The Confederates were quite prepared for this adventure, as was natural for good soldiers who had received orders to hold Sumter at all hazards, and as soon as the boats came within good range they were met with a fire of musketry and hand-grenades, lighted shells and grape and canister; and simultaneously, at a signal from Sumter, Moultrie, together with the gun-boats and rams, opened fire on the base of the fort, where all the boats were landing pell-mell, each man of the crew wanting to be the first to scale the walls.

This is exactly what ought to have been anticipated under the circumstances, for to suppose that the Confederates, having such a commanding position, with all the means of offence and defence for such an occasion, would not avail themselves of them, would be underrating that gallantry, energy and fertility of purpose for which they had been remarkable in defending these fortifications from the very beginning.

It must have been mere sport to the Confederates to see those boats rushing on heedlessly to destruction or capture, for only a miracle—something that never occurs in war—could save such an assault from annihilation. That there was great gallantry exhibited in this attempt to capture Sumter no one will deny; but there was not a ghost of a chance of success from the very commencement.

Several of the boats, among them two from the "Powhatan," had gained a landing; but the evidences of the garrison's preparation were so apparent, as well as the impossibility of scaling the walls or even effecting a permanent landing, that orders were given for the boats to be withdrawn, which was done under a withering fire. All who succeeded in leaving the boats were either killed or taken prisoners; boats were smashed by the fire of the enemy's batteries and gun-boats, and it was as much as the survivors could do to get clear of the base of the fort.

In this affair there was naturally great confusion when the officers and men discovered that a fort they had been led to believe lay a heap of ruins and powerless was

filled with men armed with breech-loading rifles, plenty of hand-grenades and shells ready for lighting, besides having grape and canister to fire from selected positions into crowded boats. The defences only required a dozen or more Gatling guns to make them complete.

As it was, all the sailors in the fleet could not have taken Sumter, even with the assistance of the contingent General Gillmore intended to supply. We know that *now*; we ought to have known it then. But, with all the disaster which followed this unfortunate assault, there was exhibited the most unflinching courage, the sternest devotion to a duty which, at the outset, must have seemed to many beyond the possibility of execution.

To show the difficulties attending night operations of this kind, we will give part of the report of Ensign Wallace, in which that officer explains how, in the *melee*, he followed the leading boat around the fort, pulled back and examined the sea-face in search of a landing; then, on coming to the right bastion of the sea-face, he found the marines firing from boats. He could find no officer to report to, and no one could tell him whether the men had landed, or where they were. Seeing a sinking boat, he pulled toward it, but found that all its crew had been removed or were drowned. Upon returning to the fort, he examined the sea-face and gorge wall; he observed all the boats retreating, and, on inquiring from one of them, was told that Commander Stevens had given the order to retreat. Ensign Wallace could obtain no information upon which to act, and seeing no boats between him and the fort, he pulled back to the flag-ship, where he first learned that Lieutenant Remy, with his boat's crew, had landed on Sumter.

This report is a fair example of all, and the affair was like many night expeditions, which generally end unfortunately, especially when not well planned beforehand. A further unhappy feature of this expedition was the delusion, under which the assaulting party labored, that it was going to an easy victory. Instead, a well-manned fort was found, supplied with all the disagreeable missiles known in war, and well supported by powerful batteries within easy range.

The less said about this expedition the better; it was a most unfortunate failure, and its acts of gallantry and daring cannot compensate for the repulse. Certain it is, however, that no blame could attach to the members of the expedition, who could not be expected to achieve success under conditions so adverse, and who could not for the darkness even see the difficulties they were obliged to contend with. The Con-

federates, it appears, knew all about the attempt that was to be made on Sumter, and met it with every precautionary measure that ingenuity could devise. Had the army of General Gillmore joined in the assault there would have been the same result, with the addition of a longer list of casualties.

A flag of truce notified Rear-Admiral Dahlgren on the following morning that there were one hundred and thirty prisoners in the enemy's hands, besides three of the killed. Among the prisoners were the following officers: Lieutenants S. W. Preston and E. T. Brower, Ensigns B. H. Porter and Charles H. Craven, Third-Assistant Engineer J. H. Harmany, Sail-maker D. C. Brayton, Acting-Master's Mates E. Butler, C. P. Hovey and C. S. McCarty. Captain McCawley, of the Marine Corps, reports that there were two lieutenants (C. H. Bradford and R. L. Meade), two sergeants, two corporals and twenty-six privates missing, and that great confusion existed at the landing.

Thus ended, for the time, the offensive operations against Charleston, with the exception that the vessels of the fleet remained at their posts, ready for any service required of them, and in no way disabled from continuing the attacks in conjunction with the Army or otherwise. The iron-clads had bravely sustained their reputation as good fighting machines, and all the officers had fairly earned the title of gallant men and able seamen, which was demonstrated time after time in the shallow and difficult channel leading up to Wagner and Sumter.

Among the vessels of the fleet, the "New Ironsides," which was not considered comparable with the Monitors in invulnerability, took more than her share of the pounding, and came out of the contest with Wagner with as many honorable scars as any veteran in the fleet could boast of. The handsome manner in which her gallant commander, Captain S. C. Rowan, handled her and took her into action, always elicited the applause of the fleet; and it was only necessary for her to get her broadside guns properly ranged on the enemy's ponderous earthworks for their defenders to go to cover after a few well-directed shots, only to renew their fire, however, when her batteries were silent.

It was remarkable how much hammering this good old ship could bear, even from the heaviest of the enemy's batteries. When the "Weehawken" went ashore in the channel, between Sumter and Cumming's Point, Captain Rowan placed his ship right between the batteries of Moultrie and the Monitor, on which they had opened fire. As Rowan anchored and swung head-on to the fort, the enemy opened a rapid fire upon

him, which was soon replied to from the "Ironsides" port battery. By this time the enemy had succeeded in getting the ship's range. The sturdy old "Ironsides" opened slowly at first for range, but soon increased the rapidity of her fire, until its spirit forced Moultrie to slacken. Two guns from each of the 10-inch batteries between Moultrie and Beauregard, however, still caused the "Ironsides" to suffer, and only after one of the heaviest guns was seen to be dismounted did the forts slacken their fire again. Having quieted her enemies, the "Ironsides" now fired an occasional gun to keep them under cover. This cessation, however, immediately brought them from behind their sand-bags to their guns, from which a rapid fire was opened, showing that the "Ironsides'" practice was too accurate to suit them. Rowan then renewed his rapid fire, and the forts were silenced again—it was but a repetition of what had been done at Wagner. By this time there were but thirty shells left in the ship, and the order was given to weigh the anchor. Under a rapid fire, the "Ironsides" quietly went out of action, after having been engaged two hours and a half in an artillery duel such as was never sustained by any ship in the Navy, and against batteries that would have sunk the heaviest three-decker then afloat.

In this action Lieutenant H. B. Robeson, Acting-Masters George W. Domett and John M. Skillings, Ensign B. H. Porter and Acting-Ensign Charles W. Howard are spoken of in terms of the highest praise for their coolness and manly bearing; while Lieutenant-Commander George E. Belknap, the executive officer of the "Ironsides," is highly lauded for his zeal and ability in putting the vessel in such an efficient fighting condition, and for the hearty manner in which he had carried out Captain Rowan's orders as commander of the gun-deck during the *fourteen* times the "Ironsides" had been under fire. Encounters of this kind were well calculated to develop the highest qualities of young officers, and the names of those above mentioned will be found prominent wherever an opportunity to distinguish themselves was offered.

There was no vessel in the fleet the enemy so heartily dreaded as the "Ironsides." Her well-drilled crew and expert gunners made her anything but welcome when she brought her broadside to bear upon any of the forts. The Confederates made several attempts to destroy her with torpedoes, but without effect. On the night of the 5th of October, 1863, however, they very nearly succeeded.

An ingenious torpedo-boat—for the day—was fitted out at Charleston, and placed in charge of Lieutenant W. T. Glassell, of the

Confederate navy, with orders to operate against and destroy as many of the iron-clads as possible. Glassell was assisted by Captain Theodore Stoney as first-officer, J. H. Toombs, engineer, and Charles Scemps and Joseph Ables as assistants. The vessel belonged to a class known as "Davids," and was shaped like a cigar, being supplied with a small engine and propeller, and was of the following dimensions: Length, fifty feet; beam (or diameter), nine feet. For offence, a torpedo was carried at the end of

LIEUTENANT-COMMANDER (NOW COMMODORE) GEORGE E. BELKNAP, EXECUTIVE OFFICER OF THE "IRONSIDES."

a stout spar, extending some fifteen feet ahead of the sharp bow.

When the attempted destruction of the "Ironsides" occurred, that vessel was anchored off Morris Island, and the time, 9:15 P. M., was one at which a ship's deck is apt to be deserted except by the look-outs. A small object on the dark water, close at hand, was suddenly discovered by the sentinels, and hailed by them, and the officer of the deck, Acting-Ensign C. W. Howard. No response being made, the officer of the deck ordered the sentries to fire into the object. The sentries delivered their fire, and, simultaneously, the ship received a severe shock from the explosion of a torpedo, which

threw a large column of water into the air, whence it descended upon the spar-deck and into the engine-room. Acting-Ensign Howard was mortally wounded by a shot from the torpedo-boat, dying five days later. The proximity of the "David" and the limited target presented by its only visible part—a hatch ten feet by two—precluded the use of great guns upon it; but a brisk musket fire was kept upon it by the marines until it drifted out of sight. Two of the Monitors soon came under the stern of the "Ironsides" in pursuit of this new device of the enemy, but, although two boats were lowered to assist in the search, nothing was seen.

Fortunately, no damage to the "Ironsides" resulted from this explosion, and her salvation was, no doubt, due to a miscalculation of the distance of the torpedo from the hull. Lieutenant Glassell was afterward picked up by a coal schooner, and stated that the explosion had swamped the torpedo-boat, and that he and the two officers with him had been obliged to leave her and swim for their lives.

Here was a new danger for the fleet to contend with, and even more than the customary watchfulness would have to be observed. The North, with all its resources, had not then developed a torpedo-boat (nor are we yet, in 1886, possessed of an efficient one), while the fleet at Charleston should have been supplied with at least twenty of them! *They* would have removed all obstructions much faster than our energetic enemy could have put them down, and the way to Charleston would have been open to the fleet.

The 5th of October was memorable for the advent of this new device of the enemy, and we were no nearer Charleston than we were on April 7th, when DuPont attacked the circle of forts without success. Wagner and Gregg had, indeed, been taken, but Sumter, that had been pronounced a harmless heap of rubbish, had not only repulsed the naval assaulters, but had captured one hundred and thirty prisoners, whom, under the circumstances, the Confederates dealt with very tenderly, considering the fact that they had them in a trap, and might have destroyed the whole of them. This leniency gives a proof that, as the war continued, both sides were learning to conduct it on civilized principles, and the bitterness with which it had commenced was subsiding, so far that it was not considered unwarlike to capture prisoners instead of killing them, and that it was to the advantage of all concerned to observe the amenities of war as practiced by all civilized nations.

In considering the attacks of Dahlgren with his little fleet of iron-clads on Charleston's defences, too much cannot be said in

praise of the persistent gallantry and untiring energy of the commander-in-chief and his officers; but in the work accomplished there was the strongest endorsement of Rear-Admiral DuPont and of the views of *his* officers—that the naval force was not strong enough to contend successfully with the well-built and formidable forts included in the great “circle of fire,” to say nothing of the submarine and other obstructions barring the way to Charleston.

With all Dahlgren’s incessant fighting, from the time of his first attack to the 8th of September, 1863, he had not advanced beyond the line whence DuPont had engaged the batteries on the 7th of April previously. True, some of the Confederate force had been broken in the fall of Wagner and Gregg, but only after the junction of Gillmore’s sixty guns with those of the iron-clads in cross-fire. It was the same result that obtained on the Western rivers, success always attended a hearty co-operation between the military and naval forces, and failure as surely met the single-handed siege operations of either.

Too much was expected of the Monitors in the first instance. The conception of such vessels was a grand one, and for it the inventor and his supporters will live long in the memory of the American people; but the vessels did not possess all the qualities required of them, since much had to be sacrificed in their design. Against wooden ships or vessels more lightly clad than themselves, they would have proved perfectly destructive—premising equality of speed for all—but against forts they lacked qualities possessed by the “Ironsides.” They could not concentrate the rapid fire possible for a broadside-ship upon the enemy’s embrasures, and while they were slowly loading—harmless for five or more minutes at a time—the guns of their opponents could be concentrated upon them with destructive effect, as on the 7th of April. It was a matter of frequent observation during the attacks on the batteries, that the rapid fire of the “New Ironsides” always relieved the Monitors after she had settled into position, and fairly obtained the range.

There was one great mistake made in the armament of the Monitors: they should have been armed throughout with the heaviest rifled guns they could carry. With these they could have taken position between four and five thousand yards from Sumter and cut it down at their leisure, without receiving a shot in return. This was exactly what Gillmore did with his sixty breaching-guns, lodging over three thousand shells in the devoted fort, and making it a ruin in seven days. The 15-inch guns of the Monitors would, no doubt, have breached the walls and have effected the same results,

but the short range necessary would have subjected these vessels to a combined fire of all the batteries, which they were not fitted to endure for any protracted period.

The disappointment felt at the Navy Department over the failure of the first attack, and the resulting controversies, no doubt, prevented a calm investigation of the facts, from which the iron-clads might have profited. If a careful study of the case had been made by unprejudiced men, or if DuPont had been listened to, the Monitors would have had their batteries changed for the 200-pounder rifles. The author saw enough of the firing of the Monitors—at pretty short ranges—at sand-bags, to know that the effect was trifling compared with the more rapid fire of the “Ironsides’” 11-inch guns with their higher velocity, and these were greatly exceeded by the larger rifled guns made for the Navy. The age of smooth-bores departed with the advent of iron-clad vessels, and the most probable reason for their retention during the war was the treacherous character of the rifled substitutes of large calibre, besides the fact that the Dahlgren shell-guns were favorite weapons, the 11-inch standing next in efficiency to the heavy rifles. The earlier use of rifles might have followed from the example shown at Pulaski, a fort built by Colonel Totten, a veteran chief of engineers, to resist any fleet that could be brought against it. With a few 30-pdr. and 60-pdr. rifles, the work was bored through and through its masonry until honeycombed, when a few shot from 10-inch guns brought the disintegrated structure down about its defenders’ ears.

The naval historian Boynton attempts to show that the 15-inch guns of the Monitors had great smashing effect, because *two* of the shells passed through the walls of Sumter, “one exploding in a casemate, another exploding on the parade ground; other 15-inch shells exploded against the wall, making great craters.” And this, the historian thought, settled the point that these guns were of great smashing power. He, however, fails to mention what number of the many that struck the walls did *not* go through, and how little damaged Sumter was when the iron-clads drew off. Mr. Boynton, though a very pleasant historian, was not good authority upon the matter of which he wrote, and, with all his desire to do justice, he allowed himself to be guided in his opinions by those riding a hobby, and, unfortunately, a defective one.

Concerning the siege of Charleston: at this day, when men can sit down coolly, and untrammelled by prejudice, read over all the operations of the naval force, there can be but one conclusion resulting—there was too great a hurry in the effort to capture a posi-

tion particularly strong, and in which all the arts of war had been exercised for ability to hurl defiance at the Federal forces.

Notwithstanding the actual strength of Charleston, exaggerated accounts have been given out stating the number of guns to be as high as three hundred and thirty. The Confederate accounts, which there seems no reason to doubt, gave the armament of the works as follows: Sumter 44, Moultrie 21, Battery Bee 6, Fort Beauregard 2, Cumming's Point 2, and Wagner 19; total 94. To these must be added the batteries at Fort Ripley, Castle Pinckney, Mount Pleasant, Fort Johnson, Battery Gregg, and the Creek batteries.

Altogether, the naval commanders, and all with them, deserve high commendation for accomplishing what they did before Charleston; their efforts, though not successful in capture, rendered the place of not the slightest use to the Confederacy even as a resort for blockade-runners, whence supplies from abroad could be received. On the contrary, its possession was a drawback to them, for its defence necessitated the retention there of a large number of troops, elsewhere sadly needed by the enemy in the field, and it may be said that the place was only held as a matter of pride, that the spot where secession first took root and sprouted should be the last to surrender.

By some persons the conduct of the war by the naval commanders has been criticised, on the ground that they did not rush through the obstructions and go right on to the wharves of Charleston. As if, indeed, the Confederates would plant obstructions without due care that they should stop any vessel attempting to pass them under the guns of the forts! What a predicament for the commander of a squadron to be in, to get his vessels entangled in a network of piles, ropes, chains, and torpedoes—all the while under a terrific cross-fire—and then to be blamed for his stupidity!

Mr. Boynton admits that, on the 7th of April, DuPont's fleet "was huddled together helplessly in the very focus of a hundred guns, and held there during the stress of the fight." How it was to be otherwise the historian does not say, but further along remarks: "A short time only was needed to show that Admiral DuPont was mistaken in all his main opinions; the subsequent use of the Monitors by Admiral Dahlgren proved that they could safely have endured another fight with the forts. He found that the broadsides of the "New Ironsides" could sweep the Confederates from their guns whenever she was brought in proper range, and that she was a valuable co-worker with the Monitors. Dahlgren also demonstrated that the "Ironsides" and Monitors could

lie safely within the bar, and that with his iron-clads the harbor of Charleston was effectually closed."

The iron-clads, under Dahlgren, never came within the "great circle of fire of the forts," and though it is true that the fire of the "Ironsides" would silence Wagner's guns, yet she was not brought into close contact with that fort until she had the assistance of Gillmore's batteries. Firing at Wagner, and forcing the passage of all the forts entangled in obstructions, are two different things altogether, as would have been ascertained by a practical comparison.

Fortunately, the representations made at the close of the war have been carefully examined, and, in most cases, found unworthy of record. In this case, for instance, how could it be expected that a man who had no naval training, and had failed to post himself from official documents, could write a true history of naval operations? Throughout his account of the naval work before Charleston he has labored most arduously to take from a gallant officer the high reputation he had so fairly won, while endeavoring to elevate another at his expense.

Dahlgren himself must have seen, from DuPont's first attack, that all efforts in that particular direction would be futile; he wisely concluded to avail himself of the advantages to be gained by a close co-operation with the Army. If he did not succeed in all he hoped for, he at least demonstrated that a naval force alone could have no effect on the capture of Charleston.

The most remarkable piece of assurance in connection with the Charleston affairs was that of an engineer in the Navy, who, in view of DuPont's failure, addressed the Navy Department, and criticised the conduct of the fleet in a manner that should have brought him before a court-martial. How could any commander-in-chief hope to possess the confidence of his Government while officious subordinates were allowed to give their views directly in opposition to his plans, and suggesting what, in their opinion, should be the mode of attack? Yet this man not only stated that the passage of the forts was possible, but that the squadron could go up to the Charleston wharves.

Again, we say, that the best endorsement of DuPont's opinions is the hard work of Rear-Admiral Dahlgren from the first co-operation with General Gillmore, July 10th, to the unfortunate assault of September 8th on Sumter, two months in which the fleet never succeeded in passing the fort that was "useless for all offensive purposes."

With this chapter ends the operations of the Navy before Charleston to October, 1863.

## CHAPTER XXXVII.

### OPERATIONS OF THE EAST GULF SQUADRON TO OCTOBER, 1863.

ACTING-REAR-ADMIRAL BAILEY APPOINTED TO COMMAND EAST GULF SQUADRON.—VESSELS CAPTURED OR DESTROYED.—PLACES OF SAFETY.—DESTRUCTION OF CONFEDERATE SALT WORKS A NECESSITY.—ATTEMPT TO “CUT” OUT SCHOONER IN MOSQUITO INLET.—EXPEDITION UP INDIAN RIVER AND OTHER POINTS.—CAPTURE OF SCHOONER AND SLOOP.—LIEUTENANT-COMMANDER ENGLISH IN GUN-BOAT “SAGAMORE” EXPLORES COAST.—VALUE OF PROPERTY SEIZED.—VIOLATION OF BLOCKADE.—THE SLOOP “HELEN” BURNT.—BRISK ENGAGEMENT WITH CONFEDERATE BATERIES.—DESTRUCTION OF SCHOONER.—RIVER EXPEDITIONS UNDER LIEUTENANT-COMMANDER McCAULEY.—DISASTROUS RECONNAISSANCE AT ST. ANDREW’S BAY.—FLAG OF TRUCE USED AS DECOY BY THE NATIVES.—THE “TAHOMA” SHELLS A TOWN.—BOAT’S CREW FROM BARK “AMANDA” CUT OUT SCHOONER “FORWARD.”—LOSS OF PRIZE.—HEROIC CONDUCT OF MASTER HOFFNER AND MEN.—TRIBUTE TO GALLANT VOLUNTEERS.—DESTRUCTION OF IMPORTANT SALT WORKS BY BOAT’S CREW FROM STEAMER “SOMERSET.”—“TAHOMA” AND “ADELA” SHELL CONFEDERATE BATTERIES.—DESTRUCTION OF TWO BLOCKADE-RUNNING STEAMERS IN HILLSBORO RIVER.—BLOCKADE-RUNNING BROKEN UP.—LIST OF VESSELS COMPOSING EAST GULF SQUADRON UNDER ACTING-REAR-ADMIRAL BAILEY.—LIST OF OFFICERS.

**A**CTING Rear-Admiral Theodorus Bailey was appointed to the command of the East Gulf squadron on the 4th of June, 1862.

The Navy Department had found an opportunity to reward this gallant officer for his services at New Orleans, and although no important military or naval movements were going on within the limits of this command, it was the only way in which the Secretary of the Navy could show his high appreciation of Bailey’s gallantry and devotion to his country’s service.

The limits of this command extended along the Florida Peninsula from Cape Canaveral on the east, to Pensacola on the west.

Up to December, 1863, the little squadron under Bailey had exercised the greatest watchfulness along the coast, had captured many prizes, and had apparently broken up the illicit traffic by which the Confederates had been supplied with munitions of war. Lying adjacent to Cuba, and at no great distance from the English

possessions of Nassau and Bermuda, the coast of Florida presented many available points for the introduction of all kinds of material by means of small vessels that could enter the shallow harbors, streams and inlets with which this State abounds.

But notwithstanding the advantages these small craft possessed for eluding the blockaders, they could not carry on their trade with impunity. From the time that Bailey took command, up to the end of the year, more than 100 vessels were captured or destroyed by the squadron.

From Cape Canaveral, all along the eastern shore of Florida to Cape Sable, are numerous passages and inlets where vessels could with safety land their cargoes of arms or provisions in a night and be out of sight of the blockaders when daylight came.

Following the coast up to the northward were the Ten Thousand Islands, Charlotte Harbor, Tampa Bay, Crystal River, Cedar Keys, Suwanee River, Appalache Bay, St.

George's Bay, Appalachicola, St. Andrew's Bay, and a thousand other places of refuge too numerous to mention. Arms and munitions of war of all kinds could have been landed but for the watchfulness of the naval vessels.

Florida, with its inaccessible and tortuous channels, and numerous islands surrounded by impenetrable swamps, was just the place to tempt smugglers, they being led there by the quantity of game and the romantic scenery, and a delicious climate that harbored no diseases and rendered the shelter of houses unnecessary. It was a hard place to find smugglers, and the Federal sailors had great difficulty in breaking up the traffic; but it was done in spite of all obstacles, and no more disagreeable and at times dangerous duty was performed anywhere.

Florida (especially the west coast) was one of the great depots where the Confederates made their salt. This was an article without which they could not exist, and it could only be made in certain localities near salt water. It may have been noticed in the naval reports of the war that certain vessels were mentioned as having destroyed salt works, and persons may have exclaimed, "Why distress the poor by destroying their salt works? What good can it do to destroy salt?" It was the life of the Confederate army which they were destroying. They could not pack their meats without it. A soldier with a small piece of boiled beef, six ounces of corn-meal and four ounces of salt, was provisioned for a three days' march. And though we might have pitied the Confederate army in the straits to which it was often reduced, yet the Federal officers, by way of shortening the war, did all they could to destroy salt works wherever they found them. This distressed the soldiers more than the loss of blockade-runners, for although these vessels generally brought plenty of guns and powder, their owners were rarely thoughtful enough to lay in a supply of salt. The history of these salt-destroying expeditions may appear tame, but they are part of the history of the war, and if possible a place must be found for them.

Early in the year 1863, Acting-Master J. A. Pennell reports the destruction of large salt works near St. Joseph. He commanded the bark "Ethan Allen" (a sailing vessel), and, on the morning of the 9th of January, got underway and stood up St. Joseph's Bay. He anchored at daylight abreast of where he supposed the salt works to be, and sent three armed boats (in charge of Acting-Master A. Weston, his executive officer), with forty men, to destroy them. The men in charge of the works fled when the boats

landed, and everything was set on fire and destroyed.

This establishment could make 75 bushels of salt daily, and it was the fourth of the kind that Master Pennell had destroyed within a short time. At the same rate of doing work, these four manufactories could have turned out for the Confederate army 110,000 bushels of salt in a year. (The Confederates had their agents in every State where salt could be made, and in those days the wants of the Army were first considered.)

Sometimes the boats of the squadron would have something more interesting to report than the capture of a salt crop. Late in February, Lieutenant-Commander Earl English, in command of the gun-boat "Sagamore," received information that a schooner was in Mosquito Inlet, Florida, loading up with cotton, the captain being of the opinion that there was no blockading vessel in the vicinity.

English proceeded to that point at once, arriving there on the 28th, when the schooner was discovered inside. An expedition was organized to cut her out or burn her.

It was placed under the command of Acting-Master's Mate J. A. Slamm, a very young officer, but one who was full of zeal. He took the ship's launch, with Third-Assistant Engineer F. G. Coggin, thirteen men and a howitzer; the first cutter in charge of Acting-Master's Mate Frank E. Ford with seven men; the second cutter in charge of Acting-Master's Mate C. R. Fleming with eleven men, and the gig in charge of Acting-Master's Mate George B. Sidell, five men; in all, forty-one officers and men.

The boats proceeded up the river and sighted the schooner without meeting any resistance, when suddenly she was set on fire by a party that ran on board of her. The cutters were then ordered to board, extinguish the fire and bring the schooner out, while the launch shelled the banks and bushes with her howitzer.

While boarding, the sailors were fired upon by a party of twenty-five men concealed in the bushes behind the embankment. Finding that the schooner was hard and fast on the bottom, and that it was impossible to extinguish the fire, the young officer, having accomplished the object of the expedition, determined to return to his vessel.

Unfortunately, while in the act of boarding, Hugh Maguire, a seaman, was shot dead, and most of the crew of the first cutter were wounded. Acting-Master's Mate Ford, of the first cutter, though wounded himself, shot one of the enemy who was in the act of firing upon the boarding party.

While the boats were returning, the enemy

continued to fire upon them, but a heavy return fire of musketry and shrapnel was kept up by the men, and some punishment was, no doubt, inflicted.

The schooner was of 150 tons burden, all ready to sail, but instead was given to the flames by the advent of this brave little party, which lost one killed and five wounded. So it will be seen that this affair, which lasted only twenty minutes, was gallantly managed and was not without danger.

On March 4th, Acting-Master's Mate Henry A. Crane reports the results of an expedition up Indian River, under the instructions of Lieutenant-Commander Earl English.

On the morning of February 23d, he started in a boat and reached a cove five miles above the mouth of St. Sebastian River, and at 2 o'clock P. M. discovered a schooner

mined to run into and capture, but was informed by one of his prisoners that she had no crew and was full of cotton. He placed two men in her, thus reducing his party to five, and ran down for the inlet (some eighteen miles), reaching there on the morning of the 27th, having been seventy-two hours on the expedition with no sleep and very little food. He took his prizes off to the "Gem of the Sea," where he obtained assistance to secure his prisoners and take care of his vessels.

This was a small party, but of inflexible firmness, to which they were indebted for securing two vessels that netted them a nice little sum in prize-money. Even so small an affair, when well executed, is more creditable than a great one poorly managed.

The only way of reaching the Confederates up the crooked and shallow streams in Florida was by boat expeditions, and Rear-Admiral Bailey kept his officers and men well employed, giving all those who deserved it an opportunity to distinguish themselves.

On March 24th, 1863, he directed Lieutenant-Commander Earl English to proceed to Cedar Keys with the gunboat "Sagamore," taking with him two armed launches from the flag-ship "St. Lawrence," under the immediate command of Acting-Lieutenant E. Y. McCauley, for the purpose of scouring the coast between the Suwanee River and the Anclote Keys, where it was reported a number of small craft were engaged in violating the blockade.

There was no end to this kind of traffic wherever there was a slip of land to haul a boat upon, or a shallow stream where a schooner could scrape her keel over the sandbar and proceed inland. When one considers that this was going on all along 3,000 miles of coast, it will appear wonderful how, even with the force the Federals had on hand, they were able to put a stop to the traffic which alone kept the Confederate armies in the field.

During the war, over \$30,000,000 worth of this kind of property was seized and turned into the Treasury—not a tithe of its value, for a large portion of it went into the possession of land-sharks, who rarely gave a fair account of the money which passed through their hands. But when the big holes and the small leaks on the blockade were all closed up, the tale was told at Appomattox, where General Grant had to serve out rations to Lee's soldiers and give them enough to enable them to reach their homes.

A launch and cutter from the "Sagamore" and others from the "Fort Henry," including an ambulance boat, were added to this expedition and the whole force proceeded direct to Bayport, while the "Sara-

LIEUTENANT-COMMANDER (NOW REAR-ADMIRAL) EARL ENGLISH.

bearing down, apparently filled with men. From their number and appearance it was supposed that they were Confederates prepared to act on the offensive. Mr. Crane's boat was so disguised as to look like a boat from a merchantman, so that the Confederates passed him unsuspectingly and went on down the river.

He allowed the schooner to get well ahead and then followed in her wake, until night came on and she got into shoal water. While her crew were employed in getting her over the bar, the Union boat dashed alongside and captured her. There were twelve men on board, who no doubt would have made a good fight if they had not been taken by surprise.

Ordering the schooner's sails hoisted, Mr. Crane started down the river, when he discovered a sloop ahead, which he deter-

more" remained in the offing to prevent the escape of Confederate vessels.

Great difficulties attended this expedition, as the weather was very unfavorable, but the main object was handsomely carried out.

The sloop "Helen," of Crystal River, loaded with corn, was burnt, and the boats pushed on for a large schooner on the inside, loaded with cotton and said to contain three hundred bales.

As they pulled for the schooner the boats were opened upon by a battery of two guns on shore, and by quite a number of riflemen concealed in the woods. A brisk engagement of half an hour ensued and the bushwhackers were driven from their works and rifle-pits, with one killed and three wounded. Unfortunately, the howitzers in the launches were partly disabled, by their recoil, from rapid use, but they kept up such a fire, while they could, with shrapnel and

Wakassa—beautiful Indian names, that signified anything rather than the lawless scenes that were carried on in their waters.

The expedition had, however, been so delayed by head-winds and currents, and by the sluggishness of one of the launches, that they only made seventy-five miles in five days, so that the news of their coming preceded them, and, on the appearance of the boats, everything had been moved out of the way. This expedition was well managed by Lieutenant-Commander McCauley.

An expedition fitted out on March 20th by Acting-Master John Sherrill, commanding bark "Roebuck," did not fare so well. Sherrill sent a launch up St. Andrew's Bay on a reconnaissance; but, on the return of the boat, they were attacked by a party of fifty men, with rifles, one man killed and six severely wounded, including the officer in charge, Acting-Master Jas. Folger.

Two brave seamen, Thomas Wylie and James Kitchen, brought the boat off, all the rest being killed or wounded. The fire from the bushwhackers was very severe, and most of the men shot were mortally wounded. These were dangerous enemies to encounter. They were not soldiers, but, more properly speaking, smugglers.

There was not a particle of loyalty in these parts and the only object of the inhabitants was gain. They were fighting, not to preserve the independence of the South, but to make rich harvests by smuggling and to set the laws at defiance. This region at that time could boast of the worst and most reckless set of men in the South, and they would have been just as willing to put to death a Confederate party as a Union one, if it should attempt to interfere with their vocation.

They had no military notions of honor, and would not respect a flag of truce if the bearer of it had anything on his person worth taking. As a proof of this we relate the following incidents, which are officially reported:

On the 27th of March, as the bark "Pursuit" was lying in Tampa Bay, a smoke was discovered on the beach and three persons made their appearance with a white flag. The commanding officer, supposing them to be escaped contrabands, sent a boat in charge of Acting-Master H. K. Lapham with a flag of truce flying. On nearing the beach, two of the parties were seen to be clothed in women's apparel with their faces blackened and seemed to be overcome with joy at the idea of obtaining their freedom, exclaiming, "Thank God, thank God, I am free!"

When the boat touched the beach the female apparel was thrown off, and it then became evident that these were white men disguised, and using a flag of truce to decoy

LIEUTENANT-COMMANDER (NOW REAR-ADMIRAL) EDWARD YORK MCCAULEY.

grape, that the enemy's fire was very wild, and went over the boats.

This little affair was conducted with coolness and judgment, and also with the right spirit.

When the Confederates found that the boats could not be driven off, they set fire to the schooner. The engagement was still continued from the boats until there was no chance of extinguishing the flames, and it is quite probable the Confederates were delighted to think the attacking party would secure no prize. The object of the expedition having been effected, the party in the boats returned, after seeing the vessel and cargo totally consumed.

This boat expedition then proceeded to the Chassahowitzka, thence to Crystal River, the Homosassa, the Withlacoochee and the

the boat on shore. Immediately after, a hundred armed men rose from the bushes where they had been concealed, and demanded the surrender of the boat, which being refused, the enemy opened fire, wounding the officer in charge and three of the crew. But the brave fellows who were left unwounded returned the fire and the attacking party took to the trees. Some of the men in the boat kept up a rapid fire with their breech-loading guns, while the others pushed off the boat, and they finally got out of range.

As soon as the first volley was fired, the broadside of the "Pursuit" was opened on the bushwhackers, and the shells bursting among them sent them scampering away. Next day the gun-boat "Tahoma" arrived, and her commander, having heard of the outrage committed, brought two vessels up and threw some shells into the town, which was called barbarous at the time, but it was the only way to prevent the indiscriminate slaughter that would have been inflicted on a boat's crew that attempted to land on any part of that coast unsupported by gun-boats.

It is dreadful to think of the bitter feeling that sprang up among the lower classes of men against the flag which they once thought they honored; but the rough life led in that section of the country, the years spent in hunting the Indian in dismal swamps and forest fastnesses, had produced a class of people far more barbarous than the Indians themselves—men without any sentiment but a love of plunder, who placed no more value on human life than on the life of a dog. Yet they were intrepid and defied all laws, human and divine, and the only way to touch their understanding was by the most severe retaliation.

On Friday, March 20th, an expedition left the United States bark "Amanda," for the purpose of proceeding to the Ocklockonnee River, to cut out the schooner "Forward," supposed to be loaded with cotton. The expedition was under the charge of Acting-Master R. J. Hoffner, and consisted of two boats and twenty-seven men, with a boat howitzer.

Great difficulty was encountered in finding the mouth of the river, and the boats constantly grounded on oyster beds, over which they had to be hauled in the night for fear of discovery, but at daylight the entrance of the river was found and the boats proceeded up. At 8 A. M., of the 23d, a dismasted schooner was discovered lying close to the starboard bank. At the same time the expedition was discovered by some people on the schooner, who jumped into the small boat and made their escape, no doubt carrying news of its arrival.

The boats boarded the schooner and took possession, hove up the anchor and commenced towing her down the river, having two hours' tide left. They anchored when the tide was too low to proceed, got underway again at 5 o'clock in the morning, and by 8 o'clock were clear of the entrance to the river. They steered for the bay channel, and again grounded when nearly over all the difficulties of the navigation. Again the tide served and the vessel was got underway, but this time they followed the wrong channel and grounded again, and all their endeavors to get her afloat proved unavailing.

These brave fellows had worked for twenty-four hours with an energy unsurpassed, hoping to receive a large share of prize-money, but now they saw that all their work had been in vain, and prepared to set fire to the vessel. The arms were all put in order in case they should be needed suddenly; the howitzer was loaded with canister and every preparation made to repel the attack which Mr. Hoffner confidently expected. At about noon, a party of forty horsemen was discovered approaching at some distance. They turned and appeared to be going off, but soon reappeared with some squads of infantry (about 200 in all) jumping from tree to tree, and taking position to attack the sailors. The boat howitzer was brought to bear upon the Confederates, and fired with grape and canister, but without marked effect, as the enemy was protected by the trees. At the same time ten sailors with muskets (behind such defences as they could throw up on board the vessel) kept up a continuous fire whenever anything could be seen to shoot at. Once a squad of twenty exposed themselves, and a shrapnel was exploded in their midst, and a number of them seemed to have been hurt.

A rapid fire was kept up on both sides, each party protecting themselves behind their barricades, until the tide began to run flood, and the boats floated. Then Mr. Hoffner determined to fire the vessel, as an attempt to save her would involve too great a loss of life. The schooner was only two hundred yards from the shore, and directly under a galling fire from the enemy's rifles. The howitzer was hoisted into the boat, while the enemy fired rapidly (though not accurately), and the boats were kept on the off-side until the sailors were able to shove off with safety. In an hour and a half the tide was supposed to be high enough, and the boats' crews embarked and shoved off; but, with the weight of the crews, the boats grounded, and the enemy opened upon them again. The sailors jumped overboard, and, taking hold of the boats, commenced dragging them over the bottom—slow work under a heavy fire.

James Mooney, a seaman, was killed instantly, shot through the heart. At the same moment, the officer in charge, Mr. Hoffner, received a rifle-ball in the right side of the neck, passing around the back and lodging in the left side, deeply imbedded in the muscles. Other men were struck at the same time, but only one of them so seriously that he could not work. Every one was doing his best to get the boats over the bottom, or else firing at the pursuers, who were keeping up with them along the banks. Mr. Shaffer, the second officer, was conspicuous in setting an example of gallantry very much to be commended.

At length, after being nearly exhausted by the hard work, the sailors got their boats afloat in deep water, jumped in, and, giving the enemy a parting volley and a cheer, they sprang to their oars, and soon put themselves out of range.

The bushwhackers had kept themselves so well protected by the trees that they could be detected only by the flashes of their guns. Under such circumstances and with so greatly a superior force, some officers would have felt themselves justified in surrendering to save the lives of their men. But there was not a word said about surrendering in this party. The commanding officer, Mr. Hoffner, though dangerously wounded, stuck to his work like a hero and brought his boats off safely, with one man killed and six (besides himself) seriously wounded.

During this engagement, which lasted several hours, some heroic acts occurred, which would have done credit to any service, and the determination shown not to be captured proved the stuff the officers and men were made of. These gallant fellows abhorred the idea of letting their flag (which was kept flying in the boat all the time) fall into such an enemy's hands, for though the people, who performed the part of soldiers on shore, were at the farthest extreme of the Confederacy, and not inspired by the exciting scenes which were daily taking place between the Federal and Confederate forces, yet they were as bitter in their hostility to everything Union as if they had received some great injury at the hands of the Government.

These people, no doubt, considered it an outrage for the Federal naval forces to interfere with their smuggling articles contraband of war, but they never stopped to reflect that war could not be ended merely by the Navy sailing up and down the coast of Florida and looking at them violating the laws. Hence all this talk of the Confederates about the inhuman treatment to these smugglers (for they were nothing more) is simply absurd. War is not a pleasant pas-

time. Its object is to bring about law and order, and the most stringent measures are those most likely to succeed. There was no way of arresting this war but by sacrificing every object that would tend to keep it going on.

Let it be understood that most of these little expeditions, which were fitted out and did so well, were commanded and officered by those gallant volunteers from the merchant marine, who, sacrificing all their interests in commercial affairs, joined the Navy to devote life and all they held dear to the defence of their country's rights and honor. They gave such a guarantee, by their matchless adaptation to the rules and

LIEUTENANT (AFTERWARDS COMMODORE) A. A. SEMMES.

regulations of the Navy, of their ability to learn the science of war from officers educated for the naval service, that the country must not forget, while awarding credit to the Navy proper, to allow a full share of the honor to fall upon the volunteer officers from the American mercantile marine.

On July 6th, Rear-Admiral Bailey reports the destruction of important salt works, under the direction of Lieutenant-Commander A. F. Crosman, of the steamer "Somerset."

This duty was well performed by Acting-Master Thomas Chatfield, who landed in boats under the guns of the "Somerset," and, with sixty-five sailors and marines,

destroyed four distinct stations. Sixty-five salt-kettles were demolished, over two hundred bushels of salt destroyed, and thirty houses, with all their appurtenances, were burned. The whole establishment was completely blotted out without the loss of a man, in which these expeditions were not always so fortunate.

On the 16th of October an expedition was fitted out to destroy two blockade-running steamers in Hillsboro River.

Lieutenant-Commander A. A. Semmes, in the gun-boat "Tahoma" (assisted by the "Adela"), was directed to divert attention from the expedition by shelling the town and fort and to land men under cover of the night at a point in Old Tampa Bay, some distance from the fort, to proceed overland to the point on the Hillsboro River where the blockade-runners lay, and destroy them.

On the date mentioned, the "Tahoma" and "Adela" ran in abreast of the batteries, and shelled them slowly during the day, their fire being unusually accurate. As soon as the moon went down that evening, a force of sixty men, under Acting-Ensigns J. P. Randall and J. G. Koehler, from the "Tahoma," and forty men, under Acting-Ensigns F. A. Strandberg and Edward Balch, and Acting-First-Assistant Engineer G. M. Bennett, from the "Adela," with Acting-Master's Mate Crane and Mr. J. A. Thompson as guides, was landed at Ballast Point. The whole expedition was under the immediate command of Acting-Master T. R. Harris, executive officer of the "Tahoma."

The line of march was quietly taken up under guidance of Mr. Thompson (who, being too ill to walk, was carried in a litter). A march of fourteen miles brought the party, before daylight, to the river-bank.

As soon as it was light the two steamers were discovered on the opposite side. The force was assembled abreast of the steamers, and those on board brought under aim of the rifles, and ordered to send a boat, which was done. A detachment was then sent to bring over the vessels and to make prisoners of their crews.

At this time two men succeeded in escaping from the steamers, and carried the alarm to the garrison. The prizes were meantime set on fire effectually, and the Union force set out on its return.

Encountering an armed party near the beach, a charge was made and two of the Confederates were captured. The beach was finally reached without loss, pickets were stationed, and the party rested, waiting the arrival of their boats.

While so resting (after a twenty-eight-mile march), word was brought the commander of the expedition that a detach-

ment of cavalry and one of infantry were advancing, and the party was formed to resist an attack; the boats, however, having arrived, the embarkation commenced; and while this was going on the Confederates opened fire.

The first and second divisions of sailors, with seven prisoners, proceeded in an orderly manner to the boats; the third division deployed as skirmishers and returned the fire of the enemy with great spirit; the "Adela" in the meantime shelled the woods and drove the Confederates from cover. The first two divisions having embarked, the rear guard followed, after having stood at their posts and protected the retreat with the coolness of veteran soldiers. Finally, they, at the order, entered the boats, taking their wounded with them.

The Confederate troops were under the command of Captain Westcott, and were the so-called regulars, who could act as smugglers or bushwhackers as suited their purpose; but they did not seem inclined on this occasion to come out boldly and "try conclusions" with the sailors.

The retreat to the boats was conducted by Acting-Master Harris, with the most admirable coolness, and the expedition throughout was characterized by a degree of discipline, courage and energy not often met with even among the best trained troops. It shows how carefully the men of the Navy were drilled and how well commanded. On this occasion, although the Union force suffered a good deal while on the beach, they never swerved for one instant. Three of the sailors were killed, and their names are mentioned as an inducement for others to show an equal bravery.

They were James Warrall, John Roddy and Joseph O'Donnell, all seamen.

Ten men were wounded severely, and we are sorry not to be able to chronicle their names also, for no seamen ever deserved better! Acting-Ensigns Randall and Koehler were wounded, and four men were made prisoners.

This is the last of Rear-Admiral Bailey's operations up to October, 1863, and although they were not remarkably important, they show a determination to break up the blockade-running, and it was done effectually. Of fifty-two vessels that attempted to run the blockade, only seven succeeded, the rest being taken into the port of Key West. Nearly one hundred were captured in the space of six months.

The command of this station, although a compliment to Admiral Bailey, was scarcely a reward commensurate with his character and services. He was not a man whose appearance would attract attention, except from those who could appreciate the honest and simple character of an old-time naval

officer, but he was a man who had no superior in the Navy in point of dash, energy and courage, and, if he had ever had the opportunity of commanding a fleet in action, he

would have done it with the coolness and bravery of Nelson.

No higher compliment could be paid him.

## LIST OF VESSELS COMPOSING THE EAST GULF BLOCKADING SQUADRON.

UNDER ACTING-REAR-ADMIRAL THEODORUS BAILEY; LIEUTENANT-COMMANDER  
WILLIAM G. TEMPLE, FLEET-CAPTAIN.

AS OBTAINED FROM THE NAVY REGISTER OF JANUARY, 1863, WITH NAMES OF COMMANDING  
AND OTHER OFFICERS.

### FRIGATE "ST. LAWRENCE"—FLAG-SHIP.

Commander, James F. Schenck; Fleet Surgeon, G. R. B. Horner; Paymaster, Washington Irving; Assistant Surgeon, W. K. Van Reypen; Acting-Assistant Paymaster, A. B. Poor; Acting-Assistant Surgeon, A. Shirk; Acting-Masters, Wm. H. Smith, John Fuller, Chas. DeBevoise and George J. Murray; Acting-Master's Mates, E. Pavys, E. S. D. Howland, John Boyle, V. W. Jones and T. W. Jones; Marine Corps: Second-Lieutenant, R. S. Collum; Boatswain, J. A. Briscoe.

### STEAMER "SAN JACINTO."

Commander, Wm. Ronckendorff; Lieutenant-Commander, Ralph Chandler; Assistant Surgeon, I. W. Bragg; Paymaster, Cramer Burt; Marine Officers, Capt. J. Schermerhorn; Second-Lieutenant, L. W. Powell; Acting-Masters, D. G. McRitchie, H. J. Coop and John Baker, Acting-Master's Mates, H. H. Fuller, H. T. Keene, J. D. Weed and T. C. Jones; Engineers: Chief, Mortimer Kellogg; Assistants, H. S. Davids, H. C. McIlvaine, Edwin Wells, H. W. Scott, Edmund Lincoln and N. P. Towne; Boatswain, John Marley; Acting-Gunner, C. A. Stevenson; Carpenter, R. A. Williams; Sailmaker, J. H. North.

### STEAMER "PENGUIN."

Commander, J. C. Williamson; Acting-Assistant Surgeon, G. B. Higginbotham; Acting-Assistant Paymaster, W. C. Cook; Acting-Masters, T. Durham, S. B. Rathbone, G. V. Cassidy and C. H. Rockwell; Acting-Master's Mates, W. E. Anderson, S. E. Foote, W. A. Beattie and W. A. Randlett; Engineers, F. W. Warner, M. P. Randall, A. B. Kinney and John Webster

### STEAM GUN-BOAT "SAGAMORE."

Lieutenant-Commander, Earl English; Assistant-Surgeon, W. K. Scofield; Acting-Assistant Paymaster, J. F. Wood; Acting-Masters, Wm. Fales and Edwin Babson; Acting-Master's Mates, J. A. Slamm, C. R. Fleming, F. E. Ford and G. B. Sidell; Engineers, Henry Snyder, W. H. Harris, F. G. Coggin and G. J. Lamberson.

### STEAM GUN-BOAT "TAHOMA."

Lieutenant-Commander, A. A. Semmes; Assistant Surgeon, J. H. Gunning; Acting-Assistant Paymaster, Wm. Hennesy; Acting-Ensigns, W. H. Harrison, D. W. Jackson and J. C. Hamlin; Acting-Master's Mates, J. G. Koehler, C. H. Tillinghast and R. G. Richards; Engineers, J. N. Cahill, J. K. Botsford, John Fornance and A. M. Rankin.

### STEAM GUN-BOAT "PORT ROYAL."

Lieutenant-Commander, George U. Morris; Lieutenant, C. J. McDougal; Acting-Volunteer-Lieutenant, Wm. P. Randall; Assistant Surgeon, H. D. Burlingham; Assistant Paymaster, Geo. A. Sawyer; Acting-Masters, Edgar Van Slyck and L. D. D. Voorhees; Acting-Master's Mates, Wm. F. Reynolds, E. V. Tyson, H. D. Baldwin and Wm. A. Prescott; Engineers, Wm. C. Selden, E. M. Breese, O. C. Lewis, F. B. Allen and Henry Snyder.

### STEAMER "SOMERSET."

Lieutenant-Commander, A. F. Crosman; Acting-Assistant Surgeon, James Meecray, Jr.; Acting-Assistant Paymaster, S. W. Adams; Acting-Masters, W. E. Dennison, J. S. Higbee, E. C. Healy and Thos. Chatfield; Acting-Master's Mates, C. H. Brantingham, T. M. Toombs and J. H. Stotsenburg; Engineers, W. D. Peters, W. H. Smith, E. Choppell and John Doyle.

### STEAMER "LODONA."

Acting-Lieutenant, E. R. Colhoun; Acting-Assistant Surgeon, T. W. Meckley; Acting-Assistant Paymaster, A. M. Stewart; Acting-Masters, Lewis West and J. P. Carr; Acting-Ensigns, H. G. McKenna and N. W. Rathbone; Acting-Master's Mates, Le Grand B. Brigham, W. A. Byrnes and F. E. Brecht; Engineers, F. A. Bremen, I. B. Hewett, S. D. Loring, O. B. Mills and James Mollineaux.

### STEAMER "FORT HENRY."

Acting-Lieutenant, Edward Y. McCauley; Acting-Assistant Surgeon, Joseph Stevens; Acting-Assistant Paymaster, Daniel Whalen; Acting-Masters, R. B. Smith, F. W. Partridge and Geo. Leinas; Acting-Ensign, Geo. W. Bogue; Acting-Master's Mates, John Hancock, W. J. Haddock and W. E. Rice; Engineers, F. H. Fletcher, James Ward and Chas. Minnerly.

### STEAMER "HUNTSVILLE."

Acting-Volunteer-Lieutenant, Wm. C. Rogers; Acting-Assistant Surgeon, G. J. Sweet; Acting-Assistant Paymaster, E. M. Hart; Acting-Masters, T. R. Harris, J. H. Platt and G. A. Smith; Acting-Master's Mates, E. B. J. Singleton, Charles Labden and C. R. Scoffin; Engineers, J. L. Parry, N. N. Buckingham, W. A. Leavitt and John Kanealy.

### BARK "PURSUIT"

Acting-Volunteer-Lieutenant, David Cate; Acting-Assistant Surgeon, H. K. Wheeler, Acting-Assistant Paymaster, D. P. Shuler; Acting-Masters, Robert Spavin, H. K. Lapham and C. R. Harris; Acting-Master's Mates, J. H. Barry and Van Buren Blum.

### BARK "GEMSBOK"

Acting-Volunteer-Lieutenant, Edward Cavendy; Acting-Assistant Surgeon, Thomas Welsh; Acting-Assistant Paymaster, E. H. Roberts; Acting-Masters, O. Thatcher and Theo. Werlhop; Acting-Master's Mates, T. J. Pray, M. W. Stone and N. W. Wait.

### SLOOP-OF-WAR "DALE."

Acting-Master, J. O. Barclay; Acting-Assistant Surgeon, F. B. Lawson; Acting-Assistant Paymaster, R. B. Rodney; Acting-Master, B. F. Cook; Acting-Ensigns, J. A. Denman and J. T. Mendall; Acting-Master's Mates, D. C. Kiersted, M. Jackson and Wm. Morris.

### STEAMER "MAGNOLIA."

Acting-Master, Chas. Potter; Acting-Assistant Surgeon, E. D. G. Smith; Acting-Assistant Paymas-

ter, W. J. Coite; Acting-Masters, Francis Burgess and Alex. Wallace; Acting-Master's Mates, David Scyler, Peter McGuire and O. Sundstrom; Engineers, Edward Eldridge, E. D. Leavitt, Jr., and R. H. Shultis.

STEAMER "STARS AND STRIPES."

Acting-Master, C. L. Willcombe; Acting-Assistant Surgeon, Benj. Marshall; Acting-Assistant Paymaster, J. J. Pratt; Acting-Masters, L. W. Hill, Geo. Ashbury, Thomas Smith and G. H. Cole; Acting-Master's Mates, H. B. Conklin, C. P. Turner and Alex. Cushman; Engineers, John Briggs, T. D. Coffee, John Burns and H. F. Brown.

BARK "JAMES L. DAVIS."

Acting-Master, John West; Acting-Assistant Surgeon, E. B. Jackson; Acting-Assistant Paymaster, B. S. Price; Acting-Masters, Alex. Waugh and Geo. F. Hammond; Acting-Master's Mates, A. J. Lyon, S. E. Willetts and G. H. Disley.

BARK "ROEBUCK."

Acting-Master, John Sherrill; Acting-Assistant Surgeon, M. G. Raefle; Acting-Assistant Paymaster, Wm. Sellow; Acting-Masters, H. F. Coffin, Jas. Folger and A. M. Newman; Acting-Ensign, Timothy Delano; Acting-Master's Mates, W. H. Bradford and C. F. Dunderdale.

BARK "JAMES S. CHAMBERS."

Acting-Master, Luther Nickerson; Acting-Assistant Surgeon, Wm. Clendaniel; Acting-Assistant Paymaster, C. H. West; Acting-Masters, A. B.

Pierson and Wm. H. McLean; Acting-Master's Mates, W. J. Eldredge, W. A. Smith and David Axe.

BARK "AMANDA."

Acting-Volunteer-Lieutenants, Geo. E. Welch and Samuel Howard; Acting-Assistant Surgeon, A. H. Hershey; Acting-Assistant Paymaster, E. B. Southworth; Acting-Masters, R. J. Hoffner and J. E. Jones; Acting-Master's Mates, G. C. Campbell and N. L. Ledyard.

BARK "ETHAN ALLEN."

Acting-Master, J. A. Pennell; Acting-Assistant Surgeon, J. M. Flint, Acting-Master, Alfred Weston; Acting-Ensign, Samuel McCormick; Acting-Master's Mates, J. E. Stickney, John Wilcox and E. R. Davidson.

BARK "HOUGHTON."

Acting-Master, Newell Graham; Acting Assistant Paymaster, O. F. Browning.

SCHOONER "EUGENIE."

Acting-Master, Wm. McClintock; Acting-Assistant Paymaster, W. C. Blackwell.

SCHOONER "BEAUREGARD."

Acting-Master, Wm. A. Arthur; Acting-Master's Mate, W. H. Melson.

SCHOONER "WANDERER."

Acting-Master, E. S. Turner; Acting-Assistant Surgeon, Thomas McHenry; Acting-Master's Mates, L. H. Livingston and Ezra Robbins.

## CHAPTER XXXVIII.

### REVIEW OF THE WORK DONE BY THE NAVY IN THE YEAR 1863.

**A** SUMMARY of the events of 1863 may serve to keep in mind the details of the several squadrons that were operating along a sea-coast of over 3,500 miles in extent, and in the Western rivers, a further distance of 4,000 miles. The harbors and indentations of the Atlantic coast, which afforded refuge for blockade-runners, or points for landing their munitions of war, amounted to at least 180 in number.

Thus the Navy had to guard a line of coasts and rivers over 7,500 miles in extent, a task compared with which the famous blockade of the French coast by the British, during the wars with Napoleon, was a mere bagatelle.

Day by day the blockade of the Southern sea-coast became more stringent, and as Congress was made to feel the urgent appeals of Mr. Secretary Welles for an increase of the Navy, and became aware that the resources of the enemy diminished in proportion as those of the Navy increased, and realized that, without an adequate force of war-vessels, the Rebellion would never be conquered, it showed due liberality, and success began to attend the Federal arms in all quarters.

By increasing the stringency of the blockade, the enemy were driven from the coast, as they realized the uselessness of contending against combined military and naval operations. The great rivers and their tributaries were no longer safe resorts for marauders, as the capture of the principal towns in the West, and the occupation of the surrounding country by the Union forces, had relieved a large number of troops from siege-duty, who could now be employed from Tennessee to Louisiana.

The power of the Navy at the same time was largely increased on the Western rivers by the addition of some 800 guns mounted in war-vessels improvised from merchant

steamboats; and these aided in transporting the Army from one point to another wherever the enemy showed himself.

The operations of the Navy up to the end of the year 1863 had borne with great severity on those who had risen in arms against the National Government, and the idea has been suggested that the almost superhuman efforts of this arm of the service to crush the Rebellion has been a serious embarrassment to its advance since the close of the civil war; that the Southern influence in Congress has, in a great measure, prevented the rebuilding of the Navy and bringing it to a condition befitting a great nation. Certain it is, the Navy has been brought to so low an ebb that it almost seems as if this state of affairs had been produced by some concert of action.

The best illustration of what the Navy had accomplished up to the close of the year 1863 is afforded by the official reports of the commanding officers of squadrons and single ships; but, as these cannot be embodied in a narrative of this kind, we must content ourselves with an abstract from the records.

Acting-Rear-Admiral S. P. Lee, in command of the North Atlantic squadron, ably seconded by the zeal of his officers, had penetrated the waters of Virginia wherever his gun-boats could reach, and had occupied the sounds of North Carolina to such an extent that the Confederates could be said to have no foothold in that quarter. Wilmington, near the mouth of the Cape Fear River, was really the only point in North Carolina where the enemy could boast that they had defied the Federal arms, and this point was found extremely difficult to close owing to two separate entrances to the river some thirty miles apart, both protected by the heaviest description of land defences and obstructed by shallow bars. These obstacles at the time were

considered such as to preclude any attempt to capture Wilmington from the sea.

Many reasons existed why the Army could not co-operate in an attack upon Wilmington, which thus remained upwards of a year longer than it should have done the great depot of supplies for the Confederate armies. Many fast steamers from the Clyde, and other parts of Great Britain, continued to elude the utmost efforts of the blockading squadron, and reached Wilmington with valuable cargoes of arms and munitions of war, though numbers were captured or driven on shore and destroyed.

In all the operations of the North Atlantic squadron its officers and men exhibited bravery and zeal second to no other organization in the Navy. There was no field for great achievement except the capture of Fort Fisher and the other defences of Wilmington, which might have been taken earlier in the war, but the task was postponed until it required nearly half of the Navy to overcome the obstacles then presented.

The South Atlantic squadron, during the year 1863, had performed most valuable service in blockading the Southern coast, and had succeeded in maintaining a force in Charleston harbor which completely closed that port as a refuge for blockade-runners, and prevented the Confederates from obtaining further supplies in that quarter.

The Navy Department had made great efforts to capture the heavy defences inside Charleston bar, and Rear-Admiral DuPont had made a vigorous attack with his iron-clads and Monitors on the heaviest line of works; but, owing to the destructive fire of the enemy and the insufficiency of his force of vessels, DuPont very properly withdrew. The wisdom of his course was subsequently shown during the combined Army and Navy operations against Charleston, under Rear-Admiral Dahlgren and Brigadier-General Gillmore. On the later occasion, sixty siege-guns were brought to bear on the enemy, and Fort Sumter was "reduced to pulp," yet the difficulties of an advance of the naval vessels were so great owing to the obstructions in the channel, that notwithstanding the energy and bravery of the commander-in-chief, his officers and men, at the end of 1863 Charleston still remained in possession of the Confederates, although practically useless to the latter.

If the Federal Government could not boast of having captured the hot-bed of secession, it had at least the satisfaction of knowing that Charleston was only held at vast expense to the enemy, merely from a sentiment of pride, and a wish to keep the Federal soldiers and sailors ignorant of the suf-

ferings the citizens had undergone in their mistaken zeal for a desperate cause. As Charleston was the first place to take up arms against the Union, its leading men considered that it should be the last to lay them down. Their gallantry was unquestionable, but their policy, in a military point of view, was open to criticism, and the city had finally to surrender on the approach of General Sherman's indefatigable soldiers, who did not always extend to conquered cities that consideration they would have received from the Navy.

The Eastern Gulf squadron had no important military operations to co-operate with, Acting-Rear Admiral Bailey being engaged in blockading the entire east and west coasts of Florida, capturing many prizes, annihilating the illicit traffic in that quarter, and preventing all supplies from reaching the Confederate armies by way of the Florida coast.

The duties of Rear-Admiral Farragut, in command of the West Gulf squadron, had been extremely harassing, but they gave that gallant officer an opportunity to exhibit the highest qualities as commander-in-chief.

Soon after the memorable battle below New Orleans and the surrender of that city, Farragut made a junction with the squadron of Flag-officer Davis above Vicksburg, and, had the Army contingent that was sent to support him been as large as it should have been, Farragut would have had the satisfaction of capturing Vicksburg. The military part of the expedition, however, though commanded by a most able and gallant general, was too small to effect anything by an attack on the city; and Farragut, after subjecting his squadron to the fire of the enemy's guns, which were daily increasing in number and power, and finding it was a mere waste of time and strength to lay before the city, returned to New Orleans to co-operate with the Army in maintaining order in Louisiana.

This omission of a proper military force to co-operate with the Navy gave the Confederates time to render Vicksburg the Gibraltar of the West, and for a long period it bade defiance to the Army and Navy combined. The Vicksburg miscarriage enabled the enemy to fortify Port Hudson and Grand Gulf, which thus became two formidable barriers against the advance of the Navy.

When Vicksburg was invested in 1863 by the Army under Major General Grant, and a large naval force under Rear-Admiral Porter, many efforts were made by the latter officer to send vessels down to blockade the mouth of the Red River, and thus cut off supplies from Port Hudson and Vicksburg; but, owing to casualties in the

vessels sent on this duty, there was a failure to bring about the desired result.

Rear-Admiral Farragut then attempted to push up past Port Hudson with his squadron, and met with serious loss. However, with the "Hartford" and "Albatross," he reached the mouth of Red River, and established so stringent a blockade that the Confederates in Port Hudson and Vicksburg could no longer obtain supplies from that quarter.

Farragut was engaged a part of the season with his ships below Port Hudson in bombarding that place. In these operations the Mortar vessels bore a conspicuous part, until Port Hudson fell, with Vicksburg, on the 4th of July, 1863, and the Mississippi was once more opened to the sea.

The blockade of the Southern coast, within the limits of Admiral Farragut's command, had, in the main, been efficient and successful, although reverses at Galveston and Sabine Pass gave the enemy something on which to congratulate themselves. These reverses, however, of the Union arms were of no permanent advantage to the Confederates, as the whole coast, from the mouth of the Mississippi to that of the Rio Grande, was so closely guarded by the Union Navy that blockade-running was reduced to very insignificant proportions.

The Mississippi squadron, under Rear-Admiral Porter, had been actively engaged in the work of suppressing the Rebellion, and co-operated zealously with the Army whenever its services were needed. The capture of Arkansas Post, on the Arkansas River, and the constant effective attacks on the batteries of Vicksburg, the bombardment of the city and its defences, the battle of Grand Gulf and the landing of Grant's army at Bruinsburg, and the final reduction of the great stronghold on July 4th, 1863, are among the successful achievements of the Mississippi squadron in co-operation with the Army.

It is simple justice to the officers and men of this squadron that their heroic exertions should receive proper credit, and we cannot better do justice to the occasion than by repeating the eulogistic terms in which Mr. Secretary Welles speaks of them :

"In the appendix to this report (1863) will be found correct records of the extraordinary adventures attending the efforts to get control of the Yazoo, by sweeping from the channel the net-work of torpedoes, explosive machines, and contrivances of submarine warfare, near its confluence with the Mississippi. These efforts were followed by the novel and singular Yazoo Pass expedition and the expedition of Steele's Bayou and Deer Creek. On the right bank of the Mississippi scenes of interest were enacted by the hardy sailors and boatmen in the rivers of Arkansas and northern Louisiana. The Cumberland and Tennessee have been actively patrolled by our vigilant and skillful naval officers; and the exciting chase of Morgan, by our steamers on the Ohio, over a distance of five hundred miles,

intercepting him and his band when attempting to escape, naturally attracted the attention of the country.

But the great and important exploits of this squadron were in the vicinity of Vicksburg, where the main strength of the naval as well as the military forces were centred. The magnitude of the defences of the place—which were intended to repulse any force, naval or military, that could be brought against them—made the siege formidable, and seemed for a time to defy all attempts at their reduction. In overcoming them, the Navy necessarily performed a conspicuous and *essential* part. For forty-two days, without intermission, the mortar-boats were throwing shells into all parts of the city, and even the works beyond it.

Heavy guns mounted on scows commanded the important water batteries, and for fourteen days maintained an incessant fire on them. Thirteen heavy guns were landed from the vessels [the Secretary should have said twenty-two], and officers and men—when they could be spared—were sent to man them.

The gun-boats below the city, in co-operation with the Army, were continually engaged in shelling the place.

During the siege sixteen thousand shells were thrown from the mortars, gun-boats and naval batteries upon the city and its defences before it capitulated.

The creation and organization of this huge squadron, which has done such effective service on the upper Mississippi and its tributaries, extending over a distance of more than 3,500 miles, may justly be considered among the most wonderful events of the times. It is but little over two years since we had not a naval vessel on all those waters, where we now have a squadron of 100 vessels, carrying 462 guns, with crews amounting, in the aggregate, to about 5,500 men.

Kentucky, Tennessee and Arkansas, the upper portions of Mississippi and Louisiana, and the southern portions of those States which border on the Ohio River on the north, have been relieved and liberated through the instrumentality of the gun-boats, acting by themselves or in earnest and cordial co-operation with the armies.

Rear-Admiral Porter has well sustained the renown which the gallant and lamented Foote so nobly earned, and has carried forward to successful results a larger and more powerful force than was ever at the disposal of that heroic officer. [The Honorable Secretary does not make his meaning quite clear at this point, but it is presumed he wished to be complimentary.]

In creating and organizing this squadron, and arming and manning the vessels, it must not be forgotten that the service labored under many and great disadvantages, for the Government had no Navy Yard or establishment of its own on which the Department could depend. In the absence of any Government shops, yards, store-houses, and other necessary facilities and aids for a naval establishment, and also of mechanics and laborers, it became necessary to collect and send out and receive supplies from some central and secure position. This work has been chiefly performed at Cairo," etc., etc.

The Honorable Secretary might have said that the then commander-in-chief of the Mississippi squadron, finding only the ghost of a squadron and the skeleton of a Navy yard in the West, had built up a naval station, with shops and machinery, to meet the wants of the occasion, had increased the squadron from 21 vessels, all out of repair, to 121, mounting 680 guns, with which force, co-operating with the Army, the Mis-

Mississippi was opened to the sea, and all its tributaries brought under control of the Federal Government.

Mr. Welles, in his official report, is almost as chary of praise for the services of the Navy before Vicksburg as was the military commanding officer in the West, who, only in his last days, in the year 1865, in a few words, gave the officers and men of the Navy full credit for their services on that occasion.

The result of the herculean efforts of the Mississippi squadron was the establishment of Federal rule along the banks of the great river and its tributaries. The Confederacy was cut in twain, never to be reunited; and from this time the cause of the Rebellion began rapidly to sink.

While the Federal Government was supposed to be almost overwhelmed with the severe pressure brought to bear on it at home, the Navy was sustaining its reputation abroad, and closely guarding American interests whenever an opportunity offered. The Confederate cruisers were still pursuing their destructive career; but ships-of-war had been sent in pursuit of them in every direction, and their end was near.

In the East Indies and the China seas, the respect due to the American flag was exacted by Commander David McDougal, commanding the U. S. S. "Wyoming," who, learning of some injustice suffered by an American vessel at the hands of the Japanese, repaired to the locality (Simonosaki), and inflicted severe punishment on some forts and vessels-of-war.

These people were taught that while the Federal Government had a gigantic task to perform at home in putting down the Rebellion, yet its naval officers were just as ready as ever to resent an insult to the flag. This prompt vindication of the honor of the country abroad had the happy effect of convincing people that the strength of the American Republic only increased when it seemed to be threatened with destruction, and that it was quite competent to guard its interests abroad as well as at home.

It will be remembered that, at the commencement of the civil war, the naval force consisted of about forty-two effective vessels, scattered over the world, with about thirty-four more at the Navy Yards available for service after undergoing extensive repairs. Up to the end of 1863 the Navy Department had exhibited great energy, and, for the first time in its history, the United States had a Navy commensurate with its importance as a maritime power.

The following table exhibits the progress made in increasing the Navy since Decem-

ber, 1862, and shows what the country was capable of achieving under a pressure that would have almost crushed any other nation:

There were added to the Navy during the year 1863, by purchase, some thirty tugs, over fifty steamers for blockading and supply purposes, and over twenty other vessels for tenders and store-ships. At least twenty of the steamers were captured in endeavoring to violate the blockade.

It will be noticed that the additions to the Navy comprised vessels of the most formidable kind, and far more powerful than those of European navies.

It is due to history to state that this addition to the Navy was owing the energy and ability of Mr. G. V. Fox, Assistant Secretary of the Navy, who had the supervision of all improvements and additions of ships, Mr. Welles wisely approving all his suggestions; while the able Chief Constructor, Mr. John Lenthall, brought all his ability to bear on the models of the vessels, and Mr. B. F. Isherwood, the talented Chief of the Bureau of Steam Engineering, devised the engines, which, even to the present day, have scarcely been equalled.

The consequence of all this was that Governments disposed to be meddling failed to interfere when they saw that the Republic was not only determined to crush

the Rebellion, but to resent any outside interference.

The year 1864 opened hopefully for the success of the Union arms by land and sea, and it will be seen that the history of the American Navy was enriched by many brilliant actions, which stand high in the annals of maritime war.

It must not be supposed that during the year 1863 the Navy Department was indifferent to the ravages committed by the Confederate cruisers fitted out in England for the destruction of Federal commerce. The prompt recognition of the Confederates as belligerents by foreign powers, on the breaking out of the Rebellion, gave to the insurrection a character and strength it could never otherwise have obtained. It encouraged the Confederates to persevere, and assured them of support abroad in any measures they might think proper to undertake, and gave them an opportunity to strike a blow at the most vulnerable point of the North—its commerce.

The apparent intention of the declaration of neutrality by the powers of Europe was to exhibit a semblance of fairness, a deception of which the Confederates naturally took advantage, and which operated very unjustly against the United States. The Government was obliged to acquiesce in this acknowledgment of belligerent rights, and assume all the consequences resulting therefrom.

While the United States had a large mercantile marine scarcely second to that of Great Britain, the Confederates had actually none whatever. In a short time the latter were able by various means to get afloat and at sea several very formidable cruisers. The United States had squadrons on every foreign station representing a *bona fide* Government, while the insurgents, at the time of their receiving belligerent rights, had not a single man-of-war, a fact well understood by the Governments which, in proclaiming their "neutrality" and desire to treat both parties alike, seriously crippled the American Navy and well-nigh destroyed its mercantile marine.

The cruising of Federal ships-of-war was limited and all sorts of obstacles thrown in the way of their capturing the Confederate cruisers. The maritime powers of Europe, after granting belligerent rights to the Confederates, declared that both belligerents should be treated alike in their ports, that the public armed vessels of neither should remain longer than twenty-four hours in their harbors, nor receive supplies or assistance except such as might be absolutely necessary to carry them to their own coasts, and for three months thereafter they should not again receive supplies in any of the ports of those Governments.

While this proclamation did not at the time of its issue affect the Confederates, for the simple reason that they had then no vessels afloat, it excluded the naval ships of the United States from the principal ports of the world. As to the fairness which assumed to be the motive of the proclamation of neutrality, that must be judged from the history of the times, which will show that these proclamations were merely excuses to allow Confederate cruisers to prey upon American commerce and then find protection from United States vessels-of-war within the jurisdiction of the great European powers that were professedly in close amity with the United States.

✓ The "Sumter," the very first Confederate cruiser fitted out, affords a fair sample of how this acknowledgment of belligerent rights operated, and how much fairness there was on the part of Great Britain in carrying out the proclamation she claimed to have issued to insure equal treatment to both the contending parties. The "Sumter," after escaping to sea from New Orleans through the carelessness of the officer on blockade, and capturing many American merchant-vessels, was chased into the harbor of Gibraltar, where she was permitted to remain twelve months—instead of twenty-four hours—under the protection of British guns. Not daring to venture to sea, as she was closely watched by several Federal cruisers, the "Sumter's" officers finally transferred the vessel to an English subject, who took her to another British port, where she was refitted, loaded with a contraband cargo, and ran the blockade, carrying supplies to the Confederates.

The "Alabama," "Georgia" and "Florida" were fitted out in England, and supplied with an English armament. Their crews were mostly Europeans, and they sailed sometimes under the British, sometimes under the Confederate, flag, dealing destruction to Federal commerce wherever it could be found.

As soon as the existence of these Confederate cruisers was known to the Secretary of the Navy, ships were sent in pursuit. While in the West Indies, the Confederate cruisers were protected whenever they were able to escape into a "neutral port"—an opportunity which was offered on every hand—or get within a marine league of a neutral island. Strange to say, most of the colonial authorities in various parts of the world were in sympathy with the Confederates and hostile to the war-vessels of the United States; and, while giving aid and comfort to those *quasi* vessels-of-war, threw every obstacle in the way of Federal cruisers obtaining supplies of coal and provisions. Not only that, the "neutrals" all through the West Indies furnished the commanding offi-

cers of the Confederate cruisers (by means of the mail-steamers plying between the different ports) with information of the intended movements of every United States vessel-of-war in those waters. Worse than all, the most unfriendly feelings were manifested by the officials generally, from governor down to the lowest subordinate, in regard to the lawful operations of United States vessels.

It can easily be imagined, under such circumstances as these, how difficult it would be for a United States vessel-of-war to capture one of these sea-rovers, especially in the West Indies. The islanders, not satisfied with transmitting information to the Confederates, in some cases assumed an intimacy with the commanders of United States vessels, and deceived them with false reports.

## CHAPTER XXXIX.

SUCCESSFUL MILITARY OPERATIONS.—PROSPECTS OF SOUTHERN INDEPENDENCE.—CONFEDERATE COMMISSIONERS.—COMPLETENESS AND DISCIPLINE OF U. S. NAVY, 1863.—POSITION AND STRENGTH OF OPPOSING FORCES.—COMBINED ARMY AND NAVY EXPEDITION UP JAMES AND NANSEMOND RIVERS.—DESTRUCTION OF BLOCKADE-RUNNERS "BENDIGO," "RANGER," "VENUS" AND "DARE."—CAPTURE AND DESTRUCTION OF U. S. THE year 1864 opened with flattering prospects for the Union cause, owing to the important successes gained over the enemy in 1863, and the constantly increasing losses in material by the Confederates in consequence of the stringent blockade of the coast. The Federal Navy had been so far strengthened with a class of vessels superior to anything of which the powers of Europe could boast, that it was no longer anticipated that England or France would interfere in our domestic affairs.

The battle of Gettysburg, which caused General Lee to fall back upon Richmond, and the surrender of Port Hudson and Vicksburg, which opened the Mississippi to the sea, were the severest blows the Confederacy had received. In the opinion of many persons well qualified to judge, the possession of the Mississippi and its tributaries by the Federals was the death-blow to the Southern cause, and the final collapse of the Rebellion was simply a matter of time, and a short time at that.

The Northern people gave the Administration continued support, while the Confederates could not repair the rapid waste

of their armies, notwithstanding their most vigorous efforts. In Washington the opinion prevailed that, before the year had elapsed, the authority of the Government would be everywhere restored. This opinion also prevailed in the Navy, which had been strongly reinforced by a class of vessels able to overhaul the swiftest blockade-runners built on the Clyde; so that hardly one out of three vessels succeeded in getting into Wilmington or Mobile—the two principal ports where these illicit traders congregated. The Southern coast was so closely invested by the Navy that it was with great difficulty the blockade-runners could get in or out, although a certain proportion of them managed to elude pursuit, and carry out cargoes of cotton, which served to keep up the financial credit of the Confederacy abroad.

The Confederates, as a matter of course, felt the want of the munitions of war they had been accustomed to receive in such quantities through the blockade-runners, particularly great guns and small arms manufactured in England. Every port, from Virginia to Texas, was watched with a zeal that had never before been exerted

on such an occasion; for it was felt by the officers of the Navy that this watchfulness would be well rewarded, and the information gained from the crews of the captured vessels confirmed them in the opinion that the end was not far off.

Meanwhile the Confederate authorities professed to think that the prospects for Southern independence were brighter than ever, and that, before the end of the year 1864, their object would be accomplished, and the following year see them acknowledged as a separate Government by all the world. Upon what such an opinion was founded is not clear, and it seems impossible to account for the confidence which existed in the hearts of the Southern leaders, and with which they entered so confidently on the campaign of 1864. Any other people in the world, under the circumstances in which they were placed, would have laid down their arms, and accepted terms from their conquerors.

It was pitiable to witness the distress of the Southern people which came under the notice of naval officers, and which was caused by the determination of their leaders to continue the contest to the bitter end; for a large proportion of them felt that there was no hope of their succeeding. It was plain to them all that there was no hope of assistance from the Democratic party of the North. The re-election of President Lincoln convinced many, who had been hitherto blind to the state of affairs, that the Union cause was as heartily supported by the Democrats as by the Republicans.

Even while the Confederacy was in the throes of dissolution, the mass of the Southern people had been hugging the delusion that there was a strong peace party in the North that would make itself felt in the Presidential election of 1864; that there was such a feeling of impatience at the prolongation of the war that no Administration could stand up under it. All that was required of the South, therefore, was to make one final effort, and they would gain the rights for which they were contending—exactly what those rights were, the majority of the people seemed to have little idea.

It was proclaimed in Richmond that the impatience and dissatisfaction of the North were so great that the people of that section were determined to have peace on any terms. All that the South had to do was simply to hold its own; and, merely by securing negative results in the ensuing campaign, the Democratic party would be able to overthrow the Administration, and open negotiations for peace with the Confederacy.

In accordance with this idea, President Davis prepared to open communication

with the Democratic party of the North, and to conduct political negotiations with that party in accordance with the military movements in the coming campaign. The commissioners appointed for this purpose were Messrs. Thompson, of Mississippi, Holcombe, of Virginia, and Clay, of Alabama, who were to proceed to a convenient spot on the northern frontier of the United States, and to use whatever political opportunities the military events of the war might disclose. The commissioners succeeded in running the blockade from Wilmington, and reached Canada, only to find that the Northern sentiment in regard to the Confederacy was practically unanimous, and that all parties were determined to bring the seceding States back into the Union.

The Federal Army and Navy in the West maintained the superiority they had won, and kept open the rivers the enemy had fought so hard to close against them. By the possession of the Mississippi, the Confederacy was cut in twain. The Union Army was constantly increasing, and, in place of the raw volunteers of 1861, who could hardly handle a musket, the Union could boast of nearly a million of veteran soldiers. Grant was now called East to command, as Lieutenant-General, all the armies of the United States; while his most able coadjutor, General Sherman, with an army of veterans famous on many a field, was to commence his march through the South, and join Grant before the defences of Richmond.

The military history of the year 1864 will show the delusion under which the Southern leaders rested—that it was “only necessary for the South to remain in *statu quo*, winning no victories in the field, and to demonstrate their endurance, to gain the desired end.” The Federal Army was most complete in all its equipments, and its discipline was established. How, then, could the South hope to contend against such an organization?

The Navy was in no respect behind the Army in completeness and discipline. At the end of the year 1863, the number of guns afloat amounted to 4,443, the tonnage of the vessels to 467,967, manned by 50,000 seamen. Among the vessels already built or in process of construction, in 1864, there were 75 iron casemated and turreted vessels, carrying 302 powerful guns, that could destroy any fortress the Confederates could build on the sea-coast, and bid defiance to any force sent by foreign powers to their assistance.

It may have been chivalric in the South to attempt a contest with such a power as was brought against them, but it was hardly wise or just to the people on the part of

those who ruled the Confederacy. It cost great waste of life, with no gain in the end to the South, except the satisfaction of feeling that they only submitted when overcome by greatly superior numbers.

The whole country, although it lost men enough to have made a dozen large armies, gained greatly in prestige, and taught Europe that our people united were a match for all their powers combined.

In February, 1864, Acting-Rear-Admiral S. P. Lee, commanding the North Atlantic squadron, was in co-operation with Major-General B. F. Butler, who commanded the army of the James with his headquarters at Fortress Monroe. General Meade commanded the Army of the Potomac, with his headquarters south of the Rapidan, while the headquarters of the Army of the Shenandoah, under command of Major-General Sigel, were at Winchester.

An important part of the North Atlantic squadron, under the immediate command of Acting-Rear-Admiral Lee, was at Hampton Roads; some of the vessels were on the James, others on the York River, ready as heretofore to co-operate with the Army when the great movement on Richmond should be made, which was to bring the civil war to a termination.

The available strength of the Federal army on the Potomac, including the Ninth Corps and the reinforcements that were held in Washington, was not less than 170,000 men. The force which the Confederates had to oppose was much inferior, according to their own account. The Confederate Army of the Rapidan, at the beginning of the campaign of 1864, consisted of two divisions of Longstreet's corps with 8,000 men, Ewell's corps of 14,000, Hill's corps of 13,000, three divisions of cavalry, and the artillery. So that, according to Confederate historians, Lee's effective force of infantry did not exceed 40,000 men. The cavalry divisions did not each exceed the proper strength of a brigade, and the artillery was in proportion to the other arms, altogether not over 80,000 men of all arms. But it will not do to rely upon Confederate figures, and General Grant's estimate placed Lee's force at 120,000 men, including the militia and local forces in and about Richmond and Petersburg. This was the condition of affairs when Grant assumed command of all the armies of the Union, when a move was being made upon Richmond, and Lee was collecting all his available forces to meet the emergency.

The battles of the Wilderness were fought and a terrible resistance was made by the Confederates, but in vain, and the great Union column, after overcoming the greatest obstacles, marched on its way towards Richmond.

While General Grant was occupied on the Rapidan he had not lost sight of other forces which were to be used in combination with the Army of the Potomac, which forces were to operate in conjunction with the Navy as near Richmond as it was possible to get. This was the Army of the James, under Major-General Butler, numbering 20,000 men. General Grant directed Butler to operate on the south side of the James River in conjunction with the Army of the Potomac, the objective point of both being Richmond.

To Butler's force was to be added ten thousand men from South Carolina under Major-General Q. A. Gillmore, while Major-General W. F. Smith was ordered to report to General Butler to command the troops sent into the field from his Department.

General Butler was directed, when his forces were able to move, to seize and hold City Point. Grant intended that, in case the Confederates should be forced by his advance into their intrenchments at Richmond, the Army of the Potomac should follow them up, and by means of transports the two armies would become a unit. It would seem from this that Grant expected to fight Lee between Culpeper Court House and Richmond, and in case he should not defeat him he could make a junction with Butler, already established on the James, and be in a position to threaten Richmond on the south side, with his left wing resting on the James, above the city.

In accordance with his instructions, General Butler moved his forces up the James River, where he had the assistance of the Navy to cover his landing, which was accomplished without difficulty. Having been joined by General Gillmore on the 4th of May, Butler occupied City Point and Bermuda Hundred on the 5th; on the 6th he was in position with his main force and intrenched, and on the 7th made a reconnaissance of the Petersburg and Richmond Railroad, and destroyed a bridge a few miles from Richmond.

From this, General Butler formed the opinion that he had succeeded in getting in the rear of the Confederates, and held the key to the back-door of Richmond. He accordingly telegraphed to Washington: "We have landed here, intrenched ourselves, destroyed many miles of railroad, and got a position which, with proper supplies, we can hold against the whole of Lee's army." Butler was, in fact, under the impression that he could capture Richmond before General Grant arrived. General Butler's dispatch caused great satisfaction in Washington, which was soon dispelled by an unforeseen occurrence.

In the month of April General Beauregard had been ordered to proceed from

Charleston to strengthen the defences of Richmond. He passed through Wilmington with a large body of troops, receiving constant accessions on the march, and assumed command of the district on the south and east of Richmond.

On the 16th of May Beauregard attacked Butler's advanced position in front of Drury's Bluff, and Butler was forced back into his intrenchments between the James and the Appomattox Rivers; thereupon Beauregard intrenched himself strongly in his front, covering the city of Richmond from any further attempts of Butler in that direction. This predicament of Butler gave rise to the celebrated letter of General Grant, in which he speaks of Butler's being as completely *hors du combat* as if he were enclosed in a bottle with the cork in. General Butler held his position, although he had the naval vessels on the James and Appomattox Rivers to cover his retreat to his transports, in case of further molestation from Beauregard.

These military movements are mentioned merely to show the position of affairs in May, 1864, when the Army and Navy were brought into co-operation before Richmond, and not with any intention of criticising.

The operations of the North Atlantic squadron in the beginning of the year 1864, although not brilliant, were none the less important, as tending to cripple the Confederacy.

The blockade of the Southern coast had been closely maintained, and many blockade-runners captured or destroyed. On the 3d of January, while the "Fah Kee" (temporary flag-ship) was standing up the coast from Little River Inlet towards Wilmington bar, a steamer was discovered at the entrance of Lockwood's Folly Inlet, apparently ashore. Smoke was issuing from the vessel, and she was evidently abandoned. Boats were sent from the "Fah Kee," and great efforts made to get the vessel off, under an incessant fire from sharpshooters on the shore. Finding it was impossible to get her afloat, she was riddled with shot and shell to destroy her boilers and machinery, and abandoned. This vessel had been a successful blockade-runner, and was called the "Bendigo."

On the 11th of January another blockade-running steamer, the "Ranger," was chased on shore by the "Daylight" and "Aries," and was set on fire by her crew after landing her passengers and mail. The commanding officer of the "Governor Buckingham," aided by the "Daylight" and "Aries," attempted to extinguish the flames and haul the "Ranger" off, but the enemy, posted in force behind the sand-hills, kept up such an incessant fire that the boats' crews could not work. The "Ranger" was therefore

riddled with shot and shell, and destroyed. In the meanwhile, black smoke was seen in the direction of Topsail Inlet, and the "Aries" was ordered to chase. She soon returned, and her commanding officer, Acting-Volunteer-Lieutenant Edward F. Devens, reported a fine-looking double-propeller blockade-runner, called the "Venus," beached and on fire, between Tubb's and Little River Inlets. The enemy's sharpshooters prevented the "Aries" boats from boarding the vessel, which had been beached and set on fire to prevent her capture. This was the twenty-second steamer lost to the Confederacy and the blockade-runners within the last six months, representing a loss to the enemy of five and a half millions of dollars.

These mishaps of the blockade-runners greatly lessened the means of the Confederates, and increased the difficulties of exporting cotton—the Confederate sinews of war—and obtaining arms and equipments in return.

On the 9th instant the blockade-runner "Dare" was chased on shore and destroyed by the "Aries" and "Montgomery," as the surf was running so high on the beach that there was no chance of getting her off. On these occasions many acts of gallantry were performed. Acting-Volunteer-Lieutenant Devens mentions, in his report of the "Dare" affair, that, while in the breakers, his boat capsized, and the crew were washed on shore and fell into the hands of the enemy. Acting Master J. W. Balch, seeing his commanding officer struggling in the water, swam ashore, with two men, and brought Lieutenant Devens off on his back, and placed him in the "Montgomery's" launch. Twenty-five officers and men on this occasion, after having a hard struggle for their lives in the breakers, fell into the hands of the enemy.

The service in which the blockaders were engaged was arduous and dangerous, but both officers and men performed their duty unflinchingly.

In the latter part of January the "Iron Age," one of the gun-boats, got fast aground while attempting to get afloat the hull of the blockade-runner "Bendigo," and, through a mistaken order, was blown up and destroyed. She was, however, no great loss, being a poor vessel.

It could not be expected that, operating along such an extensive line of coast and confronted by an active and intelligent enemy, the North Atlantic squadron could be invariably successful. On the night of the 2d of February the U. S. steamer "Underwriter" was lying in the Neuse River above the line of army works, when several boats filled with men were seen coming down the stream towards her. The night

was very dark, and the boats were close on board before they were discovered and hailed. The crew sprang to quarters, and made a stout resistance; but the enemy, with great gallantry, boarded the vessel, and overpowered the crew, driving part of them below, where they were obliged to surrender, as there was no longer a chance of successfully resisting. The officers and crew were ordered into the boats, the vessel was stripped of everything portable and set on fire, when the enemy departed with their prisoners and plunder.

This was rather a mortifying affair for the Navy, however fearless on the part of the Confederates. The most pleasant circumstance connected with the affair was the conduct of Acting-Third-Assistant Engineer G. E. Allen. The captured crew of the "Underwriter" were in the enemy's boats, and proceeding up the stream, when Mr. Allen discovered that, in the hurry to get away from the "Underwriter," on which the Federals on shore had opened fire, the enemy had left but two guards in his boat. One of the other boats was turning back to assist their comrades in Mr. Allen's boat, when the latter snatched a cutlass from one of the guards, and told the men to pull for their lives. Some of the men, including the other guard, jumped overboard, and swam ashore, while Allen headed the boat towards the river-bank, landed at the foot of the line of breastworks, and delivered his one prisoner to the commanding officer of the fort. A short time afterwards, the fire reached the "Underwriter's" magazine, and she blew up.

This gallant expedition was led by Commander John Taylor Wood, of the Confederate Navy, who was accompanied by Lieutenants Gardner, Hogue, Carr, and Wilkinson. Acting-Master Jacob Westervelt, commanding the "Underwriter," was killed on board that vessel, as also several of his crew.

In this expedition fifteen boats, including three large barges, with three hundred men, came down the river with the intention of making a simultaneous attack on the forts and the gun-boat; but, finding the latter above the forts, where she ought not to have been, she was boarded and captured, with little loss to the enemy. It was to be expected that, with so many clever officers who had left the Federal Navy and cast their fortunes with the Confederates, such gallant actions would often be attempted. They frequently failed, as they would in this instance, in all probability, had the "Underwriter" been anchored below the forts. Had the enemy attacked the forts, the chances are they would have been successful, as the garrison were unprepared for an attack from the river, their most vulnerable side.

About the middle of February the destruction of the blockade-runners, "Wild Day-rell," "Nutfield," "Dee," "Emily," and "Fannie and Jennie," was reported. All these were fine vessels, and their cargoes, consisting of munitions of war, etc., were worth at least a million of dollars, a sum which by no means represented their loss to the Confederacy. Many of the vessels destroyed would have made valuable additions to the Navy for the purpose of catching blockade-runners, as they were very fast; but their commanders, rather than be captured, ran them ashore, after throwing overboard what munitions of war they had on board; and the Federal officers, finding it impossible to get them afloat, set them on fire to prevent the enemy receiving any benefit from them. The officers who made themselves particularly active in the performance of blockading duties, and who aided in the destruction of these steamers, were Commanders Pierce Crosby and William F. Spicer, and Lieutenant-Commander Francis A. Roe.

Now and then, amid these exciting scenes, the indomitable Lieutenant Cushing came forward with some remarkable feat, more daring than important. Cushing was brave to recklessness, not seeming to care for danger, and his superior officers rather encouraged his wild adventures.

In the month of February an idea struck Cushing that he would make an expedition to Cape Fear River, and capture the Confederate commander at Smithville, where there was a strong fort and a garrison of a thousand men. On the night of the 29th Cushing passed the forts at the south inlet of Cape Fear River under cover of the darkness, and proceeded to Smithville, about six miles above, his force consisting of two boats and twenty men. Smithville was a famous resort for blockade-runners, and Cushing intended, if he found any of these vessels at anchor, attempt their capture.

Finding no vessels at Smithville, Cushing landed directly in front of the hotel, which was the headquarters of the commanding officer, concealed his men under the bank, captured some negroes, and obtained from them such information as he required. Leaving some men in charge of the boats, Cushing, with Acting-Ensign J. E. Jones, Acting-Master's Mate W. L. Howorth, and one seaman, proceeded to the headquarters of the commanding officer of the defences, General Herbert. Cushing captured the chief-engineer, but ascertained that the general had gone to Wilmington. The adjutant-general was slightly wounded, and made his escape to the woods, without stopping to put on his clothes, under an impression that the garrison had mutinied. Cushing's boats were about fifty yards from

the regular landing-place at the fort, and not so far from the sentinel on the wharf, yet he succeeded in carrying off his prisoners. By the time the alarm signal-lights were shown Cushing was abreast of Fort Caswell, on his way back to the squadron. The blockade-runner "Scotia" passed from the anchorage just before Cushing got into the river, or he might have made a good night's work of it.

Cushing's hazardous undertakings were sometimes criticised as useless, but there was more method in them than appeared on the surface, and important information was sometimes obtained, to say nothing of the brilliant example of courage and enterprise which they afforded to others.

On March 8th Acting-Rear-Admiral Lee accompanied General Butler to Yorktown to arrange a joint military and naval expedition, to operate, first, up the Pamunky River against the Confederate forces near King and Queen Court House, which had attacked the party under command of Colonel Dahlgren, and killed that officer; and, second, against a force of the enemy reported as about to make an expedition from the peninsula. Owing, however, to constant fogs, the gun-boats could not co-operate with the Army, and the Confederates, finding themselves about to be surrounded, retreated from the peninsula.

A few nights later, a boat expedition, under Acting-Masters Williams and Wilder, of the "Commodore Barney" and "Minnesota," respectively, ascended the Chuckatuck Creek, and captured a party of twenty Confederate soldiers.

While these small affairs were being transacted, the Confederate naval officers were preparing to retaliate on the vessels of the North Atlantic squadron lying in Hampton Roads. Lieutenant Hunter Davidson, of the Confederate navy, had given much study to the subject of torpedoes, and had perfected what he considered an excellent torpedo-boat. It was a small steam-launch, with a torpedo on the end of a pole projecting some twenty feet from the bow of the vessel.

Up to this time both the Union and Confederate Governments had been singularly oblivious to the torpedo as a means of offence and defence. Had the Federal Government made proper use of the torpedo, it would have soon put an end to the business of blockade-running. Electric batteries could have been established, if necessary, three or four miles outside the entrance to a harbor, and the majority of blockade-runners would not have ventured to run the gauntlet of such dangerous affairs. There would have been no difficulty in planting any number of torpedoes in the channels, made to explode on contact with a vessel.

Humanitarian ideas probably had originally a good deal to do with the neglect of the Federal Government to avail themselves of these frightful adjuncts; but the Confederates were not governed by any such sentimental feelings. Later in the war they used the torpedo freely, and blew up a number of Federal vessels-of-war — which was as justifiable as any other hostile act.

On the night of April 8th, 1864, while the "Minnesota," flag-ship of Acting-Rear-Admiral Lee, was lying at anchor off Fortress Monroe, a dark object was seen, about two hundred yards distant, slowly passing the ship. It was thought to be a row-boat; and, in reply to the hail from the "Minnesota," the answer came, "Roanoke." By this time the object was nearly abeam, and apparently motionless.

The officer of the deck sent orders for a tug, which was lying astern, to go and examine the floating object; and while he was endeavoring to get the men in the tug to attend to his orders, the torpedo-boat struck the ship, exploded a torpedo, and made off in the direction of Nansemond River. Several shots were fired at the torpedo vessel, but she escaped in the darkness. The concussion caused great excitement on board the frigate. The drums beat to quarters, and the men hurried to their stations, and stood by to lower the boats; but it was soon found that no serious damage had been done. But for the fact that the torpedo, which weighed fifty pounds, was not placed in contact with the ship, but was prematurely exploded, the "Minnesota's" bottom would have been shattered, and the Federals would have lost one of their finest frigates.

This daring exploit was performed by Lieutenant Hunter Davidson, who has, no doubt, since rejoiced that he did not succeed in sending many of his old friends and shipmates to the bottom.

It demonstrated the necessity of keeping a brighter look-out for the enemy's torpedo corps, and it also showed the determination with which the Confederates carried on the war. They were first in the field with this new method of warfare, and managed it with great dexterity. It was not until they had blown up a dozen or so Federal vessels that the Government undertook to employ torpedo-boats; but this was at so late a period in the war as to be of comparatively little use.

One torpedo-boat, under cover of the "Monitor," would have settled the "Merimac" in a very short time, and a Monitor fitted with a torpedo would have destroyed the "Tennessee" with equal facility. But it requires time to become reconciled to a system that was looked upon with horror for many years after its invention.

Such is the progress of ideas that, now-a-days, so far from being struck with horror at the idea of knocking a hole in a vessel's bottom, all Christian Governments are seeking with avidity the most powerful submarine weapons of destruction.

Early in April, Acting-Rear-Admiral Lee was called upon by General Butler to co-operate with him in putting down what he called the "pirates of the creeks," which were, in fact, the irregular forces of the enemy employed along the river to inflict all possible injury on Union vessels, and keep the Federals from landing along the rivers and capturing Confederate property. Various expeditions were fitted out, consisting of forces from the Army and Navy, but no great results were obtained. It was not the kind of warfare calculated to be of any permanent benefit to the Union cause; and it demonstrated the fact that only large bodies of troops could break up the system adopted by the Confederates of harassing Federal Army posts with constant attacks.

Some boat expeditions were undertaken, in which great gallantry was displayed and a few men killed, terminating in a retreat from under the enemy's fire, after inflicting the usual damage on him. The only satisfaction gained on the expedition to Pagan Creek was a temporary scattering of the Confederate troops, and the fact ascertained that the Davidson torpedo-boat had arrived at Smithfield on the 9th inst., and had gone thence to Richmond.

On the 5th of May, the army, under General Butler, landed at City Point and Bermuda Hundred, covered by five iron-clads and ten other vessels, without opposition. The river had been carefully dragged for torpedoes, to assure the safety of the gun-boats and transports; but, notwithstanding all the care taken, the gun-boat "Commodore Jones" was blown up while dragging for these hidden enemies. The vessel, it seems, rested directly over an infernal machine, which was fired by a galvanic battery hidden in a pit on the shore. The destruction of the steamer was complete, as the torpedo, supposed to have contained four hundred pounds of powder, was exploded directly under her bottom. So great was the concussion that the vessel was lifted bodily out of the water, and her crew hurled into the air, killing and wounding more than half of the ship's company.

This shocking casualty demonstrated the power of the torpedo, when properly managed. The arrangements in this quarter were under the direction of Lieutenant Hunter Davidson; and the man who ignited the torpedo which blew up the "Commodore Jones" was killed by a musket-ball fired by the coxswain of one of the boats dragging for these infernal machines.

There were three of these torpedo-pits, from which men were ready to act as soon as a vessel should get into the desired position; and it seems as though a few marines as skirmishers, marching along the banks, might have prevented any attempt of the enemy to operate the wires. In one of the pits two men were captured, ready to explode a torpedo should any vessel pass over it. These were Acting-Master P. W. Smith, of the Confederate navy, and Jeffries Johnson, private in the Submarine Corps. In those days such adventurers stood a chance of being shot as soon as captured, though now the case would be different. These men were quite communicative, and said they had adopted this service to remain near their homes. Some of their torpedoes would explode by contact, others by lines from the shore, and others by various ingenious contrivances. All of them could be put down in one day by a torpedo-boat arranged for the purpose by Lieutenant Davidson, who had been watching the movements of the Federals since the transports first assembled in Hampton Roads.

The investigations of the naval officers soon disclosed a system of defence embracing all the navigable rivers. The torpedoes were followed up, their positions located, and, wherever practicable, they were destroyed, making the waterways comparatively safe, and enabling General Butler to reoccupy his line from Trent's Beach to Appomattox.

On the 18th of May the enemy commenced fortifying the heights about Howlett's House, commanding Trent's Reach, on the James; and although the gun-boats kept up a steady fire on their position, they persevered, and that night mounted a sufficient number of guns to keep the Federal gun-boats in check. The charts indicating less water in the channel than the Monitors drew, it was not considered advisable to move them too close to the batteries.

The enemy seemed to be prepared all along the river to meet the advance of the Navy. The pickets of the latter were driven in at Dutch Gap heights, and the Army pickets at City Point; and Acting-Rear-Admiral Lee considered that his communications were seriously threatened.

By the 19th the Monitors were advanced nearer Howlett's Battery, on which they opened with seemingly great accuracy of fire, but with no appearance of arresting the progress of this formidable work. The artillery practice was kept up until the 24th, without any result except that for a time the enemy stopped working. On the 24th the enemy made an attack on a body of troops stationed at Wilson's wharf, which attack had been anticipated by the naval commander-in-chief, who had placed the

following vessels in position to meet it: "Pequot," Lieutenant-Commander S. P. Quackenbush; "Dawn," Acting-Volunteer-Lieutenant J. W. Simmons; "Atlanta," (iron-clad), and tug "Young America"—all under Lieutenant-Commander Quackenbush.

At 12:30, on the 24th, the enemy made a vigorous attack at the wharf; the movement was, however, supposed to be a feint to draw the Union forces from Fort Powhatan. The enemy were met by the fire of the gun-boats, particularly the "Dawn"; and although their decks were swept by musketry, such was the terrible effect of their shells on the Confederates that the latter were obliged to retreat. But for the service rendered by the "Dawn," Lieutenant Simmons, the Confederates would have, no doubt, accomplished their object and

LIEUTENANT-COMMANDER (NOW REAR-ADMIRAL) S. P. QUACKENBUSH.

carried the Union position. The engagement lasted upwards of five hours, and demonstrated the value of the Navy in protecting the flanks of the Federal Army.

About the 30th of May, the Confederate naval forces came down below Drury's Bluff, and prepared to attack the Union squadron. Their plan was to send down fire-ships with the current, and, following with their vessels, attack those of the Federals. The Confederate squadron consisted of three iron-clads, with batteries of heavy rifled guns, and six gun-boats partially plated with iron. For some reason, no immediate onset was made by the Confederate rams, which caused them to lose the opportunity of seriously damaging the Federal squadron, and perhaps driving it away.

In the meantime, General Butler, as part of his campaign, proposed to obstruct the

James River by sinking vessels a mile or so below Howlett's Battery. This would make his positions at Bermuda Hundred and at City Point perfectly secure. Part of the vessels to be used for this purpose were received by Acting-Rear-Admiral Lee on the 2d of June, consisting of a bark and three large schooners loaded with shingle ballast.

It is due to Acting-Rear-Admiral Lee to say that he objected to this plan of obstructing the river, as the force of vessels at his disposal was stronger than had been originally proposed. General Grant had only asked for two iron-clads, but the Navy Department furnished Acting-Rear-Admiral Lee with four, although one of them, the "Tecumseh," was soon to leave the James River for other service. Acting-Rear-Admiral Lee took the ground that it was not the duty of the Navy to protect itself in this manner; on the contrary, where obstructions existed, they should be removed, if possible; any other course would be admitting the superiority of the enemy and a dread of his naval force. On the other hand, it was argued that obstructing the river would lessen the chance of injuring the Federal vessels, on which depended the security of the Army at the points below. The obstructions would keep off fire-rafts and infernal machines, and a smaller force of vessels would be required in Trent's Reach to prevent the advance of the Confederate iron-clads. This latter view of the case was accepted; for, as the operations against Richmond would be altogether military, and as the naval forces could not get to that city with the land and naval batteries opposed to them, the obstruction proposal was decided upon.

At that time General Grant was expected to cross the James and operate against Richmond from the south side, and, under the circumstances, it was absolutely necessary to hold the river secure against the contingencies of a naval engagement. There were many reasons why it was not desirable to bring on an engagement with the enemy's squadron, the strength of which was unknown. The river was too narrow to manœuvre in, and the channel was very shoal in places. If a battle was won, the Army would be no nearer Richmond than before. The Navy made no headway when Howlett's Battery had but four guns, and it was not likely that, with the addition of the works at Drury's Bluff, armed with the heaviest ordnance, and with the river guarded by lines of torpedoes, that the squadron could force its way up the James River.

There seems to have been a little diplomacy as to whether General Butler or Acting-Rear-Admiral Lee should assume the responsibility of placing the obstructions in

Trent's Reach, although why there should have been any dispute in such a matter it is difficult to see. It was certainly distasteful to the Confederates, who saw all their schemes of fire-rafts, torpedo-boats and iron-clad raids completely circumvented. The following letter from General Butler to Acting Rear-Admiral Lee will show the General's views on the subject:

HEADQUARTERS IN THE FIELD, }  
June 2d, 1864. }

ADMIRAL:

Your communication dated June 2d, in regard to the obstructions, is received. The five vessels sent up were procured by my order for the purpose of being used as obstructions to the river, if, in the judgment of the naval commander, they would add to the security of his fleet.

I have no difficulty as to the point at which we desire to secure the river. It is at the right of my line, near Curtis' House, at the ravine; but whether the river should be secured by obstructions or by vessels, or a disposition of your obstructions or of the vessels of your Navy, neither myself nor my engineers have any right to feel competent to give an opinion. The vessels are wholly at your service, but upon your judgment, not mine, must rest their use.

In accordance with your request, as I informed your officer, I will visit you this afternoon, and designate the spot we desire to be held; but whether by means of obstructions or by your ships, or by both combined, must be solely for you to determine.

While I know you would not undertake to give directions to my engineers as to the situation of the earth-works on land, so we ought not to presume to advise you as to your means of defending the water.

I have not consulted the War Department on the subject, whether I should procure these obstructions. I supposed that was fairly within my discretion, and I venture respectfully to add that the question whether you should use them is entirely within yours. The Navy Department cannot know the emergencies as you know them, and, I am certain, must leave that question to the good judgment of the rear-admiral commanding the fleet.

I am aware of the delicacy naval gentlemen feel in depending upon anything but their ships in a contest with the enemy; and if it was a contest with the enemy's ships alone, I certainly would not advise the obstructions, even at the great risk of losing the river; but in a contest against such unchristian modes of warfare as fire-rafts and torpedo-boats, I think all questions of delicacy should be waived by the paramount consideration of protection for the lives of the men and the safety of the very valuable vessels of the squadron.

Pardon me if I have overstepped any line of duty or courtesy in this latter suggestion.

I have the honor to be,

Very respectfully,

Your obedient servant,

BENJ. F. BUTLER,

*Major General Commanding.*

REAR-ADMIRAL S. P. LEE,

*Commanding North Atlantic Squadron.*

This diplomatic communication of General Butler led to a long correspondence between Acting Rear-Admiral Lee and himself, which ended, as it should have done, in putting the obstructions in the channel.

During the time this discussion of a quite simple matter was pending, from the 1st to the 15th of June, General Grant had fought

the battle of Cold Harbor, in which he found General Lee's army less weakened than had been expected by its losses in the battles from the Rapidan to the James. He did not feel that his own army was in condition to operate further against a well-commanded army of veterans posted behind five miles of strong intrenchments.

In the first attack on the Confederates at Cold Harbor, Grant's army was severely handled. General Hancock's attack, although at first successful, was finally repulsed, and Warren and Burnside were brought to a stand at the edge of the enemy's rifle-pits.

In writing of this battle General Grant says: "Our loss has been heavy, while I have reason to believe that the loss of the enemy was comparatively light." The loss, in fact, in three days' operations on the Chickahominy, was 7,500 men.

No doubt Grant often wished he could have the aid of the gun-boats that had given him so much help in the West; but that was an impossibility.

Realizing the fact that he could not operate with any advantage north and east of Richmond, General Grant determined to make another movement—throw his army across the James River, capture Petersburg, and place himself in communication with the Navy.

Grant had had too much experience in the West not to know what valuable aid a naval force could afford an army under certain circumstances, not to wish to take advantage of it in the present instance. In consequence of this resolution Grant moved by Lee's right flank, and threw his army across the James River, with the hope of seizing Petersburg, while his cavalry could destroy the railroad communication between Richmond and the Shenandoah Valley and Lynchburg. The movement was skillfully executed, and, on the 14th of June, the Army was safe on the opposite bank of the James, and in communication with the Army of the James and with the Navy.

The day General Grant passed the James he gave an order to sink the obstructions in Trent's Reach, and on the 15th General Butler wrote to Acting-Rear-Admiral Lee, informing him of Grant's order, and saying that he would be glad if the admiral would assist him in carrying it out.

On the 15th of June General Grant established his headquarters at City Point. The obstructions were sunk in the river, and offered a complete barrier to the enemy's fire-rafts and torpedo-vessels. The general-in-chief had now time to breathe and look about him, and observe the new condition of affairs.

By June 20th Commander T. A. M. Craven, of the Navy, had sunk in the main channel

at Trent's Reach four hulks filled with stone. There was also stretched across the channel a heavy boom, supporting a chain cable, well secured on each side of the river. Across the flats was extended a heavy boom, secured by six anchors, and in the channel, along the right bank, was sunk a large schooner loaded with stone, from which a strong boom extended to the shore. The obstructions were very complete, and were intended to be under the fire of General Butler's guns as well as those of the iron-clads.

The enemy probably was well pleased at the Federals obstructing the channel; for, notwithstanding his forts at Howlett's and Drury's Bluff, his fire-rafts, sunken torpedoes, and torpedo-boats, he felt more secure when he knew that his position could not be assailed by a naval force; while General Grant was equally satisfied now that the

COMMANDER (NOW REAR-ADMIRAL) EDMUND R. COLHOUN.

enemy's iron-clads could not get down to City Point under any circumstances.

The enemy, in order to ascertain the character of the obstructions, made a reconnaissance in the neighborhood of Dutch Gap; while Howlett's Battery, which had been greatly strengthened by the erection of new works, opened upon the vessels below the obstructions.

These were the iron-clads "Tecumseh," Commander T. A. M. Craven; "Saugus," Commander E. R. Colhoun; "Onondaga," Lieutenant-Commander C. H. Cushman; "Canonicus," Commander E. S. Parrott, and gun-boat "Agawam," Lieutenant-Commander A. C. Rhind. They returned the fire of the enemy's batteries with considerable effect, receiving little damage in return; while the Confederate iron-clads, from their position behind a wood, opened a straggling fire, of which no notice was taken. According to one Confederate account, the

battery at Howlett's consisted of but four guns—one large rifle, one large smooth-bore, and two smaller pieces.

Notwithstanding the general impression that the obstructions in the river were impassable, Acting-Rear-Admiral Lee judged it expedient to apply for an increase of the force of iron-clads, and that he might be authorized to detain the "Tecumseh."

This is the history of the obstruction of the James River, the credit of which was given to General Butler, who simply approved the proposition when it was mentioned to him, and received General Grant's order to sink the vessels.

General Grant's arrival before Petersburg, which he attacked on the 14th of June, and the crossing of the James by General Meade's army, gave quite a different aspect to affairs at City Point, and the time had arrived when the Navy stood a chance of making itself very useful.

Petersburg was one of the strongest outposts of the Confederate capital, and a formidable resistance in that quarter was, of course, expected. Part of General Butler's command commenced the attack on the works covering the approaches to the town, and succeeded in occupying them; but, by waiting the arrival of Hancock's division and failing to push their advantage, the Confederates were strongly reinforced, so that, when Hancock's and Burnside's divisions assaulted them, the Federals were repulsed with considerable loss. Next day another attempt was made and repulsed, with the capture by the enemy of part of a Federal brigade.

About the same time, General Butler sailed forth from his intrenchments to tear up the railroad leading to Richmond; but the enemy sent out an army corps from their capital, and Butler was defeated, after sending intelligence of a splendid victory which he had won!

The result of these attempts on Petersburg, which had caused great losses to the Federal Army, convinced General Grant that his best course was to envelop the town with his forces, without attacking the outworks. Attempts were made to destroy all the railroads leading to Richmond, but the enemy was so strongly posted that these efforts were generally of no benefit to the Union cause.

Thus the month of June closed with no immediate results favorable to the Federals, except that the Army was transported to the south of Richmond, and was in communication with the Navy; while the Confederates continued to strengthen daily the fortifications of Richmond and Petersburg. In fact, General Grant had encountered obstacles far greater than he had anticipated.

A large portion of the naval forces on the

James naturally assembled at City Point, where General Grant had established his headquarters, while other portions of the North Atlantic squadron were employed in the sounds of North Carolina and in the blockade of the coast.

About the middle of May, the "North Carolina," an iron-clad resembling the "Atlanta," appeared off Fort Fisher, at the mouth of Cape Fear River, accompanied by two tugs. This vessel commenced an attack at long range on the blockading vessels then employed off the north inlet, which, with the exception of the "Tuscarora," were improvised gun-boats, without sufficient strength to contend with armored vessels. The little flotilla returned the fire of the iron-clad, and after a desultory engagement which lasted two days, with little damage on either side, the iron-clad and her consorts disappeared over the bar of Cape Fear River.

It was doubtless the intention of the Confederates to disperse the few Union vessels then off the entrance to Wilmington, and start the cry of "raised blockade," as had been attempted on a previous occasion at Charleston; but in this design they failed, and the iron-clad returned to Wilmington, where her career soon afterwards ended.

The vessels that stood their ground so faithfully, in presence of this apparently formidable iron-clad, were the "Tuscarora," Commander W. A. Parker; "Britannia," Acting-Volunteer-Lieutenant S. Huse; "Mount Vernon," Acting-Volunteer-Lieutenant James Trathen; "Houquah," Acting-Master J. W. Balch, and "Nansemond," Acting-Ensign J. H. Porter. From subsequent developments, it appears that the rams "Raleigh" and "North Carolina" were constructed at Wilmington under the direction of Commodore W. F. Lynch, but were hardly considered fit to go into battle, although they served to keep the blockaders on the look-out.

Lieutenant W. B. Cushing, with his usual zeal and enterprise, volunteered to attempt the destruction of the vessel that came out to attack the blockaders, and at the same time make a reconnaissance of the defences of Cape Fear River—a very desirable project, as an expedition for the capture of Wilmington was then in contemplation. Cushing was always attempting what no one else would think of, and in this case it seemed that he was almost certain to be killed or captured.

Obtaining permission from Acting-Rear-Admiral Lee to attempt the destruction of the "Raleigh," Cushing proceeded in the "Monticello" to the western entrance of Cape Fear River. On the night of June 23d he left the vessel in the first cutter, accompanied by Acting-Ensign J. E. Jones,

Acting-Master's Mate William L. Howorth, and fifteen men, crossed the western bar, and passed the forts and town of Smithville without discovery. Near the Zeke Island batteries, Cushing came very near being run down by a steamer—doubtless a blockade-runner, bound out, with a load of cotton—and also narrowly escaped the notice of a guard-boat.

As Cushing came abreast of the Brunswick batteries, fifteen miles from his starting-point, the moon came out from the clouds, and disclosed the party to the sentinels on the river-bank, who hailed the boat, and then opened fire upon her. The people in the fort were roused, and the confusion seemed to be general. Cushing pulled for the opposite bank, and along up the other shore, until he got out of sight. When within seven miles of Wilmington both men and boat were secreted in a marsh.

When the sun rose, Cushing watched for an opportunity to capture some one from whom he could obtain information. Nearly a dozen steamers passed, three of them fine blockade-runners, and one of them Commodore Lynch's flag-ship, yet there was no suspicion of Cushing and his men hidden within a stone's throw. The Confederates felt so secure in the river, with its powerful defences, that they never dreamed of the possibility of a boat's crew running the gauntlet.

Just after dark two boats were seen rounding a point near by, and, supposing it to be an attacking party, Cushing prepared for resistance. It was simply a fishing party returning to Wilmington. Both boats were captured, and the necessary information obtained from them, and the occupants were made to act as guides for a further exploration of the river.

Cushing made mental notes of all the obstructions, forts and guns he met along the Cape Fear River, which were useful at a later date, when Fort Fisher and the other defences at the entrance of the river were attacked. Coming to a very narrow creek, Cushing poled his boat along through it for some distance, till he reached a road, which was the main highway from Fort Fisher to Wilmington. Here he divided his little party, leaving half of them behind, and marching the rest two miles further on the main road, where they halted and concealed themselves.

About noon, a mounted soldier, with a mail-bag from Fort Fisher, came along, and was much astonished when halted by Cushing, and ordered to dismount and deliver up his mail. Two hundred letters were captured, and much information obtained in regard to the enemy's plans. Cushing then waited for the mail-carrier from Wilmington to appear with dispatches

for Fort Fisher, but, just as the courier hove in sight, a blue-jacket incautiously exposed himself, and the fellow took to flight instanter, pursued by Cushing on the captured horse; but after a chase of several miles, finding that the enemy was better mounted, and that there was no chance of overtaking him, Cushing gave up the pursuit. All this took place on a traveled highway, where squads of soldiers might have been expected to pass along at any moment.

The party captured several prisoners, and, at length, becoming hungry, Master's Mate Howorth dressed himself in the courier's clothes, and, mounting the horse, started into town to market. After a time he returned with a supply of milk, eggs and chickens, having excited no suspicion, though conversing with many persons.

After destroying the telegraph as completely as possible, Cushing returned to the creek where he had left the rest of his party, reaching the river by dark. Then he attempted to land his prisoners on an island, as he had more than he could accommodate, and a steamer coming down the river passed so close that the boat's crew jumped into the water and kept their heads under for fear of being seen.

Finally Cushing put his prisoners in the small boats he had captured, and sent them adrift on the river, without oars or sails, to get home the best way they could; while he proceeded down the river with his party in the cutter, retaining one prisoner as a pilot to show him where the ram "Raleigh" lay a wreck. He hoped also to fall in with and destroy some of the Confederate vessels by setting fire to them.

Cushing found that there was nothing left of the "Raleigh" above water—like most of the Confederate rams, she had been destroyed in a panic. As for the other iron-clad, the "North Carolina," his prisoners had told him she was then at anchor off Wilmington under Captain Wm. T. Muse, but that little confidence was placed in her, and that she would not cross the bar. Cushing was also informed that the two torpedo-boats built at Wilmington had been destroyed some time previous in the great cotton fire.

As Cushing neared the forts, at the east bar of the river, a boat was seen and captured after a short chase. It contained four soldiers and two civilians, who were taken into the cutter, and their own boat sent adrift. On questioning his prisoners, Cushing found that there was a large guard-boat, with seventy-five musketeers, stationed in the narrow passage between Federal Point and Zeke Island. Notwithstanding the disparity of force, Cushing prepared to attack the guard-boat.

Just then the moon shone out brightly;

but when a few yards from the guard-boat, three boats pulled out from the battery and five more from the other end of the passage, completely blocking up the avenue to escape. The cutter at the time was under sail, and the helm was put down; but a large sail-boat filled with soldiers appeared on the scene to windward and close aboard. This was a trying position, but every one in the cutter behaved with the utmost coolness, relying on the bravery and ingenuity of their young commander to extricate them from the difficulty, for there was not the least idea of surrendering.

Suddenly turning the cutter's head, as if for the west bar, the men shipped their oars, and, pulling vigorously, the enemy soon lost sight of the boat, but they dashed off in pursuit, expecting to intercept Cushing near the bar. The latter, however, doubled on his pursuers, and, thanks to the extraordinary pulling of his sailors, gained the passage of the island, and dashed into the breakers on Caroline Shoal, a most dangerous place, where the enemy—who doubtless thought the Federals were lost—dared not follow.

Fortunately, their boat, though so deeply laden, carried Cushing and his party safely through the breakers; and, just as day broke, they reached the gun-boat "Cherokee," after an absence from the squadron of two days and three nights.

There was not a more daring adventure than this in the whole course of the war. There were ninety-nine chances in a hundred that Cushing and his party would be killed or captured, but throughout all his daring schemes there seemed to be a method, and, though criticised as rash and ill-judged, Cushing returned unscathed from his frequent expeditions, with much important information. In this instance it was a great source of satisfaction to the blockading vessels to learn that the "Raleigh" was destroyed, and that the other iron-clad ram was not considered fit to cross the bar.

Had Cushing learned in time that there was a Confederate war-vessel lying at Wilmington, he would, no doubt, have attempted her destruction, but he only heard of it when on his return down the river.

This young officer was always cool and collected when in the midst of dangers, and, although they were plenty of others equally brave, there was something particularly dashing in Cushing's character. He seemed more like a free-lance than a regular officer of the Navy, educated in the school of routine, and, in fact, the restraints of discipline were irksome to him, and his career at the Naval Academy gave little promise of the fame he subsequently acquired.

## CHAPTER XL.

FROM the time General Grant fixed his headquarters at City Point, the naval vessels in that vicinity, under Captain Melancton Smith, were employed in guarding the river or in co-operating with the Army in raids upon the enemy along the shores of the James and adjacent rivers.

It was sufficiently evident that it was Grant's intention to envelop the enemy's works, destroy his communications, and cut off supplies. Military and naval expeditions were sent to destroy all grain-fields and other sources of supply within reach, and to pick up deserters from the enemy's ranks. Among the latter were workmen who had been employed on board the "Merrimac," from whom interesting information was obtained in regard to that and other Confederate vessels. Signal stations were destroyed, their operators captured, and instruments brought away.

In these expeditions the gun-boats were constantly exposed to the attacks of Confederate artillery, which was continually on the alert to get a shot at them. So active were the enemy, that, about the middle of July, they constructed a battery

mounting 20-pounder Sawyer guns on Malvern Hill, and for a time interrupted the navigation of the James River.

The Confederates were, in fact, untiring in their efforts to make the Federal troops and gun-boats uncomfortable. On the 28th of July the enemy commenced the erection of batteries at Four Mile Creek, where they had assembled a large force for the purpose of covering the men at work in the trenches, and making a demonstration against General Foster's front. The gun-boats were brought into requisition, and the "Agawam," Commander A. C. Rhind, and the "Mendota," Commander E. T. Nichols, shelled the enemy's works for some time, rendering very effective service in connection with General Hancock's military operations.

The following night, in view of the military movements ordered by General Grant, all the troops, except General Foster's original command, were ordered to move from Deep Bottom, under cover of the gun-boats. Here, again, General Grant had an opportunity of utilizing the Navy.

As an instance of the activity of the Confederates in presence of the strong forces

of the Federals, which almost enveloped them, on August 3d they established a 6-gun rifled 12-pounder battery at Wilcox's Wharf, and opened fire on passing transports. The firing being heard on board the "Miami," Acting-Volunteer-Lieutenant G. W. Graves, that vessel pushed ahead and engaged the battery, which was driven away after a spirited resistance, the "Miami" losing but one man killed and one wounded.

On the 4th of August another battery opened on the transports near Harrison's Landing, which was driven away, after a sharp action, by the "Miami" and "Osceola."

On the same day, the "Pequot" and the "Commodore Morris" were engaged during a greater part of the time in shelling sharpshooters out of the woods, who were engaged in picking off the men on board passing transports. These Confederate artillerymen were remarkably active and energetic, but they found the people in the gun-boats equally so; and the light artillery and bushwhackers soon came to the conclusion that attacking gun-boats was a losing business. The gun-boats now so rigidly patrolled the James River that they were in close proximity to all transports passing up or down. So seldom did the enemy get a chance to fire unmolested on a transport, that they even took occasion to attack a hospital steamer, without regard to her sacred character, killing one man and mortally wounding two others; but they were soon driven away by the watchful "Pequot," Lieutenant-Commander S. P. Quackenbush, and the "Commodore Morris," Acting-Master R. G. Lee.

At this time operations were going on at Dutch Gap for the purpose of opening a new route from below Howlett's Battery to the upper reach of the James River. This scheme was not favorably regarded by army engineers, and was not a success. The enemy planted mortars not far away, which in the course of the work killed one hundred and forty laborers, and wounded many more. It also brought on a conflict with the Confederate iron-clads, which came down the river and opened upon the laborers. A long-range battle then ensued between the Union and Confederate iron-clads, which inflicted little or no injury to either side, but showed that the Dutch Gap Canal, although never likely to be of any use to the Army or Navy, would be continually inviting attacks from the enemy, which would tend to divert the attention of the Army from its main object—the capture of Richmond.

It was evidently General Grant's design to avoid any great military movement until he heard of Sherman's arrival near the Southern coast. Although Grant had no

faith in Butler's project to open the way to Richmond by Dutch Gap, he was willing that Butler should amuse himself, and thereby be kept from interfering in more important matters.

On the 2d of September Sherman entered Atlanta, Georgia, as a conqueror.

General Lee had made such a persistent defence against all the attacks on his lines, and had succeeded so well in keeping the railroads south of Richmond open, that Grant saw that to push him too heavily at this time would result in great loss to the Federal Army, while Lee would be ultimately forced to evacuate Richmond.

Up to the 17th of July, General J. E. Johnston had severely hampered Sherman in his advance through the South; but, on the above date, this able Confederate general was displaced from his command owing to intrigues in Richmond, and J. B. Hood, who was considered a fighting general *par excellence*, succeeded him. This circumstance, though it threw a damper on the army which Johnston had so ably commanded, gave Sherman fresh spirits, and he moved upon Atlanta quite certain of success.

Hood had now under his command an effective force of 40,000 infantry and artillery and 10,000 cavalry, not to mention other Confederate forces in the field; but, in spite of all his forces, Hood was no match for Sherman, and, by capturing Atlanta, the latter had a new base from which to operate, and a certainty of cutting off the retreat of General Lee in case he should endeavor to march south with his army.

If General Lee had escaped from Richmond with 50,000 men, and joined his forces with those of Johnston, previous to the latter's being relieved from command, Sherman would have been confronted by an army twice the size of his own, and would have been obliged to retreat. The Confederates would then have fortified Atlanta, as they had previously fortified Richmond; the headquarters of the Confederacy would have been in the interior instead of on the coast, and the war would have been continued indefinitely. This was probably the reason why Grant did not push matters more vigorously before Richmond, where he would have met with great losses, and perhaps have been unable to prevent Lee's final escape.

Grant had had, at Vicksburg, an example of how much cheaper it was to starve out an enemy, protected by the strongest fortifications, than to drive him out; and he had no idea of forcing Lee south into regions where he could prolong the war until the patience of the North was exhausted.

The commanding general had not only to consider the military situation, but also the

political one. The two great parties in the North were divided by distinct lines. One party, though in favor of a vigorous prosecution of the war, called for a strict observance of the Constitution in relation to the rights of the States, and severely criticised certain of the measures of the Government as arbitrary and unnecessary.

The numerous successes of the Union arms in 1863, and the advance of the Federal Army until it almost enveloped the Confederates in Richmond, greatly increased the strength of the Administration party. Everybody was now hopeful that the war would speedily be brought to a close, particularly as the supreme direction of military affairs was now in the hands of General Grant, in whom the people had entire confidence. The Democratic party was now a war party, and the conservative or peace party was in such a minority that their utterances amounted to very little.

The terrible resistance Grant had encountered on his way to Richmond had given rise to an impression that in Lee he had met an antagonist whom it would be difficult for him to overcome, and the opposition to the Government in the North was for a moment emboldened.

By midsummer, the numerous successes which had attended the Federal arms, and the adherents thereby gained to the Administration, had rendered the re-election of President Lincoln a certainty. General Grant felt that, under these circumstances, it would be unwise to do anything calculated to imperil a condition of affairs so beneficial to the country, and although he determined to leave no effort untried to capture Richmond, yet he resolved to succeed by means that would cause comparatively little loss of life.

The fall of Atlanta and the dispersion of Hood's army caused a great sensation throughout the South. The impending doom of the Confederate cause was evident to all thinking men. Hood moved his scattered forces to new lines, and Mr. Davis, anxious to prove that he had committed no mistake in removing General Johnston, repaired to Hood's headquarters in person to encourage that general and plan a new campaign that would compensate for the loss of Atlanta. On his way to Hood's army, Mr. Davis made frequent speeches to cheer up the people, declaring that General Sherman could be driven back, Atlanta recovered, etc., etc. The effect of all this was to inform Grant and Sherman of the new plan of operations decided on by the Confederate President and General Hood; for, of course, everything appeared in the Southern newspapers without regard to the injury it might inflict on the cause. In writing on this

subject, General Grant expresses himself as follows:

During this time, Jefferson Davis made a speech at Macon, Georgia, which was reported in the papers of the South, and soon became known to the whole country, disclosing the plans of the enemy and enabling General Sherman to fully meet them. Mr. Davis exhibited the weakness of supposing that an army that had been beaten and decimated in a vain attempt at the defensive, could successfully undertake the offensive against an army that had so often defeated it.

On the 24th of September, Hood commenced his new movement to endeavor to reach Sherman's rear and cut off his communications, apparently oblivious of the fact that the Union Army could live on the country, and would be relieved from a vast deal of trouble in keeping open communications. Ascertaining that Hood had crossed the Chattahoochie River on the 29th and 30th of September, General Sherman followed him; but finding that Hood was bound for Nashville, he abandoned the pursuit and returned to Atlanta, where he prepared to march to the sea across the State of Georgia. Sherman's calculation was that General Thomas could collect troops at Nashville; which, with the two army corps sent him by Sherman by way of Chattanooga, would enable him to hold the line of the Tennessee. Everything turned out well, and General Thomas gained a victory that dispersed Hood's army in every direction, and administered another crushing blow to the Confederate cause.

General Sherman was the more induced to hurry his movements from a telegram sent to him by General Grant, in which the latter says: "If you were to cut loose, I do not believe you would meet Hood's army, but you would be bushwhacked by all the old men, little boys, and such railroad guards as are left at home." With the dispositions made by the enemy, Sherman felt sure he would have nothing in his rear or on his flank to disturb him, and so pursued his devastating march to the sea—that march which is so celebrated in the annals of the civil war.

Notwithstanding all the criticisms of the press on his apparent inactivity, Grant waited patiently until he should hear that Sherman was in a position to prevent Lee and his army from escaping southward. When Sherman made a junction at Goldsboro, N. C., with the forces of Generals Schofield and Terry, which had marched from Wilmington to meet him, the fate of the Confederacy was sealed, and Grant moved on Richmond.

While Grant was watching the progress of events which we have detailed above, the Federal naval vessels in the James River, under the immediate command of Captain Melancton Smith, were actively engaged in

patrolling the river, guarding Trent's Reach, or in any co-operative service called for by General Grant. About the middle of August, the Navy Department wrote to Acting-Rear-Admiral Lee, inquiring if he could not dispense with some of the iron-clads, on the ground that James River was effectually blocked against the Confederate squadron. To this action General Grant interposed an objection, which relieves Acting-Rear-Admiral Lee from any imputation of desiring to retain the iron-clads in the vicinity of Trent's Reach when their services were so imperatively demanded elsewhere. General Grant, in his communication to the admiral, says :

While I believe we never will require armored vessels to meet those of the enemy, I think it imprudent to withdraw them. At least two such vessels, in my judgment, should be kept in the upper James River. They stand a constant threat to the enemy, and prevent them from taking the offensive. There is no disguising the fact that if the enemy should take the offensive on the water, although we should probably destroy his whole James River navy, such damage would be done our shipping and stores, all accumulated on the waters where the conflict would begin, that our victory would be dearly bought.

In consequence of General Grant's protest, Acting-Rear-Admiral Lee made such representations to the Navy Department that a sufficient force of iron-clads was allowed to remain on the James.

The army had erected a strong battery at right angles with the line of fire of the Monitors at Trent's Reach. This battery had on several occasions opened on Howlett's and completely silenced it. Hence, with the obstructions under fire of the Army and Navy guns, the Army stores, etc., at City Point were perfectly secure against any attack.

While the attention of the Commander-in-chief of the North Atlantic squadron was principally directed to the security of Grant's army against an attack by the river, the enemy in the sounds of North Carolina were doing their best to make an impression on the Federal posts established along those waters. "Great victories" over the Union forces were constantly reported, which existed only in the vivid imagination of the Confederate reporters. To show how war news was manufactured, we quote the following from the *Raleigh Weekly* :

"Colonel Griffin, Confederate forces, telegraphed to the War Department from Jackson, on the 31st of January, as follows: 'Yesterday morning engaged the enemy with a force of two hundred men and a rifled field piece. After a fight of two hours, in which we engaged twelve hundred men of the enemy and three pieces of artillery, the Yankees were driven from Windsor, N. C., to their boats. We lost six men; loss of the enemy not known.'"

Lieutenant-Commander C. W. Flusser

indignant at such a report, in a communication to Acting-Rear-Admiral Lee, writes as follows :

"The report is false from beginning to conclusion. I planned the affair and we would have captured the entire party had we been ten minutes earlier. I had forty sailors and one 12-pounder howitzer, and there were three hundred and fifty infantry. We marched about sixteen miles. There was no fight and nothing worth reporting. The rebels ran. I fired three or four times at them at long range. We held the town of Windsor several hours, and marched back eight miles to our boats without a single shot from the enemy."

In this case the Confederate commander made capital out of nothing. Flusser was as truthful as he was brave, and his account is reliable. He was ever on the alert to surprise the enemy, and his escaping death for so long a period is remarkable.

The Confederates had been employed in building a powerful ram, called the "Albemarle," on the Roanoke River, and, knowing that the Federals had no vessel that could compete with her, it was arranged to fit out an expedition of Confederate soldiers, which, in conjunction with the ram, should make a descent on Plymouth.

The United States Government attached considerable importance to the possession of Plymouth as a base for Army operations. Two or three fortifications had been erected and well armed, and these were connected by lines of intrenchments and rifle-pits, calculated, with the aid of the gun-boats, to repel any force likely to be sent to this point. No one took any account of the "Albemarle," then building up the river, of which vessel only meagre accounts could be learned, though frequent representations, by naval officers in command in the sounds, had been made to the Navy Department of the necessity for more troops in that quarter.

It seems to have been the general impression that the Confederates were cherishing the idea of repossessing and regaining those places which had been so gallantly wrested from them early in the war by the united efforts of the Army and Navy. No doubt the Department rested under the opinion that the Confederates could not, so late in the year 1864, when they had been beaten at all points, undertake to recapture the towns in the sounds, or build a formidable iron-clad, in face of the fact that we had built numerous small Monitors, any of which, lightened of their armament and provisions, could have been floated into the sounds. There was, in fact, an extraordinary supineness manifested in certain quarters in relation to defending those sounds, for the possession of which so much time and labor had been expended.

The object of the Confederates, at the commencement of the year 1864, was to call

up victories in every quarter, which would have their effect on the peace party in the North, and influence the coming Presidential election. Then, too, their victories, much exaggerated, would sound well abroad, and perhaps bring aid from the English and French Governments.

It was clearly the duty of the Federal Government never to fall back from a position so easily to be held with Monitors and gun-boats as the sounds of North Carolina; yet, for want of proper precautions on the part of the Government, the enemy besieged Plymouth.

On the 18th of April, 1864, the Confederates opened with artillery upon Fort Gray, and in the afternoon, directing a heavy fire upon the town of Plymouth, the battle became general all along the line. The enemy assaulted the works with great gal-

LIEUTENANT-COMMANDER CHARLES W. FLUSSER.

lantry, but were driven back by the aid of the gun-boats "Miami" and "Southfield," under Lieutenant-Commander Flusser. A message was sent from General Wessels to Lieutenant-Commander Flusser, acknowledging the value of the Navy's services in driving back the enemy, and requesting that the "Miami" might be kept below the town to prevent a flank movement by the Confederates. The "Southfield," Acting-Volunteer-Lieutenant Chas. A. French, anchored with the "Miami" below Plymouth, and the ram, having been reported as coming down the river, the two gun-boats were chained together to meet her. At 3:45 P.M. both steamers got underway, and stood up the river as fast as possible, and in less than five minutes the ram struck the "Miami" on the port bow, near the water line, breaking through two planks for a distance

of about ten feet. Almost at the same moment the ram struck the "Southfield" with her prow on the starboard bow, causing the latter vessel to sink rapidly. Both vessels had opened on the ram, as soon as she appeared in sight, with solid shot from their 100-pounder rifles and 11-inch Dahlgren guns, without making any perceptible impression on the "Albemarle's" armor. Lieutenant-Commander Flusser fired the first three shots himself, the third shot being a 10-second Dahlgren 11-inch shell. Directly after, Flusser was killed by a fragment of a shell—whether from the ram or from one of the "Miami's" rebounding from the "Albemarle's" armor is doubtful—and the command of the "Miami" devolved upon Acting-Master William N. Wells.

The pressure of the ram between the two vessels broke the fastenings with which they were joined, and as many of the "Southfield's" men as could do so got on board the "Miami," which vessel rapidly retreated down the river, followed by the "Whitehead" and "Ceres," the ram not appearing to make more than four knots an hour in pursuit. The "Albemarle" soon relinquished the chase, and returned to Plymouth, where the battle was still in progress.

Flusser had no superior as a gallant and energetic officer, but his arrangements for meeting the ram were certainly ill-judged. Had the four vessels been properly disposed, the "Albemarle" herself could have been rammed while endeavoring to ram others. Tying two vessels together gave the enemy the very opportunity he desired. Either of the gun-boats was twice as fast as the ram, and there were chances of crippling her that were not improved.

The "Albemarle" had with her the "Cotton Planter," a strong screw-steamer, barricaded with cotton and iron, and her presence was, perhaps, the reason why the gun-boats retreated, and left the ram mistress of the situation. The result of this unfortunate affair was the capture of the town of Plymouth, with its garrison, munitions of war, etc.

The following were the casualties in the flotilla from the attack of the "Albemarle" and "Cotton Planter": "Miami," commanding officer killed, eleven men wounded; "Ceres," one killed, eight wounded. Out of the "Southfield's" crew, seven officers and forty-two men escaped to the "Miami;" the rest were supposed to have been made prisoners. After setting fire to the part of the "Southfield" that was still above water, the "Albemarle" returned to Plymouth.

After the gun-boats left the ram in full possession of the river, the Confederates took fresh courage, and resumed their attacks on the Federal works, from which

they had been several times repulsed with loss, and, no reinforcements arriving, the forts (on the 20th) surrendered.

An attempt was made to censure the Navy for allowing the ram to come down the river; and it does seem as though obstructions and torpedoes might have been planted in the channel to prevent the "Albemarle" from reaching Plymouth; but, although piles were driven and the river partially blockaded, as events proved, the obstructions had no power to delay the advance of the Confederate vessels.

In response to a resolution of the House of Representatives, calling for information in regard to the capture of Plymouth through want of assistance from the Navy, the Secretary of the Navy sent to the Speaker copies of a number of communications, among them the following:

NAVY DEPARTMENT, September 17, 1863.

SIR—I have the honor to present for your consideration a subject of great importance connected with the maintaining possession of the sounds of North Carolina.

Information received from time to time places it beyond doubt that the rebels are constructing, and have almost completed, at Edward's Ferry, near Weldon, on the Roanoke River, a ram and an iron-clad floating battery. It is reported that these vessels will be completed in the course of five or six weeks. It is further reported that an attack on Plymouth is contemplated by land and water.

Our force of wooden vessels in the sounds, necessarily of light draft and lightly armed, will by no means be adequate to contend against the rebel ram and battery should they succeed in getting down the Roanoke, and, in that event, our possession of the sounds would be jeopardized.

It is impossible for our vessels to ascend the Roanoke River to any great distance in consequence of the shallowness of the water, their exposed situation from the fire of sharpshooters, and the earth-works represented to be located at different points, particularly at Rainbow Bluff.

Were our iron-clads, now completed, available for service in the sounds, they could not be sent there, as they draw too much water to cross the bar at Hatteras. Our light-draft ones will not be completed for some time to come.

In view of all these facts, I deem it proper to suggest the importance of an effort on the part of the Army to surprise and destroy the rebel ram and battery referred to, or of obstructing the river by torpedoes and piles, or otherwise, so as to prevent their descent.

This Department will be happy to co-operate as far as it may be able in adopting such steps as may seem practicable and adequate to secure us against threatening disaster.

I am, very respectfully,  
GIDEON WELLES.

To Hon. E. M. STANTON,  
Secretary of War.

The "Albemarle" did not appear until nine months after the above letter was written, during which time no efforts seem to have been made to hasten the preparation of light-draft Monitors, that might have been floated over the bar at Hatteras at high water.

The letter we have quoted shows that the

War Department took little interest in the matter of destroying the ram when under construction, which could only be done by a strong military and naval force combined.

There was great excitement among all those who could by any possibility be made responsible for the capture of Plymouth. Both the military and naval authorities had full knowledge of the building of the ram and floating battery; but the naval officer commanding in the sounds remained at Newbern, and left the most important position, Plymouth, with but four vessels, only two of which were of any force, to defend the place against an iron-clad represented to be almost a match for the far-famed "Merrimac." Although the attack commenced on the 18th, and lasted until the 20th, no vessels were sent from the naval forces in the sounds or soldiers from the military posts at other points.

Major-General Peck, commanding at Newbern, writes to General Butler as follows:

HEADQUARTERS,  
ARMY OF THE DISTRICT OF NORTH CAROLINA,  
NEWBERN, N. C., April 20th, 1864.

GENERAL:  
\* \* \* \* \* The enemy have appeared in force in front of Plymouth, and attacked the place. The ram has sunk the "Southfield," disabled the "Miami," and passed below Plymouth. The sound is probably by this time in possession of the enemy, and Roanoke Island will undoubtedly soon be attacked, if it has not been already. Washington, N. C., is also threatened. Firing has been heard in that direction all night and this morning. Unless we are immediately and strongly reinforced, both by land and water, all of eastern North Carolina is lost to us. Immediate action is imperatively necessary. Captain Flusser, of the "Miami," is killed.

Very respectfully,

JOHN J. PECK,  
Major-General Commanding.  
Major-General B. F. BUTLER,  
Commanding Department of Virginia  
and North Carolina.

In reply to the resolution of Congress asking for information in regard to the capture of Plymouth, Mr. Secretary Welles sent a characteristic communication, in which he says:

I transmit herewith copies of correspondence on the files of this Department relating to the construction of the rebel ram referred to, and other matters connected therewith. I also subjoin a schedule of iron-clad gun-boats of light draft in process of construction, which, in anticipation of the state of things now existing, were designed for service in the sounds and rivers of North Carolina, and the shallow interior waters elsewhere on the coast. These vessels were contracted for as soon as it was possible to do so after the necessary appropriations were made by Congress, and it will be seen by the date given that most of them were to have been completed last year, some of them as early as September. Not one has yet been delivered, and it will be some weeks before one can be made available for service.

I have felt it my duty on repeated occasions to call the attention of Congress to the necessity for a yard

and establishment where iron and armored vessels could be constructed for the Government, but the preliminary steps for such an establishment have not yet been taken. In the meantime, the Department and the Government are wholly dependent on contractors, who, if they have the will, do not possess the ability, to finish these vessels promptly. Conflicting local controversies in regard to the place which shall be selected and benefitted by the proposed important national establishment for an iron Navy, such as the present and future necessities of the Government require, have contributed to delay action on this important subject.

Having in view economy as well as the public necessities, I have at no time recommended that the number of our Navy Yards should be increased on the Atlantic coast; but it is my deliberate opinion that no time should be wasted in establishing, at a proper place, a suitable yard where iron ships can be made and repaired. We feel its necessity in an emergency which has called forth the present inquiry, and not a single contractor is able to fulfill his engagements, even for one of this class of small vessels.

In the event of a foreign war with one or more of the maritime powers, our condition would be most unfortunate, with no Government establishment for the construction and repair of armored vessels such as modern science and skill are introducing.

The omission to make provision for such an establishment, on which the Government can always depend, is to be regretted.

Such incidental aid as the Navy could render the Army was cheerfully and earnestly given at Plymouth, as it has ever been given always and at all times when its aid and co-operation could be useful. It has been less effective than it could have been, even with such boats as we have, in consequence of the unfortunate legislation of the last Congress, which, in its enrollment law, ignored the Navy, subjected seamen to military draft, tendered large bounties to such as became soldiers, but allowed no bounty to those who entered the naval service, and would not even permit naval recruits to be credited on the quotas required to be drafted.

The remedial legislation of the present Congress has thus far effected comparatively few transfers. Some suggestions which I had the honor to submit to the Senate in March last, in answer to an inquiry as to what other legislation is necessary to supply any deficiencies of men for the naval service, have not, that I am aware, been reported upon, and many of our vessels—some of which would have been ordered to the sounds of North Carolina—are still without crews.

The correspondence of Acting-Rear-Admiral Lee and the naval officers are evidence that there has been no neglect or inattention on their part at Plymouth or elsewhere in that quarter.

I have, etc.,

GIDEON WELLES.

Mr. Secretary Welles, in his communication to Congress, plainly demonstrated that the Confederates could never have captured Plymouth if adequate appropriations had been made when first asked for to construct light-draft iron-clads, but all through the war Congress required much urging from the Navy Department in order that proper appropriations should be made.

The same unwillingness to grant the Navy money exists to-day, and the country, as regards this arm of defence, is in a deplorable condition.

Following the capture of Plymouth, the Confederates early in May made an attack

on Newbern, drove in the pickets, and took possession of the railroad; but there was a fair force of gun-boats at this point, and the summons of the enemy to surrender the town was refused.

On the 23d of April, Captain Melancton Smith assumed command of the naval forces in the sounds of North Carolina, with orders, if possible, to destroy the ram "Albemarle," either by running her down with the double-ender gun-boats or in such other manner as his judgment might suggest. The most efficient vessels at the disposal of Captain Smith were the "Miami," Commander Renshaw; "Tacony," Lieutenant-Commander Truxtun; "Sassacus," Lieutenant-Commander Roe; "Mattabesett," Commander Febiger, and the "Wyalusing," Lieutenant-Commander Queen.

Captain Smith was well supplied with "instructions" by his commander-in-chief, Acting-Rear-Admiral Lee, although it seems probable that so gallant and distinguished an officer could have done equally well without them. For the reader's benefit they are here quoted:

Attacking the ram will, to some extent, intimidate it, and by getting alongside in or near contact, and on each side holding position, and by firing at the centre of its ports, whether open or shut, and on its roof, you will disable and capture it. Your guns should have double breaching and be loaded with heavy charges—say from fifteen to eighteen pounds of powder for the 9-inch guns, and solid shot—and they should be so depressed as to fire as near a perpendicular line to the slope of the roof as practicable.

If all hands lie down when the guns are fired, they will escape the rebound of broken parts from the shot.

At the time of this attack, if some shells were thrown down the smoke-stack, she might then be disabled.

The advantage of getting alongside and on each side of her is that you prevent her from ramming, and have a controlling fire upon her roof and ports.

The ports and stern are her weak points, even if her ports are kept closed, as on her attack on the "Miami" and "Southfield" shows. You can, if alongside of her, fire through them and into her, and if her roof is, as described, of railroad iron, with a thin plating over it, the mechanical difficulty of securing this is such that it will loosen and fly off under the concussion of your heavy fire; while the inside bolts will act like canister on her deck; and the concussion—especially if her ports are shut—will shock and demoralize her crew, giving you a complete victory.

Be sure and not have the neutral point of your wheel-house opposite her ports. Your wheel-houses should be abaft or forward of her roof—better abaft.

The Department seems to prefer ramming. This ram is reported as being of the usual "Merrimac" model; if so, heavy lagging and a knuckle would make her sides strong. But ramming under high speed may drive it in, or you may drive her ashore, or mount her ends, and—especially in the sounds, with some sea—sink her.

Entrusted by the Department with the performance of this signal service, I leave, with the expression of my views, to you the manner of executing it.

All assaults are exposed service, but this assault has with much real risk less than appears.

Wishing you success and promotion,  
I have the honor to be, etc., etc.,

S. P. LEE.

To Captain MELANCTON SMITH,

*U. S. Navy.*

In the coming times, these quaint dispatches of the year 1864, issued by the old salts of the Navy, will doubtless be looked upon much as we now regard the lucubrations of Admiral Benbow and his contemporaries. Whether Captain Smith benefitted by the directions so liberally showered upon him will appear when we chronicle his adventures in the sounds of North Carolina.

The following vessels, arranged in the order given, off Edenton Bay, were under Captain Smith's command :

"Miami," Acting-Volunteer-Lieutenant Charles A. French.

"Ceres," Acting-Master H. H. Foster.

"Commodore Hull," Act.-Master Francis Josselyn.

"Seymour."

SECOND LINE.

"Mattabesett," Commander J. G. Febiger.

"Sassacus," Lieutenant-Commander F. A. Roe.

"Wyalusing," Lieutenant-Commander W. W. Queen.

"Whitehead," Acting-Ensign G. W. Barrett.

The "Miami" was fitted with a torpedo to explode against the side of the ram, if opportunity offered.

At 1 o'clock P. M. on the 5th of May, the "Miami," "Commodore Hull," "Ceres" and army transport "Trumpeter" got underway from the picket station off Edenton Bay, bound to the mouth of the Roanoke River, for the purpose of laying down torpedoes. Within a short distance of the buoy, at the mouth of the river, the "Albemarle" was discovered coming down, accompanied by the steamers "Cotton Plant" and "Bombshell," laden with troops, and doubtless bound to the attack of Newbern.

The "Trumpeter" was sent back to give tidings of the approach of the ram, while the other vessels steamed slowly away, endeavoring to draw the ram as far as possible from the mouth of the river.

The ram followed the "Miami" and her consorts until the vessels fell in with Captain Smith and the other division of gunboats, when signal was made to attack the enemy. The "Mattabesett," "Wyalusing," "Sassacus" and "Whitehead" steamed towards the ram, the smaller vessels falling into the rear according to programme.

At 4:40 P. M. the ram fired the first gun, which destroyed the "Mattabesett's" launch, and wounded several men. A sec-

ond shot cut away some of the rigging. At 4:45 the Confederate steamer "Bombshell," being temporarily disabled by a shot, hauled down her flag and surrendered. The next moment the "Mattabesett" fired a broadside at the ram from a distance of 150 yards. Just afterwards, the "Sassacus" delivered a broadside, and the "Albemarle" sheered with a port-helm with the intention of ramming, but the superior speed of the "Sassacus" foiled her in this attempt, and the latter passed around the ram's stern, with a hard port-helm.

The "Bombshell" lay off the ram's port-quarter, and, having opened fire simultaneously with the "Albemarle," the "Sassacus" fired on her, and her commanding officer was under the impression that the Confederate vessel had surrendered to him.

As the "Mattabesett" had passed around the stern of the ram and was heading down the sound, the ram had turned partially around, presenting her broadside to the "Sassacus," which vessel was at that time about three or four hundred yards distant. She made for the ram, and struck her fairly with a speed of five or six knots, according to Captain Smith, or ten knots, according to Lieutenant-Commander Roe.

The ram was struck just abaft her starboard-beam, causing her to heel over, and placing her after-deck under water; so much so, that Lieutenant-Commander Roe thought she was sinking. At the same instant the "Albemarle" fired a 100-pounder rifle-shot through and through the "Sassacus," from starboard to port on the berth-deck. The collision was heavy, and the engine of the "Sassacus" was kept going in the attempt to force her bow deeper and deeper into the ram, so that some of the other vessels could attack on the other side, and enable the "Sassacus" to sink the enemy. This position the "Sassacus" maintained at least ten minutes. Hand-grenades were thrown down the ram's hatches, and attempts made to get shells into her smoke-stack, besides keeping up a severe musketry fire on her.

At length the stern of the ram swung around, and, her broadside-port bearing on the starboard-bow of the "Sassacus," the "Albemarle" fired a 100-pounder rifled shot, which passed through the starboard-side of the "Sassacus," through the empty bunkers into the starboard-boiler, clear through it fore and aft, and finally lodging in the ward-room. In a moment the "Sassacus" was filled with steam, killing and wounding many of the crew, and rendering all movement for the time impossible.

Only those who have witnessed the effect of a bursting boiler, with the steam rushing all over the ship and penetrating every nook and cranny, can appreciate the condi-

tion of affairs on board the "Sassacus." The stoutest nerves are scarcely proof against the appalling sights which meet the eye, and the cries and groans which fall upon the ear. When the vapor cleared away, so that the commander of the "Sassacus," could look around him, he saw his antagonist steaming away. The engine of the "Sassacus" was meanwhile in motion, no one being able to get into the engine-room to stop it, on account of the scalding steam, until the boiler was empty. The helm was at once put a-port, and the "Sassacus" headed up the sound, leaving the field clear for the other vessels to operate. As soon as the immediate effects of the explosion were over, the officers and men returned to their guns, firing upon the enemy until the "Sassacus" drifted out of range.

While the "Sassacus" was in contact with the "Albemarle," it was impossible for the other vessels of the squadron to fire, for fear of injuring their consort; but they subsequently failed to take advantage of the act of the gallant "Sassacus," and deliver blows upon the ram while she was at rest and somewhat demoralized from the shock she had received.

It was by such concerted action that the "Tennessee" was forced to surrender to Farragut's vessels in Mobile Bay. The failure of the larger vessels to ram the "Albemarle" is accounted for by the indiscriminate firing from the smaller ones upon the enemy. These latter vessels answered the signals made by the senior officer, without obeying them.

The engagement continued until 7:30 P. M., when darkness supervened. The "Commodore Hull" and the "Ceres" were left to keep sight of the ram, and to remain off the mouth of the Roanoke River if she succeeded in entering it, the other vessels coming to anchor in the sound.

During the engagement an attempt was made by the "Wyalusing" to lay a seine in front of the ram with the intent of fouling her propeller, but the latter ran over it without damage. A torpedo was rigged out from the "Miami," and the attempt was made to explode it against the enemy, but from some unexplained cause the attempt failed. The ram, during the attacks of the different vessels, kept moving about delivering an accurate fire, apparently unharmed, although the shot and shell rattled upon her slanting roof like hail. When the shots struck her armor they fairly sparkled, and flying up into the air fell into the water without doing any perceptible damage. The ram moved through the water at the rate of six knots an hour, and turned quickly to meet her adversaries.

When the "Sassacus" struck the "Albe-

marle," and directly afterwards was covered with vapor fore and aft, many supposed that this catastrophe was brought about by the collision, and the impression prevailed that it would not be prudent to repeat the experiment for fear the whole flotilla would be disabled by their own exertions. There does not seem to have been that system in manœuvering the vessels of the flotilla which should have prevailed; but Captain Smith had only been in command a few days, and the officers of the vessels were quite unpracticed in fleet manœuvering. Signals, though made and answered, were not carried out. It seems to have been the object to fire into the enemy at a distance of from two to three hundred yards, although it was soon evident that the ram was invulnerable in her hull against any shot from the Federal vessels.

The "Mattabesett" (flag-ship) was well handled, and her fire was remarkably accurate. She was not in the least disabled during the action.

While passing the ram in the "Wyalusing," at a distance of one hundred and fifty yards, Lieutenant-Commander Queen says: "It was my intention to run the 'Bombshell' down, but discovered in time that she had surrendered, when I immediately backed clear of her and again opened fire on the ram." Lieutenant-Commander Queen claims to have cut away the signal halliards of the "Albemarle" when her colors came down, and he supposed she had surrendered, though he was soon convinced to the contrary by a 6-inch rifle-shot crashing through the side of his vessel. Soon after, the executive officer of the "Wyalusing" reported the ship as sinking, and it seemed as if the ram was about to clear the field, as she moved about, firing her two 6-inch rifles, almost every shot taking effect on some of the vessels. As it was found on examination that the "Wyalusing" was making no more water than usual, another start was made to run the ram down, passing around her and throwing in broadsides which did no harm, and it was only at the close of the action one of the pieces of plating forward on the port side was seen to fly off. At 7:40 the "Wyalusing" ceased firing, agreeably to signal from the flag-ship.

The reports of the different commanding officers show that as rapid a fire was kept up as circumstances would admit; yet, after the attack of the "Sassacus," there was no concerted action, which is to be regretted, since one or two heavy blows in the stern of the "Albemarle" would have sealed her fate; for her rudder once disabled, the ram would have been obliged to surrender. Even if she had been repeatedly rammed, without piercing her sides, her crew would have become demoralized,

as always happens in such cases. A great deal of gallantry was shown on this occasion; but a mistake was made in not carrying out the Department's directions, to depend upon ramming.

The "Albemarle" had no opportunity to use her ram; or, if she had, failed to take advantage of it. It is probable that the commanding officer of the ram, who fought his vessel with so much judgment and gallantry, would not have lost an opportunity to use his prow if one had offered.

This remarkable engagement continued from 4:40 until 7:40 P. M., when the signal was made to cease firing, and the ram made off towards the mouth of Roanoke River. It afterwards appeared that she was not materially injured, but could have continued the contest for some time, in spite of the reports to the contrary brought by refugees from Plymouth. There were fired from the different vessels at the "Albemarle" 292 one-hundred-pounder shot and shells, 239 nine-inch shells, 60 thirty-pounder Parrott shot and shells, 59 twenty-four-pound howitzers, and some 12-pound rifle-shots—in all, 648 shot and shells.

The following damages were sustained by the vessels of the flotilla:

"Mattabesett"—one shot through water-ways abaft port-wheel.

"Sassacus"—a 6-inch solid shot through the starboard-side of the ship five feet above the berth-deck, through the starboard boiler, and exploding it; wheel badly damaged by coming in contact with the ram's stern.

"Wyalusing"—shell exploded in starboard wheel-house, cutting away two of the water-rims of the starboard wheel, etc.; one shot knocking out the gig's bottom; one shot through starboard-side of berth-deck, doing much damage; one shot on the starboard quarter above the water line, doing much damage.

"Miami"—struck three or four times, all but one shot unimportant.

This was not a great deal of damage, considering the number of targets the ram had to fire at, and seemingly nothing to disable any of the flotilla except the "Sassacus," which vessel was put *hors de combat* early in the action. The fire of the ram was, doubtless, much interfered with by the tremendous hail of shot and shell which fell upon her, obliging her to keep her shutters almost constantly closed.

The engagement showed conclusively the immense advantage of an iron-clad ram over any number of vulnerable wooden vessels such as were employed in the waters of North Carolina, and that the money spent to build "double-enders" would have been much better applied in the construction of fast rams, each with one or two heavy guns. It would have taken little more time to build

light iron-clads than it did to construct the double-enders, which, on the whole, were not well suited for their intended purpose.

The engagement with the "Albemarle," although not successful in sinking or disabling her, yet answered the valuable purpose of preventing her from doing further mischief. Her intended attack on Newbern, in co-operation with the Confederate land forces, was given up, and the ram was only seen once more after the engagement. A day or two afterwards, the "Albemarle" came to the mouth of the Roanoke River with the apparent object of putting down torpedoes; but when fired upon retreated up the stream. She was then tied to the bank under the guns of Plymouth, and heavy booms placed around her to keep off torpedo-boats, there to undergo such repairs as were found necessary. Her commanding officer was evidently satisfied that with his limited speed it was not prudent to encounter so many vessels without further strengthening the "Albemarle." The blow given by the "Sassacus" admonished him that two or three successive shocks would disable his vessel.

The commanding officer of the "Albemarle" was Lieutenant A. F. Warley, late of the United States Navy, who commanded the "Manassas" at the forts below New Orleans. In the command of the "Albemarle" he certainly showed great skill and gallantry, the credit for which we do not propose to withhold because it was exercised against the flag under which he had been trained to service. The attack on the flotilla was a bold stroke, doubtless intended to make a point for the Confederate cause, which was just then threatened with a collapse.

The "Albemarle" was constructed on the same general plan as the "Merrimac." The slanting roof and other exposed parts were covered with five inches of pine and the same thickness of oak surmounted with railroad iron, over which was an inch of plating secured through all with bolts and nuts. The ram had a cast-iron prow and carried two 6-inch Brooke rifled guns, pivoted on the bow and stern, so that the guns could be worked from the bow and quarter ports. Her overhanging sides, connected with a "knuckle," made it difficult to ram her with an ordinary gun-boat. She was driven at a speed of six knots by a propeller and drew not exceeding eight feet of water.

The Confederates throughout the war adhered to this class of vessel, which was the most convenient for them to build with their limited facilities. Considering the number the enemy constructed, and the gallantry and ability of their naval officers, it is remarkable that they should not have accomplished more.

While the Federals may be liable to criticism for allowing the enemy to get ahead of them in the construction of iron-clads, there was no want of gallantry on the part of the Navy in attempting their destruction, and the attempts were generally successful. The "Merrimac" was the only Confederate iron-clad which really accomplished much, and she bade fair at one time to change the aspect of affairs in favor of the Confederates, and overwhelm the Union people in mortification and disaster.

An effort was made to destroy the "Albemarle" by torpedoes. A party of five volunteers from the "Wyalusing" left that vessel at 2 P. M. on the 20th of May, having made a reconnaissance two days previously, and ascended the middle channel of the Roanoke River in a dinghy. The party carried two torpedoes, each containing one hundred pounds of powder, with their appendages, which were transported on stretchers across the swamps. John W. Lloyd, coxswain, and Charles Baldwin, coal-heaver, swam the river with a line and hauled the torpedoes across to the Plymouth shore close to the town. The torpedoes were then connected by a bridle floated down with the current, guided by Charles Baldwin, who designed to place them across the "Albemarle's" bow, one on either side, and Allen Crawford, fireman, who was

stationed in the swamps on the opposite side of the river, was to explode them on a given signal.

Everything worked well until the torpedoes were within a few yards of the ram, when Baldwin was seen and hailed by a sentry on the wharf. The sentry then fired two shots, which was soon followed by a volley of musketry, which induced Lloyd to cut the guiding line, throw away the coil, and swim the river again to join John Laverty, fireman, who was left in charge of the arms and clothes. These two men, with the boat-keeper, returned to the ship, after an absence of thirty-eight hours, nearly exhausted with their arduous and perilous labors. The other two men were found, after a two days' search in the swamps, almost worn out with hunger and fatigue. Although their design was defeated by the accidental fouling of the line with a schooner, these men deserve none the less credit for undertaking so perilous an adventure.

After this episode the "Albemarle" was strictly guarded, and remained at Plymouth, a constant source of anxiety to our naval authorities.

The flotilla in the sounds was reinforced by some additional vessels and placed under the command of Commander William H. Macomb, an officer fully competent to perform the duties required of him.

#### NORTH ATLANTIC SQUADRON, JANUARY 1, 1864.

ACTING-REAR-ADMIRAL, SAMUEL P. LEE. FLEET-CAPTAIN, LIEUTENANT-COMMANDER  
JOHN S. BARNES.

##### STEAM FRIGATE "MINNESOTA"—FLAG-SHIP.

Lieutenant-Commander, John H. Upshur; Lieutenant, Jos. P. Fyffe; Fleet Surgeon, W. Maxwell Wood; Assistant Surgeons, G. S. Franklin, W. S. Fort and A. Mathewson; Fleet Paymaster, Chas. P. Upham; Chaplain, Thomas G. Salter; Marine Officers: Captain, John Schermerhorn; Second-Lieutenant, C. F. Williams; Acting-Masters, Robert Barstow, A. B. Pierson and W. H. Polly; Acting-Ensigns, J. W. Grattan, E. R. Oleott, Richard Bates, John M. Cowen and James Birtwistle; Acting-Master's Mates, F. A. O'Connor, John Brann, J. M. Skarden, G. W. Kellogg and S. A. Tabor; Engineers: Chiefs, Benj. F. Garvin and John H. Long; Assistants, G. W. Sensner, James Renshaw, Jr., Guy Sanson, R. D. Taylor, F. W. Nyman, Wm. Bond and J. D. Lee; Boatswain, Wm. Bunker; Gunner, C. W. Homer; Carpenter, J. W. Stimson; Sailmaker, T. O. Fassett.

##### IRON-CLAD STEAMER "ROANOKE."

Captain, Guert Gansevoort; Lieutenant, Clark Merebant; Surgeon, Robert Woodworth; Assistant Surgeon, A. A. Hoehling; Paymaster, James D. Murray; Marine Corps: First-Lieutenant, Frank Monroe; Acting-Masters, James French, Chas. De Bevoise, H. J. Coop and T. A. Wyatt; Ensigns, D. D. Wemple and H. B. Rumsey; Acting-Ensign, E. E. Taylor; Acting-Master's Mates, H. H. Collamore, J. S. Young and John Dow; Engineers: Chief, Ed-

ward Fithian; Assistants, T. J. McK. Daniels, H. S. Leonard, H. D. Sellman, Webster Lane, Henry Blye, E. P. Rank and J. C. Cross; Boatswain, John A. Selmer; Gunner, John Caulk; Carpenter, J. H. Owens.

##### STEAMER "FORT JACKSON."

Captain, B. F. Sands; Lieutenant-Commander, Chas. S. Norton; Surgeon, Philip S. Wales; Paymaster, Clifton Hellen; Acting-Masters, W. E. Dennison and R. P. Swann; Ensign, S. H. Hunt; Acting-Ensigns, H. F. Moffat, S. R. Hopkins and F. P. B. Sands; Acting-Master's Mates, J. D. Moore, G. W. Smoot, W. M. Mann and H. S. Eytlinge; Engineers, Rodney Smith, J. E. Fox, Jared Day, John Herron, C. H. Wakefield, W. M. Prentiss and J. H. Eppes; Boatswain, P. A. Chason; Acting-Gunner, Thomas Reise; Carpenter, E. Thompson.

##### STEAMER "SHENANDOAH."

Captain, Daniel B. Ridgely; Lieutenant-Commander, R. R. Wallace; Lieutenant, S. W. Nichols; Ensigns, H. C. Taylor and Yates Sterling; Surgeon, James McMaster; Acting-Assistant Paymaster, C. M. Guild; Acting-Master, J. W. Bentley; Acting-Ensigns, W. H. Brice and J. A. Bullard; Acting-Master's Mates, Harrison Miller, L. H. White, Charles Tangwell and W. Moore; Engineers: Chief, J. W. Thomson; Assistants, J. M. Hobby, J. T. Keleher, D. P. McCartney, D. M. Fulmer, J. W.

Gardner and F. W. Towner; Boatswain, J. H. Polly; Gunner, Wm. Hardison.

## STEAMER "CONNECTICUT."

Commander, John J. Almy; Lieutenant, Louis Kempff; Assistant Surgeon, J. R. Little; Assistant Paymaster, Arthur Burtis, Jr.; Acting-Master, F. Hopkins, Jr.; Acting-Ensigns, F. Wallace, S. Harding, Jr., and J. M. C. Reville; Acting-Master's Mates, Charles Hall, E. P. Blayne, E. S. D. Howland, John Williams and Thos. Stanfield; Engineers: Acting-Chief, Alex. McCausland; Acting-Second-Assistant, David McArthur; Acting-Third-Assistants, James Campbell, John Quinn and Wm. McGrath; Gunner, Wm. Mowbray.

## STEAMER "QUAKER CITY."

Commander, James M. Frailey; Lieutenant, Silas Casey, Jr.; Acting-Assistant Surgeon, J. J. Brownlee; Acting-Assistant Paymaster, H. J. Bullay; Acting-Chief-Engineer, G. W. Farrer; Acting-Master, Edmund Kemble; Acting-Ensigns, C. J. Hill, E. M. Seaver and Richard Wilkinson; Acting-Master's Mates, G. C. Sanborn, J. B. Tew; C. H. Thorne and J. C. Constant; Engineers: Acting-Second-Assistants, W. J. Howard and J. K. Hickey; Acting-Third-Assistants, J. H. Mathews, J. R. Peterson, E. Prest, E. E. Porter and Fred'k Fries; Acting Gunner, Joseph Furlong.

## ORDNANCE STORE-SHIP "ST. LAWRENCE."

Commander, Dominick Lynch; Acting-Master, E. S. Goodwin; Acting-Ensigns, Robert Merchant, Alonzo Small and C. E. Buck; Acting-Master's Mates, Thomas Welsh, W. S. Cammett and E. M. Hemsley; Acting-Assistant Surgeon, J. E. Warner; Acting-Assistant Paymaster, W. Goldsborough; Acting-Gunner, W. E. Webber.

## STEAMER "KEYSTONE STATE."

Commander, Edward Donaldson; Lieutenant, J. P. Robertson; Acting-Masters, C. H. Corser, L. E. Degn and W. T. Buck; Acting-Ensigns, C. M. Bird and J. C. Murphy; Acting-Master's Mate, J. T. Ridgway; Acting-Assistant Surgeon, A. E. Emery; Acting-Assistant Paymaster, J. S. Stimson; Engineers: Acting-Chief, A. K. Eddows; Acting-Second-Assistant, P. L. Fry; Acting-Third-Assistants, J. H. Smith, C. A. Blake, W. H. Brown and J. B. Wilbur; Acting-Gunner, D. L. Briggs.

## STEAMER "HETZEL."

Commander, H. K. Davenport; Acting-Masters, G. B. Thompson and Milford Rogers; Acting-Master's Mates, R. P. Boss, John Rudrow, W. H. Leavitt and Tully McEntyre; Acting-Assistant Surgeon, G. W. Wilson; Acting-Assistant Paymaster, G. W. Morton; Engineers: Acting-Second-Assistant, J. H. Padgett; Acting-Third-Assistants, T. B. Cole, W. B. Whitmore and A. D. Witherell.

## STEAMER "FLORIDA."

Commander, Pierce Crosby; Acting-Lieutenant, E. C. Merriman; Acting-Assistant Surgeon, E. H. Vose; Acting-Assistant Paymaster, W. F. Keeler; Acting-Master, John McGowan, Jr.; Acting-Ensigns, Peter Williams, C. E. Rich and C. Washburn; Acting-Master's Mates, W. H. Knowlton, T. W. Rock, Robert Clifford and David Fader; Engineers: Acting-First-Assistant, William McLean; Acting-Second-Assistants, John Mason and D. M. Lane; Acting-Third-Assistants, G. F. Smith and J. W. Hockett.

## STEAMER "LOUISIANA."

Commander, Richard T. Renshaw; Acting-Ensign, E. S. McKeever; Acting-Master's Mates, Edw. Cassady, Chas. Fisher and Paul Boyden; Acting-Assistant Surgeon, T. W. Jamison; Acting-Assistant Paymaster, G. N. Simpson, Jr.; Engineers: Acting-Second-Assistants, Wm. Mara and Hiram Parker, Jr.; Acting-Third-Assistants, C. S. Servoss and R. D. Faron; Carpenter, John Mills.

## STEAMER "CAMBRIDGE."

Commander, William F. Spicer; Acting-Master, F. W. Strong; Acting-Ensigns, S. H. Mead, Jr., E. A. Small, S. K. Luce and J. K. Barker; Acting-Master's Mates, J. S. Bradbury, R. S. Sheperd and F. U. Northup; Acting-Assistant Surgeon, L. C. Granger; Acting-Assistant Paymaster, J. C. Canning; Engineers: Acting-First-Assistant, G. B. Orsewell; Acting-Second-Assistants, J. F. Powers, H. F. Hayden and John Whitaker; Acting-Gunner, Wm. Scott.

## STEAMER "STATE OF GEORGIA."

Commander, Somerville Nicholson; Lieutenant, George B. White; Acting-Assistant Surgeon, R. H. Greene; Acting-Assistant Paymaster, J. F. Griffiths; Acting-Master, Benj. Whitmore; Acting-Ensigns, Chas. Trathen, S. L. Griffin and Wm. Shultz; Acting-Master's Mates, Frank Papanti, Peter Hayes and G. E. Kidder; Engineers: Acting-First-Assistant, John Bloomsbury; Acting-Second-Assistants, W. A. Andress and A. N. Gilmore; Acting Third-Assistants, Wm. Madden, J. A. Patterson and F. R. Shoemaker; Gunner, Wm. Griffiths.

## STEAMER "MERCEDITA."

Lieutenant-Commander, H. N. T. Arnold; Acting-Assistant Surgeon, J. K. Walsh; Acting-Assistant Paymaster, J. S. Mallary; Acting-Master, D. E. Taylor; Acting-Ensigns, H. G. Marcy, Wm. Young, G. W. Williams and E. D. Pettingill; Acting-Master's Mates, Isaac Hallock and H. C. Robertson; Engineers: Acting-First-Assistant, B. F. Beckett; Acting-Second-Assistant, F. E. Porter; Acting-Third-Assistants, D. J. Lanahan, J. H. Hopkins, Wm. Ellis, W. A. Steinrock and Wm. McComb; Acting-Gunner, James Addison.

## STEAMER "MARATANZA."

Lieutenant-Commander, Milton Haxtun; Assistant Surgeon, D. D. Gilbert; Assistant Paymaster, C. S. Perley; Acting-Masters, Chas. Courtney, Jacob Kimball and J. B. Wood; Acting-Ensign, R. D. Eldridge; Acting-Master's Mates, A. F. Williamson and G. E. Chipman; Engineers: Acting-First-Assistant, C. L. Carty; Second-Assistant, Edw. Scattergood; Third-Assistants, W. H. Kilpatrick, L. R. Harvey and R. L. Webb.

## STEAM GUN-BOAT "MIAMI."

Lieutenant-Commander, Chas. W. Flusser; Acting-Masters, W. N. Wells and John Lear; Acting-Ensigns, J. W. Bennett and T. G. Hargis; Assistant Surgeon, Wm. B. Mann; Acting-Assistant Paymaster, F. W. Hackett; Engineers: Third-Assistants, H. D. Heiser, C. C. Davis and J. W. Saville; Acting-Third-Assistants, David Newell and Dennis Harrington.

## STEAMER "MORSE."

Lieutenant-Commander, C. A. Babcock; Acting-Assistant Surgeon, G. F. Winslow; Acting-Assistant Paymaster, Henry Russell; Acting-Ensigns, A. Dennett, J. F. Merry and R. M. Wagstaff; Acting-Master's Mate, Wm. Dunne; Engineers: Acting-First-Assistant, Thomas Divine; Acting-Third-Assistants, Timothy Flanders, Thomas McNellis and G. C. Rogers.

## STEAMER "NANSEMOND."

Lieutenant, R. H. Lamson; Acting-Assistant Surgeon, Edgar S. Smith; Acting-Assistant Paymaster, R. M. Gillette; Acting-Ensigns, J. H. Porter, Wm. Hunter, J. B. Henderson and Henry Waring; Engineers: Acting-Second-Assistant, Fred'k Snyder; Acting-Third-Assistants, Edw. Aspaal, C. M. Goodwin, J. T. Earl and E. A. Reilly.

## STEAMER "SOUTHFIELD."

Acting-Volunteer-Lieutenant, Charles A. French; Acting-Masters, W. B. Newman and W. F. Pratt; Acting-Ensigns, T. B. Stokes and J. R. Peacock; Acting-Master's Mates, G. W. Pratt and J. J. Allen.

Jr.; Acting-Assistant Surgeon, Wm. H. Holmes; Acting-Assistant Paymaster, Addison Pool; Engineers: Acting-Second-Assistant, Wm. F. Goff; Acting-Third-Assistants, J. B. Farrand, J. A. Strieby and Joseph Watts.

STEAMER "NIPHON."

Acting-Volunteer-Lieutenant, J. B. Breck; Acting-Ensigns, H. S. Borden, E. N. Seaman, J. J. Reagan and Niels Larsen; Acting-Master's Mates, A. R. Arey and G. W. Barnes; Acting-Assistant Paymaster, Theo. Barker; Engineers: Acting-Third-Assistants, T. L. Churchill, J. J. Sullivan, Wm. Norie and T. T. Sanborn.

STEAMER "DAYLIGHT."

Acting-Volunteer-Lieutenant, Francis S. Wells; Acting-Masters, J. H. Gleason and T. Werlhof; Acting-Ensigns, J. W. Willard and W. H. Penfield; Acting-Assistant Surgeon, F. M. Dearborne; Acting-Assistant Paymaster, H. M. Rogers; Acting-Master's Mates, Chas. Attmore and J. M. Simms; Engineers: Acting-First Assistant, Wm. H. Best; Acting-Second-Assistants, P. O. Brightman and C. O. Morgan; Acting-Third-Assistants, W. H. Crawford, J. E. Hilliard and J. T. Smith.

STEAMER "MONTGOMERY."

Acting-Volunteer-Lieutenant, E. A. Faucon; Acting-Master, G. H. Pendleton; Acting-Ensigns, W. O. Putnam, Rob't Wiley and W. P. Burke; Acting-Master's Mates, J. D. Gossick, T. J. Walker and F. C. Simonds; Acting-Assistant Surgeon, D. F. Lincoln; Acting-Assistant Paymaster, Joseph Watson; Engineers: Acting-First-Assistant, G. H. Wade; Acting-Second-Assistant, James Pollard; Acting-Third-Assistants, John McEwan, James Allen and G. M. Smith.

STEAMER "COMMODORE PERRY."

Acting-Volunteer-Lieutenant, Thos. J. Woodward; Acting-Assistant Paymaster, Wm. J. Healy; Acting-Master, J. E. Stammad; Acting-Ensign, Wm. H. McLean; Engineers: Acting-Third-Assistants, J. L. Bowers, Charles Hickey and Horace Whitworth.

STEAMER "MOUNT VERNON."

Acting-Volunteer-Lieutenant, James Trathen; Acting-Master, Edw. W. White; Acting-Ensigns, F. M. Paine, H. F. Cleverly and C. G. Walstrom; Acting-Master's Mates, Jason Ryan and Henry Rogers; Acting-Assistant Surgeon, Oswald Warner; Acting-Assistant Paymaster, H. Y. Glisson; Engineers: Acting-Second-Assistant, J. H. Horsford; Acting-Third-Assistants, H. S. Short, W. H. Smith and George Ducker.

STEAMER "BRITANNIA."

Acting-Volunteer-Lieutenant, Samuel Huse; Acting-Master, J. S. Coney; Acting-Ensigns, F. C. Ford, A. J. Lowell and M. E. Wandell; Acting-Master's Mate, R. L. M. Jones; Acting-Assistant Paymaster, C. R. Culver; Engineers: Second-Assistant, P. A. Rearick; Acting-Second-Assistant, Joseph Fernald; Acting-Third-Assistants, J. M. Barron, Wm. Hifferon and H. F. Loveaire.

STEAMER "GOVERNOR BUCKINGHAM."

Acting-Volunteer-Lieutenant, Wm. G. Saltonstall; Acting-Master, John S. Watson; Acting-Ensigns, Wm. C. Gibson, J. W. Crowell and W. B. Mix; Acting-Master's Mates, James Auld, F. H. Poole and J. W. Gardner; Acting-Assistant Surgeon, R. C. Tuttle, Acting-Assistant Paymaster, E. G. Musgrave; Engineers: Acting-Second-Assistants, C. W. Doten, Thomas Usticks, Wm. Collier; Acting-Third-Assistants, Thomas Harrison and O. L. Smith.

SUPPLY STEAMER "NEWBERN."

Acting-Volunteer-Lieutenant, T. A. Harris; Acting-Masters, R. Y. Holly and J. K. Richardson; Acting-Ensigns, Chas. Millett, C. H. Sawyer and Milton

Webster; Acting-Assistant Surgeon, John E. Cobb; Acting-Assistant Paymaster, E. H. Cushing; Acting-Master's Mates, J. P. Jones, O. F. Wixon and A. Landergren; Engineers: Acting-First-Assistant, Isaac Maples; Acting-Second-Assistant, J. E. Cooper; Acting-Third-Assistants, C. E. Rainier, F. C. Lomas and S. J. Hoffman.

STEAMER "HOQUAH."

Acting-Volunteer-Lieutenant, J. Macdearmid; Acting-Master, C. B. Wilder; Acting-Ensigns, G. P. St. John and John Duly; Acting-Master's Mates, R. B. Smith and F. B. Haskell; Acting-Assistant Paymaster, E. W. Brooks; Engineers: Acting-Second-Assistants, Wm. McLane and D. R. Wylie; Acting-Third-Assistants, J. B. Rice and Thomas Dobbs.

STEAMER "LOCKWOOD."

Acting-Volunteer-Lieutenant, G. W. Graves; Acting-Ensigns, J. Q. A. Davidson and Abram Hicks; Acting-Master's Mate, E. S. Austin; Engineers: Acting-Third-Assistants, J. T. Miller and Samuel Dean.

STEAMER "UNDERWRITER."

Acting-Master, Jacob Westervelt; Acting-Assistant Surgeon, L. R. Boyce; Acting-Assistant Paymaster, E. H. Sears; Acting-Master's Mates, W. K. Engell, Daniel Ward, C. A. Stewart and John McCormick; Engineers: Acting-Second-Assistant, J. B. Dick; Acting-Third-Assistant, S. B. Ellis.

STEAMER "CALYPSO."

Acting-Master, Fred'k D. Stuart; Acting-Assistant Surgeon, Chas. Sturtevant; Acting-Assistant Paymaster, A. H. Nelson; Acting-Ensigns, W. Jameson, J. A. French, G. W. Comer and B. H. Macintire; Acting-Master's Mates, W. H. Alger, Isaac Sawyer and P. M. Topham; Engineers: Acting-First-Assistant, Cornelius Carr; Acting-Second-Assistants, B. F. Haines, F. V. Holt and Samuel Bolson; Acting-Third-Assistants, E. Minne and W. Y. Schneider.

STEAMER "COMMODORE BARNEY."

Acting-Master, James M. Williams; Acting-Ensigns, Jos. Avant, C. J. Goodwin and C. W. Leekins; Acting-Master's Mates, John Aspinwall and W. H. Richmond; Acting-Assistant Surgeon, James Kinnier; Acting-Assistant Paymaster, Thos. Jernegan; Engineers: Acting-Second-Assistant, Hiram Warner; Acting-Third-Assistants, Charles Culver, D. S. Leffer and F. G. Shannon.

STEAMER "COMMODORE HULL."

Acting-Masters, Francis Josselyn and J. O. Johnson; Acting-Master's Mates, D. A. Simmond and Geo. Van Duzer; Acting-Assistant Surgeon, C. F. T. Hildreth; Acting-Assistant Paymaster, Jonathan Chapman; Engineer: Acting-Second-Assistant, B. F. Bee; Acting-Third-Assistants, W. Lannan, M. O. Stimson and A. C. Stuart.

STEAMER "WYANDOTTE."

Acting-Master, Thomas W. Sheer; Acting-Ensigns, Benj. Wood, Wm. Henry, Andrew McCleary and J. W. Thompson; Acting-Master's Mates, Wm. Chandler; Acting-Assistant Surgeon, James Pennoyer; Acting-Assistant Paymaster, Wm. A. Purse; Engineers: Acting-First-Assistant, J. W. Farrell; Acting-Second-Assistant, Geo. R. Dunkly.

STEAMER "MT WASHINGTON."

Acting-Master, H. H. Haynie; Acting-Master's Mate, G. B. Griffin; Engineers: Acting-Second-Assistants, Sidney Smith and Wm. Veitch; Acting-Third-Assistant, Joseph Jamieson.

STEAMER "COMMODORE JONES."

Acting-Master, J. O. Barclay; Acting-Ensign, Geo. W. Adams; Acting-Master's Mates, C. P. Luscomb, E. L. Deane and P. M. Nye; Acting-Assistant Paymaster, E. T. Chapman; Engineers: Acting-Second-Assistant, Timothy McCarthy; Acting-

Third - Assistants, J. B. McKenzie, Malcolm Sinclair and I. L. Sawtelle.

STEAMER "STEPPING STONES."

Acting-Master, D. A. Campbell; Acting-Ensign, E. A. Roderick; Acting-Master's Mate, O. P. Knowles; Engineers: Acting-Second-Assistant, J. A. Brown; Acting-Third-Assistants, M. McCarty and G. A. Whittington.

STEAMER "LILAC."

Acting-Master, John A. Phillips; Acting-Ensigns, C. B. Staples and F. B. Owens; Acting-Master's Mate, D. S. Ingersoll; Engineers: Acting-Second-Assistant, Wm. T. Graff; Acting-Third-Assistants, L. L. Copeland and J. C. Garner.

STEAMER "YOUNG ROVER."

Acting - Masters, John B. Studley and T. W. Dodge; Acting - Ensigns, D. S. Thompson and E. N. Ryder; Acting - Assistant - Surgeon, Robert Cowie; Acting - Assistant - Paymaster, George W. Stone; Engineers: Acting-Second-Assistant, James Patterson; Acting-Third-Assistant, Wm. D. Butts.

STEAMER "MYSTIC."

Acting - Masters, Wm. Wright and Samuel B. Meader; Acting - Ensigns, A. F. Hamblen and W. H. Otis; Acting-Master's Mates, J. J. Kelleher and John Rigg; Acting-Assistant-Surgeon, Alex. Mackenzie; Acting-Assistant-Paymaster, Augustus Perrot; Engineers: Acting-First-Assistant, J. B. Lowell; Acting-Second-Assistant, Isaac Buck.

STEAMER "EMMA."

Acting-Master, Geo. B. Livingston; Acting-Assistant-Paymaster, C. H. Hammatt; Acting-Ensigns, A. Buhner, R. W. Elwell and C. A. Stewart; Acting-Master's Mates, I. S. Sampson and T. M. Webb; Engineers: Acting-Second-Assistants, W. T. Worrell and W. S. Sillman; Acting-Third-Assistants, Erastus Barry, John Ross, A. L. Churchill and George Foster.

STEAMER "GENERAL PUTNAM."

Acting-Master, H. H. Savage; Acting-Ensigns, Wm. Jennings and H. R. Fowle; Acting-Master's Mates, W. F. Gregg, J. H. Gilley and B. H. Spear; Engineers: Acting-Second-Assistant, J. Henry; Acting-Third-Assistants, A. F. Rockefeller and Wm P. Higgins.

STEAMER "VICTORIA."

Acting Masters, Chas. W. Lee and Alfred Ever-son; Acting-Ensign, Paul Borner; Acting-Master's Mates, B. W. Tucker and Wm. Moody; Acting-Assistant-Surgeon, John G. Park; Acting-Assistant-Paymaster, Samuel Thomas; Acting-Third-Assistant Engineer, John Haversfield.

STEAMER "HUNCHBACK."

Acting-Master, Robert G. Lee; Acting-Ensign, E. K. Valentine; Acting-Master's Mates, John Mad-dock and J. F. Sias; Acting-Assistant-Paymaster,

Henry Cushing; Acting-Second-Assistant Engineer, M. Smith.

STEAMER "SHAWSHEEN."

Acting-Master, Henry A. Phelon; Acting-Ensign, Charles Ringot; Acting-Master's Mate, Wm. Rushmore; Engineers: Acting-Second-Assistant, Richard Anderson; Acting-Third-Assistant, John Wall.

SHIP "RELEASE."

Acting-Master, Jonathan Baker; Acting-Ensign, F. A. Gross; Acting-Master's Mate, F. T. Baldwin; Acting-Assistant Surgeon, John Spare; Acting-Assistant Paymaster, G. L. Ely.

STEAMER "SAMUEL ROTAN."

Acting-Master, Wm. G. Nutting; Acting-Ensigns, T. W. Spencer and W. H. Jennings; Acting-Master's Mates, C. H. Packer and W. L. Lindley.

SLOOP "GRANITE."

Acting-Master, Ephraim Boomer; Acting-Master's Mate, Wm. B. Miles.

STEAMER "WHITEHEAD."

Acting-Ensign, Geo. W. Barrett; Acting-Master's Mates, T. E. Quayle, T. M. Nelson and W. S. Baldwin; Engineers: Acting-Second-Assistant, Moses Peterson; Acting-Third-Assistants, R. H. Ryan and G. B. McDermott.

STEAMER "COHASSET."

Acting-Ensign, P. C. Asserson; Acting-Master's Mate, E. H. Schmidt; Engineers: Acting-Third-Assistants, J. A. Spaulding and J. H. Tinn.

STEAMER "FAH-KEE."

Acting-Ensigns, F. R. Webb, D. W. Carroll, E. W. Pelton, J. W. Luskomb and John Williams; Acting-Master's Mates, H. A. Winslow and A. W. Harvey; Acting-Assistant Paymaster, A. B. Thornton; Engineers: Acting-Second-Assistant, G. W. Foster; Acting-Third-Assistants, E. F. Lewis, J. H. Hutton, Gilbert Webb and Andrew Harris.

STEAMER "SEYMOUR."

Acting - Ensign, J. L. Hayes; Acting - Master's Mates, Edwin Smith and J. B. Bailey; Engineers: Acting-Second-Assistant, Newton Eggleston; Acting-Thir - Assistants, John Whittaker and Philip Hubletz.

TUG "ALERT."

Acting-Ensign, John Bishop; Engineers: Acting-Second-Assistant, Wm. Mahan; Acting-Third-Assistants, S. D. Edmund and Eli Simpson.

TUG "ZOUAVE."

Acting-Master's Mates, J. F. Daggett and T. H. P. Gross; Engineers: Acting-Third-Assistants, S. M. Van Clief, Richard Wareham and J. W. Cross.

STORE-SHIP "ALBEMARLE."

Acting-Assistant Paymaster, E. Mellach; Gunner, E. A. McDonald; Carpenter, M. W. Paul.

# CHAPTER XLI.

## THE RED RIVER EXPEDITION,

UNDER MAJOR-GENERAL N. P. BANKS, ASSISTED BY THE NAVY UNDER REAR-ADMIRAL DAVID D. PORTER.

THE ORIGIN, OBJECTS AND PLAN OF THE EXPEDITION.—THE NAVAL VESSELS AND TROOPS ASSEMBLE AT THE MOUTH OF THE RED RIVER.—REMOVAL OF OBSTRUCTIONS.—CAPTURE OF THE CONFEDERATE CAMP AT SIMMSPORT.—ATTACK AND CAPTURE OF FORT DE RUSSY.—ARRIVAL OF THE FLEET AND TROOPS AT ALEXANDRIA.—UP THE FALLS.—THE ABOMINABLE COTTON TRAFFIC.—GENERAL A. J. SMITH'S "RAGGED GUERRILLAS."—BRIDGE OF COTTON.—ADVANCE ON SHREVEPORT.—BANKS MEETS A REVERSE NEAR PLEASANT HILL.—BATTLE AT SABINE CROSS ROADS.—CONFEDERATES MAKE GOOD USE OF BANKS' CANNON AND ARMY WAGONS.—BATTLE AT PLEASANT HILL.—BANKS VICTORIOUS, BUT ORDERS A RETREAT TO GRAND ECORE.—RETREAT OF THE FLEET IMPEDED.—ENGAGEMENT BETWEEN THE "OSAGE" AND "LEXINGTON" AND 2,500 CONFEDERATES UNDER GENERAL GREEN.—REPORTS OF LIEUTENANT-COMMANDER SELFRIDGE AND GENERAL KILBY SMITH.—THE ARMY AND NAVY AT GRAND ECORE.—MINOR ENGAGEMENTS.—BATTLE AT CANE RIVER.—THE "EASTPORT" BLOWN UP.—THE ATTACK ON THE LITTLE "CRICKET."—FEARFUL SCENE OF CARNAGE.—THE "JULIET" DISABLED.—BATTERIES ENGAGED ALONG THE RIVER.—DISSATISFACTION OF THE ARMY.—THE SQUADRON IN A BAD POSITION.

**N**O official account detailing the particulars of this unfortunate expedition was forwarded by General Banks until long after the expedition failed.

A question has been standing for many years as to who originated it, and this has been settled by the highest authority. General Grant, in his Memoirs, says that the expedition originated with General Halleck, who urged General Banks, with all his authority, to undertake it. This is, without doubt, the origin of the affair.

After the fall of Vicksburg and Port Hudson, General Sherman proposed to Admiral Porter an expedition to Shreveport, La., *via* Red River; but on careful inquiry it was found that the water was unusually low for the season of the year, and therefore the expediency of a movement was doubted. But, as General Sherman was anxious to undertake the expedition, and promised to be in Natchez in the latter

part of February, 1864, Admiral Porter ordered the following vessels to be ready near the mouth of Red River to accompany the Army whenever the latter should commence its march: the "Essex," "Benton," "Lafayette," "Choctaw," "Chillicothe," "Ozark," "Louisville," "Carondelet," "Eastport," "Pittsburg," "Mound City," "Osage," "Neosho," "Ouichita," "Fort Hindman," "Lexington," "Cricket," "Gazelle," "Juliet," and "Black Hawk" (flagship). This squadron comprised the most formidable part of the Mississippi fleet, only the lighter vessels being left to protect the Mississippi, the Ohio, and their tributaries; for, supposing that the Army would send a large force into the interior of Louisiana, Admiral Porter determined there should be no want of floating batteries for the troops to fall back on in case of disaster.

The Admiral had written to General Sherman that he did not think the time propitious for ascending Red River, and

when he arrived in Natchez he found that Sherman had gone to New Orleans to see General Banks. The impression was that he went there to obtain Banks' co-operation in the great raid through the South, which Sherman afterwards so successfully accomplished without Banks' assistance.

By looking at the map, it will be readily seen how valuable a position Mobile would have been at such a time if held by the Union troops, its railroad system connecting with all the Southern roads, by which Sherman could have been supplied with provisions and stores, as well as reinforcements of men in case of necessity, while the straggling forces of the enemy between him and the Gulf would have been cut off. It would strike the military observer that to insure complete success Mobile should have been captured at the time Sherman started on his raid, which would have placed the entire country between him and the sea at the disposal of the Federal forces.

Fortunately, as matters turned out, General Sherman was able to overcome all obstacles that impeded his progress, and to subsist his army on the country through which he passed.

At the time Sherman went to New Orleans to see General Banks, the latter had under his command at least 50,000 men, and could have easily captured Mobile, then garrisoned by only about 10,000 troops; but this place, so easy of access and so easily captured from the land side, was left unnoticed until the latter part of the war. Its capture was then undertaken by Rear-Admiral Thatcher and General Canby. The result was the loss of several vessels blown up by torpedoes, which the Confederates were able to lay down with impunity.

General Banks had been writing to Admiral Porter up to the latter part of February, 1864, to co-operate with him in an advance into the Red River region, and in his answers the Admiral had tried to impress on the General the impropriety of such a movement at the then low stage of water, recommending him to wait until there was a prospect of a rise.

The General, however, insisted that he

had certain information of a rise in Red River, and hinted that if he failed in his expedition it would be for want of assistance from the Navy. The Admiral therefore determined that, if Sherman gave up the enterprise, he would co-operate with Banks. The former had never allowed the military authorities to wait for him when anything was to be done to carry on their work, and did not propose to do so on this occasion, although he felt that he was being entangled in an embarrassing predicament, from which it would require all his energies to extricate himself.

When Sherman returned from New Orleans, he informed the Admiral of his proposed advance into the interior of the South, and having abandoned the idea of undertaking the Red River expedition, he had promised General Banks to lend him 10,000 men, under the command of General

A. J. Smith, whom he felt sure would co-operate with the Navy in the most energetic manner. And now, finding that Banks was determined to start on this expedition regardless of consequences, Admiral Porter resolved to do everything in his power to assist his military operations.

To make his success certain,

General Halleck had determined to send an army into Arkansas under General Steele. This force reached Little Rock early in March, and, after providing themselves with stores and munitions of war, departed from that place on the 24th, and, after a hard march, arrived at Arkadelphia, March 29th, where, for the present, we will leave them.

General Banks had informed the Admiral that he would march an army of 36,000 men to Alexandria, La., and would meet him at that place on the 17th of March. On the 10th of March the naval vessels had assembled at the mouth of Red River, and, on the 11th, General A. J. Smith arrived with 10,000 excellent soldiers in transports. After inspecting the forces on shore, the Army and Navy moved up the river on the 12th, the fleet of gun-boats followed by the Army transports. As the largest vessels could barely pass the bar at the mouth of Red River, owing to the low stage of

THE "BLACK HAWK," ADMIRAL PORTER'S FLAG-SHIP.

water, the Admiral could not cherish any very favorable hopes for the future; but the party were fairly embarked on the expedition, and the only course was to continue and do the best that could be done.

The Confederates, having been notified that a movement would soon be made up Red River, had used all their energies in preparing to repel the invaders. Some eight miles below Fort De Russy they commenced a series of works near the Bend of the Rappionnes, commanding a difficult pass of the river, and placed formidable obstructions to prevent the passage of the gun-boats.

therefore, that it was best to land the troops; so the Admiral turned off into the Atchafalaya River with the "Benton," "Lexington," "Chillicothe," "Louisville," "Mound City," "Carondelet," "Ouichita," "Pittsburg," and "Gazelle," followed by the troops in transports; while the rest of the gun-boats pushed on up Red River, with instructions to remove the obstructions, but not to attack Fort De Russy until the flagship's arrival, or until General Smith's troops came in sight.

The enemy had at this place some 5,000 men, and the only chance of capturing them was by a combined movement of the Army and Navy.

THE FLEET OF GUN-BOATS, UNDER REAR-ADMIRAL PORTER, STARTING OUT, FOLLOWED BY THE ARMY TRANSPORTS, HAVING ON BOARD 10,000 SOLDIERS, UNDER GEN. A. J. SMITH, MAY 12, 1864.

(FROM AN ORIGINAL PEN-AND-INK DRAWING BY REAR-ADMIRAL H. WALKER.)

These obstructions consisted of a line of heavy piles driven deep into the muddy bottom, and extending quite across the river, supported by a second tier of shorter ones below, on which rested braces and ties from the upper line. Immediately below the piles, a raft of heavy timber, well secured, extended across the river, a portion of the logs resting on the bottom. Finally, a forest of trees had been cut from the banks and floated down upon the piles, making an apparently impassable obstruction.

When the Admiral found the character of these obstructions, he feared that they would delay the vessels so long that the enemy would escape from Fort De Russy, and destroy all their stores and munitions of war. General Smith and he agreed,

At about noon, on the 12th of March, the Federal forces arrived at Simmsport, and found the enemy posted in force some three miles back of that place. The commanding officer of the "Benton," Lieutenant-Commander James A. Greer, was ordered to land his crew and drive in the enemy's pickets; and, General Smith's transports coming up, the troops landed and took possession of the Confederate camp, the enemy retreating towards Fort De Russy.

That night General Smith concluded to follow the enemy by land, while the Admiral agreed to proceed up the Red River, with all the gun-boats and transports, and meet the Army at Fort De Russy.

In the meantime, the gun-boats that had been sent on in advance had reached the

obstructions, and their crews were endeavoring to force a passage. It was a herculean job, but the energetic sailors had had too much experience in the strange episodes of the civil war to quail before such obstacles. The piles near the banks were first removed, and a rush of water came through, carrying away the sides of the banks; then, by pulling up piles and ramming the obstructions with the iron-clads, an opening was made in twelve hours for the passage of the fleet.

The "Eastport," "Osage," "Fort Hindman," and "Cricket" proceeded up within a short distance of Fort De Russy, where the advance of General Smith had arrived, and there was quite a brisk firing of artillery and small arms. The gun-boats, however, could not take part in this skirmish without risking the safety of the Federal soldiers. A 100-pound rifle-shell was fired at the water battery, which burst over it, and drove the enemy out; but to have continued the fire upon the main fort would have injured friends more than foes, the former being in a direct line with the fire of the gun-boats.

The progress of the fleet around from the Atchafalaya had necessarily been slow, encumbered with so many transports, and the barricade had partly filled up again, so that it took several hours to pass through the obstructions; but the flag-ship reached the fort in time to see the enemy evacuating it, and the Union soldiers taking possession.

The fort was originally garrisoned with 5,000 men, under General Walker, who had marched out to meet the Federal Army, leaving 24 officers and 300 men to defend it; but, if Walker wished to meet Smith's forces, he was disappointed, for the latter saw nothing of him.

On his march from Simmsport, General Smith was greatly annoyed by sharpshooters, and was compelled to bridge innumerable bayous. When he reached Monksville, within three miles of the fort, he was informed that a strong force of the enemy would dispute his passage. The 3d Indiana Battery was placed in position, and General Mower formed his men for the attack. The first line was under the immediate command of Colonel W. J. Shaw, 14th Iowa Infantry, commanding 2d Brigade, 3d Division, 15th Army Corps, composed of the 13th and 32d Iowa and the 3d Indiana Battery. The space intervening between the Union troops and the fort was obstructed with fallen trees; on the left of the line, a thick wood afforded an excellent cover for riflemen.

It was now 4 P. M., and, although the Union troops had been marching and building bridges all day, they came up to their

work as fresh as if they had just broken camp. Part of the 14th Iowa were deployed as skirmishers to within three hundred yards of the enemy's works, occupying some rifle-pits which had been thrown up by the Confederates, and during the progress of the fight did good execution as sharpshooters.

In the meantime, the 58th Illinois, 8th Wisconsin and 29th Iowa, who had come up from the rear, were advancing to obtain position for attack. The fire from the fort all this time was rapid, but did little execution. Shot, shell and musketry were passing between the combatants for two hours, while the naval vessels were unable to fire for fear of killing their friends. At the end of that time, all of Smith's troops having got into position, they advanced and carried the works without difficulty, capturing 24 officers, 275 men and 10 pieces of artillery.

This affair was well managed on the part of the Army, whose loss was small; General Smith was an able commander, and his soldiers were veterans—each man, as it proved afterwards, was a host in himself.

It was pleasant to see the United States flag floating over a work which had been built with so much trouble and expense to the Confederates, and the Navy regretted that it could not take a more important part in the affair.

Their operations at Fort De Russy showed the fortitude of the Federal soldiers; and, if the rest of Banks' men were of the same material, there was no reason why the army should not reach Shreveport in triumph.

An order had been sent to Lieutenant-Commander S. L. Phelps to push on with the fastest and lightest-draft gun-boats to Alexandria, as soon as the army should reach the fort, in order to seize any steamers that might be lying there with steam down. Owing to obstructions in the river, the dispatch-boat carrying the message was delayed five hours, and Phelps reached Alexandria just thirty minutes too late, the swiftest of the naval vessels arriving just in time to see six steamers escaping up "the Falls." One of them, the "Countess," having grounded, was burned by the enemy.

The fleet had thus reached Alexandria on the 15th of March, two days earlier than had been promised General Banks. On the day following, there were nine gun-boats lying off the town, and one hundred and eighty sailors were landed, to occupy the place and take possession of any Confederate Government property that might be stored there. The inhabitants were respectfully treated, and everything was as quiet as a New England village.

General Smith remained behind a few days to destroy the formidable works which he had captured, and a gun-boat was left

at Fort De Russy to try some experiments with rifle-guns on three casemated water batteries covered with several thicknesses of railroad iron. A little experience satisfied the experimenters that such works could not resist the heavy naval artillery, and orders were given to blow them up; thus destroying the formidable barrier intended to close Red River against the fleet. For their dimensions, these works were as strong as any ever built in the Confederacy. After 3,000 pounds of powder had been exploded, there remained three huge excavations, while the whole vicinity was strewn with broken timbers and twisted iron, pre-

gress up the river. This was General Mower's idea, apparently forgetting that the gun-boats could, in a very short time, have destroyed forts, troops and all, with their 100 guns. The Admiral endeavored to show General Mower, who was a fearless man, and in favor of pushing on regardless of obstacles, that the 5,000 troops were too few in number to defeat the 20,000 Confederates in the advance, who were well supplied with artillery. Besides, he urged that it would be very discourteous to General Smith to go forward without consulting him, and leave him, with only 5,000 men, unprotected by the gun-boats. Desperate

CAPTURE OF FORT DE RUSSY.

senting a scene more easily imagined than described.

On the 16th, General Mower reached Alexandria with about 5,000 men, in transports; and, having formed a rather low estimate of the enemy's forces in this region, he urged Admiral Porter to push on at once with the force they then had, and try and get to Shreveport in advance of the main army.

The Confederate general, Walker, had exhibited very little enterprise; for, with the 5,000 men under his command, he might have seriously impeded the Federal advance, and then at Fort De Russy have offered a stubborn resistance to further

as this scheme of Mower's appeared, we think it would have succeeded better than General Banks' movement on Shreveport a short time afterwards.

General Taylor had occupied Alexandria with 15,000 men, and had hurriedly decamped on the approach of the Army and Navy, leaving three pieces of artillery behind.

On the 18th of March, General A. J. Smith arrived, ready to march at a moment's notice when Banks should give the order. Meanwhile, there was no news whatever of General Banks' whereabouts. His cavalry arrived on the 19th, and on the 25th, eight days after he had agreed to

meet the Admiral at Alexandria, he appeared upon the scene. Then commenced a series of delays, which culminated in disasters, that have left a reproach upon the Red River expedition which time cannot efface; for, no matter how gallant the officers and men may have been, they share in the humiliation brought upon them by an unmilitary commander, who, at the head of nearly 40,000 men, fully equipped, was driven out of a country they could have held forever had their leader been possessed of the qualifications of a military man.

We sincerely believe that, had General A. J. Smith undertaken this expedition with only his 10,000 well-trying soldiers, supported by the fleet of gun-boats, they would have all been in Shreveport by the 5th of April; for there was no reason to entertain much fear of General Taylor and his troops, already greatly demoralized by the Union success so far.

If Taylor could not, with 15,000 men and heavy fortifications, hold the entrance to his country, how could he expect to resist the march of 10,000 veterans, supported by more than 100 heavy guns on board the war-vessels? There were never better soldiers than those under General Smith, and both he and General Mower were worthy to lead them.

When Smith's command joined the expedition they had just finished a long march, were greatly in want of clothing, had few wagons, and were without tents, yet they were the happiest-looking soldiers ever seen under arms. It was astounding how these men had learned to live upon the enemy. They seemed to be independent of the commissary department, every soldier was himself a commissary; and as for tents or barracks, they did very well without them. In less than twenty-four hours after their arrival in Alexandria, they had rummaged the country for ten miles up and down the river, one of the most fertile districts in the United States, where all their wants could be supplied without expense to the Government.

Here Colonel Shaw luxuriated with his brigade on the plantation of ex-Governor Moore, the prime mover in the secession of Louisiana, who now had ample opportunity of seeing for himself how the secession matter worked. It was a just retribution, for, notwithstanding the hospitality of the South, we have no doubt the ex-governor begrudged the soldiers the good things they were enjoying at his expense.

Notwithstanding the Federal soldiers were scattered in all directions, they were not troubled by the Confederates, who hovered around in detached bands of a few hundred men, apparently as much demoralized as

The Federal forces were on the *qui vive*, however, for anything that might happen, and one dark, rainy night, General Mower, with a party of his men, fell in with a courier bearing dispatches to General Taylor, who was encamped some nine miles in the rear. Mower, assuming the character of a Confederate officer, threatened to hang the courier as a Yankee spy, when the latter, to show his good faith, led the supposed Confederate troops right into the enemy's camp, which was captured with 22 officers, 260 privates, 4 pieces of artillery, 150 horses, and all the arms and munitions. Had there been an opportunity to capture the other outlying parties, General Mower would have accomplished it, but the Confederate commander-in-chief was a wary old soldier, disposed to act on the defensive.

It was not until the 25th of March that General Banks' infantry commenced arriving under the command of General Franklin. It was as fine a body of troops as were ever seen, and the best dressed and equipped of any soldiers in the Southwest. Notwithstanding a march of twenty-one miles, they came in quite fresh and full of spirits.

But more than a week of valuable time had been lost since the 17th instant, the day on which General Banks promised to meet the Navy at Alexandria, and the conclusion arrived at was that the General did not possess the military virtue of punctuality which the Navy had recognized in Generals Grant, Sherman, A. J. Smith, and other officers with whom they had hitherto cooperated.

As soon as the Admiral reached Alexandria, he commenced getting the vessels above the "Falls," although the water was falling in the river at the rate of an inch a day, and the larger vessels had not more than six inches to spare. He trusted to good fortune to get the vessels down again, or to that great rise in the water which General Banks had been informed would certainly come in May or June.

General Banks had apparently come into the Red River country intending to stay, for he was provided with everything necessary to maintain a large army. Transports with provisions, clothing and munitions of war were daily arriving, and large buildings in Alexandria converted into store-houses were rapidly filled up.

By the 29th of March, the Admiral had all his vessels over the "Falls," except the "Eastport," a long, heavy iron-clad, which detained the fleet two days. As soon as she was over, Lieutenant-Commander Phelps was directed to proceed to Grand Ecore and be ready to cover the army when it should arrive there. The following named vessels were under his command: the "Eastport,"

“Fort Hindman,” “Lexington,” “Osage,” and “Neosho.”

The week lost caused the expedition irreparable injury, for the enemy was not only enabled to recruit his forces, but the river had fallen six inches, which was a great deal for vessels having so little to spare.

The general tried to lay the blame for his detention on the gun-boats, but this would hardly answer, since the light-draft vessels, mounting over fifty guns, had passed the “Falls” and were ready to ascend the river before Banks reached the rendezvous. The six days General Banks passed in Alexandria prior to his onward movement were frittered away. He moved into comfortable quarters and spent his time in ordering an election in the parish of Rapides, establishing people in power who professed to be Union men—a proceeding to which there could have been no objection if the objects of the expedition had not thereby been neglected.

General Banks came from New Orleans to Alexandria in a large steamer called the “Black Hawk.” This vessel, known as “General Banks’ flag-ship,” was of the same name as Admiral Porter’s flag-ship, an unpleasant circumstance, since it happened that the Navy incurred some of the odium which attached to the transport steamer. She was loaded with cotton bagging, rope, etc., and became the rendezvous of a motley collection of people, cotton speculators, and camp followers. Everybody began to surmise that this expedition was intended for other purposes than the conquest of the Red River country. The story then told has since proved to have had some foundation, and is a hitherto unwritten piece of history.

Soon after General Banks took command at New Orleans, he had given several passes to get cotton from the Red River country, but it had been seized by the gun-boats along the river, and turned over to the agents of the Treasury, or sent to an Admiralty Court for adjudication.

Many persons had urged upon President Lincoln the importance of getting out of Red River all the cotton possible for the use of Union manufacturers, instead of forcing the Confederates to ship it abroad, which, perhaps, was a wise idea, if it could have been done under proper restrictions; but such a course opened the door to a great deal of dishonesty, besides affording an opportunity for supplying the Confederates with arms and munitions, of which they stood greatly in need.

Two naval officers captured parties of Confederates—military men—in the act of loading steamers with cotton for New Orleans, the said persons being supplied with passes purporting to be by authority of

General Banks. No doubt, they expected to receive, in return, money or articles of value, when the naval officers arrested them, and would have seized the steamers had not the latter shoved off and left their friends in the lurch.

We do not mean to say that General Banks exceeded his authority in these matters, but we know that it was calculated to prolong the war; and, as the naval commander had not been notified by the Government that facilities for getting out cotton would be granted to private citizens, he took upon himself the responsibility of putting a stop to the practice.

It was evident that this sort of traffic would soon demoralize the whole expedition, and probably defeat its every object. A gun-boat was stationed at the mouth of Red River, whose captain had orders not to permit any except naval vessels and Army transports to ascend. This, however, did not keep out the cotton agents, who managed to get up in the transports, not always to the satisfaction of General Banks.

On one occasion, a steamer loaded with stores of all kinds, and furnished with a permit from Washington to trade within the military lines, appeared at the mouth of the river. The Admiral refused to recognize the owner of this permit and ordered him to depart, which he was obliged to do, leaving a message to the effect that he would make it so hot for the naval officer in Washington that the latter would have to resign his command, etc., etc. On receiving this message, the commanding officer of the gun-boat at the mouth of the Red River was directed to seize the vessel and send her to Cairo. He chased her to Memphis, where, on arriving, he found the steamer had unloaded all her contraband of war, otherwise she would have been condemned.

We mention these things to give some idea of the rush for the cotton region of Louisiana, and the demoralization likely to ensue had every speculator been allowed to go where he pleased under permits, or in any other way. There were Treasury agents enough authorized by Government to seize cotton, and there was nothing to warrant the presence of cotton purchasers on an expedition which had for its ostensible object the redemption of this region from secession.

It was only when the Army was in retreat, after the battle of Mansfield, that the supposed objects of the expedition were learned. It was stated that before Banks’ army left New Orleans there was an arrangement that the General should go up Red River with a force before which the Confederates would retreat; that Banks would seize all the cotton in the country, for which he would give receipts, and that on the arrival

of the cotton in New Orleans, the holders of the receipts were to receive five or six cents a pound as their share. General Banks' conduct gave some corroboration to these reports, and no evidence he afterwards gave before the Committee on the Conduct of the War eradicated the impression that they were true.

It was attempted to divert attention from Banks by trying to throw the responsibility on President Lincoln for giving permits to Butler and Casey; but those men derived little benefit from their license to trade—their cotton was taken from them, and they returned from the expedition wiser and poorer men.

As long as Admiral Porter had been associated with Generals Grant and Sherman in the midst of intricate and embarrassing operations, he had never to complain of the least want of courtesy on their part, and never had the slightest dispute with either of them. Now he was sorry to see a prospect of difficulties at the very outset of the expedition. The tone of some of the officials of Banks' army was so different from what he had been in the habit of witnessing that it created bad feeling at once—this extended not only to the Navy but to the corps of General A. J. Smith as well.

When Smith joined the expedition he had just finished a long march through the interior of the Confederacy, and his men were without proper clothing and other necessities, and made a poor figure beside Banks' well-equipped troops; but when it came to actual warfare, they were famous fighters. They were men who had lain for months in the trenches at Vicksburg, had gone through the hardships of Chickasaw Bayou, had helped win Arkansas Post, etc., etc.; yet when Banks first saw these veterans, he exclaimed, "What, in the name of Heaven, did Sherman send me these ragged guerillas for?" At Mansfield he found these "ragged guerillas" saved the day and the honor of his army!

We have no doubt that when Banks saw his fine army under General Franklin, and was told how easily those troops had put the Confederates along the route to flight, he felt that he could do very well without the corps of A. J. Smith and the Navy. For this reason he treated General Smith with neglect from the first, although he took care to put that General in the advance. General Smith was a fearless, outspoken man, who felt that the cotton speculation would be the bane of the expedition, and did not hesitate to say so. He foresaw the misrepresentations that would be made of officers who would not lend themselves to the schemes of the cotton speculators.

It was very aggravating for an officer to find himself attacked in the newspapers at

home while devoting all his energies to overcome the enemies of his country, and to be reviled by a lot of people who had neither the courage nor the inclination to take part in putting down the Rebellion—Northern "copperheads," who did all in their power to shake the confidence of the public in the men at the head of the armies and fleets.

General Banks, having delayed long at Alexandria, directed General Smith's command to advance to Bayou Rapides, where the latter encamped on the 27th of March, 1864. On the 30th, part of Banks' army passed General Smith; but it was not until April 2d that Smith received orders to embark his men in the transports, and proceed to Grand Ecore, where they disembarked, and encamped at Natchitoches, near by. No opposition had thus far been met with, and one or two guns fell into the hands of the Navy a few miles below Grand Ecore.

Up to this time the opinion seemed general that the Confederates did not intend to offer any opposition to the Federal advance, and that Kirby Smith, the Confederate general, would "adhere to his agreement"—viz., to let the Army and the contractors get all the cotton they could find. The very deliberate movements of the Army gave color to these reports, and the large number of empty steam transports strengthened the idea that it was intended to load them with cotton. Besides these, there were seven or eight hundred army wagons, ostensibly to carry rations for General Banks' division, while A. J. Smith had hardly any wagons.

Anticipating the wants of the Army, the Navy brought along with them two of the large barges built some time before by General Fremont to use in making a bridge. These were turned over to the military authorities at Grand Ecore. The second day after the arrival of the expedition, Lieutenant-Commander Phelps, of the "Eastport," reported to the Admiral that these two barges, which would hold three or four hundred bales each, and another barge belonging to Butler and Casey, were being filled with cotton, under superintendence of an officer of General Banks' staff, the cotton being hauled to the bank by army wagons. Lieutenant-Commander Phelps was directed, as soon as the barges were loaded, to seize the cotton as prize to the Navy, which was accordingly done; but, soon after, the Admiral received a request from General Banks to turn the barges over to the Army, that he might bridge the river at Grand Ecore. This request was immediately complied with, and a fine bridge was made for the passage of wagons, although the cotton, after a day or two's use, looked much the worse for wear. The Army

held the barges and the cotton, and they finally had to be used in the construction of the great dam at Alexandria.

The Confederates had about 16,000 men in the field, and the Federals about 36,000; but up to this time the former had retreated without resistance, leaving the Federals their deserted camping-grounds, the best positions, and all the cotton in the country. It was so unlike anything seen before in expeditions against the enemy, that people could not help suspecting an understanding of some kind with the Confederates, otherwise they would have set fire to every bale of cotton rather than permit any to fall into Union hands.

On the 6th of April, all arrangements for an advance having been made, Banks' army, composed of part of the 13th and 19th army corps, under Franklin and Emory, and a cavalry division of about 3,500 men, under General Lee, marched from Natchitoches. General A. J. Smith followed on the 7th with his division of the 16th corps, excepting 2,500 men under General T. Kilby Smith, who had been sent to escort the transports carrying supplies. When the fleet started, there were about thirty of these transports in company, but their numbers were afterwards increased by the addition of some large empty steamers, which delayed the advance owing to their too great draft of water.

It was arranged that the naval vessels and transports were to meet the Army at Springfield Landing, about thirty miles below Shreveport, the third day after departure.

The difficulties of navigation were very great, as there were few pilots, and they were not familiar with the river channel as it then existed, it having changed very much within a year or two; but the fleet managed to surmount all obstacles, and reached the rendezvous within an hour of the time specified in the arrangement with General Banks. As the General was not very punctual, no one was surprised at his non-appearance. It was not supposed that 36,000 men would be long delayed by the 16,000 General Taylor had at that time between them and Shreveport, and the Navy wondered at not seeing the van of the Army at this point. Nothing was to be seen, and the solitude of the grave brooded over the spot.

The further advance of the transports was here prevented by a very large steamer called the "New Falls City," that the Confederates had placed across the channel, her ends resting on the banks, and her hull broken in the middle, resting on the bottom.

It required a great deal of trouble to get rid of this obstruction, and while the appointed officers were examining into the

best ways and means of removing the vessel, the Admiral proposed to General Kilby Smith that they should reconnoitre the country on horseback. They had ridden about a mile when they saw a party of men crouching and running through the high grass and coming to a halt. The Admiral remarked to the General, "Banks has been defeated, or we wouldn't see those men here. If Banks was still advancing, the outposts would keep on the main road to Shreveport. If defeated, the enemy's look-outs would be watching for our arrival, and be ready to turn their whole force upon us, and it behoves us to be wary."

It was then agreed upon between General Smith and the Admiral to land the artillery at once, and make a dash for a short distance, as if they intended an advance, which would start the Confederate look-outs off to report the landing; then the plan was to turn, and, embarking, proceed down the river until they could communicate with some part of the main army. This was rapidly accomplished, and late in the day the gun-boats and transports proceeded down the river in good order, prepared to give the enemy a warm reception if he should attack them. It was taken for granted if General Banks was defeated he would lose some of his artillery, and that the fleet would have it used against them sooner or later.

The movement proved to be a good one; the enemy were deceived, and, expecting to have the fleet at their mercy next morning, made no demonstration. All that night the vessels moved slowly down the Red River, and at 10 o'clock a courier from General Banks came on board the flag-ship, and informed the Admiral that the Army had met with a reverse, and was falling back to Pleasant Hill, about fifteen miles from the battle-ground of Mansfield, and thirty-five miles from Natchitoches. This point was sixty miles distant, and the victorious enemy was between the fleet and the Federal Army.

Orders came also for General Kilby Smith to return with his troops and transports to Grand Ecore, and the expedition proceeded towards that point as rapidly as the difficult navigation would permit. The gun-boats were placed so as to cover the transports, and the field-artillery was mounted on the upper decks of the latter; barricades were made for riflemen—in short, every possible preparation for the storm which was coming.

Here was a sudden collapse to what bid fair at one time to be a successful expedition, all owing to the unmilitary character of the commanding general, who ignored the advice of the generals under him.

When General Banks concentrated his forces at Grand Ecore, it was supposed that he would take the road along the river, where he could at all times be supported by the 100 guns carried by the vessels of the Navy, and where he could be supplied by the Army transports, instead of encumbering his army with a multitude of wagons. It was thought that, as Banks got further into the heart of the enemy's country, he would adopt precautions against an attack from the 15,000 or 20,000 men under General Taylor, who might not know of the arrangements of the cotton speculators, if any such understanding did exist. Instead of taking precautions, General Banks started on his march as if the whole country was free from the enemy; and so certain was he of reaching his place of destination that he named Springfield Landing as the point where the fleet was to meet him with supplies.

His line of march was twenty miles away from the river, along a rough and narrow road, through a miserable country, covered with pine woods, with few inhabitants and very little water. All the knowledge Banks had of the country was what he could gather from Confederate sources. Instead of putting the infantry in the van, General Lee was sent in front with about 3,500 mounted infantry—badly mounted and worse drilled—with 150 heavy wagons in their rear, the infantry following some distance behind.

When General Banks' army was attacked on the 8th of April at Sabine Cross Roads, General A. J. Smith's division was ten miles in the rear, near Pleasant Hill, and, although they heard the roar of artillery, the first Smith's men knew of the disaster to the main army was from Colonel Clarke, who had ridden rapidly to inform them that the enemy had killed, wounded and captured over 2,000 Federal soldiers, had taken 150 wagons, all the stores, and 22 pieces of artillery. How all this was done can only be understood by examining Banks' line of march, which, it appears, was also his line of battle.

It seems the further Banks' army advanced into the country the deeper became the gullies and the worse became the roads, while the thick woods on all sides afforded a fine shelter for the enemy.

Up to the 8th of April it had rained heavily. General Franklin, who left Grand Ecore on the 6th, marched but seventeen miles on that and eighteen miles on the succeeding day, being much impeded by his large wagon train; and it seems General Lee was so far in advance that he could not rely on the whole of Franklin's force for support, as should have been the case. On the 7th, Lee's force had a

severe skirmish with the enemy beyond Pleasant Hill, and, after some delay, a brigade of Franklin's infantry was sent to his assistance. Lee's cavalry were nothing more than infantry soldiers whom Banks had mounted, and as soon as fighting commenced they dismounted.

One can imagine how ill-arranged for battle was this army, with four regiments of dismounted horsemen in advance, mixed up with their horses, and fighting in gullies where they could be picked off by sharpshooters ensconced in the thick woods. No wonder General Lee sent to Franklin for assistance, who answered through Colonel Clarke, of Banks' staff, that if he could not hold his position he must fall back upon the main body of the infantry. It would have been better, however, if Lee had fallen back when he first encountered the enemy's advance, and sent the wagons to the rear, for a finer chance to have them captured could not have been offered.

Colonel Clarke, finding that Franklin was indisposed to send any troops to support Lee, went to General Banks, who sent a verbal order to Franklin to send a brigade of infantry to report to Lee at daylight next morning. General Franklin then ordered General Ransom to send a brigade, or a *division* if he saw fit. The brigades were so small that Franklin thought a division would better carry out General Banks' views; but Ransom sent a brigade, with which General Lee was satisfied.

Notwithstanding the demonstrations of the enemy in front, Banks did not seem to think there was any likelihood of a pitched battle taking place. He gave an order, through Franklin, directing Lee to proceed as far as possible on the night of the 7th, with his whole train, in order to give the infantry room to advance on the 8th. The forces of General Lee only advanced one mile between the 7th and 8th of April, and on the latter date Lee reported by letter to General Franklin that the enemy were in stronger force apparently than the day previous. He says: "I advanced this morning with ten regiments of mounted infantry (dismounted), three regiments of cavalry and a brigade of infantry. We are driving them, but they injure us some. I do not hasten forward my trains, as I wish to see the result certain first."

General Lee's idea was, perhaps, a good one, but he did not seem to realize that the enemy were leading him and his trains further into the trap; but General Banks should have seen this and withdrawn Lee in time, and pushed his infantry and artillery ahead to the attack.

Banks, however, does not appear to have kept in any position where he could see for himself what was going on, and seems to

have been influenced in a great degree by an officer of his staff. Only on the night of the 7th did General Banks arrive at Franklin's headquarters from Grand Ecore, although the fighting commenced that afternoon, and Lee complained of a want of troops to keep from being driven in. Banks did not go to the front until late on the 8th, and then sent word to Franklin that the enemy were prepared to make a strong stand at the point where they were holding Lee, and that he (Franklin) "had better make arrangements" (!!) to bring up his infantry, and pass everything on the road, and that he would send him word when to move. He thought Franklin had better send back and push the trains forward, as manifestly the Army would be able to make a rest there.

Now, whether General Banks wanted the troops to push forward and rest, or fight, does not appear; but, as far as one can learn from the reports of officers, Banks seemed to be resting that army a great deal, when thousands were anxious to push on and join in the fray.

It seems evident that General Lee did everything after he engaged the enemy that a man could with the force at his command—a force not suited for that particular kind of service; and when he found himself outnumbered he sent for reinforcements, when Banks dispatched to his assistance only 1,200 men. These were soon decimated, and 1,200 more were sent. Such small reinforcements amounted to nothing; and it does not require much military knowledge to see the folly of sending one small brigade of infantry to co-operate with a large body of cavalry in such an expedition.

From Lee's report it will appear that while the whole brigade of infantry was engaged on the 8th, only three regiments out of a whole division of cavalry were in action. The result, as General Lee expressed it, was that the first brigade of infantry "got very much embarrassed;" in other words, used up, and so Lee sent for another brigade. General Franklin protested strongly against thus sending brigade after brigade to be cut up in detail, but Banks gave the orders, and finding such halfway measures futile, directed Franklin to advance with a division of infantry, to be beaten in his turn.

The state of affairs was as follows: Lee some distance in advance of the wagon train had fought with the two brigades until he was cut up, had to retreat, and became mixed up with the wagon train and with the advancing division of Franklin's infantry, which in turn was driven back upon the train, the latter was jammed up, and when the time came for the artillery to retreat there was no way to get the guns

through the train, and they had to be abandoned.

Lee was not to blame for having his division hampered by the wagon train. He had applied to General Franklin to allow his train to move to the rear of the infantry; but Franklin told him he must take care of his own train, that he (F.) had already 750 wagons to look out for, and 150 additional wagons would make his train so unwieldy that he could not get into camp at the end of his day's march. Franklin cannot be held responsible for the disaster, but the wagon-train was.

Apparently, General Banks started on this expedition as if there was to be no fighting, and he stayed behind in Grand Ecore until the head of the army was fifty miles in advance, regardless of the circumstance that he might have been captured by Confederate stragglers. This, with the fact that he had so many wagons with his army, gave color to the stories that Banks and the cotton speculators were arranging about the bales that were to come down from Shreveport in empty army wagons and transports. The Confederates had no wagons worth mentioning until Banks had supplied them. A. J. Smith with 10,000 men had very few, and why Banks should require 900 for 30,000 men, who could sleep out of doors all the time much more comfortably than in tents, no man can tell. Had Banks understood the art of war, he would have ordered his trains to be parked when he saw that a battle was imminent.

It was not the intention of the enemy to bring on an engagement at the time it took place, but rather to draw the Federal troops as far into the interior as possible, and away from the gun-boats, into the marshes and bayous at Wallace's Lake, between Mansfield and Shreveport. In this difficult region the troops would have been entangled in swamps, and would have had to corduroy the roads for miles to get the trains along.

Had Banks been satisfied to let the cavalry go in advance, clearing the roads of outposts, and reporting the presence of the enemy's main body when they encountered it, all might have turned out well; but it appears he never gave himself much concern about the management of the Army until it was defeated.

He sailed up from New Orleans to Alexandria in a fine steamer, supplied with all comforts. He sailed again on the same vessel from Alexandria to Grand Ecore, and did not leave the latter place until Franklin's division had reached Pleasant Hill. Then, going to the front, and being ill-informed of the situation of affairs, Banks determined to win a battle without Franklin's aid.

If the cavalry had gone to the front alone

for merely its legitimate purposes, it would have marched slowly and cautiously; but, being reinforced by infantry, it got ahead faster than was prudent. Had the cavalry marched as it should have done, General A. J. Smith would have been at Pleasant Hill, only eight miles in the rear, the Army would have been in as compact a condition as could have been possible and the final result would have been different. Banks had probably never heard of the old rule, "Choose your own ground, and let the enemy attack you." At all events, he went directly contrary to the maxim; but even then he would have been successful had he waited a day longer.

Banks had two officers of the regular army, Franklin and Emory, in command of divisions, but he seemed to ignore them until he got hard pushed. General C. P. Stone, his chief-of-staff, was a clever officer, but he set aside his opinions. He allowed the enemy to bring on a battle on ground over which the Army would have to pass by a narrow road through a pine forest, filled with a dense undergrowth, with no room to handle men, much less to have a dress parade of army wagons. The Army could only march in very narrow columns.

General Banks cannot say he did not know the position of the Army when he brought on this battle, for Franklin had explained it all to him on his arrival at Pleasant Hill, and he passed along the whole line on his way to the front, where the cavalry was fighting, and could not help seeing how matters stood.

General Franklin was nominally in command of the Army when General Banks joined him at Pleasant Hill, but the latter went to the front without paying Franklin the courtesy of saying he was going to take command, and prepared to take all the glory if he succeeded. From our knowledge of the Army, it was evident that Banks was not in accord with any of his generals. They did not think him a good leader, to commence with, and they certainly had no reason to do so in the end. On his part, he seemed to care little for them or for their opinions.

Up to the time of Banks' arrival, General Lee considered Franklin in command; but when Lee referred to some order he had received from Franklin, Banks remarked, "I shall remain upon the field, General," without saying whether or not he took command. At all events, he gave such orders that his presence much embarrassed Lee in making arrangements.

It would appear, from evidence received from different sources, that, after Banks' arrival on the field, General Lee was allowed the management of this affair, although under the immediate command of General

Franklin. He waited for no order from the latter, insisting on pushing ahead all the time, though Franklin intimated that if the enemy was in force in his front, he should fall back upon the infantry, and that he, Franklin, would not send him infantry support. In this Franklin was right; but it would have been better had he gone to the front himself, and taken a more decided command in the first instance. It was not desirable to bring on a general engagement in the then condition of the Army; and when Franklin finally did send a division to assist the fragments of brigades ordered to the front by Banks, his main body of some 6,000 men were seven miles in the rear, and fifteen miles back there were 8,000 more; while we know that, when Lee first called for support, the enemy had in position 8,000 infantry, with some artillery, and nobody could tell how many more in the back-ground.

That the Federal soldiers did all that men could do in this first engagement, no one can deny; but if Banks had tried to place impediments in their way he could not have succeeded better. Colonel W. J. Landrum, commanding 4th brigade of Ransom's division, in a report to that officer, says: "My men have skirmished and marched through bushes and thickets for eight or nine miles, making in all a march of sixteen miles; they have no water, and are literally worn out. Can you have them relieved soon? General Lee insists on pushing ahead."

When General Ransom arrived on the field he found the road obstructed by the cavalry train, and, after a great deal of trouble, got through and arrived at the front with his troops. He found the enemy in force, a large body of infantry in line of battle on the edge of the woods, and two batteries of artillery about three-fourths of a mile in front, while considerable bodies of infantry were moving on the road leading to his right and rear. As Banks came on the field, at 3 P. M., Ransom reported to him, and from that moment Banks became responsible for what occurred.

On the arrival of the 3d brigade, the position of the 83d and 96th Ohio infantry were assigned opposite to that recommended by General Ransom, and in a place in which they should never have been put. The infantry on the right of the road were placed in a narrow belt of timber, dividing two large plantations, with open ground in front and cultivated fields in the rear. Nims' Battery was posted on a hill near the road, two hundred yards to the left of the belt of timber, and was supported by the 23d Wisconsin infantry. The 67th Indiana supported the battery on the right, together with the 77th and 130th Illinois, 48th Ohio, 19th Kentucky, 96th Ohio, a section of

light artillery, and the 83d Ohio—in all, 2,413 infantry. The cavalry and mounted infantry under Lee were posted on the flanks and rear, having Colonel Dudley's brigade on the left, and Colonel Lucas' on the right, with skirmishers deployed in front of the infantry.

The enemy attacked this position at 4 P. M. His first line was driven back in confusion, but, recovering, he again advanced; unable, however, to withstand the fire from the Federal troops, the Confederates laid down 200 yards in front and returned the fire; at the same time a force was pressing the Federal left flank and driving the mounted infantry back. The 1st Indiana and Chicago Mercantile Batteries had just arrived on the field, and General Ransom directed them to be placed near a house occupied as Banks' headquarters, where they opened on the enemy, who had shown himself in strong force on the left flank, which it was evidently his purpose to turn—a purpose soon afterward accomplished after the infantry were driven in and Nims' battery captured.

This may be said to have been the turning-point of the battle, which was nearly lost to the Federals. The infantry, generally, behaved with great gallantry. The Chicago and 1st Indiana Batteries went promptly into action, but were soon so cut up that they were obliged to retreat, leaving their guns in the hands of the enemy.

The fact is, the guns had to be abandoned, because the cavalry wagon-train blocked up the road against all operations from first to last. Some went so far as to assert that the said wagon-train was the cause of all the disasters; and, although this may not be literally true, the world will naturally inquire why, on the approach of a heavy engagement, the wagons were not sent to the rear. There were men enough to have hauled them away had the horses been unable to do so. The fact is, the blame rests, and always will rest, on General Banks' conduct after he took command in person. The disaster was due to his sending forward small bodies of troops—which were defeated in detail—to support the cavalry, which should have been ordered to fall back until the main army came up.

In this day's fight the Federals had but 7,000 men and 26 field-pieces, a very large proportion of ordnance to the number of infantry. The natural consequence was that, when a retreat was ordered, the artillery had to be abandoned for want of time to force it through the obstructions of wagons and bodies of infantry.

The 3d Division, 13th army corps, arrived on the field in season to check the advance of the enemy; and General Franklin, who came on the field in person, was

wounded by a fragment of a shell. This check proved but temporary, and the retreat of the Federals commenced. Their loss was 26 pieces of artillery, all the ambulances, and 157 army wagons and their horses, with the rations and forage of the mounted infantry.

General Emory's corps got into action as the evening was setting in, and checked the advance of the enemy completely by his masterly management, preventing a disaster to the whole army. With their superior numbers, and flushed with apparent victory, the enemy could not dislodge him from his position; while the discomfited regiments that had fallen back behind his corps were enabled to re-form. It was, without doubt, Emory's corps that saved the day, and prevented the Confederates from gaining a substantial victory.

At about dark the enemy retired, to rejoice over their success, and fill their canteens from General Lee's ample supply of liquor. To make sure of their captures, the Confederates unharnessed all the horses from the wagons, and conveyed them and the artillery to what they considered a place of safety.

After this repulse, General Banks fell back to Pleasant Hill with his whole force, and was there joined by General A. J. Smith, who had just reached that point with his command. At Pleasant Hill the army encamped to reorganize and repair damages.

The great mistake in this battle was in bringing the wagon-train to the front and directing General Lee, if hard pushed, to fall back on the infantry, apparently not realizing the danger of leaving all the train in the enemy's hands. Banks had ample opportunity to redeem this error before reinforcing Lee and pushing the latter further into danger, thereby bringing on a general engagement, which it was desirable to avoid in the then scattered condition of the Federal forces. General Franklin assigned this as a reason for not complying with Lee's request for reinforcements, and military critics support him in this; but it would have been wiser to have sent a positive order to Lee to send his wagon train to the rear and to fall back when the main body of the enemy was found in force. This would have been sufficient to have compelled the obedience of this officer, who was exhibiting a great deal of gallantry.

Banks says he expected the mounted soldiers to be in front and the infantry close behind; but there was no necessity for the cavalry to have their wagons with them, as each man could carry two days' rations and forage on his horse, or a certain number of wagons could have been dispatched each night with rations for the day following.

But lie the fault where it may, Banks met with defeat and a loss of prestige from which the Army never fairly recovered in that region; whereas, the Federals should have gained a victory that would have enabled them to hold that part of Louisiana until the end of the war, and to plant the Union flag in Texas—the latter a cherished object of the Government.

The plan of invasion was a wild one, it is true, but it came nearer success than many hoped for when the expedition started.

As soon as the enemy had secured the wagons and guns, they started in pursuit of the Federal Army, which, having halted at Pleasant Hill, was in a measure prepared to receive them. At 3:30 P. M., on the 9th, the enemy attacked the Federal forces with great vigor. The Federal line of battle was formed in the following order: 1st brigade, 19th corps, on the right, resting on a ravine; the 2d brigade in the centre, and the 3d brigade on the left. The centre was strengthened by a brigade of General A. J. Smith's division, whose main force acted as a reserve. The enemy moved towards the right flank of the army, and the 2d brigade withdrew in good order from the centre to support the first. A. J. Smith's brigade, in support of the centre, moved into the position vacated by the 2d brigade, and another of A. J. Smith's brigades was posted to the extreme left on a hill to the rear of the main line. Shortly after 5 P. M., the enemy had driven in the skirmishers and attacked in great strength, manœuvring to force the Federal left. He advanced in two heavy, oblique lines towards the right of the 3d brigade, 19th corps, which, after a determined resistance, fell slowly back to the reserves. The enemy then attacked the centre, which was also moved back to the reserves; and the 1st and 2d brigades were soon enveloped in front, right and rear. By the skillful manœuvring of General Emory, the flanks of the two brigades now meeting the enemy were covered, and the Confederates received terrible punishment. At the same moment, the latter came in contact with the reserve under General A. J. Smith; where, already retreating, he was met first by a volley and then a charge, led by General Mower, which caused him to retreat more rapidly. All Smith's reserves were ordered by Emory to join in the attack; the whole Confederate army was put to flight, and was followed by A. J. Smith's division until night set in.

What happened at Pleasant Hill would have happened at Sabine Cross Roads if General Franklin on that occasion had been allowed to postpone the engagement until the infantry had had time to join the troops in front. Had the fight at Sabine Cross Roads been postponed forty-eight

hours, the Federal army would have been victorious, and would, doubtless, have reached Shreveport without further molestation; although what particular object there was in going to that place does not exactly appear.

General Banks was in command at Pleasant Hill, and had acquired sufficient wisdom to send the greater part of his cavalry, together with General Ransom's command, which had been badly handled the day before, and all the baggage train that had escaped, to the rear. In the hurry of the moment, however, the medical train of the 19th corps was also sent off, much to the annoyance of the medical officers, who, before night, had the most urgent need for its contents.

The Federal position on the field of Pleasant Hill was excellent, and the enemy should not have moved the army one inch. The little village of Pleasant Hill was situated upon an eminence, the ground sloping in all directions, and rising again to the west, formed another eminence half a mile from the village. On and about the crest of this latter eminence, among trees and bushes and behind fences, the Federal troops were stationed in line of battle; the reserves in waiting joining the village on the left—just such a place as a general would like to select on such an occasion.

General A. J. Smith's reserves at this time, owing to absentees and the 2,500 men with the fleet of transports under General T. Kilby Smith, amounted to only 5,800 men, under the immediate command of General Mower. When the division appeared upon the field under Mower, the army had been forced back a considerable distance and was in some confusion. Colonel W. J. Shaw, commanding the 14th Iowa infantry, 16th corps, had been brought up in the first place to reinforce the 19th corps, and had been badly handled. As Mower broke through the ranks of the retreating troops, the enemy's cavalry was seen on the edge of a wood, where they had been concealed, forming for a charge. They swept rapidly forward across the field in one of the most perfect cavalry charges seen during the war, and met as fatal a reception as ever befel such a movement. Colonel Shaw ordered his men to reserve their fire until the horsemen were near enough to receive the full force of it, and the result was that fully half of the enemy were dismounted and many horses disabled. The remainder pressed headlong on under a close and rapid fire until some of them fell from their horses into the Federal ranks. By this time the cavalry regiment was *hors du combat*, and only a small proportion of the men got back to their lines.

After this the Confederate infantry advanced in double line of battle with perfect order, but with the result we have before mentioned.

Notwithstanding the action at Pleasant Hill was a victory for the Union Army, it came near being a defeat, and would have been so but for General Emory's strong stand. When the enemy's infantry advanced across the open field, Shaw's brigade opened on them at a distance of 200 yards. The enemy replied vigorously, and caused a heavy loss. The first line of the enemy retreated in disorder under Emory's fire, while fighting continued on the Federal left, which fell back so far as to allow the Confederates to pass almost to its rear and to nearly outflank the brigades of Benedict and Shaw, driving Benedict's right into the gap and inflicting severe loss. Benedict was killed, and Shaw lost 500 men.

For a short time these brigades were almost in the hands of the enemy, who had pushed far in their rear. Had he been bold enough to overwhelm the Federal forces with his masses, which were steadily pressing on, he could have done so.

Much of the fighting, where the Federal troops were stationed, was in the midst of a thick undergrowth, where the commanding officers could hardly see what was going on. At one time part of the troops were between two bodies of the enemy, and, with the latter in their rear, found it better to hold their position than to attempt a retreat.

General Emory, in his official report, says: "The enemy emerged from the woods in all directions and in heavy columns, completely outflanking and overpowering my left wing—composed of the 3d brigade and a brigade of General Smith—which broke in some confusion. My right stood firm and repulsed the enemy handsomely, and the left would have done so but for the great interval between it and the troops to the left, leaving the flank entirely exposed."

One might naturally inquire, why was not all the artillery, which General Banks sent to the rear, posted so as to protect these exposed flanks of a long line of battle? We hear very little of artillery in connection with the engagement at Pleasant Hill—only where the 25th New York battery, of the 19th corps, opened upon the enemy's artillery that commenced firing on Shaw's brigade at the beginning.

The Federal troops fell back upon the reserves, being hard pressed by the rush of Confederates, who seemed to get through gaps and outflank the brigades in almost every instance. The Union forces generally fell back in good order; and, if it was intended that the enemy should be fought in that way, the experiment turned out well

in the end, although the plan seems to have been a hazardous one.

The reserves quietly waited for the time when they should be called into service; and, when the order was given, poured in such a murderous fire that the Confederates were checked immediately. Then General Mower charged with Smith's men into their midst, the other Union forces keeping up a fire all along the line. This was a great surprise to the enemy, who apparently supposed they were carrying everything before them, and, panic-struck, they turned and fled in the utmost confusion, throwing away their arms and accoutrements. General Smith's victorious troops followed close upon their heels, capturing prisoners, arms and several pieces of artillery, until darkness prevented any further pursuit.

Had the mounted force been kept in reserve to act in conjunction with Smith's infantry reserves, they would have killed or captured half the Confederate army; but here was another great military blunder committed. When most needed, they were in the rear; and when little needed, as in the previous engagement, they were sent to the front to battle with infantry posted in a thick wood!

During part of this battle General Banks had his headquarters at a large building in the village, called "The Academy," while General Franklin was senior officer in the field; and, on the falling back of the Federal troops, Banks gave the order for the trains in the rear to retreat; but, being soon after informed of the complete victory the troops had gained, he countermanded the order, and directed everything to be prepared for an early advance on the enemy and on Shreveport. So the soldiers laid down, amidst the groans of their wounded comrades, to take a short repose preceding their arduous labors of the following day.

General Emory's and A. J. Smith's commands had entire possession of the field, the enemy having retreated sixteen miles without stopping, leaving the road strewn with their arms and accoutrements. Some of the best Federal artillery had been recaptured, and the wagons were again in Smith's possession, although the enemy had carried off horses and harness. All that was needed were some of the useless cavalry horses to drag the wagons within the Federal lines to a place of safety.

The enemy had evidently retreated outright, as the victory was complete, and they had thrown away such a quantity of arms, etc., that it would be useless to try and harass the Federals this side of Shreveport. Their first day's success against Lee's mounted men and meagre supports of infantry had given them an overweening esti-

mate of their prowess, which was completely taken out of them at Pleasant Hill. The falling-back of the Federal Army was considered by them a plan for enveloping them in a trap, and a more demoralized army never left the field; while the Federal soldiers, with renewed prestige, were ready to follow the enemy at all hazards.

What, then, was the surprise of the army, next morning, to learn that an order had been issued by General Banks to the divisional commander to retreat to Grand Ecore. It would be impossible to describe the disgust of officers and men on the announcement of such an order, and it gave color to the report that the commander-in-chief was badly demoralized.

Franklin had managed this last affair with the exception of sending cavalry and artillery to the rear, and though wounded at Sabine Cross Roads he kept his saddle during the entire day at Pleasant Hill, overlooking the movements of his soldiers, while Banks did not come upon the field until the reserves under General Smith commenced driving the enemy, when he rode up to this last-named officer and holding out his hand, said, "You have saved my army, General Smith, may God bless you for it!" "No, sir," said Smith, sarcastically, "my 'ragged guerillas' did it."

If General Banks was held in estimation outside of his staff, he must have ceased to be so after giving the extraordinary order for 25,000 troops to retreat before a routed and demoralized enemy of 16,000 men, a circumstance almost without a parallel in the history of war. The years that have passed since these events have scarcely softened the feelings of those who participated in the humiliation of that retreat. When General A. J. Smith received the order he was occupying the battle-field, gathering up his wounded and endeavoring to secure the trophies of war. He protested against the order and urged an advance, but Banks peremptorily directed him to retreat at once. Smith then begged the privilege of remaining on the field to bury the dead and care for the wounded; but this was denied him, he had to abandon the wounded and all that had been recaptured from the enemy.

Imperative as were the orders General Smith received, to retreat and leave his wounded and dying in the hands of the enemy, he determined to make a final effort to carry out his plan of pushing on, before obeying it. Smith was a brave, impulsive soldier who cared little what he said or did when his spirit was outraged, as on this occasion. He knew better than Banks what would occur in case of a retreat. He had a large portion of his division in transports with the Navy, whom he knew were strug-

gling to get to the place of rendezvous, where, without warning, they were liable to attack from 16,000 exasperated Confederates, armed with the very artillery captured from the Federals, and which they were now about to leave in their hands to be used against a victorious army. Scattered along the river, then at a low stage of water, the gun-boats and transports would naturally suffer great loss, attacked as they would be at prominent points everywhere.

Franklin and Smith both insisted that the army should march to the relief of the forces on the river; that it was but twelve miles to the river; where communication could be opened with the commanding officer of the fleet, and the troops could have constant access to water, for want of which they had heretofore suffered dreadfully. But all was without avail—the order still came to retreat. Smith, as a last resort, proposed to Franklin that the latter should assume command, put Banks under arrest, take care of their wounded, bury their dead, and push on to the point where they were to meet the fleet, and after insuring the safety of that part of the expedition, march upon Shreveport, if that course was found to be practicable. But Franklin, although he might wish to see this plan carried out, would not give his consent, and Smith with the rest had to turn his back upon a retreating foe, while Banks gave the latter the post of honor in the rear, to do the fighting if any was required.

The surgeons were left on the field of Pleasant Hill to do their best to alleviate the sufferings of the wounded; and the day the army departed, these officers state that the Confederates sent a flag of truce asking permission to bury their dead, and learned, much to their astonishment, that the Union forces had abandoned everything after gaining a complete victory!

It would appear that General Smith was the only officer high in command who insisted on a further advance toward Shreveport. General Franklin says: "For my part, the only question was, whether the army should remain at Pleasant Hill, or return to Grand Ecore, not that we should advance." The idea of an advance, after what he had experienced of Banks' generalship, was odious to him; and the scattered condition of the army required, in his judgment, a rest of several days to get the forces together.

About midnight, after the battle of Pleasant Hill, when he was resting under the assurances which Banks had given him, that the army would advance next morning, an orderly came to him with orders to fall back at 3 A. M. Utterly astounded, Smith went to Banks to find out what it meant. Banks pleaded the necessity of a

retreat, on the ground of the general discouragement of the officers of one of the corps, the scarcity of commissary stores, and the great losses hitherto sustained; as if the Confederates, who had been so badly beaten, had not suffered more than the Federal Army, and, in all probability, would be scattered for some time to come. It was after this interview with Banks that Smith proposed to Franklin that the latter should assume command of the army. Franklin was then in his cot suffering from the wound received at Sabine Cross Roads, and was quite unaware of what had transpired at Banks' headquarters, and replied to Smith's proposition: "Will you guarantee that I will not be hanged after the expedition is over, if I do take command?" So there the matter dropped.

If Smith had been second in command, instead of Franklin, he would, without doubt, have arrested Banks, and assumed command. Few people have attributed the right motives to General Smith in making this proposition to Franklin. We believe no one was more intimate with Smith than the author of this work; and the statements made to him were without reserve. It was not from a spirit of insubordination that General Smith made his proposition, but because he thought such a course necessary for the safety of the army, which was suffering from the presence of its commander-in-chief. It so happened that Banks did give up the command to Franklin soon after, at Grand Ecore, and abandoned the army, although Franklin was suffering so greatly from his wound as scarcely to be able to sit on his horse.

General Smith felt somewhat differently from the other division commanders, for he came flushed with victory from the battle-field, where he had left his dead and wounded, while the others had met with serious reverses, although aiding largely in the final defeat of the Confederates. Their killed and wounded were close to where they halted for the night, while Smith was compelled by positive orders to leave his wounded in the hands of the enemy after as complete a victory as ever an army won. Smith well knew what construction would be put upon this shameful retreat, without any attempt to aid the naval part of the expedition, supposed by him to be at the mercy of the Confederates, who would use the captured guns against the fleet, from point to point, with fearful effect. The old soldier actually shed tears in his chagrin and mortification at being thus forced to abandon the results of a victory.

As soon as General Taylor heard of Banks' retreat, he issued a general order, of which the following is an extract:

"In spite of the strength of the enemy's position, held by fresh troops of the 16th corps, your valor and devotion triumphed over all. The morning of the 10th instant dawned upon a flying foe with our cavalry in pursuit, capturing prisoners at every step!!"

Although in this there was a good deal of that exaggeration which characterized General Taylor, perhaps it was natural under the circumstances, when he found the Federal Army actually retreating after having beaten him. The facts, however, are that Taylor was some miles distant from the battle-field at the time Banks started to return to Grand Ecore. The Confederate army was scattered in all directions, and the "cavalry" he mentions, as capturing prisoners, existed only in his imagination.

He knew nothing of the movements of the Federal Army until the return of the flag of truce that had been sent to request of Banks permission to bury the dead. On hearing that the medical officers and the dead and wounded were the only ones remaining on the battle-field, he may have sent what cavalry he could muster to capture them; but, during its return to Grand Ecore, the Union Army was not molested in the least, moving in as good order as if on an ordinary march. This circumstance shows that the soldiers were not demoralized, and that Banks should, at least, have remained at Pleasant Hill until the dead were buried, the wounded brought in, and the recaptured artillery and wagons taken from the field.

On the 11th, the army reached Grand Ecore, and we do not think any one was much surprised to find that the gun-boats and transports had not returned. The general belief was that they would never return, but would succumb to an army of 16,000 men well supplied with captured artillery, which could pour their fire from the high banks of the narrow and shallow stream right on the decks of the vessels—often from positions where the guns of the war vessels could not reach them.

On the 12th instant, the heavy guns of the fleet were heard firing rapidly, and everybody knew then that the Confederates were taking advantage of Banks' retreat and were falling back on the river to destroy the transports. On the 13th, the firing still continued, and was heard plainly at Grand Ecore, every one wondering why no movement was made by the Army to go to the assistance of the fleet; and the indignation at Banks' inactivity was extreme, especially among the 16th corps, A. J. Smith's command, who, having been for some time associated with the Navy, felt great sympathy for their old friends.

Colonel Shaw urged General Smith to allow him to go to the Navy's assistance, if

only with a thousand men; but the General told him it could not be done without an order from General Banks. No troops were sent until the squadron and all the transports had reached a point three miles above Grand Ecore, where they had been closely followed by hundreds of guerillas, who, like famished wolves, hoped to obtain possession of some of them.

These ferocious natives seemed to take no rest by day or night while in pursuit of the vessels, firing on them from high overhanging banks, from behind levees or trees, or from deep rifle-pits. From these places unerring marksmen sent their murderous bullets, laying low almost every man who left the shelter of the protecting cotton bales used as barricades.

The vessels had to move slowly and in order along the shallow, narrow channel, enduring the perpetual fire of the sharpshooters as best they could, the flag-ship bringing up the rear, to see that no transports were left behind or neglected. There were over forty-five vessels to be looked after, and, fortunately, all were brought safely back to Grand Ecore, though not without loss in men.

Three miles above Grand Ecore the leading vessels grounded, and those in the rear piled up behind them, offering a fine target for the enemy's sharpshooters, who soon caught up and closed in around them, firing from concealed places where artillery could not reach them. The booming of cannon was heard from Grand Ecore, but no assistance was sent to drive off the Confederates and stop the sacrifice of life, until the flag-ship "Cricket," being of very light draft, passed the shoals and pushed on to Grand Ecore. Only then were cavalry and infantry sent to drive away the enemy's sharpshooters, who clung like wolves to their prey.

Even for this relief the Navy and the transports were indebted to General A. J. Smith, who, being the nearest commanding officer at hand, dispatched his troops to the aid of the Navy without waiting for orders from General Banks.

We now return to the gunboats and transports which had started to return down the river from Springfield Landing, as soon as it was felt certain that Banks was retreating, pushing on in good order, as rapidly as the intricacies of the river would permit.

The gunboats were distributed equally among the transports to protect the latter as much as possible, and the commanding officers were directed not to permit the transports to tie up to the bank without permission. General Kilby Smith in his headquarters' steamer brought up the rear of his transports, while the Admiral, in the stern-

wheel gun-boat "Cricket," moved up and down along the line, as occasion required, to preserve the prescribed order.

Thus the fleet proceeded at the rate of a mile or two an hour, until they arrived at Conchatta Chute on the 11th, where General Kilby Smith received dispatches from Banks, notifying him that he was falling back, and directing Smith to return at once to Grand Ecore and report. General Banks did not pay the Admiral the courtesy of informing him what had happened, although he must have known that the Navy was guarding his transports, and that they could not well proceed without its aid. Before leaving Springfield, a letter, dropped by a Confederate scout, was picked up, informing General Dick Taylor that the transports had from six to ten thousand soldiers on board, and were accompanied by four gunboats, this force being for the purpose of flanking him.

This idea of the enemy stood the expedition in good stead, for, perhaps, had Taylor known there were only 1,800 effective soldiers, the transports would have been attacked sooner than they were.

On the way up the river, the fleet had met with little opposition from the enemy, although parties of soldiers were frequently seen retreating. On one occasion, Colonel Warren's brigade landed at a point three miles above Conchatta Chute and captured a captain and one private. This captured officer had been charged to destroy all the cotton along the Red River as the Union forces advanced.

On the return it was seen that this design had been carried out, for the charred remains of many thousand bales, worth millions of dollars, were scattered along the banks of the river, all of which the Confederates might have saved if they had possessed a little practical wisdom. They might have known that the Union forces could not stop to collect this cotton, unless successful, and that it was only in very exceptional cases that they destroyed it.

Although on the way down the Red River the fleet had been frequently annoyed by sharpshooters, they had received no material damage, as the soldiers in the transports were protected by bales of wet hay, bags of oats, and other defences impervious to rifle bullets, while the shrapnel thrown by the gunboats seemed to have a quieting effect on the Confederates; but after getting below the Chute it was evident that the enemy's forces were rapidly augmenting, and the shots, which at first came not unlike the light patter of rain, increased to a heavy shower, and all felt that they were about to experience the wrath which the enemy could not expend on the army.

There was not so much fear for the gun-

boats as for the transports, which, although well protected against rifle-shots, were not prepared to cope with artillery.

Pleasant Hill Landing is but ten miles below Conchatta Chute, although the windings of the river make the distance by water much greater. Ten miles back from Pleasant Hill Landing is Pleasant Hill, then occupied by the army of General Taylor, who, notwithstanding his vainglorious boasts of the operations of his cavalry, had not yet assembled a corporal's guard of horsemen, and very little artillery. Altogether he may have had collected about 5,000 men to dispute the passage of the vessels down the river.

An active Confederate officer, named Harrison, had crossed the river in the rear of the fleet with 1,900 mounted men and four or five pieces of artillery, with orders to plant his batteries in the most favorable places and cripple the fleet as much as possible from the left bank. The Federals saw this party before reaching Conchatta Chute, and sending a few 11-inch shrapnel in their direction, they gave no more trouble for the time being; but it was considered certain that Harrison must plant his batteries three miles below Pleasant Hill Landing, which proved to be the case.

To this latter point the Admiral dispatched one of the heaviest iron-clads and two gun-boats, mounting some ten guns, under Lieutenant-Commander Watson Smith, with orders to prevent the erection of any batteries until all the transports had passed; but Harrison, who could go across, while the gun-boats had to follow the long bends of the river, arrived first, and posted his guns on a high bluff in a dense undergrowth, where he could fire down upon the decks of the transports, and whence it was difficult to dislodge him.

The Admiral was in the rear when he heard the firing commence, and he pushed ahead to superintend operations in that quarter, leaving General Kilby Smith and some of his transports behind, under the guns of the iron-clad "Osage." Lieutenant-Commander Selfridge, and the "Lexington," Lieutenant Bache.

As circumstances occurred at this time of which we wish to be the impartial narrators, we will first give the report of Lieutenant-Commander Selfridge, commanding the little iron-clad "Osage," who, for the time, had the "Lexington" also under his orders. Selfridge reported that he had taken the "Black Hawk"—late General Banks' headquarters' vessel—alongside the "Osage," for the purpose of helping the iron-clad to turn the bends of the river. The "Osage" had got aground just above a turn, the "Lexington" was not far off, and Lieutenant Bache was visiting the "Osage."

All the transports, with one exception, had passed down the river ahead of him, and Lieutenant-Commander Selfridge had just turned the "Osage's" bow up stream, when a body of troops, over 2,500 strong, emerged from a dense wood near the bank. Many of the men were mounted, but these soon dismounted and tied their horses.

From their new blue overcoats, Lieutenant-Commander Selfridge took them for Union soldiers, but he soon discovered their true character, and ordered Lieutenant Bache to drop down the river, in the "Lexington," a short distance, to enfilade the enemy.

The Confederates opened fire on the two vessels, with several pieces of artillery, from a hill about a quarter of a mile distant, and forming their 2,500 men into three ranks, attacked the "Osage" with the "Black Hawk" lashed to her. The "Black Hawk" had on board about forty soldiers of General Kilby Smith's command, partially protected by bags of oats and bales of hay. The enemy's volley drove the soldiers below; and some of them being wounded, and it being useless to remain where they were, Lieutenant-Commander Selfridge ordered all hands on board the "Black Hawk" to take refuge in the safe hull of the "Osage."

Now commenced one of the most remarkable conflicts on record—between a bullet-proof iron-clad and a brigade of infantry, which continued for an hour. At the commencement of the battle, the transport before-mentioned ran up the river to avoid the enemy's fire, and the "Osage," "Lexington," and "Black Hawk" were the only vessels present. The latter vessel was riddled with bullets, and all hands would have been killed had they not made their escape to the "Osage." Officers examined the vessel the day after, and there was not a place six inches square not perforated by a bullet.

The "Osage" secured a good position abreast of the main body of the enemy, and poured in grape, canister, and shrapnel from her 11-inch guns, mowing the enemy down by the dozen at every fire. The latter seemed to know no fear; as fast as one file was swept away, another took its place.

The commanding officer of the Confederates, General Thomas Green, of Texas, who had served at San Jacinto and in the Mexican war, mounted on a fine horse, led his troops up to the bank, and encouraged them to pour in their fire, which they did incessantly, never less than 2,500 muskets firing at once upon the "Osage." The wood-work of the latter was cut to pieces, but the danger from bullets passing through the iron was very little.

While this was going on, the "Lexing-

ton" enfiladed the enemy with shell from her 8-inch guns, disabling the entire gun-battery. The fight had continued nearly an hour, and the determination of the enemy seemed unabated, when Lieutenant-Commander Selfridge aimed one of his heavy guns, loaded with grape and canister, and fired it within twenty yards at a leading officer, whose head was blown clear from his shoulders by the discharge. The enemy, having had enough of this kind of fighting, retreated in confusion to the woods, leaving the ground covered with their dead and wounded.

Four of the latter crawled to the river for water, and were taken on board the "Osage," and well cared for. These men informed Lieutenant-Commander Selfridge that the party who had attacked him were new regiments from Texas; that they had been led to believe that the gun-boats could easily be captured, and that General Green encouraged them so by his example that they would have fought to the last man had not the General fallen.

Lieutenant-Commander Selfridge could only survey the battle-field from the river, but he estimated the loss of the enemy at about 700 in killed and wounded; and from later information was satisfied that it even exceeded that figure.

Selfridge conducted this affair in the handsomest manner, inflicting such a punishment on the enemy that their infantry gave no more trouble, having come to the conclusion that fighting with muskets against iron-clads did not pay. To say nothing of the loss in men inflicted upon the enemy, the "Osage" had killed the best officer the Confederates had in this quarter; who, judging from his energy on this occasion, would have given no end of trouble had he lived.

Lieutenant Bache managed the "Lexington" beautifully, and did great execution with the 8-inch guns, though less exposed to the infantry bullets than the "Osage." The latter was a fortunate circumstance, as her men might otherwise have been driven from the guns, so intense was the fire. Notwithstanding the heavy peppering the "Osage" received, and the destruction of wood-work, the vessel was just as efficient for battle as before the action.

Had not General Green's brigade been handled so severely, it was the intention of the enemy to have attacked the transports below, and the terrible punishment the "Black Hawk" received is good evidence of what would have happened to the others. The transports would have doubtless been driven on shore and great confusion would have prevailed.

This affair was considered a naval fight altogether or one in which the soldiers of

the army had but a very small share. Lieutenant-Commander Selfridge made a report to the Admiral, stating the facts as above narrated; and although General Kilby Smith makes a claim of having been under a very hot fire as he passed down, his vessels were uninjured, and no one heard of any killed or injured. Had General Kilby Smith's command been subjected to a heavy fire, his vessel's hull would have presented the same perforated appearance as did that of the "Black Hawk."

It is a delicate matter to undertake to call in question the report of an officer, especially one belonging to a different branch of the service, and it is done in this instance with great reluctance. After the Red River expedition, the Admiral wrote to General A. J. Smith eulogizing General Kilby Smith in the highest terms, giving him credit, on his own showing, for a great deal of bravery and hard fighting, which, according to Selfridge, never took place.

In justice to General Kilby Smith, however, we will permit him to tell his own story. All that is known of the affair is from Lieutenant-Commander Selfridge's written report at the time, General Smith merely making the Admiral a verbal report sometime afterwards.

Here is what General Smith told the "Committee on the Conduct of the War," in regard to the battle, of which we have given Selfridge's account:

On the 12th of April I sailed at 7 o'clock A.M. from the Chute. Upon arriving at a point ten miles below the Chute, the enemy opened upon my boats, doing more or less damage to all of them. I found myself entirely environed. General Liddell was on one side of the river with a force of 2,500 men and a battery; on the other was a force variously estimated at from 30,000 to 40,000, flushed with their recent victory over General Banks' command. The river was very narrow, very tortuous, and very difficult of navigation at all times, and especially difficult at the very low stage of water which then obtained, and with the class of steamers which I had under my control. The bottom of the river was snaggy, and the sides bristling with cypress logs and sharp, hard points.

At about 4 o'clock in the afternoon of the 12th of April, the wheel of my headquarters' boat, the "Hastings," having got out of order, I ran under the bluff of the bank with the view of making repairs. At that time the "Alice Vivian," a heavy-draft boat with three hundred and seventy-five cavalry horses on board, was lying aground midway in the stream. The "Black Hawk," General Banks' headquarters' boat, was towing the gun-boat "Osage" a short distance below. The "Vivian" signalled for assistance, and I ordered the "Clara Bell" to report to her. The "Clara Bell" failing to move her, I ordered up the "Emerald." At that time the steamer "Rob Roy," with four heavy siege-guns upon her fore-castle, ran astern of the "Black Hawk," and at this moment the enemy, with a brigade about 2,000 strong, under the immediate command of General Thos. Green, of Texas, with a 4 gun battery, formed upon the bank, and put their pieces in battery within point-blank range of the "Hastings," the nearest boat. The

were lying at the opposite bank, half-a-mile off. I ordered the "Hastings" to cast off, and just as we got underway the enemy's batteries opened upon us, the first shot falling a little short, and the others over us. Their practice being defective, we escaped without serious damage; and directly getting out of range, and taking a good position upon the opposite shore, I opened upon them with one section of Lieutenant Tiemeire's battery, one gun of which was mounted upon the hurricane-deck of the "Emerald," the siege-guns upon the fore-castle of the "Rob Roy," and the howitzer from the hurricane-deck of the "Black Hawk." (My guns had more range than the enemy's.) Very soon we killed the battery horses of the enemy, and they changed position rapidly, moving their guns up by hand. Meanwhile their sharpshooters had deployed and sheltered themselves behind the timber that lined the banks of the river, pouring in an incessant fire. My soldiers were all upon the hurricane-decks, protected by cotton bales, bales of hay, and stacks of oats, covered with soldiers' blankets, upon which I had turned the hose of the steamboats to keep them constantly wet, and which proved sufficient foil against rifle-bullets, and enabled them to mark the enemy with a deadly aim. After the fight commenced, the "Osage" rounded the point, and, with the other gun-boats, opened upon the enemy, rendering me essential service. By sundown we had silenced the enemy's batteries, and, shortly after, they fled from the field, leaving many of their dead, among them General Green, who had his head blown off."

General Kilby Smith says, on offering Admiral Porter's letter to A. J. Smith, praising his conduct, for the inspection of the "Committee on the Conduct of the War:—" "The Admiral was not thoroughly posted in regard to the battle I fought at Pleasant Hill Landing, because the data had not come in at the time. We left 700 of the enemy dead on the ground. Green was killed by a canister shot from a steel Rodman (3-inch), mounted on the hurricane-deck of the 'Emerald.'"

Smith's report that he fought a battle is so positive, and Selfridge's report is so positive that the former was not in the fight, that it was difficult to reconcile the discrepancy. Selfridge, who was long under the Admiral's command, always made correct and matter-of-fact reports, giving to every one a due share of praise. We cannot see why he should act differently on this occasion.

Unsolicited, the Admiral wrote in Kilby Smith's favor as handsome a letter as he could, and does not wish now to detract anything from the credit justly due that officer. He must leave it to him and to Captain Selfridge to settle between them the facts of the case. The Admiral having conferred with the latter officer recently, and shown him the report of General Smith, of which he has never before seen or heard, the annexed letter will speak for itself:

NEWPORT, R. I., June 2d, 1880.

Admiral D. D. PORTER, Washington, D. C.

DEAR SIR: Fifteen years have elapsed since the fatal repulse of a portion of the rebel trans-

Mississippi forces under their General Green, by the gun-boats "Osage" and "Lexington" of your fleet, and for the first time I have learned of the report of General Kilby Smith, before the "Committee upon the Conduct of the War," in which he claims for the transports under his command the principal merit of the victory.

The fight took place at what was known as Blair's plantation, and in saying it was essentially a gun-boat fight, no reflection is cast upon the portion of A. J. Smith's division embarked on the transports, because it was never designed they should engage a powerful force from their steamers; nor were the latter capable of a prolonged engagement, such as actually took place, from the unprotected condition of their hulls.

The facts of the fight are briefly these: On the afternoon of April 11th, we first learned of the repulse of Banks' army at Sabine Cross Roads, which forced the return of the transports and of the fleet under your command. You directed me (at that time in command of the light-draft Monitor "Osage") to bring up and protect the rear.

The river was very low, and the swift current in the bends made the "Osage" almost unmanageable while descending. For this reason, the next morning, April 12th, I lashed the transport "Black Hawk" on my starboard quarter, and by her assistance made the descent successfully, till late in the afternoon, when we grounded on the point opposite Blair's plantation. Our bow was therefore pointed down stream, and our starboard broadside opposite the right bank, which was 20 feet high and 100 yards distant. The transports had necessarily passed down, as my position was in the rear. Seeing my situation, Bache, of the "Lexington," which had stopped near by, came on board. We had been for some time vainly trying to get the "Osage" afloat, when the pilot of the "Black Hawk," who, from his elevated position, could see over the bank, reported a large force issuing from the woods, some two miles back. I ascended to the pilot-house, and from their being dressed in Federal overcoats thought they were our troops; but soon their movements—dismounting and picketing their horses—convinced me they were enemies. I accordingly descended, made all preparations for battle, and directed Bache to go below with the "Lexington," and take up an enfilading position.

Then commenced one of the most curious fights of the war, 2,500 infantry against a gun-boat aground. The battery unlimbered some hundred yards below and abreast of the "Lexington," which opened upon it with her port broadside, while I sent a few raking shells from the "Osage" in the same direction. Compelled to plant their guns close to the edge of the bank in order to reach us, on account of the low stage of the river, they could not long maintain the situation, and soon retired with the loss of one gun dismounted.

By this time my attention was wholly directed to the attack upon my own vessel. The rebels came rapidly across the fields in column of regiments, so the pilot of the "Black Hawk" reported, who alone, from his elevated position, could see beyond the bank. So rapid was the advance that this pilot, intent on watching them, stayed too long, and dared not leave the protection of the iron shields of the pilot-house, and so accurate was the fire, that after the fight no fewer than 60 bullet marks were counted upon the shield, behind which the poor fellow was hiding.

I loaded our two 11-inch guns with canister, elevated just to clear the top of the right bank, and as the heads of the first line became visible, fired.

One regiment would come up, deliver its fire, then fall back under cover, and another advance. It was necessary to carefully reserve our fire until the rebels were about to fire, or our shots would have gone over them to the rear, a condition of affairs

which made gun-boat firing very inaccurate at a low stage of water.

The fire of 2,500 rifles at point-blank range, mingled with the slow, sullen roar of our two great guns, was something indescribable. No transports of wood could have stood such a terrible fire; the few soldiers on the "Black Hawk" sought refuge on the "Osage," while the frightened crew of the steamer stowed themselves in her hold. During the three-quarters of an hour that this singular combat lasted, I had expended every round of grape and canister, and was using shrapnel with fuzes cut to 1", when the firing suddenly ceased, and the enemy drew off. During the latter part of the engagement I noticed an officer on a white horse, some 200 yards below the troops, and aiming one of our guns at him, when the smoke cleared away saw him no longer. I learned after, that the officer killed was their General Green. The rebel loss was reported at 700, while ours was only seven wounded. The destructiveness of the "Osage's" fire, delivered at point-blank range, was much increased by an ingenious device by which I could personally aim the guns from the outside of the turret, and thus have a clear view of the field, which would have been impossible had I remained inside. The wood-work of the "Black Hawk" and "Osage" was so pitted with bullet holes, that it is no exaggeration to say that one could not place the hand anywhere without covering a shot-mark.

These are the prominent facts. It is very certain no transports were in sight from my decks; they may have been a little below, concealed by the bend, but too far to have had any influence upon the result, the whole brunt of which fell upon the "Osage." The battery unlimbered abreast of the "Lexington," and was driven off by her fire. No better proof of the absence of General Smith's transports from the fight can be cited than the fact that none of them, except the "Black Hawk," showed any marks, while she was literally riddled with bullets. There might have been a small gun on the "Black Hawk," but it was never fired. As to the siege-guns on the exposed fore-castle of the "Rob Roy," if fired, it was at too long range to have been of any service.

The importance of this engagement cannot be over-estimated, for though they had practically possession of both banks of Red River, the rebels hardly molested us during the remainder of our descent as far as Alexandria, excepting the time when they attempted to intercept you by planting batteries against the "Cricket," bearing your flag, and which were so gallantly run by.

I remain, yours truly,

THOS. O. SELFRIDGE,  
Commander, U. S. N.

It was nearly dusk when the battle ended, and little could be seen except the numerous dead and wounded lying on the field. From the prisoners it was learned that General Liddell, with 5,000 infantry and artillery, was only two miles away and had held back, owing to the shot and shell from the gun-boats falling in his ranks and killing his men. Had this force come up it would have fared worse than the other, for the Admiral had come up with a reinforcement of gun-boats to enfilade the whole bend, and ten thousand men would have stood no chance against their fire.

The Admiral had landed above the Harrison Battery a short time before the attack from above commenced, and from the top of a tall tree was endeavoring to make out

with his glass the position of the enemy's guns and the probable number of his men. At first he paid little attention to the firing up river, thinking the gun-boats were shelling the woods to drive away the sharpshooters; but the heavy rattle of musketry soon apprised him that something serious was transpiring, and, descending from his perch, pushed up the river in the "Cricket" to see what was the matter. He soon met General Kilby Smith coming down, and knowing that Selfridge could take care of himself in case of further attack, returned to his original position, directing General Kilby Smith to form his transports in order at once, and be ready to pass the lower battery as soon as he was notified it could be done with safety.

By 10 P. M. all the vessels were in line, none of them much damaged excepting the "Black Hawk," which looked as if pitted with small-pox; and from the effects of the enemy's fire on this vessel it may be imagined how badly the transports would have fared but for the gun-boats "Osage" and "Lexington," to which General Kilby Smith gives in his report the following faint praise: "The 'Osage' and other gun-boats opened upon the enemy, rendering me essential service." (!)

The Red River expedition was emphatically a united service affair, in which Army and Navy should have shared in whatever credit was gained, and there was not a sailor in the fleet who would have withheld one iota of praise due to the soldiers, or who would not have risked his life to extricate them from any difficulty in which they might become entangled; but even the best of the Army did not always do justice to the Navy on such occasions as this, and, if not actually misrepresenting matters, they saw them through colored glasses.

As far as could be learned, about 700 of the enemy were killed in this engagement, which is very likely an under-estimate, considering the terrible fire to which the Confederates were exposed; and the Navy esteemed themselves fortunate—as sailors looked upon the matter—in the death of so brave and enterprising a leader as General Green, who had displayed a heroism worthy of a better cause.

Had General Banks halted at Pleasant Hill until the 11th, and then sent General A. J. Smith's command to Pleasant Hill Landing, distant but twelve miles by a good road, he would have given the latter officer time to bury his dead, collect his wounded, and bring in the artillery and wagons recaptured from the enemy, besides being on hand to cover the transports at the point where they were most likely to be attacked. As it turned out, the affair proved a victory for the Navy: for had it not been for the

gun-boats, not a transport would ever have returned to Grand Ecore. As it was, very few of the army expected to see them return; and it was only by the unceasing vigilance of the naval officers, in keeping the transports in position and pushing them on as rapidly as possible, that all were taken safely down to Pleasant Hill Landing.

We do not remember another instance where a large army has retreated through a hostile country, and saved their transports and munitions of war. On this occasion the chances were all in the enemy's favor, as there never were such obstacles as were met with in the down-voyage of the transports: shoals at every hundred yards, snags innumerable, and sharp-shooters at all the elevations. We think it not too much to assert that the Navy owed its remarkable preservation, under Providence, to their own good management and perseverance.

After assembling the fleet above the Harrison Battery, the Admiral strengthened the pass with additional gun-boats, and all the transports went safely by, not a shot having been fired at them. The gun-boats kept up such a shower of shell, grape and canister in the woods, that no land artillery could withstand their fire. The flag-ship remained behind to bring up the rear, and at daybreak in the morning it was found that the "Iberville," a large transport steamer that had caused much trouble by frequently grounding, had been abandoned and left in the mud below Pleasant Hill Landing. All her stores had been removed, and she was all ready for the Confederates in case they required such a vessel. Soon after removing her cargo, however, the vessel went floating down river broadside on; and, as there was nobody on board, the flag-ship took her in tow and she was safely delivered to her master and crew, so nothing was left behind for the enemy to exult over.

After passing the Harrison Battery the fleet experienced little trouble beyond the constant fire of sharp-shooters along the river. The flotilla having learned a lesson from the fight at Pleasant Hill Landing, and comprehending the necessity of preserving a compact order, did their best to maintain it, and the fleet advanced much faster—too fast, in fact, for any large body of artillery to overtake it, the only thing from which much danger was to be apprehended.

Below Pleasant Hill Landing the transports grounded so frequently that it was not until noon of the 13th that they reached the little village of Campte, about twenty-four miles by water from the Landing, and about half as far by land. Keeping in the rear to push along the stragglers, the flag-

ship did not arrive at Campte until 4 P. M., and there found the gun-boats and transports in complete confusion, and many of them aground. As the gun-boats could take care of themselves, they were merely directed to proceed to Grand Ecore as soon as they could get afloat.

General Kilby Smith now communicated with the Admiral, and informed him that the Confederates were firing on his transports, from a hill about two miles back from the river, with two pieces of artillery. There was no evidence of this while the Admiral was at Campte; in General Kilby Smith's evidence before the Committee on the Conduct of the War, he makes the following remarkable statement:

"At noon the enemy planted two guns on the other side of the river [which side?], and opened upon the fleet. We lay under shell for five hours. Admiral Porter, with the most effective gun-boats, having taken the advance, had reached Grand Ecore in safety. The 'Osage' and 'Lexington' were the only effective gun-boats left with me from the Navy. The 'Lexington' was a wooden boat of very heavy draft, and of little or no service."

The facts are that the heaviest iron-clads were at that very time behind the transports, and not in the advance; the "Lexington" and "Osage," the most efficient vessels, were in good position among the transports, and were sufficient to silence any ordinary artillery. The "Lexington" mounted ten 8-inch shell-guns and the "Osage" two 11-inch, and the "Lexington," so far from being, as General Kilby Smith asserts, "of very heavy draft, and of little or no service," was the only large vessel of the fleet that did not get aground. She and the "Osage" were the only gun-boats in the fight at Pleasant Hill Landing, against 2,500 men and a park of artillery, and it would be strange indeed if they could not take care of two pieces of artillery! The Admiral was with the transports half-an-hour, during which time there was no artillery fire, and none was ever reported to him by any of his officers. The first he knew of any serious construction being put upon the firing was from reading the above quotation. There was some musketry fire going on, but not a vessel in the fleet was struck with shell or rifle-shot, notwithstanding the five hours' fire to which General Kilby Smith says they were exposed.

The vessels at Campte were so mixed up that the flag-ship had difficulty in getting through them and alongside General Kilby Smith's headquarters' vessel. Seeing that there was no prospect of the transports getting off that night, and thinking that the Confederates might assemble during the darkness in greater force, the Admiral informed the General that he would run down to Grand Ecore, which he could do in half-an-hour, and induce General Banks

to send troops up on both sides of the river. With this, General Kilby Smith was much pleased, although he had not much idea that General Banks would pay attention to a message after plainly hearing an incessant fire of musketry for hours, to which he gave no heed, although only four miles distant.

The "Cricket" carried every pound of steam the boilers would bear, and only stopped a few moments to shell out some Confederates hidden in a house, who fired upon her as she was passing. At 5 p. m. the Admiral was on the levee at Grand Ecore, where the first person he met was General A. J. Smith, who shook his hand heartily and exclaimed: "D—n it, old fellow, I never expected to see you again!" In a few words the Admiral explained to him how matters stood at Campte, and requested him to send up some cavalry and infantry at once. The troops were ready, for Smith had been expecting orders from Banks to send them, so now the former dispatched them at once on his own authority—700 cavalry and 1,000 infantry; the latter under the gallant Colonel Shaw, and they soon cleared the river banks of any Confederates lurking in that quarter.

On the 15th, all the vessels arrived safely at Grand Ecore in good condition, excepting some little damage from running into snags and into each other. As the sailors say, they had not lost a rope-yarn on the expedition, and the casualties, all told, did not exceed fifty men, with very few killed. So, notwithstanding General Kilby Smith's exceptions, we are firm in our belief that the vessels were well managed, and whether the gun-boats were or were not "efficient" must be left to the reader to decide.

As soon as the Admiral saw the troops well underway up river, he mounted his horse and proceeded to call on General Banks.

As the Admiral entered the General's tent, he was reading by the light of a lamp. "Admiral," said the General, "you interrupted me in the most pleasing occupation of my life. I was just reading 'Scott's Tactics.'" The Admiral could not help thinking that he should have read it before he went to Sabine Cross Roads.

He told the General he was sorry he had been unsuccessful, and asking him what were his plans for the future, found him quite indignant at the idea of any one hinting that he had been beaten. "Why, sir," he said, "we gained a glorious victory, and sent the enemy flying in all directions!" "Then, what are you doing here, General?" inquired the Admiral, "This is not the road to Shreveport." "Why," replied the former, "I found that there was no water in that country, and I had to fall

back here to obtain water for my troops and animals."

The Admiral suggested that the troops could have obtained all the water they wanted by marching only twelve miles to Pleasant Hill Landing; but General Banks seemed well satisfied with what he had done, and told the Admiral he intended to continue his march to Shreveport by the river road, keeping the transports in sight.

The Admiral informed Banks that this course was now out of the question, as the river was falling so rapidly that the expedition would have as much as it could do to get from Grand Ecore to Alexandria, and then it was doubtful if the vessels could pass over the "Falls;" but the General insisted that a rise in the river would soon take place, and he would be able to march on Shreveport in a few days.

Notwithstanding this conversation, he commenced intrenching and fortifying his camp on the 16th inst.

We must now turn to General Steele's movements. On the 1st of April, General Steele's army, which was intended to co-operate with Banks, was at Arkadelphia, waiting for General Thayer to join it. The same day, the army moved fourteen miles to Campte, and thence to Washington. Near the latter place it encountered the Confederate Generals, Marmaduke and Cabell, with a good-sized force, and, after considerable manœuvring, Steele, while turning his army southward, was attacked in the rear by General Shelby near the crossing of the river. The enemy, although attacking with great bravery, were repulsed with heavy loss.

On the 3d of April, Steele's entire command crossed the Little Red River at Elkins' Ferry—a movement so skillfully planned and so promptly executed that the enemy only by accident learned of it after it was accomplished. General Thayer had not yet joined Steele, having been delayed by bad roads, for the heavy rains made terrible work for the army, causing the route to be almost impassable, so that it was necessary to corduroy it. Thayer at length arrived, and crossed the Little Red River on a bridge constructed by the soldiers.

On the 10th of April the army moved to Prairie, where Price, the Confederate General, had determined to make a final stand at the point he had chosen; two branches diverge from the main road to Shreveport—one going to Washington, the other to Camden. Here some artillery firing took place which lasted until night-fall. After dark the enemy made a desperate effort to capture the Federal guns, but were repulsed with heavy loss, and retreated to their fortifications of earth and timber, a mile long, commanding the Washington

road. On the 12th of April, Steele turned the enemy's left flank and the latter fled to Washington, followed by the cavalry sent by General Steele to make the enemy believe the army was following in their rear, instead of which it took the road to Camden. Much time was spent in crossing the Terre Rouge bottom, which had to be corduroyed for miles, and several bridges constructed. During all this time the rear-guard under General Thayer was subjected to numerous attacks by the Confederate General Dockray, who was always repulsed.

Fighting their way foot by foot, with the Confederate forces in front and rear, Steele's army entered Camden on the 15th and found the place strongly fortified, so as to be impregnable against any force the enemy could bring to bear. Steele was now only a hundred miles from Shreveport, and could get all the supplies necessary by boats on the Washita River. In fact, he could have held on here until Banks reached Mansfield.

But at Camden some captured Confederate dispatches gave the information of Banks' backward movement, which was soon confirmed by other intelligence. On the 18th, a forage train sent out by Steele was captured by the enemy, the first disaster occurring during Steele's long march through a difficult country swarming with the enemy's troops. On the 20th, a supply train arrived from Pine Bluff and was sent back on the 22d, escorted by a brigade of infantry, four pieces of artillery, and a proper force of cavalry. On the 25th, news was received that the train had been captured and the colonel in command of the escort mortally wounded.

Before this time the Confederates had learned that Banks had retreated to stay, and General Kirby Smith with 8,000 Confederates had joined General Price, and the combined forces were marching upon Steele's position. Under all the circumstances, with no hope of being joined by Banks, General Steele wisely concluded to evacuate Camden and fall back.

On the night of April 26th the army crossed the Washita and marched towards Little Rock, by way of Princeton and Jenkins' Ferry, on the Sabine. On the 27th, a pontoon bridge was thrown across the Sabine at the latter point, and the army reached Little Rock, and it was learned that General Fagan, with fourteen pieces of artillery and a large force of infantry, was moving up the river to attack Little Rock.

The combined forces of Confederates, under Price, made the attack, and were repulsed with great slaughter, losing a large part of their artillery and munitions of war. Steele held on for a few days longer to see if Price would make another attack,

and then took up his line of march and joined the Army of the Tennessee.

It does not require much military knowledge to see how much better Steele's expedition was managed than that of Banks'. Steele's army, unaccompanied by transports and depending entirely on their trains for supplies, marched more than three hundred miles over the worst roads possible, with an active enemy harassing them at every step. Their difficulties, indeed, were far too numerous to mention in this short sketch. Whenever Steele was attacked, he defeated the enemy; and the only mistake he appears to have made was in sending back an empty wagon-train to be captured instead of retaining it with the army. General Steele was a soldier who knew his business, and he was supported by Generals Rice, Solomon, Carr, and Thayer, who inspired their men with their own martial spirit. They outwitted the Confederates as well as outfought them on every occasion; and we only regret that the dispatches sent off by General Banks in a gun-boat did not reach General Steele in time to save the large wagon-train captured by the enemy.

But to return to affairs on Red River. When it was found that Banks would probably retreat to Alexandria, the Admiral got the "Eastport" and other large vessels over the bar at Grand Ecore, and directed them to proceed to Alexandria, while the "Lexington" and "Osage" were detailed to convoy the transports, and see them safe to Alexandria, when they were ready to move.

On the 16th of April, the Admiral received a dispatch from Lieutenant-Commander Phelps, reporting that the "Eastport" had been sunk by a torpedo eight miles below Grand Ecore. The Confederates had planted numbers of these along the river, but as they had hitherto done no damage, the Navy paid little attention to them.

When the Admiral reached the "Eastport," he found her resting on the bottom, with her gun-deck above water. Hastening to Alexandria, he sent up two pump-boats, with orders to Lieutenant-Commander Phelps to take out everything that would lighten the vessel, and felt sure that the "Eastport" would soon be afloat again. He was detained a day in Alexandria, making a new disposition of the naval forces on the Mississippi and its tributaries.

During his absence up Red River the massacre at Fort Pillow had occurred, in consequence of the policy pursued of not properly garrisoning the strong points, where so much blood and treasure had been expended.

There were two small gun-boats at Fort Pillow at the time, which did their part, but the garrison could make but feeble resist-

ance. The "Essex," "Benton," "Choctaw," "Lafayette," "Ouchita," and "Avenger" were sent to secure the fort against further attacks.

The "Eastport" was much more shattered by the explosion than had been imagined. Lieutenant - Commander Phelps and his officers worked with a will to save this valuable vessel, and more energy and determination were never evinced. Phelps was satisfied, if time were allowed, that the "Eastport" would be floated off all right. As the Admiral had so far met with no mishaps, he did not wish to resort to blowing up the "Eastport," to prevent her falling into the hands of the enemy.

On his return to Grand Ecore he found the army quite excited at the news that they were going back to Alexandria, though the different divisions were ordered "to be in readiness to march against the enemy!"

At noon of the 20th, General A. J. Smith's division marched out on the road to Natchitoches, and were kept for some time under arms.

All kinds of rumors were flying about: first that the cavalry had been driven in; then that the Confederates were advancing on Banks' position with 40,000 men, when everybody must have known that they could not assemble 16,000.

Every one was now convinced that Banks had not the slightest intention of advancing, and was planning a retreat, calling forth all the objections to an advance that he could in order to justify his course, and to say that his desire to advance on the enemy was overruled!

Admiral Porter had already told him that he could not now advance, if he depended on the gun-boats and transports; but he never advised him to leave Grand Ecore.

General A. J. Smith's division was advanced four miles towards the enemy, who seemed to be in force, and, although not strong enough to attack the Union position, would, in a retreat, no doubt, harass the rear. In fact, it shortly appeared that A. J. Smith's "ragged guerillas," as Banks had called them, were now to have the honor of protecting the General in his retreat.

Seeing that some move was in contemplation, the Admiral sent an officer to General Banks to ask if the report was true that he was going to move to Alexandria. If so, he requested one more day in which to float the "Eastport." To this message, the General sent a reply that he had no idea of moving.

The Admiral then called on General Franklin—sick in his cot—who asked if Banks had notified the Navy that he was going to retreat. The Admiral said "No," but that he had noticed that all the transports were moving down river, and that

one of the largest gun-boats was aground below.

Franklin then assured him that he had orders to move at a moment's warning, and that Banks did not wish any one to know he was going, as he wanted the largest gun-boats kept at Grand Ecore, so that they could cover his rear as he moved off.

At first the Admiral thought that Franklin was prejudiced against Banks and misjudged him, knowing there was no cordiality between those officers; but on a subsequent interview Franklin gave such assurances that Banks intended to leave him, and urged him so strongly to look out for himself, that the Admiral determined to follow his advice.

The gun-boats could take care of themselves; but the condition of the "Eastport" was a great cause of uneasiness; so the Admiral proceeded at once to that vessel and informed her commander that he must get away from the vicinity of Grand Ecore at all hazards, as the Confederates would occupy it immediately on the departure of the Union forces, and be able to concentrate a heavy artillery fire on him while working.

The leak in the "Eastport" had been so far overcome that steam was raised and the vessel only rested slightly on the bottom.

The Admiral returned to Grand Ecore and found that Banks had left with the advance of the army in the night for Alexandria, leaving General Franklin in command of the main body, with orders to follow him. So that Franklin was virtually in command until the army reached Cane River.

The evacuation left Grand Ecore in the solitude of a wilderness. A. J. Smith's division marched at 7 A. M., on the 22d, so hastily that they left behind a quantity of stores and some siege-guns, which were brought down by the fleet.

All the transports were gone, and the flag-ship "Cricket" and another small gun-boat were all that was left after the departure of the Grand Army, which had entered the Red River country so joyfully and was now retreating before an inferior force.

We do not think the enemy knew of the departure of the Union Army until a considerable time had elapsed, as there were no signs of them at Grand Ecore, not even a musket was fired at the army as it marched. The Admiral had had an interview with General Banks in relation to General Steele, in which he reminded the former that this was intended as a co-operative movement between the two armies; that Steele, advancing in confidence to meet Banks and not hearing of the latter's return, would fall into a trap, as the Confederates could concentrate all their forces against him and perhaps defeat his army.

Banks' army was over a hundred miles

in a direct line from Steele, as the crow flies, and twice that distance by the crooked roads and rivers, all the intermediate country swarming with Confederate troops.

As it was hardly possible to communicate with Steele in any other manner, the General proposed sending one of the fast naval dispatch steamers down the Red River, up the Mississippi and Arkansas Rivers, thence *via* Little Rock to Camden, Arkansas, a distance of over five hundred miles. A messenger was sent accordingly, but whether he got to his destination is not known.

Nothing could better demonstrate the absurdity of this co-operative movement upon Shreveport than the fact, that at no time since the expedition started had the commanders of the two armies communicated with each other. A glance at the map will show that from the first these armies were to advance upon Shreveport at right angles with each other, and without the probability of communicating until they made a junction at or near that place, while the points from which they started were over 500 miles apart, and Steele's army had to make slow marches on account of bad roads and the difficulty of obtaining supplies.

Hence it was impossible for them to move in harmony as regards time, and next to impossible for one to notify the other of any detention that might occur.

The whole idea was in violation of the rule of war that two armies co-operating with each other should be in constant communication.

This co-operation might easily have been effected if Steele had marched to Columbia, La., through a much better country than the one he passed through. On arriving at Columbia, he would have been within eighty miles of General Banks, and could have been supplied with stores by way of the Washita River, where the gun-boats could have protected his transports and added to the strength of his artillery.

The two armies could have been put in communication near Mansfield, one on each side of the Red River, and the Confederates would have retreated to Shreveport without resistance.

As it was, the enemy had the opportunity of attacking each army in detail, and turning them back whence they came, making this one of the most disastrous campaigns of the war.

From all we can learn, the enemy took up a position to oppose the Union troops at the crossing of Cane River.

Franklin gave orders to attack the enemy early the following morning; but, suffering greatly from his wound, transferred the command to General Emory, who made the necessary disposition of the troops.

In the morning the 1st division attacked the enemy directly in front, while the cavalry made a demonstration on the right, and General Birge with a picked force prepared to turn the enemy's left.

After some sharp fighting General Emory carried the enemy's position with a loss of 400 men.

In the meanwhile the enemy had attacked General A. J. Smith, who brought up the rear; but all their efforts were frustrated by the vigilance of that brave soldier, who administered a severe punishment to the enemy and took many prisoners. Before 1 P. M. the enemy had all been scattered.

The Confederates having retreated, General Smith advanced four miles and camped for the night, in readiness for any further attack, the 16th corps being within supporting distance.

On the 24th of April, the enemy saluted the Union troops with several shells, in order to feel their position, and afterwards drove in the cavalry pickets. Finally they charged on the rear with a yell, but were driven back with loss.

Up to the 25th, General Emory was kept busy in repulsing the numerous attacks of the enemy, which he did with little loss. There were skirmishes at Henderson's Hill and other points, but the army was now directed with intelligence by a good General, and on the 26th and 27th the whole force marched into Alexandria in excellent condition and went into camp.

From Cane River the road to Alexandria diverged from Red River, and, of course, the transports and "Eastport" could expect no further support from the Army. The Admiral had, therefore, to depend upon his own resources for getting back to Alexandria, but would not have cared much about it could he have moved more rapidly. But he was so hampered by the "Eastport" that he felt sure of meeting resistance before the fleet could get down. The guns and stores of the "Eastport" had been put into a large lighter, the vessel fitted with a number of siphon pumps in addition to those she already had, and on the 21st April she started in tow of the two pump-boats.

The first day the "Eastport" made forty miles down the river, but at 6 P. M. she got out of the channel and grounded; and now commenced the most serious difficulties of forcing her over the bars and other obstructions so numerous in Red River, and which were so little known that there was small hope of saving the iron-clad without some help from the Army, which would probably not be given.

It would be impossible to convey an adequate idea of the proceedings from the 21st to the 26th of April, during which time the efforts of Lieutenant-Commander Phelps,

and the officers and men of that little squadron, were devoted to the saving of this valuable iron-clad.

Phelps and his command worked day and night, almost without rest, in the hope of getting the vessel to Alexandria. Once or twice she sank, and had to be pumped out again, then she would get aground on the logs and snags. It was necessary to keep her decks and those of the pump-boats crowded with men to do the necessary work, including carrying out hawsers at nearly every bend in the river.

The party had been anticipating for several days to be attacked by infantry and artillery, and we cannot to this day imagine why it was not done, unless the enemy expected to get the vessels into a position where no resistance could be made, and capture the whole squadron.

The "Eastport" had grounded eight or nine times, and at last got so hard and fast upon the logs at a place called Montgomery, that all efforts to move her were in vain. After spending a night in useless labors, and ascertaining, by sounding, that a few yards ahead was another bed of logs with still less water, Lieutenant Commander Phelps reluctantly admitted that there was nothing to do but blow the "Eastport" up.

The Admiral had stayed by the vessel as long as there was the slightest possibility of getting her down, thereby risking the capture of the little squadron, and he acceded to the proposition to destroy her. Phelps had got the "Eastport" sixty miles down the river, and sixty more would have put her at Alexandria, but the Army was also that distance off, and the reports were that the Confederates were harassing its rear in every way, so one might naturally expect when the Union troops reached Alexandria that all the Confederate forces would be concentrated against the little flotilla.

To oppose them there were but three light-draft gun-boats—called "tin-clads"—for the "Eastport" had no guns on board. The prospect was certainly not very encouraging.

The following extract of a letter from Lieutenant-Commander Phelps will be interesting in this connection :

"The command of the 'Eastport' has been to me a source of great pride, and I could not but deplore the necessity for destroying her. The act has been the most painful one of my official career. She was the finest vessel of your squadron, and one of the best possessed by the Government.

"Your order to me to proceed to destroy her, in which you commend the zeal displayed by myself and officers and crew in our efforts to save her, not only relieved me from all responsibility, but was also grateful to my feelings both as a man and as an officer.

"I desire, further, to express to you my grateful sense of your forbearance in ordering the destruction of the vessel when yourself convinced of the impossibility of saving her, in yielding your judgment to my natural anxiety to exhaust every means

that seemed to offer a hope of success. I fear that your forbearance led to greater difficulties, both for your squadron and yourself, than ever the saving of the 'Eastport' would justify. This consciousness added largely to my anxiety for your safety when separated from you by the accidents of the action which took place on the evening after her destruction, when I had every reason to apprehend the worst."

The most thorough preparations to destroy the "Eastport" were made, the boilers, cylinders and engine-room being filled with powder, as was also every enclosed space about the hull of the vessel. Then trains were laid to have a simultaneous explosion in every part. When everything was ready and some forty barrels of gunpowder awaiting ignition, the Admiral pulled off a short distance to witness the explosion, while Phelps, from his boat alongside, applied the match, and shoved off; but he had hardly got headway on his boat before the ship blew up, shattering her to fragments.

The Admiral and Phelps were fortunate in escaping with their lives, for the fragments fell in all directions around them, though no harm was done to any one.

The Confederates, who heard the explosion, must have thought an earthquake had taken place; for in that narrow river, inclosed by high banks, the jar seemed as if everything would shake to pieces, and the trees bent, as if a tornado had passed over them.

Of course, the enemy made for that point with all dispatch; and, although the officers were always on the look-out, the attack came sooner than was expected.

The vessels had dropped down about three hundred yards from the "Eastport," and the little flag-ship, the "Cricket," was lying at the right bank; when, just after the former vessel blew up, she was attacked by a heavy force of infantry from the right bank. From their concealed position they poured a fire into all the vessels of over twelve hundred muskets and rifles, and then rushed to board the "Cricket."

Fortunately one watch was always kept at the guns, prepared for any emergency, and the men were under cover of the bulwarks; so that, with the exception of splintering wood-work and smashing glass, little damage was done by the fire.

A fire of grape, canister, and shrapnel soon drove the enemy back. One man, who could not get away, surrendered himself prisoner, and informed the Admiral that the present force was only the advance of some six thousand artillery and infantry that would give him a warm reception further down. The naval force now consisted of the "Cricket" and "Juliet," each carrying six small guns, and the "Fort Hindman," eight guns, mixed battery—"tin-clad" gun-boats only musket-proof—together with two pump-boats, "Champion"

and "Champion No. 5," entirely unprotected.

The "Champion" was lashed to the "Juliet," and the "Champion No. 5" followed the squadron.

They had proceeded twenty miles down the river, the "Cricket" leading, and the vessels in close order, when it was noticed, about one hundred yards from the river, on a high bluff at a bend, that some men were moving in the bushes; and the commander ordered a shrapnel shell fired in among them from a 12-pounder howitzer, always in readiness on the upper deck. The shell burst in the midst of the enemy, whom, it now appeared, were posted in force; and the vessels approached within about twenty yards of the shore, when nineteen shells

During this time the enemy were raking the "Cricket" fore and aft; but, supposing that she was disabled so as to be in their power, they turned their attention to the "Juliet," close behind, with such effect that she drifted down under the bank, where no guns could be brought to bear upon her.

In the meantime the "Cricket" had succeeded in getting around a long, narrow neck of land, and found herself in the enemy's rear. Having got a fresh crew to the gun on the upper deck, and remanned two of the other guns with "contrabands," the fire was directed with such effect that the enemy were driven from their guns, and the "Juliet" escaped up the river in tow of the "Champion."

In the four minutes the "Cricket" sus-

ATTACK ON THE "CRICKET" BY 2,500 CONFEDERATES, UNDER GENERAL GREEN.

crashed through the vessel from concealed artillery, shattering the "Cricket" in all her parts.

The Admiral immediately hastened to the pilot-house, and entered the door just as a bursting shell wounded the pilot, and killed all the guns' crew forward. By this time the engine had stopped; but the current, running at the rate of four miles per hour, was bearing the "Cricket" rapidly down stream. Going below, the Admiral found the engineer had been killed with his hand on the throttle-valve, and as he expired he had shut off the steam. Steam was turned on, and the engine once more started.

The gun-deck was covered with dead and wounded, and all but one of the guns was disabled. In the fire-room all the firemen were *hors du combat*.

tained the enemy's fire, she had twelve killed and nineteen wounded, most of the latter severely. She was struck thirty-eight times with shell, which generally burst in small fragments, otherwise they would probably have disabled the boilers and machinery.

The whole ship's company of this little vessel amounted to but fifty persons, of whom one third were negroes picked up along the Mississippi; but there was no flinching, although the "Cricket" had but four officers, all of whom were wounded. One gentleman, a guest on board, said he came in this expedition expecting to see fighting, and had now seen all of it he wanted.

As soon as the Confederates recovered from the temporary surprise caused by the "Cricket's" shells, and the latter had

drifted out of range, they opened upon the "Champion, No. 5," and sunk her immediately. She had a number of negroes on board who had fled from Grand Ecore, but they were all killed, many of them shot while struggling in the water.

General Taylor told the Admiral, after the war, that he was present and in command on this occasion, and, besides three batteries of artillery, he had three thousand infantry pouring their fire into the vessels all the time. The Admiral reproached the General for his want of courtesy in shooting at him as he passed along the upper deck, but Taylor assured him that he ordered the firing to cease the moment he recognized the Admiral.

If this was so, and amid all the noise and confusion, no one could pretend to recollect the exact circumstances of the case, the Admiral must attribute it to the chivalric feeling in General Taylor's breast towards one with whom he had been intimate in the days when the South did not dream of shedding Northern blood.

When Lieutenant-Commander Phelps saw the difficulties ahead, he steamed down in the "Fort Hindman," and opened fire on the enemy's batteries, enabling the "Juliet" to escape and join him. The latter vessel, in this short period, had lost fifteen killed and wounded, and was very much cut up. Phelps concluded it would be best to wait till night before trying to run the batteries. Some may think he should have followed the flag-ship immediately, but the Admiral always encouraged his officers to think for themselves, and had he followed, with the river impeded by the sunken "Champion," he might have entangled the vessels and lost all. Naturally thinking that the "Cricket" had been destroyed, Phelps had to take upon himself the responsibility of commanding officer.

Two iron-clads had been ordered to meet the fleet two miles below Cane River, near where the flotilla was attacked, and the flag-ship hastened to meet them and hurry them to the scene of action; but the "Cricket" soon ran hard and fast aground within reach of the enemy's guns, but, fortunately, out of their sight, and remained in this position for three hours. While there the vessel caught fire from the explosion of a howitzer caisson-box, which had been struck by one of the enemy's shells.

At dark, the "Cricket" fell in with the "Osage," lying opposite one of the enemy's field batteries, which she had been shelling all day, and this, together with being under a high point of land, prevented the commanding officer from learning the direction of the cannonading. The "Osage" was dispatched at once to the scene of the

late action, as she was proof against field artillery.

The "Lexington" was engaging another battery near by, and had been struck fifteen times in the hull during the day, with only one man killed. She was too large to go up the river to the enemy's batteries, so taking one or two officers from her, including a surgeon and some firemen, the "Cricket" proceeded under her convoy to Alexandria to bury the dead and care for the wounded. The Confederates, it was thought, would have batteries all along the river, and the "Cricket," with so few men and only one gun not disabled, was in no condition for service.

The "Osage," in her anxiety to reach the Confederate battery, had run ashore four miles below it, when the "Fort Hindman" and the "Juliet" appeared, coming down the river, having left the two Champions sunk. Had the iron-clad arrived in time she would have been of great service, but as it was, the passage from Grand Ecore down could not be called a success.

The Admiral left behind him one iron-clad and two pump-boats; but had the satisfaction of knowing that none of the transports had been left in the lurch, although ample excuse had been afforded to do so.

Throughout the expedition there had been no instance where the Navy held back when called upon to support the Army and its transports, and, remarkable as it may appear, not a transport was lost, nor any of their stores, during an expedition of 300 miles up the river and return, although it required the most strenuous exertions of the Navy to keep them in place and prevent their masters, some of them Confederate sympathizers, from placing their vessels where they would fall into the hands of the enemy.

The Admiral certainly was under no obligations to the Army for his escape down the river, where, after the retreat of the latter, every man and gun the Confederates could utilize were brought to the banks to try and capture a poor little squadron of "tin-clads" with the commander-in-chief of the naval forces on board.

Had Banks been surrounded by a superior force, the Navy would never have run away and left him; but would have expended every vessel, if necessary, rather than have a reverse befall him.

It never seemed to strike any one in the Army that the Navy was of the slightest consequence beyond the service it could perform for them. The loss of the "Eastport" was considered of no more importance than the loss of some quartermaster's transport, which were frequently run aground and deserted during the war, with full cargoes on board; accidents which

never happened when they had the little "tin-clad" gun-boats of the Navy—vessels as vulnerable as themselves, but much better commanded—to convoy them.

When the flag-ship arrived at Alexandria, the squadron of naval vessels, fourteen in number, was found above the "Falls," with the rocks below them for a mile quite bare, with the exception of a channel twenty feet wide and about three feet deep. Taking the chances, the pilot managed to get through this channel with the "Cricket," after considerable thumping, and passed the "Falls."

Except from that warm-hearted soldier, A. J. Smith, the Navy received few congratulations for their successful escape down the river. With this officer the Admiral conferred seriously in relation to the condition of affairs. Smith was very bitter against Banks for retreating in the manner he did, and again broached the idea that Franklin should take command of the Army.

The Admiral did all he could to pacify the General, and recommended perfect subordination, telling him that nothing would please General Banks better than to place him under arrest, notwithstanding all the services he had rendered. General Smith could not bear to rest under the stigma of defeat, although everybody knew that he and his brave division had never been beaten at any time during the expedition.

General Banks had moved into comfortable headquarters, and the several army corps had encamped near the town. Gen-

eral McClernand had taken command of the 13th corps, and was posted on a road leading to Fort De Russy, three miles outside of Alexandria, to keep the Confederates from passing down that way.

The Army was in a state of general dissatisfaction from various causes. General A. J. Smith, from not being allowed to follow the Confederates to Shreveport; Franklin and Emory were disgusted at the way the expedition had been mismanaged; while Banks, though somewhat subdued, tried to preserve his equanimity.

General Smith, when allowed, with his command, by General Sherman, to take part in this expedition, was ordered to return to the latter in thirty days, at the expiration of which time Banks promised to be in Shreveport; but, when the time had elapsed, Banks protested against Smith's leaving, on the ground that the safety of the Army depended on his remaining, as the Army could not move until the naval vessels had passed the "Falls" at Alexandria.

The squadron was now in a very bad position above the "Falls," as there seemed little chance of getting down until the river should rise some fourteen feet, and the safety of the vessels depended very much on the Army continuing at Alexandria. The latter was now in a country with good roads, and with the topography of which they were familiar, and could make their way back to the Mississippi without danger from the Confederates, who had only 12,000 men available in that region, although expecting reinforcements.

## CHAPTER XLIII.

### RED RIVER EXPEDITION.—CONTINUED.

BUILDING OF THE FAMOUS RED RIVER DAM AT THE FALLS.—DIFFICULTIES OVERCOME BY COLONEL BAILEY.—COMMUNICATIONS BETWEEN GENERAL BANKS AND ADMIRAL PORTER.—GENERAL MCCLERNAND ATTACKED BY THE CONFEDERATES.—THE “RAGGED GUERRILLAS” ARE UNEXPECTEDLY PROVIDED WITH NEW OUTFITS.—COTTON STEAMERS ATTACKED AND DISABLED.—ADMIRAL PORTER’S REPORT ON THE BUILDING OF THE DAM.—THE FLEET PASSES THE FALLS.—NAMES OF OFFICERS AND REGIMENTS ENGAGED IN BUILDING THE DAM.—BURNING OF ALEXANDRIA.—THE END OF THE RED RIVER EXPEDITION.—CAUSE OF FAILURE.—RESULTS.—CORRESPONDENCE BETWEEN GENERALS SHERMAN, BANKS, HALLECK, GRANT AND OTHERS.—DISPATCHES AND ORDERS.—REVIEW OF THE OPERATIONS OF THE NAVY.—GENERAL BANKS’ STORY OF THE EXPEDITION.—LETTER OF GENERAL KILBY SMITH.—EXTRACT FROM REPORTS BY CAPTAIN BURNS, ACTING-ASSISTANT ADJUTANT-GENERAL.—THE CONFEDERATE VIEW OF THE SITUATION.—EXTRACT FROM GENERAL BANKS’ REPORT.—RECAPITULATION.

GENERAL FRANKLIN had mentioned to Admiral Porter at Grand Ecore, on his stating that the naval vessels could not pass the “Falls” at the then stage of water, that Lieutenant-Colonel Bailey had suggested a plan of raising the water above the Falls by building wing-dams. Colonel Bailey had had great experience in lumbering, and had frequently resorted to this method to raft timber in shallow rivers.

The Admiral paid little attention to this suggestion at the time, and expressed his doubts of the practicability of getting large vessels down in that way. When he met General Franklin again in Alexandria, he recurred to this proposal of Bailey’s, and Franklin was so satisfied with the feasibility of the scheme that the Admiral asked him to send Colonel Bailey to him at once, and the latter soon appeared, in company with Colonel James Grant Wilson. The Admiral was so impressed with Bailey’s plans that he agreed with him that they ought to be tried, and he was surprised in reading General Franklin’s evidence before the Committee on the Conduct of the War, where he states as follows:

“When we returned to Grand Ecore, I sent Colonel Bailey to Admiral Porter, so that he might present

his plan to the Admiral; but it was looked upon with derision as a foolish thing. I was, however, convinced that Colonel Bailey knew his business very well, and sent him to Admiral Porter again; and, after he got down to Alexandria, I sent him two or three times. Finally, I sent him to General Banks, to try and impress upon the General the necessity for giving the orders for details of men to build the dam.

“General Hunter was there at the time, and he told General Banks that he thought, as I had recommended the thing, he ought to try it; and it was tried. I have the report of Colonel Bailey to my adjutant-general, which gives all these facts, as I have stated them here.”

General Franklin’s memory was certainly treacherous here, for the statement above quoted is incorrect in several particulars. The Admiral was only too glad to grasp at any plan likely to extricate his vessels from their unfortunate predicament; and this will appear by Lieutenant-Colonel Bailey’s report.

There was no objection on the part of the Admiral to anything, but he had no power to build a dam which would require half the army to perform the work. General Banks was the man to be consulted, for on him depended the execution of the work.

No doubt, Franklin and Bailey worked assiduously to get every one to think favorably of the plan of damming the river, and

the Admiral went in person to General Banks, as soon as he could leave a sick-bed, and urged him to try Bailey's plan. Not much time was lost in consultation, for the order to build the dam was given by General Banks immediately, and the work commenced on the 30th of April. The Admiral arrived in Alexandria on the evening of the 27th, and conferred with Colonel Bailey and General Banks on the morning of the 28th, when the order was issued.

Where all this indisposition to adopt Bailey's plan appears, we are at a loss to imagine. In fact, we are not aware that any one opposed the dam—if any did, they were persons whose opinion had no influence. The Army engineers may have doubted the practicability of the scheme, never having had experience in that kind of engineering; or General Banks may have said, "Wait till the Admiral arrives." But even those who doubted the feasibility of the plan were in favor of trying it, especially as it had been recommended by General Franklin, an engineer officer.

It seems to us that so much effort to show that there was a great opposition to Bailey's plan, demonstrates a desire to enhance the value of the recommendations of those who first favored the idea. General Banks, from whom alone authority could come for the employment of troops to build the dam, entered into the scheme with alacrity and pushed the work from beginning to end.

General Banks, in his testimony before the committee, said: "But Admiral Porter did not seem to think much of the plan, as he expressed it in his way—if *damning* would get the fleet off, he would have been afloat long before"—but Banks could not understand a joke.

Colonel Bailey, in his report, says: "Admiral Porter furnished a detail from his ships' crews under command of an excellent officer, Captain Langthorne, of the "Mound City." All his officers and men were constantly present, and to their extraordinary exertions, and to the well-known energy and ability of the Admiral, much of the success of the undertaking was due."

A great mass of testimony was taken by the "Committee on the Conduct of the War" in relation to the building of the dam, and an attempt was made to cast odium upon the Navy in order to divert attention from the real subject at issue—Banks' retreat—but the attempt was a failure.

Every man in the fleet was engaged in the operations connected with the construction of the dam, conveying stone in boats to weight the big cob-frames forming the dam, moving the frames into position—a tedious and dangerous duty—and floating

down the logs which were cut and hauled by the soldiers to the river banks. Many boats had to be kept lying on their oars day and night ready with hawsers, and at least three thousand soldiers were constantly working up to their necks in water.

While this was going on, all the forges in the fleet were employed in making long iron bolts to bind the dam together. Getting the iron off the sides of the vessels to lighten them—a most harassing and difficult job—employed many men. In addition, all the heaviest guns had to be taken on shore.

Thus, while the dam was under construction, the sailors worked night and day; and every four hours a report of progress was made to the Admiral. But General Banks, in his evidence before the Committee, says, when the right wing of the dam broke away, "I immediately rode up to the fleet to see if they were prepared to move by daylight in the morning. It was a couple of miles above the dam. When I got there, there was not a light to be seen, not a man was stirring, not a ship had been lightened" [!]. (Army gun-wheels had already taken the guns to the levee in Alexandria, and army wagons had removed all stores and ammunition, and the iron-clads had thrown their iron plating into deep water up river). "I could not arouse anybody there. I went down to my headquarters, and wrote a letter to Admiral Porter" [No such letter was ever received, if it was written], "stating my belief that it was not possible for the dam to stand, and, if it was carried away, it did not seem as if we could replace it" [How did the General expect the vessels to get through, unless part of the dam was removed?]; "that I had been up to see his fleet, and found every one asleep, and I feared they would not be ready to move by morning. This letter was delivered to him (the Admiral) by Colonel Wilson, at 1 o'clock (A. M.) that night. Admiral Porter said he would attend to it," etc., etc. Further along, General Banks says: "I went to the dam next morning, at 7 o'clock, just in time to see the dam swept away. The gun-boats were just then moving, and it would have taken them all day to move down. We thought the game was up, but officers and men were ready to recommence the work, and suggested other plans, which had been talked of before."

The fact is, what Colonel Bailey expected came to pass. The three large barges, loaded with cotton and iron, swung around and made an opening or gate in the dam fifty feet wide, just sufficient for the passage of the vessels. The barges swung against the rocks, and afforded a good cushion for the vessels to strike on as they passed down. The opening did not diminish the depth of water above the dam, and the three vessels

that had found water enough to pass the upper "Falls" had gone through the gap in the dam, under full head of steam, almost directly after it opened. The other vessels had not water enough to pass the upper "Falls," and had to wait until it was furnished them.

The Admiral was on the spot before General Banks was, and had given the necessary directions for the vessels to pass through. Having critically examined the "Falls," he saw that the break in the dam was rather an advantage than a mishap. Colonel Bailey was not at all dismayed, but coolly went to work building wing-dams above the upper Falls, which he intended to do anyway, so that all the vessels passed down in safety. While the wing-dams were in process of construction, everything that could be taken from the vessels to lighten them, and had not previously been removed, was hauled around the Falls by army teams, and not a moment was lost that could be avoided.

But General Banks, when he saw the break in the dam, thought, to use his own expression—"the game was up"—and commenced writing the Admiral letters, informing him of what the latter had rather anticipated, viz.: that Banks would have to leave him, etc., etc. However, as General A. J. Smith had promised to stand by the Navy to the last, the Admiral did not care much whether Banks went or stayed, so long as he could retain Bailey and A. J. Smith. He had no apprehension of not getting through; for, with Smith's division and the gun-boats, the Navy could have held this position against all the Confederate forces at that time on Red River.

The Admiral got very tired of General Banks' letters. He at first tried to soothe him, but at length sent him the following communication, which put an end to the correspondence:

MISSISSIPPI SQUADRON,  
FLAG-SHIP "CRICKET," }  
OFF ALEXANDRIA, May 11th, 1864. }

*Major-General N. P. Banks, Commanding Department of the Gulf, Alexandria, La. :*

GENERAL—Colonel Wilson called to see me this morning, and seemed to think the Navy were relaxing their exertions above. There is really nothing that can be done to the "Carondelet" until the water rises. The channel in which she lies is a cut channel in the shape of an S, and when the bottom of a vessel is wedged in it there is no use in attempting to haul her through; only water can help us, and we want but one foot of that to get every vessel through. It would be paying a very poor compliment to Colonel Bailey to suppose him incapable of supplying the desired quantity in one or two days. I am as anxious as yourself to see the vessels all through, and, though I have every confidence in the zeal and ability of the officers in command, I would give all my personal attention up there, but am laid up with a complaint that perfectly prostrates me when I ride on horseback or move about;

still, I know every hour what is going on, and give directions accordingly.

Don't suppose because the vessels seem quiet that nothing is being done; everything is being done that can be. I hope you will look this matter patiently in the face. I am sure that Colonel Bailey will have every vessel through in two days; and, though you are pressed for forage, two days will really amount to nothing, and any loss we might sustain in horses up to that time would be nothing in comparison to the loss of one of those vessels.

If we have met with reverses above, the rescue of this fleet from its peculiar position will redeem the past. You must have seen the tendency of the Northern press to cavil at our movement out here, and they cannot help but admit, if we succeed, that amidst our troubles the best piece of engineering ever performed in the same space of time has been accomplished under difficulties the rebels deemed insurmountable. Now, General, I really see nothing that should make us despond; you have a fine army, and I shall have a strong fleet of gun-boats to drive away an inferior force in our front. We can, by making a united effort, open the river when we please. I feel that the country is so abundant with grass and clover just now, that there can be no real danger to the stock.

I feel that you are extremely anxious to move, so am I to get the boats down, and I am sure you will agree [with] me when I say that there would be tremendous excitement throughout the country if the vessels are not all brought over, which will certainly be done with eight inches more of water, which there will be no difficulty in getting.

The water is rising in the river below the back-water from the Mississippi, which extends now to this place, the water rising here.

I hope, sir, you will not let anything divert you from the attempt to get these vessels all through safely, even if we have to stay here and eat mules' meat. There are some here who would not care if gun-boats, horses, and everything are left behind, as long as they could get away; but, as they have none of the responsibilities resting on your shoulders and on mine, I hope they may not meet with any attention.

I feel that we are doing a splendid thing, and I want to see it carried through without an accident to a single vessel. Please excuse my long dispatch.

Very respectfully, your obedient servant,

DAVID D. PORTER,  
*Rear-Admiral.*

General Banks had become considerably demoralized on account of the Confederates having gained a position on Red River, at Dunn's Bayou, thirty miles below Alexandria, and he believed the report that they were preparing to hold this strong position with ten to fifteen thousand men. The position was really strong only against light-armed vessels, but was easily turned; and the proof of this is that the enemy evacuated the place as soon as the large gun-boats passed the "Falls."

It was, indeed, a great blunder to allow the enemy to get between the army and the Mississippi; but for this Banks was not to blame. He had assigned General McClernand, with the whole of his army corps, to guard the main road three miles in the rear of Alexandria, with the understanding that no enemy was to be allowed to pass, under any circumstances; but General McClernand had joined the Army un-

der a cloud, was in a very unamiable mood, and did not seem to care whether the Army and Navy got out of their difficulties or not.

The enemy, on the 28th of April, attacked McClernand's position with 6,000 men, taking him completely by surprise, and creating a temporary panic in his camp. During the confusion they set fire to the forage and clothing, and passed down the road with some twenty pieces of artillery, hidden by the smoke, which was their object in making the attack.

At this time the Admiral was at General A. J. Smith's camp, about two miles from that of McClernand. Smith immediately ordered his men under arms, and they rode together to the scene of action, where everything seemed in dire confusion. Smith posted his men to the best advantage in advance of the 13th corps; and they remained under arms until daylight next morning, without hearing any more from the Confederates, who had accomplished all they wanted, viz.: to pass below Alexandria to Dunn's Bayou, and fortify that position strongly with field artillery.

General McClernand, not satisfied with the havoc committed by the enemy, ordered his men to set fire to a quantity of sutlers' goods and forage, which latter was extremely scarce; and it would all have been destroyed if General A. J. Smith had not taken charge and extinguished the fire.

Smith's soldiers were not in as good trim as many others, and the title "ragged guerillas" given them by Banks—which soubriquet pleased them so much that they adopted it—might, to the casual observer, seem appropriate. After putting out the fire, however, they marched back to camp completely dressed in new uniforms, leaving their old ones to McClernand's chief quartermaster, so as to make his accounts all square. When McClernand insisted on A. J. Smith's giving up the clothing, that old veteran, who, from long association with the Navy, was familiar with the prize laws, declined to do so, as his men had recaptured them from the enemy, and held them according to the laws of war; so General McClernand never recovered an article that "the ragged guerillas" had appropriated.

McClernand allowed his pickets to be driven in, and was unprepared to prevent the enemy from turning his position. He seems to have made no use of his cavalry to acquaint him with the enemy's advance. In short, McClernand was inert, and, do what you might with him, you could not make a military man.

We will do General Banks the justice to say that he did all that a man could do to

extricate the gun-boats from their difficulties, and, although he differed with the Admiral on some matters, there was none in this respect. Other things occurred about this time to disturb General Banks. Cotton had been hauled into Alexandria by army teams, to the amount of some 20,000 bales, and it was desirable that a portion of it at least should reach New Orleans. Whether this was on account of the U. S. Government, or was the property of speculators, does not appear.

A large steamer, the "Warner," was filled with cotton at Alexandria and dispatched with 400 soldiers on board to New Orleans. The Admiral was asked for a convoy and sent the two best gun-boats he could spare that were below the "Falls," the "Signal" and "Covington."

On the 4th of May all three vessels started down the river, with little thought of much opposition. While passing a plantation, the "Warner" was fired into by a company of infantry, and one man on board of her was killed. Being well protected by cotton bales, infantry fire was not much dreaded. The fire of the "Covington" soon drove off the Confederates; but this was only an earnest of what was to follow.

Next morning, on arriving at Dunn's Bayou, the "Warner" in advance, and the two "tin-clad" gun-boats bringing up the rear, the former vessel was attacked by a battery, supported by a large force of infantry. The "Warner's" rudder became disabled, causing her to run into the bank, when another battery and some six thousand infantry opened on the vessel, completely riddling her. The "Signal" and "Covington" opened their batteries; but the enemy were in too strong force to contend against, and the three vessels were soon cut to pieces with a terrible cross-fire of artillery and infantry. Acting-Volunteer Lieutenant G. P. Lord, the officer in command, tried to burn the "Warner" to prevent her falling into the hands of the enemy; but, when informed by the colonel commanding the soldiers that there were 125 killed and wounded on the decks, Lord gave up the idea; and his own vessel, the "Covington," being entirely disabled, he shortly afterwards removed the dead and wounded to shore under a heavy fire, destroyed the ship by setting fire to her, and, with the remnant of his gallant crew, escaped to the woods on the side opposite the enemy. Out of 14 officers and 62 men, Lieutenant Lord could only assemble 9 officers and 23 men, some of whom were killed in trying to escape up the bank.

The "Signal" being too much disabled to reach the bank, in order to get the wounded ashore, the commanding officer was obliged to surrender. The "Warner" was sacked

and burned by the enemy, and the "Signal," after her guns and ammunition had been removed, was sunk across the channel to obstruct it.

The brave men in these vessels, only musket-proof, defended them four or five hours, and many of the actions heralded to the world during the late war were much less worthy of notice than this contest between two little gun-boats and twenty pieces of artillery, most of which had been captured from Banks' army above Pleasant Hill. The attacking party of Confederates was the one that had pushed past General McClernand's corps with artillery, to mount it at Dunn's Bayou, on the river. They succeeded perfectly; and, selecting three commanding points, they were ready for any transports or light gun-boats that might come along. These light-draft gun-boats, be it remembered, were only the small stern-wheel steamboats of the Mississippi, their sides built up with light plank and covered with quarter-inch iron.

No attempt to follow the Confederates was made when they pushed on past McClernand's corps, although a child might have known where they were bound; but every preparation was made to repel an attack on Alexandria, which the Confederates had not the slightest idea of making. They were not foolish enough to attack 36,000 men, advantageously posted and supplied with a large quantity of artillery, when they had a far inferior force. General Banks should have seized and fortified the important points along the river, which, with the assistance of even the light-draft vessels of the Navy, could have been held against all the force the enemy had in that region.

The two commanders-in-chief had but little personal intercourse—a state of affairs which was not conducive to the perfect understanding which should subsist between the Army and Navy in a co-operative expedition. This want of harmony was not the Admiral's fault. He lay five days sick and unable to leave his bed, during which time Banks went to see him but once, and then in company with General David Hunter. His errand was to ascertain "which of your vessels can you best afford to destroy—for I must march—if there is any chance that any of them will delay us?" The Admiral was in pain and not in the best of humor, and replied: "I will destroy none of them, and if you choose to march you may do so, for General A. J. Smith has promised to stand by me until we are over the 'Falls,' after which I will take care of Smith." No more was heard of General Banks' marching for another day or two.

But to return to the dam. This had, in common parlance, "carried away" but in

reality had made a natural and safe opening for the passage of the fleet. Not to make the narrative too tedious, we here insert Admiral Porter's report of the building of the dam, etc., and it will show the credit given to every one engaged. We are sure a comparison of this report with the published evidence of General Banks will convince any one of the Admiral's impartiality:

PASSAGE OF THE FALLS BY THE FLEET.—REPORT OF REAR-ADMIRAL DAVID D. PORTER.

FLAG-SHIP "BLACK HAWK,"

MISSISSIPPI SQUADRON

MOUTH OF RED RIVER, May 16, 1864. }

SIR: I have the honor to inform you that the vessels lately caught by low water above the Falls at Alexandria have been released from their unpleasant position. The water had fallen so low that I had no hope or expectation of getting the vessels out this season, and as the army had made arrangements to evacuate the country, I saw nothing before me but the destruction of the best part of the Mississippi squadron.

There seems to have been an especial Providence looking out for us in providing a man equal to the emergency. Lieutenant-Colonel Bailey, acting engineer of the 19th army corps, proposed a plan of building a series of dams across the rocks at the Falls, and raising the water high enough to let the vessels pass over. This proposition looked like madness, and the best engineers ridiculed it; but Colonel Bailey was so sanguine of success that I requested General Banks to have it done, and he entered heartily into the work. Provisions were short and storage was almost out, and the dam was promised to be finished in ten days, or the army would have to leave us. I was doubtful about the time, but had no doubt about the ultimate success, if time would only permit. General Banks placed at the disposal of Colonel Bailey all the force he required, consisting of some three thousand men and two or three hundred wagons. All the neighboring steam-mills were torn down for material, two or three regiments of Maine men were set to work felling trees, and on the second day after my arrival in Alexandria from Grand Ecore the work had fairly begun. Trees were falling with great rapidity; teams were moving in all directions, bringing in brick and stone; quarries were opened; flatboats were built to bring stone down from above; and every man seemed to be working with a vigor I have seldom seen equalled, while perhaps not one in fifty believed in the success of the undertaking.

These Falls are about a mile in length, filled with rugged rocks, over which, at the present stage of water, it seemed to be impossible to make a channel.

The work was commenced by running out from the left bank of the river a tree dam, made of the bodies of very large trees, brush, brick, and stone, cross-tied with other heavy timber, and strengthened in every way which ingenuity could devise. This was run out about three hundred feet into the river; four large coal barges were then filled with brick and sunk at the end of it. From the right bank of the river cribs filled with stone were built out to meet the barges. All of which was successfully accomplished, notwithstanding there was a current running of nine miles an hour, which threatened to sweep everything before it.

It will take too much time to enter into the details of this truly wonderful work. Suffice it to say, that the dam had nearly reached completion in eight days' working time, and the water had risen sufficiently on the upper Falls to allow the "Fort Hindman," "Osage," and "Neosho" to get down and be ready to pass the dam. In another day it

(CONSTRUCTED UNDER THE SUPERVISION OF COLONEL HALEY, U. S. VOLUNTEERS.)

**THE RED RIVER DAM. — GUN - BOATS PASSING THE RAPIDS AT DAWN.**

(FROM AN ORIGINAL SKETCH BY REAR-ADMIRAL H. WALKER.)

would have been high enough to enable all the other vessels to pass the upper falls. Unfortunately, on the morning of the 9th instant, the pressure of water became so great that it swept away two of the stone barges, which swung in below the dam on one side. Seeing this unfortunate accident, I jumped on a horse and rode up to where the upper vessels were anchored and ordered the "Lexington" to pass the upper falls, if possible, and immediately attempt to go through the dam. I thought I might be able to save the four vessels below, not knowing whether the persons employed on the work would ever have the heart to renew their enterprise.

The "Lexington" succeeded in getting over the upper falls just in time, the water rapidly falling as she was passing over. She then steered directly for the opening in the dam, through which the water was rushing so furiously that it seemed as if nothing but destruction awaited her. Thousands of beating hearts looked on anxious for the result. The silence was so great as the "Lexington" approached the dam that a pin might almost be heard to fall. She entered the gap with a full head of steam on, pitched down the roaring torrent, made two or three spasmodic rolls, hung for a moment on the rocks below, was then swept into deep water by the current, and rounded to safely into the bank. Thirty thousand voices rose in one deafening cheer, and universal joy seemed to pervade the face of every man present.

The "Neosho" followed next; all her hatches battened down, and every precaution taken against accident. She did not fare as well as the "Lexington," her pilot having become frightened as he approached the abyss, and stopped her engine, when I particularly ordered a full head of steam to be carried; the result was that for a moment her hull disappeared from sight under the water. Every one thought she was lost. She rose, however, swept along over the rocks with the current, and, fortunately, escaped with only one hole in her bottom, which was stopped in the course of an hour.

The "Hindman" and "Osage" both came through beautifully without touching a thing, and I thought if I was only fortunate enough to get my large vessels as well over the falls, my fleet once more would do good service on the Mississippi.

The accident to the dam, instead of disheartening Colonel Bailey, only induced him to renew his exertions after he had seen the success of getting four vessels through.

The noble-hearted soldiers, seeing their labor of the last eight days swept away in a moment, cheerfully went to work to repair damages, being confident now that all the gun-boats would be finally brought over. These men had been working for eight days and nights up to their necks in water in the broiling sun, cutting trees and wheeling bricks, and nothing but good-humor prevailed among them. On the whole, it was very fortunate the dam was carried away, as the two barges that were swept away from the centre swung around against some rock on the left, and made a fine cushion for the vessels, and prevented them, as it afterwards appeared, from running on certain destruction.

The force of the water and the current being too great to construct a continuous dam of six hundred feet across the river in so short a time, Colonel Bailey determined to leave a gap of fifty-five feet in the dam, and build a series of wing-dams on the upper falls. This was accomplished in three days' time, and, on the 11th instant, the "Mound City," "Carondelet" and "Pittsburg" came over the upper falls, a good deal of labor having been expended in hauling them through, the channel being very crooked, scarcely wide enough for them. Next day the "Ozark," "Louisville," "Chillicothe," and two tugs also succeeded in crossing the upper

"Carondelet," and "Pittsburg" started in succession to pass the dam, all their hatches battened down, and every precaution taken to prevent accident. The passage of these vessels was a most beautiful sight, only to be realized when seen. They passed over without an accident, except the unshipping of one or two rudders. This was witnessed by all the troops, and the vessels were heartily cheered when they passed over. Next morning at 10 o'clock, the "Louisville," "Chillicothe," "Ozark" and two tugs passed over without any accident except the loss of a man, who was swept off the deck of one of the tugs. By 3 o'clock that afternoon the vessels were all coaled, ammunition replaced, and all steamed down the river, with the convoy of transports in company. A good deal of difficulty was anticipated in getting over the bars in lower Red River; depth of water reported only five feet; gun-boats were drawing six. Providentially, we had a rise from the back-water of the Mississippi, that river being very high at that time; the back-water extending to Alexandria, one hundred and fifty miles distant, enabling us to pass all the bars and obstructions with safety.

Words are inadequate to express the admiration I feel for the abilities of Lieutenant-Colonel Bailey. This is, without doubt, the best engineering feat ever performed. Under the best circumstances, a private company would not have completed this work under one year, and to an ordinary mind the whole thing would have appeared an utter impossibility. Leaving out his abilities as an engineer, the credit he has conferred upon the country, he has saved the Union a valuable fleet, worth nearly two million dollars. More, he has deprived the enemy of a triumph which would have emboldened them to carry on this war a year or two longer; for the intended departure of the Army was a fixed fact, and there was nothing left for me to do in case that event occurred but to destroy every part of the vessels, so that the rebels could make nothing of them. The highest honors the Government can bestow on Colonel Bailey can never repay him for the service he has rendered the country.

To General Banks, personally, I am much indebted for the happy manner in which he has forwarded this enterprise, giving it his whole attention night and day, scarcely sleeping while the work was going on, attending personally to see that all the requirements of Colonel Bailey was complied with on the instant.

I do not believe there ever was a case where such difficulties were overcome in such a short space of time, and without any preparation.

I beg leave to mention the names of some of the persons engaged on this work, as I think that credit should be given to every man employed on it. I am unable to give the names of all, but sincerely trust that General Banks will do full justice to every officer engaged in this undertaking when he makes his report. I only regret that time did not enable me to get the names of all concerned. The following are the most prominent persons:

Lieutenant-Colonel Bailey, acting-military engineer, 19th army corps, in charge of the work.

Colonel James Grant Wilson, of General Banks' staff.

Lieutenant-Colonel Pearcall, assistant.

Colonel Dwight, acting-assistant inspector-general.

Lieutenant-Colonel W. B. Kinsey, 161st New York volunteers.

Lieutenant-Colonel Hubbard, 30th Maine volunteers.

Major Sawtelle, provost marshal, and Lieutenant Williamson, ordnance officer.

The following were a portion of the regiments employed: 29th Maine, commanded by Lieutenant-Colonel Emerson; 116th New York, commanded by Colonel George M. Love; 161st New York, com-

manded by Captain Prentiss; 133d New York, commanded by Colonel Currie.

The engineer regiment and officers of the 13th army corps were also employed.

I feel that I have done but feeble justice to the work or the persons engaged in it. Being severely indisposed, I feel myself unable to go into further details. I trust some future historian will treat this matter as it deserves to be treated, because it is a subject in which the whole country should feel an interest, and the noble men who succeeded so admirably in this arduous task should not lose one atom of credit so justly due them.

The Mississippi squadron will never forget the obligations it is under to Lieutenant-Colonel Bailey, acting military engineer, of the 19th army corps.

Previous to passing the vessels over the falls, I had nearly all the guns, ammunition, provisions, chain-cables, anchors, and everything that could affect their draught, taken out of them.

The commanders were indefatigable in their exertions to accomplish the object before them, and a happier set of men were never seen than when their vessels were once more in fighting trim.

If this expedition has not been so successful as the country hoped for, it has exhibited the indomitable spirit of eastern and western men to overcome obstacles deemed by most people insurmountable. It has presented a new feature in the war, nothing like which has ever been accomplished before.

I regret to inform you, among the misfortunes of this expedition, of the loss of two small light-draught gun-boats—the "Signal" and "Covington." I sent them down from Alexandria to convoy a quartermaster's boat, the "Warner," loaded with cotton and some four hundred troops on board; not knowing that the enemy had any artillery on the river below us, or anything more than wandering gangs of guerillas, armed with muskets, which these vessels were competent to drive off. It appears, however, that the rebels were enabled to pass our advance force at night with six thousand men and some twenty-five pieces of artillery. With these they established a series of batteries at a place called Dunn's Bayou, thirty miles below Alexandria—a very commanding position. These batteries were so masked that they could not be seen in passing, even by the closest observation.

The first notice the vessels received of the battery was a furious fire which opened on the quartermaster's boat, the "Warner," piercing her boilers and completely disabling her. At the same time six thousand infantry opened with musketry, killing and wounding half the soldiers on this vessel. She drifted in to the opposite bank, where a number managed to make their escape in the bushes, though many were killed in attempting to do so.

The "Signal" and "Covington" immediately rounded-to and opened their guns on the batteries, and pushed up, endeavoring to rescue the "Warner" from her perilous position. They had, however, as much as they could do to take care of themselves, the cross-fire of the three batteries cutting them up in a terrible manner. Their steam-pipes were soon cut, and their boilers perforated with shot, notwithstanding which they fought the batteries for five long hours, the vessels being cut all to pieces, and many killed and wounded on board.

Acting-Volunteer-Lieutenant George P. Lord, commanding the "Covington," having expended all his shot, spiked his guns, set fire to his vessel, and escaped with what was left of his crew to shore, and his vessel blew up.

The "Signal," Acting-Volunteer-Lieutenant Edward Morgan, still fought her guns for half-an-hour after the destruction of the "Covington." He found it impossible to destroy his vessel by burning, her decks being covered with wounded, and humanity forbade him sacrificing the lives of the noble fellows

who had defended their vessel so gallantly. He gave permission to all those who wished to escape to do so. Some of them attempted to get off by climbing up the bank. Many were killed while doing so by the murderous fire of the musketry poured in from the opposite side. The captain remained by the vessel and was captured, if he remained alive, but I have no information regarding him. The rebels took the guns off of her, and placed her across the channel as an obstruction—sunk her.

General Banks, on hearing the news, sent out cavalry to hunt for the unfortunate men, many of whom were picked up and brought into Alexandria. A number escaped down river, and went aboard some light-draught gun-boats that were coming up at the time to the scene of action, but were driven back by the superior artillery of the enemy.

I feel very much for the poor fellows who fell into the rebels' hands, as the latter have been very merciless to some of the prisoners they have taken, and committed outrages at which humanity shudders.

The vessels will all return to their stations in a few days, as there is no prospect, under present circumstances, of renewing operations in this part of Louisiana, the season having passed for operating with any chance of success.

I am sorry to see that the rebel guerillas have become quite troublesome on the Mississippi since I left, all of which will be rectified within the coming week. I have the honor to be,

Very respectfully,

Your obedient servant,

DAVID D. PORTER,

*Rear-Admiral.*

Hon. GIDEON WELLES,

*Secretary of the Navy, Washington, D. C.*

The "Ozark," a large iron-clad, was the last vessel to pass the dam, and it was feared at one time that she would have to be abandoned, for General Banks took up his line of march the moment he thought the vessels all through, apparently forgetting that they had still to get their guns and stores on board; but, as General A. J. Smith remained to bring up the rear, the Navy was not greatly troubled by General Banks' movements.

For two or three days before the troops and vessels left Alexandria, the army teams had been employed in hauling cotton to the levee, and every army transport had been loaded with the staple to the amount of 20,000 bales.

The 13th and 19th corps began to move on the 13th of May, the former under General McClelland, the latter under General Emory; but as the rear of the advanced corps left Alexandria, fire broke out in several parts of the town. Whether the fire was the work of soldiers or negroes, large numbers of the latter being congregated here in the hope of transportation out of Red River by the army, has never been clearly established.

Just as the fire broke out, an order came from General Banks to put all the cotton from the transports on the levee, a difficult task; and everybody wondered why, after taking so much trouble to put the cotton on board, the General should now be so anxious to get rid of it. However, the cotton was thrown ashore among the burning

fragments that were falling all around. The town was seemingly in a blaze from one end to the other, and the miserable inhabitants crowded the river banks with such personal effects as they could save from the flames.

There was never beheld a more heart-rending scene, and all felt indignant that it should transpire under the eyes of the General commanding an army, without any effort being made to extinguish the flames. The army had enjoyed such hospitality as these poor people could afford while it occupied their town, and the inhabitants were fed with the delusive hope that General Banks would occupy Alexandria until the close of the war. All, therefore, who had any Union feelings were encouraged to declare themselves and benefit by the opportunities offered them to trade, and all such were now to be left to the tender mercies of the Confederates.

Out of the hundreds of negroes who had been promised transportation for themselves, their families and their effects, very few got away, and the last that was seen of these poor wretches, they sat down in despair upon the river bank, where they had conveyed their little all to try and escape the conflagration. The Admiral was the last one to leave Alexandria, having remained to see that nothing belonging to the Navy was forgotten, but he could do nothing to help these people. The "Cricket" was a very small vessel, and could not accommodate the thousandth part of those who had expected to take passage in the transports. The Navy was powerless to help them, and as the rear of General A. J. Smith's division marched out of Alexandria, the "Cricket" started down the river to join the gun-boats. For miles down could be seen the flames of the burning town, and every now and then a fresh outbreak of fire and dense smoke would occur, doubtless from cotton stored in secret places igniting.

Although it was not known who set fire to the town, the people were satisfied that it could have been extinguished by a detachment of soldiers, but nothing was done in that direction. The Confederates could have had no object in destroying the place, and the negroes had shown no disposition to take advantage of their former masters and plunder or destroy their property. It may have been a case of "spontaneous combustion"; but, however originating, the fact that the fire was not extinguished was disgraceful to humanity, and although we cannot but think the vindictive promoters of the war deserved some of the misfortunes which overtook them, yet the burning of Alexandria inflicted punishment on a people by whom it was totally undeserved.

It is only fair to General Banks to give

his version of the burning of Alexandria. On the 28th of March, 1865, nearly a year after the event, in a report, wherein he seeks to justify himself for the conduct of the campaign and to throw the blame for his mismanagement on others, he says:

"Rumors were circulated freely through the camp at Alexandria, that upon the evacuation of the town it would be burned. [We never heard any such rumors.] To prevent this destruction of property, part of which belonged to loyal citizens, General Grover, commanding the post, was instructed to organize a thorough police, and to provide for its occupation by an armed force until the army had marched to Simmsport. The measures taken were sufficient to prevent a conflagration in the manner in which it had been anticipated; but on the morning of the evacuation, while the army was in full possession of the town, a fire broke out in a building on the levee, which had been occupied by refugees or soldiers, [what soldiers?] in such a manner as to make it impossible to prevent a general conflagration. I saw the fire when it was first discovered, the ammunition and ordnance transports and the depot of ammunition on the levee were within a few yards of the fire; the boats were floated out into the river and the ammunition moved from the levee with all possible dispatch. The troops labored with alacrity and vigor to suppress the conflagration; but owing to a high wind and the combustible material of the buildings, it was found impossible to limit its progress, and a considerable portion of the town was destroyed."

The intelligent reader will naturally wonder how a town could be destroyed with such a small beginning, while so large an army remained near; but General Banks is as inaccurate in regard to this matter as in many other respects in his report.

After leaving Alexandria, the advance of the army was commanded by General Emory, and the rear was protected by General A. J. Smith.

The flag-ship "Cricket" overtook the army—which followed the river road with the gun-boats close by—just as they were encamping for the night. The troops had not been molested, except by sharpshooters, who fell back on their main body as General Emory advanced.

No more of General Banks was seen by the Navy until the flag-ship reached the Atchafalaya, where the transports had assembled, under cover of the gun-boats, to embark the army, an operation which was safely effected on the 21st of May. Here, again, Colonel Bailey's services were called into requisition to build a bridge of transports, and part of the army, which had to march to the mouth of the Red River, crossed in that way.

There was some skirmishing on the way down and the gun-boats now and then shelled the woods to drive away the enemy; but the latter continually retreated before the army and made only one dash at the rear as it was crossing the bridge of transports. General A. J. Smith turned on them and captured 350 of their number.

As there was no further occasion for the Admiral's presence, he left the gun-boats to cover the army and embarked in a tug to join his flag-ship, the "Black Hawk," at the mouth of Red River. Here he found General Canby, who had been sent to relieve Banks, and was waiting the Admiral's arrival before he assumed command.

Thus ended the Navy's connection with the Red River expedition, the most disastrous one that was undertaken during the war.

In whatever we write in relation to the late war, we try to divest ourselves of all prejudice, and nothing that we can say will bear half so hard upon Banks and his supporters as many of the articles written at the time by persons serving immediately under the General's command.

We do not know whether the twenty-two years which have elapsed since the events we narrate took place, is a sufficient period in which to write a history; but, as the States have become reconstructed, and the animosities of the war seem in good part to have vanished, we think we have a right to suppose that we can present an impartial narrative, actuated solely by a desire to state the truth, which has not generally been told in reference to the Red River expedition.

Banks and his friends have told the story in a manner to suit their political interests, which are apparently all they care about.

No one has ever, so far as we are aware, undertaken to correct the misrepresentations made against the officers of the Navy, probably because these attacks were considered harmless on account of the evident malice which prompted them.

Considering the ill-results attending the Red River expedition and its unfortunate termination, comparatively little, strange to say, has been said or written about it.

Certain newspaper reporters, having exchanged their citizens' clothing for a military garb, were constantly riding about picking up "items" for the Northern press, and doing all they could to divert attention from General Banks by dwelling on what they were pleased to call "the shortcomings of the Navy."

One of their principal points was that the expedition was a failure, partly because the Navy commenced collecting cotton along the river in violation of an understanding General Banks had with the Confederates. From this it would appear that the Union Army entered the Red River country for the purpose of securing the vast amount of cotton therein for the benefit of Northern manufactories, which were suffering from a scarcity of that material. The idea that the Navy caused the Confederates to burn their cotton and assume a hostile at-

titude, because it seized some of the staple, is absurd.

If the cotton was to be taken out of the country for the benefit of the United States, it did not matter who took it, as long as the Government received it, which it was sure to do if captured by the Navy.

All the cotton seized by the Navy was taken according to law, sent to the U. S. Marshal at Cairo, Illinois, and every form gone through with to avoid loss. Out of the many thousand bales sent to Cairo not a pound was lost or unaccounted for.

In seizing cotton, the naval officers acted by direct authority of the Navy and Treasury Departments; besides, the laws of war authorized them to take possession of all contraband goods and make a return thereof to the Government. So carefully were these returns made out that to this day claimants for cotton seized on Red River, etc., consult naval receipt-books in perfect faith, knowing that the account of every cotton transaction will be found carefully registered.

On first entering Red River the vessels of the Navy commenced taking possession of cotton within half-a-mile of the banks, that being as far as they could go for want of transportation, and in and near Alexandria they received three thousand bales, mostly marked "C. S. A.," the Confederate Government having purchased at a low figure a large portion of the cotton in the trans-Mississippi States, hoping to get it to a market some time or other.

The Admiral also ordered three thousand bales, seized up the Washita River, which was not considered within the limits of this expedition. Nearly five hundred bales of the first lot picked up near Alexandria was returned to the owners on their furnishing proof that it was their private property.

Some persons belonging to the Navy on one occasion went back three miles into the country with a couple of mule-teams, for the purpose of bringing out Confederate cotton; but, as this interfered with Army arrangements in the cotton business, the party was turned back by the pickets, and their expedition was almost barren of results.

What we have stated embraces all that the Navy did in the way of seizing cotton. Never, after leaving Alexandria to go up the river, did a naval vessel interfere with cotton except in some cases to pick up bales floating in the stream; and as it was not desired that the officers and men should be diverted from what was considered the main object of the expedition, viz., the capture of Shreveport, all this cotton was thrown overboard.

In regard to cotton, General Banks and the Admiral were playing at cross purposes

from the beginning to the end of the campaign. Had the General communicated freely with him in regard to his plans, or shown him any instructions which would have authorized him to call upon the Navy to assist in reclaiming cotton, much as the Admiral would have disliked seeing the Navy subordinated to so ignoble an enterprise he would still have co-operated to the best of his ability.

General Banks, however, did nothing of the kind. He represented that his only object was to carry out the orders of General Halleck, dated Washington, November 9, 1862, viz.: "To ascend the Red River with a military and naval force as far as it is navigable, and thus open an outlet for the sugar and cotton of northern Louisiana."

With regard to the originators of this expedition and their motives we will speak in another place; our present object is to expose the misrepresentations made against the Navy in regard to cotton, although we might well rest on the statement of Hon. D. M. Gooch, M. C., who drew up the report of the Committee on the Conduct of the War, in which he says: "Whatever there may have been of feeling between the Army and the Navy in relation to the seizure of cotton, an examination of all the testimony will show that the military operations were not interfered with by any operation in cotton; the delays at the points where those operations were carried out were occasioned wholly by other causes."

Mr. Gooch, and one or two other members of the committee favorable to Banks, tried to draw the attention of the public from the latter's mistakes to what they wished to make appear as complaints against the Navy. The attempt was not a success, since nothing was shown by any credible evidence in regard to naval cotton operations beyond what we have stated above.

The most that could be stated by any of the witnesses, some of whom were not at all particular in confining themselves to the truth, was that the Navy seized cotton as contraband of war and refused to give receipts for it; which was not the case, as receipts were given, in every instance, by which those persons who established a claim to any of the cotton received the value of it, after the war, through the United States courts.

Any one who will take the trouble to read the report of the Committee on the Conduct of the War, will see that in the vast amount of evidence given, some of it by persons very unfriendly to the Navy, there is nothing to implicate the latter in anything they were not in duty bound to do.

When General Kirby Smith was asked by the committee what he understood to be the object of the expedition, he answered:

"It has been a mystery to me, save what transpired *en route*. In my own mind, I came to the conclusion it was what might be called, in military parlance, a mercantile expedition, that is, an expedition for the purpose of opening the country to trade, or, perhaps, taking advantage of a victorious march to gather up what might naturally fall to the Army or Government in spoils," which is, for General Kirby Smith, a pretty fair way of putting it.

That the expedition was also designed to hold some prominent point in Texas there is no doubt; but it is no less a fact that it degenerated into a cotton raid, for the benefit of individuals at the expense of the Government. That the expedition was unwise and unmilitary no one now hesitates to assert, for all can see what was seen then by many, that it should never have been undertaken at all.

After the fall of Vicksburg and Port Hudson, the Federals held both banks of the Mississippi, and gun-boats had access to its tributaries for at least a hundred miles into the heart of the enemy's country.

It was desirable that everything west of the Mississippi should be kept there, and it was to the Federal advantage that the Confederates should be left to support the large force of their troops in that quarter, who were eating the inhabitants out of house and home, and, with the recklessness of half-disciplined soldiers, destroying twice as much as they could consume. The enemy had not sufficient force to attempt any serious offensive movements, and simply lived on the inhabitants, who were heartily tired of them and their cause.

If the United States Government was anxious that the cotton should come out, it was only necessary to proclaim to the inhabitants of Louisiana that the country was open to trade, and that permits would be given for cotton and sugar to be shipped to New Orleans. Such a course would have benefitted the North much more than an expensive military expedition, even had the latter been successful.

It may be argued that the Confederate generals would have prevented the execution of such a project, but from the fact that Gen. Kirby Smith entered into an arrangement to let cotton go out under the auspices of General Banks, and that the officers captured while shipping cotton to New Orleans from the west bank of the Mississippi were in the Confederate service, we are inclined to believe there would have been little difficulty in this connection.

The cotton and sugar in Louisiana, after the Mississippi was opened, was virtually lost to the Confederates, public and private. Much of the cotton had been for three years lying but partially protected, and some of it

had rotted. We saw one pile of six hundred bales so decayed as to be absolutely worthless.

The Confederates had no means of transporting the cotton across the country to the sea-coast except by wagons, a proceeding that would not have paid expenses, and General Banks when he arrived at Alexandria should have recognized that fact, if he did not know it before.

It would have been the simplest thing in the world for General Banks to have held Alexandria, which is exactly in the centre of western Louisiana, and lies on a large river, by which he could at all times be supplied with stores and reinforcements. He had everything to justify him in adopting this course, even if his original orders were to invade Texas through the Red River region.

General Grant, after becoming Commander-in-chief of the western armies, directed Banks, on or before the 5th of May, to return General A. J. Smith's command to General Sherman, and that he should march upon Mobile with what forces he had. As Banks paid no attention to this command, he was guilty of disobedience of orders. He did not move from Alexandria upon Shreveport until the 29th of March, and there was not time between that date and the 5th of May to accomplish the campaign, even with uninterrupted success, which no one but Banks himself counted on.

Banks' holding Alexandria and opening the country to commerce would probably not have been opposed by the Confederate generals; but when he attempted to move into the heart of the country at the same time that Steele with a large army was advancing to join him, the Confederates saw that it was the subjugation of all Louisiana and the invasion of Texas that was contemplated.

Banks finally accomplished for the Confederates more than they could have hoped to do for themselves, turning their trans-Mississippi department from a rather harmless affair into one of importance, provided with powerful artillery and small arms captured from his army.

The Confederates thus encouraged assembled a large army, composed of Texans and others, under enterprising leaders, who animated their men with their own spirit, and, encouraged by their unexpected success against the Federal arms, were getting ready to resume that system of warfare the Navy experienced so much trouble in breaking up.

If they did not put their old tactics in operation, it was because they deemed it wiser to let well alone, having driven one of the best appointed of the Union armies out of their country.

General Banks labored under the disadvantage not only of having some inefficient staff-officers, but of not being in accord with the officers of the regular Army who commanded the 13th, 16th and 19th corps.

Most of the civilians who undertook the command of armies were wise enough to select a capable soldier as chief-of-staff and surrounded themselves with as much military talent as possible; but Banks having previously succeeded in all that he had undertaken, having been a popular Governor and Speaker of the House of Representatives, thought himself equal in military abilities to any army officer; and although in every operation of consequence undertaken by him he failed of success, yet he assumed as much as Cæsar did after he had conquered the world.

The duties of the chief-of-staff of a civilian general were much more important than those of the chief-of-staff of a regular officer, and the Government, recognizing the *possible* inexperience of their volunteer generals, endeavored to place with each of them an officer of experience, whose duties were so onerous as hardly gave him time to eat or sleep.

The history of the civil war establishes that, wherever these educated chiefs-of-staff were supported by their civilian generals, the latter got along much better than those who, like Banks, chose to ignore the chief-of-staff altogether.

It was plain to any one from the beginning of naval intercourse with General Banks, that he and General Stone were not on good terms, and that Banks relied chiefly on one of his aides, who had received no regular military training, and was about as ignorant of the art of war as it was possible for a man to be.

Before the Army left Alexandria any one could see that General Stone did not exercise the influence over military movements that a chief-of-staff should, and this became more apparent in the advance towards Shreveport in the matter of assigning proper positions to the different portions of the Army, and in other respects; for a chief-of-staff is supposed to be on the most confidential terms with the Commander-in-chief, and is in duty bound to see his plans carried out.

General Banks complains that Stone's judgment was not good, and therefore he had to rely on some one else. He states that although General Stone was on the field at Sabine Cross Roads all day, yet he did not insist on the concentration of the Federal forces, nor did he seem to be aware that the enemy were in force in his front.

Now, Banks was on the field himself, and did not do any of the things he blames Stone for not doing.

From all we can learn, General Stone was untiring in his efforts to perform his duty at Pleasant Hill, yet at the close of the engagement he was removed from his position and General Dwight put in his place. It was necessary to make a scapegoat of some one; and as Stone was unpopular with the general public, on account of the disaster at Ball's Bluff, he was selected to bear the blame of failure.

General Stone was perfectly subordinate and desirous to make himself acceptable to General Banks, though he would not lend himself to any of the doubtful proceedings carried on under the eye of the commanding general. General Stone was particularly careful that due courtesy should be paid to the Navy and all proper requests granted. We think he had the highest respect of Franklin, Emory and A. J. Smith, which is a creditable proof of his capacity.

We believe Colonel Clarke did everything in his power to supersede General Stone in General Banks' favor. Clarke, by his own account, was in the advance during the hardest of General Lee's fighting, having joined him with orders to "press the fighting." From Lee he returned to General Banks at Pleasant Hill, and gave it as his opinion that Lee was in a dangerous position, at least eight miles from infantry support, in immediate presence of a superior force, and that he would be attacked by daylight. He thought Lee should be reinforced by one infantry brigade! but says nothing about Lee's being helped out of the scrape until the main body of the army should come up, notwithstanding Banks had expressed his surprise that the advance-guard had not been composed of infantry, cavalry and artillery. In all the evidence given by Colonel Clarke before the committee, it is evident he wishes to relieve Banks of any responsibility and throw the blame on others, as if the general commanding should not know all that was going on and be held responsible for the bad arrangements of his army.

After Stone was removed, General Dwight became chief-of-staff; but if it was intended to benefit by his services as a military adviser, it was too late to do so. On general subjects connected with this expedition, Dwight's opinion was very clear, and we think he condemned the plan as much as any one.

General Dwight's opinions in regard to cotton transactions are worth notice. He does not hesitate to say that the object of the expedition was a mercantile one, for the purpose of getting out cotton; but he is wrong in his assertion that, had not the Navy seized the cotton, the enemy would not have commenced burning it. What cotton the Navy seized was below Alexandria.

They never touched a bale after leaving that place, and the enemy never commenced burning until the Army was on its march to Grand Ecore, which seemed to be the signal for the destruction of the cotton. The enemy had no means of knowing whether the Navy was seizing cotton or not. It was the army trains that went ten miles into the interior to pick it up, and it was a well-known fact that the naval authorities surrendered every bale which was shown to be private property.

Constant applications were made to the Admiral and to his officers to seize cotton which had been bought up by speculators, and send it to Cairo for them, which was invariably declined, although all the protection asked for was given when their cotton was on board a transport. Very few of these people desired to have their cotton get into the hands of the Army, for they had to pay the quartermaster ten dollars a bale for transportation, with no certainty of getting possession of their property in the end; while hundreds of bales which had been seized by the Navy were returned to their owners in Cairo, Illinois, without any expense for transportation. These facts were proved in evidence by Lieutenant-Commander K. R. Breese, of the Navy, and others, and many instances could be cited from the books kept at Cairo, Illinois, by Captain A. M. Pennock, Chief-of-Staff.

If this expedition was intended as a commercial one, the Army and Navy commanders should have received such instructions that there would have been no clashing of interests; but while Banks was sent up the Red River as he supposed on a special mission "to let the cotton come within the Federal lines," which was done by sending out escorted wagons for it, the Admiral was under instructions to seize it as contraband of war wherever he could find it. No method of getting the cotton out of the country was indicated; and as the Navy succeeded in turning over to the Government 6,000 bales from the Red and Washita Rivers, their plan worked better than did that of General Banks.

All the inhabitants of the country cared for was to get their cotton out, trusting to the future for payment, for there was not a single intelligent person in that region who did not know how the war must terminate; and, although they intended to fight to the end, the Confederate military authorities were willing to see the people derive what benefit they could from their cotton. They had almost impoverished the inhabitants by quartering troops on them, and took this method to reimburse them! especially as one or two of their leaders (Kirby Smith, for instance) had a per-

sonal interest in saving this valuable commodity from destruction. The Confederates determined to destroy the cotton only when they thought they could no longer share in the benefits.

That there was a tacit understanding between General Banks and the enemy was the general belief, and the evidence of General Dwight, his own chief-of-staff, corroborates this belief. It was an arrangement in which neither the Navy nor the three corps commanders had any part; and we must say that disastrous as was this expedition to the cotton interest, we rejoice at the Navy not having participated in arrangements which were considered discreditable to all concerned. If the Confederates could sell all their products as they pleased, and receive money or supplies in return, the war might have been greatly prolonged.

The question as to the origin of the Red River expedition has been settled by General Grant, as before stated, but that regarding the *object* of the same is still shrouded in mystery.

General Halleck, in his testimony before the "Committee on the Conduct of the War," Feb. 16, 1865, says:

"The object of the expedition, as I understood it at the time, was to form a junction between the forces under General Steele and those under General Banks, so as to shorten the line of defence on the western side of the Mississippi River, and to establish a position within the State of Texas which should be permanently held, it being considered an important object, by the executive branch of the Government at that time, that a post should be held at all consequences within the State of Texas."

General Halleck further remarked that the Government had never received any report from Banks in regard to the failure of the expedition.

Halleck considered the Red River the best line to accomplish this object, although he acknowledges that the character of the navigation was known to be "precarious, at times good, at other times utterly impracticable." This last happened to be the condition when Banks' expedition started, which is why the Admiral strongly objected to going up the river at that time.

Any one who studies the map of Louisiana can estimate the value of General Halleck's judgment in favoring such a scheme. He wanted a point in Texas to hold permanently. With the aid of gun-boats 40,000 men could have been landed near Sabine Pass, and all that was worth anything in Texas would have been at the disposal of Federal forces. Sabine Lake was there to shelter any number of light-draft transports, with quick transportation and naval protection. Instead of this, two armies were started 500 miles apart, with no chance

of communicating on the way, to march through vast swamps and woods, across numerous rivers and streams, and over very difficult roads.

General Grant saw the folly of this scheme and disapproved the attempt; but, even although he had taken Vicksburg, he did not feel strong enough to oppose so powerful a politician as General Banks, or the plans formed in Washington by General Halleck, who called them the "views of the Administration." General Banks himself seems originally to have favored an expedition to Sabine Pass, having some notion of the difficulties that would beset an expedition into Texas by any other route, and, indeed, to have expressed himself in opposition to General Halleck's "views."

A great fear seems to have possessed the minds of Halleck and Banks that, after the fall of Port Hudson and Vicksburg, New Orleans was in danger of capture from Texas, although a large portion of the country is intersected with bayous, across which it would take an army a long time to build bridges, where no supplies could be obtained, and where the enemy were as accessible to the Federals as the latter were to them. The greatest danger to be feared after the fall of Vicksburg was the army of General Joseph E. Johnston, 40,000 strong, which, still intact and in good discipline, moved towards the coast apparently in the direction of Mobile. Yet at that time, when it was necessary to be on his guard against such an energetic commander, Banks was intent on a march on Shreveport, although in a letter to Halleck he says:

"The rivers and bayous have not been so low in this State for fifty years, and Admiral Porter informs me that the mouth of the Red River, and also the mouth of the Atchafalaya, are both hermetically sealed to his vessels by almost dry sand-bars, so that he cannot get any of the vessels into any of the streams. It is supposed that the first rise of the season will occur early in the next month." (1)

Whatever may have been Banks' plans for an advance into Texas, he was evidently much hampered by the orders and suggestions he was constantly receiving from General Halleck, who seemed to change his opinion every time the wind shifted, a proceeding likely to confuse Banks and compel him to alter his plans as often as Halleck did.

Why the Sabine Pass expedition failed does not appear; but most of Banks' expeditions failed, and there is little on record from General Banks to account for these failures. While Halleck in one letter professes to leave Banks at liberty to act as he pleases, in the next holds him fast by making "suggestions," which from a superior officer are equivalent to positive commands. The only sensible dispatch from General Halleck is one dated January

4, 1864, in which, after urging the Red River project, he says:

"So long as your plans are not positively decided upon, no definite instructions can be given to Sherman and Steele. The best thing, it would seem, to be done under the circumstances is for you to communicate with them and also with Admiral Porter in regard to some general co-operation all agree upon; what is the best plan of operations if the stage of water in the river and other circumstances should be favorable. If not, it must be modified or changed."

As Captain Cuttle would say: "Here is an opinion as is an opinion," and it would have been well if Banks had followed Halleck's advice; but, whatever the General's consultations were with others, he never deigned to consult with the Admiral, and paid no attention to his opinions.

About the time that Halleck began to agitate his plan for the invasion of Texas, all the armies of the West had been placed under command of General Grant, and the latter had conceived the idea of sending Sherman through the Southern States east of the Mississippi, on what was called the "march to the sea."

On the 31st of January, 1864, Sherman wrote to Banks as follows:

"The Mississippi, though low for the season, is free of ice and in good boating order, but I understand Red River is still low. I had a man in from Alexandria yesterday, who reported the "Falls" or Rapids impassable except for the smallest boats.

"My inland expedition is now working, and I will be off for Jackson, etc., to-morrow. The only fear I have is in the weather; all the other combinations are good. I want to keep up the delusion of an attack on Mobile and the Alabama River, and therefore would be obliged to you if you would keep up a foraging or other expedition in that direction.

"My orders from General Grant will not as yet justify me in embarking for Red River, though I am very anxious to operate in that direction. The moment I learned you were preparing for it, I sent a communication to Admiral Porter and dispatches to General Grant, at Chattanooga, asking him if he wanted me and Steele to co-operate with you against Shreveport, and I will have his answer in time, for you cannot do anything until Red River has twelve feet of water on the rapids at Alexandria. That will be from March till June. I have lived on Red River and know somewhat of the phases of that stream."

Yet, notwithstanding Sherman's warning him that the rise will not take place before March or perhaps June, and the Admiral's repeated asseverations to that effect, Banks pushes on the expedition in April, when the river was falling four inches per day.

The following is an extract of a letter from General Halleck to General Banks, dated February 2, 1864:

"I enclose a copy of a communication from Admiral Porter which shows the condition of Red River and the Atchafalaya. From this it would appear that some delay would occur before any extensive operations can be carried on in that quarter."

Suffice to say, all Admiral Porter's letters recommended that no attempt should be

made *via* Red River until the water had actually risen to a height sufficient to insure the success of the expedition. He mentioned the different years in which there had been no rise, and the signs of the times made it probable there would not be sufficient water that season to undertake an expedition to Shreveport, if the co-operation of gun-boats and transports was required.

In the voluminous correspondence between Halleck and Banks that took place in regard to the proposed expedition, each evidently wishes to place the responsibility on the other in case of failure to reach Shreveport. On March 5, 1864, Halleck wrote to Banks:

"When General Sherman left Vicksburg he expected to return there by the 1st of March, to co-operate with you west of the Mississippi, but he was of opinion that the condition of the river would not be favorable until a later period. I think it most probable that before this reaches you he will have returned to Vicksburg, or some other point on the river. Whether he has received any recent orders in regard to his movements from General Grant, I am not advised, nor have I any information of General Steele's plans, further than that all his movements will be directed to facilitate your operations toward Shreveport."

Halleck was always, it would seem, "harping on my daughter." On March 12, 1864, General Steele sent a dispatch to Halleck, of which the following is an extract:

"General Banks with 17,000 men and 10,000 of Sherman's will be in Alexandria on the 17th. \* \* \* Sherman insists upon my moving upon Shreveport to co-operate with the above-mentioned forces with all my effective forces. I have prepared to do so against my own judgment and that of the best-informed people here. The roads are mostly, if not all, impracticable; the country is destitute of provisions on the route we would have to take. I made a proposition to General Banks to threaten the enemy's flank and rear with all my cavalry, and to make a feint with infantry on the Washington road. I yielded to Sherman and Blunt as far as this plan is concerned. B. wants me to move by Munroe to Red River; Sherman wants me to go by Camden and Overton to Shreveport. The latter is impracticable, and the former plan would expose the line of the Arkansas and Missouri to cavalry raids. I can move with about 7,000 men. Our scouting parties frequently have skirmishes with detached parties all over the State, and if they should form in my rear in considerable force I should be obliged to fall back to save my depot. Please give me your opinion immediately, as I shall march to-morrow or next day."

To which Halleck answered:

"I advise that you proceed to co-operate in the movement of Banks and Sherman on Shreveport, unless General Grant orders differently, I send to him the substance of your telegram."

The same day Halleck telegraphed General Grant as follows:

"General Steele telegraphs that Banks with 17,000 men, and Sherman with 10,000, move from Alexandria on Shreveport, and wish him to co-operate. He says he can go with 7,000 effective men, but objects to the movement on account of bad roads and guerillas, and prefers to remain on the defensive

line of the Arkansas. I have replied that he should co-operate with Banks and Sherman, unless you direct otherwise. His objections on account of guerillas threatening his rear will apply equally to an advance at any time into the enemy's country."

On the 15th of March, General Halleck, as chief-of-staff, telegraphed to General Grant as follows:

"A dispatch just received from General Banks, dated March 6. He expects to effect a junction with Sherman's forces (Smith's Division) on Red River, on the 17th. He desires that positive orders be sent to Steele to move in conjunction with them for Red River, with all his available force. Sherman and Banks are of opinion that Steele can do much more than make a demonstration, as he last proposed. A telegram from you might decide him."

After reading the above dispatches, we are forced to the conclusion that Generals Halleck and Banks are responsible for the Red River expedition, one of the wildest schemes, in a military point of view, ever proposed. The Navy went into the affair with the knowledge that failure was almost certain, yet did its best to insure success.

Notwithstanding General Halleck was the author of the Red River expedition, General Banks deserves the severest censure for the manner in which he carried out the plan of campaign—if there was any plan. In Halleck's letter, while he urges the Red River as the only practicable route, he constantly reiterates the substance of one communication as follows:

"While the Government is desirous that Red River and Shreveport should be taken possession of and held as the most important objective point of the operations of a campaign of troops about to take a position where they could command Texas, and establish a better line of defence for Arkansas and Missouri than now occupied by General Steele, yet the Administration does not desire in any manner to control your actions as to the time and manner of performing this service, and you will take counsel with Generals Sherman and Steele and Admiral Porter as to the best manner of carrying out the expedition."

How far General Banks acted on these suggestions the reader can judge. Both Halleck and Banks were very desirous to escape the responsibility of the Red River failure. Halleck claims only to have made "suggestions," but suggestions coming from a person who was virtually Commander-in-chief of the Army had the weight of orders. They were supposed to be the opinions of the President and the Secretary of War, as well as of General Halleck.

When the news of the failure of the expedition reached Washington, Banks was written to by way of censure, and informed that his movements regarding the Texas expedition were not approved, and that from the beginning, when the Sabine and Rio Grande expeditions were undertaken, no notice of Banks' movements were received at the War Department until they

were actually undertaken. To offset this, we will quote from a letter of General Halleck to Banks, dated February 11, 1864:

"If by this is meant that you are waiting for orders from Washington, there must be some misapprehension. The substance of my dispatches to you was communicated to the President and Secretary of War, and it was understood that while stating my own views in regard to operations, I should leave you free to adopt such lines and plans of campaign as you might after a full consideration of the subject deem best. Such I am confident is the purport of my dispatches, and it certainly was not intended that any of your movements should be delayed to await instructions from here."

How much truth there is in this letter can be inferred by comparing it with the three telegrams of Halleck, one of them to Grant, in which Halleck seems determined to manage the whole affair. Banks, no doubt, considered these "suggestions" as instructions, which, had he disregarded, would have most probably resulted in his removal from command. Banks says:

"In the instructions I received from the Government, it was left to my discretion whether I would join (?) in the expedition, but I was directed to communicate with General Sherman, General Steele, and Admiral Porter upon the subject. I expressed the satisfaction I should feel in co-operating with them in a movement deemed of so much importance by the Government, to which my own command was unequal, and my belief that with the forces designated it would be entirely successful.

"Having received from them similar assurances, both my discretion and my authority, so far as the organization of the expedition was concerned, were at an end."

In all this controversy it will be seen that every one is disposed to ignore responsibility, but particularly Halleck.

General Sherman and the Admiral, after the capture of Vicksburg, had discussed this plan of taking Shreveport by a sudden movement; but they did not intend to leave anything to chance, or to undertake the expedition without plenty of water in the river and a prospect of its continuance in the future. They would not have ventured in case of a temporary rise—which could always be told by the rapidity with which the water subsided—for if the rise was owing to the head waters of Red River booming, and all the tributaries throwing in their supply at the same time, they could feel certain of a permanently full river. When full, Red River is easily navigable, and any expedition started by Sherman and Admiral Porter would have been as successful as the Arkansas Post expedition. Sherman was willing to listen to the Admiral, and the latter always gave that attention to Sherman's opinion which was due to his experience.

It will strike any one at all conversant with military matters how absurdly the war at this time was conducted from Washington. Here was Grant, just successful in one of the most difficult sieges of modern times, with a great prestige, and supposed

to command all the troops in Louisiana, Arkansas, Mississippi, Missouri, Tennessee, Kentucky, Illinois and Ohio, yet it does not appear that his opinion in regard to the Red River expedition was ever asked. Grant had about that time gone to Chattanooga on a tour of inspection, and thought the Red River expedition of so little importance that he directed General Banks to send back A. J. Smith's command to Sherman after the 5th of May.

General Grant was opposed to making any great effort to carry on the war west of the Mississippi, where it would take a large army and a large portion of the Navy even to hold the central portion of Louisiana, which forces would soon be wanted on the Cumberland and Tennessee rivers. All that was required was for Banks to hold New Orleans against General J. E. Johnston, who might pounce upon it if left unprotected. Banks had not troops enough in his command to authorize the withdrawal of a large force from New Orleans. All he could expect to do was to hold several points on the west bank of the Mississippi, forage in West Louisiana, and prevent supplies from crossing the Mississippi from Texas, and occasionally threatening Mobile, until such time as Grant should direct him to march upon the latter city and capture it, which would have been when Sherman began his march to the sea. This would have left no enemies in Sherman's rear. He would have had the railroads open behind him, including the important one from Mobile to Montgomery, which, with a Union Army at Mobile, would have insured the pacification of Alabama and Mississippi, and would have prevented any attempt on the part of the Confederates to pursue Sherman's rear; and in case of necessity the Federals could have thrown a large part of Bank's Army by rail upon Montgomery and Atlanta, if Sherman had got into difficulty, and there would have been a line of communication open to Sherman from the time he started until he reached Savannah.

General Banks made a report to Mr. Wade, President of the Senate, of his operations from the time he took command at New Orleans until his return from the Red River expedition. The report is interesting, and shows that a great deal of work was projected and a great deal performed. We know nothing of General Banks' performances prior to the advance on Alexandria; but, judging from his statements in regard to matters that came under our cognizance, we should pronounce the report partial. No report was made public by the War Department until the General appeared before the Committee on the Conduct of the War.

After the war he makes the report, to

which we have alluded, to go before the country. His military service was over, and having to explain to his constituents the reasons for his failure, he did not hesitate to misstate the facts in order to throw the blame on others. There is so much misrepresentation in regard to the events in which the Navy took part, as narrated by General Banks, that one is naturally disposed to doubt the truth of the whole report. Banks blames General Franklin for not reaching Alexandria sooner, but the latter shows that he was not to blame, as he only received the order to advance from the town of Franklin on the 12th of March. Banks informed General Franklin that he had promised to meet the Admiral in Alexandria on the 17th of March, and as the latter place is 175 miles from the town of Franklin, of course it was impossible to fulfill this promise. Besides, on the 10th of March only 3,000 of the troops which were to form that arm of the expedition were on the ground—"the remainder had just arrived from Texas and were at Berwick Bay without transportation, and the cavalry had not arrived from New Orleans."

Franklin started on the 13th, and his advance-guard reached Alexandria on the 25th, the rear-guard and pontoon train on the 26th and 27th. Thus Franklin marched at the rate of sixteen miles a day over bad roads, having to build many bridges across streams; while Banks, who had agreed to be at Alexandria on the 17th, only arrived on the 25th in a fast steamer—yet General Banks undertakes to say that Franklin received orders to march on the 7th, and delayed him that much. He also said the gun-boats delayed him at Alexandria, whereas the "Louisville," "Carondelet," "Pittsburgh," "Mound City," "Osage," and "Neosho," all heavy iron-clads, together with the "Lexington," "Cricket," "Gazelle," "Covington," "Signal," and "Juliet," light-drafts, were all above the "Falls," ready to move at a moment's notice; while the commanding officers of the "Choctaw," "Ozark," "Ouichita" and "Eastport" were informed that they might pass above the "Falls" if they could; and, if they did get over, to assemble at Grand Ecore and remain there to protect that place.

In one part of Banks' report he attempts to make capital out of a very small matter. After Admiral Farragut attempted to pass the batteries at Port Hudson, which he only succeeded in doing with two vessels, General Banks opened communication with him through the Atchafalaya by means of the gun-boats "Ansonia" and "Estrella." Banks says in his report:

"On the 5th of May our headquarters at Opelousas was broken up and the troops moved for

Alexandria, a distance of from 90 to 100 miles, making this march in three days, four hours. Moving rapidly to the rear of Fort de Russy, a strong work on Red River, we compelled the immediate evacuation of that post by the enemy, and enabled the fleet of gun-boats under Admiral Porter to pass up to Alexandria without firing a gun. The Army reached Alexandria the 9th of May (1863), in the evening, the Navy having reached there the morning of the same day. The enemy continued his retreat in the direction of Shreveport."

The facts of the case are as follows, important as they may be: After landing General Grant's troops fifteen miles below Grand Gulf, taking possession of that place and removing all the guns, the Admiral left at noon, May 3, 1863, and arrived that evening at the mouth of the Red River, and communicated with Admiral Farragut. He had with him the gun-boats "Benton," "Lafayette," "Pittsburg," "Price," ram "Switzerland," and tug "Ivy."

Admiral Farragut informed Porter that, hearing that General Banks proposed marching on Alexandria, he had sent the "Ansonia" and "Estrella," under Lieutenant-Commander A. P. Cooke, up Red River, to try and communicate with the General, but he feared, as they were light vessels, they might fail. On this, Admiral Porter offered to go up himself with the force he had, and started accordingly on the 4th with the above-named vessels, arriving at Fort De Russy on the 5th. On the way up he met the two gun-boats returning, their commanding officer (Cooke) informing Admiral Porter that his wheel had been disabled by a shell from Fort De Russy; the other vessel was struck, "but there was no one hurt." As the vessels were light, Lieutenant-Commander Cooke could do nothing against the enemy. The Admiral directed him to return with him, as he should need his vessels, and shortly after took possession of Fort De Russy. It was a strong work, with three casemated guns and a flanking battery nearly at right angles, calculated to mount seven more guns.

Now, be it remembered, the Navy took possession of Fort De Russy—no very important event—on the morning of May 5, 1863, while General Banks only started on that day from Opelousas, distant, he says, from Alexandria, one hundred miles; yet he claims to have caused the evacuation of the post, "enabling the Navy to pass up to Alexandria without firing a gun." (!) How he could get in the rear of De Russy and cause its evacuation, when he had not started from Opelousas until late on the day it was captured by the Navy, is a mystery, and military men should make a note of it for future reference. There was no opposition in getting to Alexandria, for there were then no troops in that region, only a few officers and a gang of negroes working at

Fort De Russy. The people all along the river were glad to see the Union flag, and when the Navy reached Alexandria it was as quiet as a country village in Massachusetts.

General Banks claims in his report that, after the fall of Vicksburg and Port Hudson, his whole aim was the capture of Mobile, which was of more importance to the Union than the capture of a dozen Shreveports. He claims to have been "opposed to the expedition up Red River, which had been explored thoroughly in the spring campaign of 1863, and that he was satisfied it was impracticable, if not impossible, for the purpose entertained by the Government." Yet so intent was General Banks on going that route that he appealed to Admiral Porter in such a manner that the latter could not decline to accompany him, and on more than one occasion he was referred to the Admiral's objections by General Halleck, who, although wishing to avoid responsibility and to throw the blame on Banks in case of failure, was as eager for this raid as any one.

If Banks simply wanted to hold a strong point in Texas, he had the opportunity at Sabine Pass, which was the nearest point to his base of operations, and into which place he could from time to time have thrown as many troops as he pleased, and kept them under protection of the naval forces. Banks fitted out an expedition to that place, but it was a failure.

In reviewing General Banks' report, it is our purpose to give him the benefit of his own words, which, although specious enough, are sufficient, if carefully studied, to condemn him out of his own mouth. He says:

"In order that the inherent difficulties attending the proposed combined movement—which had been thoroughly tested in the campaign of 1863 and 1864, and which I had represented with as much earnestness as seemed to be proper—might be presented in a manner most likely to gain attention, I directed Major D. C. Houston, chief engineer of the department—who possessed the highest claims to favorable consideration from professional qualifications and experience, and his acquaintance with the route—to prepare a memorial upon operations on Red River, which had been long under consideration. This was transmitted to the headquarters of the army, and appeared to have received the attention and approval of the general-in-chief. It stated with precision the obstacles to be encountered, and the measures necessary to accomplish the object in view. No change would be required in this statement if it had been written in review rather than in anticipation of the campaign. It recommended as a condition indispensable to success: 1st, such complete preliminary organization as would avoid the least delay in our movements after the campaign had opened; 2d, that a line of supply be established from the Mississippi independent of water-courses; 3d, the concentration of the forces west of the Mississippi, and such other force as should be assigned to this duty from General Sherman's command, in such a manner as to expel the

enemy from northern Louisiana and Arkansas; 4th, such preparation and concert of action among the different corps employed as to prevent the enemy, by keeping him constantly engaged, from operating against our positions or forces elsewhere; and, 5th, that the entire force should be placed under the command of a single General. Preparations for a long campaign were advised, and the month of May indicated as the point of time when the occupation of Shreveport might be anticipated. Not one of these suggestions, so necessary in conquering the inherent difficulties of the expedition, was carried into execution, nor was it in my power to establish them. The troops under command of General Steele were acting independently of my command, under orders not communicated to me, and at such distance that it was impossible to ascertain his movements, or to inform him of my own, so that we might co-operate with or support each other. The detachment of troops from the command of Major-General Sherman, though operating upon the same line with my own, were under special orders, having ulterior objects in view, and afforded an earnest but only a partial co-operation in the expedition. The distance which separated the different commands, the impossibility of establishing necessary communications between them, the absence of a general authority to command them, the time that was required for the transmission of orders from Washington, and the necessity of immediate action on account of the condition of the rivers and operations contemplated for the armies elsewhere, gave rise to embarrassments in organization of forces and in the execution of orders which could not be overcome.

"In the instructions I received from the Government it was left to my discretion whether or not I would join in this expedition, but I was directed to communicate with General Sherman and General Steele and Admiral Porter upon the subject. I expressed the satisfaction I should find in co-operating with them in a movement deemed of so much importance by the Government, to which my own command was unequal, and my belief that *with the forces designated* it would be entirely successful. Having received from them similar assurances, both my discretion and my authority, so far as the organization of the expedition was concerned, were at an end.

"The disposition of the enemy's forces at that time, according to the best information that could be obtained, was as follows: Magruder had about 20,000 men of all arms, of which 15,000 were serviceable. The main body covered Galveston and Houston from an anticipated movement from Matagorda peninsula, still held by our troops; Walker's division, numbering 7,000 men, were upon the Atchafalaya and Red Rivers, from Opelousas to Fort De Russy; Mouton's division, between the Black and Washita rivers, from Red River to Monroe, numbering 6,000; while Price, with two heavy divisions of infantry, estimated at 5,000, and a large cavalry force, estimated at from 7,000 to 10,000, held the country from Monroe to Camden and Arkadelphia, confronting Steele. Magruder could spare 10,000 of his force to resist an attack from the east, leaving his fortifications well garrisoned on the coast, while Price could furnish at least an additional 5,000 from the north, making a formidable army of from 25,000 to 30,000 men, equal to any forces that could be brought against them, even with the most perfect unity and co-operation of commands. This estimate of the strength of the enemy was given in my dispatch of February 2, but was thought, upon information received by the Government, to be exaggerated. The defences of the enemy consisted of a series of works covering the approaches to Galveston and Houston from the south, the defences of Galveston Bay, Sabine Pass, and Sabine River; Fort De Russy a formidable work, located three miles

from Marksville, for the defence of the Red River, and extensive and formidable works at Trinity, the junction of the Tensas and Washita at Camden, commanding approaches from the north.

"To meet these forces of the enemy it was proposed to concentrate, in some general plan of operations, 15,000 of the troops under command of General Steele, a detachment of 10,000 from the command of General Sherman, and a force of from 15,000 to 17,000 men from the army of the Gulf, making an army of 40,000 to 42,000 men of all arms, with such gun-boats as the Navy Department should order. Orders were given to my command at once to suspend operations at Galveston, and vigorous preparations were made for the new campaign.

"Having been charged by the President with duties not immediately connected with military operations, but which were deemed important and required my personal attention at New Orleans, the organization of the troops of my command assigned to the expedition was intrusted to Major-General W. B. Franklin. The main body of his command, consisting of the 19th corps—except Grover's division at Madisonville, which was to join him—and one division of the 13th corps, under General Ransom, were at this time on Berwick's Bay, between Berwick City and Franklin, on the Bayou Teche, directly on the line of march for Alexandria and Shreveport. Small garrisons were left at Brownsville and Matagorda Bay, in Texas—positions which, under instructions from the President and subsequently from Lieutenant-General Grant, were not to be abandoned—at New Orleans and at Port Hudson, which was threatened by a vigorous and active enemy. Smaller garrisons at Baton Rouge and Donaldsonville on the river, and at Pensacola and Key West on the coast, constituted the balance of forces under my command.

"It had been arranged that the troops concentrated at Franklin should move for the Red River on the 7th of March, to meet the forces of General Sherman at Alexandria on the 17th. But, for causes stated by General Franklin, their march was delayed until the 13th, at which time the advance, under General A. L. Lee, left Franklin, the whole column following soon after and arriving at Alexandria, the cavalry on the 19th, and the infantry on the 25th.

"On the 13th of March, 1864, one division of the 16th corps, under Brigadier-General Mower, and one division of the 17th corps, under Brigadier-General T. Kilby Smith—the whole under command of Brigadier-General A. J. Smith—landed at Simmsport, on the Atchafalaya, and proceeded at once towards Fort De Russy, carrying it by assault at 4:30 P. M. on the afternoon of the 14th. Two hundred and sixty prisoners and ten heavy guns were captured. Our loss was slight. The troops and transports under General A. J. Smith, and the marine brigade under General Ellet, with the gun-boats, moved to Alexandria, which was occupied without opposition on the 16th of the same month.

"General Lee, of my command, arrived at Alexandria on the morning of the 19th. The enemy, in the meantime, continued his retreat in the direction of Shreveport. Officers of my staff were at Alexandria on the 19th, and I made my headquarters there on the 24th, the forces under General Franklin arriving on the 25th and 26th of March; but as the stage of the water in Red River was too low to admit the passage of the gun-boats or transports over the Falls, the troops encamped near Alexandria, General Smith and his command moving forward 21 miles to Bayou Rapides, above Alexandria. There was but six feet of water in the channel, while seven and a-half were necessary for the second class and ten feet for the first-class gun-boats. The river is narrow, the channel tortuous, changing with every rise, making its navigation

more difficult and dangerous, probably, than any of the western rivers, while pilots for the transports were reluctant to enter Government service for this campaign.

"The first gun-boat was unable to cross the rapids until the 26th; others crossed on the 28th, with some transports, and others still on the 2d and 3d of April; the passage having been made with difficulty and danger, occupying several days. Several gun-boats and transports, being then unable to ascend the river, remained at Alexandria or returned to the Mississippi. While at Alexandria, Major-General McPherson, commanding at Vicksburg, called for the immediate return of the marine brigade—a part of General Smith's command—to protect the Mississippi, for which service it had been specially organized. The transports of this brigade were unable to pass above Alexandria. The hospital boat 'Woodford' had been wrecked on the rapids in attempting the passage. The troops were suffering from small-pox, which pervaded all the transports, and they were reported in condition of partial mutiny. It was not supposed at that time that a depot or garrison at Alexandria would be required; and this command, being without available land or water transportation, was permitted to return to the Mississippi, in compliance with the demands of General McPherson; this reduced the strength of the advancing column about 3,000 men.

"The condition of the river and the inability of the transports to pass the Falls made it necessary to establish a depot of supplies at Alexandria, and a line of wagon transportation from the steamers below to those above the Falls. This was a departure from the plan of the campaign, which did not contemplate a post or depot at any point on Red River, and involved the necessity of leaving a division at Alexandria for the purpose of protecting the depot, transports and supplies. Brigadier-General C. Grover was placed in command of the post, and his division left for its defence. This reduced the force of the advancing column about 3,000 men.

"While at Alexandria, on the 21st instant, a movement was organized against the enemy posted at Henderson's Hill, 25 miles in advance. The expedition consisted of three brigades of General A. J. Smith's command, and a brigade of cavalry of the 19th corps, under command of Colonel Lucas, of the 16th Indiana volunteers—the whole under the command of Brigadier-General Mower, of the 16th corps. The enemy was surprised, losing 250 prisoners, 200 horses and four guns, with their caissons. Colonel H. B. Sargent of my staff was severely wounded in this action, and disabled from service during this campaign. This affair reflected the highest credit upon the officers and men engaged."

General Banks' "report" as here quoted, though it sounds plausible enough, will not bear criticism. He implies that a delay of sixteen days was caused by the inability of the fleet to ascend the rapids ("Falls") at Alexandria. It should be remembered that Banks himself did not arrive in Alexandria until the 25th, and the rear-guard of his army on the 26th, after a fatiguing march. At least two days were required to reorganize the different corps after arrival. Banks says the first gun-boat could only pass the Rapids on the 28th, whereas on that day the heaviest of the vessels, the "Eastport," ascended the Falls, and seven or eight others—all that were needed—had been above the Falls for some days waiting for the Army to move. Finally, the gun-boats pushed ahead, and on the 30th the "Eastport,"

which General Banks says delayed the Army, took possession of Grand Ecore, which place had been evacuated by the enemy. Banks' army did not reach Grand Ecore until the 1st, 2d, and 3d of April. How, then, can General Banks pretend to blame the Navy for the detention? It was only intended to take eight vessels to Shreveport, viz.: the "Lexington," "Osage," "Gazelle," "Cricket," "Fort Hindman," "Juliet," "Ouichita" and "Neosho." These vessels mounted 50 guns, some of them heavy ones. The other vessels that passed the Falls were necessary to guard Grand Ecore, and a sufficient force was left to protect Alexandria. If the Navy delayed the Army, how is it the gun-boats arrived so much ahead of the latter at Grand Ecore? In fact, at any time previous to the 29th or 30th of March, a medium-draft gun-boat and any transport had no difficulty in passing above Alexandria. A hospital boat, belonging to the "Marine Brigade," was lost at the Falls, but this was due to the stupidity of her pilot. There was none of the "danger" that Banks mentions, or anything more than the ordinary accidents likely to occur among so many vessels.

No delay was caused by stopping at Alexandria to establish a depot of supplies. The depot was established before Banks arrived, and there was no departure from the plan of campaign in making such arrangement. It was a very necessary arrangement, for the campaign could not have been conducted without using Alexandria as a base of supplies.

The number, etc., of the enemy's forces is greatly overstated by General Banks. They did not, all told, number more than 20,000 men, among them were 6,000 or 7,000 raw troops from Texas, commanded by General Green. These were badly cut up by the gun-boats at Pleasant Hill Landing.

Another mistake of Banks is to be found in the recapitulation of his report. He says eight days may be set down to General Franklin for his tardy movements, and the rest of the time to delay in getting the fleet over the "Falls." The General reflects on the Admiral for undertaking to get twenty iron-clads of heavy draft over the "Falls" and up the river on a falling water. There were but six iron-clads in the fleet, and of these the "Eastport" and "Ozark" were the only two from which trouble might have been anticipated in passing above the "Falls." However, the "Ozark" never delayed the fleet a moment going or coming, and the others easily got above the "Falls." The risk run was the chance of the river falling, for which General Banks is not held responsible. The object of the Admiral was to do everything in his power to make the expedition a success; and supposing that Banks intended to

obey his instructions and hold the country, and not thinking that he would retreat on meeting resistance from an inferior force, his intention was to stay up Red River with as large a naval force as he could spare from the Mississippi, until his presence was no longer necessary.

Suppose, as Banks asserts, the fleet did not reach Springfield Landing until "two full days" after the battle of Sabine Cross Roads, that point was reached at the time appointed to meet the General and his army. The Navy's arrival any sooner would not have benefitted him in the least, and he could not, under any circumstances, have reached there before the fleet. The fleet could have reached there sooner, but was delayed by some heavy army transports which were continually getting aground. These heavy vessels were, it is said, sent up by Banks' orders to get down cotton. Any one who knows General Banks will smile at the following:

"The failure of the fleet to move up the river with ordinary expedition, together with the fact that the gun-boats were unable to pass Grand Ecore until the 7th, justified the belief that its advance had been prevented by the low stage of water, and governed the army exclusively in its retrograde movement to Grand Ecore." (!!)

Banks might also have added—impelled in a great measure by the Confederates under General Taylor, who were pressing in his rear.

It is astonishing how visionary some of the generals become after a war is over, and they want to delude the people into giving them seats in Congress. Banks once made a speech to his constituents in which he said: "Had the gun-boats not failed to come to our assistance, we would have met with no reverse"!! On the occasion referred to, there were thirty miles of land between the vessels and the army.

The last chapter in Banks' romance we leave to be criticised by the many thousands who keenly felt the disgrace inflicted on them and upon the country by a most inexperienced General. The Admiral's reports published and on file will show that he gave full credit to the Army for all the assistance the fleet received to get them out of a difficulty into which they fell, owing to Banks' self-assurance. We feel satisfied that no charge of inefficiency can ever be maintained against the Navy, or that through it the lives of those under Banks' command were sacrificed.

It is bad enough for a man to bring disasters upon the country, but when he tries to throw the blame of defeat upon others, and criticises their earnest endeavors to carry out his impracticable plans, he must not expect to be gently dealt with by those whom he fain would injure. We do not pretend to have treated

General Banks leniently in our account of his performances, including his "masterly retreat" before an inferior force. It was the Admiral's duty to make the report he did to the Secretary of the Navy, but he stated the case in much milder terms, as regarded General Banks, than did the army officers who served under him, in their evidence before the Committee on the Conduct of the War. We insert one letter from General Kilby Smith which corroborates everything that has been said in regard to Banks leaving the "Eastport" at the mercy of the enemy:

HEADQUARTERS DIVISION 17TH ARMY CORPS, }  
COTILE, April 25th, 1864. }

ADMIRAL: Arrived at this point last night. General Banks and army are on the march to Alexandria. We brought up the rear and skirmished all the way. General Banks fought at the crossing of Cane River; not much loss on either side. [Note—General Banks speaks of this as most desperate fighting.] Our fight in the rear was sharp. General A. J. Smith's command is ordered peremptorily to Alexandria; troops are now on the march. You will find the enemy some 2,000 strong on the opposite side. Their artillery does not amount to much; what they have we have crippled. [Note—The General was mistaken about the *crippling*.] Will communicate more fully from Alexandria by the gun-boats "Osage" and "Pittsburg," unless they get off before we arrive.

General Smith and myself both protest at being hurried away. I feel as if we were shamefully deserting you. If I had the power I would march my troops back to Calhoun, or wherever you might need us, if at all. I will try and get a communication to you from General A. J. Smith.

Most respectfully yours,

THOMAS KILBY SMITH,

*Brigadier-General Commanding.*

To ADMIRAL PORTER.

General Banks' shortcomings were felt in the Army as well as in the Navy, as will appear by the following extract from a report by Captain Wm. S. Burns, Acting-Assistant Adjutant-General on the staff of General A. J. Smith:

"Our victory being so complete, General Banks had ordered the retreating train to be halted, turned about, and everything prepared for an early advance next morning, and about midnight I fell asleep amidst the groans of the wounded; but at two o'clock in the morning was awakened to hear that we were ordered to retreat. Imagine our feelings! General Smith, upon receipt of the order, had gone to General Banks and urged an advance; but when he found the order to retreat was imperative, he begged the privilege of remaining on the field to bury the dead and take care of the wounded; but even this was not allowed. Disgraceful! Criminal! Inhuman! At this late day, when time has mitigated the intensity of the keen feeling then experienced by us who fled, my notes and letters seem overdrawn, and I hesitate to quote literally, but they are a true history, not only of my own personal sense of bitter humiliation—then in my mind—but are a true index of the inner consciousness of nine-tenths of the army; and, although 'military discipline' kept it under, yet so the soldiers thought, talked, and some of them wrote; and even now, when fifteen years have passed away, it is difficult to review these events and write with any degree of calmness or patience of our retreat.

\* \* \* \* \*

"This was a defeat, but a defeat only to our foe. The stake fought for by him was the trans-Mississippi Empire; by our commanding general, the safe retreat of his army. We won both, abandoned the former to the enemy after he had retreated, and gave to a brilliant victory all the moral results of a defeat. Finally, the Thirty-second Iowa blushes to place upon its banner the name of a field where its dead and wounded were cruelly abandoned to an enemy, who, many hours afterwards, humbly asked leave to care for his own."

When General Banks questions the veracity of officers, he should see what is said of his own in the following extract from the same officer:

"Having whipped our enemy and driven him miles from the battle-field, then to be ordered to run! We could see no reason for it then and cannot yet, although it may be true, as General Banks says in his official report: 'The occupation of Shreveport could not have been maintained.' But it is not the object of this article to enter into the merits or otherwise of General Banks' decision to retreat; for, of course, there are two sides to every question; but I do censure him for leaving the dead unburied and the wounded (*i. e.*, the greater part of them) to fall into the hands of the enemy. If he had to retreat, why such haste? Why not wait at least one day and care for the dead and dying? General Banks is hardly fair toward General Smith in his official report. He says: 'General Smith never declined co-operation with me, nor did he receive orders from me.' It may seem 'to the prejudice of order and military discipline,' for me, as a subordinate, to question the veracity of a commanding general, but when he says, 'nor did he receive orders from me,' I do call his veracity into question. As I have shown, Colonel Shaw, of General Smith's command, reported to General Emory for duty at Pleasant Hill. As no one stood between Generals Banks and Smith—that is, with any authority to command General Smith—who but General Banks could have ordered this? And in Colonel Shaw's official report, he says: 'I was ordered to report with my brigade to General Banks. By him I was ordered to proceed to the front and report to General Emory,' etc. I could give many other instances where General Smith did receive orders from General Banks. From the moment he reported to him at Alexandria, he was under his orders and received them and obeyed them every day while under his command. To even imagine any other state of affairs would be ridiculous and not tenable. When I reach the cotton chapter of the expedition, I will give one instance where he questioned one of Banks' orders; but that the circumstances fully justified him in this, will be, I think, the verdict of all honest men."

It is hardly fair to quote what the enemy said against General Banks—still it is interesting to know what the Confederates thought:

"What a sad picture was now to be seen, where all was beauty and luxury when we first saw it in March! Governor Moore was with his friends further south, and while fighting over his plantation one day, his wife was advised to leave, and as she left her house the tears came to her eyes as she said: 'Good-bye, once happy home!' Who made it an unhappy one? We all concluded that it was her husband, as the natural result of treason. Living far in the interior of 'Dixie,' as he did, he undoubtedly thought war's desolation would never reach his happy home. Three years had passed away, and he was an exile—his family leaving their home; the flag he insulted and defied waving over the

ruins of his 'once happy home.' Was it not a just retribution?

"We were now entirely cut off from the outside world, the blockade of the river being most effectual. A large mail for us was captured and destroyed on one of the transports. General Banks would not let us go out in force and give the enemy battle, having issued positive orders not to bring on a general engagement, which order caused a good deal of animated (but private) discussion. It is appropriate at this point to quote again from the letter of the Southern soldier already quoted from: 'The enemy showed less enterprise than I have ever known them to evince. Banks is clearly no commander. Once or twice while he was at Alexandria, the posture of our forces was such that by a sure and comparatively safe movement of ten thousand men he might have insured, beyond peradventure, the capture of Polignac's division. He must have been in the main aware of the position and strength of our forces.'"

Here is another extract from Captain Burns:

"The above view is a fair reflection of our own. We, too, felt that General Banks had 'given up all desire to acquit himself with any credit,' and showed an unaccountable lack of enterprise. Of course, we knew nothing as to the certain result above predicted, of the 'sure and comparatively safe movement of ten thousand men.' But having about that number, General Smith, having his hands tied by the order not to bring on a general engagement, and being obliged in conformity with it (another instance of receipt of orders from General Banks) to sit down quietly on Governor Moore's plantation and simply sweep away the enemy when too closely reconnoitering our position, might he excused for giving vent to his feelings in unmistakable language, at such (to him a 'West Pointer') a new phase of military life.

"I have stated that when I reached Alexandria I would show that it was General Banks, not General Smith, who meditated the abandonment of the fleet. Dr. Staples (who, owing to the wound of Dr. Derby, already spoken of, was now acting-medical director on General Smith's staff) writes me as follows: 'One day, when the wing-dams were about half completed, General Smith asked me to accompany him to General Emory's quarters. They were soon engaged in earnest conversation, and I heard Emory say there was a bad outlook; that General Banks had just informed him that Colonel Bailey thought it would take a week longer to get the fleet over the Falls, and Banks was very uneasy and seriously contemplated abandoning the fleet to its fate and marching away. General Smith replied, with some Anglo-Saxon more forcible than polite, that he wouldn't leave Admiral Porter until that locality, from which we all hope to escape, had frozen over. We went from General Emory's to Admiral Porter's boat, and General Smith told the Admiral what he had just heard, and assured him that orders, or no orders, his command should not leave the fleet until they saw it safe through to the Mississippi River. Admiral Porter replied that he was not surprised to hear such news, as he had been anticipating as much. He expressed much gratitude for General Smith's proffers of aid, and declared that if the expedition had been under his command it would not have failed.'"

We do not think we have said as much as as that against General Banks. When one remembers Banks' evidence before the "Committee on the Conduct of the War," and compares it with the following statement of Captain Burns, he might suspect

Banks of the want of ingenuousness which he imputes to others:

"I have now come to a subject which requires delicate handling; but even an historical sketch of the Red River campaign cannot well be written without a reference to it. As the expedition had been a decided failure in a military point of view, so it was a great success as a cotton speculation. It was difficult for us to believe that which our eyes saw, but it was the expressed and indignant belief of many in the army that something was wrong in the manipulation of cotton now being enacted before our eyes. We all saw an immense amount of bagging and roping upon the steamer 'Black Hawk' (General Banks' headquarters boat) when it arrived at Alexandria, and it was then said it was for cotton. And during our occupancy of Alexandria on our retreat, I myself saw steamers loaded with cotton and sent down the river under the protection of the hospital flag, and Lieutenant Pannes (ordnance officer on General Smith's staff) sends me the following extract from his diary:

"APRIL 29, 1864.—Cotton is being loaded on the boats by General Banks' order. Even the hospital boat 'Superior' is used for that purpose; went out with Captain Burns to convince myself of that fact.

"MAY 1.—The three cotton boats returned, having been fired into.

In a letter written by Colonel Shaw, who was at this time with his brigade at Governor Moore's plantation, he says:

"The ostensible purpose of occupying this position was the securing of forage, but as scarcely any was procured and several thousand bushels of corn were carelessly burned, it was thought a somewhat suspicious circumstance that a large ginning establishment, which was covered by our lines, was turning out some fifteen or twenty bales of cotton per day. But whether well founded or not, the impression was well-nigh universal that army movements were controlled to a considerable extent by the cotton interest. Such a state of affairs was most demoralizing and disheartening."

"From our first entrance into the Red River country we had been daily hearing reports which seemed too preposterous for belief; reports that an understanding existed between somebody and somebody else that there was to be no fighting on this campaign, but that the Southern Army was to fall back gradually as our army advanced and gathered up the cotton, for which, in some way not explained, the Southerners were to be paid. Also that Generals A. J. Smith and Dick Taylor, not having been informed of this secret, and both being fighting-men, had entered the campaign to fight when it became necessary, and General Smith's capture of Fort De Russey, and Dick Taylor's forcing the fight at Sabine Cross Roads, had upset the calculations of the different somebodies. This report of a secret understanding was reiterated day after day until it was believed by many to be true; but many more of us were incredulous until we witnessed this strange shipment of cotton under the *hospital flag*, which was either a gross deception under the sacredness of a hospital flag or the carrying out of a bargain."

We do not care to criticise General Banks further, otherwise we might extend these extracts; so we will leave his case to the judgment of history.

At one time we could not help feeling sorry for General Banks, for the humiliating position in which he was placed was not altogether his fault. Had he not attempted to draw attention from himself by throwing blame on the Navy, we should

Most generals must expect reverses. Frederick the Great ran away at his first battle, and was not always successful in after years, although one of the greatest soldiers of modern times, and in his most noted defeat he took all the blame on his own shoulders. A general will, in fact, gain more credit by assuming the responsibility of defeat than by attempting to shirk it.

With all General Banks' faults, he had some striking good qualities. He was a gentleman in his manners, and the Admiral never had to complain of a want of courtesy towards his officers or himself except once. He looked well in his uniform, and kept himself always scrupulously neat, though rather theatrical in his style of gloves and boots. With a better surrounding he would have had more success as a general. He had not much force of character, and lacked nerve in time of danger. As Governor of Massachusetts and Speaker of the United States House of Representatives, no one has ever questioned his ability; yet, strange to say, Banks always preferred to be considered a soldier rather than a statesman. He never had sufficient military force to properly occupy the country under his immediate command, much less to make expeditions into hostile regions.

The expedition up Red River toward Shreveport was the end of his military career. As Governor of Louisiana, Banks was not equal to Butler, who, with less *savoir faire*, had more decision of character and made a better record.

In taking leave of General Banks and Red River, we will give him the benefit of the last word, and append to this narrative that portion of his report where he appears in melodramatic attitude towards the Admiral and the Navy—"That Navy which he and the Army preserved, while it did nothing to help itself!"

While we acknowledge that General Banks and his army did all in their power to assist the fleet over the "Falls," we do not admit that they preserved it. The Navy had one hundred miles of river above the "Falls," with water deep enough to navigate, and, if Banks had left, they could have maintained themselves there, running up and down, despite all the forces in that part of Louisiana. There were four months' provisions on hand, and in less than that time the desired rise of water came.

General Banks is a clever writer, but any one who reads his report will detect that coloring of which we have on several occasions complained.

The following is the last specimen that will be quoted, and with this ends the account of the Red River expedition. It is an

"The first difficulty encountered was in the navigation of the river. Sixteen days' delay caused by the inability of the fleet to pass the Rapids at Alexandria, and three days' delay at Grand Ecore in waiting the rise of the river, enabled the enemy to concentrate his forces, and rendered impossible that celerity of movement by the Army which the success of the expedition demanded. Eight days of the delay at Alexandria would have been attributable to the tardy organization and movements of Franklin's command; but the fleet was unable to pass the Falls until eight days after his arrival at Alexandria. This delay was doubtless owing to the impracticable navigation of the river; but it is not improper to say that the forecast and diligence which is enforced upon all men in the daily affairs of life would have forbidden an attempt to force a fleet of so much importance to the free navigation of the Mississippi to a point from which it could never hope to escape, except upon the theory that the river ought to or might rise. The movement of the Navy, in a dispatch of Rear-Admiral D. D. Porter, to which the Secretary of the Navy has given official publication and sanction, is attributed to the 'request' of General Banks, who 'deemed the co-operation of the gun-boats so essential to success, that he (Porter) had to run some risks and make unusual exertions to get them over the 'Falls.' This implies that the responsibility of his action rests upon the Army; but it is not consistent with the facts. The co-operation of the Navy was an indispensable condition and basis of the expedition. Major-General Halleck informed me, January 11, that he had been assured by the Navy Department that Admiral Porter would be prepared to co-operate with the Army in its movements; and the Admiral himself informed me, February 26, that he was 'prepared to ascend Red River with a large fleet of gun-boats,' and to co-operate with the Army at any time when the water was high enough. The fleet was as necessary to the campaign as the Army. Had it been left to my discretion, I should have reluctantly undertaken, in a campaign requiring but eight or ten light-draft gun-boats, to force twenty heavy iron-clads 490 miles up a river proverbially as treacherous as the rebels who defended it, and which had given notice of its character by steadily falling when, as the Admiral reports, all other rivers were booming. There is a better reason for the disregard of the palpable difficulties of navigation than the over-zealous counsel of army officers in nautical affairs. In a subsequent dispatch Admiral Porter says, that 'all my vessels navigated the river to

Grand Ecore with ease, and with some of them I reached Springfield Landing, the place designated for the gun-boats to meet the Army. My part was successfully accomplished; the failure of the Army to proceed, and the retreat to Grand Ecore, left me almost at the mercy of the enemy.' The records of the campaign do not at all support the reckless and fiery ardor of this statement. The fleet did not reach the 'place appointed' until two full days after the first decisive battle with the enemy. The Admiral occupied four days in moving one hundred and four miles on what he calls a 'rising river,' with 'good water,' to the place appointed. General T. Kilby Smith states that the fleet made twenty miles on the 7th, fifty-seven miles on the 8th, eighteen miles on the 9th, and nine miles on the 10th of April—total, one hundred and four miles. The failure of the fleet to move up the river with ordinary expedition, together with the fact that the gun-boats were unable to pass Grand Ecore until the 7th, justified the belief that its advance had been prevented by the low stage of water, and governed the Army exclusively in its retrograde movement to Grand Ecore, as it did in every important operation of the campaign. The Admiral's dispatch does not mention the fact that, in addition to the 'mercy' of the enemy, he had the support of General T. Kilby Smith's division of 2,500 men, whose most gallant and honorable part in the preservation of the fleet of gun-boats and transports is not referred to, in what the Admiral calls 'this curious affair between [the enemy's] infantry and gun-boats.' In view of the published dispatches of Admiral Porter, it is proper for me to say, that every position of difficulty in which the Army was placed in this campaign was the immediate and direct consequence of delay in the operations of the Navy. This may have been inevitable and entirely justifiable from the condition of the river. It is not in my province to pass judgment upon its operations; but the fact remains, nevertheless. During my term of service, it has been an invariable rule of conduct, from which I have never departed, to forbear the expression of opinion or complaint upon the official action of others; but I feel it to be a solemn duty to say, in this official and formal manner, that Admiral Porter's published official statements relating to the Red River campaign are at variance with the truth, of which there are many thousand living witnesses, and do foul injustice to the officers and soldiers of the Army, living and dead, to whom the Navy Department owes exclusively the preservation and honor of its fleet."

## MISSISSIPPI SQUADRON, JANUARY 1ST, 1864.

REAR-ADMIRAL DAVID D. PORTER.

CAPTAIN A. M. PENNOCK, FLEET-CAPTAIN.

### STEAMER "BLACK HAWK"—FLAG-SHIP.

Lieutenant-Commanders, K. Randolph Breese and Watson Smith (Flag); Fleet-Surgeon, Ninian Pinkney; Assistant Surgeon, R. T. Edes; Acting-Assistant Paymaster, C. H. Kirkendall; Acting-Master, James Fitzpatrick; Ensigns, F. J. Naile, M. W. Saunders and S. W. Terry; Acting-Ensigns, Wm. Wardrop, Henry Baker, J. M. Alden and D. Pratt Mannix; Acting-Master's Mates, R. S. Howell, Harry Woodruff, David V. Porter and C. H. Sedgewick; Engineers: Acting-Chief, Geo. W. Walker; Acting-First-Assistant, O. G. Ritchie; Acting-Third-Assistants, J. C. Barr and W. B. Ritchie; Gunner, John R. Hall; Acting-Carpenter, Noah Dean.

### IRON CLAD STEAMER "ESSEX."

Commander, Robert Townsend; Acting-Assistant

Surgeon, Thomas Allen; Acting-Assistant Paymaster, C. W. Slamm; Acting-Masters, J. C. Parker and E. Reese; Acting-Ensign, Spencer Johnson; Acting-Master's Mates, J. H. Berry and C. M. Fuller; Engineers: Acting-Chief, J. K. Heap; Acting-First-Assistant, J. L. Hillard; Acting-Second-Assistants, E. P. Sprague and C. H. Burt; Acting-Third-Assistants, Henry Wood and Nicholas Saner.

### IRON-CLAD STEAMER "EASTPORT."

Lieutenant-Commander, S. L. Phelps; Acting-Assistant Surgeon, M. L. Gerould; Acting-Assistant Paymaster, W. H. Gilman; Acting-Ensigns, S. Poole, R. M. Williams and E. H. Qualding; Acting-Master's Mates, R. A. Day, R. A. Treat and B. W. Herr; Engineers: Acting-Chief, Henry Hartwig; Acting-First-Assistants, T. F. Ackerman and John

S. Moore; Acting-Second-Assistant, G. N. Heizel; Acting-Third-Assistants, W. T. Baxter and J. F. Liddell; Acting-Gunner, J. F. Riblet; Acting-Carpenter, James Rouse.

## IRON-CLAD STEAMER "LAFAYETTE."

Lieutenant-Commander, James P. Foster; Acting-Volunteer-Lieutenant, Edward Morgan; Acting-Assistant Surgeon, D. H. Hayden; Acting-Assistant Paymaster, J. P. Kelly; Acting-Ensigns, J. L. Bryant, F. G. Sampson and J. L. Moran; Acting-Master's Mates, Paul Morgan, W. P. Higbee, S. O. Lovell, S. R. Winram and C. H. Slocum; Engineers: Acting-Chief, Robert Tate; Acting-First-Assistant, James Wilkins; Acting-Second-Assistant, J. W. Paull; Acting-Third-Assistants, E. B. Hill and Max Pratt; Acting-Gunner, George Price; Acting-Carpenter, J. W. Lister.

## IRON-CLAD STEAMER "BENTON."

Lieutenant-Commander, James A. Greer; Assistant Surgeon, N. L. Bates; Acting-Assistant Paymaster, C. G. Lowndes; Acting-Masters, E. C. Brennan, J. F. Reed and N. B. Willetts; Acting-Ensigns, Wm. J. Lees, H. S. O'Grady and P. H. Randolph; Acting-Master's Mates, Wm. Kisner and Hiram Simonton; Engineers: Acting-Chief, Job V. Starr; Acting-First-Assistant, H. W. Fairfoul; Acting-Second-Assistants, Oliver Bray and A. A. Jenks; Acting-Third-Assistant, Benj. Farner; Acting-Carpenter, Richard Rockford.

## IRON-CLAD STEAMER "LOUISVILLE."

Lieutenant-Commander, Elias K. Owen; Acting-Assistant Surgeon, Fayette Clapp; Acting-Assistant Paymaster, D. L. Ruth; Acting-Ensigns, H. A. Coffenberry, Chas. Nelson, Henry Harkins, G. V. Mead, R. H. Longlands, Frank Bates and J. T. Blackford; Acting-Master's Mates, J. J. Drew, Chas. Smith, Jr., and C. S. Scanlan; Engineers: Acting-Chief, J. B. Fulton; Acting-First-Assistant, J. J. Hardy; Acting-Second-Assistant, C. W. Reynolds; Acting-Third-Assistant, C. F. Degelman; Acting-Gunner, William Shields; Acting-Carpenter, D. H. Curry.

## IRON-CLAD STEAMER "TUSCUMBIA."

Lieutenant-Commander, James W. Shirk; Assistant Paymaster, Geo. A. Lyon; Acting-Ensigns, Lewis Kenney and E. M. Clark; Engineers: Acting-Chief, J. W. Hartuper; Acting-First-Assistant, Perry South; Acting-Second-Assistant, W. J. Miligan.

## IRON-CLAD STEAMER "CHOCTAW."

Lieutenant-Commander, F. M. Ramsey; Acting-Assistant Paymaster, Wm. N. Whitehouse; Acting-Master, W. A. Griswold; Acting-Ensigns, Ezra Beaman, W. C. Bennett, A. S. Palmer and L. R. Hamersly; Acting-Master's Mates, T. Hopkins and Henry Marsh; Engineers: Acting-Chief, N. P. Baldwin; Acting-First-Assistant, C. E. Arbuthnot; Acting-Second-Assistant, Joseph Blake; Acting Third-Assistants, S. C. Babbitt and E. H. Austin; Acting-Gunner, Reuben Applegate; Acting-Carpenter, John A. Stewart.

## IRON-CLAD STEAMER "CONESTOGA."

Lieutenant-Commander, Thomas O. Selfridge; Acting-Assistant Surgeon, S. L. Adams; Acting-Assistant Paymaster, E. D. Ilsley; Acting-Master, Gilbert Morton; Acting-Ensigns, Thomas Devine, S. J. Dwight, J. C. Peterson and Wm. Neil; Acting-Master's Mate, Alanson Hamilton; Engineers: Acting-Chief, Thomas Cook; Acting-First-Assistant, Alex. Magee; Acting-Second-Assistant, Chas. Fistadt; Acting-Third-Assistants, James O'Neil and Andrew Lusk; Acting-Carpenter, John J. Hays.

## STEAMER "MOOSE."

Lieutenant-Commander, LeRoy Fitch; Acting-Assistant Paymaster, J. W. Clarke; Acting-Ensigns, Edward Morgan, John Revall and J. H. Rice; Act-

ing-Master's Mates, J. M. Tucker, C. H. Stout and C. W. Spooner; Engineers: Acting-First-Assistant, T. N. Hall; Acting-Second-Assistant, Charles McMillan.

## STEAMER "TAYLOR."

Lieutenant-Commander, James M. Prichett; Acting-Assistant Surgeon, Wm. P. Baird; Acting-Assistant Paymaster, Geo. H. Holt; Acting-Ensigns, G. L. Smith, Charles Ackley, John Hill and J. W. Lalor; Acting-Master's Mates, W. H. C. Michael, G. H. Williamson and H. S. Allen; Engineers: Acting-Chief, James Fleming; Acting-First-Assistant, J. R. Ramsey; Acting-Second-Assistants, Wm. Finch and Philip Sheridan; Acting-Third-Assistant, E. M. Bumpas; Acting-Carpenter, J. M. Peabody.

## IRON-CLAD STEAMER "MOUND CITY."

Lieutenant-Commander, Byron Wilson; Acting-Assistant Surgeon, Thomas Rice; Acting-Assistant Paymaster, B. J. Donahoe; Acting Master, F. T. Coleman; Acting-Ensigns, S. B. Coleman, D. Stebbins and W. H. Decker; Acting-Master's Mate, R. T. Lamport; Engineers: Acting-Chief, Edw. Merri-man; Acting-First-Assistant, E. R. Clemens; Acting-Second-Assistant, J. M. Hartnett; Acting-Third-Assistants, G. L. Baker and Richard Carter; Acting-Gunner, T. H. Green; Acting-Carpenter, Jerome Burns.

## IRON-CLAD STEAMER "LEXINGTON."

Lieutenant, George M. Bache; Acting-Assistant Surgeon, H. M. Mixer; Acting-Assistant Paymaster, T. C. Doane; Acting-Ensigns, Henry Booby, J. G. Migler and C. C. Briggs; Acting-Master's Mates, Daniel Winget, Howard Hale and Ezra McDunn; Engineers: Acting-Chief, W. H. Meredith; Acting-First-Assistant, A. L. Mann; Acting-Second-Assistant, Reuben Story; Acting-Third-Assistants, Jacob Vittinger and Wm. T. Neal; Acting-Gunner, Louis Frederick; Acting-Carpenter, Richard Carroll.

## STEAMER "FOREST ROSE."

Acting-Volunteer-Lieutenant, Charles A. Wright; Acting-Assistant Surgeon, R. Cadwallader; Acting-Assistant Paymaster, C. M. Dunham; Acting-Ensigns, S. E. Brown, Conrad Erickson and H. B. Graves; Acting-Master's Mates, Ira Athearn, Chas. Smith and C. W. Crocker; Engineers: First-Assistant, Francis Marsh; Acting-Second-Assistant, E. H. Goble; Acting-Third-Assistant, Silas Haskey.

## STEAMER "FORT HINDMAN."

Acting-Volunteer-Lieutenant, John Pearce; Acting-Assistant Paymaster, A. B. Adams; Acting-Ensigns, F. A. Oliver, Charles Marsden and F. H. Wait; Acting-Master's Mates, B. G. Van Dyke, S. N. Barker, C. F. A. McCord and H. Shoemaker; Engineers: Acting-First-Assistant, Thomas Girty; Acting-Second-Assistant, D. B. Cox; Acting-Third-Assistants, Eli Powell and Reuben Yocum.

## STEAMER "HASTINGS."

Acting-Volunteer-Lieutenant, A. R. Langthorne; Acting-Assistant Surgeon, J. M. Flint; Acting-Assistant Paymaster, P. J. Stone; Acting-Master, J. W. Morehead; Acting-Ensigns, W. C. Turner and C. H. Reed; Acting-Master's Mates, E. C. Urner, Frank Seymour and F. M. Clark; Engineers: Acting-First-Assistant, John H. Scott; Acting-Second-Assistants, Edwin Senior and Samuel Weaver; Acting-Third-Assistants, A. M. Wasson and Geo. W. Amsden.

## STEAMER "BRILLIANT."

Acting-Volunteer-Lieutenant, Charles G. Perkins; Acting-Assistant Surgeon, Milton James; Acting-Assistant Paymaster, Horace Talcott; Acting-Ensigns, G. D. Little, J. J. Perkins and Richard McAllister; Acting-Master's Mates, T. G. Herron and J. H. Neely; Engineers: Acting-First-Assistant,

Wm. A. Willey; Acting-Second-Assistants, Samuel Ecoff and James Cutter.

STEAMER "ST. CLAIR."

Acting-Volunteer-Lieutenant, T. B. Gregory; Acting-Assistant Paymaster, H. F. Browne; Acting-Ensigns, Warren Burch and G. W. Garrison; Acting-Master's Mates, E. C. Williams, J. H. Hurd and H. O. Proctor; Engineers: Acting-First-Assistant, Wm. McLean; Acting-Second-Assistant, Edward Lozier; Acting-Third-Assistant, F. A. Morse.

STEAMER "SILVER CLOUD."

Acting-Volunteer-Lieutenant, A. F. O'Neill; Acting-Assistant Surgeon, O. B. Damon; Acting-Assistant Paymaster, W. H. Hathorne; Acting-Ensigns, Robert Wilkinson and J. M. Reid; Acting-Master's Mates, Frank Middleton, R. S. Critchell and J. M. Darrah; Engineers: Acting-First-Assistant, B. F. Clark; Acting-Second-Assistant, W. A. Collins; Acting-Third-Assistant, James Folger.

STEAMER "COVINGTON."

Acting-Volunteer-Lieutenant, George P. Lord; Acting-Assistant Surgeon, Emile Gavarret; Acting-Assistant Paymaster, John T. Lee; Acting-Ensigns, Edw. Alford and John Powell; Acting-Master's Mates, W. H. English, C. W. Gross, J. W. Richards and Ignatius Duan; Engineers: Acting-First-Assistant, J. A. Burns; Acting-Second Assistant, W. R. Hoder; Acting-Third-Assistants, J. T. English and Southwell Lyons.

STEAMER "QUEEN CITY."

Acting-Volunteer-Lieutenant, George W. Brown; Acting-Assistant Surgeon, Louis Westfall; Acting-Assistant Paymaster, C. S. Sims; Acting-Master, Michael Hickey; Acting-Ensigns, H. E. Alexander, James Roberts and F. M. Hathaway; Acting-Master's Mates, Geo. W. Hall, W. P. Eakly and E. W. Johnson; Engineers: Acting-First-Assistants, Irwin Fox and Wm. Downey; Acting-Second-Assistant, G. W. Shellenberger; Acting-Third-Assistant, Geo. S. Read.

STEAMER "TAWAH."

Acting-Volunteer-Lieutenant, Jason Goudy; Acting-Assistant Surgeon, H. S. Nicholson; Acting-Assistant Paymaster, D. W. Hale; Acting-Master, M. V. B. Haines; Acting-Ensigns, J. B. Williams and Joseph Sawyer; Acting-Master's Mates, I. P. Neave and John W. Adams; Engineers: Acting-First-Assistant, J. H. Linn; Acting-Second-Assistant, T. J. Reed; Acting-Third-Assistants, John Henry and Walter Mossington.

STEAMER "KEY WEST."

Acting-Volunteer-Lieutenant, E. M. King; Acting-Assistant Surgeon, R. W. Gifford; Acting-Assistant Paymaster, W. B. Crosby, Jr.; Acting-Master, M. J. Cronin; Acting-Ensigns, John H. Welsh and N. A. Closson; Acting-Master's Mates, Wm. Hammett, Jr., Menzies Dickson and John Winram; Engineers: Acting-First-Assistant, R. J. Stone; Acting-Second-Assistants, G. W. Dean and G. L. Mortimer; Acting-Third-Assistant, Michael Sodon.

STEAMER "PEOSTA."

Acting-Volunteer-Lieutenant, Thos. E. Smith; Acting-Assistant Surgeon, John Wise; Acting-Assistant Paymaster, J. C. Spalding; Acting-Ensigns, Edw. Manser, C. H. Gulick and A. S. Hurlbut; Acting-Master's Mates, R. T. Nelson and Geo. P. Vance; Engineers: Acting-First-Assistant, Geo. H. Warner; Acting-Second-Assistant, S. W. Evans; Acting-Third-Assistants, D. E. Nugent and G. W. Makefield; Gunner, J. A. McDonald; Acting-Carpenter, Wm. B. Reid.

STEAMER "REINDEER."

Acting-Volunteer-Lieutenant, Henry A. Glassford; Acting-Assistant Surgeon, W. C. Foster; Acting-Assistant Paymaster, W. W. Barry; Acting-Ensigns, A. C. Sears and W. H. Hall; Acting-Master's

Mates, N. F. Vaughan, T. M. Lewis and J. E. Wright; Engineers: Acting-First-Assistant, A. H. Bagby; Acting-Third-Assistant, G. M. Hayman.

STEAMER "GENERAL PRICE."

Acting-Volunteer-Lieutenant, J. F. Richardson; Acting Assistant Surgeon, Geo. Harvey; Acting-Assistant Paymaster, J. W. McLellan; Acting-Ensigns, G. W. Pratt, J. H. Seever and D. P. Bosworth; Acting-Master's Mates, D. McKay and Peter Barclay; Engineers: Acting-First-Assistant, D. E. Weaver; Acting-Third-Assistants, W. H. Coulter, Alex. Campbell, J. B. Baldwin and R. A. Kyle.

IRON-CLAD STEAMER "PITTSBURG."

Acting-Volunteer-Lieutenant, W. R. Hoel; Acting-Assistant Surgeon, F. M. Follett; Acting-Assistant Paymaster, C. H. Gould; Acting-Master, Geo. W. Rogers; Acting-Ensigns, C. N. Hall, Jas. Ovatt, Freeman Vincent and G. W. Garlick; Acting-Master's Mates, H. N. Wells, John Scott and C. B. Jones; Engineers: Acting-First-Assistant, S. B. Goble; Acting-Second-Assistants, E. R. Pavy, W. H. Mitchell and Julius Elliter; Acting-Gunner, F. C. Green; Acting-Carpenter, Charles Poplar.

IRON-CLAD STEAMER "CHILLICOTHE."

Acting-Volunteer-Lieutenant, J. P. Couthouy; Acting-Assistant Surgeon, G. C. Osgood; Acting-Assistant Paymaster, J. H. Hathaway; Acting-Master, W. T. Power; Acting-Ensigns, W. Muir, J. C. Hall and H. A. Hannon; Acting-Master's Mates, James Harrington and C. S. Wells; Engineers: Acting-Chief, A. W. Hardy; Acting-First-Assistant, Charles Trotter; Acting-Second-Assistant, J. W. Hymen; Acting-Third-Assistants, J. W. Terrell and Anthony Lane; Acting-Gunner, W. E. Keyes; Acting-Carpenter, J. H. Fink.

STEAMER "GENERAL BRAGG."

Acting-Volunteer-Lieutenant, Cyrenius Dominey; Acting Assistant Surgeon, F. A. Castle; Acting-Assistant Paymaster, J. H. Jenkins; Acting-Ensigns, Thomas Burns, T. J. McLaughlin and M. Huston; Acting-Master's Mates, James Williams and P. M. Frost; Engineers: Acting-Chief, J. Miller; Acting-First-Assistant, Jonah Slocum; Acting-Second-Assistant, C. L. Bonchard; Acting-Third-Assistant, Joseph Anderson; Acting-Carpenter, J. W. Kennedy.

IRON-CLAD STEAMER "NEOSHO."

Acting-Volunteer-Lieutenant, Samuel Howard; Acting-Assistant Surgeon, M. A. Miller; Acting-Assistant Paymaster, W. H. Byrn; Acting-Ensigns, E. F. Brooks, Jas. Downs, E. P. Bragg and R. Howden; Acting-Master's Mates, H. J. Kiskadden, Alex. Semple and H. B. Purdy; Engineers: Acting-Chief, Wm. Mills; Acting-First-Assistant, W. C. Sanford; Acting-Second-Assistant, J. L. Miles; Acting-Third-Assistants, J. F. Humphreys and M. C. Noland; Acting-Gunner, W. T. Devlan; Acting-Carpenter, J. O. Baker.

STEAMER "RATTLER."

Acting-Volunteer-Lieutenant, James Laning; Acting-Assistant Surgeon, Scollay Parker; Acting-Assistant Paymaster, Geo. P. Peck; Acting-Master, D. W. Glenn; Acting-Ensigns, Wm. Ferguson and E. P. Nellis; Acting-Master's Mates, H. E. Church, M. C. Pickering and John Cronin; Engineers: Acting-First-Assistant, James L. Smith; Acting-Second-Assistant, G. W. Shields; Acting-Third-Assistants, Robert Russell and James H. Hume.

STEAMER "EXCHANGE."

Acting-Volunteer-Lieutenant, J. S. Hurd; Acting-Assistant Surgeon, G. E. Francis; Acting-Assistant Paymaster, J. W. Gardner; Acting-Ensigns, C. L. Manly and Daniel Jones; Acting-Master's Mates, R. W. Brown, H. M. Scott and G. T. Miller; Engineers: Acting-First-Assistant, A. G. Perkins; Acting-Second-Assistant, C. C. Streepey; Acting-Third-Assistant, B. T. Graham.

## STEAMER "BROWN."

Acting-Volunteer-Lieutenant, J. A. French; Acting-Ensign, Jacob Shinn; Acting-Master's Mates, Martin Kelly and H. A. Thoburn; Engineers: Acting-First-Assistant, Rensler Cutter; Acting-Second-Assistant, N. F. Johnson; Acting-Third-Assistant, A. N. French.

## HOSPITAL STEAMER "RED ROVER."

Acting-Volunteer-Lieutenant, Wm. R. Wells; Acting-Assistant Surgeons, Geo. H. Bixby, Wm. F. McNutt and Wm. H. Willson; Acting-Master, Henry E. Bartlett; Acting-Ensigns, J. G. Waters, Charles King and Jos. Beauchamp; Acting-Master's Mate, C. B. Plattenburg; Engineers: Acting-First-Assistants, W. J. Buffington and W. O. Logue; Acting-Second-Assistant, W. F. Holmes; Acting-Third-Assistants, J. A. Goodloe and G. W. Voice; Acting-Carpenter, Harlow Kinney.

## STEAMER "LINDEN."

Acting-Master, T. M. Farrell; Acting-Assistant Surgeon, J. F. Field; Acting-Assistant Paymaster, Arthur Sibley; Acting-Ensigns, R. H. Cameron, Cassily Adams, Chas. Swenson and Joseph McDonald; Acting-Master's Mates, Wm. C. Williams, R. S. Ballester, N. F. Brown and W. C. Frost; Engineers: Acting-First-Assistant, Wm. C. Perry; Acting-Second-Assistant, Wm. M. Fletcher; Acting-Third-Assistant, C. M. Milligan.

## STEAMER "KENWOOD."

Acting-Master, John Swaney; Acting-Assistant Surgeon, P. Treadwell; Acting-Assistant Paymaster, H. B. Witherell; Acting-Ensigns, J. C. Wells, G. R. Mott and J. L. Read; Acting-Master's Mates, N. H. Conklin, W. R. Moffatt, H. A. Vaughan and Claren Laird; Engineers: Acting-First-Assistant, Thomas Sheffer; Acting-Second-Assistant, T. J. Malbon; Acting-Third-Assistant, J. B. Holman.

## STEAMER "FAIR PLAY."

Acting-Master, Geo. J. Groves; Acting-Assistant Surgeon, W. W. Howard; Acting-Assistant Paymaster, J. G. Sankey; Acting-Ensign, W. C. Coulson; Acting-Master's Mates, W. S. Scott and A. Diserens; Engineers: Acting-First-Assistant, R. A. Matrathra; Acting-Second-Assistant, G. S. Collins; Acting-Third-Assistants, Wm. Bell and C. W. Egster; Acting-Carpenter, Thomas Manning.

## STEAMER "SPRINGFIELD."

Acting-Master, Joseph Watson; Acting-Ensign, H. T. Keene; Acting-Master's Mates, S. H. Harbison, Jas. Cunningham, John Gregg and David Pullman; Engineers: Acting-First-Assistant, R. L. McLean; Acting-Third-Assistant, Morris Van Fossen.

## STEAMER "FAWN."

Acting-Master, John R. Grove; Acting-Assistant Paymaster, A. S. Apgar; Acting-Ensigns, John Sullivan and M. A. Knox; Acting-Master's Mates, Charles Murray, E. D. O'Bryan, J. A. Seaman and John Cowdon; Engineers: Acting-First-Assistant, Edw. C. Peck; Acting-Second-Assistant, G. W. Gough; Acting-Third-Assistant, Michael O'Riley.

## STEAMER "PAW PAW."

Acting-Master, A. F. Thompson; Acting-Assistant Surgeon, Jos. Honnan; Acting-Assistant Paymaster, Alex. S. McWilliams; Acting-Ensigns, W. L. Constantine, Pat. Donnelly and J. H. Rivers; Acting-Master's Mates, John Pybus, W. A. Birchard and Julien D. Coriell; Engineers: Acting-First-Assistant, Ezekiel Reynolds; Acting-Second-Assistant, B. S. Bull; Acting-Third-Assistant, T. K. Hill.

## STEAMER "NAUMKEAG."

Acting-Master, John Rogers; Acting-Assistant Surgeon, E. LeRoy Draper; Acting-Assistant Paymaster, H. B. Mears; Acting-Ensigns, Arthur O'Leary and Jos. Meyer; Acting-Master's Mates, John Dunlop, E. D. Campbell, Alex. Brewster and

Wm. Cassidy; Engineers: Acting-First-Assistant, Edmund Cage; Acting-Second-Assistant, J. A. McCormack; Acting-Third-Assistant, James B. Byland.

## STEAMER "SILVER LAKE."

Acting-Master, Jos. C. Coyle; Acting-Assistant Surgeon, J. H. Mills; Acting-Assistant Paymaster, G. D. Rand; Acting-Ensigns, G. W. Bone, F. G. Jobson and H. H. Pierce; Acting-Master's Mates, John Fisher and Samuel McKee; Engineers: Acting-First-Assistant, John Connolly; Acting-Second-Assistant, Orrin Burroughs; Acting-Third-Assistant, J. C. Jones.

## STEAMER "CHAMPION."

Acting-Master, Alfred Phelps, Jr.; Acting-Assistant Surgeon, A. L. Vail; Acting-Assistant Paymaster, G. T. Bemis; Acting-Ensigns, Felix McCann, Mervin Allen and Anthony Hagerup; Acting-Master's Mate, Herman Alms; Engineers: Acting-First-Assistant, John Johnston; Acting-Second-Assistant, Geo. Waddle and C. A. Fisher; Acting-Third-Assistant, J. J. Suor.

## STEAMER "ALEXANDRIA."

Acting-Master, D. P. Rosenmiller; Engineers: Acting-First-Assistant, H. C. Snibley; Acting-Third-Assistant, J. S. Willcoxson.

## STEAMER "GREAT WESTERN."

Acting-Master, Thomas Bates; Acting-Assistant Surgeon, G. A. Warren; Acting-Assistant Paymaster, J. H. Marshall; Acting-Ensigns, A. M. Rowland and P. R. Starr; Acting-Master's Mates, Richard Mitchell and L. M. Knapp; Engineers: Acting-Chief, C. H. Christopher; First-Assistant, Jos. Goodwin; Acting-Third-Assistant, Edward Lodge; Acting-Gunner, Robert Sherman.

## STEAMER "JUDGE TORRENCE."

Acting-Master, Jeremiah Irwin; Acting-Ensigns, Wm. Sill; Acting-Master's Mates, Edw. Perkins and Edwin Boyce; Engineers: Acting-Chief, Peter Hartwig; Acting-First-Assistants, W. Y. Sedman and S. L. Walkenshaw; Acting-Second-Assistants, Livingston Cook and Jasper Holman.

## IRON-CLAD STEAMER "CARONDELET."

Acting-Master, James C. Gipson; Assistant-Surgeon, D. R. Bannon; Acting-Assistant Paymaster, J. G. Worden; Acting-Ensigns, Oliver Donaldson, S. D. Jordan, E. W. Miller and T. A. Quinn; Acting-Master's Mates, L. W. Hastings and W. H. H. DeGroot; Engineers: Acting-Chief, Chas. H. Caven; Acting-First-Assistant, G. H. Atkinson; Acting-Second-Assistants, M. Norton and W. B. Barton; Acting-Third-Assistants, John McWilliams; Acting-Carpenter, Geo. W. Kenney.

## IRON-CLAD STEAMER "OSAGE."

Acting-Master, Thomas Wright; Acting-Assistant Surgeon, P. P. Gilmartin; Acting-Assistant Paymaster, G. W. Dougherty; Acting-Ensigns, W. S. Pease, Geo. Dunn, J. L. Mickle and R. K. Hubbell; Acting-Master's Mates, M. J. Durney, J. C. Winslow and B. C. Wheeler; Engineers: Acting-Chief, Thomas Doughty; Acting-First-Assistant, Geo. H. Hobbs; Acting-Second-Assistants, Wm. Galbreath and A. F. Fox.

## STEAMER "MARMORA."

Acting-Master, Thomas Gibson; Assistant-Surgeon, B. F. Pierce; Acting-Assistant Paymaster, C. R. Howard; Acting-Ensigns, Elliott Callender and D. D. Bond; Acting-Master's Mates, Wm. Arnold and E. C. Nye; Engineers: Acting-First-Assistant, W. C. Armstrong; Acting-Second-Assistant, David Hawkesworth; Acting-Third-Assistant, F. A. Cramer.

## STEAMER "ROMEO."

Acting-Master, Thomas Baldwin; Acting-Assistant Surgeon, D. W. Jones; Acting-Assistant Paymaster, E. P. Moffatt; Acting-Ensigns, J. B. Durney,

J. B. Petty and R. B. Shaw; Acting-Master's Mates, J. E. Ernest, C. W. Johnston and Geo. S. Cox; Engineers: Acting-First-Assistant, J. N. McCurdy; Acting-Second-Assistants, Jos. Grippin and W. E. Taylor; Acting-Third-Assistant, Wm. Teal.

## STEAMER "JULIET."

Acting-Master, John S. Watson; Acting-Assistant Paymaster, Geo. W. Winans; Acting-Ensigns, W. L. Holcomb, Hugh Kuhl and D. T. Davids; Acting-Master's Mates, S. J. Phillips; Engineers: Acting-First-Assistants, John Wybrant and Jos. Bolejaek; Acting-Third-Assistant, James Van Zant.

## STEAMER "PETREL."

Acting-Master, Thomas McElroy; Acting-Assistant Paymaster, H. T. Skelding; Acting-Ensigns, M. E. Flannigan and S. R. Holmes; Acting-Master's Mates, H. W. Bryan, J. W. Foster, L. C. Ball and J. G. Abbott; Engineers: Acting-First-Assistants, A. W. Phillips and Edw. Roberts; Acting-Second-Assistants, J. T. Stone and Geo. Britton; Acting-Third-Assistant, W. M. Mix.

## STEAMER "CRICKET."

Acting-Master, Henry H. Gorringer; Acting-Assistant Surgeon, H. A. Bodman; Acting-Assistant Paymaster, W. M. Chester; Acting-Ensigns, D. P. Slatery, W. H. Read and J. McLeane; Acting-Master's Mate, John Wilson; Engineers: Acting-First-Assistant, Benj. Hand; Acting-Second-Assistants, David Chillas, C. P. Parks and T. M. Jenks.

## STEAMER "NEW ERA."

Acting-Master, James Marshall; Acting-Assistant Paymaster, Wm. B. Purdy; Acting-Ensigns, C. A. Schetky and W. B. Shillito; Acting-Master's Mates, P. H. Sullivan, W. F. Remer and E. A. Bangs; Engineers: Acting-First-Assistant, Israel Marsh; Acting-Second-Assistant, Richard Feugler; Acting-Third-Assistant, A. W. Smith; Acting-Carpenter, B. Martin.

## STEAMER "SIGNAL."

Acting-Ensigns, Wm. P. Lee and Wm. F. Loan; Acting-Assistant-Surgeon, N. Brewster; Acting-Assistant-Paymaster, E. D. Hayden; Acting-Master's Mates, R. P. Craft, E. D. Lovell and Andrew Donaldson; Engineers: Acting-First-Assistant, W. N. Harden; Acting-Second-Assistants, J. G. Briggs and E. H. Kidd.

## STEAMER "PRAIRIE BIRD."

Acting-Ensigns, John W. Chambers and W. M. Ernst; Acting-Assistant-Paymaster, L. Harter; Acting-Master's Mates, J. B. Morton, J. K. Lull, Jr., and Wm. D. Bangs; Engineers: Acting-First-Assistant, Geo. Radabaugh; Acting-Second-Assistant, Mathew Fleming.

## STEAMER "CURLEW."

Acting-Ensigns, H. A. B. O'Niell, Milton Griffith and Wm. Zimmerman; Acting-Assistant-Surgeon, J. J. McIlhenney; Acting-Assistant-Paymaster, J. R. Morris; Acting-Master's Mates, E. C. Huggins, M. G. Bailey and J. A. Kilby; Engineers: Acting-First-Assistant, Benj. Hoffman; Acting-Third-Assistants, L. J. Everson and Wm. Quinn.

## STEAMER "LITTLE REBEL."

Acting-Ensign, N. T. Rennell; Acting-Master's Mates, N. F. Jacobs, R. G. Van Ness, J. W. Hambrick and J. T. Rulo; Engineers: Acting-First-Assistant, A. E. Giles; Acting-Second-Assistant, Philip Allman; Acting-Third-Assistant, E. H. Burton.

## STEAMER "VICTORY."

Acting-Ensigns, Fred'k Read, W. B. Trufant and J. H. Singleton; Acting-Assistant-Surgeon, G. W. Shields; Acting-Assistant-Paymaster, Benj. Page; Acting-Master's Mates, David Wagener, R. L. Taylor and John Malony; Engineers: Acting-First-Assistant, J. L. Winston; Acting-Third-Assistants, Fred'k Heuse and J. W. Street.

## STEAMER "TENSAS."

Acting-Ensigns, E. C. Van Pelt and Jacob Ruth-erford; Acting-Master's Mate, Henry Van Velsor; Engineers: Acting-Second-Assistants, Andrew Wilson, Ant'y Courtenay; Acting-Third-Assistants, Nathan Spear and Patrick Scanlan.

## STEAMER "GENERAL PILLOW."

Acting-Ensigns, T. M. Halstead, E. M. Wood and C. M. Bragg; Engineers: Acting-First-Assistant, G. W. Crawford; Acting-Second-Assistant, E. P. Bartlett.

## STEAMER "ROBB."

Acting-Ensigns, Lloyd Thomas and James Tuohy; Acting-Master's Mates, J. C. Burnett, J. J. Irwin and Edw. Lincoln; Engineers: Acting-First-Assistant, Benj. Everson; Acting-Second-Assistant, John Miller; Acting-Third-Assistant, N. J. Brooks.

## STEAMER "ARGOSY."

Acting-Ensigns, John C. Morong, G. J. Haslett, R. W. Alson and T. J. Dean; Acting-Assistant-Surgeon, L. M. Rees; Acting-Assistant-Paymaster, R. E. Patterson; Acting-Master's Mates, A. B. Homer, Peter Lake and J. A. McCreary; Engineers: Acting-First-Assistant, Thomas Blanchard; Acting-Second-Assistant, Chas. Silverchan; Acting-Third-Assistant, Albin Donnelly.

## STEAMER "OUICHITA."

Acting-Ensigns, Eugene Zimmerman and P. C. Wright; Acting-Assistant-Paymaster, J. R. Meeker; Acting-Master's Mates, J. W. Litherbury, E. P. Marshall and A. W. Widup; Engineers: Acting-Chief, Thomas Hebron; Acting-First-Assistant, G. W. Taylor; Acting-Second-Assistant, G. T. Wilson; Acting-Third-Assistant, Thomas Reed.

## STEAMER "NEW NATIONAL."

Pilot, Alex. M. Grant; Acting-Assistant-Paymaster, J. W. Keely; Acting-Ensign, J. M. Farmer; Acting-Master's Mates, J. D. Holmes, E. R. Bradley and A. A. Mann; Engineers: Acting-First-Assistant, Wm. A. Wells; Acting-Second-Assistant, Geo. W. Aikin; Acting-Third-Assistant, Geo. R. Bell, Oliver Rosebush and D. L. Winton.

## STEAMER "GENERAL LYON."

Pilot, Richard E. Birch; Acting-Assistant Paymaster W. H. Doane; Acting-Ensigns, James Martin and Thomas Cordwell; Acting-Master's Mates, J. M. Hurd and E. W. Robeson; Engineers: Acting-First-Assistant, H. L. Ince; Acting-Second-Assistant, W. J. Hamilton; Acting-Third-Assistants, James Baldwin and Wm. Daizley.

## STEAMER "SAMSON."

Acting-Ensign, J. M. Holmes; Acting-Master's Mate, G. W. Tainter; Engineers: Acting-First-Assistant, Wm. Paul, Jr.; Acting-Second-Assistant, C. F. Yeager.

## STEAM-TUG "PANSY."

Acting-Ensign, Wm. Harris; Acting-Master's Mate, Ant'y McCarty; Engineers: Acting-Second-Assistant, John Gillis; Acting-Third-Assistant, A. F. Gardiner.

## STEAM-TUG "FERN."

Acting-Ensign, John M. Kelly; Acting-Master's Mate, Jacob Bomgarnar; Engineers: Acting-Second-Assistant, John Reed; Acting-Third-Assistant, Moses Andrews.

## STEAM-TUG "THISTLE."

Acting-Ensign, R. E. Ettingham; Acting-Master's Mate, John Thompson; Engineers: Acting-Second-Assistant, Wm. Clugston; Acting-Third-Assistant, L. B. Jones.

## STEAM-TUG "LAUREL."

Acting-Ensign, W. R. Owens; Engineers: Acting-Second-Assistant, C. H. Hilling; Acting-Third-Assistant, C. L. Rider.

## STEAM-TUG "MIGNONETTE."

Acting-Ensign, Henry D. Green; Acting-Master's Mate, Wm. Edgar; Engineers, Acting-Second-Assistant, Dan'l Barnum; Acting-Third-Assistant, Mark Wade.

## STEAM-TUG "DAISY."

Acting-Master, Daniel C. Bowers; Engineers: Acting-Second-Assistant, F. M. Magers; Acting-Third-Assistant, H. A. Cady.

## STEAM-TUG "MISTLETOE."

Acting-Ensign, James L. Quigley; Acting-Master's Mate, James Anderson; Engineers: Acting-Second-Assistants, F. P. Seavy and Charles Metzger.

## STEAM-TUG "MYRTLE."

Acting-Ensign, I. N. Goldsmith; Acting-Master's Mate, Charles Lyon; Engineer: Acting-Second-Assistant, Thompson Guernsey.

## STEAM-TUG "DAHLIA."

Acting-Ensign, W. H. Strobe; Acting-Master's Mate, Thomas Roach; Engineers: Acting-First-Assistant, J. H. Everhart; Acting-Second-Assistant, John Cook.

## STEAM-TUG "HYACINTH."

Acting-Ensign, J. B. Hiserman; Acting-Master's Mate, James Nelis; Engineer: Acting-Second-Assistant, Thomas Bell.

## STEAM-TUG "IVY."

Engineers: Acting-Second-Assistant, Eugene Calahan; Acting-Third-Assistant, T. H. Neely.

## NAVAL STATIONS AT CAIRO AND MOUND CITY.

Captain Alex. M. Pennock, Fleet-Captain and Commandant of Station; Commander Fabius Stanley, Ordnance Officer; Fleet-Paymaster, E. W. Dunn; Paymasters, W. B. Boggs and A. H. Gilman; Assistant-Fleet-Paymaster, John Reed; Acting-Assistant Paymaster, J. H. Harvey; Surgeon, J. W. Shively; Acting-Chief-Engineer, Wm. D. Faulkner; Acting-Masters, P. O. Kell and J. W. Atkinson; Acting-Ensigns, C. F. Nellis and J. M. Bailey; Acting-Master's Mate, Rivers Drake; Gunner, J. C. Ritter; Act-

ing-Boatswain, William Allen; Acting-Gunners, A. P. Snyder and L. K. Ellis.

## MARINE OFFICERS.

Captain, M. R. Kintzing; Second-Lieutenants, F. L. Church and C. H. Humphrey.

## NAVAL STATION, MEMPHIS, TENN.

Lieutenant-Commander, Thomas Pattison; Acting-Assistant Paymaster, J. H. Benton; Acting-Master, H. S. Wetmore; Acting-First-Assistant Engineer, Wm. Apperly.

## RECEIVING SHIP "CLARA DOLSEN."

Acting-Volunteer-Lieutenant, John Scott; Acting-Assistant Surgeon, C. E. Vaughan; Paymaster, Edward May; Acting-Assistant Paymaster, J. F. Hamilton; Chaplain, Wm. H. Stewart; Acting-Master, Benj. Sebastian; Acting-Ensigns, L. Gardner and D. W. Sainter; Acting-Master's-Mates, W. H. Gray and A. E. McLean; Engineers: Acting-First-Assistant, G. W. Fulton; Acting-Second-Assistant, Jeremiah Wetzell.

## RECEIVING-SHIP "GRAMPUS."

Acting-Master, Elizah Sells; Acting-Assistant Surgeon, M. W. Reber, Acting-Ensign, C. W. Lithurbury; Acting-Master's Mates, J. L. Williams, C. F. Clarkson and J. C. Wittsee.

## INSPECTION-SHIP "ABRAHAM."

Paymaster, A. E. Watson; Acting-Ensign, Wm. Wagner; Acting-First-Assistant Engineer, Enos Hoshier.

## HOSPITAL, MEMPHIS, TENN.

Surgeons, Wm. Grier and H. F. McSherry; Acting-Assistant Surgeons, Henry Beauchamp, J. B. Parker and Abner Thorpe.

## RECRUITING RENDEZVOUS, CHICAGO.

Acting-Master, J. D. Harty; Acting-Master's Mate, Wm. A. Daniels; Surgeon, Samuel J. Jones.

## RECRUITING RENDEZVOUS, CINCINNATI.

Acting-Master, A. S. Bowen; Acting-Assistant Surgeon, Geo. E. Jones; Assistant-Paymaster, Wm. H. Sells.

## CHAPTER XLIII.

### OPERATIONS OF THE MISSISSIPPI SQUADRON, UNDER ADMIRAL PORTER, AFTER THE RED RIVER EXPEDITION.

OPERATIONS ON THE TENNESSEE AND CUMBERLAND RIVERS.—SUPPRESSING GUERRILLAS.—GUN-BOATS CO-OPERATING WITH SHERMAN IN EXPEDITION TO MERIDIAN.—SILENCING BATTERIES AT LIVERPOOL.—GUN-BOATS DAMAGED.—PUSHING UP THE YAZOO.—THE EXPEDITION FALLS BACK.—DASHING ATTACK ON WATERLOO.—THE “FOREST ROSE” DRIVES CONFEDERATES OUT OF WATERPROOF.—IMPORTANT SERVICES RENDERED BY “TIN-CLADS.”—EXPEDITION UP BLACK AND WASHITA RIVERS.—GUN-BOATS DRIVE CONFEDERATES OUT OF TRINITY AND HARRISONBURG.—HEROIC SEAMEN.—PLOT TO BLOW UP FLEET.—CONFEDERATE SECRET SERVICE.—LETTERS OF CONFEDERATE SECRETARY OF THE NAVY AND OTHERS.—NAMES OF PERSONS IN CONFEDERATE SECRET SERVICE.—REPORT OF COMMISSION ON SINGER’S TORPEDOES.—CAPTURE OF YAZOO CITY.—THREE SAILORS DISTINGUISH THEMSELVES.—CAPTURE OF FORT PILLOW.—HORRIBLE MASSACRE.—ATROCITIES COMMITTED.—FORT PILLOW RETAKEN BY LIEUTENANT-COMMANDER FITCH.—CONFEDERATES CAPTURE THE “PETREL.”—THE “EXCHANGE” ATTACKED BY MASKED BATTERIES.—BATTERIES NEAR SIMMSPORT OPEN ON GUN-BOATS, BUT ARE SILENCED.—CONFEDERATES MAKE GOOD USE OF CANNON CAPTURED FROM BANKS.—ZEAL AND BRAVERY OF LOUISIANA AND TEXAS TROOPS.—THE “GENERAL BRAGG” ATTACKED AT TUNICA BEND.—THE “NAIAD” SILENCES BATTERY.—EXPEDITION UP ARKANSAS RIVER.—THE “QUEEN CITY” CAPTURED AND BLOWN UP.—DESTRUCTION OF BATTERIES NEAR CLARENDON.—EXPEDITION FROM CLIFTON TO EASTPORT.—HARD FIGHTING.—TRANSPORTS DISABLED.—“TIN-CLADS” CUT UP.—NON-SUCCESS OF EXPEDITION.

**A**FTER the conclusion of the Red River expedition the fleet returned up the Mississippi to their old stations. Fortunately the guerillas had not taken advantage of the absence of the gun-boats to attack unarmed vessels passing up or down. Only one attempt was made—by a Confederate field-battery—to interfere with river navigation, and that one was unsuccessful.

The different districts were soon under the supervision of their former commanders, and the people along the banks of the Mississippi were reassured with regard to the Navy giving its particular attention to the guerillas or any other species of soldiers that might attempt to show themselves in an offensive attitude.

While the squadron was employed up Red River, the Tennessee and Cumberland rivers became now and then the scene of

active operations. Tennessee, lying adjacent to so many Southern States, was open to the raids of the Confederates, and they seemed loath to abandon it altogether, hoping still to obtain possession of it and carry the war into the more northern States of Kentucky, Ohio and Missouri. It was a vain hope, however, and one not justified by the position or condition of the Federal armies.

In February, 1864, Lieutenant-Commander LeRoy Fitch still commanded a fleet of gun-boats on the Ohio, Tennessee and Cumberland rivers. The banks of these rivers were infested by bands of guerillas, who, posting themselves on prominent points, made it unpleasant for gun-boats, and all but impossible for transports, to pass up without a strong escort.

Lieutenant-Commander Fitch put an end to this state of affairs by sending up the

Cumberland River a reconnoitering force of gun-boats, which at the same time conveyed a number of transports to Carthage with supplies of provisions and munitions of war. This expedition was under the charge of Acting-Volunteer-Lieutenant H. A. Glassford, and the Army co-operated by sending the steamer "Silver Lake, No. 2," with a detachment of 150 sharpshooters under a gallant officer, Lieutenant Roberts. The duty was severe, the danger considerable, and the fighting incessant; but the gun-boats were so well handled that their convoy reached its destination without accident, and the guerillas were taught a lesson they did not forget for some time.

When Sherman was marching on Meridian, a naval expedition was fitted out under the command of Lieutenant-Commander E. K. Owen to co-operate with him, and for the purpose of confusing the enemy with regard to the former's movements. The gun-boats were attended by a co-operating force of troops under Colonel Coates. When they arrived near Yazoo City, it was discovered that the enemy were in force at that place with batteries of field-pieces on the hills.

On the 2d of February the expedition reached Sartalia, and next day attacked the enemy at Liverpool, where there were 2,700 men with artillery, under General Ross. The gun-boats silenced the batteries, and the Federal troops landed and took possession of the enemy's position, which they occupied until night-fall and then re-embarked, and the vessels dropped down the river. The "Petrel," "Marmora," "Exchange" and "Romeo" were the gun-boats engaged. They were somewhat cut up, but drove the enemy away. The army lost eight killed and twenty-two wounded in this attack. This expedition had the effect which Sherman desired, viz., to draw the enemy toward Yazoo River.

The gun-boats and army transports pushed on up the Yazoo as far as Greenwood, losing a few men by the way. At this place they fell in with General Forrest's command, when the army contingent landed and brought on a battle, or rather a skirmish, in which the Confederates were defeated. The result of this expedition was, as Sherman had anticipated, the falling back of all the enemy's troops which had been scattered along the Yazoo, Sunflower and Tallahatchie rivers, upon Grenada, to defend it from attack; and he was thus enabled to proceed on his raid to Meridian without molestation in his rear.

On the 15th of February the Confederates made a dashing attack on Waterloo, in the district commanded by Lieutenant-Commander James A. Greer—an excellent and brave officer, who was always on the alert for such contingencies. This raid was con-

ducted by Colonel Harrison, an indefatigable Confederate ranger, who had given a great deal of trouble with his command. On this occasion he entered the town of Waterproof with 800 mounted men, drove in the pickets, and pressed the Union troops very hard. Fortunately, the little tin-clad "Forest Rose" was at hand to assist the shore party, and, opening a hot fire of shell and shrapnel, soon compelled the enemy to retire. Acting-Volunteer-Lieutenant J. V. Johnston, her commander, then got underway, and took positions where he could constantly harass the Confederates.

This was one of the places selected to be held by negro troops; and, as these men were always offensive to the Southerners, and they never lost an opportunity of attacking them, it was necessary to keep gun-boats always at hand to defend them. The unwise measure of employing colored troops, who were inefficient and without discipline, always aroused the indignation of the guerilla element, who would run great risks to slaughter them.

The officer commanding the troops asked Lieutenant Johnston to put him across the river, but that gallant officer refused to do so, telling him to stand fast and fight it out, which he was obliged to do, and the "Forest Rose," using her rifled guns with great effect, finally succeeded in dispersing the Confederate forces. This fight lasted a whole day, and most of the work was done by the Navy. The Confederates left seven killed on the field, and took away a number of wounded. The place was soon after reinforced from Natchez, and the enemy departed.

Captain Anderson, the commander of the negro troops at Waterproof, was so grateful for the service rendered by the "Forest Rose" that he wrote Lieutenant Johnston the following letter, which we give, with pleasure, as a memento of the gallant officer who fought his ship so well. It will be noticed that the name of the "Forest Rose" frequently appears in this recital of events. She was a small vessel, but one that did good service under the gallant officers who commanded her.

The following is Captain Anderson's letter :

HEADQUARTERS' POST, WATERPROOF, LA., }  
February 19, 1864. }

SIR—Permit me to return you many thanks for the gallant manner in which you defended my little force against the rebel force of Colonel Mores, Colonel McNeal, and Major Johnson, in their several attacks of Saturday, February 14th, Sunday, the 15th, and Monday, the 16th of February, 1864.

I hope you will not consider it flattering when I say I never before saw more accurate artillery firing than you did in these engagements, invariably putting your shells in the right place ordered. My officers and men now feel perfectly secure

against a large force, so long as we have the assistance of Captain Johnston and his most excellent drilled crew on board the No. 9.

I am, Captain, your humble servant,  
 J. M. ANDERSON,  
*Captain Commanding Post.*  
 H. C. LUNT,  
*Lieutenant and Adjutant.*

CAPTAIN JOHNSTON,  
*Commanding Gun-boat No. 9.*

In the latter part of February, Admiral Porter fitted out an expedition to go, *via* the Red River, up the Black and Washita Rivers, under the command of Lieutenant-Commander F. M. Ramsey, for the purpose of breaking up the Confederate posts that were being formed along these rivers and destroying their provisions. The expedition consisted of the following vessels: "Fort Hindman," Acting-Volunteer Lieutenant John Pearce; "Osage," Acting-Master Thomas Wright; "Lexington," Lieutenant George M. Bache; "Conestoga," Lieutenant-Commander T. O. Selfridge; "Cricket," Acting-Master H. H. Gorringer, and "Ouichita," Lieutenant-Commander Byron Wilson.

The "Ouichita" was a converted river steamer and carried 39 guns in three tiers. They were mostly 24 and 12 pound howitzers, but she had a battery of 8-inch smooth-bores and some rifle-guns on the lower deck. Two 12-pounders were mounted on wooden turrets above all. She was a very formidable vessel for such operations.

On the 29th of February the expedition proceeded up the Red River into the Black, as far as the town of Trinity, where they were attacked by a battery of field-pieces, under the Confederate General Polignac, the town at the same time hanging out white flags. The gun-boats returned the enemy's fire and soon drove them away.

The fire of the "Ouichita" is said to have been withering, and the astonishment of the Confederate commander may be well imagined when a vessel, which he supposed to be a transport, opened on him with forty guns, firing two shells from each gun a minute, the shells and shrapnel bursting in all directions and tearing the village almost to pieces.

On the following day the expedition proceeded up the river to within two miles of Harrisonburg, where it was again attacked by General Polignac, with a large number of sharpshooters and some 12-pound rifle-guns, from behind the levee. The fire of the guns was directed chiefly upon the "Hindman," the flag-ship, and she was struck twenty-seven times by shot and shell, one shot disabling the starboard engine. But when the "Ouichita" got into position and opened her broadside, the enemy fled in all directions, leaving their guns on the field, after dragging them some 500 yards from

the water. The Confederates lost a great many men in killed and wounded.

Ramsey then proceeded a long distance up the river through narrow bayous and shoal cut-offs, destroying grain and provisions of all kinds, nearly reaching Monroe, but was obliged to return owing to the rapidly falling water—not, however, until the object of the expedition had been accomplished.

Harrisonburg had always been a troublesome place, from which constant expeditions were fitted out to raid along the Mississippi. The approaches to it had been strongly fortified, four forts on high hills commanding the river for two miles below the town and one mile above. Lieutenant-Commander Ramsey landed a force at this place and burned several of the largest houses, as a warning to the inhabitants not to assist in attacking river-boats, which often had women and children on board.

Two excellent earth-works were found at Trinity, in which were mounted three 32-pounders. These were hoisted on board the vessels and carried away.

This expedition was well planned and executed, and put a stop to the practice of firing upon unarmed vessels along the Mississippi River. It offers the opportunity of mentioning the gallantry of three seamen of the "Fort Hindman," James K. L. Duncan, Hugh Melloy, and William P. Johnson. A shell burst at the muzzle of one of the guns, setting fire to the tie of the cartridge which had just been put in the gun. Duncan immediately seized the burning cartridge, took it out of the gun, and threw it overboard. A shell pierced the bow casemate on the right of No. 1 gun, mortally wounding the first sponger, who dropped his sponge out of the port on the fore-castle. Melloy immediately jumped out, picked it up, and sponged and loaded the gun under a heavy fire from sharpshooters. Johnson, though very severely wounded himself in the hand, took the sponge from a wounded comrade and continued to use it throughout the action. The casualties in the flotilla were only two killed and eleven wounded.

On March 30th, a plan was discovered to blow up by torpedoes all the vessels of the fleet. A Confederate mail carrier was captured, crossing the Mississippi with a mail-bag full of official correspondence, in which an atrocious scheme was exposed. It was nothing more nor less than to introduce torpedoes in the shape of lumps of coal into the coal piles or bunkers of the naval and merchant vessels, in hopes that they would be shovelled into the furnaces by the firemen, and there explode. Acts of this kind were attempted on several occasions by the Confederates, and one would suppose that only the lowest grade of hu-

manity—men of the basest minds—would embark in such infernal enterprises. But it can be shown that some of the highest personages in the Confederacy were engaged in this business, or, at least, gave their assent to it, not in open, manly fashion, but with the apparent idea that they had no authority to stop it. See the following letters .

CONFEDERATE STATES OF AMERICA, }  
NAVY DEPARTMENT, RICHMOND, }  
September 10, 1863. }

SIR—Your letter of the 13th July, from Jacksonport, Arkansas, reached me a few days ago.

You inform me that a certain party desires to obtain proper authority from the Confederate government to undertake the destruction of gun-boats, transports, etc., for such per centum of the value of the boats destroyed as may be offered, etc.

There is no legislation of which I am aware that satisfies precisely the conditions required. The Act of May 6, 1861, recognizing the existence of war with the United States, and providing for privateering, is not construed to permit privateering on inland waters. A reference to the law for the establishment of a Volunteer Navy, a copy of which I enclose herewith, will show you that it cannot be made to embrace the parties to which you refer.

To facilitate organizations of parties to operate as you propose, in boats or otherwise, against the enemy on our Western rivers, they could be received into the Navy if they shipped regularly in accordance with existing laws, and then assigned to duty under an acting-master upon those rivers. In this case, however, they would form a part of the regular Navy establishment, drawing its pay and subsistence. I infer from your letter that such is not the object of the parties in question, but that they desire to organize in small parties, to operate as independent river guerilla parties, under their own leaders, and to look to prize-money or reward from the country for destroying enemy's property, to defray expenses, etc., using an appointment from the Government to secure to them the rights of prisoners of war, if captured.

Judging from what you say, that you have not the Acts of Congress at hand, I inclose copies of two Acts, one of which possibly serves the desired purpose. The President has authority to make such an arrangement as you refer to, and I would suggest that parties wishing to engage in the enterprise present to him their names, purposes and terms, either directly or through your obedient servant,  
S. R. MALLORY,  
*Secretary of the Navy.*  
Colonel E. C. CABELL, C. S. A.,  
*Headquarters Price's Army,*  
*Jacksonport, Arkansas.*

[No. 229.]  
AN ACT TO PROVIDE FOR LOCAL DEFENCE AND SPECIAL SERVICE.

SECTION 1. The Congress of the Confederate States do enact: That the President be and he is hereby authorized to accept the services of volunteers of such kind and in such proportion as he may deem expedient, to serve for such time as he may prescribe, for the defence of exposed places and localities, or such special service as he may deem expedient.

SECTION 2. And such forces shall be mustered into the service of the Confederate States, for the local defence or special service aforesaid, the muster-roll setting forth distinctly the services to be performed; and the said volunteers shall not be considered in actual service until thereunto ordered by the President, and they shall be entitled to pay or subsistence only for such time as they may be on

duty, under the orders of the President, or by his direction.

SECTION 3. Such volunteer forces, when so accepted or ordered into service, shall be organized in accordance and subject to all the provisions of the Act entitled "An Act to provide for the public defence," approved March 6th, 1861, and may be attached to such divisions, brigades, regiments or battalions as the President may direct; and, when not organized into battalions and regiments before being mustered into service, the President shall appoint the field-officers of the battalions and regiments when organized as such by him.

AN ACT TO AUTHORIZE THE FORMATION OF VOLUNTEER COMPANIES FOR LOCAL DEFENCE.

The Congress of the Confederate States of America do enact:

That for the purpose of local defence in any portion of the Confederate States, any number of persons, not less than twenty, who are over the age of forty-five years, or otherwise not liable to military duty, may associate themselves as a military company, elect their own officers, and establish rules and regulations for their own government, and shall be considered as belonging to the Provisional Army of the Confederate States, serving without pay or allowances, and entitled, when captured by the enemy, to all the privileges of prisoners of war.

*Provided,* That such company shall, as soon as practicable, transmit their muster-roll or list of the names of the officers and privates thereof to the Governor of the State, the commanding general of the department, or any brigadier-general in the State or Confederate service, to be forwarded to the Secretary of War; but the President or commander of the district may, at any time, disband such companies.

*Provided,* That in the States and districts in which the Act entitled "An Act to further provide for the public defence," approved April 16th, 1862, and the Acts amendatory thereof, have been suspended, persons of any age, resident within such States or districts, may volunteer and form part of such companies, so long as such suspension may continue.

*Provided,* That no person shall become a member of said company until he shall have first taken the oath of allegiance to the Confederate States of America, in writing, a copy of which shall be filed with the muster-roll of said company, as above prescribed. Approved October 13th, 1862.

CONFEDERATE STATES OF AMERICA, }  
WAR DEPARTMENT, ENGINEER BUREAU, }  
RICHMOND, VA., Sept. 15, 1863. }

R. W. Dunn, having been selected for special service, is authorized by the Secretary of War to proceed to the headquarters of Lieutenant-General E. Kirby Smith, commanding trans-Mississippi department, to be attached to one of the companies of engineer troops now being organized in that department, under the Act of Congress "to provide and organize engineer troops to serve during the war." Approved March 20, 1863.

A. L. RIVES,

*Lieutenant-Colonel and Acting-Chief of Bureau.*  
Approved—JAMES A. SEDDON,  
*Secretary of War.*

CONFEDERATE STATES OF AMERICA, }  
WAR DEPARTMENT, ENGINEER BUREAU, }  
September 15, 1863. }

GENERAL—I have the honor to send, in addition to the names specified in my letter of the 20th ultimo, the following list of men, who, by wish of the Honorable Secretary of War, are to be employed in your department, on the special service of destroying the enemy's property by torpedoes and similar inventions, viz.: [Names.]

These men should each be enlisted in and form part of an engineer company, but will nevertheless be employed, so far as possible, on the service specified above. When the public interest, in your judgment, requires it, details of additional men may be made, either from the engineer troops or from the line, to aid them in their particular duties, and they may be furnished by the military authorities with the necessary ammunition. Their compensation to be fifty per cent. of the property destroyed by their new inventions, and all the arms and munitions captured by them, by the use of torpedoes or by similar devices. Beyond this, they will be entitled to such other rewards as Congress may hereafter provide.

Very respectfully,

Your obedient servant,

A. L. RIVES,

*Lieutenant-Colonel and Acting-Chief of Bureau.*  
Approved—JAMES A. SEDDON,  
*Secretary of War.*

Names of persons in secret service, to introduce R. W. Dunn, E. C. Singer and J. D. Braman to my friends:

B. C. Adams, Grenada; Captain Samuel Applegate, Winona; Colonel H. H. Miller, commanding regiment west of Grenada and Carrollton; W. P. Mellen, Natchez; Major John B. Peyton, Raymond; Judge D. H. Bosser, Woodville; F. A. Boyle, Woodville; Henry Skipwith, Clinton, La.; Conrad McRae, Fordoche, La.; W. Barton, Atchafalaya River, La.; J. J. Morgan, Atchafalaya River, La.; T. G. Caivit, Atchafalaya River, La.; James E. Lindsey, Atchafalaya River, La.; William N. Lindsey, Atchafalaya River, La.; William H. Neilson, Atchafalaya River, La.; Samuel Faulkner, Atchafalaya River, La.; Colonel James M. Porter, St. Landry, La.; Colonel Wm. B. Davis, St. Landry, La.; Colonel Wm. Offat, St. Landry, La.; Captain James Capps, St. Landry, La.; S. A. Scribner, St. Landry, La.; Elbert Goull, St. Landry, La.; T. C. Anderson, St. Landry, La.; Simon Richard, St. Landry, La.; Henderson Taylor, Marksville, La.; S. L. Taylor, Marksville, La.; H. Robertson, Alexandria, La.; S. W. Henarie, Alexandria, La.; Governor T. O. Moore, Alexandria, La.; Colonel C. Manning, Alexandria, La.; General M. Wells, Rapides and Aveyellos Parish, La.; General P. F. Kearny, Rapides and Aveyellos Parish, La.; Hugh M. Kearny, Esq., Rapides and Aveyellos Parish,

La.; B. F. Murdock, Rapides and Aveyellos Parish, La.; B. C. Crow, Esq., Lafayette Parish, La.; Hon. John Moore, St. Martin's Parish; William Robertson, St. Martin's Parish; Judge Baker, St. Mary's Parish; T. J. Foster, St. Mary's Parish; Judge Paltrey, St. Mary's Parish; Daniel Dennett, editor *Planter's Banner*, St. Mary's Parish; Mr. Sickles, editor *Planter's Banner*, Kindred Spirits, St. Mary's Parish; Phanor Prudhomme, Esq., St. Mary's Parish; John Blair Smith, Nachitoches Parish, La.; Colonel H. J. G. Battle, Caddo, La.; Reuben White, Caddo, La.

We must help one another, and those who can be efficient in our cause must receive all necessary hospitality, aid and information. I introduce none but the worthy.  
R. J. PAGE.

REPORT OF A COMMISSION ON SINGER'S TORPEDO.  
ENGINEER HEADQUARTERS,  
DEPOT NORTHERN VIRGINIA, }  
July 14, 1863. }

COLONEL—In accordance with your order of the 13th, appointing the undersigned a commission to examine and report upon the merits of Mr. E. C. Singer's torpedo, we beg to state that we have carefully examined the same, and submit the following report:

First. "As to the place for exploding the charge." In this plan or lock, in our opinion, consists the great merit of the invention. The lock is simple, strong, and not liable at any time to be out of order; and as the caps which ignite the charge are placed within the powder magazine, they are not likely to be affected by moisture; while the percussion is upon the exterior of the magazine, actual contact with the rod, which acts as a trigger, is necessary; but by mechanical contrivances the contact may be obtained in various ways.

Second. "The certainty of action" depends, of course, upon contact; but by the peculiar and excellent arrangement of the lock and plan of percussion mentioned above, the certainty of explosion is almost absolute.

One great advantage this torpedo possesses over many others is that its explosion does not depend upon the action or judgment of an individual; that it is safe from premature ignition, and at the same time is cheap and portable, while its position in river or harbor cannot readily be ascertained by an enemy's vessels.

Third. "The efficiency of its explosion, if made in deep channels," cannot well be ascertained without experiment, but would be the same as sub-marines fired by any other contrivance. We are of the opinion, however, from the best information accessible, that if the powder, say 100 pounds in quantity, is within the distance of fifteen feet from the keel of the vessel when exploded, its efficient action is not materially affected by the depth of channel.

Of course, the quantity of powder required would have to be determined by experiment. Rifle powder, from its more rapid combustion, would be preferable in deep water to cannon powder, while some of the detonating compounds would doubtless effect certain destruction to vessels passing over torpedoes at even much greater depth. The peculiar arrangements for firing the batteries would have to be determined by the circumstances of position and draft of vessels and motion of currents, depth and width of channels, and would require the exercise of great judgment on the part of those intrusted with the duty of placing them.

We are so well satisfied with the merits of Mr. Singer's torpedo that we recommend the engineer department to give it a thorough test, and, if practicable, to have some of them placed at an early day in some of the river approaches of Richmond.

General Remarks:—

The mode of loading this torpedo dispenses with

any connection through the case of the magazine, involving no packing of any kind.

The risk of the lock fouling by sand or mud, if on the bottom of a stream, we think can be prevented by enclosing it in a metal case, which would be nearly water-tight. In narrow streams these could be placed in quincunx, so that a vessel attempting to pass would be sure to come in contact with some one.

The inventor also claims to be able to go to a vessel with one or two and get them in contact so as to explode.

This can be done, but so much depends on the nerve and daring of individuals that there is no certainty of it. Judging from the success of blasting rocks by powder, superposed upon the rock with a deep column of water over it, we are of the opinion that the depth of water below a torpedo would not interfere with its success.

Lieutenant Bolton, who saw and blasted a great deal in East River, near New York, says: "One hundred pounds of powder, fifteen feet from the bottom of a vessel, would break her sides or bottom."

We would add that a proposed adaptation of these locks to the explosion of shell or batteries under railroad tracks, for defences of approach to fortified works, and for blowing up bridges, seems to us very simple and effective; also an ingenious plan for affixing torpedoes to spar or bow of an iron-clad.

We consider the employment of submarines as a legitimate mode of defence, and, as officers connected with the defence of Richmond, feel it our duty to recommend torpedoes as a powerful accessory to our limited means. The moral effect of an explosion upon an enemy would be incalculable, and would doubtless deter them from attempting to bring troops, by transports, to points accessible to the city, as White House or Brandon.

Respectfully submitted,

W. H. STEVENS,  
*Colonel Engineers.*  
JOHN A. WILLIAMS,  
*Major Engineers.*  
W. G. TURPIN,  
*Capt. Engineers.*

*Lieutenant-Colonel and Acting-Chief of Bureau.*

LETTER OF T. E. COURTENAY TO COL. H. E. CLARK.  
RICHMOND, VIRGINIA, Jan. 19, 1864.

MY DEAR COLONEL—I hope you have received all my letters. I wrote two to Mobile, one to Columbus, and two to Brandon. I now send this by a party who is going to Shreveport, and promised to learn your whereabouts so as to forward it to you.

I have met with much delay and annoyance since you left. The castings have all been completed some time, and the coal is so perfect that the most critical eye could not detect it. The President thinks them perfect, but Mr. Seddon will do nothing without congressional action, so I have been engaged for the past two weeks in getting up a bill that will cover my case. At last it has met his approval, and will to-day go to the Senate, hence to the House in secret session. It provides that the Secretary of War shall have the power to organize a "secret service corps" commission, enlist and detail parties who shall retain former rank and pay, also give such compensation as he may deem fit, not exceeding 50 per cent. for property partially and totally destroyed; also to advance, when necessary, out of the secret service fund, money to parties engaging to injure the enemy.

As soon as this bill becomes a law, I have no

means to progress with, and that all the appointments you or I have made will be confirmed. \* \* \*

T. E. COURTENAY.

Colonel H. E. CLARK,  
*7th Missouri Cavalry.* Maj. Gen. Price's  
Headquarters, Arkansas.

The little "tin-clads" of the Mississippi squadron made a good deal of history for the Navy. They often performed duties that ought to have been assigned to iron-clads; but these latter were few in number, and too large to penetrate the small and narrow streams where the Confederates had an idea they were secure, and from whence they would start expeditions towards the great river to prey upon peaceful commerce. The "Petrel" more than once distinguished herself in these river expeditions, and while in the Yazoo River performed service that should be remembered.

Colonel Coates, who had started out with Lieutenant-Commander Owen, as mentioned on a former occasion, to keep the Confederates from following in Sherman's rear, had, with the assistance of the Navy, occupied Yazoo City, which seemed to be an object of attack from both parties. First one side and then the other had thrown up earth-works until it had become a formidable place.

Colonel Coates was quietly resting here, keeping a good look-out on the enemy, who were in force a few miles back, when, on the 5th of March, at 9:30 A. M., the Confederates made a fierce attack on the redoubts at a point occupied by part of the 11th Illinois Volunteers, supported by a 12-pound howitzer belonging to the gun-boat "Exchange." Acting-Master Thomas McElroy, of the "Petrel," had been left in charge of the naval force in the Yazoo River by Lieutenant-Commander Owen.

After firing the howitzer several times, it had a shell jammed in the bore which could not be removed. Mr. McElroy then ordered Acting-Master Gibson, of the "Marmora," to dismount one of his rifled howitzers, mount it on a field carriage, and send it on shore with a crew to work it; but before he could get the gun to the redoubt the enemy had completely surrounded the hill.

At this time the fighting in the city was hand to hand; the gun was placed in position and opened fire rapidly on the enemy. At one time the crew were driven from their piece by superior numbers; but the Union soldiers, seeing that the sailors needed support, went to their rescue, charged the enemy, and retook the gun.

The "Petrel" and "Marmora" kept up a rapid fire with shrapnel, until the battle was over, and McElroy was requested by Colonel Coates to cease firing, as the enemy

shore, took the howitzer, and pursued the retreating enemy, firing upon their rear until they escaped to the hills.

Three sailors highly distinguished themselves in this battle: Bartlett Laffey of the "Petrel," and James Stoddard and Wm. J. Franks of the "Marmora." These men, though surrounded at their gun, fought hand to hand with their cutlasses to the last, and when the enemy retreated, turned the gun upon them—this, too, after their officer (an acting ensign) had retreated, and behaved so badly that his resignation was afterwards demanded. Here was a great difference between the men and their officer, and it is to be hoped that the former will live to see their names honorably mentioned while that of their leader is withheld as unworthy of notice.

On the 13th of April, the Confederates, taking advantage of the absence of the gun-boats, marched on Columbus, Ky.; but when Colonel Lawrence, who commanded the post, refused to listen to a demand for its surrender, they turned upon Fort Pillow, and captured it after a desperate conflict.

Fort Pillow was retaken by Lieutenant-Commander Fitch, but the enemy carried off with them everything it had contained in the shape of guns or stores, and retreated to Ashport. The Union transports then landed troops at the foot of the hill, who reoccupied the fort, where traces of the massacre were still visible, and where ruin and desolation went hand-in-hand. Terrible scenes had been enacted when the place was taken by the Confederates, and they behaved as if they considered the brave defence of the Federal soldiers a grave offence, to be avenged by an indiscriminate slaughter. The atrocities which these men committed will always remain a stigma upon their character, for no possible excuses or explanations can ever justify them.

All of the successes gained by the Confederates were owing to the unfortunate Red River expedition, which had withdrawn the gun-boats from their posts.

In the meantime the small gun-boats, which were acting on the Yazoo River in connection with Colonel Coates, were making themselves felt in that region. An expedition under Colonel Schofield was about to start up the Yazoo River by order of General McArthur, when, by request of the former, on April 21st, the gun-boats "Petrel" and "Prairie Bird" preceded the army-transport up to Yazoo City. No enemy being in sight, the "Petrel" went on up, leaving the "Prairie Bird" and transport "Freestone" at the Navy Yard. When abreast of the city, the little gun-boat opened fire on some Confederate troops just then

coming in sight on the hills, which was returned briskly by musketry and cannon. The river, being too narrow to turn in, Acting-Master McElroy determined to run the batteries, go up the river where there was more room, turn about, and then run down again. It was not found practicable to return immediately, however, so the "Petrel" remained where she was until the 22d. On this day she hauled into the bank and commenced wooding, when she was attacked by the enemy with a strong force of infantry and several pieces of cannon, the shot from their guns passing through the vessel. Not being able to bring his guns to bear, McElroy armed his men as sharpshooters and returned the fire, at the same time getting underway. While starting off, two shots entered the ship, one striking the cylinder, the other cutting the steam-pipe and disabling the engines, when the Confederates closed in on her. The crew went to their quarters and commenced firing, but the sharpshooters picked them off through the ports, and McElroy, finding it impossible to work his guns, gave the order to set fire to the ship and abandon her. At this moment a shot went through the boiler, enveloping the "Petrel" in steam. This was unfortunate, for the steam extinguished the fire, and in consequence the vessel fell into the hands of the enemy, with all her stores, guns and ammunition.

There were some unpleasant features connected with this affair, but McElroy redeemed his own mistakes by his gallantry after most of his officers and men had left the vessel. The pilot, Kimble Ware, and a quartermaster, J. H. Nibbie, stood by their commander when all the officers had deserted their flag.

As soon as the steam cleared away, McElroy, with the assistance of Quartermaster Nibbie, got the wounded off the guards on to the bank, and got ready to set fire to the vessel again (all this time under an incessant fire). He obtained some live coals from the furnace and spread them about the decks, but soon had to desist on account of the heat below. At this time, the enemy seeing the officers and men escaping across the fields, crossed the river above and below the "Petrel," and, surrounding her on all sides, forced McElroy to surrender. The fires on board the steamer were at once extinguished, and the captain was taken away before he had time to find out how many of his men were killed and wounded.

As an excuse for the conduct of the crew, it must be remarked that there were only ten white men and boys on board the vessel; the rest were all "contrabands," and some of these were sick. But it was one of the

few cases where officers behaved badly on board a vessel of the Mississippi squadron. If the "Petrel" had been properly seconded by the troops, the disaster would not have occurred.

This affair threw quite a gloom over the fleet, as the "Petrel" had always been one of the favorite "tin-clads," and her name appears in many expeditions and forays.

This disaster was redeemed a short time afterwards by the gallant conduct and good management of Acting-Master James C. Gipson, in the gun-boat "Exchange," who, while passing Columbia, Arkansas, was opened upon by a masked battery, consisting of four 12-pound shell guns, two 12-pound rifles, and one 10, one 18, and one 6 pounder rifles.

The battery was divided into two sections, planted about 200 yards apart, behind the levee. The Confederates waited until the "Exchange" had passed the lower battery, and then opened upon her a destructive fire. Acting-Master Gipson could not back down on account of having turned the point of a sand-bar, and he at once saw that his only alternative was to run the upper battery. This he attempted to do, opening fire at the same time with all the guns which he could bring to bear upon the enemy; but, unfortunately, the port engine was struck by a shot and disabled, reducing the speed of the vessel and keeping her under fire for forty-five minutes.

The "Exchange" had hardly got out of range of the enemy's guns when her engine stopped entirely, and it was found necessary to anchor while the engineers were making repairs. The work was quickly and energetically done, and the little vessel was enabled to move slowly up the river with one engine. It was expected that the Confederates would move the battery above the vessel while she was disabled, and open fire upon her again; but this was not done, and she finally escaped, though badly cut up.

The "Exchange" was pierced thirty-five times with shot and shell; eight times near the water line and five times in the casemate. Several shells exploded in the coal bunkers, near the boiler, and one entered the shell-locker, overturning shell-boxes, but, fortunately, not reaching some percussion shell that were stored there. One shot passed through the pilot-house, wounding Acting-Master Gipson and rendering him senseless for fifteen minutes; but the brave pilot steered his course as coolly as if it was an every-day affair. The gallant commander was wounded in three places, but in all this firing only one man was killed outright. That, however, does not detract from the credit of this fight, and it shows how a cool and brave commander can get out of a difficulty if he is determined to do so.

Though the volunteer officers in the Mississippi fleet almost always deported themselves with great gallantry, few affairs were better managed than the one we have just described. We cannot always give the names of all the officers engaged in these adventures, but they will generally be found in the lists.

There were a number of such affairs, and in many of them the brave character of the Western men was clearly exhibited.

On the 8th of June, 1864, Lieutenant-Commander F. M. Ramsey, while employed in the Atchafalaya River, started down with the "Chillicothe," "Neosho," and "Fort Hindman." When about one and a half miles from Simmsport, they were fired upon by a battery of two 30-pounder Parrotts. When the vessels opened fire in return, the enemy did not wait to load, but scattered in all directions, leaving their guns and muskets behind them. A deserter stated that these guns had been taken from General Banks when he was on his Red River raid, and the naval officers were thus sometimes reminded that Banks had furnished the guns which so often attacked them along the river. This affair was well managed and with but little loss of life.

Five or six batteries, which had been captured from the Federals, were now raiding upon different parts of the river, and firing upon merchant steamers carrying passengers, frequently women and children. We regret that we are obliged to mention these acts of wanton vengeance on the part of the Confederates. It was not legitimate warfare, and it detracted very much from the credit which they had fairly earned by their undoubted bravery on other occasions.

It looked sometimes as if the "chivalry" of the South was dying out. The gun-boats, with as much propriety, might have fired on the defenceless houses of people who were taking no part in the war. It is true that the Union men did sometimes disgrace themselves by burning houses, but it was always done in retaliation for some wanton act on the part of the Confederates, and the women and children were always given time to get out of the way. It was all wrong on either side, and shows how the most humane people will become demoralized when engaged in a civil war. May God save us from any such war in the future!

There was no doubt about the energy, zeal and bravery of these Louisiana and Texas troops; they never relaxed for a moment, and were encountered when least expected. As they attacked everything that came along, they would sometimes "catch a Tartar."

On the 26th of June, while the gun-boat "General Bragg" was at anchor in Tunica Bend, she was opened on by the enemy with four guns. Acting-Volunteer-Lieutenant C. Dominey (commanding) slipped his cable and went to quarters, replying rapidly to the enemy's fire. After being engaged about five minutes, a shot struck the working-beam of the steamer, and disabled her engines completely. But Dominey did not mind that. He drifted along, silencing the enemy's guns, and they went away, apparently satisfied with having put 22 shot and shell into the "General Bragg."

The little "tin-clad," "Naiad," hearing the firing, ran to the assistance of the "Bragg," and when within half a mile of the latter another battery opened upon her, in a few moments completely disabling her steering gear and severely wounding the pilot, James M. Herrington. The "Naiad's" wheel being shot away, her commander, Acting-Master Henry T. Keene, rigged relieving tackles, steered for the battery and continued a close and brisk fire until it was completely silenced.

In this affair the little vessel was struck nine times; and, to show how these frail boats would hold on amidst a pitiless storm of shot and shell, we will enumerate the damages inflicted on the "Naiad:"

"The first shot passed through the smoke-stack; the second and third shots passed through the pilot-house, the third striking the barrel of the wheel, cutting the tiller rope, and literally tearing the wheel to pieces; the fourth shot passed a few feet abaft the pilot-house, shattering the steerage and skylights, but doing no further damage; the fifth shot passed through the cabin. \* \* \* \* also \* \* four shots through the starboard casemates; one striking abreast of the boilers, one abaft of No. 2 gun, tearing up the decks and exploding within a few feet of the shell-room; one abaft of No. 3 gun, killing John J. Crennell, ordinary seaman, and wounding three others; another passed through the port of No. 4 gun, tearing away the shutter and exploding in the dispensary."

This was a gallant combat on the part of these light-armed gun-boats, and showed the persistency with which the Confederates kept up the war.

Now that the great strongholds of the enemy had all been abandoned, the guerilla warfare was carried on along the Mississippi as it had been on the upper rivers. The guerillas never accomplished anything of importance, and soon became a source of great annoyance to the wretched inhabitants, who were obliged to feed and clothe them in order to make it appear that they were loyal to the Confederate cause. No discipline existed among these wandering bands, and they preyed on friends and foes alike.

On the 29th of June, a fleet of nine transports, containing troops under the com-

mand of General Steele, started on an expedition up the Arkansas River, for the purpose of meeting a Confederate force under General Marmaduke, who had assembled quite an army on both sides of the river and was obstructing navigation. The transports were accompanied by the gun-boats "Taylor," "Fawn," "Naumkeag" and "Queen City," under the command of Lieutenant George M. Bache. The smaller vessels had gone on ahead, while the "Taylor" (Lieutenant Bache's vessel) kept with the convoy. When within ten miles of Clarendon, Lieutenant Bache picked up some sailors on the left bank of the river, belonging to the "Queen City," who stated that that vessel had been captured by General Shelby at 4 o'clock that morning. Information was also obtained that the enemy were in much greater force than General Steele had anticipated, which caused a change in the programme.

It appears that while the "Queen City" was lying at anchor off Clarendon, she was suddenly attacked by General Shelby with two regiments of cavalry (dismounted) and four pieces of artillery. The officers of the vessel were taken by surprise, no intimation of the enemy's approach having been given until the attack was made. At the first or second round the starboard engine was disabled by a shell, and the effectiveness of the port engine was much injured by a piece of the same shell passing through the steam-pipe. After fighting twenty minutes, Acting-Master M. Hickey, who commanded the gun-boat, seeing that she was completely riddled with shot, shell and rifle-balls, decided to surrender, not having the bravery to fight it out, as many of his contemporaries would have done. He ordered his officers and men to abandon the vessel, and most of them escaped to the opposite shore. One man was killed, nine wounded and 25 taken prisoners.

Lieutenant Bache received intelligence of the capture of the "Queen City" about five hours after it occurred. He at once started up the river to prevent the enemy from using her against the Union forces or getting out her stores. When within a few miles of Clarendon, however, two successive reports were heard up the river, which proved to be the explosion of the unfortunate gun-boat's magazine. General Shelby, hearing of the approach of the other vessels, had destroyed her.

The gun-boats approached the point where the enemy was stationed in the following order: "Taylor," "Naumkeag," "Fawn;" and when they were abreast of Cache River the enemy opened fire, putting one of his first shots through the pilot-house of the "Taylor." This vessel could only reply with one gun until

abreast of the enemy's position, when she fired broadsides of shrapnel and canister. Having passed the batteries, the gun-boats rounded-to and steamed up at them again (at this time the "Fawn's" pilot had been mortally wounded and her signal-bell arrangements carried away, which prevented her from participating in the second attack). The Confederates thought that Bache merely intended to run by their batteries, and they gave three cheers when they saw him steaming away as they supposed, but when he returned to the attack they exclaimed in despair: "Here comes that black devil again!" After getting abreast of them again, the "Taylor" and "Naumkeag" kept up such a terrible fire that in five minutes the enemy began escaping in all directions, throwing away everything they had captured.

The Confederates had six guns of their own, of different sizes, and a 12-pounder howitzer, which they had taken from the "Queen City." These guns were placed in four different positions, making four batteries; but the fire of the gun-boats was so withering that the artillerymen were driven off after an action of 45 minutes. The Confederates must have been roughly handled, for they abandoned everything they had captured from the "Queen City," as well as some of their wounded prisoners.

This was a very gallant and well-managed affair, and Lieutenant Bache gained great credit for the handsome manner in which he had handled his vessels and defeated so large a force of the enemy.

Acting-Master John Rogers of the "Naumkeag" was also mentioned handsomely for the cool and efficient manner in which he had fought his vessel. In fact, all behaved well and redeemed the unfortunate loss of the "Queen City," which lay a shattered wreck at the bottom of the river. Her guns were finally raised and everything of value recovered.

Lieutenant Bache was now warned by the falling water that it was time to go below, if he did not wish to be caught in a trap. Having satisfied himself that he had completely driven Shelby and his force away from the river, he left the "Naumkeag" and "Fawn" at Clarendon, to protect that place and started down the river, in the "Taylor," to communicate with General Steele.

A large force of troops was then sent up in a transport, convoyed by the "Taylor," and landed at Clarendon without meeting any opposition. This force, under General Carr, immediately gave chase to the enemy, who numbered 2,500 men, and skirmished with them for twenty-five miles, capturing several pieces of artillery and 60 wounded

men. Most of the crew of the unfortunate "Queen City" were picked up along the river and distributed among the other vessels. The enemy retired towards Little Rock and did not trouble the gun-boats again for some time. The flotilla had sixteen men wounded, two of whom died the next day.

We have nothing to say against this attack of the Confederates—it was all legitimate enough, and, no doubt, they suffered severely for their temerity. General Shelby showed no want of gallantry, his only fault being that he had not fairly considered the enemy he was about to attack. He had so easily overcome the "Queen City" that he thought he could do the same with the rest.

The result of the fight was that General Steele followed the enemy to Little Rock, Arkansas, on which place General Marmaduke had intended to make a raid; and the Confederates, finding that they could not assemble on the banks of the White River while the gun-boats were so active, transferred their operations to some other quarter.

With the exception of some trouble with the guerillas up the Cumberland and Tennessee Rivers, the operations for the year 1864 ended favorably for the Union cause, as far as the Navy was concerned. The Confederates continued to show themselves in Kentucky and Tennessee, however, and sometimes took advantage of transports that were not convoyed by gun-boats. Even as late as December, 1864, there was no diminution of zeal and energy on the part of the enemy, though they must have seen by that time that the Confederacy was doomed. An artillery company would sometimes travel for miles just for the pleasure of firing a few shots into a gun-boat or transport.

There was not cavalry enough on the Federal side to pursue these raiders; and, if an expedition was organized for that purpose, it generally consisted of an army contingent in transports convoyed by gun-boats.

Sometimes the naval commander of a district, from a feeling of over-security, sent an insufficient force of gun-boats, when trouble would ensue and the undertaking be a failure. One of these cases was an expedition from Clifton to Eastport under command of Colonel Hoge, consisting of the 113th and 120th Illinois infantry, 660 strong; 61st U. S. colored infantry, 600 strong, and Battery G, 2d Missouri light artillery (four rifled 12-pounders). These troops embarked on the 9th of October, at Clifton, on the transports "City of Pekin," "Aurora" and "Kenton," and they set out for Eastport under convoy of the "Key West," Acting-Volunteer-Lieutenant E. M.

King, and the "Undine," Acting-Master John L. Bryant.

On the 10th the vessels arrived off Eastport. After passing Line Island, ten miles below, signal was made from the "Key West" to be cautious and proceed in close order. On approaching Eastport, everything seemed quiet; and as there were no signs of troops or batteries on the hill commanding the landing, Lieutenant King signalled to the transports to land their troops, and took a position with the gun-boats in the middle of the river, so as to cover the movement with their guns.

The troops commenced disembarking immediately. Colonel Hoge then went on board the "Key West," and informed Lieutenant King that he should move immediately for Iuka. As the Colonel was returning to the "City of Pekin," a masked battery of six rifled guns from the hill at Eastport and three rifled guns from the "Chickasaw" opened on the boats. The transports were struck several times, and a caisson exploded on board both the "Aurora" and "Kenton," setting them on fire. This caused great confusion among the troops, many of them jumping overboard from the burning steamers. A company that had been sent out as skirmishers immediately returned to the boats, while the troops that were forming in line on the bank broke and fled down the river, abandoning a battery of four guns. The transports cut their lines and drifted down stream, the "Kenton" and "Aurora" disabled, and the "City of Pekin" with several shot through her—it seemed to be "every man for himself."

During this time the "Key West" and "Undine" were both hit twice with rifle projectiles. One shell passed down through the boiler-deck of the "Key West," and exploded in the bag-rack, near the after-part of the boilers—another passed through the steege and out on the port side. The "Undine" had her bell-wires cut by a shell, also her port wheel-rope.

The gun-boats for half an hour returned

the fire of the enemy, whose shot fell thick and fast around them, when Lieutenant King, seeing that he could do nothing with his smooth-bores against the Confederate rifles, dropped down out of range to look after the convey. The troops had quenched the fires on the transports, but they were disabled; and this was the end of an expedition that might have produced better results if the troops had been landed out of sight of Eastport and marched up.

It seems reasonable to suppose that 1,320 soldiers could have captured these batteries if proper means had been taken to do so; but sometimes the soldiers seemed helpless, and inclined to wait for the Navy to capture a place before occupying it, forgetting, or not knowing, that a "tin-clad" was not an iron-clad, and that the former were not qualified to go under the fire of heavy batteries. But it was not often that Army men behaved as they did on this occasion, and it can be partly accounted for by the presence of the colored soldiers, who were raw and undisciplined. This expedition was certainly a complete failure, much to be regretted by all concerned.

On the whole, however, the Navy in the West had nothing to be ashamed of during the year 1864, and it will be observed that throughout the campaign it had fighting enough to satisfy the most ardent temperament.

This river-fighting may seem uninteresting to the reader, but it was a link in the great chain that helped to bind the Briarean arms of the demon of rebellion. The services of the Navy in the West had as much effect in reducing the South to submission as the greater battles fought in the East; and the brave Westerners who entered the Navy with no previous knowledge of the profession, having to learn everything from a handspike to a ten-inch gun, may well feel proud at the manner in which they conducted themselves, and glory in the results of their labors, which cost the lives of many of their comrades, but which were generally attended with success.

## CHAPTER XLIV.

### BATTLE OF MOBILE BAY.

DEFENCES OF MOBILE BAY.—FARRAGUT'S FLEET CROSSES THE BAR AND MAKES RECONNAISSANCE.—CONFEDERATE IRON-CLADS.—FORTS MORGAN, GAINES AND POWELL AND LIGHT-HOUSE BATTERY.—BOMBARDMENT OF FORT POWELL.—EVACUATION OF FORT.—IRON-CLAD "TENNESSEE" MAKES HER APPEARANCE.—ARRIVAL OF MONITORS.—CO-OPERATION OF GENERAL CANBY.—PREPARING TO ATTACK FORTS.—FARRAGUT ISSUES HIS FAMOUS ORDERS OF COMBAT.—BOMBARDING FORT MORGAN.—THE "TENNESSEE" ENGAGED.—THE "TECUMSEH" SUNK.—"D—N THE TORPEDOES—FOLLOW ME!"—FARRAGUT IN THE RIGGING OF THE "HARTFORD" PASSING FORT.—THE "SELMA" SURRENDERS.—THE "MORGAN" AND "GAINES" ASHORE.—THE "TENNESSEE" ENGAGES FLEET.—REMARKABLE COMBAT.—THE "MONONGAHELA" AND "LACKAWANNA" DAMAGED.—THE "TENNESSEE" AND "HARTFORD" FIGHT AT CLOSE QUARTERS.—GAME TO THE LAST.—THE "TENNESSEE" SURRENDERS.—INCIDENTS OF BATTLE.—THE WOUNDED TRANSFERRED TO PENSACOLA.—NAMES OF KILLED AND WOUNDED.—FARRAGUT'S DETAILED REPORT OF BATTLE.—REPORTS OF OFFICERS.—FARRAGUT RETURNS THANKS TO OFFICERS AND MEN.—INDIVIDUAL ACTS OF HEROISM.—INCIDENTS ATTENDING SINKING OF "TECUMSEH."—SURRENDER OF FORT GAINES.—BOMBARDMENT OF FORT MORGAN.—SURRENDER OF FORT.—LIST OF OFFICERS OF THE "TENNESSEE" AND "SELMA."—WANTON DESTRUCTION OF PROPERTY AT FORT MORGAN.—LIST OF KILLED AND WOUNDED.—LOSS OF THE "PHILLIPPI."—HISTORY AND DESCRIPTION OF CONFEDERATE IRON-CLAD "TENNESSEE."—LIST OF VESSELS AND OFFICERS OF WEST GULF SQUADRON, JANUARY 1ST, 1864.

**I**N January, 1864, Admiral Farragut began to turn his attention to the forts in Mobile Bay, which up to that time had been a complete protection to the blockade-runners, which passed in and out almost with impunity in spite of the greatest watchfulness on the part of the blockading fleet. There were several channels in the Bay with wide shoal grounds in and about their approaches, over which the Confederate light-draft vessels could pass, but where the Federal ships-of-war could not follow them.

The city of Mobile, in consequence, became one of the most important rendezvous for blockade-runners, as it was situated some miles up the bay, and could only be reached through tortuous channels, with which only experienced pilots were famil-

iar. The people of Mobile felt quite secure against any attempt on the part of the Union gun-boats to pass their defences, and the blockade-runners laid as safely at their wharves as if they had been in the docks of Liverpool.

While the forts at the entrance of Mobile Bay remained intact, the Confederates could continue to supply their armies through Mobile City and the numerous railroads running from it to all parts of the South.

After the fall of Port Hudson and Vicksburg, General Banks, in New Orleans, had at his disposal over 50,000 troops; and General Grant, at that time having in his mind the idea of sending Sherman on the celebrated march to the sea, had urgently requested the authorities at Washington to

send Banks to Mobile with a sufficient force to capture that place; while at the same time the Secretary of the Navy offered naval co-operation with Farragut's fleet, which was then disengaged from operations on the Mississippi River, and principally employed in watching Mobile and blockading the coast of Texas.

The Navy Department, as well as General Grant, was unsuccessful in obtaining an order from the War Department for Banks to proceed to Mobile, and act there in conjunction with the Navy; and the fatal move up Red River having been decided upon, all other objects were for the time being passed over, until the anxiety of the Government became concentrated upon the problem of how to relieve that expedition from the unfortunate position in which General Banks' measures had placed it.

Mobile itself was poorly fortified against a land attack, and the Confederates had not more than 10,000 men in and about the city, and the majority of these were artillerymen. Notwithstanding the fact that the weakness of the city was well known to him, General Banks turned away from the rich prize which he might so easily have taken, and embarked on the unwise expedition into the Red River region, from which his army was only extricated through the presence of the naval force—which for a time was also seriously embarrassed.

The Navy Department, finding that no co-operation could be expected from General Banks, directed Farragut (January, 1864) to prepare his vessels for an attack on the forts in Mobile Bay, and promised that a land force should be forthcoming at the time the fleet was ready to commence operations.

On the morning of January 20th Farragut crossed the bar of Mobile Bay in the "Octorara," taking the "Itasca" in company in case of accidents, and made a thorough reconnaissance of the bay and of all the forts commanding its approaches. He moved up to within three and one-half miles of the enemy's works, where he was able to verify the reports of refugees who had brought him a statement of the condition of the Confederate works. He could count the number of guns and see the men standing by them. A line of piles, which extended from Fort Gaines to the channel opposite Fort Morgan, was also plainly visible, and showed the intention of the enemy to compel all entering vessels to pass close under the guns of the latter work.

At that time Farragut had not an iron-clad, and, being convinced that it would be madness to attack these forts without such aid, made his wants known to the Navy Department, and the vessels were eventually supplied.

The reconnaissance made by the Admiral satisfied him that he had a difficult task before him. Two heavy works protected the entrance to Mobile Bay—Forts Gaines and Morgan—the former mounting 21 guns and the latter 48, while Fort Powell, higher up the bay, commanded the fairway leading to Mobile.

A better idea of the situation of these works can be obtained by examining the accompanying chart than from any written description, and the reader is referred to the plan for information, without which he could form but a small idea of the defences of Mobile Bay and the difficulties attending an attack on them.

The lines of piles, extending from the head of the eastern bank to the edge of the tortuous and shallow channel near Fort Gaines, rendered it impossible for any vessel to pass between the bank and the channel; indeed, only vessels of the lightest draft of water would have dared to make such an attempt under ordinary circumstances.

Every effort had been made by the Confederate engineers to make the channel between Gaines and Morgan impassable; but its depth in some places was as much as 60 feet, the bottom was bad (drift-sand, in fact), and the action of ebb and flow, with that of heavy winds, rendered it almost impossible to obstruct it effectually. Even in time of peace it would have been an immense undertaking, requiring time and taxing the ingenuity of the engineers to the utmost. Not only that, it would have required means which were not at the disposal of the Confederates. Many plans were offered, but the chief engineer of the Department rejected them all and undertook to defend the pass with torpedoes, but, with an order from the Department commander to leave a gap in the line of torpedoes, 500 yards wide, through which blockade-runners could pass in safety between Mobile Point and a buoy marking the eastern end of the lines of torpedoes; which arrangement it was foolishly supposed would keep out a fleet commanded by a man like Farragut, who had already earned the *sobriquet* of "The old Salamander."

Besides the forts above mentioned, the following auxiliary defences were possessed by the Confederates: Steam ram "Tennessee," 235 feet in length, casemate plated with three thicknesses of 2-inch plates or six inches of iron, speed  $7\frac{1}{2}$  knots; battery, four 10-inch columbiads of 16,000 lbs. and two  $7\frac{1}{2}$ -inch Brooke rifles of 19,000 lbs. The "Tennessee" was the flag-ship of Admiral Franklin Buchanan, and was commanded by Commander J. D. Johnston.

The following gun-boats also belonged

to Buchanan's little squadron: The "Morgan," Commander Bennet; "Selma," Commander Murphy, and "Gaines," Commander Harris. Two rams, the "Tuscaloosa" and "Huntsville," were building at Mobile, but they were never finished, and Buchanan received no assistance from them.

The guns of Fort Morgan were mounted as follows: Bastion No. 1 (N. E.), two 32-pounders of 7,000 lbs., one 24-pound rifle throwing Read & Slater's projectiles, shaped like Minie-balls; East curtain, three 10-inch sea-coast mortars, one 32-pounder of 7,000 lbs.; Bastion No. 2 (E. S. E.), one 10-inch columbiad, two 32-pounders of 7,000 lbs.; Bastion No. 3, two 32-pounders of 7,000 lbs. (rifled), one 10-inch columbiad of 16,000 lbs.; South curtain, two 24-pounders of 11,000 lbs. (rifled), throwing 68-pound projectiles), one 10-inch columbiad of 16,000 lbs.; Bastion No. 4, one 24-pounder (rifled), one 10-inch columbiad of 16,000 lbs., two 32-pounders of 7,000 lbs. (rifled); West curtain, facing the channel, two Blakely rifles throwing shell of 160 lbs. and shot of 169 lbs., three 10-inch columbiads of 16,000 lbs.; Bastion No. 5, two 32-pounders, smooth-bore; North curtain, one 8-inch smooth-bore. On each flank of each bastion there were two 24-pounders, making in all 20 flank casemate guns.

Light-house battery eleven 32-pounders of 7,000 tons. Fort Gaines mounted one 10-inch columbiad of 14,000 lbs., fourteen 32-pounders, smooth-bore, one 32-pounder, (rifled), and five 24-pound siege-pieces.

These were the guns under which an attacking fleet would have to pass, besides the Confederate gun-boats, which could take good positions under the guns of the forts, and rake the Federal vessels as they approached. Taking into consideration the fact that he had only wooden ships at first, Farragut was wise to delay his attack until the arrival of the iron-clads.

In addition to the two forts above mentioned was Fort Powell, situated at Grant's Pass. This could inflict no damage to a fleet passing Morgan and Gaines, but could annoy an enemy after he had passed up as far as the anchoring ground.

While waiting for the iron-clads, Farragut thought he would try and batter this fort down or injure its guns, and make it untenable; but the attempt was not a success. The attack was made in the latter part of February, but discontinued as soon as the difficulties of the operation were realized.

Farragut continued to apply to the Department for even one iron-clad, with which he was willing to undertake the attack, supposing the iron-clad ram "Tennessee" would be over the Dog River bar by the

time he was ready to advance with his fleet.

Farragut's idea was to have a combined attack by the Army and Navy—the land forces to operate in the rear of forts Gaines and Morgan by the Big Dauphine Island and Mobile Point—and great expectations were laid on a contingent being sent from General Banks' army, but that officer had gone into the Red River country and met with such disasters as made co-operation impossible.

The Confederate papers magnified the want of success on the part of General Banks, and made the most of it for their side, until they really believed all through the Southwest that they had gained a brilliant victory, when the truth was simply that the Federal General did not hold on to the victory which his troops had won.

Great rejoicing was also kept up in the South in consequence of the success of the "Albemarle" and the capture of Plymouth. Many were made to believe that a new and favorable turn had been given to their affairs, and that if the opportunity was followed up it would lead to further successes in Louisiana. A pressure was brought to bear on Admiral Buchanan to expedite the completion of the iron-clad "Tennessee," with the expectation that this vessel would demolish Farragut and his fleet, proceed to New Orleans, capture the Union fleet at that place, prevent Banks from reaching the city again, and finally restore the Confederate authority!

This may seem a wild scheme, but it might have been successful. Buchanan was a brave and energetic officer, capable of undertaking any enterprise, and could he have succeeded in getting all his iron-clads and gun-boats ready in time, he would have been more than a match for the force which Farragut had on hand in February.

Farragut himself fully appreciated his situation. From his experience in the Mississippi River, where the ram "Arkansas" attacked the two Federal fleets (Davis' and his own), he saw plainly what would be the result of a contest between wooden vessels and iron-clads. In his letters to the Navy Department the Admiral deeply regrets his inability to obtain even one of the iron-clads on the Mississippi, and remarks, "it appears that it takes us twice as long to build an iron-clad as any one else. It looks as if the fates and contractors were against us. While the Confederates are bending their whole energies to the war, our people are expecting the war to close by default; and, if they do not awake to the sense of their danger soon, it will be so."

Farragut was fully aware of what would

be the result if Buchanan crossed the Dog River bar with the "Tennessee," "Tuscaloosa," "Huntsville" and "Nashville. (The three latter vessels were reported to be plated with nearly the thickness of iron carried by the "Tennessee").

Continuous reports came from Mobile that the ram "Tennessee" was preparing to cross the Dog River bar by means of camels, and that Buchanan, with his well-known energy, was pushing the work on his iron clads night and day. Farragut knew as well as any one the determination and energy of the man he expected to contend with, and under the circumstances his position was not an enviable one.

He seemed to have the idea that the capture of Fort Powell was a most desirable thing, and would tend to keep the Confederate Navy up the river if he could succeed in getting possession of it; and from the 22d of February to the 2d of March he kept up a fire on this fort from rifles, smooth-bores and mortars from a distance of 4,000 yards—the nearest point attainable.

Fort Powell was built on an oyster bank. The Confederate engineers had exhibited great skill in its construction, and it was impervious to shot and shell. It was built to guard Grant's Pass, the entrance from Mississippi Sound to Mobile Bay, and it was very important that it should be well built and armed.

A Confederate writer says:

"Admiral Farragut opened from his mortars and gun-boats a fire on the small fort that would have battered any stone or brick structure into a mass of ruins. The firing, especially that of the 13-inch mortars could (in accuracy) not have been surpassed: one shell after another falling on the earth-cover of the bomb-proof, penetrating as deep as three and a half feet, exploding and making a crater of seven feet in diameter."

"This bombardment was steadily kept up from February 22d till March 2d, without making any impression whatever on the fort; not a single gun had been dismounted, not a single traverse had been seriously damaged, nor had the parapet and bomb-proof lost any of their strength; all damage done by the exploding shells being at once repaired by throwing sand-bags into the open craters. But one man had been killed, another wounded, and the brave commander of the fort, Lieutenant-Colonel James M. Williams, of the 21st Alabama regiment, paid for his temerity, in unnecessarily exposing himself to the shower of the enemy's iron missiles, with the loss of his coat-tail.

"The wharf and quarters on the east face of the fort had been considerably damaged by the bombardment.

"When Farragut had forced his way into the Bay of Mobile, an evacuation of Fort Powell was the only means to save its garrison from capture, and the place was abandoned after preparations for blowing up the magazine had been so well made that its explosion took place hardly half-an-hour after Lieutenant-Colonel Williams (the last man) had left the fort."

Farragut's chief motive in making this attack was to get the gun-boats into Mobile Bay through Grant's Pass, and to endeavor

to destroy the "Tennessee" while she had the camels under her in crossing the Dog River bar.

From all accounts Buchanan was working energetically to bring the "Tennessee" and her consorts face to face with the Union fleet, which he felt sure of driving from before Mobile. He then intended to proceed to Pensacola and raise the siege in that quarter. There is no doubt that, had he succeeded in finishing his four iron-clads in time, Farragut would have either been destroyed or the siege of Mobile raised.

The account of the sinking of the "Southfield" by the ram "Albemarle" in the Sounds of North Carolina, on the 17th of April, and the stubborn battle made by the "Albemarle" against the comparatively heavy force of gun-boats on May 5th, in which the ram moved off apparently unharmed after a three hours' fight at close quarters, had been received in the South and also in the fleet; and while this news encouraged the Confederate Admiral to fresh exertions, it, on the other hand, made Farragut feel more anxious that he should be supplied with iron-clads to meet the new naval force of the Confederates, the like of which had not been so near completion since the war began.

Farragut knew Buchanan well, and was aware that in point of courage, energy and skill he had few equals, and no superiors; and that, if he did succeed in getting his vessels over Dog River bar, he would come out with the intention of conquering or being destroyed, the latter contingency not being likely in Farragut's then weak condition.

By some authorities it is stated that the "Tennessee" made her appearance in Mobile Bay on the 17th of March; but we think there must be some mistake about this, for, as late as the 9th of May, Farragut wrote to the Department that "the late accounts from Mobile agree in representing Buchanan as making great exertions to get camels large enough to float the ram "Tennessee" over Dog River bar.

No one doubted but that Buchanan would be successful if any one could be, and Farragut expected that he would come out and attack him with his whole force of iron-clads, besides the three gun-boats, and so wrote urgent letters in the middle of May to the Navy Department, requesting that iron-clads be sent him. It was the most uncomfortable position that any officer was placed in during the war, when told by the Department as late as June, 1864, that the vessels could not be furnished because the contractors had not come up to their contract. But the Admiral bore it all bravely, and with his usual equanimity prepared his wooden ships to do the best they could in the coming conflict.

Not until May 25th does Farragut speak of the "Tennessee" having arrived in the Mobile Roads, and anchored under the guns of Fort Morgan. He went in as close as he could, examined her with good glasses, and satisfied himself that all that had been said about her formidable character was true. He had been deceived so many times by what were supposed to be iron-clads, that he was glad to have his mind settled on this question, and to know that this was really the "Tennessee" without her consorts.

On June 2d, refugees, who stated that they were from Mobile, two or three days before, reported that, besides the "Tennessee," a vessel called the "Baltic," the iron-clads "Tuscaloosa" and "Huntsville," and three gun-boats had also crossed the bar and entered the lower bay; the "Nashville" was not yet over the bar, but she was all ready with the camels under her by this time; her bow, stern and pilot-house were only partly plated."

Two more rams were reported to be at Mobile, not yet plated, and one just completed at Selma and aground above Mobile. They also reported at Mobile "four iron-plated floating batteries, one of them sunk." These reports were constantly brought down concerning Buchanan's force, and they were far from reassuring to the Union commander, who up to this time had not received a single iron-clad.

It was not until July 26th that the arrival of the Monitor "Manhattan" was reported. She was under Sand Island, in charge of gun-boats.

The two double-turreted Monitors, "Winnebago" and "Chickasaw," sent from Admiral Porter's fleet on the Mississippi, were in New Orleans, and would be off Mobile about the 30th of July. The "Tecumseh" was not yet heard from, and the Army which Farragut had asked for to co-operate with him was still in New Orleans. When the latter should arrive, Farragut would be quite ready to commence operations against the defences of Mobile.

The arrival of the "Manhattan" was an assurance that Buchanan would not leave the bay to attack the Federal wooden ships, which Buchanan at no time had any idea of doing. His policy was to fight Farragut's fleet, under the cover of the forts, in the narrow channel which had been left by the Confederate engineers.

The only thing wanting to make Farragut satisfied with his condition was the arrival of the "Tecumseh," and this took place on the 4th of August. He now determined to make his attack as soon as possible.

As soon as General Canby had arrived in New Orleans with the troops which General

Banks left crossing the Atchafalaya River, Farragut communicated with him and requested that two or three thousand troops be sent to co-operate with him in an attack on Mobile. These troops were promised without hesitation on the 8th of July, in an interview held on board the "Hartford," between the Admiral and Generals Canby and Granger; but circumstances soon obliged General Canby to say that he could only spare troops enough to invest one fort.

Farragut then suggested that it should be Fort Gaines, and engaged at the same time to have a naval force in the Sounds ready to protect the landing of the Army on Dauphine Island, in the rear of the fort. Lieutenant-Commander J. C. P. De Krafft, in the "Conemaugh," was assigned to this duty.

It was arranged between Farragut and General Granger that the attack should take place on the 4th day of August, but owing to unforeseen circumstances it was delayed until the 5th. This delay turned out to be fortunate, for on the 4th the Confederates were engaged in throwing more troops and supplies into Fort Gaines, all of which were captured.

At 5:40 A. M. on the 5th of August, 1864, all the vessels outside of the bar, which were to participate in the battle, got underway in the following order, two abreast, lashed together:

"Brooklyn," Captain James Alden, with the "Octorara," Lieutenant-Commander C. H. Greene, on the port side.

"Hartford," Captain Percival Drayton, with the "Metacomet," Lieutenant-Commander James E. Jouett.

"Richmond," Captain Thornton A. Jenkins, with the "Port Royal," Lieutenant-Commander Bancroft Gherardi.

"Lackawanna," Captain J. B. Marchand, with the "Seminole," Commander E. Donaldson.

"Monongahela," Commander J. H. Strong, with the "Kennebec," Lieutenant-Commander W. P. McCann.

"Ossipee," Commander Wm. E. LeRoy, and the "Itasca," Lieutenant-Commander George Brown.

"Oneida," Commander J. R. M. Mullany, and the "Galena," Lieutenant-Commander C. H. Wells.

The iron-clads, "Tecumseh," Commander T. A. M. Craven, "Manhattan," Commander J. W. A. Nicholson, "Winnebago," Commander T. H. Stevens, and "Chickasaw," Lieutenant-Commander George H. Perkins, were already inside the bar, and they were ordered to take up their positions on the starboard hand of the wooden vessels, between them and Fort Morgan, for the double purpose of keeping down the fire

of the water battery and fort, and of attacking the ram "Tennessee" as soon as the fort was passed.

The commanding officers of the ships urgently requested Farragut to allow Captain Alden, in the "Brooklyn," to lead the attacking column, as this vessel had four chase-guns and an ingenious apparatus for picking up torpedoes, and because, in their judgment, the flag-ship should not lead and be too much exposed. The proper place for the flag-ship was, in fact, the middle of the line, but Farragut would only yield so far as to have one ship in advance of him. He did not believe in the principle that a flag-officer should not lead. He considered it one of the privileges of high rank in the Navy, and that it was an honor to be sought by every one who desired to set a proper example to those under his command.

Before going into action the Admiral had issued orders making his commanding officers acquainted with his plan of combat and steaming. His orders for battle had a determination in them which showed that he meant to destroy the enemy or be destroyed himself. There was a vigor and coolness about them which cannot but commend them to officers of the Navy, and they will offer good examples in the future for those who would not otherwise appreciate all his precautions, but who are convinced by the resulting events how necessary they were on this occasion.

It was no ordinary battle that was to be fought. Four iron-clads and a fleet of wooden vessels fourteen in number, the heaviest carrying only 26 guns, were about to attack forts that were originally constructed with the purpose of keeping out of Mobile the heaviest vessels then known (ships-of-the-line and frigates) that could pass the bar into Mobile Bay, or that might attempt to enfilade Fort Morgan from outside the bar to the eastward.

Forts Gaines and Morgan had been planned and built by the best engineer in the United States Army, and they had been strengthened and improved in every way by the Confederates. To crown all, these forts mounted not only the heaviest guns made in the country, but were well provided with the latest improved rifle-cannon of English manufacture, which had been brought over in blockade runners. The impediments in the channel have been already mentioned, but what number of torpedoes had been planted no one knew.

All these drawbacks against a passage by the forts did not cast a cloud over the countenance of any officer or man in the fleet. They were all as anxious for the combat as was their commanding officer, who had passed through too many battles

within the last two years to feel dismayed at the idea of running through a lot of piles and sunken torpedoes.

Every officer was on the alert; the ear of every sailor was attentive to catch the sound of the first tap of the drum (the call to quarters); and one, to look at all those eager faces on the poop and fore-castle of every ship, would suppose this to be some grand gala day. It was indeed a gala day, for every one could see in the cheerful and determined look of their great commander that this would be a day of glorious victory, that the frowning forts and dark-looking "Tennessee," though barring the way and threatening destruction, would be swept away, if "hearts of oak in wooden hulls" could do it. All longed to see the defiant Confederate flag, which had waved so long unmolested, hauled down, and the last ram the Confederates ever built assigned to the fate of her predecessors.

It was a glorious sight to see those brave fellows wearing a smile of joy upon their faces in view of such odds against them—and not knowing how soon they and their comrades would be lying at the bottom of the bay. All could not hope to escape this trying ordeal, when several of the coolest officers calculated that at least six of the ships would be blown up. They never stopped to consider whose fate this would be; all they desired was to grapple with the enemy, and see the Union flag floating over the forts that had been taken from their lawful owners.

Soon the word went forth :

#### GENERAL ORDER, No. 10.

"Strip your vessels and prepare for the conflict. Send down all your superfluous spars and rigging. Trim up or remove the whiskers. Put up the splinter nets on the starboard side and barricade the steersmen with sails and hammocks. Lay chains or sand-bags on the deck over the machinery to resist a plunging fire. Hang the sheet chains over the side, or make any other arrangement for security that your ingenuity may suggest. Land your starboard boats or lower them and tow them on the port side, and lower the port boats down to the water's edge. Place a leadsmen and the pilot in the port-quarter boat or the one most convenient to the commander.

"The vessels will run past the forts in couples, lashed side by side, as hereafter designated. The flag-ship will lead and steer from Sand Island N. by E. by compass until abreast of Fort Morgan, then N. W. half N., until past the Middle Ground; then N. by W; and the others, as designated in the drawing, will follow in due order, until directed to anchor; but the bow and quarter line must be preserved to give the chase-guns a fair range, and each vessel must be kept astern of the broadside of the next ahead. Each vessel will keep a very little on the starboard quarter of his next ahead, and when abreast of the fort will keep directly astern, and as we pass the fort will take the same distance on the port quarter of the next ahead, to enable the stern guns to fire clear of the next vessel astern.

"It will be the object of the Admiral to get as close to the fort as possible before opening fire :

the ships, however, will open fire the moment the enemy opens upon us, with their chase and other guns, as fast as they can be brought to bear. Use short fuzes for the shell and shrapnel, and as soon as within three or four hundred yards, give the grape. It is understood that heretofore we have fired too high; but with grape-shot it is necessary to elevate a little above the object, as grape will dribble from the muzzle of the gun. If one or more of the vessels be disabled, their partners must carry them through, if possible; but if they cannot, then the next astern must render the required assistance; but as the Admiral contemplates moving with the flood-tide it will only require sufficient power to keep the crippled vessels in the channel.

"Vessels that can, must place guns upon the poop and topgallant forecastle, and in the tops on the starboard side. Should the enemy fire grape, they will remove the men from the topgallant forecastle and poop to the guns below, until out of grape range.

"The howitzers must keep up a constant fire

Morgan. It being understood that there are torpedoes and other obstructions between the buoys, the vessels will take care to pass eastward of the easternmost buoy, which is clear of all obstructions.

"So soon as the vessels arrive opposite the end of the piles, it will be best to stop the propeller of the ship, and let her drift the distance past by her headway and the tide; and those having side-wheel gun-boats will continue on by the aid of their paddle-wheels, which are not likely to foul with the enemy's drag-ropes.

"D. G. FARRAGUT,  
"Rear-Admiral."

The appended diagram is the plan of attack, and distinctly shows, not only the position of every vessel in the fleet, but also Fort Morgan, the Confederate ram "Tennessee," and her consorts, the "Selma," "Morgan" and "Gaines."

The Federal vessels having formed line, according to the diagram, moved ahead at

PLAN SHOWING FARRAGUT'S VESSELS PASSING FORT MORGAN, ALSO POSITION OF CONFEDERATE RAM AND GUN-BOATS.

from the time they can reach with shrapnel until out of range.

"D. G. FARRAGUT,  
"Rear-Admiral, Commanding  
"West Gulf Blockading Squadron."

GENERAL ORDER, No. 11.

"Should any vessel be disabled to such a degree that her consort is unable to keep her in her station, she will drop out of line to the westward, and not embarrass the vessels next astern by attempting to regain her station. Should she repair damages so as to be able to re-enter the line of battle, she will take her station in the rear, as close to the last vessel as possible.

"So soon as the vessels have passed the fort and kept away northwest, they can cast off the gun-boats at the discretion of the senior officer of the two vessels, and allow them to proceed up the bay to cut off the enemy's gun-boats that may be attempting to escape up to Mobile. There are certain black buoys placed by the enemy from the piles on the west side of the channel, across it towards Fort

about 5:45 A. M., following the "Brooklyn," which vessel took the lead. Some little delay was now necessary to allow all the ships to get into position, and form a compact line of steaming. When this was accomplished, the fleet moved on in the direction of Fort Morgan, which opened fire at 7:07 o'clock, at a distance of about two miles.

The "Tecumseh," leading the iron-clads, fired the first gun at 6:45, and was followed by the "Brooklyn," with her two 100-pounder Parrotts, and then by the "Hartford." As the leading vessels approached, they commenced firing their broadside guns, and the remainder of the fleet continued the fire as they got in position to do so effectively.

As the Federal vessels neared the fort, the ram "Tennessee" and the wooden gun-

boats opened fire upon them—raking them at every discharge. At about half-past seven the battle became general all along the line, as vessel after vessel came near enough to use her guns.

The Monitors had so little speed that the whole fleet was obliged to move slowly, and thus offer a fair mark to the Confederate gunners; but the thick smoke and the rapid fire of grape from the fleet so disconcerted them, that the flag-ship passed with no great injury or loss of life; a shell which passed through the side and exploded abaft the mainmast, killing and wounding a large portion of No. 7 gun's crew, being the only one that caused much destruction.

At this time the "Hartford" had become the leading vessel, owing to the fact that just as the "Brooklyn" came abreast of Fort Morgan, and was keeping up a rapid fire of grape from her broadside guns, which seemed to almost silence the enemy's batteries, the Monitor "Tecumseh"—then about three hundred yards ahead, and on the starboard bow of the "Brooklyn"—was seen from the latter vessel to careen violently over, and sink almost instantly. The "Brooklyn" was now somewhat inside the fort, shoal water was reported, and at the same time the smoke cleared away, and revealed a row of suspicious-looking buoys right under the vessel's bow.

The captain of the "Brooklyn" now made a mistake; he stopped his vessel and then backed, to avoid leading the fleet into what appeared to be a nest of torpedoes. His motive was a good one, but this movement was not in the programme.

It was apparent to Farragut that there was some difficulty ahead, and that the advance of the fleet was arrested, while Fort Morgan was firing with great effect upon the stationary vessels. At this moment the Admiral also witnessed the sinking of the "Tecumseh," with nearly all her officers and crew. It was an appalling spectacle, and would have daunted many other men. He did not know but that his whole fleet would be blown up in less than a minute, and their hulls and guns lying at the bottom of the bay. He did not hesitate, however, but gave the order to Captain Drayton: "Pass the 'Brooklyn,' and take the lead." His order was immediately obeyed, and as the flag-ship went by him, Captain Alden informed the Admiral that he was "running into a nest of torpedoes." "D—n the torpedoes," he replied, "follow me!" At the same time he directed the commander of the "Metacomet" to send a boat and pick up any of the "Tecumseh's" survivors that he could find.

This was a trying time, for, as the ships were moving at a rate of about seven knots

at the time the "Brooklyn" stopped, the line was thrown into confusion. The "Brooklyn," as soon as she stopped, received the concentrated fire of the fort, it being the object of the Confederate gunners to cripple the leading ships and throw those in the rear into confusion. Many of the "Brooklyn's" crew were killed and wounded by this fire, and her total loss during the engagement was 54 officers and men.

As soon as the Admiral had passed, Captain Alden followed in his wake at full speed, and turned northward with him, receiving at the same time several heavy shots from the "Tennessee," which cut his vessel up considerably near the water line, forward.

The battle had been general some time before this, and the rapid and well-aimed fire of the naval gunners drove the enemy from their guns. The latter had never before witnessed the effect of shell, grape and shrapnel when fired from guns worked by fearless American seamen, who had but one idea, and that was to knock down the offending flag which now floated on the fort where in days of yore the "Stars and Stripes" had waved peacefully in the breeze.

All was animation in the fleet; every commander was on the alert to keep his ship in position, and not confuse the ships ahead and astern of him. The gunners were cautioned to throw no shot away, and carefully instructed how to train their guns. The Admiral, jumping into the main rigging, where he could see over the smoke, gave orders to steam through the buoys, where the torpedoes were supposed to be placed in the greatest numbers. At this moment the fire of every gun that could be brought to bear was playing on the fort, and as ship after ship followed in the wake of the "Hartford," and turned up channel, their stern-guns belched forth their deadly missiles, while the fort scarcely fired a gun; the enemy were either killed or sent to cover, though a Confederate writer asserts that not a gun in Fort Morgan was silenced.

All anxiously watched the "Hartford" to see what would be her fate, but the stout old ship that had fairly been bathed in fire on so many occasions, sped safely on, and the road was clear for those who came after.

The line of buoys had been examined on several occasions (in night reconnaissances) by Flag-Lieutenant J. Crittenden Watson, who was unable to discover any sunken torpedoes, yet the Admiral had been assured by refugees that such did exist. He believed, however, that, from their having been for some time under water, they were harmless, and under this idea he determined to take the chances.

CONFEDERATE GUNBOATS: "Gaines," "Tennessee," "Selma," "Manhattan," "Tucumseh," "Chickasaw," "Winnebago," "Metacombel," "Brooklyn," "Richmond," "Lackawanna," "Monongahela," "Osage," "Oneida," "Sand Island," "Trans-Island," "Galena," "Tasca," "Kennebec," "Seminole," "Fort Royal," "Octorara," "Metacombel," "Brooklyn," "Richmond," "Lackawanna," "Monongahela," "Osage," "Oneida," "Sand Island," "Trans-Island," "Galena," "Tasca," "Kennebec," "Seminole," "Fort Royal," "Octorara," "Metacombel."

**BATTLE OF MOBILE BAY.**

FORT MORGAN BEARING S. E., AND SAND ISLAND LIGHT SOUTH BY COMPASS.

At ten minutes before 8 A. M. the "Hartford" had fairly passed Fort Morgan, with the "Brooklyn" close behind her. As the flag-ship passed the shore batteries, she came directly under the fire of the gun-boats "Selma," "Morgan" and "Gaines" and the ram "Tennessee," and being only able to direct her fire on one of them at a time, the shots from the others were delivered with effect, a single shot having killed ten men and wounded five at guns Nos. 1 and 2.

The "Tennessee" followed the "Hartford" for some distance, throwing an occasional shot, while the gun-boat "Selma," keeping on her bow, annoyed her very much by the fire of her three stern-guns. The "Hartford" could not answer this attack, for the reason that her rifle-gun carriage had been crippled by a shell.

The flag-ship was at this time nearly a mile ahead of the fleet, and the "Metacomet," Lieutenant-Commander Jouett, was ordered to cast off and attack the "Selma." This energetic officer lost not a moment in obeying the order, and putting on all steam started in pursuit of the enemy's gun-boats, all three of which were annoying the "Hartford." These vessels all retreated up the bay, engaging the "Metacomet" with their stern-guns. At half-past 8 the "Gaines" retreated under cover of Fort Morgan in a crippled condition. At 9 the "Morgan" hauled off to starboard, and at 10 minutes past 9 the "Selma" struck her flag to the "Metacomet."

By this time the whole fleet had passed the obstructions and were beyond the fire of Fort Morgan, but the ram "Tennessee" was steaming about and delivering her heavy rifle-shell with terrible effect. The "Brooklyn," as she passed the ram, poured in her broadside of 9-inch shot, but without inflicting any apparent damage, and then passed on after the "Hartford," which had anchored about five miles up the bay.

Whatever may have been Admiral Buchanan's plan up to this time, he had not yet succeeded in crippling any of the Federal vessels either with his shot or with his ram. He made an effort to strike the "Brooklyn," but passed astern of her, after which he turned and ran as if to intercept the fleet, which was now passing under a full head of steam, and delivering their broadsides in quick succession.

It was a beautiful sight to see the Union fleet passing on in such good order, and delivering their fire on the enemy's forts, iron-clad or gun-boats, as occasion required, with wonderful precision and effect.

The passage of the fleet had sealed the fate of Mobile: the surrender of Fort Mor-

gan was but the matter of a few days; Fort Gaines could make but a feeble resistance against a combined attack of Army and Navy, and Fort Powell, cut off as it was, would fall without firing a shot.

No doubt Buchanan realized the situation. The "Selma" had been captured; the "Gaines," not being as closely pursued as was the "Selma," escaped under cover of Fort Morgan, where she was afterwards run ashore and burnt, while the "Morgan" escaped to Mobile. Nothing was now left for Buchanan to do but to surrender, or die gloriously fighting to the last. He chose the latter, but did not choose the right time.

Farragut, supposing that the fighting was over for the time being, had anchored and made signal to the fleet to follow his motions. He expected the "Tennessee" to remain under the guns of Fort Morgan during the remainder of the day; and if she had done so and attacked the fleet after dark there is no knowing what would have been the result. The rain would have been the only Confederate vessel engaged, and her commander could therefore treat every vessel he met as an enemy, while the Union vessels would not have been able to use their guns for fear of firing into a consort. As it was, with the heaviest guns in the fleet pouring shot and shell into her in broad day, she committed great havoc.

Looking upon it as a naval movement, Buchanan made a great mistake that morning when he went out to attack Farragut's fleet. He must have seen that every one of the Union vessels was superior to him in speed, and had nothing to fear from his ram, while the heavy guns of the three remaining Monitors would be brought to bear on him in such a way that his 6-inch armor would be damaged and his port shutters closed. He might have supposed, too, that Farragut would not hesitate to ram him, with ships of greater speed than his own—there are a hundred things which one good sailor would expect another to do under certain circumstances.

No one who knew Buchanan and his professional ability would doubt for a minute that he had considered all these matters. Perhaps he feared that the forts would be surrendered before sunset, and the powerful "Tennessee," of which so much had been expected, and by which so little had yet been done, surrendered with them.

Whatever was the case, he did not take long to make up his mind. The fleet had not been anchored more than fifteen minutes when it was reported to Admiral Farragut that the "Tennessee" was coming out from under Fort Morgan and standing down for the head of the fleet. Farragut at once divined that it was his enemy's intention to sink the flag-ship (which would

have been glory enough for one day), but he determined to show the Confederates that it was an easier matter to sink a frigate at anchor in Hampton Roads than a live fleet in Mobile Bay. The signal was at once made to get underway, and the crews ran the anchors up to the bows with marvellous rapidity.

The iron-clads, and such wooden vessels as had been prepared with iron prows, were ordered to attack the "Tennessee" at once, before she could reach the centre of the fleet, and the wooden vessels were directed to ram the iron-clad and attempt to disable her in that way.

Thus the fleet and the "Tennessee" were approaching each other rapidly, while the people in the former were watching keenly for the result, no one being able to form an opinion as to the power of the latter for offensive purposes, or what might be the plan of her commander, who was standing fearlessly on, as if conscious that he was more than a match for the Federals. And now commenced one of the most remarkable combats known throughout the war—in fact, one of the fiercest naval battles on record.

The "Monongahela," Commander Strong, was the first vessel that had the honor of striking the "Tennessee," which she did squarely and fairly, with a good head of steam; but the only result was that the ramming vessel carried away her cast-iron prow, together with the cut-water, without apparently doing the "Tennessee" any damage. Just afterwards, the "Lackawanna," Captain Marchand, delivered a blow, going at full speed, crushing in her own stem, but had no other effect on the ram than to give her a heavy list. The Admiral then dashed at his enemy with the "Hartford," but only got in a glancing blow, for the "Tennessee" avoided his attack by shifting her helm in time. The flag-ship rasped alongside of her and delivered a broadside from her starboard guns as she passed, but with little or no effect.

This was a reception Buchanan did not anticipate. He had calculated on catching the fleet in confusion, and expected to enact again the role of the "Albemarle" in the Sounds of North Carolina. But here the conditions were quite different. The rattling of the 9-inch shot on the "Tennessee's" casements made his vessel fairly quiver, while the ramming demoralized her crew, they having been made to believe that no one would undertake such an adventure.

The Monitors were slow in speed, but they had now reached the "Tennessee's" wake, delivering their fire as opportunity offered. The "Manhattan," Commander J. W. A. Nicholson, got close under her stern and fired a raking shot (15-inch), which

struck the "Tennessee's" port-quarter and carried away her steering gear. The "Manhattan" fired altogether six times, and most of her shots took effect. In the meantime, the "Winnebago" and "Chickasaw" were firing as opportunity offered. The smoke-stack of the "Tennessee" was shot away by the "Chickasaw," which vessel followed her closely, firing solid shot into her until her flag was hauled down.

If the commander of the ram had calculated that he could scatter the gallant officers who were swarming about him, he had reckoned without his host, for never did an iron-clad receive such a battering in so short a time. Every ship in the fleet tried to get alongside of her to throw in a broadside, but there was not room for all to manoeuvre; and the "Lackawanna," in her desire to have another blow at the enemy, collided with the "Hartford" and cut her down on the quarter to within two feet of the water line.

Meanwhile the "Tennessee" was not idle. All her guns were at work as fast as they could be loaded and fired. She was like a great buffalo of the plains, with a pack of wolves hanging to its flanks, finally compelled to succumb to superior numbers. But the ram managed to inflict some dreadful wounds in her last efforts.

While the "Hartford" was drifting by her, and from a distance of ten feet or less was pouring in a broadside of 9-inch solid shot, with charges of thirteen pounds of powder, without any effect, the "Tennessee" fired a large shell through her side, which burst on the berth-deck, killing and wounding a number of men, the pieces breaking through the spar and berth-decks, passing through the launch and entering the hold among the wounded. There was no time to think of the danger from shot or shell, for every one's blood was up, and it was determined that the "Tennessee" should not escape, if it cost the lives of every one in the fleet.

The "Hartford," after being struck by the "Lackawanna," was at first reported to be sinking; but that report was soon set at rest, and she started for the enemy at full speed, determined this time to crush in her side or be crushed in the attempt. But as the flag-ship approached the "Tennessee," it was seen that she was flying a white flag, so the former sheered off without delivering the intended blow. After the "Lackawanna" had run into the "Hartford," she was signalled to ram the "Tennessee" again, and the gallant Marchand had started to do it under a full head of steam when the "Tennessee" surrendered.

At this particular moment the Confederate iron-clad was sore beset. The "Manhattan," "Chickasaw," and "Winnebago"

were hammering her with solid shot and shell; the "Ossipee" was approaching her again at full speed, while the "Hartford," "Monongahela," and "Lackawanna" were bearing down under a press of steam, determined on her destruction; and it is probable that, if the three ships had struck her at the same time, it would have demoralized her crew, if it did not break in her sides. Her smoke-stack had been shot away, her steering apparatus was disabled, and several of her port shutters driven in or jammed. Any one could see that the battle was won by the fleet for some time before the Confederate surrendered. But one shot was fired by the ram after the "Hartford" ran into her, but her crew were game to the last, and took it out in jeering the Yankees. The "Ossipee" was within a few feet of her, and in another moment would have collided, when the gallant Le Roy (who never laid aside his politeness under any circumstances) saw the white flag fluttering on the "Tennessee," and stopped and backed his engines.

The "Tennessee" had done well, though she was not fought with the skill expected from Buchanan. The latter was wounded and had his leg so shattered that it had afterwards to be amputated. The "Tennessee" lost only two or three men killed, and five or six wounded; but the crew, no doubt, became demoralized from the terrible pounding they were getting from ships and guns. The smoke-stack being knocked down, the engine became almost useless; but the best reason for her surrender was that the "Boys in Blue" had determined to have her, no matter what the consequences to themselves. She was only one vessel, it is true, but a vessel capable of resisting the blow of any projectile fired by the Union fleet; while her own projectiles could pass through and through any of the Federal wooden vessels. She was like a knight of the olden time, encased in impenetrable armor and contending with a party of unarmored soldiers. She was built by the ablest naval officer in the Confederacy under the belief that she would wipe off the face of the waters anything the Federals could bring against her.

Buchanan, without doubt, had calculated all his chances, and when he saw the fleet at anchor in the bay, thought he had

them all in a *cul-de-sac*, and that he would be able to demolish them in a couple of hours. He was a brave man, too, and in the past had been successful in almost everything he had undertaken; and the capture of the great commander, who had hitherto set all Confederate forts and obstructions at defiance, was to have been the crowning triumph of his life. How little he must have remembered of the brave officers in that fleet, many of whom had been under his command, if he expected to conquer them without a severe and prolonged struggle!

Sometimes we think he was tired of the unnatural contest which separated him from friends and relations. Whatever may have been the cause, the "Tennessee" did not effect as much as she ought to have done for so powerful a vessel. She never once struck a vessel of Farragut's fleet, while she herself was rammed at least four times.

How frail the Federal wooden ships were was shown when the "Lackawanna," moving at low speed, struck the "Hartford," cutting her down nearly to the water's edge, and placed her almost in a sinking condition.

Never did people fight their vessels to more effect than did Farragut and his officers on this occasion. The bat-

tle was short and decisive; and although the Confederates claim that their vessels fought desperately from 7 o'clock until 10, the truth is that the last encounter between the ram and the fleet only lasted from 8.50 until 10 o'clock, one hour and ten minutes. Hours and minutes fly fast when under fire and amid the excitement there were incidents enough in this battle to make time pass rapidly.

After the "Tennessee" had surrendered, signal was made to the fleet to anchor. The "Chickasaw," Lieutenant-Commander Geo. H. Perkins, took the disabled prize in tow and anchored her near the "Hartford," when Commander Johnston (formerly of the U. S. Navy), now in command of the "Tennessee," went on board the flag-ship and surrendered his sword and that of Admiral Buchanan. The surgeon of the "Tennessee" accompanied him and said that Buchanan had been severely wounded, and wished to know what was to be done with him. It seems from the statements then presented that

CONFEDERATE RAM "TENNESSEE" AFTER HER SURRENDER TO U. S. SQUADRON, REAR-ADMIRAL D. G. FARRAGUT, MOBILE BAY, AUGUST 5, 1864.

Buchanan during the engagement remained standing on the casemate of the "Tennessee" until he was severely wounded in the left leg, but he refused to surrender until the "Tennessee's" steering apparatus was disabled and the ship so filled with smoke—from the loss of the smoke-stack—that his men could hardly breathe or see.

The only shot which penetrated the "Tennessee's" armor was one from the 15-inch gun of the "Manhattan," which knocked a hole in the iron plating, leaving an undetached mass of oak and pine splinters projecting about two feet inside of the casemate. She might have been fought longer if it had not been for the loss of her smoke-stack and the disarrangement of her steering gear; but these are contingencies to which all ships are liable in action, and they are probabilities that should always be taken into account.

The victory was won, and with the surrender of the "Tennessee" ended the career of nearly the last ram owned by the Confederacy. She had made a good fight, but now passed to new owners, and never again struck a blow against the Union.

And now was to be exercised that humanity which Union naval officers always extended to their prisoners. Fleet Surgeon Palmer, who was on board the "Hartford" during the action attending to the suffering wounded, suggested that they should all—of both sides—be sent to Pensacola, where they would alike be properly cared for; and the Admiral, whose heart was always open to the calls of humanity, addressed a letter to Brigadier-General R. L. Page (formerly of the United States Navy, and now commanding Fort Morgan), informing him that Admiral Buchanan had been wounded, and desiring to know if he would permit one of his vessels, under a flag of truce, with or without the Union wounded, to go to Pensacola, with the understanding that the vessel should take out nothing but the wounded men, and bring nothing back that she did not take out. This permission was accorded by General Page, and the "Metacomet" proceeded on her mission of mercy.

The fleet had lost heavily throughout the engagement, but a greater number were killed during the fight with the "Tennessee" than in the passage of the fort, showing the terrible power of this vessel. Almost every shot she fired after closing with the fleet went to its mark, and, crashing through the wooden sides of the Federal vessels committed great havoc and destruction on their crowded decks.

The following is a list of the killed and wounded in the fleet: "Hartford," killed 25, wounded 28; "Brooklyn," killed 11, wounded 43; "Lackawanna," killed 4, wounded 35;

"Oneida," killed 8, wounded 30; "Monongahela," wounded 6; "Metacomet," killed 1, wounded 2; "Ossipee," killed 1, wounded 7; "Richmond," wounded 2; "Galena," wounded 1; "Octorara," killed 1, wounded 10; "Kennebec," killed 1, wounded 6. Total killed, 52; wounded, 170.

This is a much larger list of casualties than occurred at the battle of New Orleans, and it gives a fair idea of the sanguinary nature of the conflict. To the list must be added the 120 lost in the "Tecumseh" when she sunk, making a total of 172 killed, and 170 wounded.

The vessels received injuries as follows: Monitors: "Tecumseh," sunk by a torpedo; "Manhattan," struck 9 times; "Winnebago," struck 19 times; "Chickasaw," struck three times by guns of Fort Powell. Steamers: "Brooklyn," struck 30 times; "Octorara," struck 17 times; "Hartford," struck 20 times; "Metacomet," struck 11 times; "Richmond," no serious damage; "Port Royal," no serious damage; "Lackawanna," struck 5 times; "Seminole," hull not struck; "Ossipee," struck 4 times; "Monongahela," struck 5 times; "Kennebec," struck twice; "Itasca," struck once; "Oneida," one shot in starboard boiler; "Galena," struck 7 times. Whole number of hits by the enemy, 134.

It would be an impossibility to enumerate the many acts of gallantry performed by the officers and men of the fleet.

The Admiral and his captains will therefore be left to speak for those under their immediate observation; and, although it will swell this account, we will insert as much of the several reports as will serve to do justice to all, and give the reader a further insight into this famous battle.

Admiral Farragut, after detailing the movements of the fleet (which have already been described), proceeds as follows:

"As I had an elevated position in the main rigging near the top, I was able to overlook, not only the deck of the 'Hartford,' but the other vessels of the fleet. I witnessed the terrible effects of the enemy's shot, and the good conduct of the men at their guns; and although, no doubt, their hearts sickened, as mine did, when their shipmates were struck down beside them, yet there was not a moment's hesitation to lay their comrades aside, and spring again to their deadly work.

"Our little consort, the 'Metacomet,' was also under my immediate eye during the whole action up to the moment I ordered her to cast off in pursuit of the 'Selma.'

"The coolness and promptness of Lieutenant-Commander Jouett throughout, merit high praise; his whole conduct was worthy of his reputation.

"In this connection I must not omit to call the attention of the department to the conduct of Acting-Ensign Henry C. Nields, of the "Metacomet," who had charge of the boat sent from that vessel when the 'Tecumseh' sank. He took her in under one of the most galling fires I ever saw, and succeeded in rescuing from death ten of her

crew, within six hundred yards of the fort. I would respectfully recommend his advancement.

"The commanding officers of all the vessels who took part in the action deserve my warmest commendations, not only for the untiring zeal with which they had prepared their ships for the contest, but for their skill and daring in carrying out my orders during the engagement.

"With the exception of the momentary arrest of the fleet, when the 'Hartford' passed ahead, and to which I have already adverted, the order of battle was preserved, and the ships followed each other in close order past the batteries of Fort Morgan, and in comparative safety too, with the exception of the 'Oneida.' Her boilers were penetrated by a shot from the fort which completely disabled her, but her consort, the 'Galena,' firmly fastened to her side, brought her safely through, showing clearly the wisdom of the precaution of carrying the vessels in two abreast. Commander Mullany, who had solicited eagerly to take part in the action, was severely wounded, losing his left arm.

"In the encounter with the ram the commanding officers obeyed with alacrity the order to run her down, and without hesitation exposed their ships to destruction to destroy the enemy.

"Our iron-clads, from their slow speed and bad steering, had some difficulty in getting into and maintaining their position in line as we passed the fort, and, in the subsequent encounter with the 'Tennessee,' from the same causes, were not as effective as could have been desired; but I cannot give too much praise to Lieutenant-Commander Perkins, who, though he had orders from the Department to return North, volunteered to take command of the 'Chickasaw,' and did his duty nobly.

"The 'Winnebago' was commanded by Commander T. H. Stevens, who volunteered for that position. His vessel steers very badly, and neither of his turrets will work, which compelled him to turn his vessel every time to get a shot, so that he could not fire very often, but he did the best under the circumstances.

"The 'Manhattan' appeared to work well, though she moved slowly. Commander Nicholson delivered his fire deliberately, and, as before stated, with one of his 15-inch shot broke through the armor of the 'Tennessee,' with its wooden backing, though the shot itself did not enter the vessel. No other shot broke through the armor, though many of her plates were started, and several of her port shutters jammed by the fire from the different ships.

"The 'Hartford' (my flag-ship) was commanded by Captain Percival Drayton, who exhibited throughout that coolness and ability for which he has been long known to his brother officers. But I must speak of that officer in a double capacity. He is the fleet-captain of my squadron, and one of more determined energy, untiring devotion to duty and zeal for the service, tempered by great calmness, I do not think adorns any Navy. I desire to call your attention to this officer, though well aware that in thus speaking of his high qualities I am only communicating officially to the Department that which it knew full well before.

"To him, and to my staff, in their respective positions, I am indebted for the detail of my fleet.

"Lieutenant J. Crittenden Watson, my flag-lieutenant, has been brought to your notice in former dispatches. During the action he was on the poop, attending to the signals, and performed his duties, as might be expected, thoroughly. He is a scion worthy the noble stock he sprang from, and I commend him to your attention.

"My secretary, Mr. McKinley, and Acting-Ensign, H. H. Brownell, were also on the poop, the latter taking notes of the action, a duty which he performed with coolness and accuracy.

Bogart and Mr. Higinbotham, were on duty in the powder division, and, as the reports will show, exhibited zeal and ability. The latter, I regret to add, was severely wounded by a raking shot from the 'Tennessee' when we collided with that vessel, and died a few hours after. Mr. Higinbotham was a young married man, and has left a widow and one child, whom I commend to the kindness of the Department.

"Lieutenant A. R. Yates, of the 'Augusta,' acted as an additional aid to me on board the 'Hartford,' and was very efficient in the transmission of orders. I have given him the command temporarily of the captured steamer 'Selma.'

"The last of my staff, and to whom I would call the attention of the Department, is not the least in importance. I mean Pilot Martin Freeman. He has been my great reliance in all difficulties in his line of duty. During the action he was in the main-top piloting the ships into the bay. He was cool and brave throughout, never losing his self-possession. This man was captured early in the war in a fishing-smack which he owned, and though he protested that he had no interest in the war, and only asked for the privilege of fishing for the fleet, yet his services were too valuable to the captors as a pilot not to be secured. He was appointed a first-class pilot, and has served us with zeal and fidelity, and has lost his vessel, which went to pieces on Ship Island. I commend him to the Department.

"It gives me pleasure to refer to several officers who volunteered to take any situation where they might be useful, some of whom were on their way North, either by orders of the Department or condemned by medical survey. The reports of the different commanders will show how they conducted themselves.

"I have already mentioned Lieutenant-Commander Perkins, of the 'Chickasaw,' and Lieutenant Yates, of the 'Augusta,' Acting-Volunteer-Lieutenant William Hamilton, late commanding officer of the 'Augusta Dinsmore,' had been invalidated by medical survey, but he eagerly offered his services on board the iron-clad 'Chickasaw,' having had much experience in our Monitors. Acting-Volunteer-Lieutenant P. Giraud, another experienced officer in iron-clads, asked to go in on one of these vessels, but as they were all well supplied with officers, I permitted him to go in on the 'Ossipee,' under Commander Le Roy. After the action he was given temporary charge of the ram 'Tennessee.'

"Before closing this report, there is one other officer of my squadron of whom I feel bound to speak, Captain T. A. Jenkins, of the 'Richmond,' who was formerly my chief-of-staff, not because of his having held that position, but because he never forgets to do his duty to the Government, and takes now the same interest in the fleet as when he stood in that relation to me. He is also the commanding officer of the second division of my squadron, and, as such, has shown ability and the most untiring zeal. He carries out the spirit of one of Lord Collingwood's best sayings, 'Not to be afraid of doing too much; those who are, seldom do as much as they ought.' When in Pensacola, he spent days on the bar, placing the buoys in the best position, was always looking after the interests of the service, and keeping the vessels from being detained one moment longer in port than was necessary. The gallant Craven told me only the night before the action in which he lost his life: 'I regret, Admiral, that I have detained you; but had it not been for Captain Jenkins, God knows when I should have been here! When your order came I had not received an ounce of coal.' I feel I should not be doing my duty did I not call the attention of the Department to an officer who has performed all his various duties with so much zeal and fidelity.

"Very respectfully, etc.,

Extract from the report of Captain Drayton, commanding United States flag-ship "Hartford":

"To Lieutenant-Commander Kimberly, the executive officer, I am indebted, not only for the fine example of coolness and self-possession which he set to those around him, but also for the excellent condition to which he had brought everything belonging to the fighting department of the ship, in consequence of which there was no confusion anywhere, even when, from the terrible slaughter at some of the guns, it might have been looked for.

"All did their duty, but I cannot but mention Lieutenants Tyson and Adams and Ensign Whiting, to whose example and exertions it was in great measure owing, no doubt, that the great loss of some of the guns was not followed by confusion or delay in repairing damages. Acting-Master's Mate Tinelli, who took charge of the 3d Division after Lieutenant Adams was wounded, is spoken of to me very highly.

"Acting-Assistant-Engineer McEwan is also strongly noticed in the report of Chief-Engineer Williamson. He lost his right arm while busily employed on the berth-deck, where he was stationed, in assisting and comforting the wounded. He is spoken of by his superiors as most competent to fill the possession of Third Assistant-Engineer in the regular service, for which I would beg you to recommend him to the Honorable Secretary of the Navy.

"The last shell fired at us—that from the ram—killed my clerk, Ensign W. H. Higinbotham. Although this was the first time he had been in action, nothing, I am told, could exceed the coolness and zeal with which he performed his duties in the powder-division, and I feel his loss most seriously, as his general intelligence and many amiable qualities had made him almost necessary to me.

"I must also thank Lieutenant A. R. Yates, a volunteer from the United States steamship 'Augusta,' who acted as an aide both to you and myself, and was to me most useful.

"The two after-guns were entirely manned by marines, who, under the direction of Captain Charles Heywood, performed most efficient service.

"Thanks to the unremitting supervision of Chief-Engineer Williamson, all had been so thoroughly prepared in his department that nothing was required of the engines during the day which they could not perfectly perform.

"The devoted attention of Fleet Surgeon Palmer, Surgeon Lansdale, and Assistant Surgeon Commons to our wounded, was beyond praise, and it was owing to their skill and untiring exertion that the large number of desperately wounded were prepared by 8 o'clock in the evening for removal to the hospital at Pensacola, for which place they left at daylight on the following morning in the 'Metacomet,' under a flag of truce.

"Boatswain Dixon was nearly knocked overboard by a splinter, but absented himself from the deck only long enough to have his wounds dressed, when he returned to his duties.

"Acting-Master's Mate Herrick, while superintending the passage of powder and shell on the berth-deck, was very seriously wounded by a piece of shell which entirely disabled him at the time, and may, I am afraid, prove very serious. Up to this time his conduct and bearing are spoken of by the commanding officer of the division in the highest praise.

"I must also thank Lieutenant Watson, your flag-lieutenant, who, besides attending most faithfully to the signals, found time to assist me on several occasions when it was important to give directions, in detail, about the firing.

"Of the crew I can scarcely say too much. They

were most of them persons who had never been in action, and yet I cannot hear of a case where any one attempted to leave his quarters, or showed anything but the sternest determination to fight it out.

"There might, perhaps, have been a little excuse had such a disposition been exhibited, when it is considered that a great part of four guns' crews were at different times swept away almost entirely by as many shells.

"In every case, however, the killed and wounded were quietly removed; the injury at the guns made good, and in a few moments, except from the traces of blood, nothing could lead one to suppose that anything out of the ordinary routine had happened.

"In conclusion, I request that you recommend to the Hon. Secretary of the Navy, for the medal of honor, the men whose names accompany this in a separate report. They well deserve the distinction.

"P. DRAYTON, *Captain.*"

Report of Lieutenant Herbert B. Tyson, commanding 1st Division, on board U. S. S. "Hartford":

"SIR—I respectfully submit the following report of the conduct of the officers and men in the first division during the engagement of yesterday:

"Acting-Ensign W. H. Whiting, in charge of the forecastle guns, deserves special mention for his gallantry in serving and working both 100-pounder rifles under the most trying circumstances.

"The three captains of guns, Henry Clark, Peter W. Stanley, and W. H. Wright, displayed an amount of courage and coolness which I have rarely seen equalled.

"But the two men of whom I wish particularly to speak are Charles Melville and Thomas Fitzpatrick.

"A rifle-shell burst between the two forward 9-inch guns, killing and wounding fifteen men. Charles Melville was among the wounded, and was taken down with the rest to the surgeon, but came on deck almost immediately, and although scarcely able to stand, refused to go below, and worked at the gun during the remainder of the action.

"Thomas Fitzpatrick, captain of No. 1 gun, was struck several times in the face by splinters, and had his gun disabled by a shell. In a few minutes he had his gun in working order again, with new truck, breeching, side-tackle, etc., his wounded below, the dead clear, and was fighting his gun as before, setting a splendid example to the remainder of his crew. His conduct came particularly under my notice and during the entire action was distinguished for coolness and bravery.

"The 1st Division had 13 killed and 10 wounded."

From report of Acting-Volunteer Lieutenant George Mundy, commanding 2d Division U. S. S. "Hartford":

"SIR—I respectfully submit the following report of the conduct of the 2d Division during the engagement of yesterday, the 5th, with Fort Morgan and the rebel gun-boats and ram 'Tennessee':

"But a few moments elapsed after the drum beat to quarters before every man was at his station, the guns cast loose and ready for action. Every man seemed determined to do his duty, which he did faithfully; not a man shrinking. Where all did their duty so well, it is hard to discriminate; still it gives me pleasure to mention a few who were the most conspicuous.

"Acting-Master's Mate W. H. Childs displayed great courage in assisting me in the Division."

The following men were also honorably mentioned: Charles Lake, Coxswain; Joseph Perry, Quartermaster; James Smith, Captain mizzen-top;

James Bennet, seaman; Owen Holland, 2d Captain mizzen-top; Samuel McFall, Captain after-guard; Beonth Diggings, O. S.; Augustus Pauly, seaman; Charles Davidson, Captain fore-castle; Henry Wright, O. S.; Robert Emerson, Lds.; David Morrow, Quarter-gunner.

From Report of Lieutenant LaRue P. Adams, commanding 3d Division, U. S. S. "Hartford":

"SIR—I have the honor to submit the following report of the conduct of the officers and men of the Third Division during the engagement of yesterday with Fort Morgan, the rebel gun-boats and the ram:

"When the drum beat to quarters, every man was at his station instantly and the guns cleared for action. We were unable to bring our guns to bear until nearly abreast of the fort. We then fired with 10-second shell and 40° elevation.

"The fire was kept up with great rapidity, using 5-second shell and decreasing the elevation as we neared the fort. When abreast of it, two rounds of shrapnel, cut for 2-seconds, were fired by us.

"As we passed ahead of the 'Brooklyn,' two shells struck No. 7 gun, disabling the crew; but one man escaped uninjured on the right side of that gun. Another shell followed in a few seconds, wounding the captain of No. 7, three men at No. 8, and myself. Four men were killed and nine wounded in all, and by those three shells. \* \* \* Acting-Master's Mate J. J. Tinelli I cannot fail to mention. He behaved with great gallantry, encouraging the men by his example, and served the guns of the division with great spirit against the rebel gun-boats and ram after I was sent below."

Men honorably mentioned: Forbes, Ingersoll and Pinto, Gun-Captains; William E. Stanley, Shellman.

From Report of Ensign George B. Glidden, commanding Master's Division, U. S. S. "Hartford":

"SIR—I have the honor to submit to you a report of the conduct of the officers and men of the Master's Division during the engagement yesterday with Fort Morgan, the rebel gun-boats and the ram 'Tennessee.' I have great pleasure in mentioning Acting-Master's Mate G. R. Avery, who assisted in conning the ship during the entire action, for the great coolness he displayed in his—a responsible—position."

Men honorably mentioned: John McFarland, Captain fore-castle; James Wood, Quartermaster; Joseph Cassier, Seaman; James Reddington, landsman; Henry Williams, Boatswain's Mate.

From Report of Ensign Wm. Starr Dana, in charge of Powder Division, U. S. S. "Hartford":

"SIR: I submit the following report of the conduct of the officers and men of the powder division during the engagement of the 5th:

"Acting-Ensign Bogart exhibited much coolness and presence of mind. Acting-Master's Mate R. P. Herrick deserves especial mention, for until seriously wounded he performed his duties with great coolness and spirit. Acting-Ensign W. H. Higinbotham also deserves special mention for his coolness and bravery. He performed his duties in most exemplary manner until he received his death-wound.

"The few men I had on deck passing powder acted with great coolness, and at no time were there any signs of shrinking or fear. Nelson (ship's cook) John Wallington (landsman), and Mellage (paymaster's steward) deserve special mention.

"Seven of the forward part of the division were wounded and three of them killed; most of the wounds were mortal.

"In addition to the above, I would call attention to the conduct of Sailmaker T. C. Herbert, whose conduct and cool courage is spoken of as most remarkable.

"P. DRAYTON, *Captain.*"

From Report of Chief-Engineer Thomas Williamson, U. S. S. "Hartford":

"SIR—The conduct of the officers and men belonging to the engineer's department was characterized by coolness and energy during the engagement of yesterday.

"Their duties were performed as if nothing extraordinary was going on.

"Acting-Third-Assistant Engineer Wm. G. McEwan deserves special mention for the prompt and efficient manner in which he attended to getting the wounded below, near his station at the berth-deck close hose, and he continued to do so until near the close of the action, when he lost his right arm. \* \* \* \* The loss in the engineer's department was three men killed and three men wounded."

Men honorably mentioned: Thomas Walkley, first-class fireman; James R. Garrison, coal-heaver; Thomas O'Connell —.

CAPTAIN (NOW REAR-ADMIRAL) THORNTON A. JENKINS.

Report of Captain Thornton A. Jenkins, commanding U. S. S. "Richmond":

"SIR—I have the honor and very great pleasure to report, that in the action this forenoon with the batteries at Fort Morgan and the rebel ram "Tennessee," this ship has received no serious damage, and there were no persons killed. Two men were wounded, but not seriously, and the ship struck a number of times in the hull and rigging."

Reports of Captain J. B. Marchand, commanding U. S. S. "Lackawanna":

"SIR—I have the honor to report that, about sunrise to-day, this ship was gotten underway, and the "Seminole" lashed on the port side. Our position being in the centre of the line of battle, we crossed the bar, and following close on the leading vessels, stood up the channel; and as soon as our guns could be brought to bear, a fire was opened on Fort Morgan with shells, and continued until passing it, when the "Seminole" was cast off.

"Soon after the fleet had passed the Middle Ground the rebel iron-clad 'Tennessee' commenced

approaching with the design of attacking our vessels, and, in obedience to your signal, I started under the heaviest headway to run her down, and succeeded in striking her at right-angles at the after-end of the casemate.

"The concussion was great, but the effect on her was only a heavy list, while our stern was cut and crushed to the plank ends for a distance of three feet above the water's edge to five feet below, and causing a considerable leak in the forward store-room and peak.

"Fortunately our yards and top-masts were down, otherwise they in all probability would have been carried away by the concussion, which caused the ship to rebound and the stern of the 'Tennessee' to recede. Some panic must have existed on board the enemy, as they fired but two guns through our bows.

"After striking, the two swung head and stern alongside of each other, and, as our guns had been pivoted for the opposite side, we succeeded in discharging but one 9-inch shell, that struck one of the enemy's port shutters, which was distant about twelve feet, destroying it, and driving some of the fragments into her casemate.

"A few of the enemy were seen through their ports, who were using most opprobrious language.

"Our marines opened upon them with muskets; even a spittoon and a holy-stone were thrown at them from our deck, which drove them away. Upon separating from the 'Tennessee,' our helm was put hard over to make another attempt at running the enemy down; but our great length, and the shallowness of the water, caused us to turn so slowly, that we had not got round until again amongst our fleet, and, unfortunately, we collided with the flag-ship, which was running towards the 'Tennessee,' although every exertion was used to prevent it by backing.

"By this accident two of the quarter-deck ports of the 'Hartford' were knocked into one, without this ship sustaining any injury.

"After the collision with the flag-ship, I again started to run down the 'Tennessee,' but, whilst still at a distance, she surrendered to our fleet.

"Our loss throughout the day was 4 killed and 35 wounded.

"Herewith I send the reports of the surgeon, engineer, and board of officers, on the injuries and expenditures.

"Under no circumstances could more coolness and bravery have been shown by the crew.

"I cannot express my deep feeling for the undaunted courage and aid given me by all the officers.

"Second-Lieutenant Hiram Adams of the Army Signal Corps, with two assistants, were on board, and great credit is due them for their promptness in transmitting signals.

"Very respectfully," &c.

"SIR—In the report made of the part taken by the 'Lackawanna' in passing the forts and entering Mobile Bay on the 5th instant, I inadvertently omitted to state that Commander Edward Donaldson, commanding the 'Seminole,' which was lashed alongside of this ship, rendered most efficient service by his coolness and judgment in piloting both vessels until passing Fort Morgan, the regular pilot being sick.

"My additional thanks are due him and all his officers and men for volunteering to aid in manning the guns of the 'Lackawanna,' and the continuous fire which they kept up whilst their guns could bear upon the enemy.

"Very respectfully," &c.,

"J. B. MARCHAND, *Captain.*"

From Reports of Captain James Alden, commanding U. S. S. "Brooklyn":

\* \* \* \* \*  
"The fleet here came to near the former anchorage.

"The surgeon's list of killed and wounded, together with the forward officer's report of injuries done to the ship by the enemy's shot, and the number of projectiles expended, etc., are herewith enclosed.

"Lieutenant-Commander Lull, the executive officer, has, at my request, made a statement of some very interesting incidents, giving a list of men who most distinguished themselves during the action; which I take great pleasure in forwarding, with a hearty approval of it and the suggestions it contains.

"It will be seen that we have 54 casualties on board, 11 killed and 43 wounded; many of the latter, I am happy to say, are slight.

"The list will not appear large when it is considered that we were nearly two hours under fire. Among the others we have to regret the loss of an officer, Acting-Master's Mate William H. Cook, who was killed while bravely doing his duty, having already been wounded.

"By the carpenter's report it will be seen that the hull has received extensive and serious injuries, having being struck 23 times. Our mainmast is ruined, having been shot through and through the centre, three times between the catbargins and the deck, the shot-holes being about equidistant from each other. Shot struck the other spars 7 times, injuring some badly. The boatswain's report shows the rigging to have been struck and cut in 29 places, making an aggregate of some 59 hits in the hull, rigging and spars.

"The number of projectiles expended was 183.

"In conclusion, I must beg leave to state that, as far as I can learn, every one did his duty nobly and well; and while the officers, generally, would seem to deserve some especial mention, I must, from the nature of circumstances, confine my notice to those on whom devolved the more important duty of controlling and fighting the ship.

"To my executive officer, Lieutenant-Commander E. P. Lull, my thanks are especially due, not only for his cool, steady bearing in the fight, but also for the efficient training of the crew, which have been together now less than three months, but displayed in the action the steadiness of veterans, fighting their guns almost as coolly as if they were at an ordinary exercise. Lieutenant Thomas L. Swann, the ordnance officer, had everything ready, and the working of his department was admirable; he was principally occupied during the action with the bowchasers. The other division officers—Captain Houston, of the marines, Lieutenant Charles F. Blake, Ensigns Cassell and Sigsbee, with their assistants, Master's-Mates Duncan and Stevens, fought their guns nobly and well.

"The powder division, under Acting-Ensign Utter, could not have been conducted better.

"Chief-Engineer Kellogg's department worked beautifully.

"Doctor Maulsby was fully prepared for the wounded, and extended to those unfortunates all the solicitude and care that a generous nature could dictate.

"Ensign Pendleton, my aide and signal officer, afforded me great assistance, being always prompt and active in his duties.

"To our pilot, Mr. Christopher Lawrence, great credit is due for the handsome manner he piloted the ship.

"I ought to mention, before closing this report, that I was particularly pleased with the cheerful bearing and aid afforded me by Capt. E. A. Denicke, of the Army Signal Corps, in watching and point-

ing out the effect of our shot in the batteries and upon the rebel ram and gun-boats.

"In accordance with your directions, I also send a separate report in regard to those men who were most conspicuous for good conduct and gallantry in the action. It is taken mostly from the report of Lieutenant-Commander Lull, the executive officer.

"Congratulating you upon the handsome result of the day, I remain, etc.,

"JAMES ALDEN."

"SIR—In accordance with your instructions, I herewith append a list of the crew who most distinguished themselves for gallantry and good conduct during the action with Fort Morgan and the rebel ram and gun-boats. Feeling satisfied that

James E. Sterling, Coalheaver; Richard Dennis Boatswain's Mate; Samuel W. Davis, \_\_\_\_\_, Samuel Todd, Quartermaster."

Extract from report of Commander J. H. Strong, commanding U. S. S. "Monongahela":

"After passing the forts, I saw the rebel ram 'Tennessee' head in for the line. I then sheered out of the line to run into her, at the same time ordering full speed. I struck her fair, and swinging round poured in a broadside of solid 11-inch shot, which apparently had but little, if any, effect upon her. Soon after, signal was made to my ship

CAPTAIN (AFTERWARDS REAR-ADMIRAL) JAMES ALDEN, U. S. N

they have earned that justly-prized distinction, the "medal of honor." I trust the Department will confer it upon them:

"J. Henry Dennig and Michael Hudson, Sergeants of Marines; Wm. M. Smith and Miles M. Oviatt, Corporals of Marines; Barnett Kenna, Quartermaster; Wm. Halsted, Coxswain; Joseph Brown, Quartermaster; Joseph Irlane, Seaman; Edward Price, Coxswain; Alexander Mack, Captain-of-Top; William Nichols, Quartermaster; Nicholas Irwin, Seaman; John Cooper, Coxswain; John Brown, Captain-of-Forecastle; John Irwin, Coxswain; William Blagden, Ship's Cook; William Madden, Coalheaver; James Machon, boy; William H. Brown, Lds.: James Miffin, Engineer's Cook;

to again run into her. I did so, and was about to try it the third time when she surrendered to the fleet.

"During the action my officers and men, without exception, behaved in the most gallant manner. It would be impossible to make any distinction where all did everything that could have been desired.

"I would here mention that a volunteer crew from the U. S. steamer 'Kennebec,' in charge of Acting-Ensign Ellis, came on board, and manned one of my 32-pounder broadside guns during the engagement with Fort Morgan. Their conduct during the action was gallant, and met with my entire approbation.

"I regret to say that my first-lieutenant, Mr. Prentiss, lost a leg in the action, and that fears are entertained for his life." \* \* \*

Reports of Commander William E. LeRoy, commanding U. S. S. "Ossipee":

"ADMIRAL—I have the honor to report, that in passing the forts, and in the attack upon the iron-clad 'Tennessee,' this ship was struck four times in the hull and several times in the rigging, fortunately without disabling the ship. Our stem is somewhat injured by running against the 'Tennessee.' Our casualties I am pleased to report as small. When about running down the 'Tennessee,' she displayed a white flag, but not in time to prevent my colliding with her, having been so disabled by the fire of the fleet and unable longer to continue the contest, and I was fortunate in receiving her surrender from Commander Johnston, her commander—Admiral Buchanan being wounded—a prize to the fleet under your command."

COMMANDER (NOW REAR-ADMIRAL) J. W. A. NICHOLSON.

"ADMIRAL—In my report of the part this ship took in the passage of Fort Morgan yesterday, I neglected to allude to the efficient manner in which Lieutenant-Commander Geo. Brown, with the 'Itasca' lashed alongside of me, performed his duty of piloting both vessels, etc."

From report of Commander T. H. Stevens, commanding U. S. Monitor "Winnebago":

"At half-past 8 passed Fort Morgan and steamed slowly up the bay. At 10 minutes past 9 the after-turret broke down. At 15 minutes past 9, received order from flag-ship to attack the rebel ram 'Tennessee,' which surrendered at 45 minutes past 9. Anchored with the fleet at 45 minutes past 10 in the lower fleet anchorage of Mobile Bay.

"Enclosed please receive engineer's report of the condition of the turrets, and the gunner's account of ammunition expended.

"The 'Winnebago' was struck 19 times, three of the shot having penetrated the deck near the after-turret.

"I have to report no casualties. The officers and

men conducted themselves well; and to Acting-Volunteer-Lieutenant W. T. Shankland, First-Assistant-Engineer John Purdy, who volunteered for this vessel, and the pilot, Wm. H. Wroten, I am indebted for valuable assistance."

Reports of Commander J. W. A. Nicholson, commanding U. S. S. "Manhattan":

"SIR—I have the honor to make the following report of the part taken by this ship in the action of the 5th instant with Fort Morgan and the rebel iron-clad 'Tennessee':

"At 5 minutes past 7 A. M. I opened on the fort, but, owing to the dense smoke from the guns, our firing was necessarily very slow.

"After passing Fort Morgan, I devoted my attention entirely to the rebel iron-clad, firing my guns slowly and with great precision.

"At 45 minutes past 9 I obtained a raking position under his stern, and fired a solid shot, which struck him on the port-quarter, carrying away his steering gear.

"At 57 minutes past 9, when on the point of firing from the same position, he hauled down his colors and surrendered.

"I fired at the 'Tennessee' six times, namely, one shell, two solid and three cored shot. I am satisfied that most, if not all, the serious damage she has sustained was caused by the 15-inch shot of this vessel.

"This ship was struck by the enemy's shot nine times, causing no material damage; but of this I will make a separate report.

"No person was injured on board. Officers and men all did their duty; but I especially recommend Acting-Ensign John B. Trott, who was stationed at the wheel steering the ship himself, for the admirable manner in which he performed his duty. Also Acting-Master Robert B. Ely, for the manner in which he worked his guns. Both of these gentlemen, I think, are worthy of being advanced a grade in the service.

"One of the 15-inch carriages is temporarily disabled by the breaking of some bolts."

"SIR—Of the six 15-inch projectiles fired from this vessel at the rebel iron-clad 'Tennessee,' I claim four as having struck, doing most of the real injuries that she has sustained, namely, first, one shot on port-beam, going entirely through the armor and crushing the wood backing, making a hole completely through the vessel; second, one shot near the first, but higher up, and further forward, making a deep indentation, and then glancing over the ship; third, a shell striking her stern port-shutter, disabling it, so that the gun could not be used; fourth, a shot striking her stern, ripping up the deck-plating, carrying away her steering gear, and then striking her armor at the angle of the port quarter, crushing it, and starting the wood backing through to the inside."

From report of Lieutenant-Commander C. H. Wells, commanding U. S. S. "Galena":

"SIR—I herewith report to you the part which this steamer took in passing Forts Morgan and Gaines yesterday:

\* \* \* \* \*  
 "I take pleasure in bringing to your notice the executive officer of this vessel, Acting-Volunteer-Lieutenant C. W. Wilson, who faithfully carried out my orders in passing Fort Morgan, as well as in the exhibition of coolness and bravery.

"Acting-Master D. C. Kells, Acting-Ensigns Pease and Miner, and Acting-Master's Mates Tuttle and Delano, I would also recommend to your favorable notice for their good conduct under the fire of the enemy.

Mr. Buehler, First-Assistant Engineer and Acting-Chief, managed the engineer's department in a highly creditable manner, in which he was sustained by the Assistant-Engineers Greenleaf, Scott, Burns and Weecker.

Acting-Assistant Paymaster Kitchen, and Lesley G. Morrow, Captain's Clerk, remained on deck during the action, and contributed their parts to my entire satisfaction. Acting-Assistant Surgeon George P. Wright not only attended to our three cases of wounded (one mortally), but gave his professional services to the 'Oneida,' to several of their wounded who came on board this steamer.

"The crew manifested the utmost courage throughout the affair, which will always reflect creditably upon you and the Navy of the United States."

From report of Lieutenant-Commander James E. Jouett, commanding U. S. S. "Metacomet":

\* \* \* \* \*

"At 40 minutes past 7 the 'Brooklyn' backed down the line, when the 'Hartford' shot ahead, leading the fleet in past the forts. At this time a shell from the rebel gun-boat 'Selma' passed through this vessel into the forward storeroom, killing one man and wounding another, and setting the ship on fire. By prompt action on the part of Acting-Ensign G. E. Wing, in charge of powder division, we succeeded in extinguishing it.

"At 5 minutes past 8 cast off from the 'Hartford' and steamed for the rebel gun-boats, who were annoying the fleet by a raking fire. They steamed up the bay, engaging us with their stern guns, of which they had three each. At half-past 8 the 'Gaines' retreated under cover of the fort in a crippled condition. At 9 the 'Morgan' hauled off to starboard, and at 10 minutes past 9 the 'Selma' struck her flag to this ship.

"I immediately dispatched a boat, in charge of Acting-Master N. M. Dyer, to take charge of the prize, and to send her Captain and First-Lieutenant on board. He hoisted the American flag, and reported Captain Murphy wounded and the First-Lieutenant killed.

"He transferred fifty of her crew to this vessel, and at 50 minutes past 9, Captain P. U. Murphy came on board and surrendered his sword and vessel.

"She had five killed and ten wounded, including the Captain, two of whom have since died. The dead and wounded were attended to. The remainder of her crew and officers were sent to the 'Port Royal.' Put engineers and firemen on board and steamed to the fleet, reporting the capture of the Confederate steamer 'Selma,' which vessel mounted two 9-inch Dahlgren smooth-bore, one 6½-inch rifle and one 8½-inch smooth-bore, all on pivot, with a crew, all told, of 94 men.

"I am much indebted to the executive officer, H. J. Sleeper, for his cool, prompt, and officer-like conduct; he is a valuable officer. For the efficient handling of the vessel, I am much indebted to Acting-Master N. M. Dyer, who had permission to go North on leave, but volunteered to remain to assist in the attack upon the forts. Acting-Ensign John White was cool and deliberate, working his rifle-gun with good effect. Acting-Master's Mates Goodwin and Miller performed their duties with promptness and zeal, making good shots with their 9-inch guns. Acting-Third-Assistant Engineer King, who was much exposed at the engine-bell, never failed to pull the proper bell; and to the efficient arrangement of the engineer department and the prompt answer to the bells, I am indebted to First-Assistant Engineer Atkins. The gunner, Mr. Lamien, attended in both shell-rooms and magazines, forward and aft, and kept the guns more than supplied.

"I cannot close this long report without calling

your attention to Assistant-Surgeon Payne, of this vessel. By his report we had one killed and two wounded. That evening there were placed on board this vessel some sixty badly wounded officers and men, to be conveyed to Pensacola. He was untiring in his attention, watching and tending them at all times. He deserves especial mention for his great and successful exertions.

"This ship was struck eleven times, doing but little damage; shots mostly above the hull.

"I herewith submit the reports of the executive officer and surgeon."

Report of Lieutenant-Commander Bancroft Gherardi, commanding U. S. S. "Port Royal":

"SIR—I have the honor to inform you that on the morning of the 5th instant I took my position on the port side of the U. S. steamer 'Richmond,' as her consort. I was able to open fire but twice—once as the rebel iron-clad 'Tennessee' passed down the line; the second time as we kept away on a

LIEUTENANT-COMMANDER (NOW COMMODORE) BANCROFT GHERARDI.

northwest course, I was able to bring the 10-inch pivot-gun to bear on Fort Morgan, and the rifled guns to bear on Fort Gaines."

Report of Lieutenant-Commander C. H. Greene, commanding U. S. S. "Octorara":

"SIR—I have the honor to forward to you the various reports of damages and casualties on board.

"I bear cheerful testimony to the good conduct of officers and men; part of the latter volunteered to work one of the 'Brooklyn's' guns, and although I have not yet heard of them from Captain Alden, I have every reason to believe they bore their part well.

"To Acting-Volunteer-Lieutenant Urann, executive officer, I am much indebted for his zeal and efforts in having the ship ready to go under fire.

"Acting-Master Billings, a volunteer from the 'Vincennes,' kept his post faithfully, and though quite severely hurt, still remained.

"To Acting-Master Young, Acting-Ensigns Dodge and McEntee, my thanks are due for their steadiness and promptness at their quarters.

"The engineer department, under the charge of Mr. Shipman, Acting-Chief-Engineer, was well attended to, and his subordinates' conduct met my approbation.

"To Assistant-Surgeon Dodge and Paymaster Pynchon, and, in fact, all, I tender my hearty thanks."

From Report of Lieutenant-Commander William P. McCann, commanding U. S. S. "Kennebec":

\* \* \* \* \*

"The officers and crew of the 'Kennebec' performed their duties gallantly under the enemy's fire.

"When lashed alongside the 'Monongahela' I sent Acting-Ensign J. D. Ellis, in charge of a gun's crew, to work a gun there, under the observation of Captain Strong, where he acted nobly.

"I beg leave to call your attention to the good conduct of Acting-Ensign H. E. Tinkham, who, when seriously wounded by the explosion of a shell from the rebel ram 'Tennessee,' and when the vessel was supposed to be on fire, refused to leave his station. It affords me pleasure to bring to your favorable notice Acting-Volunteer-Lieutenant Edward Baker, the executive officer, Acting-Ensign J. J. Butler and Second-Assistant Engineer L. W. Robinson.

"Acting-Assistant Surgeon George W. Hatch rendered the most prompt assistance to the wounded. The crew fully sustained the proud reputation of the American sailor for courage and bravery."

From Report of Lieutenant-Commander George Brown, commanding U. S. S. "Itasca":

\* \* \* \* \*

"After passing Fort Morgan, I cast off from the 'Ossipee,' and started under sail and a full head of steam in pursuit of the rebel gun-boats 'Morgan' and 'Selma,' that were being engaged by the 'Metacomet'; but before I came within range the 'Morgan' had succeeded in getting in such a position that I could not cut off her retreat toward Fort Morgan, and the 'Selma' had struck her flag to the 'Metacomet.'

"I take pleasure in testifying to the spirited willingness and desire manifested by all under my command to take a more active part in the engagement; but the duty assigned us prevented us from using our guns in passing Fort Morgan except for the purpose of increasing the density of smoke.

"I am happy to be able to report that no casualties occurred.

"The vessel was struck once in the mainmast."

Report of Lieutenant-Commander G. H. Perkins, commanding U. S. Monitor "Chickasaw":

"SIR—I have the honor to submit the following report:

"At 6 A. M., on Friday, August 5th, in obedience to orders, I got underway, and took my position in the rear of the 'Winnebago,' on the right of the line. I passed the forts with the rest of the fleet, firing as rapidly as possible. Afterwards, in obedience to orders, I attacked the rebel ram 'Tennessee,' following her up closely, shooting away her smoke-stack, and firing solid shot at her till her flag was hauled down and a white flag raised. Her steering gear being shot away, I took her in tow and brought her to anchor near the 'Hartford.' In the afternoon of the same day, I got underway, and

brought a large barge, the 'Ingomar,' out from under the guns of Fort Powell, exchanging several shot and being struck three times.

"On the morning of the 6th, I proceeded again to Fort Powell, which I found deserted and blown up. I towed out another barge. In the afternoon I advanced and shelled Fort Gaines.

"Too much praise cannot be given to all the officers and men for their coolness and efficiency under fire, and their endurance while at quarters. I would mention in particular Acting-Volunteer-Lieutenant William Hamilton, the executive officer, who, when on his way home, condemned by medical survey, volunteered for this vessel. I owe much to him, his energy, in fitting out the vessel, and for his gallantry and coolness during the fight. Acting-Master E. D. Percy, who also volunteered for the vessel, and commanded the guns in the after-turret, and Gunner J. A. McDonald, who commanded the forward-turret, deserve especial mention for the skill and rapidity with which they fought their batteries. Chief-Boatswain's Mate Andrew Jones and Master-at-Arms James Seanor, who, although their time was out, volunteered for the fight from the 'Vincennes,' are entitled to honorable mention.

"During the entire action the vessel was struck a number of times, the smoke-stack was shot almost entirely away, and one shot penetrated the deck on the starboard bow. No serious injury was suffered, and there were no casualties among officers or men."

From Report of Lieutenant Charles L. Huntington, executive officer of the U. S. S. "Oneida":

\* \* \* \* \*

"The ram, passing astern, delivered two raking fires into us, one of which disabled the 12-pdr. howitzer on the poop, severely wounding Commander Mullany; the effect of the other one I am unable to state, but think the only damage from it was to our rigging.

"The command of the ship now devolved upon me, and the management of the two vessels upon Lieutenant-Commander Wells, of the 'Galena.'

"The battery was gallantly served while passing the forts, but the enemy raked us several times after our guns could not be brought to bear.

"In passing the fort we received a shell forward on the berth-deck, which exploded, knocking out a dead-light on the port side, [and] starting a fire on the top of the magazine. Owing to the presence of mind of Acting-Ensign Hall, commanding the powder division, and Gunner William Parker, the fire was promptly extinguished, and the supply of powder was as rapid as ever before.

"At 35 minutes past 8 signal was made that the captain was wounded, and also that our boiler was disabled; not being answered from the flag-ship, hauled down signals. About a quarter past 9 repeated signals and they were not answered, but signal was made from the flag-ship to run down at full speed the enemy's principal vessel. Answered the signal, but I am sure the Admiral understands we could not obey it; we had no speed.

"At 10 o'clock A. M., the 'Itasca,' Lieutenant-Commander Brown, took us in tow and carried us to an anchorage. At 11, anchored in 3½ fathoms of water, with thirty fathoms of chain ready for slipping.

The officers and crew of the 'Oneida' are proud to have served in your fleet, and they are proud of their gallant commander, J. R. M. Mullany, who gave us all such a noble example of unflinching courage and heroism.

"His coolness in action could not possibly have been surpassed. Having scarcely become acquainted with Commander Mullany, he having only been on board two days, the highest compliment

that can be paid him is the confidence and spirit with which the crew went into action.

"Too much praise cannot be awarded to Lieutenant C. S. Cotton, Lieutenant E. N. Kellogg and Acting-Ensign John Sears, commanding gun divisions, for the admirable examples of courage they afforded their men, and for their skill in directing the fire of the guns.

"The conduct of Acting-Ensign Charles V. Gridley (regular) is beyond all praise. He had charge of the Master's division, and assisted in conning the ship from the top gallant forecastle.

"Acting-Ensign Hall's conduct has been previously mentioned. His duties were performed in the most satisfactory manner, and, under Almighty God, we probably owe to his presence of mind at the time of the fire on the berth-deck the safety of the ship.

"Acting-Master's Mates Edward Bird, Daniel Clark, and John Devereaux behaved courageously.

COMMANDER (AFTERWARDS REAR-ADMIRAL) J. R. MADISON MULLANY.

Gunner Wm. Parker and Boatswain Hallowell Dickinson merit mention for their good conduct.

"I leave it to Chief-Engineer W. H. Hunt to speak of the officers and men under his immediate supervision, but must speak of him personally in this report. He was cool and collected during the whole affair, and his gallantry was particularly apparent at the time of the accident to our starboard boiler. Mr. Hunt was scalded severely in both arms.

"Surgeon John Y. Taylor had a severe task imposed upon him, but his whole duty by the wounded was done quietly and skillfully. Medical assistance was offered from the 'Galena'; it was accepted, and Acting-Assistant Surgeon Geo. P. Wright came on board, for which we owe him our thanks. At the time that our boiler was exploded, five of our wounded men went on board the 'Galena'; four subsequently returned—the other was suffering much pain, and remained on board until transferred to the 'Metacomet.'

"The safety of the ship after the explosion depended upon the 'Galena.' That we are here, quietly at anchor, attests how nobly Lieutenant-Commander Clark H. Wells stood by us

"Assistant-Paymaster Geo. R. Martin assisted the surgeon materially. He also superintended putting out a fire that broke out in the cabin.

"Paymaster's Clerk W. P. Treadwell rendered great service in passing orders to the bell, until he was required below to assist in caring for the wounded. He was quite badly scalded himself. Mr. Geo. A. Ebbetts, Captain's Clerk, behaved splendidly. He was knocked down at the same time that Captain Mullany was wounded. Whenever he could be spared from below, after this accident, he cheerfully rendered assistance in carrying orders.

"The pilot, Mr. John V. Grivet, served part of the time on board the 'Galena,' and part of the time on this ship. That part of his conduct which came under my observation merits praise.

"For the crew, they stood to their guns most nobly. Many deserve mention, but I shall only name those that came under my own observation."

The following men are then honorably mentioned by Lieutenant Huntington:

"James Sheridan and John E. Jones, Quartermasters; William Gardner, Seaman; John Preston, Landsman; William Newland, Ordinary Seaman; David Nailor, Landsman; Charles Wooram, Ordinary Seaman; Thomas Kendrick, Coxswain.

"The marines conducted themselves with the usual distinguished gallantry of their corps. Sergeant James S. Roantree is particularly deserving of notice."

Additional Reports of Captain T. A. Jenkins, commanding U. S. S. "Richmond":

"SIR—I have the honor to report that in obedience to your general order and plan of battle for attacking Fort Morgan and the rebel fleet, Lieutenant-Commander Baneroff Gherardi, commanding the United States Steamer "Port Royal," reported himself with his vessel to me ready for action a little before daylight this morning.

"The 'Port Royal' was lashed on the port side of this vessel, with her stern pivot-gun sufficiently far aft of the quarter of this ship to enable it to be used against the enemy as effectively as one of my own broadside guns.

"To Lieutenant-Commander Gherardi I am greatly indebted for his cool and courageous conduct, from the moment the attack commenced to the time that his vessel was cast off by my order to go in chase of the enemy's three wooden gun-boats, the 'Morgan,' 'Gaines,' and 'Selma.'

"My orders on board of this ship to the helmsman, and to the officer stationed at the engine-bell, were repeated by him on board of his own vessel, and the soundings passed from his own vessel to this with a coolness and clearness of voice that could not but excite my admiration.

"The after pivot-gun of the 'Port Royal' (the only one that could be brought to bear upon the enemy's batteries from that vessel) was worked most effectively."

"SIR—In my report of the 5th instant I expressed my great admiration of and thanks for the cool and courageous conduct of every officer and of every man serving on board of this ship in the terrible conflict with the rebel batteries at Fort Morgan, the iron-clad 'Tennessee,' and gun-boats 'Selma,' 'Morgan' and 'Gaines,' on the morning of that day.

"I consider it, however, but an act of plain and simple duty on my part to go further now, and respectfully invite your attention, and that of the Department through you, to the highly meritorious conduct of the under-mentioned petty-officers and seamen on board of this ship, who exhibited on that memorable occasion, and in conflict with the rebels

previously, a will and determination and set an example to their shipmates and messmates worthy, in my opinion, of the highest commendation."

The following are then honorably mentioned :

"Wm. Densmore, Chief Boatswain's Mate; Adam Duncan and Charles Deakin, Boatswain's Mates; Cornelius Cronin, Chief Quartermaster; William Wells, Quartermaster; Henry Sharp, Seaman; Walter B. Smith, Ordinary Seaman; George Parks, Captain of Forecastle; Thomas Hayes, Lebes Simkins, Oloff Smith and Alex. H. Truett, Coxswains; Robert Brown and John H. James, Captains of Top; Thomas Cripps and John Brazell, Quartermasters; James H. Morgan and John Smith, Captains of Top; James B. Chandler, Coxswain; William Jones, Captain of Top; William Doolan, Coalheaver; James Smith, Captain of Forecastle; Hugh Hamilton, Coxswain; James McIntosh, Captain of Top; William M. Carr, Master-at-Arms; Thomas Atkinson, Yeoman; David Sprowls, Orderly Sergeant; Andrew Miller and James Martin, Sergeants of Marines."

From the additional Report of Captain Percival Drayton, commanding "Hartford":

"SIR—I beg leave to call your attention to the conduct of the following petty officers and others of this vessel during the action of the 5th instant, which, I think, entitles them to the medal of honor:

"Thomas Fitzpatrick, Coxswain; Charles Melville, Ordinary Seaman; William E. Stanley, Shellman; William Pelham, Landsman; John McFarlan, Captain of Forecastle; James R. Garrison and Thomas O'Connell, Coalheavers; Wilson Brown and John Lamson, Landsmen; George Mellage, Paymaster's Steward."

From additional Reports of Captain J. B. Marchand of the "Lackawanna":

"SIR—In the action of the 5th instant the following-named petty officers, and others of inferior rating, were conspicuous for their energy and bravery, and deserve medals of honor; but under the fourth rule of the general order of the Navy Department, No. 10, dated April 3d, 1863, their special signal acts of valor cannot be cited so as to authorize me to recommend their obtaining medals."

The following are then honorably mentioned:

"William Phinney, Boatswain Mate; John Smith, Captain Forecastle; Samuel W. Kinnaird, Robert Dougherty, Michael Cassidy, Landsmen."

"SIR—I respectfully bring to your attention the following petty officers, etc., of this ship, who evinced in the battle of the 5th instant signal acts of bravery which would justly entitle them to medals of honor: George Taylor, Armorer; Lewis Copat, Landsman; James Ward, Quarter-gunner; Daniel Whitfield, Quartermaster; John M. Burns, Seaman; John Edwards, Captain of Top; Adam McCulloch, Seaman."

On August 6th, the Admiral returned thanks in a general order to the officers and men who had so ably supported him during the late conflict, as follows:

GENERAL ORDER, No. 12.

U. S. FLAG-SHIP "HARTFORD," }  
MOBILE BAY, August 6, 1864. }

The Admiral returns thanks to the officers and crews of the vessels of the fleet for their gallant conduct during the fight of yesterday.

It has never been his good fortune to see men do their duty with more courage and cheerfulness; for, although they knew that the enemy was prepared with all devilish means for our destruction, and though they witnessed the almost instantaneous annihilation of our gallant companions in the "Te-cumseh" by a torpedo, and the slaughter of their friends, messmates and gun-mates on our decks, still there were no evidences of hesitation in following their commander-in-chief through the line of torpedoes and obstructions, of which we knew nothing, except from the exaggerations of the enemy, who had given out that we should all be blown up as certainly as we attempted to enter.

For this noble and implicit confidence in their leader he heartily thanks them.

D. G. FARRAGUT,

Rear-Admiral Commanding W. G. B. Squadron.

GENERAL ORDER, No. 13.

FLAG-SHIP "HARTFORD," }  
MOBILE BAY, August 7, 1864. }

The Admiral desires the fleet to return thanks to Almighty God for the signal victory over the enemy on the morning of the 5th instant.

D. G. FARRAGUT,

Rear-Admiral Commanding W. G. B. Squadron.

It is not always that the sailors and petty officers who have taken part in a naval battle have full justice done them, although they may have shown as much courage as any of their officers.

There never was a case where sailors showed more true heroism than at the battle of Mobile Bay, especially in the exacting moment when the "Tennessee" made her attack upon the fleet. Men, who were so seriously wounded that they could not stand, would crawl back to their guns, and though they could do no work would cheer on and inspire their comrades. Men in their last moments would give forth a faint cheer when they heard that the "Tennessee" was being beaten, and die with a smile on their lips. If a comrade fell at his post, another from a gun that could not be brought to bear would spring to take his place, laying him tenderly aside and swearing to avenge his death.

It is not always in the excitement of battle that these heroic acts are noticed, and it is with pleasure that we here publish the reports of those officers who thought enough of their sailors to mention those among them who had especially distinguished themselves. The medal of honor was as much as they could expect, but these badges were as much prized as were the decorations which Napoleon served out to his brave soldiers after a victory. He knew the secret of touching men's hearts on the battle-field, and to this he owed the many victories won for him by his soldiers. It is not the value of the medal, for it is only made of copper; it is the fact that a sailor's services are noticed that makes him the happiest of men, and he treasures up the mementoes of his services with care and pride.

While the fleet was darting ahead under a sharp fire from Fort Morgan, and just as the "Brooklyn" stopped her engines, the "Tecumseh," struck by a torpedo, went down almost instantly, carrying with her nearly all her brave officers and men. It was an appalling sight to look upon, but it did not for one moment throw the fleet into confusion. The commanders followed their brave leader, not thinking for a moment of the possible consequences. Admiral Farragut, even at that trying moment, did not fail to remember what was due to humanity, but hailed Lieutenant-Commander Jouett of the "Metacomet," and directed him to send a boat to pick up the few men who could be seen struggling in the water. This was done with a promptitude that reflected great credit on the discipline of the "Metacomet."

Acting-Ensign Henry C. Niels had charge of the boat that went on this perilous service, and steering right for the struggling men in the water, under as heavy a fire from Fort Morgan as any officer ever went through, found his reward in the rescue of ten men, who, but for the coolness he displayed and the encouragement he gave his brave boat's crew to spring to their oars, would have soon followed their shipmates to a watery grave. This was done within three hundred yards of the fort, with shot and shell falling thickly about him. Ensign Niels, not only received the warmest commendations from Admiral Farragut, but the highest admiration that could be felt by every officer in the fleet. Such acts of gallantry, connected with a mission of mercy, should obtain the greatest rewards.

The following survivors of the "Tecumseh" were picked up by the "Metacomet's" boat: Acting-Ensign John J. P. Zettich, Quartermasters C. V. Dean and William Roberts; Seamen James McDonald, George Major and James Thorn; Ordinary Seaman Charles Packard; Landsman William Fadden; Coal-heaver William C. West, and Pilot John Collins. In addition to these, there were picked up by one of the "Tecumseh's" boats: Acting-Masters C. F. Langley and Gardner Cottrell, Gunner's Mate S. S. Shinn, Quarter-gunner John Gould, Seamen Frank Commins, Richard Collins and Peter Parkes. Four men, whose names are unknown, swam ashore and were captured by the Confederates.

Acting-Masters Langley and Cottrell state in their joint report that the "Tecumseh" was nearly abreast of Fort Morgan, and about 150 yards from the beach, when it was reported to Commander Craven that there was a row of buoys, stretching from the shore a distance from one to two hun-

dred yards. He immediately ordered full speed and attempted to pass between two of the buoys. When in their range, a torpedo was exploded directly under the turret, blowing a large hole in the bottom of the vessel, through which the water rushed with great rapidity. Finding that the vessel was sinking, the order was given to leave quarters, and from that moment every one used the utmost exertions to clear himself from the wreck. After being carried down several times they were picked up in a drowning condition, as before stated.

Commander Craven was with the pilot in the pilot-house when the torpedo exploded under the vessel, but his chivalric spirit caused him to lose his life. He insisted on the pilot taking precedence in descending the ladder. They both reached the turret, but as the pilot passed through the port-hole the vessel keeled over and went down, taking with her as gallant an officer as there was in the American Navy. One moment more and his life would have been saved to adorn the list of officers of which he was so bright a member. The example shown by Craven on this occasion should be chronicled in every story of the war. No more chivalrous event occurred during the four years' conflict.

After the capture of the "Tennessee," and when the fleet had anchored, the "Chickasaw," Lieutenant-Commander Geo. H. Perkins, was sent to fire on Fort Powell and to bring off a large barge lying near it. This duty was handsomely performed, the fort was well battered and the barge brought away. The enemy, using their guns with spirit, gave the "Chickasaw" some ugly wounds in her armor; but, seeing the inequality of a conflict with the fleet, the commander of the fort evacuated it on the night of the 5th, when it soon after blew up. The guns were, however, left intact, and several covered barges were captured that made good workshops for the fleet.

On the afternoon of the 6th, the "Chickasaw" was sent in to shell Fort Gaines, and this was so effectually done that Colonel Anderson, the commander, soon came to terms. He had not much of a garrison—most of his men being raw recruits and boys—but he seems to have been a sensible man, for on the morning of the 7th he sent a communication to Admiral Farragut offering to surrender, and requesting that he be given the best conditions. General Granger was sent for by the Admiral to meet Colonel Anderson and Major Brown on board the flag-ship, where an agreement was signed, by which Fort Gaines was surrendered unconditionally. All private property (except arms) was to

be respected, and the inmates of the fort were to remain prisoners-of-war.

On August 8th, Fleet-Captain Drayton, on the part of the Navy, and Colonel Myer, on the part of the Army, proceeded to the fort to carry out the stipulations of the agreement, and at 9:45 A. M. they received its surrender, and hoisted the Union flag amid the prolonged cheers of the sailors of the fleet. No cheers were ever given with more ardor, for this victory was seen to be another of the severe death-blows given to an enemy whose end was very near.

This was the close of the battle on the water. Fort Morgan was still to be reduced, but any one could see that this event would be but a matter of a short time. There was no hope for the defenders of the fort, strong as it was, for it was cut off from all succor. The Navy commanded it and the waters of Mobile Bay, and the army having landed in its rear, shut it out from all hope of reinforcements or supplies. Preparations were being made to invest it by land and sea, with as little loss of life as possible to the Union forces.

There was the great and impregnable "Tennessee" lying at anchor among the fleet as harmless as a Chinese junk, with the American flag flying where the Confederate "Stars and Bars" was wont to wave. The "Selma" was captured, the "Gaines" burnt, and the "Morgan" was the only vessel of Buchanan's fleet that had escaped. She ran up to Mobile the night after the battle by keeping close in shore.

As soon as the fate of their Navy and the two forts was known at Mobile, the Confederates sunk the "Nashville" right across the narrow channel under commanding guns—and thus completely blocked the way to the city. But this did not help them any. The days of blockade-runners were over. No more would those snug-looking clippers slip into the bay at night in spite of a most watchful blockade, and, carrying their welcome cargoes into the port of Mobile, supply the Confederacy with food, clothing and munitions of war. The steam locomotive no longer blew its shrillest whistle as it started from Mobile with a rich load of provisions and arms for the city of Richmond, to enable their brave and desperate soldiers to sustain the lost cause by a few spasmodic efforts that could be of no service to them. And here the reader will see the benefit the battle of Mobile Bay was to the Union and the injury it was to the Confederacy, and Farragut once more earned the plaudits of the nation by his successful conflict against desperate odds.

The people of the North rejoiced heartily when they heard of this famous victory, while the people of the South were proportionally depressed. They had counted so

much on Buchanan (who was very popular among them) and on his fleet, that this last blow almost deprived them of all hope; but they fought on to the last with unequalled energy and bravery.

This victory atoned for the effects of the misadventures with the ram "Albemarle" in the sounds of North Carolina. The Southerners had made great capital out of that affair, and so rejoiced over it that the people of the North were disposed to regard it as more important than the Navy Department chose to acknowledge; and the press of the North, always prone to take sides against Federal officers, published reports that were wholly unreliable.

And herein lay the difference between the North and the South. Though the latter might be fighting in a bad cause, yet the people stood by each other like a band of brothers, and when their officers met with defeats they did not raise a howl from one end of the Confederacy to the other—they smoothed them over, and often claimed them as victories. But it was otherwise with the press of the North. They had very little consideration for those who were fighting their battles, while they were comfortable at home, with substitutes in the field. They all wanted to dictate to their military leaders, and found fault oftener than they praised, while half the time they were not properly informed in regard to matters on which they were expressing opinions.

As soon as Secretary Welles heard of the results of the battle of Mobile Bay, he forwarded to Admiral Farragut the following congratulatory letter:

NAVY DEPARTMENT, }  
WASHINGTON, August 15, 1864. }

SIR—Your dispatch of the 5th instant, stating that you had on the morning of that day entered Mobile Bay, passing between Forts Morgan and Gaines, and encountering and overcoming the rebel fleet, I had the satisfaction to receive this day. Some preliminary account of your operations had previously reached us through rebel channels.

Again, it is my pleasure and my duty to congratulate you and your brave associates on an achievement unequalled in our service by any other commander, and only surpassed by that unparalleled naval triumph of the squadron under your command in the spring of 1862, when, proceeding up the Mississippi, you passed forts Jackson and St. Philip, and, overcoming all obstructions, captured New Orleans, and restored unobstructed navigation to the commercial emporium of the great central valley of the Union.

The Bay of Mobile was not only fortified and guarded by forts and batteries on shore, and by submerged obstructions, but the rebels had also collected there a formidable fleet, commanded by their highest naval officer, a former captain in the Union Navy, who, false to the Government and the Union, had deserted his country in the hour of peril, and levelled his guns against the flag which it was his duty to have defended. The possession of Mobile Bay, which you have acquired, will close the illicit traffic which has been carried on by running

the blockade in that part of the Gulf, and gives point and value to the success you have achieved.

Great results in war are seldom obtained without great risks, and it was not expected that the possession of the harbor of Mobile would be secured without disaster.

The loss of the gallant Craven and his brave companions, with the "Tecumseh" (a vessel that was invulnerable to the guns of Fort Morgan), by a concealed torpedo, was a casualty against which no human foresight could guard. While the Nation awards cheerful honors to the living, she will ever hold in grateful remembrance the memory of the gallant and lamented dead, who perilled their lives for their country and died in her cause.

To you and the brave officers and sailors of your squadron, who participated in this great achievement, the Department tenders its thanks and those of the Government and country.

Very respectfully, etc.,

GIDEON WELLES,

*Secretary of the Navy.*

Rear-Admiral DAVID G. FARRAGUT,  
*Commanding West Gulf Blockading Squadron,  
Mobile Bay.*

Fort Morgan remained yet to be captured, and all the necessary steps were being taken to bring about this desired object. The Army, under General Granger, had been transferred from Dauphine Island to its rear.

Admiral Farragut had also landed four 9-inch guns in the rear of the fort, under the command of Lieutenant H. B. Tyson, of the "Hartford," and manned with crews from the "Hartford," "Brooklyn," "Richmond" and "Lackawanna."

On the 21st of August, General Granger informed him that his guns were all in battery and would be ready to open upon the enemy's works on the morning of the 22d. Farragut, in consequence, directed the Monitors and other vessels carrying suitable guns to move up and be ready to open upon the fort at the same time with the army batteries.

At daylight, on the 22d, the bombardment began from the shore batteries, the Monitors and ships inside the Bay of Mobile and those outside, and it presented a most magnificent sight. No hotter bombardment was ever kept up for twenty-four hours.

At half-past 8 P. M., the citadel of the fort burst out in flames, adding its bright light to the grandeur of the scene, and illuminating the bay, where the cannon of the fleet, directed by practiced hands, were belching forth their deadly missiles, which sped on their destructive way unerringly.

When the fire broke out, General Granger ordered the rear batteries to redouble their fire. At 6 A. M. on the 23d an explosion took place in the enemy's work, and at half-past 6 a white flag was displayed on the parapet of Fort Morgan. The Admiral immediately sent Fleet-Captain Drayton to join General Granger and arrange the terms of surrender; which were that the fort, its garrison and all public property

should be surrendered, unconditionally, at 2 o'clock on that day, to the Army and naval forces of the United States then present. These terms were accepted by Brigadier-General R. L. Page, of the Confederate service (formerly a Commander in the United States Navy). The garrison was sent to New Orleans in company with the crews of the ram "Tennessee" and the gunboat "Selma."

List of the officers of the "Tennessee": Admiral, Franklin Buchanan; Commander, James D. Johnston; Lieutenants, Wm. L. Bradford, A. P. Wharton, E. G. McDermott; Masters, J. R. De Moley and H. W. Perron; Fleet Surgeon, R. C. Bowles; Engineers, G. D. Lining, J. O'Connell, John Hays, O. Benson and W. B. Patterson; Paymaster's Clerk, J. H. Cohen; Master's Mates, W. A. Forrest, Beebe and R. M. Carter; Boat-swain, John McCudie; Gunner, H. S. Smith. Officers of the "Selma": Commander, Peter U. Murphy; Lieutenant, J. H. Comstock.

General Page tried to obtain more favorable terms, but without success. He had held out bravely against the bombardment, and thought, perhaps, that he and his officers should have received some favors on that account; but then, again, he had caused an unnecessary loss of life by persisting in defending a fort that was virtually in the power of the Federal forces, and which he knew could not by any possibility escape capture. The defence was gallant, but it was an unnecessary display of bravery, as the end proved.

Admiral Farragut reported that after the assembling of the Confederate officers outside of the works, to deliver Fort Morgan to its conquerors, it was discovered, on an examination of the interior, that most of the guns were spiked and many of the gun-carriages wantonly injured, and arms, ammunition, provisions, etc., destroyed, and that there was every reason to believe that this was done after the white flag had been displayed. It was also discovered that General Page and several of his officers had no swords to deliver, and, further, that some of those that were surrendered were broken. He draws attention to the different course pursued by Colonel Anderson, who commanded at Fort Gaines, and turned over everything in good order.

The Admiral reflects very severely on General Page and his officers for their wanton destruction of property; but it must be remembered that this was done at Fort Morgan in the excitement of battle, and it might have been done without the General's knowledge by young officers who had had no extensive military training, and who were not posted as to the proprieties of the occasion. We do not like to believe that General Page lent himself to such im-

proper proceedings, for while he was in the United States Navy he was looked upon by all who knew him as the soul of honor, and although he committed the gravest fault when he abjured the flag under which he was born, educated and cherished, yet there were so many others of world-wide reputations who set the example and carried men away with their wild secession sophistries, that he could have erred on that one subject without forfeiting an honorable name. The fact of his not having a sword to deliver might have been an accident. It would have been very foolish in an officer of his age to suppose that he could in this way free himself from any odium that might attach to defeat, or gain any applause even from his warmest admirers.

No matter what happened, Fort Morgan was won in the most handsome manner, and Farragut was once more entitled to the heartiest congratulations of his countrymen. This, his last great achievement, had placed him in the foremost rank of naval officers, and the following letter from the Hon. Secretary of the Navy scarcely states the value of the service he had rendered to the Union cause:

NAVY DEPARTMENT, }  
September 5, 1864. }

SIR—Your dispatch, numbered 368, is received, informing the Department of the capture, on the 23d ultimo, of Fort Morgan. This is the last and most formidable of all the defences erected to command the entrance of the Bay of Mobile, and it is a gratification that its capitulation was effected sooner than had been anticipated. I will not, in this communication, stop to comment on the bad faith exhibited in the destruction of the arms and property in the fort after its surrender, which is reprobated by you with just severity; but I desire to congratulate you and your command on a series of achievements which put us in possession of the bay; and, until the integrity of the Union is fully vindicated and established, close all ocean communications with the city of Mobile.

In the success which has attended your operations, you have illustrated the efficiency and irresistible power of a naval force led by a bold and vigorous mind, and the insufficiency of any batteries to prevent the passage of a fleet thus led and commanded. You have, first on the Mississippi, and recently in the Bay of Mobile, demonstrated what had been previously doubted, the ability of naval vessels, properly manned and commanded, to set at defiance the best constructed and most heavily armed fortifications.

In these successive victories you have encountered great risks, but the results have vindicated the wisdom of your policy and the daring valor of our officers and seamen.

I desire the congratulations which are hereby tendered to yourself, your officers and men, may be extended to the Army, who have so cordially cooperated with you. Very respectfully,

GIDEON WELLES,  
*Secretary of the Navy.*

Rear-Admiral D. G. FARRAGUT,  
*Commanding W. G. B. Squadron, Mobile Bay.*

As soon as Fort Morgan had surrendered, Farragut ordered the channel raked for torpedoes.

Twenty-one were taken up, but most of them had lain so long in the water that they had, fortunately, become harmless. In consequence of this, the seamen became somewhat careless in handling them, and one torpedo exploded, killing and wounding the following named persons:

Killed—C. E. Milliken (Ord. Sea.).

Mortally wounded—Isaac Young (Ord. Sea.); John Miller (Sea.), Robert G. White (Sea.), George Thompson (Sea.)—all of U. S. S. "Seminole."

Wounded seriously—Pilot Martin Freeman, U. S. S. "Hartford"; Acting-Ensign John White; H. J. O'Brien (Qr. Mr.); William Howard (Lds.); James McDonald (Sea.), all of the "Metacomet;" and Boat-swain Charles White, of the "Seminole."

Slightly wounded—Henry Chester (Sea.); Edward Mann (O. S.); Thomas Webster (Lds.)—U. S. S. "Seminole."

These men had passed through all the danger of battle, and had stood to their guns like heroes, and now, when they might hope to live and enjoy part of the honor won in this great victory, they were snatched from life or maimed forever by an infernal machine, which the officers of the Union Navy, as a rule, disdained to use—trusting rather to hearts of steel and wooden ships with which to win their victories.

We place their names on the roll of fame as worthy to be remembered by all who honor the true American sailor, who will stick to his flag as long as he has a leg to stand on.

It is bad enough to have men shot down in battle while fighting their guns, but it is dreadful to see them lying crushed to pieces after the victory is won, especially when, as in this case, it might so easily have been prevented. Few of the vessels lost so many in killed and wounded during the fight as were lost by the explosion of this one torpedo.

One of the vessels of the Union fleet was lost very unnecessarily, and that was the steamer "Philippi," commanded by Acting-Master James T. Seaver, who, it appears, wished to undertake an adventure on his own account, and, after delivering some stores to the vessels outside the bar, stood in after the fleet to try and be of assistance in case any vessel was disabled. He was unfortunate enough to run aground, however, when within range of Fort Morgan, and the Confederate gunners struck his vessel almost every time and soon set her on fire, showing how much better is the aim of gunners when they are firing at a vessel that does not fire back. Had Fort Morgan fired as well at the fleet while passing, it would have crippled all the wooden ships.

We can imagine the Admiral's feelings

when, after passing all the batteries safely, he saw a vessel of his squadron in flames, away off in the outer bay, and out of the main channel. Worst of all, Acting-Master Seaver deserted his vessel, leaving the signal-book on the quarter-deck.

The "Philippi" was an express vessel, and a great loss to the squadron. It was a small loss, however, compared with the final gain, and it merely shows that, with all the precautions that a commander-in-chief may take, there is always some one person who will, for want of common sense, do his best to defeat the object of his commander.

Now that years have passed, and the prejudices of the day have been forgotten by all truly loyal men, we can calmly discuss this remarkable battle without any fear of being considered partial towards any of the parties concerned.

The question has often been asked, "Was Buchanan justified by circumstances in attacking Farragut's fleet, unless he was covered by the heavy batteries of Fort Morgan?"

Let us see first what effect the "Tennessee" had had upon the fleet, from the time it came under the fire of Fort Morgan until it anchored in Mobile Roads. The iron-clad occupied a commanding and raking position, backed by the three gun-boats and covered by Fort Morgan; but every vessel passed her without being disabled, all the serious injury which they received coming from the guns of Fort Morgan.

It was expected by the officers of the fleet that the Confederate iron-clad would place herself right in the way of the leading vessel, sink her with her formidable prow, throw the fleet into confusion, and keep them huddled together under the fire of the fort until she could get into their midst and deal destruction on every side. This is the course which Buchanan should have pursued, for it will be seen that his iron-clad was quite strong enough to withstand the battering of any vessel in the Union fleet. She was rammed by the "Monongahela," "Lackawanna," "Hartford," and "Ossipee." The first two vessels were seriously injured, the "Hartford" only hit a glancing blow, and the "Ossipee" received more injury than she inflicted; in fact, all their attacks were harmless against the iron-clad hull of the ram, which had been built expressly to stand just such encounters. The Board which examined her after the battle reported that there were no visible marks or evidence of injury done by the ramming she had received. This shows that the calculations made by Buchanan were not without due consideration. He knew every ship in the Union fleet, the number and calibre of their guns, their

speed, the strength of their hulls, and, in fact, all that was worth knowing about them. But he failed to appreciate the merit of their commanding officers, and, ever following in the wake of the "lost cause," he forgot the spirit of the brave seamen who manned the Union ships.

He well knew what would be the effect of the 11 and 15 inch shot that would be fired from the Monitors. He had seen in the fight of the "Monitor" and "Merrimac" that 11-inch shot would not penetrate the 4-inch armor of the latter, and he had seen, from the reports of the bombardment of Fort Sumter by the Monitors, that 15-inch shot had not enough penetrating power to break through masonry that was easily bored through and through by a 6-inch rifle. He knew that the fleet had very few rifled guns, and that what they had were small calibre Parrotts, which it was necessary to load with reduced charges in order to guard against explosion. He had placed one-third more armor on the "Tennessee" than was on the "Merrimac," and had strengthened her in other ways as no vessel had ever been strengthened before.

We have seen from the accounts of this battle that the hull of the "Tennessee" was virtually uninjured by the shots from the Monitors. Only one 15-inch shot penetrated her armor, while the 11-inch shot made no impression on her beyond shattering the port shutters; and had it not been for the carrying away of her exposed steering gear and smoke-stack, Buchanan's calculations might have been verified.

Yet the only real damage done to the "Tennessee" was by the Monitors, and it may be asked: "Would not the Monitors have captured her without the aid of the wooden ships?" We think they ought to have done so, unless by her superior speed she had escaped under the guns of the fort. The wooden ships smothered her by their heavy blows, demoralizing her crew and keeping them from the guns, for they did not know what would be the result of this constant ramming. It is certain that the "Tennessee" did not fire a gun after her last encounter with the "Hartford."

The Confederates claim that she was attacked by a squadron of eighteen vessels, and that Buchanan, single-handed, held his own for hours; while the fact is, she was attacked by only seven vessels of the fleet (four of them wooden), and the action lasted but an hour and a quarter—(8:45 to 10 A. M.)

Considering all things, Admiral Buchanan made a mistake in attacking the fleet when he did; he ought to have remained under shelter of Fort Morgan until the fleet attacked him, or else have come out in the

night when the vessels were at anchor and at a disadvantage. That was his only chance of success. As he took upon himself to go out and seek battle, instead of waiting for it to be offered to him, one would naturally suppose that his ship had a resisting power that was only known to himself, and that he, as one of the best sailors afloat, felt himself authorized to attack the whole fleet by daylight. If this was the case, the forces on each side might be considered as about equal, in spite of the disparity of numbers.

One point must not be lost sight of, and that is, that no damage was inflicted on the "Tennessee" before the Monitors came up, and when they did attack her the battle was soon ended. It is a significant fact in favor of iron-clads, and if the Monitors had possessed more speed they would not have required any assistance from wooden vessels.

In this connection we must mention a very creditable action of Commander Nicholson. The charge for the 15-inch gun, as regulated by the Bureau of Ordnance, was only 35 lbs. of powder, but Captain Nicholson nearly doubled it, using 65 lbs.—taking the responsibility of bursting the gun—but proving, in fact, that it could bear that charge for a limited number of rounds. The result was, that he pierced the armor of the ram, and dispelled the illusion of Buchanan and his crew—that their ship was invulnerable.

There is no doubt that the "Tennessee" was at that time the most formidable vessel the Confederates had ever built, and they might well feel proud of their great war monster, and believe her to be a match for half a-dozen Monitors. In fact, she might have been more than a match for them if the fight had taken place in the open sea, where her superior speed and long-range guns would have given her a great advantage.

This battle gave the Government a great deal of experience, and demonstrated beyond question that the 9 and 11 inch guns were perfectly useless against six inches of iron, heavily backed, even when fired at close quarters. But, with this lesson before them, the U. S. Government—for twenty years after the war—has held on to these guns, and paraded them about the world in obsolete wooden ships, which all other nations have abolished as unfit for war purposes.

The two great systems of iron-clad construction, which had been introduced on the scene of war by the North and the South respectively, had on this occasion a fair chance of being fully tested, and in a manner admitting of no dispute, and the palm was given to Ericsson's invention. The

want of speed and a proper armament are not faults inherent in his system.

The "Tennessee" was a formidable vessel, and her designers and constructors deserved great credit for the result of their labors. Had she succeeded in winning a victory in Mobile Bay, the world would have been some years longer groping in the dark for the right kind of an iron-clad, but would have found it finally in the Ericsson "Monitor," which to-day has no superior throughout the world.

This battle rendered Mobile of no value to the Confederacy, for, although owing to shoal water and obstructions, the Navy could not reach the city, it was as hermetically sealed against blockade-runners as if actually surrendered. A few vessels only were kept inside the bay, leaving Farragut at liberty to use his remaining force on the coast of Texas, where General Banks (after his failure up the Red River) had evacuated all the important points which had been captured by the Army and Navy, and thus left the Texan ports open to the blockade-runners.

The work of the Navy seemed to be endless. It had not only to fight the enemy, but to repair the blunders of quasi-military men, who would not even hold the positions which the Navy placed in their hands. Yet the officers and sailors worked on with unwearying activity and bravery to reach the victorious end, and every battle won diminished in an increasing ratio the Confederates' chance of success.

The battle of Mobile Bay proved several things which it is as important to know to-day as it was then. Guns mounted *en barbette*, even when protected by proper traverses, can be silenced and passed by steamers on their throwing in a heavy and concentrated fire, especially if they carry a large number of guns in broadside. No fort now existing in this country can keep out a fleet unless the channel is thoroughly obstructed.

Up to the present time, ships-of-war are gaining in strength over the forts of this country, and the saying that "one gun on shore is worth three on board-ship" may very properly be reversed. Steam has changed the whole principle of war, and iron-clads with rifled guns are too strong for our walls of stone, brick and mortar.

NOTE.—As the "Tennessee" was the most powerful and remarkable vessel the Confederates ever built, the scientific reader may take some interest in the following description of her construction, from the report of a Board of Survey, ordered by Admiral Farragut, after the battle :

DESCRIPTION OF THE CONFEDERATE IRON-CLAD  
"TENNESSEE."

The vessel had been built at Mobile, Alabama, under the superintendence of Messrs. Pierce and Bassett, naval constructors, and Mr. Frick, chief engineer of the station.

*Hull.* The hull of the vessel was very strongly built in every part, the materials being oak and yellow pine, with iron fastenings. Length from stem to stern on deck, 209 feet; greatest breadth of beam on deck, 48 feet; mean average draught of water about 14 feet.

The deck was covered fore and aft with wrought-iron plates, two inches thick.

The sides of the vessel were protected by an overhang, sponsoned, and covered with two layers of 2-inch wrought-iron. This overhang extended about six feet below the water line.

The sides of the vessel below the deck were eight feet thick, and the distance from the knuckle or outside of the overhang on deck, to the base of the casemate on either side, was ten feet. The vessel was provided with a strong beak or prow, which projected about two feet under water, formed by the continuation of the sponsoning and covered with wrought-iron plates.

The Casemate was very strongly built. It was 78 feet 8 inches long, and 28 feet 9 inches wide inside, the sides of the vessel extending ten feet from it on either side at the greatest breadth of beam.

The framing consisted of heavy yellow pine beams, 13 inches thick, and placed close together vertically. Outside planking of yellow pine, 5½

DIAGRAM OF THE CONFEDERATE IRON-CLAD RAM  
"TENNESSEE."

inches thick, laid on horizontally; and outside of this horizontal planking there was a layer of oak timber 4 inches thick, bolted on vertically, upon which the iron plating was secured.

The plating or armor of the casemate forward was 6 inches thick, consisting of three 2-inch iron plates, of about 6 inches wide each, and abaft and on the sides 5 inches thick, consisting of [two] 2-inch and one 1-inch iron plate of the same width.

The yellow pine framing of the casemate was planked over inside with 2½-inch oak timber, laid on diagonally. The whole of the armor plating was fastened with through bolts, 1½ inch diameter, with washers and nuts inside.

The casemate was covered on top with wrought-iron gratings composed of bars 2 inches thick and 6 inches wide, laid flat, and supported on wooden beams 12 inches square, and about 5 feet distant from each other. Some of these gratings were hinged and fitted to open from the inside.

There were ten gun-ports in the casemate, three in the broadside on either side, two forward and two aft. The forward and after ports, to port and starboard, were placed so as to enable the forward and after pivot-guns to be used as broadside guns. The directly-forward and after-ports were on a line with the keel.

The ports were elongated and made just wide enough for the entrance of the muzzle of the guns in training, and only high enough to allow a moderate elevation and depression of the gun.

The wooden backing was cut away on each side of the ports inside of the casemate, to allow the guns to be trained about one point forward and aft. The gun ports were covered with wrought-iron sliding plates or shutters five inches thick; those for

sliding plates or shutters for the pivot-guns were pivoted on the edge with one bolt that could be knocked out, detaching the shutter if necessary, and were worked by a combination of racks and pinions.

*Armament.* The armament of the "Tennessee" consisted of six rifled guns, Brooke's rifles.

The two pivot-guns were 7.125-inch bore, and the four broadside guns were 6-inch bore. These guns were reinforced at the breech by two wrought-iron bands, two inches thick respectively. Weight of projectiles, 95 pounds and 110 pounds, solid shot.

The pivot-guns were fitted on wooden slides, with a rack let into them. On an arm attached to the carriage there was a pinion for running out the gun, and, by raising the arm, the rack was thrown out of gear to allow the gun to recoil.

*Quarters for Officers and Crew.* For an iron-clad vessel the cabin was large and comfortable. The ward-room was situated immediately over the engine, and was open to it; but although sufficiently commodious, its ventilation was so bad, and the smell arising from the accumulation of bilge-water so offensive, that it would have been impossible for officers or others to preserve their health or to live there comfortably for any length of time.

The quarters of the crew were good and comfortable for an iron-clad vessel of her description. They consisted of a roomy berth-deck, with rooms fitted up on either side for the junior officers. When in port the crew were quartered on a covered barge, anchored near the vessel.

The steering arrangements were very defective, nor were the accommodations for the pilot and helmsman good.

*Machinery.* The machinery of the vessel consisted of two geared non-condensing engines. Cylinders, 24 inches diameter and 7 feet stroke.

These engines had been taken out of the Alabama River steamer, "Alonzo Child." They were placed fore and aft in the vessel, geared to an idler-shaft by spur gearing with wooden teeth, and from the idler-shaft to the propeller-shaft by bevel cast-iron gear.

*Boilers.* There were four horizontal fine boilers, 24 feet long, placed side by side, with one furnace under the whole of them; the products of combustion returning through the flues were delivered into one smoke-pipe.

The engine and fire-rooms were insufferably hot and very badly ventilated.

## INJURIES RECEIVED IN THE ACTION.

"The injuries to the casemate of the 'Tennessee' from shot are very considerable. On its after-side nearly all the plating is started; one bolt driven in; several nuts knocked off inside; gun-carriage of the after pivot-gun damaged, and the steering rod or chain cut near that gun. There are unmistakable marks on the after-part of the casemate of not less than nine 11-inch solid shot having struck within the space of a few square feet in the immediate vicinity of that port. On the port side of the casemate the armor is also badly damaged from shot.

"On that side nearly amidships of the casemate, and between the broadside guns, a 15-inch solid shot knocked a hole through the armor and backing, leaving on the inside an undetached mass of oak and pine splinters, about three by four feet, and projecting inside of the casemate about two feet from the side. This is the only shot that penetrated the wooden backing of the casemate, although there are numerous places on the inside giving evidence of the effect of the shot.

"There are visible between forty and fifty indentations and marks of shot on the hull, deck and casemate, varying from very severe to slight; nine of the deepest indentations on the after-part of the casemate (evidently being 11-inch shot), and the marks of about thirty of other calibres on different parts of

"There are also a few other marks, being, however, merely scratches or slight indentations of the plating.

"The smoke-stack was shot away, although it is not improbable the heavy ramming by the 'Monongahela,' 'Lackawanna,' and the 'Hartford' had previously prepared it for its fall.

"Three of the wrought-iron port shutters or slides were so much damaged by shot as to prevent the firing of the guns.

"There are no external visible marks or evidences of injury inflicted upon the hull of the 'Tennessee' by the severe ramming of the 'Monongahela,' 'Lackawanna,' and 'Hartford'; but inasmuch as the decks leaked badly, and when there is a moderate sea running in the bay, her reported usual leakage of three inches an hour being now increased to five or six inches an hour, it is fairly to be inferred that the increased leakage is caused by the concus-

sion of the vessels. The 'Tennessee' is in a state to do good service now. To restore her to the state of efficiency in which she was when she went into action with this fleet on the 5th instant, it will be necessary to overhaul much of the iron plating on the port and after-sides of the casemate, and replace some of it.

"The iron gun-port slides or shutters, which were damaged, must be either removed or repaired.

"A new smoke-stack is required, and additional ventilators should be fitted.

"Blowers are required to produce proper ventilation in the engine-room and on the berth-deck.

"When these small repairs and additions shall have been made, the iron-clad 'Tennessee' will be a most formidable vessel for harbor and river service, and for operating generally in smooth water, both offensively and defensively."

## WEST GULF SQUADRON, JANUARY 1ST, 1864.

REAR-ADMIRAL DAVID G. FARRAGUT.

CAPTAIN PERCIVAL DRAYTON, FLEET-CAPTAIN.

[Vessels and Commanders marked with a \* were in the Battle of Mobile Bay.]

### \* STEAMER "HARTFORD"—FLAG-SHIP.

Captain, Percival Drayton, at Mobile; Lieutenant-Commander, L. A. Kimberly, executive officer at Mobile; Lieutenants, H. B. Tyson and J. C. Watson; Fleet Surgeon, James C. Palmer; Fleet Paymaster, Edw. T. Dunn; Surgeon, John J. Gibson; Assistant-Surgeon, Wm. Commons; Paymaster, Wm. T. Merideth; Marines: Captain, Charles Heywood; First-Lieutenant, C. L. Sherman; Ensigns, C. D. Jones and LaRue P. Adams; Acting-Ensigns, Wm. H. Whiting, G. D. B. Glidden, C. W. Snow and Geo. Munday; Pilot, Martin Freeman; Acting-Master's Mates, J. J. Tinelli, Wm. H. Hathorne, W. H. Childs, R. P. Herrick, G. R. Avery and H. Brownell; Fleet Engineer, Wm. H. Shock; Chief Engineer, Thom Williamson; Second-Assistants, E. B. Latch, F. A. Wilson, Isaac DeGraff, C. M. Burchard and John Wilson; Third-Assistants, J. E. Speights, H. L. Pilkington and Alfred Hoyt; Boatswain, Robert Dixon; Gunner, J. L. Staples; Carpenter, O. S. Stimson; Sailmaker, T. C. Herbert.

### STEAMER "PENSACOLA."

Commodore, Henry H. Bell, commanding squadron *pro tem.*; Lieutenant-Commander, Samuel R. Franklin; Lieutenants, F. V. McNair and G. W. Sumner; Surgeon, Wm. Lansdale; Assistant-Surgeon, W. H. Jones; Acting-Assistant Paymaster, J. H. Stevenson; Marines: First-Lieutenant, Norval L. Nokes; Acting-Masters, F. T. King, Thos. Andrews and S. B. Washburne; Acting-Ensign, V. W. Jones; Engineers: First-Assistant, John Purdy, Jr.; Second-Assistants, A. H. Able and Alfred Colin; Third-Assistants, T. W. Fitch, F. C. Burchard and G. W. Baird; Boatswain, James Herold; Gunner, David Roe; Carpenter, Edward Cox; Sailmaker, Chas. Lawrence.

### STEAM-FRIGATE "COLORADO."

Commodore, Henry K. Thatcher; Lieutenants, H. W. Miller and Benj. F. Day; Paymaster, W. H. Williams; Chaplain, D. X. Junkin; Assistant-Surgeons, A. W. H. Hawkins and Matthew Chalmers; Marines: Captain, Geo. R. Graham; Second-Lieutenant, S. C. Adams; Acting Masters, Thos. Hanrahan and Charles Folsom; Acting-Ensigns, Henry Avery, F. P. Bibbes and B. B. Knowlton;

Acting-Master's Mates, A. O. Child, C. H. Littlefield, W. G. Perry, J. L. Vennard and Leon Bryant; Chief Engineer, R. M. Bartleman; Acting-First-Assistant, C. W. Pennington; Acting-Second-Assistant, G. S. Perkins; Acting-Third-Assistants, T. J. Lavery, R. Wallace and H. B. Green; Boatswain, A. M. Pomeroy; Gunner, R. H. Cross; Carpenter, John A. Dixon; Sailmaker, W. N. Maul.

### \* STEAMER "OSSIPEE."

Commander, William E. LeRoy, at Mobile; Captain, John P. Gillis; Lieutenant, J. A. Howell; Surgeon, B. F. Gibbs; Assistant-Surgeon, G. H. E. Baumgarten; Paymaster, E. Foster; Acting-Master, C. C. Bunker; Acting-Ensigns, H. S. Lambert, Chas. Putnam, C. W. Adams, W. A. Van Vleck and C. E. Clark; Acting-Master's Mates, W. Wingood, W. W. Black and P. P. Hawkes; Engineers: Acting-Chief, J. M. Adams; Acting-First-Assistant, Geo. L. Harris; Acting-Second-Assistant, J. W. Webb; Third-Assistants, G. W. Kidder, John Mathews, Wm. Collier, W. W. Vanderbilt and James Germon; Boatswain, Andrew Milne; Gunner, J. Q. Adams.

### \* STEAMER "RICHMOND."

Captain, Thornton A. Jenkins; Lieutenant-Commander, Edward Terry; Surgeon, L. J. Williams; Assistant-Surgeon, J. D. Murphy; Paymaster, Edwin Stewart; First-Lieutenant of Marines, S. W. Powell; Acting-Masters, P. S. Borden and C. J. Gibbs; Ensign, P. H. Cooper; Acting-Ensigns, J. F. Beyer, C. M. Chester and Lewis Clark; Acting-Master's Mates, Wm. R. Cox, James West, T. J. Warner and W. C. Seymour; Chief Engineer, Jackson McElmuell; First-Assistant, E. J. Brooks; Second-Assistant, A. J. Kenyon; Third-Assistants, A. J. Kirby, Robert Weir, James Patterson, John D. Ford, W. H. Crawford and C. W. C. Senter; Boatswain, I. P. Choate; Gunner, Wm. Cheney; Carpenter, H. L. Dixon; Sailmaker, Wm. Rogers.

### \* STEAMER "LACKAWANNA."

Captain, John B. Marchand; Lieutenants, T. C. Bowen and S. A. McCarty; Surgeon, Thomas W. Leach; Paymaster, James Fulton; Acting-Master, Felix McCurley; Ensigns, G. H. Wadleigh and Frank Wildes; Acting-Ensign, Geo. T. Chanman;

Acting-Master's Mates, Charles Welles and John Cannon; Engineers: Acting-Chief, W. A. R. Latimer; Second-Assistants, R. H. Gunnell and E. J. Whittaker; Third-Assistants, G. W. Roche, C. F. Marsland, B. E. Pike and I. B. Fort; Boatswain, W. E. Leeds; Gunner, J. G. Foster.

\* STEAMER "ITASCA."

Lieutenant-Commander, George Brown, at Mobile; Acting-Master, Richard Hustace; Acting-Ensigns, C. H. Hurd and James Igo; Acting-Assistant Surgeon, Henry Rockwood; Acting-Assistant Paymaster, George L. Mead; Acting-Master's Mate, Henry Myron; Engineers: Acting-Second-Assistant, M. H. Gerry; Acting-Third-Assistants, Owen Raney and George C. Irelan.

NOTE.—List not given in Navy Register for January, and is, therefore, incomplete.

STORE SHIP "POTOMAC."

Commander, Alex. Gibson; Assistant-Surgeon, Geo. R. Brush; Acting-Assistant Paymaster, J. H. Wood; Chaplain, Robert Given; Captain of Marines, Geo. W. Collier; Acting-Master, Geo. D. Upham; Acting-Ensigns, Edwin Cressy and L. B. King; Acting-Master's Mates, A. Whiting, W. H. Metz and James Connell; Gunner, Henry Hamilton; Acting-Carpenter, John C. Hoffman.

\* STEAMER "MONONGAHELA."

Commander, James H. Strong; Lieutenant, Roderick Prentiss; Surgeon, David Kindleberger; Assistant Paymaster, Forbes Parker; Acting-Masters, Ezra Leonard and Chas. Higgins; Ensign, G. M. Brown; Acting-Ensigns, C. D. Sigsbee, D. W. Mulen and H. W. Grinnell; Acting-Master's Mate, W. S. Armand; Chief Engineer, Geo. F. Kutz; Second-Assistants, Joseph Trilly and N. B. Clark; Third-Assistants, J. J. Bissett, Edw. Cheney, P. G. Eastwick and P. J. Langer; Boatswain, Wm. Green; Gunner, J. D. Fletcher.

\* STEAMER "METACOMET."

Lieutenant-Commander, James E. Jouett, at Mobile; Acting-Masters, Henry J. Sleeper, N. M. Dyer and C. W. Wilson; Acting-Ensigns, H. C. Nields, G. E. Wing, John White and John O. Morse; Acting-Assistant Paymaster, Horace M. Harriman; Assistant Surgeon, Edw. D. Payne; Acting-Master's Mates, J. K. Goodwin, — Miller, Chas. C. Jones and Henry Wyman; Engineers: First-Assistant, Jas. Atkins; Second-Assistant, Joseph Morgan; Acting-Third-Assistants, S. W. King and George B. Rodgers; Acting-Gunners, James Lamen, at Mobile, and Peter McGovern (January 1).

SLOOP-OF-WAR "PORTSMOUTH."

Commander, L. C. Sartori; Assistant-Surgeon, C. S. Giberson; Assistant Paymaster, Caspar Schenck; First-Lieutenant of Marines, W. H. Hale; Acting-Masters, G. Richmond, John Wallace and Eben Hoyt; Acting-Ensigns, John H. Allen and Abraham Rich; Acting-Master's Mates, T. H. Jenks, W. F. Buel and Samuel Carpenter; Boatswain, John Ross; Sailmaker, L. B. Wakeman.

\* STEAMER "ONEIDA"

Commanders, J. R. M. Mullany, at Mobile, and W. E. LeRoy; Lieutenant, C. L. Huntington; Surgeon, John Y. Taylor; Paymaster, C. W. Hassler; Acting-Masters, Thomas Edwards and Elijah Rose; Ensign, E. N. Kellogg; Acting-Ensigns, C. V. Gridley and John Sears; Acting-Master's Mates, Edward Bird, D. H. Clark and Chas. Gainesford; Chief Engineer, Wm. H. Hunt; Second-Assistants, J. H. Morrison and R. H. Fitch; Third-Assistants, W. D. McIlvaine and C. W. Breaker; Acting-Third-Assistants, W. E. Dearer and Nicholas Dillon; Boatswain, H. Dickinson; Gunner, Wm. Parker.

STEAMER "PRINCESS ROYAL."

Commander, M. B. Woolsey; Lieutenant, C. E. McKeon; Assistant Surgeon, W. F. Chesley;

Acting-Assistant Paymaster, F. T. Morton; Acting-Master, F. J. Grover; Acting-Ensigns, T. H. Paine and F. A. Miller; Acting-Master's Mates, Freeman Langly and W. E. Cannon; Engineers: Acting-First-Assistant, Wm. Huntley; Acting-Second-Assistant, W. H. Thompson; Acting-Third-Assistants, Andrew Redmond, Charles Wolf and Peter Taylor.

\* STEAMER "SEMINOLE."

Commanders, E. Donaldson, at Mobile, and Henry Rolando; Lieutenant, A. T. Mahan; Surgeon, Charles Martin; Paymaster, T. T. Caswell; Acting-Master, C. G. Arthur; Ensign, G. K. Haswell; Acting-Ensigns, F. A. Cook, G. B. Stevenson and F. Kempton; Acting-Master's Mates, D. K. Perkins, J. P. Knowles and John Dennett; Engineers: Acting-First-Assistant, C. B. Babcock; Acting-Second-Assistant, A. R. Calden; Acting-Third-Assistants, Wm. Drinkwater, G. S. Thurston, P. J. Hughes and H. M. Quig; Boatswain, Paul Atkinson; Acting-Gunner, Wm. H. Herring.

\* STEAMER "OCTORARA."

Lieutenant-Commanders, C. H. Greene, at Mobile, and W. W. Iow; Lieutenant, C. M. Schoonmaker; Assistant-Surgeon, E. R. Dodge; Acting-Assistant Paymaster, W. H. Higbee; Acting-Masters, E. A. Howell and W. D. Urann; Acting-Ensigns, G. F. Hollis, A. R. Jones and G. H. Dodge, Jr.; Engineers: First-Assistant, J. W. Whittaker; Acting-Second-Assistant, W. W. Shipman; Third-Assistants, C. R. Morgan and J. G. Cooper; Acting-Third-Assistant, Joseph Knight.

STEAMER "KANAWHA."

Lieutenant-Commander, Wm. K. Mayo; Acting-Assistant Surgeon, F. W. Brigham; Acting-Assistant Paymaster, L. L. Penniman; Acting-Ensigns, L. S. Trickett, W. A. Purdie and H. Banks; Acting-Master's Mates, R. P. Boss and James Clark; Engineers: Second-Assistant, Edward Farmer; Third-Assistants, W. S. Cherry, M. M. Murphy and M. W. Mather.

STEAMER "GENESEE."

Lieutenant-Commander, Edward C. Grafton; Lieutenant, Thomas S. Spencer; Acting-Assistant Surgeon, W. F. Hutchinson; Acting-Assistant Paymaster, F. C. Alley; Acting-Masters, Wm. Hanson and C. M. Merchant; Acting-Ensigns, C. H. Baxter and E. W. Halero; Acting-Master's Mates, W. J. Crosby and John Conner; Engineers: Acting-First-Assistant, John Cahill; Acting-Second-Assistant, C. H. Harrab; Acting-Third-Assistants, Christopher Milton, Michael McLaughlin and Henry Webster.

\* STEAMER "GALENA."

Lieutenant-Commander, C. H. Wells, at Mobile; Acting-Volunteer-Lieutenant, C. W. Wilson; Acting-Master, D. C. Kells; Acting-Ensigns, Henry Pease, Jr., and S. S. Miner; Acting-Assistant Surgeon, George P. Wright; Acting-Assistant Paymaster, Theo. S. Kitchen; Acting-Master's Mates, Francis Tuttle, Jas. H. Delano and O. H. Robbins; Engineers: First-Assistant, Wm. H. Buehler; Second-Assistants, C. H. Greenleaf and J. A. Scott; Acting-Third-Assistants, Patrick Burns and William Welcker; Captain's Clerk, Lesley G. Morrow.

STEAMER "OWASCO."

Lieutenant-Commander, E. W. Henry; Acting-Assistant Surgeon, G. H. Van Deusen; Acting-Assistant Paymaster, W. B. Coleman; Acting-Masters, E. A. Terrill and T. B. Sears; Acting-Ensigns, T. H. Baker, W. H. Titcomb, and T. McL. Miller; Acting-Master's Mate, R. N. Eldridge; Engineers: Second-Assistant, F. S. Barlow; Third-Assistant, B. D. Clemens; Acting-Third-Assistants, T. H. Carter and James Peales.

## STEAMER "KATAHDIN."

Lieutenant-Commander, P. C. Johnson; Assistant-Surgeon, Ira Bragg; Acting-Assistant Paymaster, L. S. Bradley; Acting-Ensigns, M. W. McEntee, G. A. Fannce, P. R. MacLaurin and George Leonard; Acting-Master's Mate, John Leeds; Engineers: Second-Assistant, T. W. Rae; Third-Assistants, W. J. Reed, W. W. Heaton, John McIntyre and Thomas Tuttle.

## \*STEAMER "PORT ROYAL."

Lieutenant-Commander, Bancroft Gherardi, at Mobile; Lieutenant-Commander, George U. Morris; Acting-Assistant-Surgeon, E. R. Hutchins; Paymaster, G. A. Sawyer; Acting-Masters, E. Van Slyck and Edward Herrick; Acting-Ensigns, William Hull and Peter Faunce; Acting-Master's Mates, E. O. Tyson, H. D. Baldwin and W. A. Prescott; Engineers: Second-Assistant, W. C. Selden; Third-Assistants, E. M. Breeze, F. B. Allen, Henry Snyder and W. C. F. Reichenbach.

## STEAMER "CHOCURA."

Lieutenant-Commander, Bancroft Gherardi; Acting-Assistant Surgeon, B. F. Hamell; Acting-Assistant Paymaster, E. L. Turner; Acting-Master, Alfred Washburn; Acting-Ensigns, D. M. Carver, Robert Beardsley and T. T. Tracy; Acting-Master's Mates, A. P. Atwood and Thomas Kennedy; Engineers: Second-Assistant, H. H. Maloney; Third-Assistants, Theodore Cooper, Andrew Blythe and N. H. Lawton; Acting-Third-Assistant, O. D. Hughes.

## STEAMER "PEMBINA."

Lieutenant-Commander, L. H. Newman; Acting-Assistant Surgeon, A. R. Holmes; Acting-Assistant Paymaster, Walter Fuller; Acting-Masters, Bowen Allen and J. W. Saunders; Acting-Ensigns, William Lyddon, B. M. Chester and Olof Sandstrom; Acting-Master's Mate, H. T. Davis; Engineers: Second-Assistants, T. A. Stephens and J. W. Sydney; Third-Assistants, R. M. Hodgson, J. F. Bingham and C. F. Nagle.

## STEAMER "PENOBSCOT."

Lieutenant-Commander, A. E. K. Benham; Acting-Assistant Surgeon, F. C. Sargent; Acting-Assistant Paymaster, F. H. Hinman; Acting-Master, C. E. Jack; Acting-Ensigns, H. D. Edwards, F. W. Hearn, J. B. Fairchild and W. G. Campbell; Engineers: Acting-First-Assistant, W. M. Rhodes; Acting-Second-Assistants, W. C. Barrett and A. E. McConnell; Third-Assistants, Warren Howland and J. F. Plant.

## SLOOP-OF-WAR "VINCENNES."

Lieutenant-Commander, C. H. Greene; Assistant-Surgeon, G. B. Slough; Acting-Assistant Paymaster, Samuel Jordan; Acting-Masters, J. T. Searer and A. E. Hunter; Acting-Boatswain, A. O. Goodsoe; Gunner, William Wilson; Sailmaker, N. Lynch.

## \*STEAMER "KENNEBEC."

Lieutenant-Commander, W. P. McCann; Assistant Surgeon, C. H. Perry; Acting-Assistant Paymaster, C. L. Burnet; Acting-Master, Edward Baker; Acting-Ensigns, A. L. Emerson, J. J. Butler, J. D. Ellis and H. E. Tinkham; Acting-Master's Mate, H. C. Nields; Engineers: Third-Assistants, B. C. Gowing, E. E. Roberts, L. W. Robinson and G. R. Holt.

## STEAMER "PINOLA"

Lieutenant-Commander, O. F. Stanton; Assistant-Surgeon, L. M. Lyon; Acting-Assistant Paymaster, A. B. Robinson; Acting-Master, W. P. Gibbs; Acting-Ensigns, C. V. Rummell, G. M. Bogart and H. Crosby; Acting-Master's Mate, J. G. Rosling; Engineers: First-Assistant, John Johnson; Third-Assistants, John Everding, F. E. Hosmer, C. O. Farciot and S. A. Appold.

## STEAMER "CAYUGA."

Lieutenant-Commander, Wm. H. Dana; Acting-Assistant Surgeon, J. E. Parsons; Acting-Assistant Paymaster, J. N. Whiffen; Acting-Masters, E. D. Percy and John Hanscom; Acting-Master's Mates, F. P. Stevens, R. O. Longfear and I. A. Abbott; Engineers: Second-Assistant, J. M. Harris; Third-Assistants, W. A. H. Allen, J. C. Chaffee and Ralph Aston.

## STEAMER "OALHOUN."

Lieutenant-Commander, Geo. A. Bigelow; Assistant Surgeon, D. M. Skinner; Acting-Assistant Paymaster, D. W. Riddle; Acting-Ensigns, J. S. Clark and J. M. Chadwick; Acting-Master's Mates, J. L. Blauvelt, J. P. Sturgin and J. Mayo; Engineers: Acting-Third-Assistants, W. H. Brown, F. D. Stuart, Lucius Harlow and Richard Dwyer.

## STEAMER "ESTRELLA."

Lieutenant-Commander, A. P. Cooke; Assistant Surgeon, Thomas Hiland; Acting-Assistant Paymaster, F. J. Painter; Acting-Master, G. P. Romero; Acting-Ensign, W. W. Duley; Acting-Master's Mates, W. H. Wetmore and Thomas Kelly; Engineers: Acting-Second Assistant, R. G. Pope; Acting-Third-Assistants, G. R. Marble, W. D. Pancake, J. F. Winters and John Gilbert.

## STEAMER "NEW LONDON."

Lieutenant-Commander, Weld N. Allen; Acting-Assistant Paymaster, E. A. Chadwick; Acting-Master, H. L. Sturgis; Acting-Ensigns, Edward Pendexter and Eugene Biondi; Acting-Master's Mates, Edward Hennessy and Francis Way; Engineers: Acting-Second Assistant, H. P. Powers; Acting-Third-Assistants, Chas. Haskins, John Dunlap and James Creery.

## STEAMER "ARROOSTOOK."

Lieutenant-Commander, Chester Hatfield; Assistant Surgeon, H. W. Birkey; Acting-Assistant Paymaster, W. L. Pynchon; Acting-Ensigns, J. S. Russ and J. Griffin; Acting-Master's Mates, C. S. Bellows, Wm. Barker and Edw. Culbert; Engineers: Acting-Second-Assistant, J. C. Cree; Third-Assistants, James Entwistle, Samuel Gregg and Nathan Brown.

## STEAMER "SCIOTA."

Lieutenant-Commander, George H. Perkins; Acting-Assistant Surgeon, E. P. Colby; Acting-Assistant Paymaster, C. H. Lockwood; Acting-Master, B. Van Voorhis; Acting-Ensigns, S. S. Beck, S. H. Bevins and Geo. W. Coffin; Acting-Master's Mates, W. A. Osborne, Charles Atkins and Richard Graham; Engineers: Second-Assistant, Horace McMurtrie; Third-Assistants, A. H. Price, W. F. Pratt and Daniel Dod.

## STEAMER "ARKANSAS."

Acting-Volunteer-Lieutenant, David Cate; Acting-Assistant Surgeon, E. D. G. Smith; Acting-Assistant Paymaster, E. G. Bishop; Acting-Master, James McDonald; Acting-Ensigns, B. F. Russell and F. H. Beers; Acting-Master's Mates, T. S. Ransom, G. F. Carey and Roger Farrill; Engineers: Acting-First-Assistant, James Blenkinsop; Acting-Second-Assistants, S. T. Reeves and Benjamin La Bree; Acting-Third-Assistant, James Crooks.

## STEAMER "ALBATROSS."

Acting-Volunteer-Lieutenant, Theodore B. DuBois; Acting-Assistant Surgeon, I. C. Whitehead; Acting-Assistant Paymaster, G. R. Martin; Acting-Ensigns, R. E. Anson and Alfred Hornsby; Acting-Master's Mates, James Brown, John Clark and J. T. Thompson; Engineers: Acting-First-Assistant, J. Tucker; Acting-Third-Assistants, E. H. Slack, J. Shields and J. Pearce.

## STEAMER "J. P. JACKSON."

Acting-Volunteer-Lieutenant, L. W. Pennington; Acting-Assistant Surgeon, T. S. Yard; Acting-Assistant Paymaster, C. B. Perry; Acting-Masters, M. B. Crowell and J. F. Dearborn; Acting-Ensign, J. S. Gullett; Acting-Master's Mates, W. H. Howard and Jer. Murphy; Engineers: Acting-Second-Assistant, J. C. Mockabee; Acting-Third-Assistants, J. D. Cadwell, T. W. Harding and James Lockwood.

## STEAMER "VIRGINIA."

Acting-Volunteer-Lieutenant, Charles H. Brown; Acting-Assistant Surgeon, C. H. Mason; Acting-Assistant Paymaster, E. C. Bowman; Acting-Master, L. G. Cook; Acting-Ensigns, E. H. Thomas, J. H. Rogers, A. F. West and N. A. Blume; Acting-Master's Mate, F. E. Brackett; Engineers: Acting-Second-Assistant, S. S. Glass; Acting-Third-Assistants, E. J. Gillespie, Charles Goodwin and E. M. Clark.

## STEAMER "PENGUIN."

Acting-Volunteer-Lieutenant, James R. Beers; Acting-Assistant Surgeon, C. D. White; Acting-Assistant Paymaster, T. C. Hutchinson; Acting-Master, Tolford Durham; Acting-Ensigns, Charles Knowles, N. S. Hayden and Benj. Caulet; Acting-Master's Mates, Charles Smith, Jr., F. C. Almy and W. A. Hannah; Engineers: Acting-First-Assistant, F. W. Warner; Acting-Second-Assistant, Milton Randall; Acting-Third-Assistants, John Webster, Edw. Reilly and DeWitt C. McBride.

## STEAMER "TENNESSEE."

Acting-Volunteer-Lieutenant, Pierre Giraud; Assistant-Surgeon, W. C. Hull; Acting-Assistant Paymaster, B. F. D. Fitch; Acting-Master, Geo. E. Nelson; Acting-Ensigns, J. B. Trott, W. S. Bacon and Jos. Marthon; Acting-Master's Mate, H. E. Giraud; Engineers: Acting-First-Assistant, D. Frazer; Acting-Second-Assistant, E. C. Maloy; Acting-Third-Assistants, Thos. Fitzgerald, G. W. Kiersted and Thomas Campbell.

## BARK "W. G. ANDERSON."

Acting-Volunteer-Lieutenant, John A. Johnstone; Acting-Assistant Surgeon, T. M. Drummond; Acting-Assistant Paymaster, T. S. Dabney; Acting-Masters, J. F. Winchester and A. Cook; Acting-Ensigns, R. H. Cary, A. P. Sampson, S. H. Newman and S. A. Brooks; Acting-Master's Mates, Rosville Davis, S. C. Heath, Charles Brown and James Morgan.

## BARK "ARTHUR."

Acting-Volunteer-Lieutenant, T. F. Wade; Acting-Assistant Paymaster, C. E. Mitchell; Acting-Masters, W. O. Lundt and W. S. Wittington.

## BRIG "BOHIO."

Acting-Volunteer-Lieutenant, W. D. Roath; Acting-Assistant Paymaster, J. M. Skillman; Acting-Master, W. M. Stannard; Acting-Ensigns, G. W. Baker and James Sheppard.

## STEAMER "ARIZONA."

Acting-Master, H. Tibbetts; Acting-Assistant Surgeon, S. H. Weil; Acting-Assistant Paymaster, W. L. Darling; Acting-Ensigns, S. J. Butler and Wm. Harcourt; Acting-Master's Mates, J. H. Mallon and T. P. Jones; Engineers: Acting-First-Assistant, C. H. Harrington; Acting-Second-Assistant, J. W. Smyth; Third-Assistants, J. E. Fallon and L. Golden.

## STEAMER "ANTONA."

Acting-Master, A. L. B. Zerega; Acting-Assistant Paymaster, H. M. Whittemore; Acting-Ensigns, J. A. Davis, J. F. Perkins, A. L. C. Bowie and H. L. Ransom; Acting-Master's Mate, J. P. Cole; Engineers: Acting-First-Assistant, W. D. Adair; Acting-Third-Assistants, R. H. Alexander, Barna Cook and F. A. Hurd.

## STEAMER "GRANITE CITY."

Acting-Masters, C. W. Lamson and A. H. Atkinson; Acting-Assistant Surgeon, E. C. Ver Mulen; Acting-Assistant Paymaster, John Reed; Acting-Ensigns, S. R. Tyrrell and A. H. Berry; Acting-Master's Mates, T. R. Marshall, T. E. Ashmead and D. Hall; Engineers: Acting-Second-Assistant, S. Green; Acting-Third-Assistants, E. M. Schryver, J. H. Rollins and R. H. Gordon.

## STEAMER "JASMINE."

Acting-Master, Wm. A. Maine; Acting-Ensign, F. J. Brenton; Acting-Master's Mates, L. E. Heath and F. W. Kimball; Engineers: Acting-Second-Assistant, Samuel Lemon; Third-Assistant, Jay Dinsmore; Acting-Third-Assistants, J. M. Cheeny and J. H. Pelton.

## STEAMER "HOLLYHOCK."

Acting-Master, Meltiah Jordan; Acting-Master's Mate, Lewis Milk; Engineers: Acting-First-Assistant, J. F. Butler; Acting-Second-Assistants, Arthur Clements and S. B. Rannels; Acting-Third-Assistants, G. S. Prvor and Arthur Irwin.

## STEAMER "COMMODORE."

Acting-Master, John R. Hamilton; Acting-Master's Mates, M. G. Nickerson and Richard Seward; Engineers: Acting-Third-Assistants, Wm. Connell, E. A. Hopkins and Sanford Curran.

## STEAMER "GERTRUDE."

Acting-Master, Henry C. Wade; Acting-Assistant Surgeon, Adam Shirk; Acting-Assistant Paymaster, R. R. Brawley; Acting-Ensigns, Fred Newell, Wm. Shepherd and Horace Walton; Acting-Master's Mates, C. A. Osborne, Benj. Leeds and T. W. Jones; Engineers: Acting-Second-Assistant, C. P. Maples; Acting-Third-Assistants, F. C. Murrey, Philip Ketter and J. H. Nesson.

## STEAMER "EUGENIE."

Acting-Ensign, N. M. Dyer; Acting-Master's Mates, John Locke and Edmund Aiken; Engineers: Acting-Second-Assistant, Wm. Morris; Acting-Third-Assistant, W. L. Wallace.

## SHIP "FEAR-NOT."

Acting-Master, D. S. Murphy; Acting-Assistant Paymasters, T. E. Ryan and W. C. Cook; Acting-Ensign, M. H. Karlowski; Acting-Master's Mates, C. H. Blount and H. R. Rome.

## SHIP "NIGHTINGALE."

Acting-Master, E. D. Bruner; Acting-Assistant Surgeon, John Flynn; Acting-Assistant Paymaster, H. D. Kimberly; Acting-Master's Mates, T. W. Stevens and Alonzo Gowdy.

## SHIP "KITATINNY."

Acting-Master, I. D. Seyburn; Acting-Assistant Paymaster, A. Depue; Acting-Ensigns, Henry Jackson, G. H. Barry, N. J. Blasdel and W. H. De Grosse; Acting-Master's Mates, J. W. Brown, W. H. Sprague and F. A. Johnson.

## SHIP "PAMPERO."

Acting-Masters, F. E. Ellis and A. H. Mitchell; Acting-Assistant Surgeon, J. W. Langley; Acting-Assistant Paymaster, E. S. Wheeler.

## BARK "J. O. KUHN."

Acting-Master, John F. Hardin; Acting-Ensigns, J. P. Pearson and Alex. Hanson.

## BARKENTINE "HORACE BEALS."

Acting-Master, D. P. Heath; Acting-Master's Mate, Francis Keenan; Acting-Assistant Paymaster, Ichabod Norton.

## BRIG "SEAFOAM."

Acting-Master, D. C. Woods; Acting-Master's Mate, George Woodland.

## YACHT "CORYPHEUS."

Acting-Master, Francis H. Grove; Acting-Master's Mates, J. H. Gregory and H. H. Nicholson.

## SCHOONER "MARIA WOOD"

Acting-Master, S. C. Cruse; Acting-Ensign, J. J. Kane; Acting-Master's Mate, Charles Fort.

## SCHOONER "ORVETTA."

Acting-Master, Enos O. Adams; Acting-Master's Mates, John Broe and Stephen Nelson.

## SCHOONER "JOHN GRIFFITHS."

Acting-Master, Henry Brown; Acting-Master's Mates, Alex. Moses and John McAllister.

## SCHOONER "SAMUEL HOUSTON."

Acting-Master, C. W. Pratt.

## SCHOONER "SARAH BRUEN."

Acting-Master, A. Christian.

## SCHOONER "HENRY JANES."

Acting-Ensign, Joseph A. Chadwick; Acting-Master's Mates, T. S. Russell, Zach. Predmore and Wm. Roberts.

## SCHOONER "OLIVER H. LEE."

Acting-Ensign, Douglas F. O'Brien; Acting-Master's Mate, Cornelius Dailey.

## NAVAL STATION, NEW ORLEANS, LA.

Acting-Master, Adrien C. Starrett.

## NAVAL HOSPITAL.

Surgeon, J. S. Dungan; Assistant Surgeon, J. H. Clark; Acting-Assistant Surgeon, W. H. Wentworth.

## SOUTHWEST PASS.

Acting-Master, William Jones.

## THE FOLLOWING OFFICERS PARTICIPATED IN THE BATTLE OF MOBILE BAY.

This list has been compiled from the official reports of the battle. The Navy Register for January 1, 1864, does not give them as part of the West Gulf Blockading Squadron, and they were, therefore, omitted in their proper places.

## FLAG-SHIP "HARTFORD."

Lieutenant, A. R. Yates, Volunteer from the "Augusta"; Ensign, Wm. Starr Dana; Acting-Ensign, R. D. Bogart; Acting-Ensign, Joseph Marthon ("Tennessee"); Surgeon, Philip Lansdale; Acting-Assisting Engineer, Wm. G. McEwan; Admiral's Secretary, A. McKinley; Carpenter, George E. Burcham.

## "LACKAWANNA."

Acting-Master, John H. Allen; Ensign, Clarence Rathbone; First-Assistant Engineer, James W. Whittaker.

## "MONONGAHELA."

Lieutenant, Oliver A. Batcheller; Acting-Ensign, J. D. Ellis, ("Kennebec.")

## "OCTORARA."

Acting-Masters, H. R. Billings ("Vincennes") and Horace S. Young; Acting-Ensign, Maurice W. McEntee; Acting-Assistant Paymaster, J. H. Pynchon; Acting-First-Assistant Engineer, Wm. W. Shipman had charge of Engineer's Department.

## "KENNEBEC."

Acting-Assistant Surgeon, Geo. W. Hatch.

## "ONEIDA."

Lieutenant, Chas. S. Cotton; Acting-Ensign, — Hall; Acting-Master's Mate, John Devereux; Assistant Paymaster, Geo. R. Martin; Pilot, John V. Grivet; Paymaster's Clerk, W. P. Treadwell; Captain's Clerk, G. A. Ebbetts.

## "MANHATTAN."

Commander, J. W. A. Nicholson; Lieutenant, C. M. Schoonmaker; Acting-Master, Robert B. Ely; Acting Ensign, John B. Trott; Acting-First-Assistant Engineer, Chas. L. Carty. [NOTE.—A more complete list cannot be obtained.]

## "TECUMSEH."

\*Commander, Tunis A. M. Craven; \*Lieutenant, J. W. Kelly; Acting Master, C. F. Langley; Acting-Master, Gardner Cottrell; Acting-Ensign, John J. P. Zettick; \*Acting Ensign, Robert Price; \*Acting Ensign, Walter L. Titcomb; Pilot, John Collins; \*Acting-Assistant Paymaster, George Work; \*Chief Engineer, John Farron; \*Second-Assistant Engineers, Elisha Harsen, F. S. Barlow and H. L. Leonard. [\*Drowned by sinking of "Tecumseh."]

## "BROOKLYN."

Captain, James Alden; Lieutenant-Commander, E. P. Lull; Lieutenants, Thomas L. Swann and Chas. F. Blake; Ensigns, Douglass R. Cassell, Chas. D. Sigsbee and C. H. Pendleton; Acting-Ensign, John Utter; Chief Engineer, Mortimer Kellogg; Acting-Third-Assistant Engineer, H. H. Arthur; Surgeon, George Maulsby; Captain of Marines, G. P. Houston; Captain, E. Denicke, U. S. A. (Signal Officer); Pilot, Christopher Lawrence; Acting-Master's Mates, Wm. H. Cook, F. C. Duncan and A. L. Stevens; Paymaster's Clerk, — Baker; Boatswain, Chas. A. Bragdon; Acting-Gunner, John Quevedo; Carpenter, R. G. Thomas; Sailmaker, D. C. Brayton. [NOTE.—A more complete list cannot be obtained.]

## "WINNEBAGO."

Commander, Thomas H. Stevens; Acting-Volunteer-Lieutenant, Wm. T. Shankland; First-Assistant Engineer, John Purdy; Pilot, Wm. H. Wroten; Acting-Gunner, Robert Sherman. [NOTE.—A more complete list cannot be obtained.]

## "CHICKASAW."

Lieutenant-Commander, Geo. H. Perkins; Acting-Volunteer-Lieutenant, William Hamilton; Acting Master, E. D. Percy; Gunner, J. A. McDonald. [NOTE.—A more complete list cannot be obtained.]

## CHAPTER XLV.

### THE CRUISE OF THE "SUMTER" AND THE HAVOC SHE COMMITTED.

IN granting belligerent rights to the Confederates, the United States Government not only yielded the claim that the secessionists were merely armed insurgents, but also yielded the right to the latter to fit out cruisers to prey on Northern commerce, for it was impossible to prescribe a mode of warfare for the Confederates to adopt. This view was also taken by the leading nations of Europe, who gave in many instances all the aid and comfort to the Confederate cruisers it was possible to extend. England permitted the Confederates to build and equip vessels in her ports and enlist English seamen, and they allowed the cruisers to roam at will

over the ocean, plundering and destroying Federal merchant-ships.

Whether this policy of the British Government will be of any benefit to Great Britain in the end is doubtful, for, in case she should become involved in war, the same tactics, which were so effective against the United States, might be made even more disastrous to herself. The captures by these Confederate cruisers were finally paid for by the British Government, but such payments can only partially compensate the ship-owners or the country. The greatest damage, the interruption or destruction of trade, and the expense to which the United States Government was

put in pursuing the cruisers, was never taken into account. No one seemed to think of the encouragement this wholesale destruction of American commerce gave the Confederates, who depended as much on that circumstance to bring about a peace as they did upon their armies.

In recognizing these cruisers, Great Britain and France were encouraging a kind of predatory warfare unknown in recent days. The Confederates, having no ports into which to send their prizes, burned or sank them wherever taken, so that their course was marked by burning hulls and

and it may not be uninteresting to give a sketch of his career.

While in the United States Navy, Semmes had little reputation as an officer. He had no particular taste for his profession, but had a fondness for literature and was a good talker and writer. He made a study of the law, and had he devoted himself to the legal profession would doubtless have been very successful. He was indolent and fond of his comfort, so that altogether his associates in the Navy gave him credit for very little energy.

What was, then, the astonishment of his

COMMANDER (AFTERWARDS REAR-ADMIRAL) RAPHAEL SEMMES, C. S. NAVY.

floating debris. Their Courts of Admiralty were on the high seas, and the commanding officers were the judges whether to destroy vessel and cargo or to transfer the latter to their own holds. Whether portions of valuable cargoes were sold in neutral ports, for the purpose of procuring coal and other supplies, is a point not fully ascertained; but it is not likely that men in command of cruisers, whose legality was somewhat doubtful, should be over-scrupulous of the means by which to carry out their cherished objects.

Captain Raphael Semmes, in the "Alabama," was perhaps the most vindictive of all the officers of the Confederate Navy,

old companions to find that Semmes was pursuing a course that required the greatest skill and vigor; for there never was a naval commander who in so short a time committed such depredations on an enemy's commerce, or who so successfully eluded the vessels sent in pursuit of him, up to the time of the sinking of the "Alabama."

Semmes was the last man to have embarked in the business of destroying Northern commerce, for during his service in the war with Mexico he wrote an interesting book, giving an insight into the character of the Mexican people. At the time of his writing this book, the Mexican Government was discussing the project of issuing letters

of marque to vessels, authorizing them to prey upon the commerce of the United States. Lieutenant Semmes took the ground that all such cruisers should be treated as pirates, since they had no ports into which they could take captured vessels, but must destroy them on the high seas. The events of 1861-65 changed Semmes' opinions, and the convictions he so strongly maintained up to the year 1861 vanished when he was offered a vessel by which he could inflict damage on United States commerce, with the prospect of high reward in the future for his services in burning and sinking.

We wish, in our narrative, to be just to all parties, but we cannot justify Semmes' course, even although he may have had a shadow of international law to plead in his defence. He might have joined the Southern Army or Navy, as many others did, and fought to the utmost of his ability, and nothing would now be laid against him; but for a man born under the Stars and Stripes, and who had spent the greater part of his life to middle age in holding himself ready to defend the flag, to turn and bend all his energies to the destruction of Federal unarmed merchant vessels, there seems to be no justification. It would have been better to have left that part of the Confederate war operations to some of the enthusiastic merchant captains of the South who honestly believed in the secession theory, and were not bound by a solemn oath to support the Constitution and laws of the United States.

Commander Semmes asserted that he withdrew his oath of allegiance to the United States because he considered the Southern States had a right to dissolve partnership with those of the North. He believed the South to have had greater justification than had the United Colonies when they declared their independence of Great Britain. The South had no actual grievances. They wished to extend their slave system, which was objected to by the North, and by the election of a Republican President they were ruled out of power held for twenty years, and given to understand that there should be no further extension of slavery, which the vast majority of Northern people considered a blot on our escutcheon.

It was Semmes' duty as an officer of the Government to help put down insurrection in whatever quarter or in whatever shape it might appear, for armies and navies are intended for such purposes as well as for carrying on war with foreign enemies. What would become of any Government in Europe if, at the breaking out of an insurrection, the military forces should object to serving against their compatriots? An officer of the Army or Navy who has engaged to support the *de facto* Government of the country can lay no claim to allegi-

ance to State or city, and if he violates his oath to support the Government he simply becomes a traitor and liable to the penalty of death. Commander Semmes could hardly have expected to draw fifty thousand dollars or more in pay from the United States Government—which is about the amount he received up to the date of his resignation—and then at the first speck of trouble go off and fight against it. His case is much worse than that of a private citizen whose interests are bound up in a particular locality, and who owes no special allegiance to the General Government except such as may be dictated by the impulses of patriotism.

Being a native of Maryland, Semmes had not even the excuse of siding with his State, for if he had he would have fought against the South. This difficulty he easily skips over by claiming to be a citizen of Alabama, yet he stigmatizes, as "traitors to their States" officers of Southern birth who remained loyal to the Union. Semmes has published what he doubtless considered a masterly argument in defence of his cause; but, although he speaks of Webster and Story with great contempt, he was hardly equal to either of them as a constitutional lawyer, and the secession fallacy has been so thoroughly exposed that we have no fears of another civil war based on State Rights theories.

Commander Semmes resigned his commission in the United States Navy on the 15th of February, 1861, and made the best of his way to the capitol of the Southern Confederacy, temporarily fixed at Montgomery, Alabama. On his arrival he put himself in communication with Mr. Conrad, Chairman of the Confederate States Naval Committee, and when President Davis reached the city, a few days afterwards, offered his services to the Confederate Government. They were at once accepted, and Semmes proceeded to Washington, after a visit to Richmond and Harper's Ferry, to ascertain the character of certain machinery at the latter place, in anticipation of the enlargement of the Tredagar Works at Richmond, for the South meant war from the beginning, in case of any attempt on the part of the Northern States to prevent them from carrying out their designs.

When the Confederate Government had been fairly organized, they found themselves badly supplied with materials from which to improvise a Navy, and Semmes here made himself useful, being the first to propose "a well-organized system of private armed ships called privateers." Mr. Mallory, the Confederate Secretary of the Navy, readily agreed to all that Commander Semmes proposed; for the latter, being much the cleverer man of the two, provided

the Secretary with ideas which he was only too willing to accept.

A Board of Confederate naval officers assembled in New Orleans charged with the duty of procuring, as speedily as possible, some swift, light-armed steamers that could be used to prey upon Northern commerce; and the Federal Navy was in such a disorganized condition that the Confederate Government might well feel secure in sending out these light cruisers, for they would hardly meet with any interference until they had swept the whole Northern coast.

Several vessels were examined by the Board, among them was a 500-ton steamer with a speed of ten knots, but with capacity for but five days' coal, and with no accommodations for the crew required by a vessel-of-war. She was condemned by the Board, and the report sent to the Secretary of the Navy, who showed it to Commander Semmes. The latter at once exclaimed: "Give me that ship, I think I can make her answer the purpose." The request was granted, and officers were at once detailed to accompany Semmes on his cruise for the destruction of Northern commerce.

Semmes was certainly the very man the Confederates wanted for the occasion. He manifested no doubts of success with the vessel, and seemed to have no fear of the consequences. The inertness he had displayed while in the United States Navy had disappeared; he had become a new man. "The labors and associations of a lifetime had been inscribed in a volume that had been closed, and a new book, whose pages were as yet all blank, had been opened." Semmes' volume, we might also add, though containing matter sufficient for a dozen books, embraced not an account of one act of bravery or generosity, but only records of burning, sinking, and destroying, worthy of the buccaneers.

Semmes was appointed to command the "Sumter" with the rank of commander, the same rank that he had held in the United States Navy, for the Confederates were slow in conferring increased rank until sure that their officers had earned a reward. The following order from Mr. Mallory was sent to Semmes the day after his interview with that gentleman:

CONFEDERATE STATES OF AMERICA, }  
NAVY DEPARTMENT, }  
MONTGOMERY, April 18, 1861. }

SIR — You are hereby detached from duty as Chief of the Light-house Bureau, and will proceed to New Orleans and take command of the steamer "Sumter"—named in honor of our recent victory over Fort Sumter. The following officers have been ordered to report to you for duty: Lieutenants John M. Kell, R. T. Chapman, J. M. Stribling and William T. Evans; Paymaster Henry Myers; Surgeon Francis L. Galt; Midshipmen Wm. A.

Hicks, Richard F. Armstrong, Albert G. Hudgins, John F. Holden and Joseph D. Wilson.

I am respectfully, your obedient servant,  
S. R. MALLORY,  
*Secretary of the Navy.*

On the 22d of April, Semmes took command of his vessel in New Orleans. The "Sumter" was simply a coasting steamer, cumbered with upper cabins, and with apparently none of the attributes of a ship-of-war. Who would imagine that so much harm lurked in that frail vessel? though her graceful lines and jaunty air pleased her commander, who seemed to have had a vivid idea of the destruction he could accomplish with this little craft.

Frenchmen are popularly supposed to be prone to revolution, and the enthusiasm of the French population of Louisiana had been early excited at the idea of the secession of the Southern States. Almost immediately, preparations were made by unauthorized persons to prey upon United States commerce, and several vessels were captured and taken to New Orleans. The Federal Government became alarmed at the probable consequences of a wholesale system of privateering, and President Lincoln at once issued his Proclamation.

As soon as it became evident that hostilities had broken out between the United States and the seceding members of the Union, European Governments, with singular unanimity, declared their neutrality between the contending parties, and their intention to treat both alike; viz., that neither United States nor Confederate cruisers should take their prizes into neutral ports. At first sight, this looked like a concession to the United States, as it excluded Confederate prizes from European ports; but it was really the other way, since it recognized the Confederates as belligerents. Commander Semmes was shrewd enough to know what this arrangement portended, and such was his confidence that he made a requisition before sailing simply for the modest amount of ten thousand dollars, saying, "This will suffice until I have the opportunity of replenishing my military chest from the enemy." How readily he adopted that word "enemy," when scarcely three months from the service of the Government that had fostered him for thirty-six years! We may be too sentimental on this point, but, no doubt, our feelings will be shared by many of our readers.

There was no end to Semmes' trials and disappointments in his task of fitting out the "Sumter," and the patience and energy he exhibited were worthy of a better cause. On June 3d, 1861, the ship was put in commission, and her commander gazed proudly on the "Stars and Bars" floating from her peak. Having received his sailing orders,

Semmes dropped down to the forts preparatory to getting to sea past the blockading vessels at the mouths of the Mississippi—the “Powhatan,” Lieutenant D. D. Porter, at Southwest Pass, and the “Brooklyn,” Commander Charles H. Poor, at Pass à l’Ouvre. Semmes’ sailing orders were brief and to the purpose. He was to burn, sink and destroy, within the limits prescribed by the laws of nations, and with due attention to the laws of humanity. After long watching and waiting, Semmes made his escape to sea by the Pass à l’Ouvre, while the “Brooklyn” was absent from that mouth of the river in chase of a vessel some eight miles to westward. As soon as the black smoke of the “Sumter” was seen coming down the river, the “Brooklyn” started to return to her anchorage, and had nearly the same distance as the “Sumter” to run before reaching the bar, but the latter vessel had the advantage of a four-knot current in her favor, while the “Brooklyn” had the current against her.

The “Sumter” with a skillful pilot passed the bar while the “Brooklyn” was three and a half miles distant from it, and out of gun-shot. The engineers and firemen of both vessels did their whole duty, and thick volumes of smoke poured from the chimneys. The “Sumter” went off at the rate of nine and a half knots, while the “Brooklyn,” to assist her speed, set every sail that would draw. The “Sumter” also set her sails, bracing them up sharp on the starboard-tack.

The “Brooklyn” was at this time a little on the weather quarter of the “Sumter,” and as Semmes knew he could lay closer to the wind than his pursuer, having the advantage of larger fore-and-aft sail, he resolved to hold his wind so closely as to compel the “Brooklyn” to furl her sails, although this would carry him athwart her bows and bring him perhaps a little nearer for the next half-hour or so. A rain squall now enveloped the two vessels, hiding them from each other; but as the squall passed away and the sloop-of-war reappeared, she seemed to Semmes to be much nearer, and he began to think his chance of escape very dubious. As Semmes stood looking at the “Brooklyn” coming on astern, he could not but admire the majesty of her appearance, with her broad flaring bow and clean, beautiful run, with her masts and yards as taunt and square as can only be seen in a ship-of-war. The Stars and Stripes appeared from time to time under the lee of the spanker, and with a glass a crowd of officers could be seen on the quarter-deck apparently watching the efforts of the “Sumter” to escape.

As the “Brooklyn” still gained on the Confederate vessel Semmes ordered the

paymaster to prepare to throw his iron chest and all its contents overboard, an incident which shows what gloomy forebodings must have possessed him when he was ready to sacrifice the precious treasure which was to aid him in his career of destruction. Coming from fresh into salt water had caused the “Sumter’s” boilers to “foam,” which circumstance prevented her for a while from getting up as good a supply of steam as would otherwise have been the case; but at the crisis of the chase the foaming ceased, and the engineer reported the engine working beautifully. At the same time, the breeze freshened and favored the “Sumter;” and what was more, the latter was eating the “Brooklyn” out of the wind, yet the latter vessel did not fire a gun.

Semmes naturally supposed that as soon as the “Brooklyn” fell in his wake she would furl her sails, and this shortly came to pass, and for the first time Semmes began to breathe a little easy. He had feared that, instead of pursuing a career of destruction, he would be taken prisoner and tried for violating the President’s proclamation, while his little cruiser would be turned into a Yankee blockader. But Semmes’ good fortune—or perhaps we might rather say his evil fortune—decreed otherwise. The “Brooklyn” was under sail to royals when suddenly every sail in the ship was clewed up at once, the yards came down together and the men laid out to furl. In less than three minutes every stitch of canvas had vanished. If the crew of the “Brooklyn” had had any visions of prize-money, they evaporated a few minutes after this beautiful evolution which even the Confederate officers admired. In their hearts they could not help being proud of the skill and discipline of “the Old Navy,” and comparing the seamen of the service they had abandoned with the heterogeneous crew of the “Sumter,” that they had not yet time to discipline.

It seems strange to us, as it did to Semmes, that this beautiful evolution of the “Brooklyn” was not followed by a ricochet-shot from the bow gun of that ship, for the Confederates evidently thought themselves within range; but not a shot was fired during the pursuit. This was perhaps one of the most exciting chases of the war. Semmes knew perfectly well the exact speed of the “Brooklyn,” which was about the same as that of the “Sumter,” and believed if he could hold his own until dark that he could elude his enemy after nightfall; but he never expected the “Brooklyn” to abandon the chase as long as the “Sumter” remained in sight.

When the sloop-of-war furled her sails the “Sumter” began to draw slightly

ahead, as steam was crowded on her boilers almost to the bursting point. Then the engineer reported the journals as heating so much that the brasses would soon melt. That meant capture, and all waited for the first shot from the "Brooklyn," announcing that their fate was sealed. No shot came, and the "Sumter" still gained, if only a trifle. Just then the "Brooklyn" put her helm a-starboard, went around in the opposite direction and abandoned the chase, returning to *Pass à l'Outre*, where there was no longer anything to blockade, as the bird had flown; while the "Sumter" slowed her engines until the journals cooled down, and her crew gave three cheers for the Confederate flag. The shades of night soon hid the vessel from any possible pursuit.

Many were the criticisms on the escape of the "Sumter," which, as they may do injustice, we will not here repeat. Naval officers, as a rule, are disposed to give credit for skill and gallantry from whatever quarter it may come, and all agreed that Semmes' escape in the "Sumter" was a bold and dashing adventure.

Great latitude had been given Semmes in his instructions, and his plan was to make a cruise upon the coast of Cuba, destroy all American shipping he could meet with in that quarter, coal at some convenient point, and finally proceed to Brazil. Accordingly, the "Sumter" steamed along the coast of Cuba, in the direct track of vessels bound for the Gulf, and while between the coast and the Isle of Pines two sail were reported in sight, both standing in the same direction with the Confederate. When within signal distance, the British ensign was displayed by the latter, and the nearest vessel proving to be a Spanish brig, was permitted to proceed. The other, though she showed no colors, was soon discovered to be an American, and a shot was fired—the first that was fired afloat by ex-naval officers at an American vessel. The "hateful" Stars and Stripes were soon run up to the stranger's peak, but it awoke no sentiment of remorse or regret in the bosoms of the "Sumter's" officers. Every noble sentiment was sacrificed to a wild idea which was mistaken for duty.

It is impossible for us to understand the feeling of joy and exultation that was evinced at the capture of the first American merchant ship, unarmed and helpless. This first prize, Semmes records, was from the "Black Republican State of Maine," and when her flag was hoisted—the flag which Semmes had been educated to venerate, but which now seemed the very incarnation of all that was hateful—the "Sumter" showed at her peak the emblem of the Confederacy, a flag which might easily have been mistaken for that of Hayti or the Society Islands,

whose cruisers if met upon the high seas would be naturally objects of suspicion. To Semmes, the Stars and Stripes appeared to look abashed in the presence of the latest symbol of Southern sovereignty, "as a burglar might be supposed to feel who had been caught in the act of looking into a gentleman's house." Some of our readers may differ in opinion with the gallant captain and think that the master of the merchant vessel had a right to be astonished in finding a cruiser, which he supposed to be policing the seas, turn out a marauder. Semmes avers that he felt some pity for the captain of the merchantman, but this sentiment was not in sufficient quantity to delay his doom.

The master of the vessel, a mild, amiable-looking man, when he found into what hands he had fallen, merely expressed his surprise at the appearance of the Confederate flag in Cuban waters. The name of the prize was the "Golden Rocket," an appropriate one, for she would go off in a blaze, and be remembered in history as the first illegal prize made by a Confederate vessel-of-war—for Semmes had no more right to capture her than he had to seize the Spanish vessel he first encountered. Semmes at the time was simply an insurgent like Lopez, the Cuban "fillibuster," who was garotted in the plaza at Havana, (because belligerent rights had not been accorded him,) and he was under the ban of proclamation.

By sunset the wind had died away, and the night came on of such pitchy darkness as would seem emblematical of the deed about to be committed. The crew of the "Golden Rocket," and everything on board the vessel needed by the "Sumter," had been transferred to that vessel. The boat which had been sent on the errand of destruction pulled out of sight, and neither ship nor boat could be seen by the watchers who crowded the decks of the "Sumter," although but a few yards distant. Suddenly one of the crew of the "Sumter" exclaimed, "She is on fire!"

The decks of the doomed vessel were of pine, the seams caulked with oakum and payed with pitch, while her fore-castle was stored with paints and oil, therefore the flames leaped at once into the darkness. The boarding officer had done his work like an adept, and applied the torch in several parts of the ship, and the flames rushed up through three apertures, lighting up the scene as plainly as if the drama had been enacted on the stage of a theatre. The masts and hull of the "Sumter" were reflected on the mirror-like sea, and the dense columns of smoke ascending to the skies seemed like a grand funeral pyre. The rush of air into the hold of the burning ship ad-

ded every moment new fury to the flames, which now ascended to the trucks, raging like a mighty furnace in full blast. The ship had been laid to with her maintopsail to the mast, and all her light canvass was flying loose about the yards, the headsails hanging from the booms, and the forked tongues of flame ran rapidly up the shrouds and from the tops to the light sails fluttering in the breeze. A topgallantsail or royal all on fire would now fly off from the yard and settle upon the surface of the sea like some fiery albatross, then followed yards in flames till the sea was lighted up by a hundred floating lamps. At one time the intricate network of cordage was traced as with a pencil of fire upon the black sky. Then the masts went by the board, the mainmast being the last to fall with a crash, as when in the northern forest it fell by the stroke of the woodman. Numbers of sea-birds flew round the burning ship, their discordant cries contributing to the horror of the scene; but at length the fire

CONFEDERATE STEAM-CRUISER "SUMTER."

burned down, the vengeance of man was satisfied, and the "Sumter" moved away by the light of the expiring flames in pursuit of other prey.

Of all men in the Southern Confederacy Semmes was perhaps the best qualified to carry out the designs of his employers on the commerce of the United States. The burning of the "Golden Rocket" was like the first glass of liquor taken by the drunkard. Burning ships became a passion, and if ever a man had the bump of destructiveness on his cranium that man was Raphael Semmes. He slept peacefully that night in the thought that he had performed a meritorious action, one that would inure to the cause of Southern liberty fighting against the Northern people, who after twenty years of Southern domination had dared to elect a President to suit themselves.

According to the Law of Nations the "Sumter" was not a vessel of war. When

the South had belligerent rights accorded them by the United States the case was different. As we have said before, the captain of the "Golden Rocket" took the destruction of his ship philosophically, although, apart from any monetary considerations, it must have been hard to see her set on fire and consumed before his eyes without power to raise a hand to save her; but one consolation the master had, the ship was insured, and the loss fell on the underwriters.

But what became of the "old flag"? It was marked with the date of capture, latitude and longitude, etc., and consigned to a bag in charge of the Signal Quartermaster to keep company ere long with numerous other copies of the Stars and Stripes that accumulated under Semmes' auspices ere his career was brought to a close by the guns of the "Kearsarge." As Semmes writes: "I committed to the keeping of the guardian spirits of that famous battle-ground a great many bags full of 'old flags,' to be stowed away in the caves of the sea as mementoes that a nation once lived whose naval officers loved liberty more than the false memorial of it under which they had once served, and who were capable, when it became 'Hate's polluted rag,' of tearing it down." Yet who can doubt that Commander Semmes, in case the Confederate Navy officers had been reinstated in the Federal service, would have been among the first to resume his station under that "polluted rag," again to forswear his allegiance, if it suited his convenience so to do.

The day following the destruction of the "Golden Rocket" was the 4th of July, an anniversary which had ever been venerated by all true Americans; but it was not celebrated on board the "Sumter," because associated so intimately with the "old flag," which, in the opinion of Commander Semmes and his followers, had all at once become a sham and a deceit. It was also, in the opinion of these persons connected "with the wholesale robberies which had been committed on Southern property, and with the vilification and abuse which had been heaped upon their persons by their late copartners for a generation or more." What generosity could be expected by his foes from an intelligent man holding such sentiments as these?

At daylight next morning two sail were reported in sight ahead, which proved to be two American brigantines. The "Sumter" hoisted the Confederate flag, ran alongside and captured the vessels, both of which were loaded with sugar and molasses belonging to neutrals, and both bound from Trinidad de Cuba to English ports. These vessels Semmes did not venture to burn, but taking them in tow he steamed for

Cienfuegos, in order to test the disposition of the Spanish authorities towards the Confederacy. France and England had issued proclamations forbidding the introduction of prizes to their ports, but Spain had not yet spoken, and Semmes hoped the Spanish officials might have different views. The vessels together being more than the "Sumter" could tow, the prize-master of the "Cuba" was ordered to cast off and follow; but when the former got out of sight, the master and crew of the "Cuba" overpowered the prize-crew, recaptured the vessel, and eluding their captors, finally reached their destination.

On arriving off the harbor of Cienfuegos two more sail were descried from the "Sumter," standing off the land. Two more American brigantines were captured—the "Ben Dunning" of Maine, and the "Albert Adams" of Massachusetts. They had left the port of Cienfuegos three hours before, and their cargoes of sugar were documented as Spanish property. Prize-crews were thrown on board, and the prize-masters directed to stand in for Cienfuegos light-house and lay-to until morning.

Thus in the space of three days, Semmes had captured five prizes heavily laden. His crew had become quite enamored of the service, which just suited these worthy successors of Lafitte, who were mostly from the city of New Orleans, which could then boast of possessing the worst class of seamen in the country. Without doubt, there were a number of persons on board the "Sumter" who acknowledged no allegiance to any nation, and whose love of plunder would incite them to any disreputable deed. To such men the American flag conveyed no sentiment any more than did the flag of the Confederacy. Under the latter they might hope to plunder, and, no doubt, shipped with this expectation. If they were disappointed, it was because there was an innate love of discipline among their officers which forbade their entering on a course which might ultimately subject them to severe penalties. The crew were as eager in pursuit of vessels as dogs in chase of game, but they were too ignorant to know that burning and destroying could bring them no profit.

As daylight broke with all the beauty of a tropical morning, and the prizes moved sluggishly waiting for the sea-breeze, three American vessels in tow of a steam-tug were seen coming out of the harbor. Here was a piece of good fortune! Semmes had reckoned on carrying three prizes into Cienfuegos; here were three more, but he could not molest them in neutral waters—a little management was necessary. The neutral belt extended a marine league from the shore, so Semmes hoisted a Spanish

jack for a pilot, giving orders to disarrange the yards, etc., that the "Sumter" might look as much like a merchant vessel as possible. To still further carry out the deceit, most of the crew were sent below and the Spanish ensign hoisted. These were the very tactics adopted by Lafitte, the Barratarian, in the early part of this century, which would indicate that Semmes had taken a leaf from his book.

The prize-masters showed themselves adepts in following the methods of their commander and hoisted the American flag at the fore of their respective prize-vessels for a pilot also. This deceived the people on board the vessels coming out, and they proceeded on their way in tow of the tug until they were well off the land, when they cast off and made all sail to enable them to get a good offing before the sea-breeze set in.

As soon as the tug had cast off from the vessels she proceeded to the steamer to ask if the captain wanted a pilot, for even the Spaniards had been deceived by Semmes' ruse. The Confederate commander replied in the affirmative, but said to the pilot: "I am waiting a little to take back those ships you have just towed out." "Diablo!" exclaimed the Spaniard; "how can that be? they are North Americans bound to Boston and New York." "That is just what I want," said Semmes. "We are Confederates, at war with the North Americans." "Ah!" said the pilot, turning *picaroon* at the first sign of plunder, "That is good; give her the steam quick, captain!" Here was a scoundrel, who had just piloted these vessels to sea and received his pay, ready to pounce upon them and take them back again for another fee. Nothing could better please that sort of man than this game of semi-piracy. Probably he was a descendant of some of those pirates who infested the Spanish West Indies in 1824-26, murdering the crews of American merchant vessels, plundering their cargoes, and then destroying the vessels.

Semmes was determined not to lay himself liable for violating any neutrality laws; he was too conscientious for that. He said to the impatient pilot, "Wait awhile, I must not fail in respect to Her Majesty the Queen of Spain and the Captain-General. I must wait until these vessels are beyond their jurisdiction, one league from shore." So when the American vessels were supposed to be beyond the imaginary line, the "Sumter" was let loose like a tiger on its prey. A booming gun and the hoisting of the Confederate flag soon disclosed the "Sumter's" character, and in a short time the three vessels were prizes to the Confederate steamer and joined the others off Cienfuegos. When the sea-breeze set in,

Semmes stood into the harbor, followed by his six prizes, much to the astonishment of those who had seen the "West Wind" of Rhode Island, the "Louisa Killum" of Massachusetts, and the "Naiad" of New York, sail but a few hours before on their legitimate business.

Semmes was treated at Cienfuegos with all due courtesy, and hobnobbed with the Captain of the Port, who had at first fired upon him with musketry, not knowing what flag he sailed under; but when Semmes assured him that he did not come to sack the town like the buccaneers of old, the official took him to his heart. He had but a vague idea of the locality of the Southern Confederacy, and probably never suspected that the "North American" expeditions against the island were mostly fitted out from the Southern States—the fair haven of filibusters.

Semmes wrote a specious letter to the Governor of Cienfuegos, a timid old man, who knew as little of international law as his friend the pilot. This letter may not agree with the opinions of our standard authorities on international law, but the originality of its views should preserve it from oblivion. Unfortunately for the enterprising sea-lawyer, the letter had exactly the contrary effect to what he had expected. The Spanish officials saw plainly that their harbors were about to be made the receptacles for prizes, and the Spanish Government, following the example of England and France, issued a proclamation that no prizes should be brought into their ports. Therefore, as soon as the Queen's proclamation was received, the Captain-General ordered all the prizes to be restored to their legitimate owners. Spain was not going to lose her best customer, nor be liable to a suit for damages from the United States after the civil war was over.

The commander of the "Sumter" naturally felt despondent over this decision of the Spanish authorities, and it may have influenced him somewhat in his subsequent career, when he burned and sank without much thought whether he was acting according to international law or not. The following is the letter to the Governor referred to above:

CONFEDERATE STATES STEAMER "SUMTER," }  
ISLAND OF CUBA, July 6, 1861. }

SIR—I have the honor to inform you of my arrival at the port of Cienfuegos with seven prizes of war. These vessels are the brigantines "Cuba," "Machias," "Ben Dunning," "Albert Adams," and "Naiad," and barks "West Wind" and "Louisa Killum," property of citizens of the United States; which States, as your Excellency is aware, are waging an aggressive and unjust war upon the Confederate States, which I have the honor with this ship under my command to represent.

I have sought a port of Cuba with these prizes

with the expectation that Spain will extend to the cruisers of the Confederate States the same friendly reception that, in similar circumstances, she would extend to the cruisers of the enemy; in other words, that she will permit me to leave the captured vessels within her jurisdiction until they can be adjudicated by a Court of Admiralty of the Confederate States. As a people maintaining a Government *de facto*, and not only holding the enemy in check, but gaining advantages over him, we are entitled to all the rights of belligerents, and I confidently rely upon the friendly disposition of Spain, who is our near neighbor in the most important of her colonial possessions, to receive us with equal and even-handed justice, if not with the sympathy which our identity of interests and policy, with regard to an important social and industrial institution, are so well calculated to inspire. A rule which would exclude our prizes from her ports during the war, although it should be applied in terms equally to the enemy, would not, I respectfully suggest, be an equitable or just rule. The basis of such rule, as indeed of all the conduct of a neutral during war, is equal and impartial justice to all the belligerents, without inclining to the side of either; and this should be a substantial and practical justice, and not exist in terms merely, which may be deceptive. Now, a little reflection will, I think, show your Excellency, that the rule in question, in the exclusion of prizes of both belligerents from neutral ports, cannot be applied in the present war, without operating with great injustice to the Confederate States. It is well known to your Excellency that the United States are a manufacturing and commercial people, while the Confederate States are an agricultural people. The consequence of this dissimilarity of pursuits was that, at the breaking out of the war, the former had within their limits and control almost all the naval force of the old Government. This naval force they have dishonestly seized and turned against the Confederate States, regardless of the just claims of the latter to a large proportion of it, as tax-payers, out of whose contributions to the common treasury it was created. The United States, by this disseizin of the property of the Confederate States, are enabled in the first months of the war to blockade all the ports of the latter States. In this condition of things observe the *practical* working of the rule I am discussing, whatever may be the seeming fairness of its terms.

It will be admitted that we have equal belligerent rights with the enemy. One of the most important of these rights in a war against a commercial people is that which I have just exercised, of capturing his property on the high seas. But how are the Confederate States to enjoy, to its full extent, the benefit of this right if their cruisers are not permitted to enter neutral ports with their prizes, and retain them there, in safe custody, until they can be condemned and disposed of? They cannot send them into their own ports, for the reason already mentioned, namely, that those ports are hermetically sealed by the agency of their own ships, forcibly wrested from them. If they cannot send them into neutral ports, where are they to send them? Nowhere. Except for the purpose of destruction, therefore, their right of capture would be entirely defeated by the adoption of the rule in question, while the opposite belligerent would not be inconvenienced by it at all, as all his own ports are open to him. I take it for granted that Spain will not think of acting upon so unjust and unequal a rule.

But another question arises, indeed, has already arisen, in the cases of some of the very captures which I have brought into port. The cargoes of several of the vessels are claimed, as appears by certificates from among the papers, as Spanish property. This fact, cannot, of course, be verified, except by a judicial proceeding, in the Prize Courts

of the Confederate States. But if the prizes cannot be sent either into the ports of the Confederate States or into neutral ports, how can this verification be made? Further—supposing there to be no dispute about the title to the cargo, how is it to be unladen and delivered to the neutral claimant unless the captured ship can make a port? Indeed, one of the motives which influenced me in making a Spanish colonial port was the fact that these cargoes were claimed by Spanish subjects, whom I was desirous of putting to as little inconvenience as possible, in the unloading and reception of their property, should it be restored to them by a decree of the Confederate Courts. It will be for your Excellency to consider and act upon these grave questions, touching alike the interests of both our Governments.

I have the honor to be, &c., &c.

RAPHAEL SEMMES.

#### Semmes remarks :

"I did not expect much to grow immediately out of the above communication. Indeed, as the reader will probably surmise, I had written it more for the eye of the Spanish Premier than for that of the Governor of a small provincial town who had no diplomatic power and whom I knew to be timid, as are all the subordinate officers of absolute Governments. I presumed that the Governor would telegraph it to the Captain General at Havana, and that the latter would hold the subject in abeyance until he could hear from the home Government.

"Nor was I disappointed in this expectation, for Lieutenant Chapinan returned from Cienfuegos the next morning, and brought me intelligence to this effect.

"To dispose of the question raised, without the necessity of again returning to them, the reader is informed that Spain, in due time, followed the lead of England and France in the matter of excluding prizes from her ports; and that my prizes were delivered—to whom do you think, reader? You will naturally say to myself, or my duly appointed agent, with instructions to take them out of the Spanish port. This was the result to be logically expected. The Captain-General had received them, in trust, as it were, to abide the decision of his Government. If that decision should be in favor of receiving the prizes of both belligerents, well; if not, I expected to be notified to take them away. But nothing was further, it seems, from the intention of the Captain-General than this simple and just proceeding; for, as soon as the Queen's proclamation was received, he deliberately handed back all my prizes to their original owners!"

But the Confederates were not without comfort. Sympathizers flocked to them from the town on their landing. The houses of the principal citizens were open to the officers, and the night was made merry by the popping of champagne corks. Yet Commander Semmes was not happy, though he regretted less the loss of his prizes than his failure to convince the Spanish authorities that he was a great expounder of the law of nations. Meanwhile the natives wondered where all the United States gun-boats were, that this Confederate hawk should be permitted thus to flutter the Yankee doves. The reader will, no doubt, share their astonishment at the failure of the Navy Department to protect Federal commerce in the Caribbean Sea as well as in other quarters. The fact is, every passage to that sea ought to have

been guarded as soon as it was known the "Sumter" had escaped, and she should have been followed up until captured or driven from the ocean.

Commander Semmes having appointed a prize-agent to take charge of his prizes until they could be taken to a Southern port for adjudication before a Court of Admiralty, and obtained a supply of coal and provisions from his neutral friends at Cienfuegos, departed from that port on the 8th of July with the intention of proceeding *via* Barbadoes to Cape St. Roque, in the great line of travel for vessels bound from the East Indies to the United States or Europe. Owing to the strength of the trade-winds his coal ran short, and he made sail for the Dutch island of Curaçoa, and on the 16th the "Sumter" entered the port of St. Anne—the capital town of this little colony. The American consul did all he could to persuade the Governor that the "Sumter" was not a legitimate vessel-of-war, and that officer, therefore, forbade the ship's entering the port, saying that he had received recent orders from Holland to that effect. Semmes was, however, well aware that these colonial magnates were generally men of little character or intelligence, so he sent one of his brightest officers on shore with the following letter to the Governor :

CONFEDERATE STATES STEAMER "SUMTER." }  
OFF ST. ANNE'S, CURAÇOA, July 17, 1861. }

*His Excellency Governor Crol:*

I was surprised to receive by the pilot, this morning, a message from your Excellency, to the effect that this ship would not be permitted to enter the harbor unless she was in distress, as your Excellency had received orders from your Government not to admit vessels-of-war of the Confederate States of America to the hospitality of the ports under your Excellency's command. I most respectfully suggest that there must be some mistake here, and I have sent to you the bearer, Lieutenant Chapinan, of the Confederate States Navy, for the purpose of explanation. Your Excellency must be under some misapprehension as to the character of this vessel. She is a ship-of-war duly commissioned by the Government of the Confederate States, which States have been recognized as belligerents, in the present war, by all the leading powers of Europe, viz.: Great Britain, France, Spain, etc., as your Excellency must be aware.

It is true, that these Powers have prohibited both belligerents, alike, from bringing prizes into their several jurisdictions; but no one of them has made a distinction, either between the respective prizes, or the cruisers themselves, of the two belligerents—the cruisers of both Governments, unaccompanied by prizes, being admitted to the hospitalities of the ports of all these great Powers on terms of perfect equality. In the face of these facts, am I to understand from your Excellency that Holland has adopted a different rule, and that she not only excludes the prizes, but the ships-of-war themselves, of the Confederate States? And this at the same time that she admits the cruisers of the United States; thus departing from her neutrality, in this war, ignoring the Confederate States as belligerents and aiding and abetting their enemy?

"If this be the position which Holland has assumed in this contest, I pray your Excellency to be kind enough to say as much to me in writing."

When the Governor had read this communication, he summoned all the civil and military dignitaries of the colony, and it took a lot of thinking, talking, smoking and drinking to get the matter fairly imbedded in their brains, the Confederate officer in the meanwhile making friends with the citizens, and helping them with their drinking, which seems to have been their main employment.

After waiting an hour or two, Semmes thought he would go to quarters and fire a few shells at a target; but it so happened that one of the shells passed across a window of the room where the council was in session—the "Sumter" was not more than fifty yards from the mouth of the narrow harbor—and exploding, shook the little town as if by an earthquake. Up flew the windows of the council-room, and out popped the heads of the dignitaries. It was decided *nem. con.* that the Confederacy should be recognized, and the "Sumter" allowed to enter the port, which she did shortly afterwards. Nothing could exceed the enthusiasm with which the "Sumter" was received at Curaçoa. Semmes and his officers were the heroes of the hour. The ten thousand dollars with which he had started seemed inexhaustible.

Everything needed was supplied to the ship without a question, and Semmes was everywhere honored as the representative of the great Southern Confederacy, although few people had the least idea what that was.

While at St. Anne's Semmes missed a great opportunity. President Castro, one of the South American adventurers, requested his assistance to reinstate him in the presidential chair of Venezuela; but the Confederate officer declined to play the part of a Warwick. Castro claimed to be President *de jure*, but Semmes professed to scorn all Governments except those that were *de facto*.

After remaining a week at St. Anne's and accomplishing all he wanted, Semmes bade adieu to his kind friends and steamed out of the harbor on the 24th of July. Curaçoa lies but a short distance from the coast of Venezuela, and as both the ports of La Guayra and Puerto Cabello have considerable trade with the United States, Semmes determined to look in upon them. When about thirty miles off the coast, a sail was sighted on the lee bow standing obliquely towards the "Sumter." Chase was given, and in a short time a large schooner was taken. She proved to be the "Abby Bradford," of New York, bound to Puerto Cabello. The schooner had left New York before the "Sumter's" escape was known in the North,

prised when he found that he had fallen into the clutches of the Southern Confederacy.

Porto Cabello being but a short distance under his lee, Semmes determined to try his hand with Castro's opponent, the *de facto* President of Venezuela. He thought surely some arrangement could be made with the South American republics, which were too weak to be worth the notice of the stronger Powers. What right had they to be putting on the airs of nations and talk about acknowledging other people who had never themselves been acknowledged by Spain? In this instance Semmes reckoned without his host, for he found at least one Government that had some respect left for the great republic of North America.

Semmes arrived off Puerto Cabello after night-fall, and the next morning, making the ship and crew as much like those of a man-of-war as circumstances would permit, he steamed into the harbor, the prize-vessel following under sail. The "Sumter" had hoisted the Confederate flag early in the morning, and the Venezuelan colors were hoisted from the fort in response. The town looked like some old Moorish establishment transported to the New World, and its most prominent inhabitants appeared to be turkey-buzzards, which reminded the Confederate commander of the sacred birds he had met so often in the Queen City of the Confederacy. His hopes increased as he noted the similarity between Puerto Cabello and the city that had first given a stimulus to his career of adventure. He saw at once what an advantage it would be if the President would admit his prizes, for in the course of a few months he could make the harbor busier than it had ever been. He even thought he could have given a new impulse to the revolutions and make the people rich enough to indulge in a *pronunciamento* once a week.

It never appears to have occurred to the romantic adventurer that his own beloved Confederacy might one day become like a South American republic, ruled by unprincipled adventurers, or a prey to anarchy.

No one seemed to notice the "Sumter" after she anchored. Semmes carefully scanned the features of the "castle," its three or four guns, worthless for any purpose beyond firing a salute, and compared it with his trim battery of shell-guns. He was satisfied with the comparison and immediately wrote the Governor of the town a letter, which he sent ashore by one of his officers. This missive was to the following effect :

CONFEDERATE STATES STEAMER "SUMTER," }  
 PUERTO CABELLO, July 26, 1861. }  
 His Excellency the Governor :  
 I have the honor to inform your Excellency of my

mand, with the prize schooner "Abby Bradford" in company, captured by me about seventy miles to the northward and eastward. The "Abby Bradford" is the property of citizens of the United States, with which States, as your Excellency is aware, the Confederate States, which I have the honor to represent, are at war, and the cargo would appear to belong also to citizens of the United States, who have shipped it on consignment to a house in Puerto Cabello.

Should any claim, however, be given for the cargo, or any part of it, the question of ownership can only be decided by the prize-courts of the Confederate States. In the meantime I have the honor to request that your Excellency will permit me to leave this prize vessel, with her cargo, in the port of Puerto Cabello, until the question of prize can be adjudicated by the proper tribunals of my country. This will be a convenience to all parties; as well to any citizens of Venezuela who may have an interest in the cargo as to the captors who have also valuable interests to protect.

In making this request, I do not propose that the Venezuela Government shall depart from a strict neutrality between the belligerents, as the same rule it applies to us it can give the other party the benefit of also. In other words, with the most scrupulous regard for her neutrality, she may permit both belligerents to bring their prizes into her waters, and of this neither belligerent could complain, since whatever justice is extended to its enemy is extended also to itself. \* \* \* \* Thus your Excellency sees that, under the rule of exclusion, the enemy could enjoy his right of capture to its full extent—all his own ports being open to him—whilst the cruisers of the Confederate States could enjoy it *sub modo* only, that is, for the purpose of destroying their prizes. A rule which would produce such unequal results as this, is not a just rule (although it might in terms be extended to both parties), and as equality and justice are of the essence of neutrality, I take it for granted that Venezuela will not adopt it.

On the other hand, the rule admitting both parties, alike, with their prizes into your ports, until the prize-courts of the respective countries could have time to adjudicate the cases, would work equal and exact justice to both; and this is all that the Confederate States demand.

With reference to the present case, as the cargo consists chiefly of provisions, which are perishable, I would ask leave to sell them at public auction, for the benefit of "whom it may concern," depositing the proceeds with a suitable prize agent until the decision of the court can be known. With regard to the vessel, I request that she may remain in the custody of the same agent until condemned and sold.

Although his Excellency of Puerto Cabello probably knew very little of international law, the American consul at the port was sufficiently well posted, and he at once advised the Governor what course to pursue. The inhabitants were dependent upon their trade with New England and New York for the supply of their necessities, and, of course, the Governor was naturally in favor of his friends rather than a doubtful-looking stranger. So he sent a reply, with "God and Liberty" on the seal, simply informing the Confederate commander that he had not the necessary *funcion* to answer him diplomatically, but would lay his communication before the supreme Government; meanwhile he desired

the "Sumter" to leave Puerto Cabello, and take the "Abby Bradford" with her.

Had Commander Semmes erected a target, and burst a few shells over it just outside the harbor, it might have had some effect; there was no room inside for such practice, and a shell bursting near the town or fort would have been too much for Spanish pride, and a stray shot from the dilapidated castle might have gone through the "Sumter's" unprotected machinery, and ended her career by enabling the Federal gun-boats to overtake her; therefore Semmes prudently refrained from any attempt to show the power of the Confederacy.

After reading the Governor's letter, to which he paid no attention, Semmes sent his Paymaster on shore, and purchased such articles as he required. The Governor, after an inspection of his artillery and a consultation with the military commandant, made up his mind that it would be best not to coerce any ship belonging to the Southern Confederacy, for fear that these modern representatives of Drake and Morgan might follow the example of their illustrious predecessors if interfered with, and left Semmes to do pretty much as he pleased.

The "Abby Bradford" was sent in charge of a prize-crew to New Orleans, to report her arrival to Commodore Rousseau, delivering to him the prize-papers, seals unbroken, etc. The vessel reached Barrataria Bay, but was recaptured by the "Powhatan," Lieutenant D. D. Porter, and restored to her owners. Semmes did not burn the "Abby Bradford," because, as he says, "I only resorted to that practice when it became evident there was nothing else to do."

As soon as Lieutenant Porter ascertained from the crew of the "Abby Bradford" the whereabouts of the "Sumter," he obtained the permission of Flag-officer McKean, and started in pursuit of the Confederate vessel, following her from port to port to the coast of Brazil, and thence to the equator, from which point Semmes shaped his course, so that his trail was lost.

After having dispatched the "Bradford," Semmes put to sea, and was no sooner outside the harbor than an American vessel was sighted. In less than an hour the "Sumter" came up with the bark "Joseph Maxwell," of Philadelphia. Half her cargo was the property of a neutral doing business in Puerto Cabello; and here again Semmes was in a dilemma. Leaving the bark outside the marine league, Semmes returned in the "Sumter" to Puerto Cabello and sent another letter to the Governor informing him of the capture he had made, and inquiring if some arrangement could not be had for the protection of the neutral

half-owner's interests—in other words, to ascertain if the prize, in which a citizen of Venezuela was interested, would not be permitted to enter the harbor and remain until she could be adjudicated.

Much to the surprise of Semmes, the Governor in his reply commanded the representative of the Southern Confederacy to deliver the "Maxwell" over to him until the courts of Venezuela could determine whether or not she had been captured within the marine league!

In the words of Commander Semmes, "This insolence was refreshing—I scarcely knew whether to laugh or be angry." The "Sumter" was then lying close under the guns of the fort, which were manned by some half-naked soldiers. Semmes beat to quarters and cast loose his guns, not knowing but the Governor might attempt to prevent his going to sea again, and with his crew standing at their quarters steamed out of the harbor, without opposition from his Excellency, who was only too happy to be rid of him.

As Semmes' conscience would not permit him to destroy neutral property, he sent the "Maxwell" with a prize-crew to Cienfuegos to join his other prizes, still clinging to the hope that Spain "would dare to be just, in the face of the truckling of England and of France."

Semmes had been in the Caribbean Sea from the 3rd to the 27th of July, 1861, had captured ten prizes, and not a Federal gun-boat had been heard of, although the United States Consul-General at Havana had been promptly informed of all his transactions at Cienfuegos. Five of the fast steamers purchased for the purpose of carrying stores to the several squadrons, well armed and manned, would have caught the "Sumter" ten days after her escape from Pass à l'Outre, saving many thousand dollars worth of property and terminating Semmes' career. Although the Federal Navy Department displayed a great deal of energy throughout the war, it was lacking in forethought in regard to the matter of Confederate cruisers. The Department had probably no idea that the Confederates would exhibit so much energy in this direction, forgetting that men who embark in a desperate undertaking generally show far more activity than the power they are opposing, besides being less particular in the means employed to gain their ends.

The Federal Government should have sent swift vessels to all parts of the world as soon as it became evident that the Confederates had designs on its commerce. President Lincoln's proclamation declaring Confederate privateers "pirates" was unheeded by European Governments, and it must have been evident that the success of the "Sum-

ter" would prompt the Confederates to send as many vessels as possible on the same errand. Had the "Sumter" been captured soon after her escape from the Mississippi River, there would probably have been no more Confederate cruisers, the Confederacy would have been deprived of its most energetic agent in this line of business, and the ocean commerce of the United States would have been uninterrupted.

After sending off the "Maxwell," the "Sumter" pursued her course along the Spanish main and through the Caribbean Sea to the Port of Spain, in the Island of Trinidad. An English merchant vessel, passing out, paid the "Sumter" the honor of a salute by lowering her flag—a sign of hostility to the United States Government exhibited at that time by almost everything British.

The Governor of Trinidad had already received Queen Victoria's proclamation of neutrality, and when Commander Semmes called upon him his Excellency promptly informed the Confederate Commander that he should receive the same hospitality that would be shown to a Federal cruiser—this hospitality consisted in extending to the "Sumter" every facility for prosecuting her operations against the commerce of the United States.

Semmes lost no time in coaling ship and laying in provisions. His trouble now was to get rid of his prisoners. The "Maxwell's" crew, in particular, were held as hostages until the case of the prisoners captured in the pilot-boat "Savannah," who had been tried and condemned as pirates, was disposed of. Not until Semmes heard that the crew of the "Savannah" were treated as ordinary prisoners-of-war, did he conclude to discharge these merchant seamen, who had been made to understand from day to day what their fate would be if any of the "Savannah's" crew were executed. Fortunately, the Federal Government was not disposed to stain its record by any bloody reprisals, although a mistake was made in issuing a proclamation which it would not have been wise to enforce.

The feelings of the "Maxwell's" crew on hearing that they were to be discharged can be imagined, and even Semmes experienced relief when he found that it would not be necessary to hang unoffending non-combatants at the yard-arm. Semmes remarks in relation to this matter: "I would be stretching a point in undertaking retaliation of this serious character without instructions from my Government, but the case was pressing, and we of the 'Sumter' were vitally interested in the issue. The commission of the 'Savannah,' although she was only a privateer, was as lawful as our own, and judging by the abuse that had

already been heaped upon us by the Northern papers, we had no reason to expect any better treatment at the hands of the well-paid New York District Attorneys and well-packed New York juries." It only required that Semmes should appear in this new role of executioner on the high seas to have insured him an immortality equal to that of Captain Kidd. He would have progressed but little further in making himself judge and jury to condemn innocent merchant seamen who had taken no part in the hostilities between the North and the South, than he had already in establishing a Court of Admiralty on the high seas, where all the rules of law and rights of property were set aside. As to any humanity shown his prisoners by turning them loose to shift for themselves in a foreign land, it was due solely to the inexpediency of keeping his ship full of Northerners that might some day rise and overpower his crew.

Commander Semmes had already received his cue from the Confederate authorities, but it would detract from his reputation for cleverness to believe that he imagined himself invested with authority to commit such an act as he had intimated, and we will be charitable enough to think that his expressions on the subject were simply gaseous.

When one of the men captured in the privateer "Jeff Davis" was convicted of piracy in the Philadelphia Court, the Confederate Government issued the following order, which Semmes took for his guide, apparently forgetting that, while his Government might incur the responsibility, he, not the one hundred thousandth part of that Government, had no more right to commit such an act than the commonest seaman in his vessel. The letter of Mr. Secretary Benjamin, which came so near causing murder to be done on the high seas, is herewith inserted, showing to what dreadful lengths the asperities of civil war will drive people. It may be hoped that in future wars men will not be condemned to death simply for being led astray by reckless leaders, and that retaliation may not be exercised against men who have borne an innocent part in the conflict :

ORDER OF MR. BENJAMIN TO GENERAL WINDER  
IN CHARGE OF FEDERAL PRISONERS.

SIR—You are hereby instructed to choose by lot from among the prisoners-of-war, of highest rank, one who is to be confined in a cell appropriated to convicted felons, and who is to be treated in all respects as if such convict, and to be held for execution, in the same manner as may be adopted by the enemy for the execution of the prisoner-of-war Smith recently condemned to death in Philadelphia.

You will also select thirteen other prisoners-of-war, the highest in rank of those captured by our forces, to be confined in cells, reserved for prisoners accused of infamous crimes, and will treat them as

such, so long as the enemy shall continue so to treat the like number of prisoners-of-war captured by them at sea, and now held for trial in New York as pirates.

As these measures are intended to repress the infamous attempt now made by the enemy to commit judicial murder on prisoners-of-war, you will execute them strictly, as the mode best calculated to prevent the commission of so heinous a crime.

While the "Sumter" remained at Trinidad she was thronged with visitors; some were sympathizers with the Confederate cause, others were there from mere curiosity; but the officials generally held aloof for fear of compromising themselves if they took much interest in the Confederates. All Semmes cared for was to obtain a stock of coal and provisions, and these not being considered contraband of war were freely furnished. Semmes met with some opposition from the authorities, but he bore his trials with meekness, for he knew that the heavy guns commanding the harbor could soon be manned, and were too formidable to trifle with. Nor could he tell how soon a British man-of-war might come into port with orders for the Governor to detain the "Sumter."

On the 25th of August the "Sumter" sailed from Trinidad bound for Maranham. So far, nothing had been heard of a United States vessel-of-war. The slow old frigate "Powhatan" was following on the track of the marauder, never missing a port at which the "Sumter" had stopped. But for defective boilers the "Powhatan" would have overtaken the "Sumter" at Maranham. It must have given the inhabitants of the places Semmes visited a poor idea of the power of the Federal Government, to see the "Sumter" roving at will, with no opposition.

In addition to his other tasks, Semmes undertook to play the part of a missionary, and teach the people among whom he went the difference between the Northern and Southern governments; the former an effete affair, without resources; the latter a young giant that was to carry everything before it. Of course, there were plenty of people to believe all this. They had seen the evidence of Northern commercial wealth in the number of vessels that had visited their ports, but they had no evidence of Federal military or naval power, which is, after all, what counts most with nations. In the "Sumter" they beheld an engine-of-war that could do much harm, and, although she was not a large vessel, yet they saw nothing opposed to her to repress her ill-doings. Had there been a fair-sized United States vessel-of-war at either of the ports the "Sumter" entered, the latter would have probably been refused a supply of coal.

The "Sumter," owing to strong headwinds and currents, soon expended the

greater portion of her coal, and had then to resort to her sails; but on the 19th of August she made the harbor of Paramaribo and obtained a supply of coal and provisions, fraternizing with the officials of the town and with some French and Dutch officers, who seemed to recognize in the "Sumter" the germ of a Navy that was to supplant that of the United States. All this now seems like the merest mockery, and we can hardly realize how the representatives of old-established Governments could lend themselves to the schemes of the Confederates before they had the slightest evidence that the latter could maintain their position. It must have been a serious matter to admit the ships of long-established Governments into neutral ports for the purpose of obtaining coal with which to prey upon each other's commerce; but to admit a vessel of such doubtful character as the "Sumter," with a flag never before seen, was certainly going to the utmost extreme. The secret of the matter was, probably, not so much sympathy with the South, as a general dislike to the institutions of the United States, which were a standing menace to the governments of the Old World. Had the United States been provided with a Navy proportioned to its wealth and resources, with ships stationed at every part of the world frequented by its commerce, the Confederates could not have kept the seas, for want of coal, and would soon have been obliged to abandon their cruising, even if their vessels escaped capture. The argument enforced by war vessels is better than diplomacy, which has not such support; and, although Mr. Seward had duly instructed all the diplomatic and consular representatives of the United States, these gentlemen could never satisfactorily answer the question, "Why don't you send your Navy to repress the 'Sumter'?"

The "Sumter" left Paramaribo on the 30th of August, the commanding officer giving the pilot to understand that he was bound to Barbadoes to look after the U. S. S. "Keystone State," which vessel he had learned was in pursuit of him. Semmes had satisfied himself that the display of the "Sumter" and the Confederate flag in Cayenne and Paramaribo had had a most excellent effect on the fortunes of his young republic!

The "Powhatan" arrived off Surinam River only two or three days after the "Sumter" sailed. The pilot said she had caulked her ports in and sailed for Barbadoes; but Lieutenant Porter, feeling satisfied that Semmes was aiming to get on the track of American vessels bound round Cape St. Roque, and knowing that he would have to touch at Maranham for coal, lost no

time, but stood in the direction of the latter port, sometimes under three boilers, sometimes under one only, the engineer's force working night and day patching the worn-out boilers.

This old representative ship of the United States Navy at times made not more than three knots an hour, scarcely enough to stem the current setting along the Brazilian coast.

With all the difficulties attending this pursuit, which Semmes calls "Quixotic," the "Powhatan" had gained over fifteen hundred miles on the "Sumter" since she first started in pursuit; and had the former vessel been fit for sea the Confederate cruiser would have been easily overtaken, which shows the remissness of the Government in not dispatching a dozen fast vessels in pursuit, even if they had to be taken from blockade duty.

On the 6th of September the "Sumter" arrived in the Port of Maranham, and the Port Admiral sent a lieutenant to inquire of the commanding officer of the Confederate vessel what strange flag that was he carried at his peak, and was duly informed that it was the emblem of the Southern Confederacy. A cordial understanding was soon had with all the Brazilian authorities, including the Governor of the province, who was made to understand that there were now two "United States" instead of one, that the Northern government abhorred slavery and all that pertained to it. This statement struck a chord in the breast of the Governor, who, like most of the Brazilians at that time, was a strong advocate of the *peculiar institution*. So he took Semmes, his officers and men, at once to his heart, and welcomed them to Maranham. Yet Semmes and his officers were not invited to a grand ball given by his Excellency, as diplomatic etiquette forbade this without the permission of the Emperor. "The only feeling excited in us," Semmes remarks, "by this official slight was of contempt for the silliness of the proceeding, a contempt heightened by the reflection that we were a race of Anglo-Saxons, proud of our lineage and proud of our strength (!) frowned upon by a set of half-breeds."

Semmes was more anxious, however, to capture merchant vessels than to attend official gatherings. The day after the ball the Governor gave him an audience, and after Semmes had satisfied him that the "Sumter" was entitled to belligerent rights, granted permission for the ship to have everything desired except munitions of war, as if granting coal was not a far greater injury to United States commerce than all the munitions in the world without it.

If England had been the plaintiff Amer-

ica would not have permitted those vessels, with their imitation of the British flag, to obtain supplies to carry on their depredations against a country with whom they were on terms of friendship, and with whom they had treaties. All such vessels would have been excluded from their ports, or, if admitted, would be detained to prevent their doing mischief. Great Britain would not condone such an offence as giving aid and comfort to such cruisers would be, and would have had her war ships promptly on hand to demand reparation. Who is there that does not admire and applaud the policy of such a nation in protecting the interests of her citizens, although her operations may often seem to conflict with the maxims of writers on international matters ?

The Federal Government was too slow in sending war vessels abroad to look out for its merchant marine, and depended on the poorly paid consuls at the different ports to oppose their feeble influence against a plausible person like Commander Semmes, who had as advisers men in the Confederate councils still more clever. These same men had deluded many States filled with intelligent people, and it would have been strange if they could not delude a few old Governors, especially when the latter were impressed with the idea that the Confederacy had England and France to back her, and would be acknowledged by all the Powers of Europe in less than six months.

In Maranhão, during their stay, Commander Semmes and his officers were the lions of the hour, and brought a good deal of odium on the head of the United States consul, who did all in his power to prevent the "Sumter" from proceeding on her work of destruction. His small pay had prevented him attaining much social consideration, so that he had but little influence. Semmes' greatest objection to this gentleman was that he was a dentist, and forced to practice his profession to eke out a livelihood.

On the 15th of September Semmes left Maranhão, his ship thoroughly equipped from keel to truck. For very good reasons, considering the character of his vessel, Semmes determined to steer to the northward and eastward and reach the calm belt north of Cape St. Roque, where he expected to fall in with a number of vessels bound from ports south of the equator.

Four days after the departure of the "Sumter" the "Powhatan" appeared off Maranhão. This vessel had worked her way in a fog through the dangerous channel leading to the port, for the pilots had all been withdrawn from the outer anchorage and not even a fisherman was encountered. The "Powhatan" had but ten hours' coal

on board and was so light that her paddle-wheels had but little hold on the water. By careful navigation the outside of the harbor was reached and an insolent negro pilot was received on board—the same person that had taken the "Sumter" out. "How did you get through all the shoals?" he inquired. "By the chart," was the answer. "I don't believe it," he said. "You must have had the devil for a pilot. No ship of this size can come through those channels without a good pilot. Even the little 'Sumter' struck coming in and came near leaving her bones among them." "She is here, then?" said the commanding officer of the "Powhatan," his eyes glistening with pleasure. The negro laughed and replied, impudently: "No, you can't catch her, she is miles away—she sailed four days ago."

It was high-water when the "Powhatan" entered the harbor and came to anchor in five fathoms. The tide rises some fourteen feet and runs very strong on the ebb. Three hours after the "Powhatan" anchored she began rasping on the bottom and pounding against her anchor, and at low-water was hard and fast in the mud with three feet of copper out of water. This was evidently intentional on the part of the pilot, but fortunately no damage was done, and at high tide the ship was moved into deeper water. The hope of the pilot was undoubtedly that the ship would bring up on the bill of her anchor and knock a hole in her bottom.

The Stars and Stripes floated proudly at the peak of the "Powhatan," but no official visited the ship. The paymaster was sent on shore to purchase coal, but could not procure any. The "Powhatan," in the eyes of these people, represented the cause of slave emancipation. When application for coal was made to the agent of the British Mail Steamship Company, he charged at the rate of twenty-two dollars a ton, at least twice as much as it was worth. The offer was accepted; but the ship had scarcely commenced coaling when a black officer, with an aide of the same complexion, came on board and haughtily demanded in the name of the Governor that the "Powhatan" should stop taking in coal. He was told to go on shore and not to interfere with that which did not concern him. The coal barges were towed alongside the ship and a marine with loaded musket placed in each one.

That is all the communication the "Powhatan" had with Maranhão, except that a Brazilian gentleman came on board and strongly protested against the Governor's acts; but he could effect nothing, as he was on the wrong side in politics.

As soon as the "Powhatan" had coaled she departed in pursuit of the "Sumter,"

the commanding officer declining the services of a pilot for fear the good ship's bones might be left on some ugly reef.

The "Sumter" reached the calm belt on the 24th of September. The next day a sail was sighted; the "Sumter" pursued under steam showing the American flag. The stranger, thinking this a United States gun-boat, ran up the Stars and Stripes. The vessel proved to be the "Joseph Parke," of Boston; a prize-crew was put on board and she was sent to the westward to act as a decoy to other vessels, and to report, by signal, all sails that hove in sight. A few days afterwards, as nothing appeared, the "Parke" was set on fire and destroyed, after removing all valuables. Vessels on the Brazilian coast had heard of the "Sumter's" escape and had taken a new route homeward consequently. Semmes gained little by cruising between the parallels of 2° 30' and 9° 30' North and the Meridians 41° 30' and 47° 30' West. So he made his way back to the West Indies, while the "Powhatan" about the same time followed in his track.

On the 24th of October, the "Sumter" captured the schooner "Daniel Trowbridge," of New Haven, loaded with everything a cruiser could desire, her deck even being filled with live stock. It took these cormorants two or three days to clear out this well-filled schooner, and as boat-load after boat-load was sent from the prize to the "Sumter," Semmes gloated over the luxuries he was receiving. It does not seem to have occurred to him how much this resembled the achievements of old buccaneering days, when the sea-rovers overtook their victims and treated them in pretty much the same fashion, finally consigning their vessels to the flames. There is this to be said in Semmes' favor, that he did not make his prisoners walk the plank. Semmes is silent as to the fate of this vessel, from which he received five months' provisions; but she was probably sunk, as it was not desirable to burn her when so many vessels were about.

Many vessels were now chased without any prizes being taken, most of them being the property of neutrals, and the "Sumter" at length, on the 9th of November, 1861, made Port de France, in the Island of Martinique, having been at sea nearly two months since leaving Maranham. Of late the "Sumter" had taken few prizes, but her career, as a whole, had been very destructive and caused premiums on insurance to assume formidable proportions.

At one time Semmes came very near being captured by the "Powhatan." He remarks in his journal: "At Trinidad the 'Keystone State' lost our trail, and, instead

ham, turned back to the westward. We learn from the same papers that the enemy's steam-frigate 'Powhatan,' Lieutenant Porter, with more sagacity, pursued us to Maranham, arriving there one week [four days] after our departure. At a subsequent date, Lieutenant (now Admiral) Porter's official account fell into my hands, and, plotting his track, I found that on one occasion we had been within forty miles of each other, almost near enough on a still day to see each other's smoke." This was at the time when the "Sumter" burned the "Joseph Parke" near the equator.

Commander Semmes heard of the presence of the "Iroquois," Commander James S. Palmer, in the Caribbean Sea, soon after his arrival at Martinique, and made haste to get away from that place before he should be blockaded by the Federal steamer. The "Iroquois" was superior in every respect to the "Sumter," and Semmes had not the slightest idea of getting within range of her guns, if he could help it.

On November 13, the "Sumter" left Port de France and anchored off St. Pierre, and a day or two later the "Iroquois" appeared off the harbor, and sent a boat ashore to the United States consul, after which she steamed outside and kept up a steady blockade until the authorities at Martinique called Captain Palmer's attention to the fact that he was violating the sanctity of neutral waters, and requested him to retire beyond the marine league. The manœuvring on the part of Semmes to get to sea, and of Palmer to prevent him, forms an interesting episode in the history of the war. Semmes, in the end, was too clever for Palmer, and one dark night the "Sumter" made her escape under full steam while the "Iroquois" was watching for her in another direction. It is a difficult thing for one steamer to prevent the passage of another out of an open bay with head-lands three or four miles apart, as was conclusively proven in this instance.

Finding that the Federal cruisers were getting on his track, the commander of the "Sumter" determined to leave the Caribbean Sea and cross the Atlantic. On his way Semmes captured and destroyed the "Arcadia," "Vigilant" and "Ebenezer Dodge," making the total number of captures by the "Sumter" fourteen.

Semmes had done as well for the Confederacy as possible, and the Confederate Government was well satisfied with his operations; but the crowning blow was yet to come, when Semmes, in a more efficient vessel, could still better illustrate the fact that a great commercial country, without a sufficient naval force, is at the mercy of any set of adventurers in case war should

started on such a crusade against British commerce, the seas would have swarmed with swift cruisers, and Semmes' career would have come to a sudden and inglorious termination. He showed a deal of cleverness in achieving so much for his Government, but he had few vessels in search of him, and only one of these was fast enough to overtake him if he was sighted.

From an English vessel that Semmes encountered he obtained newspapers that gave him interesting information. Among other things he learned that another Confederate cruiser called the "Nashville," under the command of Lieutenant Pegram, had put to sea and had burned a large American merchant ship, the "Harvey Birch," in the British Channel. She was loaded with tea and just from China. This news stimulated Semmes to fresh exertions, that he might replenish his coal and continue his pleasant employment of burning and sinking. Having been well received at Cienfuegos, he calculated on meeting similar treatment in other Spanish ports, and he now entered the beautiful harbor of Cadiz with the most pleasing anticipations, so that for a moment he forgot the ravages he had committed on unoffending people who had taken no part in the war against the South, and many of whom, for all he knew, might have sympathized with the secession cause. He showed a vindictiveness towards everything relating to the North which nobody thought to have existed in his character. Those who knew him as an officer of more than thirty years' service in the United States Navy, supposed that he would feel some little compunction in pulling down the honored flag of the Union and consigning its ships to the flames; but, so far from this, Semmes exulted in every deed he committed, and showed himself in acts and language so rancorous against everything belonging to the North, that one would have supposed he had received the greatest injuries from the United States Government. We can understand that a man may be led by his sympathies and the persuasion of his friends to embark in a bad cause, but there should be enough of humanity in him to cause him to feel regret at deserting the flag he had professed to love for so many years.

Semmes was not received at Cadiz with that consideration he thought he had a right to expect, and after some correspondence with the authorities was ordered by a dispatch from Madrid to proceed to sea within twenty-four hours; but after consideration the "Sumter" was allowed to go into dock for repairs and Semmes was permitted to land his prisoners, who were making serious inroads on his provisions. He met with no encouragement at Cadiz.

In the eyes of the Spaniards the secession movement was a mere political outbreak, in which Spain was not concerned.

Part of the "Sumter's" crew deserted while the vessel was in dock. Semmes' money had given out; he could not purchase coal, and every day he was urged by the authorities to depart. Having a small supply of coal remaining, Semmes determined to shake the dust of Cadiz from his feet, and that night he laid to off the Straits of Gibraltar. At daybreak several sail were sighted coming down the Mediterranean bound through the Straits. Semmes could not think of going into Gibraltar without first examining these vessels, as his predecessors, the Barbary corsairs, were wont to do on this very spot in days gone by. It was two hours before the "Sumter" came up with the first of these vessels. She was standing towards the African coast, though still distant from the land six or seven miles; yet who would have asked whether she was within the marine league or not? What did Semmes care for the guns at Ceuta? When near enough, the Confederate flag was displayed and the usual gun fired, when the American hove-to, much astonished at this summons; but he soon found himself in the hands of an enemy from whom there was no escape. The master of the vessel stated before the "Admiralty Court" sitting on board the "Sumter" that his ship belonged to the English house of Baring Brothers and was consigned to an agent in Boston; but, notwithstanding his expostulations, he was informed that his ship would be destroyed. The other vessel was approaching and Semmes had no time to parley. So the torch was applied to the beautiful bark "Neapolitan," of Kingston, Massachusetts, and she with her valuable cargo was totally consumed. Commander Semmes' justification, to use his own expressions, was that "Gallant naval officers wearing Mr. Welles' shoulder-straps, and commanding Mr. Welles' ships, were capturing little coasting schooners laden with fire-wood, plundering the houses and hen-roosts of non-combatants along the Southern coast, destroying salt-works and intercepting medicines going to Confederate hospitals." Is it strange that men who would tell such falsehoods as the above would burn the ships of non-combatants?

The "Neapolitan" was no sooner on fire than the "Sumter" started in pursuit of the other vessel, which proved to be the bark "Investigator," of Searsport, Maine. The cargo being clearly the property of neutrals, the vessel, after giving a ransom-bond, was allowed to proceed on her course.

Commander Semmes had now to be somewhat careful of seizing neutral property, as

he was in civilized Europe and not among a set of "half-breeds" before whose council windows he could "flash his shells," or hector a pack of feeble officials.

That night the "Sumter" lay in the "man-of-war anchorage" in Gibraltar Bay. It was not necessary to tell the inhabitants of Gibraltar what the "Sumter" was, for she had been expected. It was quite in keeping that Semmes should announce his arrival by burning a ship; but it would have been still more suited to his character if he had waited until night to illuminate the shores of Spain and Africa, and run into the anchorage, showing the Confederate flag by the lurid light of the flames.

Some of the officers of the garrison of Gibraltar, being ardent admirers of the Confederate cause, expressed themselves unreservedly. In other words, they disliked the United States, and would have been delighted to see the whole fabric of the Union broken to pieces.

The only restrictions placed upon the "Sumter" were that she should not make Gibraltar a station from which to sally out for war purposes, and should not receive on board any contraband of war. That is, she could purchase all the coal needed to enable her to commit depredations upon United States commerce, but could not replace what few blank cartridges had been expended in bringing vessels to, and the shells with which she had made a target of her prizes.

What would Great Britain have thought had Ireland thrown off her allegiance, and sent out vessels to destroy British commerce, if these vessels had been received in New York, and the authorities had allowed them to refit and repair and sent them on their way. When Washington was President, and Genet Minister from France to the United States, certain French privateers put into Philadelphia, and an attempt was made to refit them so that they might commit depredations on British commerce. The President issued an order prohibiting this, and on Minister Genet protesting against it, the President declined to receive him as the representative of France. Yet the French had materially assisted us to gain our independence from Great Britain. The diplomatic correspondence of the civil war will show how different the conduct of the British Government. It might be advisable for Great Britain to proclaim her neutrality, but there was certainly no reason why she should give aid to those in rebellion against the United States. The limits of this work will not permit a lengthy discussion of this matter, however, and we can only chronicle the movements of the Confederate cruisers and the measures taken to check their career.

While the "Sumter" remained in Gibraltar she was crowded with visitors. People came from a distance to see the wonderful vessel that had strewn the ocean with blackened hulls. The Duke of Beaufort and Sir John Inglis went on board and examined the ship—men whose ancestors had stigmatized Paul Jones as a pirate when, in the "Bon Homme Richard," he left the whole English coast in terror, and sunk the "Serapis," in a contest that will be forever memorable.

But in spite of the sympathy showered upon the "Sumter" and her interesting commander, the tide gradually turned, and Semmes wore out his welcome. Two Federal gun-boats were watching—one from Algeiras, the other at Gibraltar—neither of them violating any neutrality, or fraternizing with the inhabitants of the shore, yet every movement was reported to the Governor of Gibraltar as a violation of neutrality. The escape of the "Sumter" had put Secretary Seward on his mettle, and he made the strongest protests against her being received or recognized as a belligerent, and even went so far as to denounce her as a pirate. The British Government began to consider the matter more carefully, and the idea doubtless suggested itself that England was establishing a precedent which might give her much trouble in case of future wars. Whatever the cause, the career of the "Sumter" terminated at Gibraltar. Semmes could raise no money, and the presence of the United States vessels had a strong moral influence against him. Semmes took up his old employment of writing letters, which were referred by the Governor to the authorities at home. When it was found that Semmes had no money to purchase coal, the sympathizers with secession became lukewarm, and as every one in Gibraltar was more or less under the influence of official authority, even the Army and Navy officers became cooler towards the officers of the "Sumter." The calm bearing of the officers of the two United States vessels had its effect, they seemed to be of the right metal—the representatives of an old-established Government. The "Sumter" might be a lion for a time while the story of her exploits was still fresh in people's minds, but when two *bona-fide* ships-of-war appeared in pursuit of her, the glamour seemed to evaporate, and the bold cruiser was merely the fugitive from justice. The "Sumter" was like some young fellow entertained as a visitor, with two policemen watching the house ready to seize him when he came out.

To make matters still more unpleasant for Commander Semmes, Paymaster Myers of the "Sumter" was arrested at Tangier

on the opposite side of the Straits. Mr. Myers was on his way to Cadiz to negotiate for coal or money, and landed from the passenger steamer to walk about the town. The United States treaty with Morocco called for the surrender of all persons accused of offences against the United States; and the consul, having civil and criminal jurisdiction, had Mr. Myers and an ex-consul who was traveling with him arrested and placed in close confinement. They were then transferred to the U. S. naval vessel at Algeiras—much against the wishes of the commanding officer—by the consul, who demanded that these persons should be taken to the United States, charged with piracy on the high seas and aiding and abetting the same. The fact that officers of the "Sumter" could be arrested by the emissaries of a foreign Government put a still more dubious aspect on the "Sumter's" case. There was a flaw in the "Sumter" somewhere, and this episode was the feather that broke the camel's back.

We do not dwell with any satisfaction on the action of the consul at Tangier, who was doubtless prompted in his course by

the instructions from the Department of State denouncing the Confederate cruisers as pirates. The paymaster of the "Sumter" was of little consequence one way or another, and whether he was a prisoner, or at large, made not much difference. Semmes tried in vain to procure the release of his officer, for the United States Government had considerable prestige, and was every day growing more powerful. Mr. Secretary Seward was assuming a determined tone to which foreign powers were forced to listen. After much correspondence the unlucky paymaster was released from confinement and placed on parole as a prisoner-of-war.

As it was impossible to get to sea, the "Sumter" was finally laid up at Gibraltar in charge of a midshipman, while Semmes and some of his officers, on the 15th of April, 1862, embarked on board the mail steamer for Southampton, in search of a better vessel with which to renew their depredations on United States commerce. The "Sumter" became a blockade-runner, and, after the war, terminated her career on some dangerous shoals in the China Sea and all her crew were lost.

## CHAPTER XLVI.

### THE ADVENTURES OF THE "FLORIDA" ("ORETO") AND "ALABAMA." ENGAGEMENT BETWEEN THE "KEARSARGE" AND "ALABAMA."

DESTRUCTION OF THE NATION'S COMMERCE. — SEMMES' CAREER IN THE OLD NAVY. — SEMMES IN ENGLAND. — TAKES PASSAGE FOR NASSAU. — RECEIVES CAPTAIN'S COMMISSION. — ORDERED TO COMMAND THE "ALABAMA." — THE "ORETO" SEIZED BY BRITISH AUTHORITIES, AFTERWARDS RELEASED. — RECEIVES HER ARMAMENT AT GRAND KEY. — THE "ORETO" ("FLORIDA") SAILS FOR MOBILE. — RUNS THROUGH BLOCKADING SQUADRON. — RUNS BLOCKADE A SECOND TIME. — MAFFITT LIGHTS UP THE SEA. — THE "ALABAMA." — SEMMES JOINS THE "ALABAMA" AT TERCEIRA. — IN COMMISSION. — CAPTURE OF "STARLIGHT," "OCEAN ROVER," "ALERT," "WEATHER-GAUGE" AND "ALTAMAHA." — EXCITING CHASE. — CAPTURE OF THE "BENJAMIN TUCKER," "COURSER," "VIRGINIA" AND "ELISHA DUNBAR." — ROUGH SEA AND A PICTURESQUE CONFLAGRATION. — CAPTURE OF THE "BRILLIANT," "EMILY FARNUM," "DUNKIRK," "WAVE CREST," "TONAWANDA," "MANCHESTER," "LAMPLIGHTER," "CRENSHAW" AND "LEVI STARBUCK." — EXCITING ADVENTURES. — LANDING PRISONERS AT PORT DE FRANCE. — BLOCKADED. — THE "ALABAMA" ESCAPES U. S. S. "SAN JACINTO." — CAPTURE OF THE "PARKER COOKE," "UNION" AND "ARIEL." — INCIDENTS ON BOARD THE "ARIEL." — THE "ALABAMA" IN GULF OF MEXICO. — SINKS U. S. S. "HATTERAS." — LANDING PRISONERS AND REFITTING AT JAMAICA. — CAPTURE OF "GOLDEN RULE," "CHASTELAINE," "PALMETTO," "OLIVE JANE" AND "GOLDEN EAGLE." — THE SEA ABLAZE WITH BURNING VESSELS. — THE TOLL-GATE UPON THE SEA. — CAPTURE OF THE "WASHINGTON," "JOHN A. PARKS," "BETHIAH THAYER," "PUNJAUB," "MORNING STAR," "KINGFISHER," "CHARLES HILL," "NORA," "LOUISA HATCH," "LAFAYETTE" AND "KATE CORY." — CAPTURE OF THE WHALERS "NYE," "DORCAS PRINCE" AND "UNION JACK." — THE "ALABAMA" AND CONFEDERATE STEAMER "GEORGIA" AT BAHIA. — CAPTURE OF THE "GILDERSLIEVE," "JUSTIANA," "JABEZ SNOW," "AMAZONIAN," "TALISMAN" AND "CONRAD." — THE "CONRAD" COMMISSIONED AS A CONFEDERATE CRUISER. — CAPTURE OF THE "ANNA F. SCHMIDT." — THE "TUSCALOOSA." — CAPTURE OF THE "SEA-BRIDE." — U. S. S. "VANDERBILT" AND "WYOMING." — THE "WINGED RACER" AND THE "CONTEST" IN FLAMES. — THE "ALABAMA" GIVES THE "WYOMING" THE SLIP. — CAPTURE OF THE "MARTABAN," "SONORA" AND "HIGHLANDER." — BURNING OF THE "EMMA JANE." — RELEASE OF THE "TUSCALOOSA." — CAPTURE OF THE "ROCKINGHAM" AND "TYCOON." — THE "ALABAMA" ANCHORS IN HARBOR OF CHERBOURG. — ARRIVAL OF THE "KEARSARGE." — A CHALLENGE. — PREPARATIONS TO FIGHT. — ENGAGEMENT BETWEEN THE "ALABAMA" AND "KEARSARGE." — INCIDENTS OF BATTLE. — THE "ALABAMA" SUNK! — SEMMES ESCAPES. — CAPTAIN WINSLOW'S REPORT. — OFFICERS AND CREW OF THE "KEARSARGE." — OFFICERS OF THE "ALABAMA."

**T**HERE is no more interesting chapter in the history of the war than the account of the performances of those who commanded the cruisers that were sent forth by the Confederate Government to destroy the commerce of the Northern States.

This commerce had long been the pride of the nation, and its white sails covered nearly every sea; but that it was poorly protected by the Government was well known to all the world, and it was predicted by those who thought seriously upon the subject that the day would come when

the rude hands of some foreign power would be laid upon it, in some future war, when it would be swept from the seas; but who, in his wildest conjectures, would ever suppose that the blow would come from those whose greatest pride once was that they were born under the "Stars and Stripes," and that they loved every stripe and star in the dear old flag that had borne itself so bravely in times past, on land and sea, in the defence of human rights, and in the vindication of its own honor?

Yet men change their creeds so rapidly with the circumstances of the times, that it would be impossible to predict their actions when revolution overwhelms a nation, and changes the most loyal hearts. Men, who with patriotic pride had looked upon our flag with a veneration almost as great as they owed their God, forsook it at a moment's warning—at a time when it most needed their support. And, strange to say, some of these not only placed themselves in opposition to the Government—to which they had been bound by the most sacred ties—but they did all in their power to drive its flag from the ocean, by destroying the noble ships that carried it.

There was a large corps of these officers, and among them some of the most gallant and fiery spirits of the old Navy, without whose intelligent aid the Confederates could have inflicted little or no injury upon American commerce. It is well known that all the attempts made by the merchant captains of the South to fit out privateers were failures. Their vessels were always captured, simply because their commanders lacked the training and intelligence of the regular naval officers who went South when their States seceded.

There can be no doubt that Commander Semmes was one of the most intelligent of these officers, and he not only willingly entered into Mr. Mallory's plan for the destruction of American commerce, but embarked in the career with so much energy that it amounted to vindictiveness; so that, although he performed many daring exploits, he is hardly entitled to be called a hero. We have seen what he accomplished with the "Sumter," a small vessel which had been condemned by a Board of naval officers at New Orleans. Semmes, however, at once decided that she would suit his purpose, and, with an energy he had never been thought to possess, he got her to sea, eluded the blockaders, and after capturing fifteen merchantment, arrived at Cadiz. From this port he went to Gibraltar, where the career of the "Sumter," as a commerce-destroyer, ended. She was in an unseaworthy condition, and, being closely blockaded, Semmes decided that she could be of no further use to the Confederacy. He sold her in such a

way that his adopted country could benefit by the purchase-money, and then started in pursuit of some other field of action.

As we have said before, Commander Semmes had denounced the Mexican Government for proposing to do what he was doing in the "Alabama," but no one can tell how a man may change his nature or his opinions when swayed by some passion that may have been dormant in him for years, and which only required to be called into action to make the inert, indifferent officer throw off the old man and take on the new; there are so many instances where such men have come to the surface in great revolutions, that it is not strange that Commander Semmes, from being the mildest-mannered gentleman in the Navy, should have assumed a character bordering on that of an ancient viking.

This officer would not perhaps have merited these remarks had he not throughout his career shown the most vindictive feelings towards anything that claimed to belong to the United States; he was so inhumane in his treatment of prisoners, and so indifferent to the rights of property, that he could scarcely have expected to be treated as mildly as his compatriots who inflicted great damage on American commerce, but were content after the war was over to remain quietly in their retirement without boasting of what they had done in a book that tended to keep alive the bad passions which it were better for both North and South to bury in oblivion.

We have seen Commander Semmes in the "Sumter," we have yet to see him in the "Alabama," which he made ten times more famous as a destroyer than the little vessel which first carried his fortunes. During his second command he carried such terror into the hearts of peaceful merchantmen that many of them abandoned their flag and placed their ships under the protection of England, where they knew they would be safe from molestation.

When Semmes arrived in England he found that a commission of Confederate naval officers had been sent abroad to purchase or build cruisers for the Southern Navy, but that, owing to the difficulties thrown in their way by the protests of the American Minister and Secretary of State, little headway had been made in the desired direction; and, although he was offered the first command, he saw little prospect of immediate employment and determined to return to the Confederate States. An opportunity soon offered, and he took passage on the fast blockade-runner "Melita," which landed him at Nassau, N. P., on the 13th of June, 1862. On the same evening Semmes was quartered at the Victoria Hotel with

his staff, where he was surrounded by many Confederates, who all consorted together after a manner, and at least with apparent harmony, for they were all, as a rule, engaged in the same errand (search for plunder); and the greedy look and hungry eyes of many of these parties, as they longingly gazed upon the thousands of bales of cotton which strewed the beach, showed that their hearts were wrapped up in that beautiful staple.

Nassau, originally an insignificant town, sought only as a place of resort for invalids, had now assumed the airs of a thriving city. The harbor was filled with shipping, and its warehouses, wharves and quays were overflowing with merchandise of all kinds, ready to be sent into Confederate ports. There was almost as much bustle and activity here as at the wharves of New York. Ships were constantly arriving from England with merchandise, great-guns, small-arms, ammunition, and everything else that could be wanted by the Confederates to enable them to carry on the war, and light-draft steamers, Confederate and English, were constantly reloading these articles and running them into Southern ports. So successful were some of these traders in running the blockade that they made their voyages as regularly as mail-packets, returning again and again to Nassau with heavy loads of cotton, which were there transferred to the vessels which had brought arms and munitions of war from England.

What was there to prevent the Confederates from maintaining and equipping their fast cruisers except the unwearying vigilance of the blockading fleet? This trying duty was well performed, however, and, although some escaped them, the Federal officers captured 1,156 blockade-runners during the war. This faithful work was attributed by Commander Semmes to the greed of the "Old Navy." He complained that "this duty became a bone of contention among the Federal naval officers, which of them should be assigned to the lucrative command of the blockading squadron," and that "the Admiral of one of their squadrons would frequently awake in the morning and find himself richer by twenty thousand dollars by reason of a capture made by some one of his subordinates the night before." This, he said, was "the 'mess of potage' for which so many unprincipled Southern men in the Federal Navy sold their birthright." Is it any wonder that these loyal men refused to recognize Semmes when he was left by the war in indigent circumstances and could not make a living by the law?

Commander Semmes met several Confederate officers at Nassau, among them Com-

mander J. N. Maffitt, who had arrived in the "Oreto," a vessel that had been purchased in England by the Confederate commission and fitted out as a cruiser. At this moment she was detained at Nassau by the Attorney-General of the colony for a violation of the British "Foreign Enlistment Act." Semmes passed his time in listening to the arguments in this case, and in the meanwhile received a commission as Captain in the Confederate Navy, with orders to return to England and take command of the steamer "Alabama" (then known as "No. 290"). She had been so far secured by the Confederate commissioners that they felt quite certain of getting her to sea.

The "Oreto," of which Commander Maffitt had charge, was quite swift, but not so formidable a vessel as the "290." She had left England unarmed, but with all the arrangements made to mount guns, and with all the appliances below to stow pow-

COMMANDER J. NEWLAND MAFFITT, C. S. N.

der and shell. After a long trial she was released by the British authorities, and Maffitt again prepared to put her in fighting trim. This vessel was afterwards known as the "Florida," and though she did not equal the "Alabama," she made herself sufficiently famous to give the Federal Government a great deal of trouble, and cause it to put forth all its energies for her capture.

Maffitt was a different kind of man from Semmes. A thorough master of his profession, and possessed of all the qualities that make a favorite naval commander, he became a successful raider of the sea; but he made no enemies among those officers who had once known him and who now missed his genial humor in their messes. He was a veritable rover, but was never inhumane to those whom the fortunes of war threw into his hands, and he made himself as pleas-

ant, while emptying a ship of her cargo and then scuttling her, as Claude Duval when robbing a man of his purse or borrowing his watch from his pocket.

After Maffitt's vessel was released from the Court of Nassau (the trial having been a farce), he made arrangements to mount her guns and man her from the motley crew of sailors that floated about the town ready for any kind of work that might offer, so long as they did not compromise themselves with some power having plenty of ships-of-war, that could catch them and hang them to the yard-arm if they happened to burn or sink anything belonging to it. This they knew was piracy; but for English sailors to ship in an English port on board a Confederate cruiser, to assist in burning or sinking American vessels, they considered to be merely the exercise of belligerent rights.

The vessel loaded with the "Oreto's" guns and stores had arrived while her case was before the court at Nassau. It was shown by the defendants in this trial that the "Oreto" had not sailed with any warlike stores on board, and there the investigation ended; while it was well-known to all on the island that the arms were actually in port, only waiting to be put on board the Confederate as soon as she was released.

Maffitt was too clever to actually violate English neutrality laws by any overt act. He made arrangements with J. B. Lafitte, the Confederate agent at Nassau, to meet him at Grand Key, where the guns were to be delivered by a schooner chartered for that purpose. The meeting took place, and Maffitt succeeded in arming his ship, but was obliged to trust to recruiting his crew from such disaffected Americans as might elect to join him from captured vessels. He had at this time but five firemen, and fourteen deck-hands. So short-handed was he, that when he met the schooner with his battery on board he had to take off his coat and work as a common sailor. Every hour was precious to him, for the Federal cruisers hovering in the neighborhood might pounce upon him at any moment. The work was especially laborious under the scorching rays of an August sun, and it almost exhausted the energies of all hands; but at the end of five days the "Oreto" had all her stores and guns on board, and Captain Maffitt steamed out upon the ocean and put his ship in commission. The British flag, which she had worn since her departure from England, was hauled down, and the Confederate ensign hoisted amid the cheers of her motley crew. The ship was christened the "Florida."

All this looked very much like the ways of the buccaneers, who, in years gone by,

used to meet at these rendezvous, and prepare for raids on harmless merchantmen and their helpless passengers; but these people were pirates in every sense of the word—ignorant, cold-blooded, brutal men, who had no nationality, and not education enough to teach them right from wrong. The "Florida," however, was not a pirate. It had been declared by the most civilized and Christian nation on the face of the earth, followed by France, that these vessels were belligerents, and entitled to all belligerent rights. The only trouble was that England, in her anxiety to follow a strictly neutral course (!), was not careful enough to see her own laws maintained, and her "Foreign Enlistment Act" strictly enforced. Had she done so, the Confederate cruisers would never have sailed from an English port; or, if they did, the British Navy would have been instructed to arrest them on the high seas, or in any English port, for a violation of the "Foreign Enlistment Act." But this was not attempted, and the English Navy, in their scrupulous care to be neutral, almost deserted the West Indies, leaving the Confederate agents to carry on their operations for the future destruction of American commerce at their discretion.

The work of getting the guns on board the "Oreto" had been so severe in that burning climate that it produced sickness among her crew. The captain's steward was buried on the day the cruiser went into commission, and, on investigation, it appeared that he had died of yellow fever. The constantly increasing sick-list confirmed this opinion. There was no surgeon on board, and the captain was compelled to assume all the duties of medical officer as well as his own.

On the fifth day out, the "Florida" found herself off the little island of Anguila, and by report of the hospital steward the epidemic had reduced the working force to one fireman and four deck-hands. Being no longer able to keep the sea, Maffitt ran into the Port of Cardenas, in the Island of Cuba. Here all the officers and men were attacked in succession, and the disease being epidemic on shore, no medical aid could be obtained. Maffitt himself was at last taken down, and never perhaps in the history of yellow fever was there a ship in a worse condition than this. But "it is an ill-wind that blows nobody good," and the peaceful merchantmen could now follow their way unmolested by the "Florida"; and thus many of them escaped burning or scuttling by this misadventure of the Confederate cruiser—which some, no doubt, attributed to an act of Providence, but which was simply owing to the fact that the sailors had been indulging too freely at

Nassau, and there laid in the germs of fever, which were afterwards developed by their work in the hot sun.

There was a dreadful condition of affairs on board the "Florida," but amidst it all Maffitt never lost his self-possession until he became unconscious and was given up for dead. While in this apparently hopeless condition his young son died, followed shortly afterwards by the chief engineer, and the "Florida" bade fair to lay at anchor in the Bay of Cardenas until the war was over. But Maffitt recovered; his indomitable will carried him through the dreadful ordeal, and the doom of the "Florida" was not yet sealed. When he and most of his crew were convalescent, the Captain-General of Cuba sent a message to request the commander of the "Florida" to proceed to Havana, on the ground (it is asserted) that his vessel would be safe from an attack of Federal gun-boats, when it is well known that there was but one instance during the war where a Confederate cruiser was molested in neutral waters. In fact, there was such an absence of Federal gun-boats all along the Bahama banks and coast of Cuba, from the time the "Florida" first appeared in Nassau up to the time of her leaving Havana, that it was the cause of severe and well deserved strictures upon the neglect of the Navy Department, which seemed to be oblivious to the fact that the Confederates were fitting out these vessels as fast as their means would permit.

Though the Captain-General had invited the commander of the "Florida" to go to Havana for the above reason, it was actually for the purpose of preventing him from violating Spanish neutrality laws; and when Maffitt arrived in Havana he found himself so tied up with restrictions imposed by the Spanish authorities, that he determined to go to Mobile and fit his ship out there.

He therefore got underway for that port on the 1st of September, and arrived in sight of Fort Morgan on the 4th, having started on his perilous adventure with his crew just convalescing, and he himself scarcely able to stand from the prostrating effects of the fever.

It may appear to the reader that we have exhibited more sympathy for Commander Maffitt and given him more credit than he deserved: it must be remembered that we are endeavoring to write a naval history of the war, and not a partisan work. This officer, it is true, had gone from under the flag we venerate to fight against it; but we know that it was a sore trial for him to leave the service to which he was attached, and that he believed he was doing his duty in following the fortunes of his State, and had the courage to follow his convictions.

He did not leave the United States Navy with any bitterness, and when the troubles were all over he accepted the situation gracefully. What we are going to state of him shows that he was capable of the greatest heroism, and that, though he was on the side of the enemy, his courage and skill were worthy of praise.

On the 4th of September, at 2 P. M., the "Florida" made Fort Morgan, and at the same time it was discovered that three of the enemy's cruisers lay between her and the bar. Maffitt was assisted on deck, being too sick to move without help. He determined to run the risk of passing the blockaders; and, if he failed in that, he made his preparations to destroy his vessel so that she might not fall into Federal hands. He hoisted the English ensign, and assumed the character of an English ship-of-war. The moment the "Florida" was seen by the blockaders, as she stood boldly in, two of these vessels got underway and stood towards her. The blockading force was at this time under the command of Commander George H. Preble, in the "Oneida," a prudent, careful officer, who tried hard not to commit any mistakes; but on this occasion he was too careful not to compromise his Government by attacking an English man-of-war, as he supposed the "Florida" was, from the bold manner in which she stood towards him.

Several gun-boats had been employed blockading outside the bar, the "Kana-wha," "Pinola" and "Kennebec," and the steam-frigate "Susquehanna" had also been there, but all of these vessels had been temporarily withdrawn for other duty. The "Oneida" had been making repairs on her boilers, and the "Winona" was the only other vessel actually on the blockade at that moment. The "Oneida" was one of the fine ships built at the beginning of the war, and was supposed to be a 12-knot vessel. Her armament consisted of two 11-inch Dahlgrens (one forward and the other aft), four 32-pounders and three Dahlgren 30-pounder rifles. The "Winona" carried one 11-inch Dahlgren pivot-gun (forward), and two 32-pounders; and the schooner "Rachel Seaman" (bomb vessel), which happened to be beating up to the bar at the time, carried two 33-pounders. The "Oneida," owing to repairs that were going on, could not carry a full press of steam, and may be said to have been caught napping.

Commander Maffitt could not have chosen a more auspicious time to attempt his daring feat, though, be it said to his credit, he had made up his mind to run through the whole blockading fleet if necessary. It was his last chance; he had only to do that or run his vessel on shore and burn her, for she

was of no use to the Confederates in her then condition.

As soon as Maffitt discovered the Federal vessels, he stood directly for them, knowing that, as the "Florida" resembled an English gun-boat, she would probably be mistaken for one, and trusting to his speed to save him at the last moment. Intelligence had been received at Pensacola, the headquarters of the squadron, of the "Florida's" having left Nassau; but no news of her having reached Cardenas had followed, and for some reason no intimation had been sent to the fleet off Mobile that she was on a cruise.

At that time English ships-of-war were in the habit of going along the coast to see if the blockade was effectual, and it was customary for them to enter blockaded ports after reporting to the commanding officer of the blockading force and obtaining his permission. Commander Preble, thinking this to be a case of that kind, ran out to meet the supposed Englishman, and rounded-to, to go in with him on the same course. The "Florida" approached rapidly, her smoke-pipes vomiting forth volumes of black smoke and a high press of steam escaping from her steam-pipe. As she came within hailing distance, the Federal commander ordered her to heave-to, but Maffitt still sped on, having sent all his men below, except the man at the wheel, and returned no reply to the hail. Preble then fired a shot ahead of the "Florida," still supposing her to be some saucy Englishman disposed to try what liberties he could take, though the absence of men on deck should have excited suspicion. He hesitated, however, and his hesitation lost him a prize and the honor of capturing one of the Confederate scourges of the ocean. Preble had his crew at quarters, however, and as soon as he saw that the stranger was passing him he opened his broadside upon her, and the other two blockaders did the same. But the first shots were aimed too high and the "Florida" sped on toward the bar, her feeble crew forgetting their sickness and heaping coal upon the furnace fires with all possible rapidity. Every man was working for his life, while the captain stood amid the storm of shot and shell perfectly unmoved, keenly watching the marks for entering the port, and wondering to himself what his chances were for getting safely in.

The first broadside of the "Oneida," which was fired from a distance of a few yards only, cut away the "Florida's" hammocks, smashed her boats, and shattered some of her spars. The shock seemed to give a new impetus to her speed, the English colors were hauled down, and an attempt was made to hoist the Confederate flag in their place, but the man who

was bending it to the halyards had his fingers shot away, and it was not run up while under fire.

The "Winona" now opened on the chase with her heavy guns, as did also the "Rachel Seaman" with her 32-pounders, but the latter vessel was at a distance and her fire was of little effect. The "Oneida" fired rapidly from all the guns she could bring to bear; but as she could not make more than seven knots an hour, the "Florida" was rapidly leaving her. One 11-inch shell entered the side of the blockade-runner just above the water-line, passed through both sides, and exploded. Had it exploded one second sooner the career of the "Florida" would have ended and she would have gone to the bottom; but an inch or two saved her. On she sped, faster and faster, until even those who longed for his discomfiture could not but admire the steady bearing of the brave man who stood alone upon the deck. Another shell passed through the cabin, and her afterspars began to tremble as their supports were cut away. The firing of the Union vessels was bad, however, and the Confederate finally escaped with but one man killed and seven wounded—a small loss compared to their great gain.

During the whole war there was not a more exciting adventure than this escape of the "Florida" into Mobile Bay. The gallant manner in which it was conducted excited great admiration, even among the men who were responsible for permitting it. We do not suppose there was ever a case where a man, under all the attending circumstances, displayed more energy or more bravery.

The "Florida" remained four months in Mobile preparing for sea, and watching a chance to get out. The blockading squadron had been enlarged to seven vessels, among them the "R. R. Cuyler," a very fast steamer, that had been sent to this station with the certainty that she would be able to intercept the "Florida" if she attempted to run out.

Maffitt came down from Mobile one afternoon in the "Florida," and noted the number and positions of the blockaders, while he was plainly visible to them. The Federal commanders had been in a continual state of vigilance for three months, and it was a great relief to them to see the coveted prize at last. One would have supposed that on such an occasion every man would have been at his post, and the vessels with steam up and the chains ready to slip; but this was not the case. The "Cuyler" only was ordered to change her position after dark, and be ready to start after the "Florida" the moment she appeared. Not a vessel was sent off eight or ten miles to head the Confed-

erate off if she should get the lead, and no extraordinary precautions were taken.

At about 2 A. M. the "Florida" was reported as coming out. She passed directly between the "Cuyler" and the "Susquehanna," at a distance of 300 yards from the former. It is stated that half an hour was lost in the "Cuyler's" getting underway, owing to a regulation of the ship that the officer of the watch should report to the captain and wait for him to come on deck before slipping the cable (in this instance it would have been well if the Captain had slept on deck).

The "Oneida's" officers saw the signal, beat to quarters, but remained at anchor, though she was assigned as one of the chasing vessels! and at 3:50, "having seen no vessel run out, beat the retreat!" Such is the extract from her log. The "Cuyler's" officers, however, saw the "Florida" distinctly, and chased her during the whole of the next day, making as her greatest speed during the chase only  $12\frac{1}{2}$  knots, although she had previously made 14. At night the "Florida" changed her course, and ran for the coast of Cuba, where she was engaged in burning prizes the next day, while the "Cuyler" was hunting for her in the Yucatan Channel.

On the day after the "Florida" ran out, the "Oneida" was sent in pursuit of her; but she missed the Confederate cruiser, and Commodore Wilkes, who at that time commanded a "flying squadron" of slow vessels, fell in with her, detained her and made her a part of his command, as he also did the "Cuyler" when she fell into his hands.

And so the "Florida" was allowed to go on her way without molestation, and Maffitt was enabled to commence that career on the high seas which has made his name one of the notable ones of the war. He lighted the seas wherever he passed along, and committed such havoc among American merchantmen, that, if possible, he was even more dreaded than Semmes. We have only to say, that his being permitted to escape into Mobile Bay, and then to get out again, was the greatest example of blundering committed throughout the war. Every officer who knew Maffitt was certain that he would attempt to get out of Mobile, and we are forced to say that those who permitted his escape are responsible for the terrible consequences of their want of vigilance and energy.

To return to Captain Semmes: He had been kept several anxious weeks at Nassau waiting for an opportunity to return to Europe. The "290," then fitting out in England, was nearly ready for sea—and it

soon as possible, before the application of the British "Foreign Enlistment Act" should become more stringent.

Semmes wrote to Captain Bulloch, who had charge of fitting out the "290," to bring her to a rendezvous where he would join her. The former then made his way to Liverpool in the steamer "Bahama," and found that the "290" had succeeded in eluding the vigilance (!) of the English authorities and had proceeded to the island of Terceira, where she was awaiting the arrival of her battery on another vessel, which had also eluded these vigilant Englishmen!

The "Alabama" was built by John Laird, an eminent ship-builder, and we believe that she was built especially for the Confederate Government. This book does not pretend to enter into a lengthy legal discussion of the rights of the Confederates to build and equip ships in English ports for the destruction of American commerce, though the writer condemns the practice *in toto*. The Queen of England, at the outbreak of the civil war in America, issued a proclamation, in which it was stated that England would preserve a strict neutrality between the contending parties. This neutrality consisted not only in permitting the Confederates actually to build and equip cruising steamships for the purpose of inflicting injury on the Federals, but these ships managed to leave England in violation of the "Foreign Enlistment Act," and did inflict serious injury to the shipping of the United States.

A great many arguments were brought forward by Confederate writers to prove that no laws were violated by the above proceedings, but a folio of such arguments is not worth much in the face of the fact that in 1871 a commission was appointed by England and the United States to settle what were known as the "Alabama Claims," but which included the vessels captured by all the Confederate cruisers fitted out in England. The result of that Commission was that Great Britain paid to the United States the sum of \$15,000,000 as indemnification for the damage inflicted on United States commerce by Confederate cruisers, owing to the neglect of the British authorities in not preventing the said cruisers from getting to sea. There could be no better argument than this against all the specious writings which have appeared from time to time, and it especially refutes the attempt of Commander Semmes to justify his course. Great Britain is a nation from whom nothing like payment could have been exacted, but the concurrence of the English Commissioners was based on that high sense of justice and fair-play which is the ruling characteristic of the Anglo-Saxon race.

few days in Liverpool, collecting his officers and making financial arrangements, departed on the 13th of August, 1862, in the steamer "Bahama," to join the "290."

Commander James D. Bullock, formerly of the U. S. Navy, accompanied him, to be present at the christening of the "290," which he had contracted for and superintended while she was building.

The "290" was a vessel of 900 tons burden, 230 feet in length, 32 feet beam, and, when provisioned and coaled for a cruise, drew 15 feet of water. Her model was of the most perfect symmetry, and she sat upon the water with the lightness and grace of a swan. She was barkentine-rigged, with long lower masts, that enabled her to carry large fore-and-aft sails, which are of so much importance to a steamer in most weathers. She was of the lightest build compatible with strength, and was, in fact, constructed with the one idea of making her an efficient commerce-destroyer. She was a fast steamer, but her two modes of locomotion were independent of each other. Her speed was about 10 knots, though she made  $11\frac{1}{2}$  on her trial trip. She was well armed with 8 guns, six 32-pounders in broadside and two pivot guns, one a 100-pounder Blakely rifle, and the other a long 8-inch smooth-bore. The crew required for the "290" (not counting those in the engine-room) numbered 120 men, and she carried 24 officers.

This was the vessel that became so famous in burning and sinking that her reputation in this kind of warfare has eclipsed that of all the other Confederate vessels engaged in the same business.

A week after Semmes left Liverpool he was in Porto Praya, where he found the "290" with some of her stores already on board. Some objections being made to his getting guns on board in West Angra Bay, Semmes got underway with his flotilla and proceeded far enough to sea to be outside of neutral jurisdiction, and there, in smooth water, got the vessels alongside and completed his outfit. He then steamed back to Terceira and filled his vessel with coal.

Terceira is a beautiful place, nearly every foot of the island is under cultivation, and from a distance the whole country looks like a rambling village, where Nature seems to smile as it does nowhere else. There is everything here to allure the heart of man to harmony and peace. The little town of Angra, near which the "Alabama" was anchored, was a perfect picture of a Portuguese-Moorish settlement, with its red-tiled roofs, sharp gables, and parti-colored verandas, while the quiet peacefulness that hung over this spot, so far removed from the highways of the world, gave it an unusual charm.

Yet from this beautiful spot, where it seemed as if nothing unlawful could exist, started forth one of the most devastating expeditions against a nation's commerce known in the history of war.

The "290" lay at her anchors in all her rakish beauty; but to one who could have known of her mission she would have been an offence instead of an object of admiration. Who, to look at her in that beautiful harbor, would ever have supposed that she was bound on a mission of vengeance, and that she was destined to rove the high seas in search of plunder and leave behind her a track of flame!

Semmes had arrived in Terceira on a Wednesday, and by Saturday night all his labors were completed. The "290's" battery was on board, her provisions all stowed away, and her coal-bunkers full.

Sunday morning dawned bright and beautiful, and Semmes and his co-workers took it as a harbinger of success. The ship had not been yet put in commission, *i. e.*, had not been baptized, and the time having now come to perform this ceremony, every preparation was made to carry it through in man-of-war style. The decks were cleaned, the rigging hauled taut, and the vessel made to look, as her captain expressed it, "like a bride, with the orange-wreath about her brow, ready to be led to the altar!"

But the crew had not yet been enlisted; there were some ninety stalwart fellows in the two steamers who had been brought thus far under articles of agreement that were now no longer binding. Some had shipped for one voyage—some for another—but none of them, it is said, had been enlisted for service on board a Confederate cruiser. This course had been pursued in order to avoid a breach of the British "Foreign Enlistment Act," but no one can doubt that these rough and devil-may-care-looking fellows were ready for any adventure that promised plunder or profit; they were the same kind of men that accompanied Morgan all through the West Indies, across the Isthmus, and even to the gates of Panama.

But to perform these functions for the christening of the "290," it was necessary to be careful that no neutral law should be violated. Not for anything in the world would Semmes and his confederates have done anything of this kind, and it was therefore essential that the "290" should get underway and steam off beyond the marine league, where, upon the broad ocean, it was neutral for all the world. After steaming the required distance, the "290" was stopped and the programme carried out.

The officers were all in full uniform, and

the crew neatly dressed. All hands were summoned aft on the quarter-deck, and, mounting a gun-carriage, Semmes read his commission as a Captain in the Confederate service, and the Secretary of the Navy's order directing him to assume command of the "Alabama." When this reading was finished, the Confederate flag and pennant were run up, while the English colors were hauled down; a gun was fired, the band played "Dixie," and thus was christened the "Alabama"—a vessel whose career was destined to throw that of the "Sumter" into the shade.

Captain Semmes congratulated himself on having performed this ceremony in the most legal manner. The fact that it had all been done upon the high seas, more than a marine league from the land, where Mr. Jefferson Davis had as much jurisdiction as Mr. Abraham Lincoln, made it entirely legal in his sight.

Up to this time not a single sailor had shipped for the coming cruise of the "Alabama"; but the stalwart fellows who were now moving about her decks had well understood before they left Liverpool that they were to enlist in the Confederate service, and thus violate the "Foreign Enlistment Act" of the British nation.

The new cruiser cannot be considered to have been a representative Confederate man-of-war, for, with the exception of a few officers, all on board of her were Englishmen, who possessed no sentiment of loyalty towards the Government under which they were now to serve. It was not a crew of enthusiastic Southerners who were going forth to fight for a cause they really loved, but a band of foreign mercenaries who had no feeling but of indifference towards either of the combatants; and when one thinks of the character of these sailors there is some excuse for comparing them to pirates who fight with no other motive than that of plunder.

In this case they had been quietly told that they would receive double the amount of wages paid elsewhere, and that the Confederate Congress would vote them prize-money to the full value of every ship they destroyed. Captain Semmes had touched the hearts of these Englishmen in the right place, and he had the satisfaction of enlisting 80 out of the 90 sailors who had come out from the Mersey in the two steamers, and they came forward willingly to sign their names and receive their advance wages. This ended the democratic part of the proceedings. There was no more talk about nationalities or liberties or double wages. The strict discipline of an American man-of-war was at once enforced by Semmes and his officers (most of whom had been educated in the old Navy), and the

new vessel was quickly put into a state of efficiency.

If these officers were engaged in a bad cause, they were at least faithful to it in the extreme. They had succeeded far beyond their most sanguine expectations, having got their vessel to sea in spite of the watchful care of the American minister in London and the apparent zeal of the British Government to prevent it. How far Her Majesty's Government were sincere in their intentions can be seen from the following extract, which we give from the work of a clever naval writer, Professor J. Russell Soley, U. S. N. :

"The second cruiser built in England for the Confederates was the 'Alabama,' whose career began in July, 1862. The attention of the Foreign Office had been first called to this vessel by a note from Mr. Adams on the 23d of June. The evidence then submitted as to her character was confined to a statement made by the Consul at Liverpool, of suspicious circumstances connected with the vessel. The communication was referred to the law officers of the Crown, who gave the opinion that, if the allegations were true, the building and equipment of the vessel were a 'Manifest violation of the Foreign Enlistment Act, and steps ought to be taken to put that act in force and to prevent the vessel from going to sea.'

"It was added that the Customs authorities at Liverpool should endeavor to ascertain the truth of the statements, and that, if sufficient evidence could be obtained, proceedings should be taken as early as possible. On the 4th of July, the report of the Customs officers was transmitted to Mr. Adams, tending to show that there was no sufficient evidence that a violation of the act was contemplated.

"Other correspondence and opinions followed. On the 21st, affidavits were delivered to the authorities at Liverpool, one of which, made by a seaman who had been shipped on board the vessel, declared that Butcher, the captain of the 'Alabama,' who engaged him, had stated that she was going out to fight for the Confederate States. Other depositions to the same effect were received on the 23d and 25th, all of which were referred, as they came in, to the law officers. The latter rendered the opinion that the evidence of the deponents, coupled with the character of the vessel, make it reasonably clear that she was intended for warlike use against the United States, and recommended that she be seized without loss of time.

"Notwithstanding that the urgency of the case was well known to the Government, and notwithstanding also that of the four depositions upon which the law officers chiefly based their opinion, one had been received on the 21st of July, two others on the 23d, and the fourth on the 25th, the report was not presented until the 29th. On that day, however, the 'Alabama' left Liverpool, without an armament, and ostensibly on a trial trip. She ran down to Port Lynas, on the coast of Anglesea, about fifty miles from Liverpool. Here she remained for two days completing her preparations.

"On the morning of the 31st she got underway and stood to the northward up the Irish Sea; and, rounding the northern coast of Ireland, she passed out into the Atlantic.

"Among the innumerable side-issues presented by the case of the 'Alabama,' the facts given above contain the essential point. That the attention of the British Government was called to the suspicious character of the vessel on the 23d of June; that her adaptation to warlike use was admitted; that

her readiness for sea was known; that evidence was submitted on the 21st, the 23d, and finally on the 25th of July, that put her character beyond a doubt; and that, in spite of all this, she was allowed to sail on the 29th, make the real foundation of the case against Great Britain.

"The inference is unavoidable that the Government deliberately intended to pursue a policy as unfriendly as it could possibly be without passing the technical bounds of a legal neutrality."

The proof of the illegality of all these acts is the fact that the British Government finally paid the award of the "Alabama Commission," which was an acknowledgment on its part that the responsibility for the acts of the Confederate cruiser rested with the Power that by indifference and neglect of a plain duty had allowed its laws to be violated.

The "Alabama" had not far to go before she could strike a blow at the commerce of the North. The theatre of her performances was close at hand. The whaling season in the neighborhood of the Azores generally ends about the 1st of October, when the winter gales begin to blow, and food for the whales becomes scarce. The whales then migrate to other feeding grounds, and are followed up by their pursuers.

It was now in the early days of September, and Semmes had but a few weeks left in which to accomplish his purpose of striking a blow at the whale fishery of the United States, which had for years been carried on in these peaceful latitudes. The people pursuing this industry had no idea that there was such a vessel in existence as the "Alabama." The "Ocmulgee," of Edgartown, was lying off Fayal, made fast to a dead whale, when her captain was astonished by the appearance of a Confederate cruiser. When the "Alabama" first came in sight she carried the American flag, and was naturally mistaken for one of the new cruisers that were reported to be fitting out for the protection of Federal commerce and the whaling industry.

The same old story is to be told of the "Ocmulgee," as with the "Sumter's" prizes. Semmes was too old a hunter to burn her by night, when the light of his bonfire would serve as a warning to other whalers that might happen to be in the neighborhood, although by so doing he risked disappointing the descendants of the old Norsemen in his crew, who would greatly have enjoyed the spectacle. He well knew that it was necessary to keep these men amused, for they might at any time take the bit in their teeth, bid defiance to him and his officers, and take the "Alabama" into a Northern port, where their claim for prize-money would have been cheerfully acknowledged. He had read about the

mutinies at the Nore, and on board the "Bounty," and was well aware what freaks men of this class were capable of committing, but on this occasion he was compelled to defer gratifying their taste for brilliant effects, and he waited until daylight next morning before applying the torch to his prize.

On the following day, Semmes stood in for the beautiful island of Flores, spread his awnings, cleaned his ship, and read to his crew the "Articles of War" of the old Navy. It must have been very amusing to the descendants of the Norsemen when they heard that "any officer of the Navy guilty of treason shall suffer death." It was intended that this occasion should be an impressive one, for the crew had not up to this time assumed the orderly bearing of men-of-war's men. Somehow or other they had got it into their heads that they were bound on a privateering expedition, and that the "Alabama" was not a *bona-fide* man-of-war. They looked earnestly at each other as the reading of death-penalties went on, and openly signified that they did not fear being brought up and shot for insubordination by a man who had set such a shining example! Yet Semmes seemed to think that this reading of the Articles of War had so rivetted the chains of discipline upon his men that he could count on them to the end for any adventure he might choose to embark in.

On the next day, the schooner "Starlight," from Boston, was captured. Her crew consisted of seven persons, and there were several lady passengers. Here Semmes appears in a new role. Having heard of the treatment received by the paymaster of the "Sumter," he determined to practice a little retaliation on his own account, and the crew of the "Starlight" were forthwith put in irons. This was taking upon himself the authority only possessed by his Government; for, when retaliatory measures are adopted by one Government against another, it is done formally, and by an edict, endorsed with all the forms of lawful authority. If this were not the case, and if every commander of a ship or of a regiment were allowed to retaliate for every supposed offence, war would run into a species of brutality worthy only of savages. Hence, this power of retaliation is properly kept in the hands of heads of governments, and any subordinate who assumes this power and causes injustice to innocent people is held personally and morally responsible.

But Captain Semmes was a law unto himself, and cared for no authority or precedents that interfered with his design in the present case. Because some brute of a

merchant captain, to whose care the paymaster of the "Sumter" had been intrusted, had not conscience or kindness of heart enough to treat his prisoner with respect, Semmes determined that all Yankee crews captured by the "Alabama" should suffer for it. It was not the Federal Government that had treated the paymaster of the "Sumter" with cruelty. It was an irresponsible merchant captain, and the Confederate Government had in consequence issued no order of retaliation. Captain Semmes merely followed his own notion, that the Yankees should be chastised for the sins which one man had committed against a Southerner; but let it be remembered that these men whom he was putting in irons, and subjecting to every indignity, had not borne arms against the South, nor committed any overt act. They were peaceful traders, following their avocations, and it is not likely that they would ever have interfered with either one side or the other. He continued this practice, however, with the captains and crews of the next eight or ten prizes, and treated them with the greatest rigor. The only effect of this action was to embitter the North against an officer who thus took upon himself undue authority.

Two more fine prizes were soon afterwards taken by the "Alabama," the ships "Ocean Rover" and "Alert," both of which were filled with such supplies as the Confederates wanted. The crews of these vessels were allowed to take their boats with sufficient provisions, and start for the shore, which was then distant about five miles. Semmes did not want them, for, as they would not enlist, they would simply eat up his provisions without being of any use to him, and he was glad to get rid of them on any terms. The three last prizes were all burnt that afternoon, and the successors of the Norsemen were delighted as the smoke from three funeral pyres ascended to the skies at the same moment.

While this work was going on, an incautious American schooner (the "Weather-gauge") hove in sight and was speedily captured. There were some Northern papers on board the prize that dealt out liberal invectives against the South, and the reader may rest assured that they did the "Weather-gauge" no good. Her crew, however, were put in their boats to seek the shore, while a pillar of fire behind them revealed the fate of their floating home.

Three days after this the whaler "Altamaha," of New Bedford, was taken and burned; but, as she had not made a successful "catch," her bonfire was somewhat of a disappointment to Semmes' adventurers. Still she counted in the game; her name

and qualifications were all entered on the "Alabama's" log-book, and the quartermaster, whose duty it was to attend to such matters, stowed away her clean new flag in his plethoric bag.

There was often a little excitement and some poetry in these chases, especially when the "Alabama" happened to fall in with a clipper of a vessel that would give her as much as she could attend to. At such a time the best helmsman would be placed at the wheel, and every sail set and trimmed to a nicety, while officers and men watched the result with the keenness of sportsmen in pursuit of a hare. The "Alabama" was a long, lean racer, with three large fore-and-aft sails and square yards. When in a heavy breeze and she wanted to go to windward, she could furl her square-sails and then become a three-masted schooner, and when under this sail few vessels could equal her in speed.

On a dark night, shortly after the last burning, while Semmes was asleep in his cabin, an old quartermaster went below and shook him by the arm, informing him that there was a large ship just passing to windward of them on the opposite tack. He sprang out of bed at once, and throwing on a few clothes was on deck as soon as the quartermaster, and gave orders to "wear ship" and give chase to the stranger. The "Alabama" was under topsails at the time, and it took some moments to get all sail upon her, and when this was done the chase was three or four miles ahead, yet quite visible to a good eye in the bright moonlight. Both vessels were now close hauled on the starboard-tack, and it was evident that the merchant captain was doing his best to escape. He set his light sails with alacrity, and trimmed his yards to the greatest advantage; but this was the "Alabama's" best point of sailing, and when the sheets of her great trysails were hauled flat aft, and the fore-tack boarded, she bounded over the water like something imbued with life. What would not that merchant captain have given at that moment if the moon could have been blotted out? But the darkness would not have covered her, for the Confederates were provided with the best English night-glasses, made on purpose to spy out American prizes on dark nights.

The "Alabama" gained on the chase from the very first, and in two hours was on her weather-quarter, having head-reached and gone to windward of her. The stranger was not more than a mile off, on the lee bow, when the stillness of the night was broken into by the boom of a heavy cannon. The gun was unshotted and the merchantman paid no attention to it—not a tack or sheet was slacked in

obedience to the thundering summons; but the Confederates saw that preparations were being made to keep off from the wind and set stun'sails. Poor fellows! Never did merchant sailors work with such a will. They knew how little mercy they had to expect from the Southern rovers. The burnings of the "Sunter" were known in every sea where a newspaper could reach.

The merchant ship now began to move briskly through the water, by keeping off, and the delusive hope sprung up in the captain's breast that he might yet evade his pursuer. For a moment the "Alabama" began to drop astern, but it was only for a moment. As soon as she followed the movements of the chase and stood on a parallel course, she made such good speed that before the stranger could get his foretopmast stun'sail set she was within good point-blank range of a long 32-pounder. The moon was shining brightly and every rope and sail proved the stranger to be American.

The chase was very exciting, and the crew of the "Alabama" were grouped about on her deck, wondering if the "old man" would not soon bring it to a close, and let them have a good night display of burning before changing watches, and they were soon gratified by the order to fire another gun shotted, as the "Alabama" ranged up under the stern of her prey, not more than 300 yards distant. This was too much for the nerves of the old merchant captain. He was not a fighting man, and, if he had been, he had nothing to fight with, so he wisely hauled up his courses and lay-to. It was a pretty picture—that large ship lying in the light of the moon, with the long, low clipper silently stealing up alongside of her—and, no doubt, reminded the spectators of the yarns oft told in the fore-castle of the times when the bold buccaneers sailed along the Spanish main, burning vessels and making their crews walk the plank.

Semmes at once gave the order to board the prize, and directed the officer to hoist a light at the peak in case she proved to be an American. When the boat came alongside, the old captain was relieved of his worst apprehensions, instead of his pursuer being a pirate, she was only the "Alabama," and though he was told his vessel would be burned in the morning, and that all his worldly goods would go up in a cloud of smoke, he thanked God that it was no worse. The light was hoisted at the peak as directed, and Semmes went below to finish the nap so unceremoniously broken, and dream of the sport he would be able to give his men next morning when he destroyed the prize.

Next morning when he came on deck he

was monarch of all he surveyed. He ruled the ocean for miles around, as far even as the Saragossa Sea, for there was not such a thing as an American man-of-war in all those waters. The fifty cruisers that should have been afloat six months before, and guarding every point where American merchantmen could be found, were yet upon the stocks—nay, many of them were only on paper. An old commodore with a fleet of fourteen vessels at his heels, was steaming up and down the Gulf and Caribbean Sea, looking for "Alabamas" that were hundreds of miles away and upsetting all the plans of the Navy Department.

As Semmes looked about him that morning, his eye rested on the fine large ship lying close by, awaiting his orders. She proved to be the whaler, "Benjamin Tucker," of New Bedford, eight months out, with 340 barrels of oil. But the Confederate captain had no need for oil, so he took from her only the tobacco and small stores, and after transferring her crew of thirty persons to his own vessel, applied the torch, and before ten o'clock she was a mass of flames fore-and-aft.

The next morning he overtook and burned the schooner "Courser," of Provincetown, Massachusetts. For a moment the springs of pity opened in the breast of the Confederate as he surveyed this pretty little craft, and looked upon her handsome young captain; but he had just finished reading a Northern paper, in which he was spoken of in terms that were anything but polite, and he had to steel his heart against his better feelings and let the laws of war be executed.

He had now the crews of his three last prizes on board, and as they somewhat crowded the "Alabama," he stood in for the Island of Flores, put them in eight captured whale-boats, and sent them off to land as best they might, and compare notes with the poor fellows already on shore.

What fun it must have been to the Norsemen to see that regatta, in which eight boats were struggling to reach the shore and get as far as possible out of the neighborhood of the "Alabama"! Semmes was not otherwise inhumane to these men, but they were in his way and he wanted to get rid of them, and he seemed to think that they were so well pleased with him that, with a little coaxing, they would have given three cheers for the "Alabama"!

We are now to see the new cruiser in rough and tempestuous weather. We have seen her in smooth seas and moonlight nights; but it often happens that these smooth-water sailors do not maintain their reputation when they have to contend with heavy weather. The "Alabama" had been built as a type of a perfect cruiser, one that

could maintain her character under sail as well as under steam. But up to this time Semmes had had no opportunity to test her in all weathers, which would decide the character of the vessel, and prove whether she was the most dangerous machine to be used against American commerce ever yet planned, or simply one of those expensive failures of which the United States had so many in its own Navy. The opportunity soon occurred.

The wind was rapidly freshening into a gale, when in the morning, after the burning of the "Courser," a large American ship was discovered and soon overtaken. This was the whaling-ship "Virginia," and she was burned like the rest, after being despoiled of such articles as the "Alabama" needed. The only difference was that, as the torch was not applied until late in the afternoon, the fire burned brightly for a part of the night, and could be seen when many miles away, as the flames and burning masses of timber were whirled into the air by the strong eddies of a freshening wind.

Next morning a bark hove in sight, and as soon as those on board made out the "Alabama" they commenced making efforts to escape. By this time it was blowing half a gale, and both vessels were under snug sail; but the reefs were now shaken out and topgallant sails set in both of them. It seemed at first as if the topgallant masts of the "Alabama" would go over the side, the sticks buckled so; but John Laird had selected good timber for the craft, which he had pronounced to be the finest cruiser of her class in the world, and the broad, tough English cross-trees kept everything in its place. Not a mast snapped, nor did a rope-yarn part, so perfect were all the appliances of the vessel. The bark hung on to all the sail she could carry, though she was short-handed, and her commander evidently seemed determined to escape from his pursuer or let his masts and sails go overboard.

Though the "Alabama" was much the smaller vessel of the two, it was quite evident that she was as much at home in this rough weather as the prey in view. Both vessels were at times almost under water during this exciting chase, yet the "Alabama" gained so rapidly and steadily that it was plainly seen that the bark's only chance of safety lay in the Confederate losing some of his spars. But it was the same old story. The "Alabama" carried sail, and in three hours had the stranger within reach of her 32-pounders, and there was nothing left for the merchant captain to do but surrender. He had made a gallant run for it, and had carried his canvas in a manner worthy of a man-of-war's-man, but Semmes made short shrift of his vessel (the

"Elisha Dunbar," of New Bedford), and she was soon destroyed.

Semmes did not in this case wait even long enough to examine the papers of his prize, for the gale was increasing and he desired to get his boat on board as soon as possible. What cared he whether her cargo included neutral property or not? Was not there a "prize-court" sitting in the "Alabama's" cabin night and day, and did not this court feel perfectly qualified to settle all questions of law and fact? Had not the English Government tacitly admitted that neutrals who shipped goods in vessels belonging to either belligerent must take the chances of war and apply for redress and compensation to a prize-court?

That Semmes had under his command brave and daring officers, no one will deny, for that day put their zeal and seamanship to the severest test. The boats of the "Alabama" were well managed, and succeeded in transferring all the persons without accident. Nothing was taken out of the prize but her chronometer and flag, and by the time the boats were alongside the "Alabama," the "Dunbar" was all in flames, with her sails set just as when she hove-to. The gale howled, as if giving out a solemn requiem over the destruction of this fine vessel, and the sea-birds that brave the gale and were hovering around with discordant cries, added their apparent grief to the noise and crashing of timbers and roaring eddies of wind that were rushing through the doomed vessel.

The burning ship was, without doubt, a beautiful spectacle, which the descendants of the Norsemen enjoyed amazingly. What cared they who was injured by the destruction of the "Elisha Dunbar," since even Earl Russell was not averse to seeing a little English commerce consigned to the bottom of the ocean, as long as the whole American merchant marine could be destroyed or transferred to the flag of Great Britain!

The black clouds were mustering their forces in fearful array, ready to burst in anger over this scene of destruction. Night seemed suddenly to have wrapped the day in its mantle of darkness. The thunder rolled in the high heavens, reverberating for miles away to leeward, the awful crash seeming to shake the sea and earth to their centres, and lightning leaped from cloud to cloud, adding greatly to the grandeur of a scene which no pen can describe. All nature seemed to protest against such unnatural and wanton proceedings. The sea was by this time raging fearfully, and spray that was blown from the tops of rising waves cut the faces of the sailors as if it had been small-shot. The winds howled, and rain descended in torrents, as if deter-

mined to quench the fires raised by rebellious hands; but nothing could save the "Dunbar," and the flames burned yet more fiercely as she lay rolling and tossing upon the tumultuous sea. Now an ignited sail would fly away from a yard and scud off before the gale like some huge albatross with its wings on fire, while the yards, with braces burned and released from all control, would sway about violently, as if anxious to escape from this turmoil of fire and wind, and finally drop into the sea. The masts, one after another, went by the board, as the hull rocked and heaved like some great animal in its death throes, and finally the sea broke in and met the flames with a shriek resembling the howl of a thousand demons. The ship gave one great roll, and then went to the bottom, "a victim to the passions of man and the prey of the elements."

These were the scenes that followed in the track of the "Alabama." Semmes looked on unmoved amidst the howlings of the storm, and the descendants of the Norsemen added a new scene to their adventures, hereafter to be told under the fore-castle to their admiring shipmates who had not had the glory of serving on a Confederate cruiser.

The storm was at its height, but the "Alabama" rode it out under reefed sails like a duck; and Captain Semmes was satisfied that he had under his command not only a formidable war-vessel, but a capital sea-boat. John Laird had kept his word with the Confederate agent when he designed and built the "Alabama," and it is reasonable to suppose, since he gave so much of his time and attention to this cruiser, that his heart was much interested in the Confederate cause.

Semmes felt that he had a vessel on which he could depend for any emergency. It was now the month of October, and the gales of the season were beginning to blow. He had completely swept the seas in the whaling district, and there was nothing more of consequence to be done in that latitude. He had not, so far, burned a pound of coal in his pursuit of United States commerce; all his operations had been conducted under sail, and he had never found a vessel that could escape the "Alabama." He now sighed for new scenes of adventure, and his officers, who also longed for a change, suggested going to the ground where the grain-ships of the North might be picked up when on their way to Europe to feed the great multitudes there who depended on American grain for a subsistence.

The descendants of the Norsemen had got tired of capturing whalers, and they longed to get into the track of traders, whose rich cargoes would afford better opportunities

for obtaining plunder. Semmes knew how to manage his men, and that it was necessary to amuse them. Sailors are like children all the world over; and, although they must be governed with a firm hand, it is sometimes advisable to let them think that their wishes are consulted. Semmes never forgot the lessons taught by mutineers in times past, and he attempted to keep his sailors in a contented frame of mind by occasional concessions.

Early on the morning of October 3d two sails were simultaneously reported from the "Alabama's" mast-head; but, as both ships were standing in the direction of the cruiser, there was no need to chase. They were running right into the spoiler's net, and suspected no danger until they were within gunshot, when the "Alabama" fired a gun and hoisted the flag that had carried such terror to the whale-ships of the Azores. These vessels were the "Brilliant" and "Emily Farnum," both of New York, and both loaded with grain. The latter being what Semmes considered "properly documented" was released on ransom-bond, and he took the opportunity of sending away in her all his prisoners, of whom he had 50 or 60, besides those just captured. The "Brilliant" was burned with her valuable cargo.

On the afternoon of October 7th, the bark "Wavecrest" was taken; and, after being relieved of everything that could be of use to the Confederates, she was made a target for gun practice, and finally destroyed.

Next day the brig "Dunkirk," of New York, fell into the hands of the "Alabama," and, as her captain could offer no evidence of neutral ownership, she also was committed to the flames.

Up to this time Semmes had destroyed twelve valuable vessels, with their cargoes, and all this work had been done in little over a month, with his ship under sail alone, and here he was now right in the track of the grain trade between New York and Europe with not a single Federal man-of-war in the neighborhood to interfere with his proceedings. He approached the coast with confidence, for he had not as yet ever heard of any vessel having been sent in pursuit of him—much less seen one. Crowds of vessels were daily leaving New York for Liverpool, but they were mostly foreigners, with cargoes properly documented, who were taking advantage of the times to reap golden harvests. These vessels Semmes could not touch, but he gave them as much trouble as possible.

Why the United States Government should have left this great highway unprotected no one to this day can conjecture. The vessels that were sent to look for the "Alabama" always went to the wrong

places, when it must have been known that she would seek the highways of trade as naturally as a bluefish would seek the feeding-grounds of the menhaden. Whatever success the Federal Government may have had in blockading the enemy's ports, its attempts to protect the merchant marine were nearly always failures; and it shows how necessary it is for a nation to keep on hand in time of peace vessels that will prove useful in time of war.

There seemed to be no limit to his success, and Semmes had so much to do, and so many legal questions to decide, that he was sometimes brought to a standstill. One ship that he captured (the "Tonawanda") carried a number of women and children, who filled the air with piteous lamentations at what appeared to them to be a dreadful fate. This was more perplexing than a dozen ordinary cargoes, for he could burn these if his "prize-court" so decided, but could not so easily dispose of the women and children; and he was obliged to sail about for some time with this living cargo following in his wake, hoping that he might fall in with some neutral vessel to which he could transfer his passengers, and then be at liberty to destroy the floating home of these poor people before their eyes. If he had been a man of any generosity, he would have said to the captain of the "Tonawanda," "Go in peace; we are not warring against women and children, and these helpless ones shall not be molested." But not he: he had no sentiment about him, and, although he knew the agony felt by these people, he kept them sailing in his wake until another victim should heave in sight.

But it seems that the "Alabama" still had to play out her role before she left the North Atlantic. The good intentions that were entertained towards the passengers of the "Tonawanda"—to put them on board a neutral vessel—were frustrated by the arrival of another heavy ship of the "junk fleet" (as the grain ships were called by Semmes' men). This vessel approached the "Alabama" unsuspectingly until the boom of a gun and the Confederate flag at the stranger's peak showed the merchant captain that his fate was sealed, and he immediately surrendered.

The "Alabama" had by this time become pretty well known in the United States, and Semmes' methods were understood. Ships were heavily insured before sailing, and a shipmaster surrendered his vessel with the satisfaction of knowing that some time in the future his losses would be reimbursed. The ship "Manchester," that had now fallen into the "Alabama's" toils, was a more valuable prize than the "Tona-

wanda," so the latter was allowed to proceed on her voyage, while the former was burned in her place.

On the 15th of October the next ship was taken; but Semmes and his officers were very much disappointed when they sat down to breakfast that morning at not having their regular batch of newspapers. This vessel was the "Lamplighter," loaded with tobacco, and after the Confederates had taken what they wanted out of her they burned her, and thus approached the coast, leaving a track of flames behind them; while the Federal Government, which had been immediately apprised of her escape from Liverpool, took no effective measures to arrest the career of the cruiser that was attacking American commerce and driving its vessels to seek protection under the British flag.

The English Ministry might well afford to ignore the occasional destruction of part of a British cargo, when they knew that the system pursued by Semmes was driving all merchants to ship their cargoes in British bottoms, or to register their vessels under the English flag. The Chamber of Commerce, in Liverpool, writing to Earl Russell, as late as November, 1862, in regard to the destruction of neutral goods by the "Alabama," received the reply: "British owners of property on board of *Federal* ships, alleged to have been unlawfully captured by Confederate cruisers, are in the same position as any other neutral owner shipping in enemy's bottoms during the war." Of course, this drove all British property to seek neutral bottoms; and when English owners of captured property were told to apply to the Confederate prize-courts for redress, it convinced everybody that the British Government was not going to protect the property of its subjects on the high seas as long as an American flag waved upon the ocean.

With all her great Navy; Her Britannic Majesty had not a vessel on the ocean looking after the proceedings of these Confederate cruisers, while quite a number of them were employed in watching the operations of the Federal Navy on the coast, and officiously inspecting the blockade, to see that it was lawfully maintained.

The "Alabama" made her sixteenth capture on the 21st of October: a fine large ship running down to her—the fly and the spider again—looking a perfect picture, with her sails all beautifully drawing, and her masts swaying and bending under the cloud of canvas, while the sea was rolling before her broad, flaring bows as if nothing could oppose her progress. It was a beautiful sight, this almost living sign of a nation's greatness, that could boast at that time that the white sails of her ships

covered every sea. But a little puff of smoke from the "Alabama's" guns soon changed the picture: her cloud of canvas seemed to shrivel and disappear as if it had been a scroll rolled up by an invisible hand, and all the symmetry of the great mass that had so lately been swaying gracefully above the water was gone.

Though the cargo of the prize was certified to all over as being the property of neutrals, and also covered with British consular seals that had heretofore been respected, Semmes was not satisfied until he had held an "Admiralty Court" in his cabin, and the court came to the conclusion that the "Lafayette" must burn. Earl Russell had decided that neutrals shipping in vessels belonging to the belligerents must suffer the consequences of war, and the British Minister at Washington simply carried out the instructions of his superior, and referred all complainants to the Southern prize-courts.

Semmes found, that day, newspapers on board the "Lafayette" in which were some very severe strictures in regard to his course in the cases of the "Brilliant" and "Emily Farnum"—in fact, some of the papers denounced his acts as piracy, a term always galling to him. This did not help the case of the "Lafayette," and she was ruthlessly destroyed as soon as the captain of the "Alabama" was satisfied that he had taken everything out of her that could be of service to himself or his crew.

Three days after this capture the "Crenshaw" was taken, plundered and burned. She was only a schooner, and it did not take the "prize-court" in the "Alabama's" cabin ten minutes to decide her fate.

Semmes now found that his supply of coal was running out, and decided to shape his course for the Island of Martinique, where he had directed Captain Bullock to send him a coal-ship.

On the 2d of November he captured the "Levi Starbuck," a New Bedford whaler, bound on a voyage to the Pacific Ocean. Like all her class just starting out, she was filled with all sorts of stores and Yankee nicknacks; and although the "Alabama" had been filled up a dozen times since she started from the Azores with stores taken from her prizes, yet she had the maw of a cormorant and always seemed to want to be fed. All this booty was easily acquired, and it went just as easily. The amount of food, tobacco and clothing used by the 90 men and 24 officers on board the "Alabama" was among the most remarkable events of her cruise. But, notwithstanding the comforts bestowed upon her captors by the "Levi Starbuck," she was burned at night-fall.

It will be observed how easily all these vessels were taken by the "Alabama." Some would call this good luck on the part of the Confederate commander; but, in fact, it was the result of good management and forethought. Semmes did no more than follow the channels of trade which the American ships were known to travel, and it is reasonable to suppose that, if Federal ships-of-war had followed the same tracks, they would have picked up the bold adventurer before he had been many days at sea.

About this time the "Alabama" was approaching another track of commerce, across which it was intended to run on her way to Martinique, viz., the track of homeward-bound East Indiamen, and the day after getting in the track she fell in with and captured the "T. B. Wales." of Boston.

Captain Semmes now liberally construed the Confederate prize-law, that "No person in the Navy shall take out of a prize or vessel seized as a prize, any money, plate, goods, or any part of her rigging, unless it be for the better preservation thereof, or absolutely necessary for the use of any of the vessels of the Confederate States." He helped himself not only to anchors, chains, stores and provisions, but to the main-yard of the "Wales," which happened to be the right size and in better condition than that of the "Alabama." No wonder the Confederates were able to keep a number of cruisers at sea, when they found a victualling station in everything they captured, and could supply themselves with all necessaries at these floating dockyards.

There were women and children on board the East Indiaman, but they were all transferred to the "Alabama," and that night they were treated to the sight of a burning vessel; but, as much of their personal property went up in the flames, it is not likely that they enjoyed the spectacle to any great extent. It can be said to Semmes' credit, however, that he showed these poor people all attention, and made them as comfortable as circumstances would permit.

About the 16th of November the "Alabama" sighted the island of Dominica, the first land she had made since leaving Terceira in the Azores. Semmes now put his vessel under steam and ran for Martinique—where he expected to meet his coal-ship—passed close by the harbor of St. Pierre, to see that there were no United States ships-of-war there, and then into the harbor of Port de France, where he came to anchor.

Here the "Alabama" landed her prisoners and took on board what stores she needed; but Semmes did not attempt to coal his vessel in this port, as he feared the appearance of an American man-of-war. This precaution was well taken, for the coal-ship had

hardly got clear of the Island when the U. S. steamer "San Jacinto" appeared off the entrance to the harbor and blockaded him. But Semmes did not fear this slow and antiquated ship, as he knew that his superior speed would enable him to make his escape whenever he was ready.

The "San Jacinto" was an old steam-frigate, under the command of Commander Ronckendorff, carrying a heavy battery, but not able to make more than 7 knots under steam, and Semmes cared no more for her than if she had been an old-fashioned sailing three-decker. Commander Ronckendorff stationed himself just outside of the marine league, and kept a sharp watch on the "Alabama," but she escaped without difficulty under cover of the night, and joined her coal-ship at Blanquilla, a little island on the coast of Venezuela.

From this point Semmes shaped his course for the Gulf of Mexico, in hopes of overtaking an expedition said to be fitting out under General Banks for the purpose of invading Texas, and, as this expedition was to rendezvous at Galveston, he steered for that port. At the same time, he hoped to make his cruise remunerative by way-laying one of the steamers from Panama carrying gold to the North. He had several weeks to spare, and the idea of levying upon the mail-steamers gave him much pleasure, as a million or so of dollars deposited in Europe would naturally aid him in his operations upon the sea.

On November 26th Semmes stood for the Mona Passage between St. Domingo and Porto Rico. This was the general route of the mail-steamers on their way to the North from Aspinwall, and he naturally approached it with great caution, expecting to find a Federal ship-of-war stationed there, but there was none, and the Confederate captain seemed still to be sailing under a lucky star. It was Sunday when the cry of "Sail ho!" came from aloft: everything was dropped for the new excitement, as it had been some time since a prize had been sighted. The "Alabama's" head was pointed towards the stranger, her topmen sprang aloft at the order, and in five minutes she was under a cloud of canvas from rail to truck. The chase was a short one, a run of a few hours brought the "Alabama" up with the vessel, which proved to be the "Parker Cooke," of and from Boston.

This capture greatly pleased the descendants of the Norsemen, for they had learned from experience that the Boston traders always contained the very best of everything, from a needle to a barrel of crackers or firkin of butter. So it was in this case; the "Parker Cooke" was plethoric with good things, and all that day the canacious

maw of the "Alabama" was open to receive the cargo of her prize. The trader was completely emptied, and yet the maw was still unsatisfied, and the wonder will always remain what the 120 men on board this cruiser did with the cargoes, or parts of cargoes, of eighteen vessels which had been transferred to her from time to time. It was sunset before the prisoners and cargo were transferred, the torch was then applied to the beautiful merchantman, and soon the flames were casting a broad light on the bold mountains of St. Domingo, and were reflected on the soft, smooth sea, which already sparkled with the phosphorescence of those latitudes.

While waiting for the mail-steamers, the "Alabama" captured the Baltimore schooner "Union," to which the prisoners were transferred and the vessel allowed to depart on a ransom-bond.

Semmes knowing, from the Northern papers, that the California steamer was due next day, kept a bright look-out for her, and soon a large brig-rigged steamer appeared. All was now excitement on board the "Alabama"; the propeller was lowered, sails furled, steam raised, and in twenty minutes she was ready for the chase.

The reader is, no doubt, hoping that something will happen to warn the coming steamer in time to avoid her threatened fate. But she came on rapidly, and when within three or four miles, the "Alabama" hoisted the American flag. It was astonishing how often Semmes resorted to using what he called "the flaunting lie"—which he derided on all occasions—forgetting that in the days of the Revolution it had been carried to victory by the bravest and most chivalrous men of the South. Yet he did not feel degraded at having that flag flying at his peak as long as he could draw his enemy into his net; and that foolish steamer, seeing the old flag, put her whole faith and trust in it, and came on with increased speed to greet the defenders of the Union, whom an energetic and benign Government had sent to that spot to assure them a safe passage!!

When within a mile of the "Alabama" the steamer was making great speed, and even at that moment could have turned and escaped, but the merchant captain never thought of examining carefully that clipper-built hull and English rig, so totally unlike anything American. All eyes were bent on the American ensign, and the one small gun the steamer carried for signalling purposes was loaded to fire a passing salute to the flag of their country. Semmes placed his vessel directly across the path of the huge steamer, which came foaming through the water towards him, and if the captain of that vessel had been

a bold man he would have crashed through the "Alabama," as soon as he discovered her character, and sent her to the bottom off the island of San Domingo, where many a rich galleon, after being robbed by the Drakes and Morgans of old, had been sunk before her.

The mail-packet had all her awnings spread, and underneath them, on the upper deck, were congregated a number of passengers of both sexes, among whom could be seen the occasional uniform of an officer or soldier. It was a happy picture as they crowded to the side to look upon the defenders of their country, and the officers of the "Alabama" watched the expression of their faces as they appeared to criticise or admire their vessel. They saw plainly that not even the captain and officers had yet suspected danger, when Semmes surprised them by wheeling in pursuit, firing a blank cartridge, and hoisting the Confederate flag. The panic that now ensued was dreadful; the screams of women filled the air, and men turned pale as they realized the proximity of one of the dreaded Confederate cruisers—which were designated in the North as pirates, and which were as much feared at that time as was the vessel of the famous Lafitte by the Spaniards and Frenchmen in 1806-8.

The merchant captain, astonished at the turn of affairs, gave the order to open wide the throttle of his engines and make all possible speed. For the moment he had no intention of slacking up, but the "Alabama" was within three or four hundred yards of him, in hot pursuit, with a long gun ready to be fired if it should prove necessary to use force. It was very plain from the beginning that the packet was going rapidly away from the "Alabama," and that if Semmes wished to detain her he would have to use shot and shell. She was a fine large target, and he knew that his gunners would not be likely to miss her—after their varied and extended practice. Nor was he disappointed—a curl of white smoke, a flash, and a shower of large splinters from one of the steamer's masts, were all the result of a moment.

That was sufficient—the mast had not been cut away entirely, but the practice told those in charge of the steamer that they were entirely in the power of their pursuer, and that they had better stop before another shot was sent crashing through the stern among the women and children. The walking-beam of the engine began to move more slowly, and the bell in the engine-room soon signalled to stop. The "Alabama" slowed down, ranged up alongside, and took possession of her prize. But now Captain Semmes experienced a keen disappointment. Instead of a homeward-bound California

steamer, with a couple of millions of dollars in her safes, he discovered that his prize, the "Ariel," was outward-bound and had as passengers some 500 women and children. Here was an elephant on his hands that he had not bargained for, and he did not know what to do with his prize. He could not take her into a neutral port, for that was forbidden by the Orders in Council; he could not land the passengers, and he could not take them on board the "Alabama." The best he could hope to do was to capture some inferior prize in the next few days, place all the passengers on board of her, and let them get into port as best they could. He would then be at liberty to burn the "Ariel," and proceed on his voyage.

One of the most humiliating things about this capture was that the "Ariel" carried a battalion of marines and a number of naval officers, who were on their way to join ships in the Pacific. How these men must have blushed for their country and bitten their lips in anger, as they listened to the taunts and jeers of their captors! There were 140 of them, rank and file, and, as they were all paroled, Semmes congratulated himself on having disarmed so many of his country's enemies.

The boarding officer, on his return to the "Alabama," reported that a dreadful state of alarm existed on board the "Ariel," that the women were all in tears, and many of them in hysterics. They had read in the papers of the doings of the "Alabama," and took her officers and crew to be nothing better than pirates; and, indeed, the behavior of the "Alabama's" men on many occasions justified people in coming to this conclusion, unless it were possible to consider as legal all the decisions of the "Admiralty Court" which sat in the cabin of the commerce destroyer.

Captain Semmes was not insensible to the distress of his fair captives, and at once took steps to quiet their fears. He sent for his handsomest lieutenant (history does not give his name), and ordered him to array himself in his most gorgeous uniform, and gird on the finest sword to be found in the ward-room. The young man soon returned, looking as bewitching as possible in a uniform that was somewhat tarnished by sea air, and the Captain ordered his own gig, a handsome boat fitted with beautiful scarlet cushions, to be placed at his disposal. "Go," said the humane commander! "and coax those ladies out of their hysterics." "Oh, I'll be sure to do that, sir," replied the young coxcomb, "I never knew a fair creature who could resist me more than fifteen minutes." This sounds very much like some of the scenes enacted on board the "Red Rover," in Cooper's novel, but it is true to the letter, nevertheless.

In order to do justice to the scene which followed, we must take the description of it as given by the Captain of the "Alabama":

"A few strokes of the oars put him alongside of the steamer, and asking to be shown to the ladies' cabin, he entered the scene of dismay and confusion. So many were the signs of distress, and so numerous the wailers, that he was abashed, for a moment, as he afterward told me, with all his assurance. But summoning courage, he spoke to them about as follows: 'Ladies! The Captain of the 'Alabama' has heard of your distress, and sent me on board to calm your fears, by assuring you that you have fallen into the hands of Southern gentlemen, under whose protection you are entirely safe. We are by no means the ruffians and outlaws that we have been represented by your people, and you have nothing whatever to fear.' The sobs ceased as he proceeded, but they eyed him askance for the first few minutes. As he advanced in their midst, however, they took a second and more favorable glance at him. A second glance begat a third, more favorable still, and when he entered into conversation with some of the ladies nearest him, picking out the youngest and prettiest, as the rogue admitted, he found no reluctance on their part to answer him. In short, he was fast becoming a favorite. The ice being once broken, a perfect avalanche of loveliness soon surrounded him, the eyes of the fair creatures looking all the brighter for the tears that had recently dimmed them.'

"Was ever woman in such humor wooed?  
Was ever woman in such humor won?"

This shows the fickleness of Northern women; had they been Southern-born they would not have looked at a Northern officer, even had he rescued them from fire or wreck. But it cannot be disguised that the ladies on board the "Ariel" allowed themselves to believe that a man could be a gentleman and a man of honor, even though differing from them in politics, and one of them even so far forgot herself as to request her handsome enemy to give her a button from his uniform coat, as a memento of the occasion. It is needless to say that the request was granted, for the young officer was now so intoxicated with the beauty about him that he would have given away his coat, cap, sword and boots, had he been asked to do so. Others followed the example of the fair petitioner, and when the lieutenant reported to his commander he was in the condition of a picked chicken!

The male passengers were not so deeply impressed by the appearance of the envoy, and occupied the time of his visit in overhauling their baggage, and secreting their valuables.

"In fact," said the lieutenant, as he reported to Captain Semmes, 'I really believe that these fellows think we are no better than the Northern thieves who are burning dwelling-houses, and robbing our women and children in the South!'

This was a Southern view of the matter, which had not been modified by the plundering and burning of the "Alabama" on the high seas. Semmes himself was deeply

concerned and men on this occasion. He estimated that each of the five hundred passengers had from three to five hundred dollars, and thought that under the laws of war all this money would have been a fair prize. "But not one dollar of it," he says, "was touched, or indeed so much as a passenger's baggage examined," and we are glad that history will vouch for it for the credit of Southern officers who once belonged to the United States Navy. The fact remains, however, that to have taken one dollar or piece of property from any passenger on board the "Ariel" would have been a base act of piracy.

Semmes carried out his intention of keeping the "Ariel" in company, and it was not until he had given up all hope of falling in with another merchantman that he allowed her to go on her way rejoicing. The Captain of the "Ariel" was, of course, obliged to give a "ransom-bond"; but it was a great disappointment to Captain Semmes not to be able to burn this fine large packet, especially as he knew she belonged to Cornelius Vanderbilt, who had given a fast steamer to the United States Government for the express purpose of pursuing Confederate cruisers. Semmes looked upon this act of a private citizen as an outrage that should meet with condign punishment, forgetting that there are two sides to every question, and that Vanderbilt was merely showing his devotion and loyalty to the Republic in a most practical and sensible manner. Semmes also complained that Vanderbilt never redeemed the "ransom-bond"; but this was not singular, for the general understanding was that these bonds were only to be paid in case the South was successful.

On the 23d of December the "Alabama" joined her coal-ship at Arcas Islands, in the Gulf of Mexico, and prepared to waylay the Banks expedition, which was expected to reach Galveston by the 10th of January. Semmes' plan was to approach the harbor of Galveston at a time when the army transports would probably have arrived, make careful observations of their positions by daylight, and then withdraw until night-fall. He then proposed to run in and attack the fleet under cover of the darkness, and hoped to be able to sink or scatter the whole of them.

This was a bold and feasible plan, and no one can deny that Semmes displayed great daring in thus bearding the lion in his den, and entering waters that he knew to be full of his enemy's gun-boats. But he knew the character of every vessel on the coast, and was well aware that but few of the "old tubs" in the Federal Navy could catch him. The "Florida" had distanced the "Cuyler," the fastest vessel off Mobile bar, and the

Under these conditions he felt quite safe, as he could either run or fight.

On the 5th of January Semmes left the *Arcas* and headed for Galveston. As he approached the harbor, he discovered that, instead of Banks' transports, there were five men-of-war anchored off the town. This was a damper, and for a short time he was undecided what to do. He had promised his men some fun in this vicinity, and did not like to go away without gratifying them. He was soon relieved from his quandary, however, by the look-out aloft reporting that one of the Federal gun-boats was coming out in chase. This was the unfortunate "Hatteras," the story of whose sinking by the "Alabama" has already been told in another part of this history.

The course pursued by the Confederate commander in this action cannot be justified by the rules of war. In answer to a hail from the "Hatteras," he declared his vessel to be *Her Britannic Majesty's steamer "Petrel,"* and when Lieutenant-Commander Blake proposed to send a boat along-side of him, expressed his willingness to receive the officers in a friendly manner. This implied that the "Alabama" was what Semmes reported her to be, a neutral man-of-war. If it had been simply a ruse to escape while the boat was being lowered, it might have passed. But when, as in this case, it was to gain time in which to train the guns upon the vital parts of an enemy, and make preparations for taking human life, it was simply perfidy, such as a Zulu warrior would hardly resort to. There are certain laws of courtesy in war which the meanest nations observe. When two men-of-war meet in the day-time their nationality is shown by their flag; but when, under cover of darkness, a false nationality is given, and willingness to receive a friendly visit expressed, it is the same as violating a flag of truce, for the visitor goes on board with the full expectation of meeting a kind reception and does not anticipate treachery.

The first broadside is often the turning-point in a battle, especially when there is, as in this case, a disparity of force. As the boat approached the "Alabama," Semmes gave the order to open fire upon the "Hatteras," and the little vessel actually staggered under the blow. At the same time he ordered his first-lieutenant to hail the enemy, and reveal the true character of the "Alabama." As has been already narrated, the "Hatteras" was literally cut to pieces, and in fifteen minutes went to the bottom.

It is not necessary to give any other reason for the loss of the "Hatteras," than that her antagonist was more than a match for her in every respect. The Confederate

vessel carried heavier guns and was strongly built, while the "Hatteras" was a mere shell—an iron side-wheel river-boat, that had been used to carry passengers on the Delaware. The "Alabama" had much the greater speed, and her fire was more accurate, owing to the fact that the crew of the "Hatteras" were somewhat demoralized by the first, unexpected, broadside.

Semmes did not seem disposed to make much capital out of this victory. Nothing remained for him to do in this vicinity; so, after he had picked up the officers and crew of the "Hatteras," he put out all his lights and steamed away for the coast of Yucatan, congratulating himself that he had been able to satisfy his men with this substitute for his contemplated attack on Banks' transports. The "Alabama" received little damage in the fight, and on January 20th arrived at Jamaica, where the prisoners were landed, on parole, to find their way home as best they could. It is but fair to state that the officers and men of the "Hatteras" were kindly treated by their captors, and Lieutenant-Commander Blake was received as a guest in the cabin.

The "Alabama" sailed from Jamaica on the 25th of January, 1863, bound for the coast of Brazil. Captain Semmes had been treated with every possible attention by the British officers at Jamaica, and flattered himself that they implicitly believed in his right to burn, sink and destroy American merchantmen, even if they carried English goods, for the Confederacy would be sure to make amends in her prize-courts as soon as the war was over!

In fact, the English Admiral and his officers behaved with a great want of dignity in thus taking sides with the "Alabama," and treating the officers of the "Hatteras" with such marked discourtesy. The military bands played that lovely air "Dixie" with all the pathos they could throw into the music; while, much to the delight of the Confederates, they performed "Yankee Doodle" with all their drums, cymbals and squeaking clarionets in the harshest manner, as if in mockery of the American nation. It was, no doubt, a great source of satisfaction to the British to see the once great commerce of the United States being turned over to the protection of the British flag, and giving employment to all the vessels that had been lying idle for years at the English docks. But they forgot the pertinacity of these Yankees, whom they were trying to turn into ridicule, and they also forgot that the Northern officers and men, who were now obliged to listen to their taunts, were prisoners-of-war who possessed nothing but the clothes they stood in, and that they were entitled to all the

courtesy a generous nation could give them. They forgot, for a time, that the people whom they were attempting to ridicule were wont to remember injuries and wrongs received, and sooner or later to find a day of reckoning. The day of reckoning for these insults came when the Americans received an indemnity of \$15,000,000 for the pranks of the "Alabama" and "Florida," which the Englishmen paid to the tune of Yankee Doodle, at a time when the reunited States had adopted "Dixie" as one of its national airs.

Soon after leaving port the "Alabama" fell in with the American ship "Golden Rule," from New York, bound to Aspinwall. The island of San Domingo was sufficiently near to allow its inhabitants to witness a splendid bonfire. Semmes says in his journal:

"A looker-on upon that conflagration would have seen a beautiful picture, for, besides the burning ship, there were the two islands mentioned, sleeping in the dreamy moonlight on a calm bosom of a tropical sea, and the rakish-looking 'British pirate' steaming in for the land, with every spar and line of cordage brought out in bold relief by the bright flame—nay, with the very 'pirates' themselves visible, handling the boxes and bales of merchandise which they had 'robbed' from this innocent Yankee, whose countrymen at home were engaged in the Christian occupation of burning our houses and desolating our fields."

There was more truth than poetry in the first part of this quotation. No doubt, if the oldest inhabitants among these simple islanders could have refreshed their memories, they might have brought back the days when the buccaneers of old (many of whom were stout Anglo-Saxons in English-built ships) roved these seas and left behind them a trail of fire—even as the "Alabama" was now doing.

Soon after the capture of the "Golden Rule," a beautiful hermaphrodite brig hove in sight. It was blowing half a gale, and in the bright moonlight she looked like a sea-gull skimming along over the top of the waves. Her white sails and rakish rig proclaimed her to be an American, and she was at once brought-to by a shot from the "Alabama." She proved to be the "Chastelaine," a Boston vessel, and the fiat went forth at once—burn her. Her crew were removed, the torch applied, and with sail set, the doomed vessel bounded away over the waves, like a courser with his nostrils breathing fire. The light of her burning hull illumined the sea-girt walls of Alta Vela (a tall island about ten miles from San Domingo), and disturbed the slumber of sea-gulls and cormorants for the rest of the night; while the "Alabama" sailed away in the darkness, and this adventure soon ceased to be a matter of comment among her crew.

Semmes next appeared in the *Mona Pas-*

sage, and found this important channel of commerce still unguarded by American men-of-war. In fact, it had remained so ever since his last visit, while an old commodore, with a large squadron, had been sailing about the Caribbean Sea, interfering with neutral commerce and watching the English mail-steamers that were pursuing their legitimate business.

The "Alabama" had hardly got through the passage before she fell in with and captured the schooner "Palmetto," from New York, bound to St. John's, Porto Rico. This vessel carried neutral goods, but they were not under consular seals, and Captain Semmes decided that they came under the rule, "that when partners reside, some in a belligerent and some in a neutral country, the property of all of them, which has any connection with the house in the belligerent country, is liable to confiscation." It was wonderful how many rules of international law this officer could interpret to suit his own convenience; for only one or two instances exist in which any vessel was released by the "Alabama," unless it was desired to get rid of a lot of prisoners. The "Palmetto" had short shrift, and was forgotten in an hour.

The Confederate cruiser was now obliged to work her way into "the variables," and proceed to the eastward, near the thirtieth parallel of latitude, a sufficient distance to clear Cape St. Roque on the coast of South America. She soon sighted a sail from aloft, and quickly afterwards three more appeared and caused the Confederates to think they had fallen upon a perfect bonanza of prizes. Chase was given to the first sail, but finally abandoned, as it was leading the "Alabama" away from the other three vessels, which were fine tall ships, and apparently American. Coming up with the eastward-bound ship, a prize-crew was thrown on board of her and the prize-master ordered to follow the "Alabama," which vessel started in pursuit of one of the others, that was at least fifteen miles distant by this time, and running off before the wind with steering sails set "alow and aloft." This vessel was overtaken after quite a chase, and proved to be the "Olive Jane," of New York, loaded with French wines and brandies. Captain Semmes decided that, although much of this cargo evidently belonged to Frenchmen, it was not properly documented, so he applied the torch without waiting to make any searching investigation, not allowing so much as a bottle of brandy or a case of champagne to be taken out of her. This last was a wise precaution on his part, for he had had great trouble in controlling a number of his drunken sailors at Jamaica, and knew that it would not be safe to subject them

to temptation. Although the Confederate Captain regretted not being able to indulge himself and his men, he chuckled with delight when he thought of the disappointment of New York "shoddyites" and "*nouveau-riche* plebeians," at the loss of the rich wines, olives, and "*pate-de-fois-gras*," which had been intended to tickle their palates.

Amid the crackling of the fire, the bursting of brandy casks, the shrivelling of sails and the falling of the lighter spars from aloft, the "Alabama" turned her head to the eastward again and rejoined her first prize. This ship was the "Golden Eagle," and the great bird itself was sitting on the cutwater, spreading his wings, as if he owned all the ocean, and seemingly unconscious of his approaching fate. An inquiry into the papers of this vessel showed that her cargo was wholly owned by Americans. She had sailed full of guano from Howland's Island in the Pacific, "for Cork and a market, and after having buffeted gales off Cape Horn, threaded her way through icebergs, been parched by the heat of the tropics and drenched with the rains of the equator, it was her misfortune to be captured when within a few hundred miles of port."

Semmes himself felt sorry for a moment for these people (!), and regretted that he was obliged to destroy this fine ship with so large a cargo of fertilizing matter that would have made fields stagger under a load of grain and carried joy to many a farmer's heart. But this feeling quickly passed away when he remembered that these fields would be the fields of his enemies, or, if the guano was not used by them, its sale would pour a stream of gold into their coffers. So he applied the torch without compunction, and the career of the "Golden Eagle" was speedily terminated.

The "Alabama" now crossed the equator and stationed herself in the great toll-gate of commerce, through which traders from India, China, the Pacific Ocean and South America were continually passing, rejoicing as they reached these latitudes that the long, weary road was behind them, and that but a short and easy passage lay between them and their homes.

It had never occurred to the American Government to send half-a-dozen gun-boats or "double enders" to these latitudes. They could easily have been spared, and a depot for coaling vessels could have been established under the smooth waters of the equator, at which all the vessels-of-war in the Navy could have been supplied. If the "Alabama" knew where to go to catch American merchantmen, why did not the Federal Government know where to seek the "Alabama"? The policeman looks for rogues in the most frequented part of the

city, or at points where the wealth of the city is least guarded; and even if he does not catch the rascals, he prevents their doing harm. This was a parallel case. It was not the particular smartness of Semmes that enabled him to escape capture. It was the omission or indifference of the Navy Department in not sending proper vessels to the right localities.

Many foreign ships passed along this route; but Americans had, in a measure, taken the alarm, and were pursuing longer and safer lines of travel. Still Semmes was amply repaid for watching at the toll-gate, even though many passed through without paying toll. He captured the ship "Washington" from the Chincha Islands with a cargo of guano, bound to Antwerp. Finding difficulties in the way of destroying her neutral cargo, he put his prisoners on board, and let her go on a ransom-bond. The fact was, he was anxious to get rid of his prisoners who were eating him "out of house and home."

On the morning of the 1st of March the "Alabama" captured the fine ship "John A. Parks," of Hallowell, Maine. Her cargo, consisting of lumber for Montevideo, was covered by the seals of the British consul, and was as neutral as any cargo could be. But the ship was burned, nevertheless. A large quantity of newspapers were taken from the "Parks," which, as they contained many unflattering notices of the "Alabama," gave her officers and crew something to sharpen their appetites upon until they overhauled another prize.

The next vessel taken was the "Bethiah Thayer," last from the Chinchas with a cargo of guano for the Peruvian Government, and, as her cargo was properly documented, she was released on bond.

On the 15th of March, the ship "Punjab," of Boston, was captured; but as her cargo was English property, and was properly certified to, she was released on a ransom-bond, after the prisoners were all transferred to her. Semmes was getting merciful; the mild climate of the tropics was acting favorably upon his temperament, while his crew, for want of excitement, began to look gloomy and disconsolate. All this time Semmes made but little change in his position, lying under easy sail near the toll-gate, and allowing his prey to come to him.

On the 23d of March, the "Morning Star," of Boston, from Calcutta to London, and the whaling schooner, "Kingfisher," of Fairhaven, Massachusetts, were captured. The fact that the cargo of the "Morning Star" was English saved that vessel, but the "Kingfisher" was burned. Although this little vessel did not make as large a bonfire as some of her predecessors, it served to beguile the time; and, in order to make the

spectacle more interesting to his men, Semmes applied the torch at night-fall, when the effect of the burning oil, amid the rain and wind of a tropical squall, was quite brilliant.

Next day two large ships hove in sight, evidently Americans. They were sailing close together, their captains, no doubt, having a chat about matters at home and congratulating each other at having so far escaped the "Alabama" and "Florida." Their *tête-à-tête* was suddenly interrupted by seeing a piratical-looking craft lying directly in their course, and they separated, as if to seek safety in flight. But it was too late; they had run directly under the guns of their bitterest foe, and were soon obliged to shorten sail and submit to their fate. They were the "Charles Hill" and the "Nora," both of Boston, and although their cargoes were owned in part by neutrals, Semmes took a new view of the law, and burned them, after helping himself to about forty tons of coal.

A day or two after this, in the morning-watch, the look-out on the "Alabama" sighted a tall, fine ship standing to the southward. All sail was made in chase, and as the southwest wind, then blowing fresh, was favorable to the "Alabama," she overhauled the stranger before night-fall. The prize was the "Louisa Hatch," of Rockland, Maine, from Cardiff, with a cargo of Welsh coal for Port de Galle, Island of Ceylon. The bill of lading required this cargo to be delivered to the "Messageries Imperiales" Steamship Company, and a certificate was on the back of this document to the effect that the coal belonged to that company. But, in Captain Semmes' opinion, this certificate was not properly sworn to, so he decided that the "Louisa Hatch" was a good prize-of-war; and this idea was strengthened by the fact that she was loaded with the best Cardiff coal, exactly what the "Alabama" most needed.

Was there ever such a lucky man as the Captain of the "Alabama"? If he wanted a cargo of provisions it fell into his hands. If he required to visit a dock-yard to fit out his ship, a vessel came along filled with cordage, canvas and anchors. If he wanted lumber, a lumber vessel from Maine came right into his path; and if he needed to reinforce his crew, renegades from captured vessels would put their names to the shipping articles, after listening to the thrilling tales of the Norsemen, of burning ships and abundant prize-money.

The prize at first seemed an elephant, as Semmes would lose too much time if he attempted to transfer her cargo at sea, so he determined to send her to Fernando de Noronha, and to pay due respect to the Empire of

If the "Agrippina," his coal-tender, should arrive in time he could burn the "Louisa Hatch"; if not, the latter would supply him with coal. The Scotch collier did not, however, appear at Fernando de Noronha, for the Captain of the vessel, becoming frightened at the illicit business in which he had embarked, sold his coal to the best advantage and left the "Alabama" to look out for herself.

The Island of Fernando de Noronha is a penal settlement of Brazil. Few vessels stopped there, though many sighted it, to take a fresh departure. Although prohibited from taking his prizes into a neutral port, Semmes did not hesitate to take the "Louisa Hatch" into the harbor and coal from her, and for two weeks the officers and crew of the Confederate vessel fraternized with the interesting swindlers and homicides who colonized the island. At the end of five days, when the "Alabama" had finished coaling, signal was made from the high peaks of the island that two large American whalers had hove-to and were sending boats on shore. Semmes immediately got up steam and proceeded in search of his prey. The Confederate cruiser was soon alongside, and no time was lost in determining their fate. The "Lafayette," of New Bedford, in the course of an hour, was burning brightly, much to the amusement of the robbers and murderers on shore. The other prize, the "Kate Cory," of Westport, was retained to act as a cartel and convey the one hundred and ten prisoners on board the "Alabama" to the United States.

By 7 P. M. the "Alabama" again anchored in the harbor with her prize, without any objection from the Governor, yet the Government of Brazil subsequently pretended to be very indignant at the violation of neutrality whereby the Confederate cruiser "Florida" was taken from one of her ports.

There was no end to the indignities heaped upon the United States and its commerce while the "Alabama" remained at this colony of criminals. Semmes changed his mind about sending his prisoners to the United States, and engaged the master of a Brazilian schooner to convey them to Pernambuco. No feeling of humanity at the sufferings so many persons crowded into a small and filthy vessel must undergo troubled Semmes. The apologist for Wirtz, the Andersonville jailer, did not stick at trifles.

The "Cory" suffered the same fate as the "Hatch," Semmes being careful to burn both beyond the marine league, so as not to offend the delicate susceptibilities of the Governor of Fernando de Noronha, and to pay due respect to the Empire of

On the 22d of April, the "Alabama" was again on the wing under plain sail for a cruise along the Brazilian coast, and in less than twenty-four hours another unfortunate whaler, the "Nye," of New Bedford, was in her hands, making the sixteenth whaler that had been captured. The "Nye" had sent home one or two cargoes of oil, and had now 425 barrels on board. For a moment Semmes thought "what a pity to break in upon these old salts, who had encountered so many gales and chased the whale through so many latitudes!" But such thoughts never remained long with this sea-rover. He had a special hatred for New Englanders, and the "Nye," well saturated with oil, soon blazed up in a way to satisfy the most vindictive partisan of the Southern cause. The old whalers, who for nearly three years had risked their lives in a dangerous calling, stood silent and in tears as they beheld their hard-earned property disappear in a cloud of smoke. The people of the South necessarily suffered much at the hands of Union soldiers, and it is hard to tell what men will not do in the heat of war, but it may be fairly said there was nothing during the civil conflict to equal the atrocity of the "Alabama's" doings.

The day after the destruction of the "Nye," the "Dorcas Prince," of New York, loaded with coal, was encountered; but, as the "Alabama's" bunkers were already filled, the vessel was set on fire and destroyed.

On the third of May the Clipper ship, "Union Jack," fell into the "Alabama's" power and a prize crew was sent on board, as just afterwards, the "Sea Lark," bound from New York to San Francisco, was sighted—two fine prizes in two hours. Three women and some children were taken from the last prize and conveyed on board the "Alabama." Both ships were burned after their crews were removed.

On the 11th of May the "Alabama" landed her prisoners at Bahia, and was ordered by the Brazilian authorities to leave the port in twenty-four hours for violation of the neutrality laws; but Semmes was so much cleverer than the Governor that he was finally permitted to remain and give his men liberty on shore, where they turned the town upside down generally.

These Brazilian officials were easily influenced by the threats of Semmes to call down on them the vengeance of the Southern Confederacy after it had disposed of its "Yankee war," and they had never been taught, by the display of a proper Federal naval force, to respect the United States. The British residents of Bahia did all in their power to make Semmes' stay pleasant,

congratulating themselves that the commerce of the United States was being rapidly driven from the ocean, and this although Bahia derived its chief importance from its trade with that country.

While the "Alabama" was in Bahia, the Confederate steamer "Georgia," Commander William L. Maury commanding, anchored in the port, much increasing the respect of the Governor for the Southern Confederacy; although the latter was somewhat afraid of trouble with the Emperor, who was believed to favor the Federal Government. He accordingly requested Semmes to leave as soon as possible. This request Semmes politely ignored; amusing himself with traveling about the country, and perfecting plans with the commanding officer of the "Georgia" for the destruction of United States commerce on the coast of Brazil.

After the "Alabama" bade farewell to the "Georgia" at Bahia, she was put under press of sail, and quickly overhauled the "Gilderslieve," of New York, and the "Justina," of Baltimore. The latter, being a Maryland ship, was converted into a cartel, and after taking all Semmes' prisoners on board and giving a ransom-bond, was allowed to depart. The other vessel was loaded with coal; but as the captain had no sworn certificate of ownership by British subjects, and as the "Alabama" did not need it, Semmes' "Admiralty Court" decreed that the "Gilderslieve" should be converted into a bonfire.

The next day, the "Jabez Snow," of Bucksport, Maine, laden with Cardiff coal, was captured. As the cargo was evidently British property, Semmes might perhaps have released the vessel under a ransom-bond but for a letter found on board to the following effect:

"We hope you will arrive safely and in good season, but we think you will find business rather flat at Liverpool, as American ships especially are under a cloud, owing to dangers from pirates, more politely styled privateers, which our kind friends in England are so willing should slip out of their ports to prey upon our commerce."

Such letters as the above were always considered by the "Admiralty Court" in Semmes' cabin as not only stupid and malicious, but positive evidence against the neutral ownership of anything on board a prize; so the crew of the "Jabez Snow" were promptly removed, and the vessel set on fire.

On the 2d of June, the "Alabama" fell in with the clipper bark "Amazonian," from New York for Montevideo, with an assorted cargo. Semmes remarks: "There was an attempt to cover two of the consignments in this ship," but the "Court of Admiralty" decided that "the bark being evi-

dently Yankee, the certificates were not worth a cent!" So the ship was plundered and burned.

The next day Semmes fell in with an English brig, the master of which agreed to receive his forty-one captives and land them in Rio de Janeiro, the consideration being twice as much provisions as the prisoners could eat, and a chronometer. Of the latter articles Semmes had an abundant supply, the property of the merchant captains he had taken prisoners, although he professed to respect private property. All the other "Confederate cruisers" exhibited the same weakness for chronometers, which may be accounted for by the fact that they would all be needed for the great Navy it was proposed to build in England. The virtuous Briton at first demurred to the proposition to receive the prisoners from Semmes, on the ground that "it might offend Earl Russell," but the offer of a chronometer silenced his objections. As the Earl had a keen sense of humor, he would doubtless have remarked had he ever heard of this incident, that as chronometers are made to go they might as well go that way as any other.

The clipper-ship "Talisman," of New York, was the "Alabama's" next capture, and, as usual, was given but short shrift. After taking from the vessel her crew and such of the cargo as he wanted, Semmes applied the torch, and she went off before the wind in flames with all sail set. The "Talisman" had a number of 12-pounder field-pieces on board, and boilers and machinery for a gun-boat to be built in China to take part in the Chinese war. Semmes took two of the guns on board his vessel for the purpose of fitting out a consort when the proper vessel should fall into his hands.

Semmes continued his course along the Brazilian coast, and now began to fall in with American vessels under the British flag; for what Earl Russell had foreseen had now come to pass, and the United States carrying-trade was being transferred to English hands. The papers of these vessels were so carefully made out that Semmes' "Court of Admiralty" did not dare meddle with them, as a rule; however, he was enraged at seeing such prizes slip through his judicial fingers; but on the 20th of June the fates were propitious in bringing another fly to the "Alabama's" web.

This was the bark "Conrad," of Philadelphia, and although her cargo was English, she was taken possession of and quickly converted into a "vessel-of-war." Three or four officers, a dozen men, and the two captured field-pieces were put on board the little clipper with a celerity that would have astonished Mr. Gideon Welles, and the new Confederate cruiser was christened

the "Tuscaloosa." The baptismal ceremony was not elaborate. When all was ready, signal was given, the "Tuscaloosa" ran up the Confederate flag, and the crew of the "Alabama" gave three cheers, which were duly acknowledged by those on board the new man-of-war. Semmes' prisoners, now thirty-nine in number, were on the same day put on board an English vessel, to be landed in Rio de Janeiro.

It was now time for the "Alabama" to change her cruising-ground, not only because the United States Navy Department might be supposed to have heard of her operations and taken measures to bring them to a close, but also for the reason that there was little more damage to be inflicted in that quarter. Semmes was astonished that no Federal ships-of-war were on the Brazilian coast when he arrived there. For months he had been working his way in that direction, his track marked by burning vessels; but, in any event, one might have been reasonably sure that Semmes would ultimately seek that great thoroughfare of vessels, along the coast of Brazil. At Cape St. Roque the ocean highway becomes so narrow by the influence of the northeast trade-winds, and the vessels are so close together, that they are at the mercy of any enemy's cruiser stretching backward and forward across the road. If heavier and faster vessels than the "Alabama" had been stationed in latitude 30° North, and others at the equator to the eastward of Fernando de Noronha, Confederate cruisers could have done little harm; their principal object on hearing of the proximity of Federal vessels being to get out of their way. As it was, Semmes could make his calculations pretty accurately, and when he thought it time for a Federal cruiser to appear on the scene of action, he would slip off to "fresh fields and pastures new."

The "Alabama" and her consort now shaped their course for the Cape of Good Hope; but, finding his bread spoiled by weevil, Semmes was obliged to put back to Rio for a supply of provisions. On the 1st of July the ship "Anna F. Schmidt," from Boston, with an assorted cargo, was overhauled, and, to use Semmes' own language, "it took us nearly the entire day to do the necessary amount of 'robbing.'" The vessel was abundantly supplied with provisions, including bread; and after the "robbing" was concluded the burning was commenced, and the "Schmidt" shared the fate of her predecessors. Semmes' usual good fortune had served him well in this instance, saving him a journey of nearly a thousand miles in search of a bake-shop.

While the "Schmidt" was in flames and drifting before the wind, a large ship, un-

der a cloud of canvas, went rushing by, taking no notice of the burning vessel. The light of the fire was reflected on her white sails, which seemed to mark her as an American, and the "Alabama" followed in pursuit, firing a gun to induce the stranger to heave-to, but the only notice taken was a gun in return from the latter.

Semmes now ordered all steam and sail to be crowded on the "Alabama," while his crew became greatly excited, thinking from the strangers' firing a gun that a fight was about to ensue. It was midnight before the "Alabama" overhauled the chase, which loomed up very large in the darkness. The ship had a white streak like a man-of-war, and with a night glass five guns could be seen protruding through her side. A voice from the "Alabama" cried out: "What ship is that?" "Her Britannic Majesty's ship 'Diomedé!'" was the reply. When the British officer was informed that the pursuing vessel was the Confederate States steamer "Alabama," he remarked: "I suspected as much when I saw you making sail by the light of the burning ship."

It may be remarked that Semmes did not ask to see the stranger's commission, to ascertain whether he was really one of her Majesty's cruisers, and his sailors were somewhat uneasy at their proximity to a British ship-of-war, as a search might have taken place for deserters; but they need not have troubled themselves, for the English were in full sympathy with the "Alabama," as was evidenced by their not stopping to inquire into the fate of those on board the burning vessel.

The "Alabama" now continued on her way towards the Cape of Good Hope, capturing and destroying on the passage the ship "Express," of Boston. On the 28th of July Semmes anchored in Saldanha Bay, not venturing to Cape Town until he had ascertained that the coast was clear of American vessels-of-war. Every ship that had touched at the Cape had brought intelligence of the wonderful doings of the "Alabama," and Semmes in his journal remarks: "Mr. Seward and Mr. Adams, Earl Russell and the London *Times*, have made the 'British pirate' famous."

At Saldanha Bay Semmes received every civility from the people, who appeared to be nearly as barbarous as the aboriginal owners of the soil whom they had dispossessed of their country. These Boers flocked on board the "British pirate," and were mightily interested in all they saw. They knew that the ship and crew were British, and to this circumstance attributed all the success which had followed the career of the "Alabama." A simon-pure Confederate vessel, officered and manned by South-

erners, would have elicited far less enthusiasm in any British port that Semmes visited.

On the 5th of August, the "Alabama" sailed for Table Bay, encountering on the way her consort the "Tuscaloosa," which was sent into Simon's Bay to refit. The same day the bark "Sea-Bride," of Boston, was captured. This vessel was on a trading voyage to the east coast of Africa with an assorted cargo. Her capture was witnessed from Cape Town and caused intense excitement among the inhabitants, a majority of whom could not conceal their joy at the seizure of a well-known trading vessel that had often stopped at their port to supply their necessities. The local newspapers raved over the gallant deeds of the "Alabama," and all the people followed suit. In the little English-built vessel they saw the representative of a rising power that was to destroy the commercial supremacy of the great republic, and they naturally wanted to make friends with the winning side. The power of the United States had been estimated in the remote parts of the earth by its commercial marine; but this moral influence ceases to prevail in time of war, when that commercial marine is not protected by a suitable force of war vessels, but, on the contrary, is everywhere being driven from the sea.

The U. S. Steamer "Vanderbilt" arrived at Cape Town after the "Alabama" left, but the officers and crew received no such welcome as was given the Confederates. The people rejoiced that the "Alabama" had escaped, and none gave a hint whither the bird had flown.

Several complications arose while the "Alabama" was in Table Bay, yet, notwithstanding some of her acts were in plain violation of local and international law, the authorities sustained Semmes, even in fitting out prize-vessels for belligerent purposes.

Semmes next visited Simon's Bay, the naval station of the colony, whither the "Tuscaloosa" had preceded her. The United States Consul raised the question that the "Tuscaloosa" was not a vessel of war, but the Confederate commander replied, that although the "Tuscaloosa" had not been condemned by a prize-court of the Confederate States, yet the sovereign power of the Confederacy, acting through its authorized agent, had commissioned her as a ship-of-war, which was the most solemn condemnation of the prize. He claimed that no nation had the right to inquire into the antecedents of the ships of another nation.

Everybody except the commander-in-chief of the British naval forces was silenced, if not convinced, by this logic,

and recognized the "Tuscaloosa" as a *bona-fide* ship-of-war; but Admiral Sir Baldwin Walker wrote to the Governor: "Viewing all the circumstances of the case, they afford room for the supposition that the vessel ("Tuscaloosa") is styled a tender, with the object of avoiding the prohibition against her entrance as a prize into our ports, where, if the captors wished, arrangements could be made for the disposal of her valuable cargo." This opinion was overruled, but the British Government instructed the Colonial Governor that he should have detained the "Tuscaloosa." Accordingly, when the "Tuscaloosa" again came into port after a cruise, the Governor seized her, but the Home Government veering round ordered him to restore her to Lieutenant Low, her commanding officer, on the ground that "having been once allowed to enter and leave the port, he was fairly entitled to assume that he might do so a second time!"

The "Alabama" remained five days at Simon's Bay. The flag-ship and two other British men-of-war were there, and every attention in the way of dinner parties, etc., was shown to the Confederates by the English officers and the civil authorities. The "Alabama" then sailed from Simon's Town and joined her consorts at Angra Pequena, in the Hottentot country. While at Cape Town, an English merchant proposed to purchase the "Sea Bride" and her cargo. The transfer was made at Angra Pequena for about one-third the real value of the property, the merchant, of course, having to take a considerable risk. This questionable transaction took place right under the eyes of the British authorities, who were doing all in their power to promote the extinction of American commerce.

Again, the "Alabama" is off the Cape of Good Hope, where she cruised for several days without success, and finally proceeded to Simon's Bay, where Semmes learned that the U. S. S. "Vanderbilt," Lieutenant-Commanding Baldwin, had just left the port in search of him. On the day that the "Vanderbilt" left Simon's Bay, the "Alabama" was cruising further off the land than usual, a lucky circumstance for Semmes, whose romantic career would otherwise have been brought to a sudden and ignominious termination. The coal-dealers were the only people who welcomed the "Vanderbilt," for, as we have before mentioned, all the hospitality of the officials and citizens was given to the "Alabama." The latter, after coaling, shaped her course for the Straits of Sunda, a channel of commerce much frequented by American merchant vessels. On this voyage Semmes' only prize was an immense albatross, caught with hook and line.

On nearing the straits Semmes boarded an English brig, and was informed that the U. S. S. "Wyoming" was cruising in the straits in company with a three-masted schooner fitted as a tender. Two days after, he obtained similar information from a Dutch vessel, and it seems to have been the design of the commanding officer of the United States vessel to make his whereabouts generally known.

The "Alabama" had scarcely entered the straits when she captured and burned the bark "Amanda," of Boston, and the next day overhauled the clipper-ship "Winged Racer." Semmes anchored with his last prize under North Island, and after the latter had been despoiled of her valuable cargo, her captain, with his family, officers and crew were granted permission to take their own boats and proceed to Batavia.

While these operations were in progress the two ships were surrounded by Malay boats bringing provisions of every kind for sale, when all at once a great blaze sprung from the hold of the "Winged Racer," and the Malays for the first time realized that she had been captured by the "Alabama," when the crew of the latter vessel gave three lusty cheers. The Malays were great pirates themselves, and many European and American ships have been plundered and destroyed and their crews murdered by these picturesque vagabonds. Mistaking the "Alabama" for a corsair, and fearing to be carried off and sold for slaves, they made all haste to get away from the "English pirate."

But where was the "Wyoming" all this time that her watchful commander could not see the blazing ship? Had he visited the spot where the "Winged Racer" was burning, he would not, however, have encountered Semmes, for the "Alabama" had departed as soon as the captured vessel was fairly ablaze.

Next day the "Alabama" sighted another American clipper-ship on a wind under a press of sail. Not until the "Alabama" got up steam did she gain on the chase, and it was only after many hours that the Confederate vessel overhauled and captured her. On this occasion the "Alabama," for the first time, hoisted the new flag of the Southern Confederacy, a white ensign with cross and stars, rather a handsome flag and a great improvement on the original banner of secession, although it could have little effect in sustaining a declining cause. The prize was the "Contest" from Yokohama, with a light cargo of Japanese goods consigned to merchants in New York. The two vessels were anchored in fourteen fathoms in the open sea with no land visible, and it was after night-fall before the crew and plunder of the prize were removed to

the "Alabama." Then the torch was applied to the captured vessel, and the little plunderer sailed away in search of other victims.

Semmes now turned the "Alabama's" head to the eastward, and passed through Carimata Strait in five days, although vessels are sometimes thirty days in making the passage.

The "Alabama" was now in the China seas, having left the "Wyoming" somewhere in the Straits of Sunda looking for Confederate cruisers! Instead of one vessel there should have been a dozen in the vicinity of the straits. No wonder Semmes asked himself: "Where is the Yankee, that he is permitting all this rich harvest of commerce in the East to pass away from him?" Had English commerce been threatened with destruction by an enemy's cruisers, how her men-of-war would have swarmed in the Chinese seas! English naval officers could smile calmly at the proceedings of the Confederate plunderer, even where she might occasionally destroy a cargo belonging to British subjects, for this would induce the latter to ship goods in British bottoms.

Semmes cruised in the China seas in search of American merchant vessels, but without success. He played the Rajah at Pulo Condore, where he got springs upon his cable in order to bring his broadside to bear upon the "Wyoming," and rake her fore and aft before she could get alongside of the "Alabama" in case she should enter that narrow harbor. In this harbor Semmes spent two weeks refitting his ship and studying natural history, and became so absorbed in watching the habits of locusts and monkeys, that he appears to have quite forgotten the "Wyoming," which vessel ought to have heard of his whereabouts. Probably the commanding officer of the "Wyoming" was deceived by Semmes' eccentric movements, while the latter calculated that the "Wyoming" had gone to Canton and Shanghai in pursuit of him.

The "Alabama" next proceeded to Singapore for coal and stores. Semmes' stay was short, but the officers and crew were sumptuously entertained. The day he left Singapore Semmes captured a beautiful ship, which, though flying the British flag, was evidently an American vessel, officered and manned by "the hated Yankees." The ship's papers appeared to be in due form, and she had been transferred by a bill of sale to her British owner. After a thorough examination, Semmes satisfied himself that the transfer was not a real one, so he hauled down the British ensign and burned the "Martaban" (late the "Texan Star"), virtuously indignant at the unprincipled conduct of the shipmaster in attempting to de-

ceive the representative of the Southern Confederacy. After this little matter was settled, Semmes apparently had some misgivings, lest the British authorities might call him to an account for burning a vessel under the British flag, so he called the unlucky shipmaster into his cabin and extorted from him a confession that he had resorted to a stratagem to save his ship in case he should fall in with the "Alabama."

Notwithstanding the uncomplimentary manner in which Captain Semmes had treated the flag which has "braved a thousand years the battle and the breeze," when the "Alabama" arrived at her next port and anchored off the little town of Malacca, the English officers and inhabitants went wild over her. After leaving this place, Semmes fell in with an English vessel, the master of which gave him such information as enabled him to capture two large American ships in that vicinity, the "Sonora," of Newburyport, and the "Highlander," of Boston. When the Master of

THE "ALABAMA" OFF CAPETOWN.  
FROM A SKETCH BY REAR-ADMIRAL WALKER.

the "Sonora" came on board the "Alabama," he said pleasantly to Captain Semmes: "I have been expecting you for the last three years." Semmes answered that he was glad the Captain had found him after so long a search. "It is some such search," replied the other, "as the devil may be supposed to make after holy water!" This good humor saved the captives from imprisonment, and they were allowed to take their boats with provisions and start for Singapore. After the usual cremation services, the "Alabama" steamed out past the light-ship, and was once more in the Indian Ocean. Query, were the two ships above-named burned in neutral waters?

The "Alabama" now proceeded to the Bay of Bengal, and on the 11th of January captured and burned the "Emma Jane," of Bath, Maine. This was the last vessel burned by Captain Semmes in that quarter. Further continuance in the East Indies did

not promise much profit and the "Alabama" finally proceeded towards the Cape of Good Hope. But even in that quarter there were no prizes to be found. American vessels that were not laid up in port or transferred to the British flag avoided the beaten track.

On the 20th of March Semmes went into Cape Town for coal and provisions, and there found the "Tuscaloosa," which vessel he had sent to cruise on the coast of Brazil and which had been seized by the British authorities and afterwards released. The news received at Cape Town from the Confederate States was far from encouraging; everything seemed to be gradually falling into Federal hands. Captain Semmes, for his part, was quite satisfied with the mischief he had wrought, estimating that he had destroyed or driven for protection under the British flag, one-half of the United States vessels engaged in trade with English ports. Still greater damage was done to American trade with other nations. Commerce with the South American States was practically broken up, and that on the Pacific, including the important whale fishery, greatly crippled.

Semmes left Cape Town March 25th, the "Alabama" keeping in the "fair way" leading from the Cape of Good Hope to the equatorial region where the Confederate cruisers had been so successful, shortening sail from day to day and tacking to and fro in the "high-way," but for some time the American flag was nowhere to be seen among the numerous vessels passing on their way. At last an unlucky "Yankee" was reported, and although he made all sail and handled his ship with great skill, the "Alabama" overtook the fugitive. She proved to be the ship "Rockingham," from the Chincha Islands, with a cargo of guano, bound to Cork. Semmes, after removing the crew and such provisions and stores as he wanted, made a target of the "Rockingham," exercising his crew in firing shot and shell at her, which they did with "great precision," owing doubtless to the circumstance that the "Rockingham" could not return the fire; for we find on a subsequent occasion, when the "Kearsarge" was the target, this same crew fired with very little effect.

On the 27th of April the "Tycoon," of New York, with an assorted cargo, was brought-to; the hold of the "Alabama" was filled up with stores, and the night illuminated by another burning ship.

About this time Semmes crossed the equator, and ran up to the old toll-gate, where so many American vessels had been made to haul down their flags. He now felt that he was getting towards the end of his career. The latest captured newspapers had given him an insight into the desper-

ate condition of the Southern Confederacy, and he saw that his commerce-destroying was about ended. To quote his own words: "The poor old 'Alabama' was not now what she had been. She was like the weary foxhound, limping back after a long chase, footsore and longing for quiet and repose. Her commander, like herself, was well-nigh worn down. Vigils by day and night, the storms and the drenching rain, the frequent and rapid change of climate—now freezing, now melting or broiling, and the constant excitement of the chase and capture—had laid, in the three years of war he had been afloat, a load of a dozen years upon his shoulders. The shadows of a sorrowful future, too, began to dawn upon his spirit." From this melancholy moralizing we might almost imagine that Semmes anticipated some such fate as befell Conrad the Corsair:

"'Tis idle all, moons roll on moons away,  
And Conrad comes not, came not since that day:  
Nor trace, nor tidings of his doom declare  
Where lives his grief, or perished his despair!"

On his way to Europe Semmes met with no prizes. American merchant vessels had scattered in all directions like chickens threatened by the hawk, many of them seeking, under the British and other flags, the protection which their own Government failed to afford.

On the 11th day of June, 1864, the "Alabama" anchored in the port of Cherbourg, France; and three days afterwards the U. S. steamer "Kearsarge," Captain John A. Winslow, steamed into port, communicated with the authorities, steamed out again without coming to an anchor, and took a station off the breakwater, in order to prevent the "Alabama" from escaping.

It was evidently not Semmes' intention to fight anybody, for he was about to go into dock and give his men two months' leave, when they would have scattered to parts unknown; but as Cherbourg was exclusively a naval port, the French Admiral would not admit the "Alabama" into dry-dock until he obtained permission from the Emperor, then absent at Biarritz. Had the latter been in Paris, the fight with the "Kearsarge" would never have taken place. Under the circumstances, it would not have done to decline the combat which the "Kearsarge" offered; and Captain Semmes, after so long warring on peaceful merchant vessels, directed the Confederate agent in Cherbourg to request Captain Winslow to wait for him and he would give him battle as soon as he could get some coal on board.

The Captain of the "Alabama" occupied four days in preparations for battle, filling the bunkers so that the machinery would be protected, sending down all useless spars and top hamper, and doing everything possi-

ble to achieve success in the coming contest. Semmes' principal anxiety seemed to have been lest his English crew had grown rusty for want of gunnery practice, which he had been obliged to neglect in the more congenial business of plundering and burning; still, as the force of the "Kearsarge" was as nearly as possible the same as his own ship, he was exceedingly hopeful of success.

Semmes tried after the battle to make it

	"ALABAMA."	lbs.
6 long 32-pounders,		192
1 rifled 100-pounder, (Blakeley)		100
18-inch shell-gun,		68
<hr/>		
8 guns,		360

In speed the "Kearsarge" had somewhat the advantage. In tonnage the vessels were almost the same. The "Kearsarge" had 163 officers and men, the "Alabama," 149. It

CAPTAIN (AFTERWARDS REAR-ADMIRAL) JOHN A. WINSLOW.

appear that the "Kearsarge" had the advantage in size, weight of ordnance and number of guns and crew; but this, like many other of his assertions, is disputed by official records, which state as follows :

	"KEARSARGE."	lbs.
4 short 32-pounders, weight of projectile,		128
2 11-inch pivot-guns,		272
1 30-pounder rifle,		30
<hr/>		
7 guns,		430

was a matter of little consequence what battery the "Alabama" carried, as so few of her shots struck the "Kearsarge"; and if, as has been asserted, many of Semmes' crew were old English man-of-war's men, their shooting did little credit to their training.

With wise precaution, Semmes sent all his valuables on shore before steaming out to meet his antagonist, who was eagerly watching for his appearance. The weather

was fine, and a large number of people were assembled on the heights to witness the engagement. The English yacht "Deerhound," owned by one of Semmes' sympathizers, followed in the "Alabama's" wake, and the French iron-clad "Couronne" steamed out of port to see that the neutrality of French waters was not violated.

Before going into battle, Captain Semmes made the following address to his officers and men, who were all attired in their best clothes:

"Officers and seamen of the 'Alabama': you have at length another opportunity of meeting the enemy—the first that has been presented to you since you sank the 'Hatteras'! In the meantime, you have been all over the world, and it is not too much to say that you have destroyed and driven for protection under neutral flags one-half of the enemy's commerce, which at the beginning of the war covered every sea. This is an achievement of which you may well be proud; and a grateful country will not be unmindful of it. The name of your ship has become a household word wherever civilization extends. Shall that name be tarnished by defeat? The thing is impossible! Remember that you are in the English Channel, the theatre of so much of the naval glory of our race, and that the eyes of all Europe are at this moment upon you. The flag that floats over you is that of a young Republic, who bids defiance to her enemies, whenever and wherever found. Show the world that you know how to uphold it! Go to your quarters."

The "Kearsarge" ran off shore a few miles so as to draw the Confederate vessel as far as possible from the land and be able to intercept her in case she should attempt to retreat in shore.

As soon as the "Kearsarge" turned to approach the "Alabama," the latter opened fire from the distance of a mile; the Federal vessel not replying, but steaming at full speed for the enemy, receiving a second and third broadside.

When within nine hundred yards, the "Kearsarge" slowed and returned the fire with her starboard battery, and then attempted to gain a position where she could rake the "Alabama." The latter avoided this by sheering, still keeping her starboard broadside bearing on the "Kearsarge." These tactics brought the combatants circling around each other, each working their starboard batteries. As Captain Semmes appeared to avoid close action, Captain Winslow was apprehensive that he might make for the shore, and therefore determined, with full speed and a port helm, to run under the "Alabama's" stern, and if possible rake her. It was Semmes' anticipation of this manœuvre that forced the "Alabama" under full steam into a circular track during the action as in the diagram, with the result that at the close of the fight the "Alabama" was then nearly five miles off shore,

and it was impossible for her to escape within French jurisdiction, as her commanding officer intended in case the battle should go against him.

The firing of the Confederates was rapid and wild until near the close of the engagement, when it became better, while that of the Federal gunners, owing to the careful training of Lieutenant-Commander James S. Thornton, the executive officer of the "Kearsarge," was very effective. The superior training of the "Kearsarge's" crew was evident from the beginning of the action, their guns telling fearfully on the hull and spars of the Confederate. On the seventh rotation on the circular track the "Alabama" set her foresail and two jibs, with head in shore. Her speed was now retarded, and, by winding her, the port broadside was presented to the "Kearsarge," with only two guns bearing, being able to shift but one gun from the starboard side.

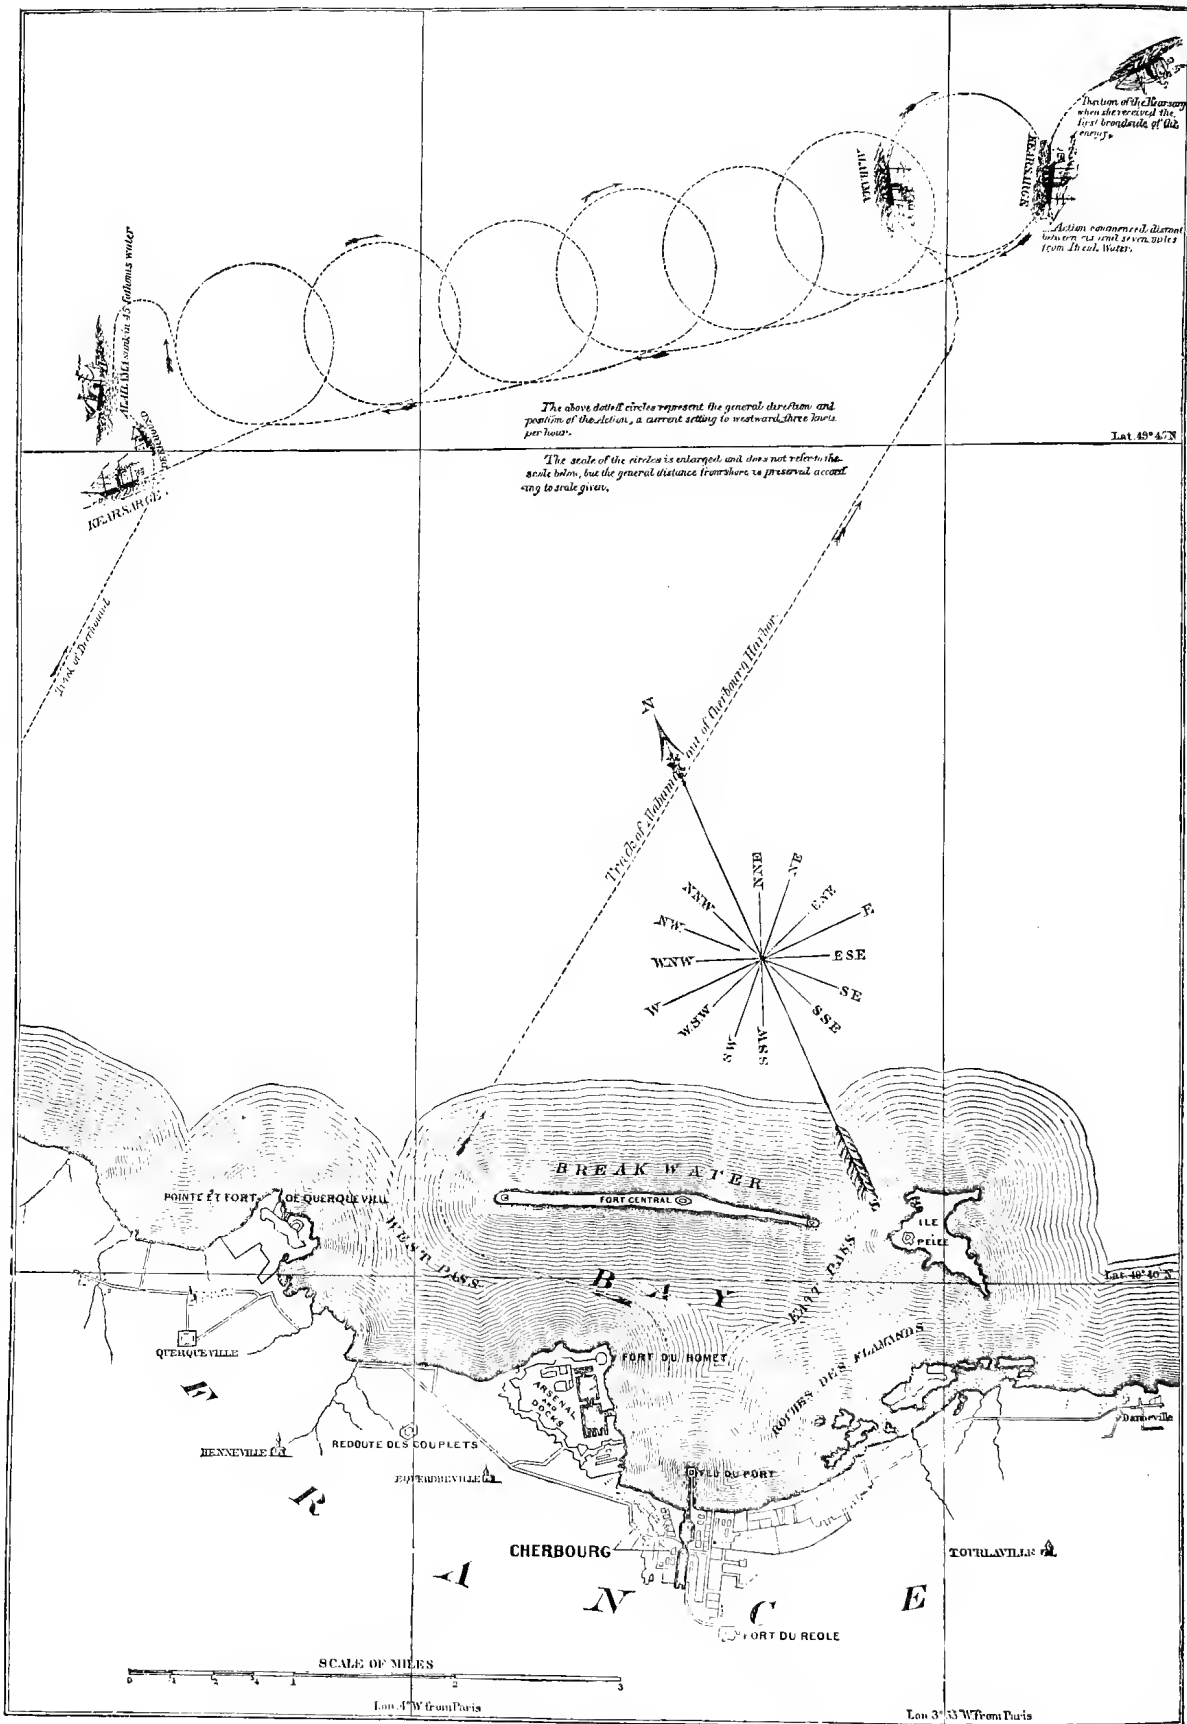

At this time the "Alabama" was com-

THE U. S. S. "KEARSARGE."

pletely at the mercy of the "Kearsarge," and a few more well-directed shots brought down the Confederate flag. Fifteen minutes after the action commenced, the spanker-gaff of the "Alabama" was shot away, and her flag came down, but was immediately hoisted at the mizzen. The "Kearsarge's" shot told fearfully on the "Alabama's" hull, killing and wounding numbers of men in different parts of the ship. So that, in sixty-five minutes after the commencement of the fight, the "Alabama" was discovered to be sinking, an 11-inch shell having entered her side near the water line, making a huge aperture, through which the water poured in torrents. For a moment Semmes had an idea of escaping, and crowded on steam and sail, heading the "Alabama" for the French coast; but the fires in the engine-room were soon extinguished and he was obliged to surrender.

Semmes asserts that his ship was fired upon five times after he had hauled down his colors; but this assertion is not supported by other evidence, for when the Confederate flag came down, Captain Winslow, al-

though unable to ascertain whether it had been hauled down, or shot away, gave the order to reserve the "Kearsarge's" fire. A white flag was displayed over the Confederate's stern, and a moment after the "Alabama" opened on her antagonist with the two guns on the port side, drawing the fire of the "Kearsarge" once more. It was at this moment the Federal vessel steamed ahead, placing herself across the "Alabama's" bow in a position for raking; but, seeing the white flag still flying, the "Kearsarge" again reserved her fire.

Immediately afterwards, the "Alabama's" boats were lowered, one of them pulled alongside the "Kearsarge" with some of the wounded, and in twenty minutes afterwards the "Alabama" went down stern foremost, leaving a large number of her officers and crew struggling in the water. Most of the "Kearsarge's" boats were rendered useless by fragments of shell, as the Confederates fired high; but as soon as possible the launch and second cutter were hoisted out to pick up the drowning men, while the "Alabama's" boat was sent back for the same purpose.

Meanwhile the English yacht "Deerhound," which had been viewing the combat from a distance of about a mile, ran under the stern of the "Kearsarge" and volunteered to pick up the men in the water, to which proposition Captain Winslow assented; for this was no time to think of anything but the claims of humanity, to which American officers and seamen have ever shown due appreciation. In spite of the officers and crew of the "Kearsarge" having done everything possible to rescue their opponent, Captain Semmes, in his chagrin at being so thoroughly beaten, reflects upon Captain Winslow for not sooner getting his boats to the rescue of the "Alabama's" crew.

The prisoners picked up by the boats of the "Kearsarge" were taken on board that vessel, while the "Deerhound," after rescuing Captain Semmes and many of his officers and crew, steamed away for the English coast, leaving others struggling for their lives in the water. Six officers and sixty-four men, including twenty wounded, were received on board the "Kearsarge"; so that, notwithstanding Semmes' accusation, it appears that most of the people of the "Alabama" were saved by the "Kearsarge's" boats, while the Confederate Captain, as soon as he was safe on board the "Deerhound," fearing that Winslow would demand his surrender, urged his friend, the owner of the yacht, to save *him*. The latter accordingly made off without further efforts at rescue; so that, if any one was drowned, it was due more to the selfishness of Captain Semmes than to any other cause.

Although the actions of the owner of the "Deerhound" may be open to criticism, as an Englishman he could hardly be expected to deliver up as prisoners men whom he found struggling for their lives in the water. It is honorable to the English flag that it is a protection to everything it waves over, and that the whole power of the British nation will sustain the rights of even the meanest of its citizens. Captain Semmes' escape made little difference one way or the other, for, with the "Alabama" at the bottom of the channel, his power of mischief had departed. As the Confederacy was in its last agonies, there was no chance of fitting out any more "cruisers."

The action between the "Kearsarge" and the "Alabama," although comparatively a small battle, much impaired the prestige of the Confederate Navy. The British public might rejoice over the destruction of helpless merchantmen, but when it came to fighting, the "Kearsarge" did her work so quickly and effectively that the blindest could but detect the difference between the true and the false coin.

Mr. Secretary Welles attached more importance to the escape of Semmes and his companions in the "Deerhound" than the matter deserved, and even blamed Captain Winslow for his course in paroling the prisoners. Mr. Welles characterized all those connected with the "Alabama" as "pirates," but they were not so in the eyes of European Governments, which had recognized the Confederates' armed vessels as belligerents, and although many of the acts of the "Alabama" bordered on the piratical, yet such irregularities are always found existing in revolutionary struggles, where the worst passions are engendered in the breasts of those who have staked their all on the hazard of a die, and are not always scrupulous as to the means of accomplishing their ends.

The fault of encouraging the Confederate cruisers lay chiefly with the English and French, and to them is due the latitude the former were allowed on the ocean. Possibly the English may have thought that a country capable of putting a million of men in the field must have been able to muster a sufficient force of cruisers to put an end to the "piracy" of which Mr. Welles complained.

As to the implied censure on Captain Winslow for not pursuing the "Deerhound" and recovering his prisoners, the question arises: Were they Winslow's prisoners at all, any more than if they had succeeded in landing on fragments of the wreck at some point on the coast of England, for an English ship represents English soil? A similar sentiment animates the American people, and it would be very in-

consistent for them to wish to apply another standard to foreigners, and maintain that it was Captain Winslow's duty to commit violence upon the "Deerhound," and thereby involve the Federal Government in a serious complication with that of Great Britain.

While the "Alabama" was sent to the bottom in sixty-five minutes, with her hull cut to pieces, thirty of her crew killed and wounded, and ten drowned, the "Kearsarge" incurred little damage in hull or spars and had but three men wounded. Out of three hundred and seventy shot and shell fired by the Confederate vessel, thirteen or fourteen only struck the "Kearsarge" in or about the hull, and some sixteen about the masts or rigging. The latter vessel was in perfect readiness to engage another immediately after sinking the "Alabama."

If the "Alabama's" guns were, as it has been asserted, manned by trained gunners from the practice-ship "Excellent," of the Royal Navy, their firing did little credit to the school in which they had been educated. On the other hand, the fire of the "Kearsarge" showed the great superiority of the American crew—as great as was manifested on so many occasions during the war of 1812.

The "Kearsarge" fired one hundred and seventy-three projectiles, less than half the number fired by her antagonist; but what damage they did and whom they killed will never be known. Captain Semmes states that one shot alone killed and wounded eighteen men. Another exploded in the coal-bunkers, completely blocking up the engine-room; others exploded against the sides, making, as Semmes expresses it, "great gaping wounds" which let in the water and sent the ship to the bottom, with the precious bag of captured flags, and probably the old quartermaster who had charge of the trophies.

No account can be given of the casualties on board the "Alabama" beyond that furnished by Captain Semmes that we have already quoted. Out of one hundred and forty-nine officers and men, forty seem to have been killed or drowned, although it was stated by the prisoners that a number of men joined the ship at Cherbourg, in addition to the regular complement of the "Alabama."

It is remarkable that there was no one killed on board the "Kearsarge" in the action—although three men were wounded, one mortally—as shells were continually bursting over the heads of the crew.

Semmes tried to make it appear that the "Kearsarge" was an iron-clad in disguise, because Captain Winslow had hung his spare chains up and down the sides of his ship abreast of the machinery. This had been done some time before meeting the

"Alabama" with the design to protect the boilers and engines, in case the coal in the bunker should get so reduced as to leave them exposed to shot. It was not done with any especial reference to meeting Semmes, who might have adopted a similar plan had he chosen to do so—and this had been done extensively during the civil war, a fact well known to the commander of the "Alabama."

Semmes remarks that the shells fired from the "Alabama" burst against the sides of the "Kearsarge" without effect, owing to this chain armor; but the fact is, only two projectiles struck the chain—a 32-pound shot and a Blakeley shell. The latter did not burst, but broke some of the links of chain. It was of very little use for Captain Semmes to try and excuse himself, after being so thoroughly beaten by the superior discipline of the "Kearsarge," and the skill of her crew in gunnery. It was the intention to make short work with the "Alabama" in case the "Kearsarge" fell in with her, and the action would have terminated sooner but for the difficulty of coming to close quarters with the Confederate vessel.

No wonder the people of the North were overjoyed when they read Captain Winslow's modest dispatch announcing the destruction of the despoiler that had sent so many of their merchant ships to the bottom. The writer evidently states what in his mind was a foregone conclusion, and it is pleasing in its simplicity and brevity:

UNITED STATES STEAMER "KEARSARGE," }  
CHERBOURG, FRANCE, JUNE 19, P. M., 1864. }

SIR—I have the honor to inform the Department that the day subsequent to the arrival of the "Kearsarge" off this port, on the 24th instant, I received a note from Captain Semmes begging that the "Kearsarge" would not depart, as he intended to fight her, and would delay her but a day or two. According to this notice, the "Alabama" left the port of Cherbourg this morning at about 9:30 o'clock. At 10:20 A. M. we discovered her steering towards us. Fearing the question of jurisdiction might arise, we steamed to sea until a distance of six or seven miles was attained from the Cherbourg breakwater, when we rounded-to, and commenced steaming for the "Alabama."

As we approached her, within about twelve hundred yards, she opened fire; we receiving two or three broadsides before a shot was returned. The action continued, the respective steamers making a circle round and round at a distance of about nine hundred yards from each other. At the expiration of an hour the "Alabama" struck, going down in about twenty minutes afterward, carrying many persons with her.

It affords me great gratification to announce to the Department that every officer and man did their duty—exhibiting a degree of coolness and fortitude which gave promise at the outset of certain victory.

I have the honor to be, most respectfully, your obedient servant,

JOHN A. WINSLOW,  
Captain.

HON. GIDEON WELLES,  
Secretary of the Navy, Washington, D. C.

To this dispatch the Secretary of the Navy responded as follows :

NAVY DEPARTMENT, July 6, 1864.

SIR--Your very brief dispatches of the 19th and 20th ultimo, informing the Department that the piratical craft "Alabama," or "290," had been sunk on the 19th of June near meridian, by the "Kearsarge," under your command, were this day received. I congratulate you on your good fortune in meeting this vessel, which had so long avoided the fastest ships and some of the most vigilant and intelligent officers of the service; and for the ability displayed in this combat you have the thanks of the Department.

You will please express to the officers and crew of the "Kearsarge" the satisfaction of the Government at the victory over a vessel superior in tonnage, superior in number of guns, and superior in the number of her crew. The battle was so brief, the victory so decisive, and the comparative results so striking, that the country will be reminded of the brilliant actions of our infant Navy, which have been repeated and illustrated in this engagement.

The "Alabama" represented the best maritime effort of the most skilled English workshops. Her battery was composed of the well-tryed 32-pounders of 57-hundred weight, of the famous 68-pounder of the British Navy, and of the only successful rifled 100-pounder yet produced in England. The crew were generally recruited in Great Britain, and many of them received superior training on board Her Majesty's gunnery ship, the "Excellent."

The "Kearsarge" is one of the first gun-boats built at our Navy Yards at the commencement of the rebellion, and lacks the improvements of vessels now under construction. The principal guns composing her battery had never been previously tried in an exclusively naval engagement, yet in one hour you succeeded in sinking your antagonist, thus fully ending her predatory career, and killed many of her crew without injury to the "Kearsarge," or the loss of a single life on your vessel.

Our countrymen have reason to be satisfied that in this, as in every naval action of this unhappy war, neither the ships, the guns nor the crew have been deteriorated, but that they maintain the abilities and continue the renown which ever adorned our naval annals.

The President has signified his intention to recommend that you receive a vote of thanks, in order that you may be advanced to the grade of commodore.

Lieutenant-Commander James S. Thornton, the executive officer of the "Kearsarge," will be recommended to the Senate for advancement ten numbers in his grade, and you will report to the Department the names of any other of the officers or crew whose good conduct on the occasion entitles them to especial mention.

Very respectfully,  
GIDEON WELLES,  
*Secretary of the Navy.*

CAPTAIN JOHN A. WINSLOW,  
*Commanding U. S. Steamer "Kearsarge,"  
Cherbourg, France.*

There was no occurrence during the war more grateful to the Northern people than this victory of the "Kearsarge" over the "Alabama." Winslow became the hero of the hour, for he had not only disposed of a most troublesome enemy, but he had demonstrated the superiority of a United States ship, crew and guns over an English-built, English-armed and English-manned vessel of equal, if not superior, force.

The triumph was the greater because the

British Government and a large section of the British people had given every assistance to the "Alabama," in the way of moral and material support, in her business of destroying the commerce of a friendly nation. That it was a moral victory over the English can hardly be disputed, and they felt it to be such, as was proven by the desperate efforts of a large portion of the newspapers to show that Winslow's success was unimportant, while the courage and ability of Semmes were extolled to the skies. The fiction on which these newspapers most relied to belittle the victory of the "Kearsarge" was the assertion that the United States vessel was an iron-clad in disguise—an idea which Captain Semmes took every opportunity to disseminate, and which was generally received by the British public.

While Captain Winslow received great credit and promotion for his victory, his executive officer, Lieutenant-Commander Thornton, was complimented by an advance of only ten numbers on the list of officers of his grade, although it was well known that to his close attention to the drilling of the crew, and his management of the "Kearsarge," was due the speedy result of the action. He deserved and should have received promotion to the rank of commander; but, as he died soon after the close of the war, he never obtained any substantial advancement, although he lives in the memory of those who can properly estimate his services.

#### LIST OF OFFICERS OF THE U. S. S. "KEARSARGE."

John A. Winslow, Captain; James S. Thornton, Lieutenant-Commander; John M. Browne, Surgeon; J. A. Smith, Paymaster; Wm. H. Cushman, Chief Engineer; James R. Wheeler, Eben M. Stoddard and David H. Sumner, Acting-Masters; Wm. H. Badlam, Second-Assistant Engineer; Fred. L. Miller, Sidney L. Smith and Henry McConnell, Third-Assistant Engineers; Edward E. Preble, Midshipman; David B. Sargent, Paymaster's Clerk; S. E. Hartwell, Captain's Clerk; Frank A. Graham, Gunner; James C. Walton, Boatswain; William H. Yeaton, Charles H. Danforth and Ezra Bartlett, Acting-Master's Mates.

#### PETTY OFFICERS AND CREW.

George A. Tittle, Surgeon's-Steward; C. B. De Witt, Yeoman; J. N. Watrus, Master-at-Arms; Chas. Jones, Seaman; Daniel Charter, Landsman; Edward Williams, Officer's-Steward; George Williams, Landsman; Charles Butts, Quartermaster; Chas. Bedding, Landsman; James Wilson, Coxswain; William Gowan (died), Ordinary Seaman; James Saunders, Quartermaster; John W. Dempsey, Quarter-Gunner; William D. Chapel, Landsman; Thomas Perry, Boatswain's-Mate; John Barrow, Ordinary Seaman; William Bond, Boatswain's-Mate; James Haley, Captain-of-Forecastle; Robert Strahn, Captain-of-Top; James O. Stone, First-Class Boy; Jacob Barth, John H. McCarthy and James F. Hayes, Landsmen; John Hayes, Coxswain; James Devine, Landsman; Geo. H. Russell, Ammunition; Patrick McKeever, Nathan Jones and

Dennis McCarty, Landsmen; John Boyle and John C. Woodberry, Ordinary Seamen; Geo. E. Reed, Seaman; James Morey, Ordinary Seaman; Benedict Drury and William Giles, Seamen; Timothy Hurley, Ship's Cook; Michael Conroy, Ordinary Seaman; Levi W. Nye and James H. Lee, Seamen; John E. Brady, Ordinary Seaman; Andrew J. Rowley, Quarter-Gunner; James Bradley, Seaman; Wm. Ellis, Captain-of-Hold; Henry Cook, Captain-of-Afterguard; Charles A. Reed and William S. Morgan, Seamen; Joshua E. Carey, Sailmaker's-Mate; James Magee, Ordinary Seaman; Benj. S. Davis, Officer's Cook; John F. Bickford, Coxswain; Wm. Gurney, Seaman; Wm. Smith, Quartermaster; Lawrence T. Crowley, Ordinary Seaman; Hugh McPherson, Gunner's-Mate; Taran Phillips, Ordinary Seaman; Joachim Pease, Seaman; Benj. H. Blaisdell and Joel B. Blaisdell, First-Class Firemen; Charles Fisher, Officer's-Cook; James Henson, Wm. M. Smith, Wm. Fisher, George Bailey and Martin Hoyt, Landsmen; Mark G. Ham, Carpenter's-Mate; Wm. H. Bastine, Landsman; Layman P. Spinney, Adoniram Littlefield, John W. Young and Will Wainwright, Coalheavers; John E. Orchon, Second-class Fireman; George W. Remick, Joel L. Sanborn, Jere. Young and Wm. Smith, First-class Firemen; Stephen Smith, John F. Stackpole, Wm. Stanley and Lyman H. Hartford, Second-class Firemen; True W. Priest and Joseph Dugan, First-class Firemen; John F. Dugan, Coalheaver; James W. Sheffield, Second-class Fireman; Charles T. Young, Orderly-Sergeant; Austin Quimley, Corporal-of-Marines; Roscoe G. Dolley and Patrick Flood, Privates of Marines; Henry Hobson, Corporal-of-Marines; James Kerrigan, John McAleen, Geo. A. Raymond, James Tucker and Isaac Thornton, Privates-of-Marines; Wm. Y. Evans, Nurse; Wm. B. Poole, Quartermaster; F. J. Veannah, Captain-of-Afterguard; Charles Hill, Landsman; Henry Jameson, First-class Fireman; John G. Batchelder, Private-of-Marines; John Dwyer, First-class Fireman; Thomas Salmon and Patrick O'Conner, Second-class Firemen; Geo. H. Harrison and George Andrew, Ordinary Seamen; Charles Moore, Seaman; George A. Whipple, Ordinary Seaman; Edward Wallace, Seaman; Thomas Marsh, Coalheaver; Thomas Buckley, Ordinary Seaman; Edward Wilt, Captain-of-Top; Geo. H. Kinnie, Ordinary Seaman; Augustus Johnson, Jeremiah Horrigan, William O'Halloran and William Turner, Seamen; Joshua Collins and James McBeath, Ordinary Seamen; John Pope, Coalheaver; Charles Mattison, Ordinary Seaman; George Baker, Timothy G. Cauty, John Shields, Thomas Alloway, Philip Weeks and Wm. Barnes, Landsmen; George E. Smart, Second-class Fireman; Chas. A. Poole, Timothy Lynch, Sylvanus P. Brackett and John W. Sanborn, Coalheavers; W. H. Donnally, First-class Fireman. All the above natives of the United States. Wm. Alsdorf and Clement Antoine, Coalheavers; Jose Dabney, Landsmen; Benjamin Button and Jean Briset, Coalheavers; Vanburn Francois, Landsman; Peter Ludy and George English, Seamen; Jonathan Brien, Landsman; Manuel J. Gallardo, Second-class Boy, and John M. Sonius, First-class Boy. The above are of foreign birth.

It thus appears that out of one hundred and sixty-three officers and crew of the "Kearsarge," only eleven persons were foreign-born.

LIST OF OFFICERS OF CONFEDERATE STEAMER  
"ALABAMA," JUNE 25, 1864.

Raphael Semmes, Captain; J. M. Kell and Arthur Sinclair, Lieutenants; R. K. Howell, Lieutenant-of-Marines; J. S. Bulloch, Sailing Master; E. A. Maffitt and E. M. Anderson, Midshipmen; R. F. Armstrong and Jos. D. Wilson, Lieutenants; M. J. Freeman,

Chief Engineer; John W. Pundt and M. O'Brien, Third-Assistant Engineers; J. O. Cuddy, W. Crawford and C. Seymour, Gunners; Captain's-Clerk, W. B. Smith; Boatswain, B. L. McClaskey; Francis L. Galt, Surgeon; W. P. Brooks, Second-Assistant Engineer; Henry Alcott, Sailmaker; D. H. Llewellyn, Assistant-Surgeon; G. T. Fullam, James Evans, Max Mulliner and J. Schroeder, Master's-Mates; Wm. Robinson, Carpenter.

There has been doubt expressed whether Captain Semmes challenged Captain Winslow to do battle; but the latter could not well have accepted, since the "Alabama" was not recognized by the United States Government as a Confederate ship-of-war. On the contrary, her acts had been denounced as "piratical." Winslow pursued the only course proper for him: he went off Cherbourg and waited as near as possible to the entrance of the port, to see that the "Alabama" did not escape. Captain Semmes' notification to Winslow, that he would give him battle in a day or two if the latter would wait, was hardly necessary, as Winslow had not the slightest idea of avoiding a contest.

For Winslow to have challenged Semmes would have been to put the "Alabama" in the *status* denied her by the Federal Navy Department, namely, that of a recognized vessel-of-war of a *de facto* Government. The propriety of sending challenges from one commanding officer to another in time of war has been questioned. In this instance Winslow did exactly the right thing—waited till his enemy came out of port and defeated him without bluster.

A few words in regard to Semmes' character and abilities, as an agent in carrying out the views of the Confederate Government, may not be out of place. As an individual, he had great defects of character, but as a bold and capable commander, on whom the Confederacy could depend to inflict the greatest damage on United States commerce, Semmes had probably no equal. Although he had served many years in the United States Navy, none of his associates ever supposed that in time of war he would exhibit so much efficiency; for, although his courage was undoubted, his tastes were rather those of the scholar than of the dashing naval officer and destroyer of commerce.

It became common in the North to speak of the "Alabama" as the "English pirate," and Semmes in his memoirs frequently applies the term in a sarcastic manner to his own vessel; yet, although he was guilty of many irregularities, if not outrages, he could not, in justice, be so stigmatized. The writer has on several occasions compared Semmes' acts with those of the buccaneers, who were sometimes regularly commissioned by royal authority to plunder the

Spaniards; but such actions do not constitute piracy, and the Law of Nations is so elastic on the subject that a commander may do a great many outrageous things and still keep within the legal limits.

In the case of the "Alabama," her Captain seems to have been a law unto himself, and his vessel a Court of Admiralty of the Confederate States, with power to commission vessels on the high seas. With his pen this clever navigator could baffle the shrewdness of colonial authorities and create discord in the councils of the Home Governments. He set the proclamation of Queen Victoria at defiance, took his prizes into British ports, and fitted them out as cruisers whenever it suited him to do so. To call this enterprising individual a "pirate" would give rise to the suspicion that want of success in stopping his career of destruction, and a fear of being held responsible for negligence in the premises, had influenced persons in authority to throw all the odium possible on Semmes.

The "Alabama" certainly fulfilled most, if not all, the requirements of a vessel-of-war. She was the sole property of the Confederate Government; and therefore, for all acts committed under the general orders to "burn, sink, and destroy," the said Government was answerable.

As a general rule, a vessel purchased in a neutral port, to war upon another nation, in order to be armed and commissioned, should proceed to a port of the nation purchasing her, and there be fitted for service; but there is so much latitude allowed in practice that it would perhaps be difficult to settle this matter authoritatively before the courts. The high seas are certainly neutral, in one sense of the word, for all nations; and although the Confederates undoubtedly violated British law, yet Semmes had a right to take command of an armed vessel placed in his possession at sea.

It would be well if there could be a careful reconsideration of all the laws and precedents bearing on this subject by the maritime governments of the world, in order that in future no "Alabamas" could get to sea, and commercial nations be free from depredations such as were committed upon the commerce of the United States in 1861-65.

The question has been often debated whether the "Alabama" and her consorts were entitled to be considered vessels-of-war on a par with those of other nations. The powers of Europe accorded belligerent rights to the Confederates, and proclaimed their intention of observing strict neutrality between the contending parties. Such a recognition was in many respects inconsistent, for although the Confederate cruisers were acting in behalf of a Power that had

been accorded belligerent rights, yet no recognition further than this had been extended to the State itself by any European Government. The Confederates could have no representatives abroad, and it might well be considered an anomalous state of things when a State was accorded belligerent rights by foreign powers which held no official relations with it, and could not therefore depend upon the ordinary methods for redress if Confederate vessels should commit offences against their sovereignty. This condition of affairs would seem to cast a doubt upon the validity of the commissions of the Confederate cruisers; and for this reason, if for no other, the character of ships-of-war was never accorded to the "Alabama" and the other Confederate cruisers by the Government of the United States.

Captain Semmes' method had a good deal to do, perhaps, with the action of the United States Government, for according to his own account he plundered his prizes of whatever he pleased, and even took the chronometers, which were the private property of the shipmasters.

Whether Confederate naval officers could take delight in the destruction of the Federal commerce, which they once felt such pride in protecting, is very doubtful in the case of all except Captain Semmes. He appears to have gloried in the burning of ships, as if it was the greatest pleasure, instead of a disagreeable duty, imposed upon him by the stern necessities of war; and it is not known that he ever experienced much regret for the burning of a beautiful ship, or sympathy for her master or crew—a sentiment one would naturally expect to exist in the bosom of an officer brought up in a chivalrous service such as that of the United States Navy.

As a fighting-man, Semmes was not a success when he met an enemy of equal force, as was proved by the "Kearsarge" sinking the "Alabama" in about an hour, killing and wounding a great number of men, while the "Kearsarge" was uninjured in hull or spars, and only had three men wounded. The fact is, the "Alabama's" crew, not being well drilled, were doomed to defeat from the outset; for, although the "Kearsarge" stood for her for some moments and received three broadsides, no damage was inflicted, and out of three hundred and seventy shot and shell fired by the Confederate vessel, only thirteen struck the hull, and fifteen the rigging and spars. The difference between the efficiency and discipline of the vessels was too marked to admit of argument, although Semmes insisted that the victory would have been his if one of the shells which struck the "Kearsarge's" stern-post had exploded!

Captain Semmes' want of generosity is

shown by his attempting to deprive Winslow and his officers and men of the credit of their victory, on the ground that the "Kearsarge" was an "iron-clad," and that Winslow had taken a dishonorable advantage of him. A brave man should accept his defeat in dignified silence, in the hope that at some future time he may have an opportunity of retrieving his fortunes.

With regard to Semmes making his escape after the sinking of his ship, that was a matter between him and his conscience. No man is a prisoner until he is actually in the custody of the victor, and if, when struggling in the water, he is rescued by a neutral, the latter should protect him from cap-

ture if he has the power to do so. There is even less censure to be given Semmes and his officers for making off in the "Deerhound," because they were under the impression that they would be harshly treated if they fell into the power of the United States Government.

We have endeavored to do Captain Semmes no injustice, but simply to state our impressions of his character, for we knew him well. His career is certainly one of the most remarkable of the civil war; and if he had served the United States while he remained in its Navy as faithfully as he did the Confederacy, his resignation would have been accepted with great regret.

### SPECIAL SERVICE, JANUARY 1, 1864.

#### STEAMER "MOHICAN."

Captain, O. S. Glisson; Lieutenant, R. K. Duer; Surgeon, Edw. F. Corson; Assistant-Paymaster, James Hoy, Jr.; Acting-Master, Robert B. Ely; Acting-Ensigns, A. D. Campbell and A. T. Holmes; Acting-Master's Mates, J. S. Reynolds, W. F. Veltman, E. N. Snow and George T. Ford; Engineers: Acting-First-Assistant, G. W. Halloway; Acting-Second-Assistants, John Lardner and C. R. Weaver; Acting-Third-Assistants, James Buckley and J. W. Buck; Acting-Boatswain, Geo. C. Abbott; Gunner, James Hutchinson.

#### STEAM-SLOOP "KEARSARGE."

Captain, John A. Winslow; Lieutenant-Commander, James S. Thornton; Surgeon, John M. Browne; Paymaster, Joseph A. Smith; Engineers: Chief, William H. Cushman; Second-Assistant, Wm. H. Badlam; Third-Assistants, Fredk. L. Miller, Sidney L. Smith and Henry McConnell; Boatswain, James C. Walton; Acting-Gunner, Franklin A. Graham.

#### STEAMER "SACRAMENTO."

Captain, Henry Walke; Lieutenant-Commander, H. D. Todd; Lieutenant, G. P. Ryan; Surgeon, J. S. Kitchen; Assistant-Paymaster, J. P. Woodbury; Ensigns, Marston Niles, P. W. Lowry, J. D. Clark and J. B. Coghlan; Acting-Master's Mates, D. C. Harrington, O. G. Moore, E. N. R. Place and Charles Pease, Engineers: Acting-Chief, John Yates; Acting-First-Assistant, Wm. Tipton; Acting-Second-Assistants, J. S. G. Aspinwall and E. A. Bushnell; Acting-Third-Assistants, G. E. Savory, John Moquon, Leonard Pratt and E. B. Dyer; Boatswain, John Bates; Gunner, Andrew Wilson; Carpenter, G. E. Anderson.

#### STEAMER "MICHIGAN."

Commander, John C. Carter; Paymaster, C. C. Jackson; Engineers: Acting-Third-Assistants, Wm. Baas, Bennet Jones and Robert Reilly.

#### STEAMER "WACHUSETT."

Commander, Napoleon Collins; Lieutenant-Com-

mander, L. A. Beardslee; Surgeon, Wm. M. King; Assistant-Paymaster, W. W. Williams; Acting-Master, J. H. Stimpson; Ensign, E. M. Shepard; Acting-Ensigns, Nicol Ludlow and C. J. Barclay; Acting-Master's Mates, C. R. Haskins, Reuben Rich and John Hetherington; Engineers: Chief, Wm. H. Rutherford; Second-Assistants, Geo. W. Melville, M. Knapp and Edmund Lincoln; Third-Assistants, H. D. McEwen, R. S. Stedman and J. A. Barton; Boatswain, John Burrows; Acting-Gunner, John Russell.

#### SLOOP-OF-WAR "ST. LOUIS."

Commander, George H. Preble; Lieutenant Wm. F. Stewart; Surgeon, A. L. Gihon; Assistant-Surgeon, F. B. A. Lewis; Paymaster, J. S. Post; First-Lieutenant-of-Marines, W. J. Squires; Acting-Masters, J. N. Rowe, Geo. Cables and Allan Hoxie; Acting-Ensign, Hazard Marsh; Acting-Master's Mates, P. W. Fagan, F. L. Bryan and J. H. Langley; Acting-Boatswain, George Brown; Gunner, G. P. Cushman; Carpenter, Daniel Jones; Sailmaker, I. E. Crowell.

#### SHIP "ONWARD."

Acting-Masters, Wm. H. Clarke; T. G. Groove and William Collins; Acting-Assistant Surgeon, David Watson; Acting-Assistant Paymaster, J. S. Allen; Acting-Ensigns, G. J. Conklin and Wm. Rogers; Acting-Master's Mates, F. A. Gording, A. F. Ulmer and J. S. Newbegin.

#### STEAMER "IROQUOIS."

Commander, C. R. P. Rodgers; Lieutenants, S. Dana Greene and A. H. McCormick; Acting-Master Thomas Hanrahan; Surgeon, J. Corbin; Assistant-Paymaster, J. A. Bates, Jr.; Ensigns, Henry C. Taylor, Allan D. Brown and W. K. Wheeler; Acting-Master's Mates, C. F. Purrington, Carleton Race, B. F. Ritter and William Welch; Engineers: Acting-Chief, J. W. Stormes; Acting-First-Assistants, W. H. Best and R. E. Stall; Acting-Second-Assistant, John B. Roach; Acting-Third-Assistants, H. P. Gray and Edward Ewel; Acting-Gunner, J. C. Clapham.

## CHAPTER XLVII.

### OPERATIONS OF SOUTH ATLANTIC BLOCKADING SQUADRON, UNDER REAR-ADMIRAL DAHLGREN, DURING LATTER END OF 1863 AND IN 1864.

FORT SUMTER BOMBARDED.—DAMAGES TO THE FORT AND IRON-CLADS.—LOSS OF THE "WEEHAWKEN."—ATTACK ON BATTERIES IN STONO RIVER.—REVIEW OF WORK DONE BY SOUTH ATLANTIC SQUADRON UNDER DAHLGREN.—ACTIONS IN WHICH IRON-CLADS WERE ENGAGED.—DESTRUCTION OF BLOCKADE-RUNNERS.—OPERATIONS OF CONFEDERATE TORPEDO CORPS.—PLANS TO BLOW UP FLEET.—DESTRUCTION OF THE "HOUSATONIC."—SUBLIME PATRIOTISM.—ORIGINATORS OF TORPEDO.—OPERATIONS OF GUN-BOATS IN FLORIDA RIVERS.—DESTRUCTION OF STEAMER "HARRIET A. WEED" AND TRANSPORT "MAPLE-LEAF."—HAZARDOUS CUTTING-OUT EXPEDITIONS.—HOT RECEPTIONS FROM MASKED BATTERIES.—CAPTURE OF U. S. STEAMER "WATER WITCH" AND RIVER-BOAT "COLUMBINE."—TREATMENT RECEIVED BY ASSISTANT SURGEON PIERSON.—PRISONERS EXPOSED IN DANGEROUS PLACES.—FAILURE OF EXPEDITION TO CUT RAILROADS.—MISCELLANEOUS EXPEDITIONS.—BLOCKADE OF WHOLE SOUTHERN COAST.—EXTREMITIES OF CONFEDERATE ARMIES, ETC.—VESSELS AND OFFICERS OF SOUTH ATLANTIC BLOCKADING SQUADRON, JANUARY, 1864.

ON the 26th of October, 1863, General Gillmore opened fire upon Fort Sumter from his battery on Morris Island, his object being to complete the reduction of this work, drive out the garrison, and occupy it with Union troops. This, as a matter of sentiment, might have been a good move; but, as the Confederates still commanded Fort Sumter with the guns of Fort Moultrie and other batteries, they could have rendered the place untenable, as they did in the time of Colonel Anderson.

But the Navy was desirous of performing its share in this useless operation, and the Monitors "Lehigh" and "Patapsco" were ordered to take positions at a distance of from 1,600 to 2,000 yards of the fort, and open fire upon it with their rifled guns.

These vessels were within range of Fort Moultrie for some time, but suffered little damage, while their rifle projectiles told on the walls of Fort Sumter with considerable effect. Large masses of masonry were displaced, heavy timbers thrown into the air, gun-cartridges destroyed, and, in fact, the work reduced to a great heap of ruins;

forces as ever, and Dahlgren was no nearer getting into Charleston than DuPont had been when he relinquished the command because of an implied reflection on his ability to decide whether a proper force had been placed at his disposal or not. About eight hundred and fifty shells were fired by the Navy at the ruins of Fort Sumter, which helped to crumble the works more and more; but that business had better have been left to General Gillmore with his siege-guns, and the attack of the Monitors should have been turned upon Moultrie and Beauregard, where their rifle projectiles would have done good service.

On November 16th more congenial work offered. General Gillmore telegraphed: "The enemy have opened a heavy fire on Cummings' Point. Will you have some of your vessels move up, so as to prevent an attack by boats on the sea-face of the Point?" That night the Monitors moved up at about 10 o'clock, and boats were placed on patrol to prevent any attack of the enemy at the place indicated.

On November 17th the "Lehigh" grounded, and the enemy, perceiving her dilemma,

and adjacent batteries. Signal was at once made to all the Monitors to get underway and cover the "Lehigh," and the Admiral himself went up in the "Passaic" to attend the operations in person. The "Nahant," Lieutenant-Commander Cornwell, was already alongside the "Lehigh," and, by getting out hawsers, succeeded in towing her off at high water. Both vessels were subjected to a brisk fire, but they received no serious damage. The "Lehigh" received twenty-two hits, nine of which were on her deck-plates, and she had one officer and six men wounded. The "Montauk" also assisted in getting the "Lehigh" off, but there were no casualties in the assisting vessels.

Assistant-Surgeon Wm. Longshaw was handsomely mentioned on this occasion for going to and fro in a small boat, carrying out hawsers under a heavy fire of shot and shell. This kind of service always deserves recognition, and especially when, as in this case, it is voluntarily undertaken by an officer who would never have been called upon to perform it in the ordinary course of his profession. Surgeon Longshaw was recommended for promotion in his corps by the Chief of the Bureau of Medicine and Surgery.

On December 6th, Rear-Admiral Dahlgren had the misfortune to lose the Monitor "Weehawken" under the following circumstances, as given in the report of Commander J. M. Duncan:

"On the morning of the 5th I arrived here, and in the evening took command of her [the 'Weehawken'] and went up on the advanced picket, and remained there until 9:30 of the morning of the 6th; then came down; made fast to buoy No. 2; then came on board this vessel [the flag-ship].

"About 1:30 P. M. a signal was made that the 'Weehawken' wanted assistance. I immediately got in a boat with the pilot of this vessel. Before we could reach her she went down. Boats from all the vessels around went to the assistance of the men that were overboard, and succeeded in saving all but four of the engineers and twenty-seven of the men. When I left the vessel everything appeared to be right; the anchor-hold was all dry, no water coming through the hawse-pipe. \* \* \* Not being on board myself at the time, I am not able to give any account of the sad accident.

"Very respectfully," etc.

From statements of officers who were on board the "Weehawken" at the time of the disaster, it appears that the immediate cause of her sinking was that a heavy sea swept over her fore-castle, and entering the fore-hatch, filled the anchor-well. This, under ordinary circumstances, would not have proved fatal to the ship's safety; but she was heavily loaded forward with ammunition, and the slight increase of weight, due to the water in her forward compartment, caused an opening between the overhang and the hull, which made itself manifest by numerous leaks. As the water ac-

cumulated forward, her bow commenced to settle rapidly, and she soon went to the bottom, with a number of her brave officers and men.

This was a serious loss to Rear-Admiral Dahlgren, who was at that moment urging the Government to send him more Monitors, in view of the necessity of defending his command against the iron-clads which the Confederates were building at Charleston. No doubt the Confederates considered that the sinking of the "Weehawken" was due to the shot and shell which they fired at the "Lehigh"—as they could not tell one from another.

Nothing of interest occurred in Dahlgren's command from November 6th up to December 25th, when the "Pawnee," Commander G. B. Balch, the "Marblehead," Lieutenant-Commander R. W. Meade, Jr., and the schooner "C. P. Williams," Acting-Master S. N. Freeman, were attacked by Confederate batteries in Stono River.

Lieutenant-Commander Meade reports that on December 25th the enemy opened fire on the "Marblehead," at 6 o'clock in the morning, from two batteries of field and siege pieces posted advantageously in the woods. At the time mentioned, the "Marblehead" had steam on the port boiler only. The gun-boat returned the enemy's fire vigorously, and, slipping his cable, Lieutenant-Commander Meade took a position nearer the batteries, and after a short encounter caused them to retreat in disorder, leaving two guns and caissons.

No attempt was made by the "Marblehead" to retire from this unequal contest, though she was struck over twenty times and much cut up, having three men killed and four wounded. Officers and men stood to their guns with great gallantry, and the precision of their fire was shown by the complete discomfiture of the enemy. Acting-Ensign Geo. F. Winslow and the officers of the gun divisions are handsomely mentioned in this report.

During the action, the "Pawnee" took an enfilading position in the Keowah River, while the "Williams" was ordered to work up towards Legareville. The three vessels kept up such a fire that the enemy fled precipitately. Commander Balch speaks in the highest terms of Lieutenant-Commander Meade's coolness and bravery, the management of his vessel, and the remarkable rapidity of his fire.

On the conclusion of the firing, General Gordon, commanding the troops at the south end of Folly Island, sent an infantry force to bring off the guns left by the Confederates; which, on reaching the spot where the batteries were posted, found two guns, one soldier in the throes of death, six dead artillery horses, and all the enemy's

intrenching tools, knapsacks, etc. As night was coming on, and it was found impossible to bring off the guns in face of a heavy force of the enemy, not far off, they were disabled and abandoned.

This was a handsomely-executed affair, particularly on the part of the "Marblehead," which bore the brunt of the fire from the enemy's 8-inch guns. There was some dispute as to the credit due the different vessels, which ought not to have been the case where all did so well. In addition to Lieutenant Commander Meade's gallantry in the action, he made a reconnaissance of the ground abandoned by the enemy, and then, by direction of Commander Balch, headed an expedition to bring off the guns which General Gordon had failed to take possession of. His force consisted of 3 boats, 3 officers, and 50

CAPTAIN (NOW REAR-ADMIRAL) GEORGE B. BALCH.

men from the "Pawnee"; 4 boats, 4 officers and 20 men from the "Marblehead," and 1 officer and 12 men from the "C. P. Williams"—total, 8 boats, 8 officers and 82 men, of which 22 were marines, under Sergeant W. Fredrickson, of the "Pawnee."

On reaching the earth works, near a bayou which flows southwesterly of Legareville, Acting-Ensign Moore was directed to take the "Pawnee's" men and get the nearest gun into her cutter. The other gun in the most northern work was then raised with great difficulty, lashed to the carriage of a 12-pound howitzer, and hauled with great exertion to the bayou, a distance of a mile, and finally gotten into the "Marblehead's" launch.

The whole affair was a perfect success :

the two guns, 8-inch seacoast howitzers, were taken off, the gun-carriages and implements thrown into the river, and all done in the space of two hours.

Though Rear-Admiral Dahlgren had not, up to this time, forced any of the obstructions in Charleston harbor, or made his way past the batteries (thus verifying the assertion of Admiral DuPont, that the force of Monitors was not equal to the occasion), he had shown great pertinacity in sticking to the work assigned him, and had given all the aid in his power to the land-batteries under General Gillmore. The following review of the services of Admiral Dahlgren when in command of the South Atlantic squadron will give a fair insight into the value of his work:

On the 6th of July, 1863, Rear-Admiral DuPont delivered to Rear-Admiral Dahlgren the command of the forces occupying the coast of South Carolina, Georgia, and part of Florida. This force, which consisted of 70 vessels of all classes, was scattered along the coast for a distance of 300 miles; there was no concentration, the object being rather to distribute the vessels in such a manner as to enforce an efficient blockade.

When Dahlgren took command, the Navy Department was much more liberal towards him than it had been to DuPont; for he was left to exercise his own judgment, unhindered by orders of any kind. His instructions were so couched that they merely directed him to assume command, without confining him to any course of action. They went no further, nor was it necessary that they should do so. There was an enemy in front who had defied the Government to the utmost; the Department and the President had already signified their wishes to Admiral DuPont, and it was clearly the duty of his successor to go to work as soon as possible and compel the enemy to obedience if he could. But it must be remembered that the Department, in view of the difficulties that had beset the first expedition, had modified its opinion, and was now satisfied that it would be better to have a combined attack of the Army and Navy against the heavy works in Charleston harbor than to depend on the Monitors alone.

The "New Ironsides" was off Charleston bar, two Monitors were at Edisto, one at Stono River, three at Port-Royal, and one at Ossabaw. General Gillmore having arrived, arrangements were immediately made between him and Rear-Admiral Dahlgren for a descent on Morris Island, where the former was to establish his batteries.

The naval part of the operations consisted in assembling all the Monitors at Charleston, so as to cross the bar at early

daylight, and be ready to cover the landing of the army, with its guns, munitions, etc.; and then to co-operate in whatever way the army might desire to attack the enemy.

On the 9th of July all was in readiness. In the combined attack which followed, the "Catskill," "Montauk," "Nahant," and "Weehawken" were laid in line parallel with the land opposite the southern eminences of Morris Island, and they poured in such a steady fire upon the Confederate batteries at that point that they made but a feeble show of fight. At 8 o'clock the troops that had been brought from the Folly River by the boats of the squadron advanced to the attack; and, under the covering fire of the Monitors, occupied all the enemy's outer positions, and were only stopped when they came in contact with Fort Wagner.

Until the fall of Wagner, on September 7th, the iron-clads and gun-boats kept up a constant fire on the place, which could only be taken by hard and patient work. But this work was not crowned with success until after several desperate assaults had been made by the Army, and a heavy bombardment by the Navy. All assaults were failures, however, and it was proved that the great engineering skill of the Confederates had produced a work that could only be taken by the slow and laborious operation of a regular siege.

And here Admiral Dahlgren gives a very good reason why the delay in reaching Charleston subsequently ensued, viz., that there was a paucity of troops in the first place; that there ought to have been men enough to make the first assault an assured success; that Wagner might have been carried at the first assault; Gregg would have yielded in consequence; Sumter would soon have followed, and the iron-clads, untouched by severe and continued battering, would have been in condition to come quickly in contact with the imperfect interior defences. The Admiral forgot, however, that he would still have had the line of obstructions to break, and the batteries at Moultrie and on Sullivan's Island to pass, and that the Monitors would have found the same difficulties in forcing their way through the interior defences as DuPont met with in his first attack.

The military and naval attacks were as gallant as anything could be, but, though they achieved a great deal, they did not succeed in driving the enemy out of Wagner before he had time to convert Fort Johnson from a very imperfect work into a powerful fort. Moultrie received similar advantages, and most of the cannon of Sumter were divided between Johnson and Moultrie. Batteries were established along the south shore of the channel from Fort

Johnson towards the city; and thus an interior defence was completed that rendered access to the upper harbor far more difficult than it was before, because a heavy fire could be concentrated from additional batteries upon vessels attempting to enter. In fact, the enemy had profited by the experience gained in their outer defences, and had placed their guns so as to obtain a concentrated fire. When the troops who garrisoned Wagner were informed that the interior forts were completed, they quietly evacuated that post on the eve of an assault by the Union troops, and occupied the new positions so adroitly prepared by their able engineers.

In all the siege of this tough work the Navy bore a conspicuous part, having kept up a continuous and heavy fire whenever the opportunity offered. But the more they battered it, the more apparent it became that the small force of iron-clads off Charleston was not capable of forcing its way up to the city through obstructions that were now commanded by the newly built defences.

The services of the vessels during the attack on Wagner were invaluable, as the fire of their guns prevented the access of reinforcements, or their accumulation between Wagner and Gregg; and, in fact, without the assistance of the Navy, the Army would not have been able to maintain its position a day without further reinforcements.

The boats of the squadron were engaged on picket duty by night along the sea-shore of Morris Island, and in the little stream on its inner border. A detachment of seamen and marines were also engaged, under Commander F. A. Parker, in the attack on the batteries at Fort Sumter, working four Navy rifled cannon that had been landed for the purpose.

Besides the principal attacks made on Wagner, there were few days from the first attack on Morris Island (July 10) to its evacuation (September 7) that some iron-clads or gun-boats were not engaged with the enemy's works.

The following table will exhibit the work done by the fleet from July 18th to September 8th :

Date.	Object.	Vessels engaged.
1863.		
July 18.	Assault on Wagner	"Montauk," "Ironsides," "Catskill," "Nantucket," "Weehawken," "Patapsco," "Paul Jones," "Ottawa," "Seneca," "Chippewa," "Wissahickon."
July 22.	Wagner.....	"Nantucket," "Ottawa."
July 24.	Wagner (to cover advance).....	"Weehawken," "Ironsides," "Catskill," "Montauk," "Patapsco," "Nantucket," "Ottawa," "Dai Ching," "Paul Jones," "Seneca."
July 25.	Wagner .....	"Ottawa," "Dai Ching," "Paul Jones."
July 28.	Wagner.....	"Weehawken," "Catskill," "Ottawa."
July 29.	Wagner.....	"Ironsides," "Patapsco."
July 30.	Wagner.....	"Ironsides," "Catskill," "Patapsco," "Ottawa."
July 31.	Batteries on Morris Island.....	"Ottawa."
Aug. 1.	Wagner .....	"Montauk," "Patapsco," "Catskill," "Weehawken," "Passaic," "Nahant," "Marblehead."

Date.	Object.	Vessels engaged.
1863.		
Aug. 2.	Wagner.....	"Ottawa," "Marblehead."
Aug. 4.	Wagner.....	"Montauk," "Marblehead."
Aug. 6.	Wagner.....	"Marblehead."
Aug. 8.	Wagner.....	"Ottawa," "Mahaska," "Marblehead."
Aug. 11.	Wagner and vicinity	"Patapsco," "Catskill."
Aug. 13.	Morris Island .....	"Dai Ching," "Ottawa," "Mahaska," "Racer," "Wissahickon."
Aug. 14.	Morris Island.....	"Wissahickon," "Mahaska," "Dan Smith," "Ottawa," "Dai Ching," "Racer."
Aug. 15.	Wagner.....	"Racer," "Dan Smith."
Aug. 17.	Batteries on Morris Island to direct fire from the batteries which opened on Sumter.	"Weehawken," "Ironsides," "Montauk," "Nahant," "Catskill," "Passaic," "Patapsco," "Canandaigua," "Mahaska," "Ottawa," "Cimmarron," "Wissahickon," "Dai Ching," "Lodona."
Aug. 18.	Wagner, to prevent assault.....	"Ironsides," "Passaic," "Weehawken," "Wissahickon," "Mahaska," "Dai Ching," "Ottawa," "Lodona."
Aug. 19.	Wagner.....	"Ironsides."
Aug. 20.	Morris Island.....	"Ironsides," "Mahaska," "Ottawa," "Dai Ching," "Lodona."
Aug. 21.	Sumter and Wagner.....	"Ironsides," "Patapsco," "Mahaska," "Dai Ching."
Aug. 22.	Wagner.....	"Weehawken," "Ironsides," "Montauk."
Aug. 23.	Sumter.....	"Weehawken," "Passaic," "Montauk," "Patapsco," "Nahant."
Sept. 1.	Sumter and obstructions.....	"Weehawken," "Montauk," "Passaic," "Patapsco," "Nahant," "Lehigh."
Sept. 5.	Between Sumter and Gregg.....	"Lehigh," "Nahant."
Sept. 6.	Wagner and Gregg	"Ironsides," "Weehawken," "Montauk," "Passaic," "Patapsco," "Nahant," "Lehigh."
Sept. 7.	Batteries on Sullivan's Island.....	"Ironsides," "Patapsco," "Lehigh," "Nahant," "Montauk," "Weehawken."
Sept. 8.	Batteries on Sullivan's Island .....	"Ironsides," "Nahant," "Patapsco," "Lehigh," "Montauk," "Weehawken."

SERVICE OF IRON-CLADS.

SOUTH ATLANTIC BLOCKADING SQUADRON.

Shots fired and hits received by them during operations against Morris Island:

Vessels	No. of shots fired.		Hits.	Hits Apr. 7, 1863.	Hits at Ogeechees.	Total hits.

By "Ironsides" .....	4,439	288½
11-in. by Monitors .....	2,332	151½
15-in. by Monitors .....	1,255	213½
Total.....	8,026	653½

That these vessels were subjected to a terrific fire there can be no doubt; and it shows that, though there may have been defects in the building of some of the Monitors, yet that Ericsson's system was the most perfect one then invented, and that no ship in European navies then built could have contended successfully with any one of them for an hour.

During the progress of the engineering work under General Gillmore, which was of the most laborious kind, the iron-clads and gun-boats played a most conspicuous part, as has been shown in instances already quoted. It would have been as easy for the enemy to have worked towards the Union position as for the Federals to ad-

vance towards theirs, had it not been for the fire of the vessels which confined them to the main fort and prevented their extending its lines of defence. If this had not been the case, the Confederates could have kept pace with the Federal troops, and the latter at the end of a month would have been no nearer their object than before. But the naval commanders were always on the alert to sweep the plain, and prevent the erection of any new works on the side of Wagner, or any assault on Gillmore's position. In fact, the fire from the fleet enfiladed the entire width of the narrow island, and not only absolutely interdicted any aggressive operations on the part of the enemy, but kept them constantly occupied in repairing damages to the main work; and, finally, on the day before the last assault was contemplated, Dahlgren took in his whole force of iron-clads and battered the fort into sand-heaps.

History cannot but award great praise to the brave Confederates who remained at their posts for two months under this terrible fire, and kept a great Army and Navy at bay until their interior defences were so strengthened that they could afford to abandon the outer work.

The operations of the iron-clads at Morris Island were appropriately closed by a severe contest with Forts Moultrie and Beauregard, Battery Bee, and all the batteries on Sullivan's Island, to relieve the "Weehawken," which vessel had grounded under their guns and was in great danger, the tide having fallen and exposed her unprotected hull. This last affair showed conclusively that Fort Moultrie and the batteries mentioned might have been attacked with success, could a strong force of Federal troops with heavy rifled guns have been stationed on Sullivan's Island, to co-operate, as was done at Morris Island. No doubt the struggle would have been a severe one, but, if as ably carried out as in the first instance, success would assuredly have followed.

It is not always easy for the historian to give the full credit where it is due. He must be governed by the official reports, except in cases where there are glaring inconsistencies. Hence the tabulated form of reports adopted by Rear-Admiral Dahlgren has been followed. This plan is intended to show at a glance what each vessel had done; but, with all the care a commanding officer may take to do justice to his subordinates, discrepancies will creep into official reports at times. This may imply a want of accuracy on the part of a commander-in-chief, when, in fact, it may have been due to the hurried performance of a multiplicity of duties, or to the indiscretion of a secretary. But it is the duty

of the historian to correct these discrepancies when they are manifest, where it can be done without raising questions that might end in angry controversies.

There was published in the *Army and Navy Journal*, on the 16th of April, 1864, a review of the services of the Monitors in Southern waters. Commander Edward Simpson, in a report dated April 21st, expressed himself as dissatisfied with the amount of credit given his vessel, the "Passaic," in the official reports. On the 29th of July, 1863, the "Passaic" went into action with Fort Wagner, followed by the "Patapsco" and the "New Ironsides." The presence of the "Passaic" is not mentioned in Rear-Admiral Dahlgren's review.

On the 31st of August, 1863, the most serious engagement in which the iron-clads had yet taken part occurred between Fort Moultrie on one side, and the Monitors "Patapsco," "Weehawken," "Passaic,"

COMMANDER (NOW REAR-ADMIRAL) EDWARD SIMPSON.

and "Nahant" on the other; the detachment being under the command of Commander T. H. Stevens, on board the "Passaic." During the action, the "Passaic" grounded about half a mile from Fort Moultrie, and was severely hammered by the guns of that work before she floated off. This affair was not mentioned in the review, though it was a much more serious one than the engagements with Wagner and Battery Gregg, on Morris Island.

On the 8th of September, one of the most remarkable actions between iron-clads and shore-batteries that ever occurred was fought under command of Commodore S. C. Rowan, between the batteries on

Sullivan's Island on the one side, and the "New Ironsides," "Patapsco," "Lehigh," "Passaic," "Nahant," and "Weehawken" (aground), on the other. This action lasted three hours, and terminated in silencing the fire of the batteries on the island.

During this action, the "Passaic" was at the head of the line, having received an order from the Commodore as she was going into action to go well up and engage Battery Bee. In this affair the vessel was hit in fifty-one new places.

The presence of the "Passaic" is not mentioned. It was very difficult to keep this vessel in effective condition for firing, as her turret had got jammed on the 6th of September, which caused the spindle and pilot house to take up motion with the turret, thus disabling the steering gear, which required the most ingenious expedients to rectify.

After all his efforts to keep his vessel available, and after having endured such a battering from Moultrie's 10-inch shot, it was disheartening to Lieutenant-Commander Simpson to find that the presence of his vessel in this action was not mentioned, particularly as she had been more battered than any in the Monitor fleet.

Admiral Dahlgren, however, did in a measure rectify this mistake, as will appear from the following

"ADDITIONAL LIST OF ACTIONS, in which the iron-clads were engaged with the Confederate batteries in Charleston harbor while reducing Morris Island."

Date, 1863.	Name.	Rounds fired.	Hits by Enemy.	Distance Yards.	Object.	Remarks.
July 18.	"New Ironsides."	805	4	1,400	Wagner	
July 20.	" "	168	13	1,300	Wagner.

"On July 29th, the 'Passaic' engaged Wagner, and on August 31st Moultrie. On September 8th, the 'Passaic' (in a disabled condition), 'Patapsco,' 'Weehawken,' and 'Nahant' engaged Moultrie."

This was scant justice to an officer who had so well maintained the reputation of the Navy at Charleston, under the hottest fire; but, no doubt, he obtained full credit from his comrades in arms, who, after all, are the ones who appreciate a brother officer's services on such occasions.

One of the points in the efficiency of the iron-clads was the manner in which they had almost closed up the harbor of Charles-

ton against the blockade-runners. We say *almost*, for, notwithstanding all the watchfulness of the officers on patrol duty, some of these vessels did force their way in, and even succeeded in getting as far as Moultrie, where they thought themselves secure.

On February 2d, 1864, at daylight, a beautiful blockade-runner, the "Presto," was perceived close under the batteries of Moultrie, which was the first notice of her presence, she having crept in during the night under the management of some daring captain, who was, no doubt, assisted by range-lights. He had anchored close to Moultrie, intending, no doubt, to go up to Charleston as soon as he could get a pilot to take him through the obstructions. Dahlgren at once ordered up the nearest Monitor, and directed her commander to open fire upon the intruder with his rifled gun from a distance of about 2,500 yards. Other Monitors were ordered up in succession, for it was desirable to show these blockade-runners that Charleston was a sealed port to them. The "Lehigh," "Passaic," "Catskill" and "Nahant" opened on the doomed vessel. Colonel Davis, commanding Morris Island, also opened from Fort Strong and Battery Gregg, and the steamer was soon set on fire and destroyed.

It was remarkable that, under the circumstances, any blockade-runner should have attempted such a dare-devil feat; but the greed of gain was overpowering in that class of people, and one successful trip often made them rich for life.

There was no end to the energy of the Confederates, who, after they had lost the forts on Morris Island and seen Sumter battered out of shape by the Army and Navy, determined to show that they were not at all subdued. They had strengthened the works in the inner harbor above Moultrie, and made the place more difficult of approach than ever. Colonel Davis held Morris Island up to Cummings' Point and commanded Sumter, which was of no use to any one, with his guns.

General Gillmore, who seemed to think for the present that he had done all *he* could to close the port against blockade-runners, informed Rear-Admiral Dahlgren, on February 5th, 1864, that he was about to throw a force into Florida, on the west bank of the St. John's River, and desired his assistance. In consequence, three gun-boats were sent to the St. John's River by the commander-in-chief, who, the same evening, departed himself for that point, leaving the blockade of Charleston in charge of Commodore Rowan. This was virtually abandoning the attempt to capture Charleston, that long-cherished object of the Navy Department, and seeking a new and much less important field of operations. But as

this expedition only required the presence of the Navy while the troops were disembarking, Rear-Admiral Dahlgren soon after returned to Port Royal, leaving a sufficient force of gun-boats in the St. John's River to co-operate with the Army if necessary.

The Confederates were not slow to take advantage of the lull which had taken place after the storm of shot and shell that had been poured down upon their devoted heads, and their torpedo corps went to work to fit out another "David" (or torpedo-boat), after the plan, with improvements, of the one that had attempted to blow up the "Ironsides." The first attempt was such a complete failure that the Federal officers on the outside blockade had grown somewhat careless.

As early as January 14, 1864, the Navy Department had written to Rear-Admiral Dahlgren, informing him that it had received notice that the Confederates had on foot a plan to blow up his fleet, and that it considered it of sufficient importance to notify him of it. Dahlgren, however, did not think that such a plan would be carried out against the vessels blockading outside of the harbor, but only against the iron-clads on the inside; but, at the same time, thought it advisable to give notice to the officers on the outer blockade, so that they might be on their guard. Notwithstanding these precautions, the Confederates managed to get one of their torpedo-boats over the bar, and on the night of the 17th of February the fine new ship "Housatonic," while lying at anchor off Charleston, in a most convenient position to be attacked by torpedo-boats, was destroyed under the following circumstances:

At about 8:45 P. M., the officer of the deck on board the "Housatonic," Acting-Master J. K. Crosby, discovered something in the water, about one hundred yards away, moving towards the ship. All the officers in the squadron had been informed of the character of the "Davids," and what they looked like on the water. The commander-in-chief had had printed full descriptions of these infernal machines, and directions as to the best manner of avoiding them. He had attached more importance to torpedoes than persons generally did at that time, and considered that they constituted the most formidable difficulties in the way of getting to Charleston. He felt that the whole line of blockade would probably be attacked with these cheap, convenient and formidable weapons, and that officers should adopt every means to guard against them.

When this machine was first seen by the officer of the deck, it had the appearance of a plank moving along on the water. It came directly towards the ship, and, within

two minutes of the time it was first sighted, was alongside. The chain was slipped, the engine backed, and all hands called to quarters. But it was too late—the torpedo struck the “Housatonic” just forward of the main-mast on the starboard side, in a line with the magazine. The man who steered her knew where the vulnerable spots of the steamer were, and he did his work well! As the after pivot-gun was pivoted to port, it was found impossible to bring a gun to bear on the daring intruder, while those on board of her were coolly making their arrangements to knock a hole in the ship’s bottom, for the “David” laid alongside a full minute. When the explosion took place the ship trembled all over, as if by the shock of an earthquake, and seemed to be lifted out of the water, and then sank stern foremost, heeling to port as she went down.

It must have been a large hole in the bottom that could sink her so rapidly. There was, of course, great consternation on board at this unlooked-for event, for there is nothing more appalling than to have a torpedo exploded under a ship’s bottom. A hundred pounds of powder on a pole, is enough to blow the bottom through the heaviest iron-clad—how destructive must it have been then to a wooden vessel! Most of the crew flew up the rigging for safety, and all order was at an end on board the “Housatonic.” Her captain (Pickering) was stunned and somewhat bruised by the concussion, and the order of the day was “*sauve qui peut.*” A boat was dispatched to the “Canandaigua,” not far off, and that vessel at once responded to the request for help, and succeeded in rescuing all but the following officers and men, who are supposed to have been drowned: Ensign E. C. Hazletine, Captain’s Clerk C. O. Muzzey, Quartermaster John Williams, Landsman Theodore Parker, and Fireman John Walsh.

Strange to say, the “David” was not seen after the explosion, and was supposed to have slipped away in the confusion; but when the “Housatonic” was inspected by divers, the torpedo-boat was found sticking in the hole she had made, having been drawn in by the rush of water, and all her crew were found dead in her. It was a reckless adventure these men had engaged in, and one in which they could scarcely have hoped to succeed. They had tried it once before inside the harbor, against the “Iron-sides,” with the same boat, or one very similar, and failed, and some of the crew had been blown overboard. How could they hope to succeed on the outside, where the sea might be rough, when the speed of the “David” would not be over five knots an hour, and when they might be driven out to sea? Reckless as it might be, it was the

most sublime patriotism, and showed the length to which men could be urged in behalf of a cause for which they were willing to give their lives and all they held most dear.

Torpedo practice was at that time cried down by humanitarians, but the use of it in war was perfectly legitimate, and had the Federal Government availed itself of it a little more freely, fewer blockade-runners, and less munitions of war, provisions and clothing would have reached the Confederate armies. What was considered un-Christian warfare then, is now resorted to by all nations, only in more destructive shapes. The torpedo which was so successfully used by the Confederates was a very primitive arrangement. It has been so improved and enlarged in destructive ability that it bids fair to become a great factor in keeping the peace throughout the world; and those nations which have built great iron-clad fleets, with which to dominate weaker nations, may well stop to consider whether it is worth while to extend the system, in view of the advances made in the locomotive torpedo, which will likely put the smaller nations more on a par with the stronger ones.

It was to the naval officers of the Southern Confederacy that we were mostly indebted for what we knew about torpedoes. At the present time we may have improved on the slow-moving “David,” which could only make five miles an hour, and brought up the speed of the present torpedo-boats to twenty knots an hour; but we are not at all in advance of the system adopted by the Confederates, which, if it did not keep the Navy out of their harbors, yet contributed in a great measure in prolonging the war, and was the cause of the Federal Government losing a large number of valuable vessels-of-war. The energy of the Confederates in regard to their inventions in the torpedo line was most remarkable, and in quite strong contrast to that of the other side. During the whole war the Federals never invented anything except a torpedo in a steam launch, called the Wood-Lay torpedo, which was nearly as dangerous to the crew as to the enemy.

In March, 1864, the gun-boats in Florida, under the command of Commander George B. Balch, were participating in the expedition up the St. John’s River. When the Federal troops landed, they threw up such heavy intrenchments that it was not likely the Confederates could make much impression on them. The Confederates of that region, however, did not propose to allow their native State to be invaded without making a stubborn resistance, and left no means untried to annoy the military posi-

tions whenever there was an opportunity of doing so. But the gun-boats were generally at hand with their heavy guns and bursting shells, and the Southerners were usually discomfited.

General Gordon landed at Jacksonville on the 9th of May, and assumed command of the district of Florida; and, in view of the long line of river to be kept open, objected to any reduction of the naval force in the St. John's River, in which Commander Balch concurred with him.

The activity of the Confederates in this quarter, as elsewhere, was very marked; for, though they yielded up all the forts along the coast, they seemed determined to resist any further entrance of Federal troops into the interior of the State, and they tried to confine the Navy as much as possible to the lower part of the St. John's River.

Notwithstanding the vigilance of the naval commanders, the Confederates succeeded in planting torpedoes in the river in the channel. On May 10th, the steamer "Harriet A. Weed" ran into two of these torpedoes, which exploded at the same moment and completely destroyed the vessel, sinking her in less than one minute's time, with five men killed and ten badly wounded.

The naval force employed in the St. John's River, under Commander Balch, was composed of the "Pawnee," "Mahaska" and "Norwich," off Jacksonville, and the "Ottawa" at Palatka. With such a small force it would have been impossible to prevent the enemy from practicing their system of torpedo warfare, which they had found to be so effective wherever the Federal gun-boats were employed.

On about the last of March, the transport "Maple-leaf" offered another success for the Confederates, and was blown up by a torpedo, fifteen miles above Jacksonville—this being the highway to Palatka and above, where Federal troops were being constantly transported. The duty on the river became very hazardous, for a severe torpedo warfare was carried on in small boats during dark nights by the Confederate torpedo corps, which first made its appearance on the Mississippi in 1862.

The above operations in Florida of the Army and Navy lasted from March 6th to April 16th, when orders were received from the War Department for the troops to be sent North, in consequence of which the gun-boats were withdrawn; but while employed with the Army, Commander Balch, Lieutenant-Commander S. Livingston Breese, of the "Ottawa," and the commanders of the "Mahaska" and "Norwich" performed good and gallant service.

It must not be supposed that there were not constantly occurring gallant affairs on

the Federal side as well as on that of the Confederates; for though the latter resorted to every means in their power to damage the Federal vessels, yet the officers of the Navy were ever on the alert to take advantage of anything that would enable them to circumvent the enemy. These were small affairs, but they were hazardous, and showed the skill of the Union officers and men.

On the 23d of March, a steamer, supposed to be loading with cotton, was discovered up the Santee River, at a point called McClellansville, and Commodore Rowan, senior officer of the blockading squadron, ordered Lieutenant A. W. Weaver, of the gun-boat "Winona," to fit out an expedition and cut her out. Accordingly, an expedition was started from the "Winona," under the command of Acting-Master E. H. Sheffield (executive officer), consisting of the gig and second and third cutters. Acting-Ensign

LIEUTENANT-COMMANDER (NOW CAPTAIN) A. W. WEAVER.

Wm. McKendry was in charge of one cutter, Acting-Master's Mate L. N. Cornthwait in charge of the other, with Acting-Assistant Surgeon Charles Little and Assistant-Engineer W. I. Barrington; the sailors consisted of 21 of the crew. Mr. Sheffield had orders to proceed up the Santee, capture the steamer if possible, and bring her out; if not, to burn her. Cutting-out expeditions are always hazardous, and this was no exception to the rule.

It was a dark night with drizzling rain, just such a night as an enemy might be supposed to be taking care of himself in snug quarters. The boats had to thread their way in the uncertain darkness through marshes, with their numberless small ditches or creeks. They could not be positive whither they were going, and frequently lost their way. But, at 6 in the morning, the commander of the expedition sighted the steamer

lying at anchor off the bank, when the boats pushed ahead for the anticipated prize.

As the boats got near the vessel, a large number of men were seen to be rushing about the decks, and a boat was lowered; when the boats of the "Winona" boarded her, drove the men below, and a sentry was placed at each hatch. The captain of the prize had been captured by the sailors while attempting to make his way on shore.

There being no indication of a battery on shore, Engineer Barrington immediately commenced to start the fires. The chain was hove short, but the vessel was so fastened by stern chains that were shackled around her after-bitts that it was found impossible to slip them, and the party commenced to cut them with cold-chisels, when a masked battery of three rifled guns opened on them and put a stop to their proceedings. The shot, fired at short range, went in one side and out the other—one penetrating the steam-drum and another the boilers, destroying the tubes, etc.

The artillerists had evidently been prepared for the attack, and perforated the vessel in many places, evidently determined to disable her in case she was boarded. The fire of the enemy was successful, and, as the vessel was iron and could not be burned, the party were obliged to leave or be cut to pieces. The result was a retreat after a gallant attack that ought to have been successful, and it detracts nothing from the gallantry of this affair that it was not so.

Operations in Florida continued on a small scale—Commander Balch, in the "Pawnee," and two gun-boats being stationed there to assist the Army. Not much scope existed for brilliant action; but now and then a small expedition to reconnoitre the enemy or capture some river steamer would be fitted out by young officers, who showed great cleverness and gallantry in most of the planned expeditions undertaken, particularly in one by General Gordon, opposite Palatka—backed by the Navy; and, though they were of no great import, were always successful.

It is pleasant to see that the Navy service was appreciated by the Army, as will appear by the following letter :

HEADQUARTERS OF AUXILIARY COLUMN TO }  
GORDON'S COMMAND, }  
JACKSONVILLE, FLORIDA, June 3, 1864. }

CAPTAIN — It is a duty and pleasure to express through you to the officers and privates of your branch of the service, my high sense of the efficient aid rendered by them to my column in their advance, auxiliary to Gordon's late expedition.

We found the whole extent of the waters to be traversed by one portion of the expedition had been thoroughly searched for torpedoes, and that, in the vicinity of our landing, your picket-boats had pervaded and patrolled every part of the surface.

I desire you particularly to express to Captain Lewis my thanks for his admirable arrangements for the rapid landing of the troops, and his efficient supervision thereof.

Accept, also, for yourself our obligations for the prompt and complete arrangements made by you to protect and effect our transportation and debarkation.

I am, Captain, with sentiments of high respect and regard, your obedient servant, etc., etc.,

W. H. NOBLE,

*Colonel Commanding Auxiliary Column.*

CAPTAIN GEO. B. BALCH,

*Commanding Naval Squadron, St. John's River.*

In these small affairs whatever was attempted was well executed, under the efficient preparations made by Captain Balch, in all cases where the land forces wanted assistance; and the officers under his command, guided by his example, left nothing undone to assist the Army, no matter how unreasonable its demands might sometimes be. Captain Balch was not a precise officer, but a very gallant one, and his name frequently appears in the dispatches of the commander-in-chief as always doing well in whatever situation he was placed.

The operations of the Navy were conducted all along the coast of South Carolina and in Florida, after the active and exciting raids in the harbor of Charleston. Several vessels were taken by the enemy: the "Columbine," a captured river-boat, was retaken by the Confederates up the St. John's River, and the U. S. S. "Water Witch" captured by a number of boats in Ossabaw Sound after a gallant defence; but these were small mishaps, and to be expected in a large base of operations. The last mentioned might have been avoided by shifting the berth after dark, and keeping the watch at quarters in a place where a boarding expedition of the enemy was to have been expected. They were quite as fertile in expedients to destroy and capture as were the Federal forces. Most of the officers of the "Water Witch" were wounded during the first of the attack, and Lieutenant-Commander Austin Pendergrast, the commanding officer, was himself cut down with sword in hand, bravely defending his vessel. It was thought by him that but for the casualties among his officers the enemy would have been repulsed; but they were not, and therein lies the difference. The "Water Witch" was a favorite little steamer, which had performed some remarkably good service, and her loss caused great regret.

Amid all their gallantry, there were too many occasions in which the Confederates departed from the usages of war, and practiced unnecessary cruelty on their prisoners. This occurred in the case of the officers and men of the "Water Witch." The surgeon supposed that he would be treated according to the usual manner of captured medical officers. Understanding that there

was an arrangement between the Federals and Confederates that the medical officers should be permitted to attend their own wounded, and, after there was no longer any necessity for their services, be allowed to depart, Acting-Assistant Surgeon W. H. Pierson made a request in writing to Flag-officer W. W. Hunter, that the Confederate Secretary of the Navy be applied to for his release, according to the supposed agreement; but he only, after a second application, received for answer the following letter:

SAVANNAH, July 17, 1864

I have received your note of this day. In reply, I have to inform you that I am instructed by the honorable Secretary of the Navy as follows, viz.: "When the services of Assistant-Surgeon Pierson, United States Navy, are no longer needed with the wounded officers and men in the hospital, he will be turned over to the proper military authorities to be treated as other prisoners-of-war."

Respectfully,

W. W. HUNTER,  
*Flag-Officer, etc.*

In accordance with the above edict, this gentleman was sent to Macon Prison. His daily ration consisted of one pint of unbolted corn-meal, a tablespoonful of rice, a little miserable and sometimes maggoty bacon (called, in derision, soap-grease) a very little salt, and a moderate supply of poor molasses. It was said at that time that the same ration was served out to Confederate soldiers; if that was so, they were in a bad strait, and could not help it. But there is always a courtesy due a prisoner-of-war taken in honest battle, and it is quite evident that this courtesy was not extended to Union officers.

It is but fair to say that, through the Confederate surgeons, Assistant-Surgeon Pierson afterwards received better treatment, was finally released through the same influence, and found himself under the old flag again, without any conditions.

We dislike, and have always avoided as much as possible referring to cruelties practiced by the Confederates in retaliation for supposed injuries received by Southern prisoners—or for the purpose of preventing Federal batteries firing on besieged places. But the following letter, received in June from the Confederate commander at Charleston, must have shocked the sense of humanity and propriety which every gallant officer must feel at having to carry out such an order. It plainly showed what straits the Confederates were in when they could resort to such a measure to prevent besiegers from firing on a city which was a fair object of attack according to the strictest rules of war, and when, if the besieged non-combatants were in any danger, it was the duty of the military authorities to have them removed, unless they determined to remain and stand the consequences:

HEADQUARTERS FIRST MILITARY DISTRICT,  
DEPT' OF S. C., GA., AND FLORIDA. }  
June, 13, 1864. }

GENERAL—I have the honor to inclose for transmission to the Commanding General of the United States forces on this coast, a letter from Major Samuel Jones, commanding this Department. The letter informs him that five generals and 45 field-officers of the Federal army, prisoners, have been ordered to be confined in Charleston. These officers have been placed in my charge, and will be provided with commodious quarters in a part of the city occupied by non-combatants, the majority of whom are women and children.

It is proper that you should know, however, that the portion of the city in which they are located is, and has been for some time, exposed day and night to the fire of your guns.

Very respectfully, etc.,

R. S. RIPLEY,

*Brigadier-General Commanding.*

GENERAL SCHIMMELFENNIG,  
*Commanding United States Forces,  
Morris and Folly Islands, etc.*

There is much to be said against exercising this kind of warfare; and exposing the lives of prisoners in a place to prevent an enemy from firing upon it, can only be considered a violation of the usages of civilized warfare which would damage any cause.

The shelling of a beleaguered city is a right of war, and though the duties of humanity towards women and children should be strictly observed, and they should have full time given them to remove from the scene of danger, yet, if they do not do so, military operations could not be interfered with. To expose captives to the close confinement of a place under fire, with the hopes of thereby putting a stop to a bombardment, is making an unfair comparison between the captives and non-combatants, for the latter have the power to withdraw from the fire, while the captives cannot. It had not been the custom to send captives from other parts to Charleston to be kept in confinement; on the contrary, all prisoners had been sent away from there; and it is evident that the Union officers were sent there to be sacrificed in case the Union batteries kept up their fire on the city.

The destruction of Charleston in a military point of view was just as necessary as the destruction of the Confederate forts. It was a store-house of arms and munitions-of-war from which the forts could draw supplies. It contained a large arsenal of military stores and ammunition; and while these existed, the General commanding the Federal forces was justified in attempting to destroy them. A siege without a bombardment would have been of no use, as the city was open in the rear, and supplies of all kinds could be brought in from the surrounding country. This is the only reason which can be given why the military commander of the Union forces should have forbore to use his guns upon

the city. It was of no use in bringing about a surrender, for it might have been known from the character of the defences of Charleston that they would not have surrendered the city until the outside works were taken, and it would have been more profitable to have expended the shot and shell on the surrounding forts.

If General Gillmore at a distance of over 5,000 yards "had reduced Sumter to a pulp," it is quite possible that the Federal Army and Navy, by keeping up the same kind of fire on the forts, would eventually have reduced them, as they did Wagner and Sumter, and enabled the Navy to remove the obstructions, so that the Monitors could go on up to Charleston. The Confederates had shown an immense amount of energy and courage in holding their own.

This shelling the city gave the Confederates the opportunity of saying that the fire was kept up from the disappointment the Federal forces had met with in not bringing about a surrender. An opportunity should never have been given the enemy to cast a shadow of reflection upon the acts of Federal officers, who could afford to be forbearing in the face of the fact that Charleston, as a base of supplies through the means of blockade-runners, could never be of any more use to the Confederacy, and that the larger the force that was kept there to hold the place the more advantageous it was for the Federal arms.

That the situation of the Confederates was becoming desperate about that time we now know full well, and probably some civilian member of the Confederate Cabinet suggested this confinement of Federal prisoners in Charleston; for it cannot be conceived that any of the high-toned officers, who on many occasions showed true chivalric feeling in the capture of Federals, should have instituted a scheme that would surely have reflected on them as honorable soldiers.

On the 20th of June the Rear-Admiral commanding received a notification from the Navy Department in Washington "that the Confederates in Charleston were preparing for a simultaneous move on the blockade, inside and out, in order to cover the exit of a large quantity of cotton." The next day, the "Sonoma," Commander George H. Cooper, and "Nipsic," Lieutenant-Commander William Gibson, were sent as outside cruisers to cover the blockade south of Port Royal, where it was weakest, and where the chief effort was to be made.

A plan was laid between General Foster and Admiral Dahlgren to make a diversion by cutting the railroad between Charleston and Savannah. Generals Foster, Schimmelfennig and Hatch were to land, each

with a force considered adequate for the occasion, while General Birney was to go into the North Edisto, and as high as possible, to destroy the railroad. The Navy was to enter the Stono to co-operate with General Schimmelfennig. One or two gun-boats were to ascend the North Edisto, and co-operate with General Birney to secure his landing.

On the 2d day of July the Monitors "Lehigh" and "Montauk" crossed the Stono bar, while the remaining naval force consisted of the "Pawnee," "McDonough" and "Racer."

Though the plans were well made, nothing resulted from this expedition. The different co-operating parties reached some of the points aimed at and attacked the Confederate troops that were out to receive them, and the gun-boats and Monitors opened on such forts as they were directed

COMMANDER (NOW REAR-ADMIRAL) GEORGE H. COOPER.

to fire upon; but there was no success in the attack. The Federal troops failed to capture any of the enemy's batteries; and after one or two days spent in desultory fighting, it was decided that the enemy were in too strong force, that further efforts would not be profitable, and therefore the troops should be withdrawn from John's Island.

These operations lasted about six days, during which there was a good deal of hard work and the usual display of gallantry on the part of the Navy, under the guns of which the Army safely re-embarked.

Rear-Admiral Dahlgren speaks handsomely of his staff, and particularly mentions the services of Commander Balch and Lieutenant-Commanders Semmes, Filbrow, A. W. Johnson, R. L. Phythian, and Acting-Masters Phinney and Furber.

This was about the last operation of any importance that occurred in the South Atlantic squadron up to October 22, when

the account of its operations for the year ended. Some minor expeditions were undertaken—in one of which the brig "Perry" lost fifteen men in killed, wounded and prisoners—and in another a schooner loaded with cotton was set on fire and burned by a party of brave fellows; but we miss the exciting scenes which occurred in the attacks on the batteries of Charleston, where the officers and men fought persistently for so many days and nights, demonstrating their capacity to command, and exhibiting a gallantry never exceeded, and a disappointment that cannot be described, at their unsuccessful efforts to win the works of Charleston. The innumerable obstacles thrown in their way by a powerful and active foe, full of resources and full of means, to check the advance into his harbor, were too great for a force entirely too small in the first place for such an undertaking.

The Southern coast was, on the whole, thoroughly blockaded, and Charleston no longer of any use to the Confederates; and there was really no further necessity for their holding it, except for the sake of a sentiment connected with the fact that it was the first place to raise the flag of secession, and desired to be the last that would haul it down.

Towards the close of the year 1864, owing to the stringent blockade of the whole Southern coast by the Navy, except at the entrance to Wilmington, the Confederate States began to be placed in great distress for the want of food to supply their armies, and at one time there was a prospect of their being starved into submission, even without victories by the Federal armies.

In the early part of May there were on hand but two days' rations for Lee's army at Richmond, and on the 23d of June only thirteen days' rations, showing how the Navy had cut off the foreign supply; and to meet the demand, and keep the Confederate army from disbanding, the Commissary-General had to offer market rates for wheat then growing in the fields.

A great deal of this distress and exhaustion of supplies was, however, owing to the exhaustion of Virginia. The prevalence of droughts, and the fact that the crops all over the State had been destroyed by the Federal armies, rendered it very difficult to subsist so large a number of troops as were located in and around Richmond. The effect of the advance of the Federal forces was to oblige the Confederates to call out their reserves, and these had to be fed. Many farmers were detailed for military duty and ordered into the field, at the very time it was most necessary for them to be at home attending to the seeding of wheat.

Yet the blockade was far more ruinous to the Confederate cause than all other

operations put together. As long as a blockade-runner could get into any of the Southern ports, bringing bacon and flour, the soldiers could be sustained; and whenever two or three of these supply-vessels were captured by the Federal fleet, it carried dismay to the hearts of those who ruled the destinies of the South. In Virginia the supply of breadstuff was practically exhausted. The negro field-hands were absconding for fear of being employed in the army, and were taking refuge in the Union lines, while Sherman's march through the South had cut off all supplies of grain or cattle from that region. It may be imagined, then, how important it was for the Confederate armies that the blockade-runners should now and then obtain safe entrance into the Southern harbors with their military supplies.

As late as November, 1864, President Davis applied to the Commissary-General to ascertain how many rations there were on hand, to feed not only the army at Richmond, but the other forces in the field, and was informed that there was a very alarming state of affairs in that Department; that Georgia, Alabama and Mississippi were the only States where there was an accumulation, and that the Confederate Army was at that time being subsisted from these States.

The Commissary of Georgia sent dispatches that he could not send another pound of provisions to Richmond. Alabama, under the most urgent call, could only send forward 135,000 pounds of food. Mississippi was doing all she could in supplying rations to General Beauregard's army. South Carolina could only subsist the troops at Charleston and the prisoners in the interior of the State. The enemy had visited every section of North Carolina, and that State was only able to supply the forts at Wilmington with rations of the most ordinary kind, and not a pound of meat could be shipped to either Wilmington or Richmond.

Fortunately for the Confederates, the blockade-runner "Banshee" succeeded in eluding the blockaders and getting into Wilmington; and owing to this timely supply of provisions the reserves at the forts were prevented from being starved out. As it was, the commissaries were only able to supply them with thirty days' rations. At that moment there were only 3,400,000 rations of bacon and pork in the whole Confederacy to subsist 300,000 men for 25 days.

In the month of December matters were still worse; there was not meat enough in the Southern Confederacy for the armies it had in the field. That the meat must be obtained from abroad was plainly seen, and it was also recognized that, in order to ob-

tain it, it would be necessary to break the blockade by some means then untried or unknown. Nor was the transportation adequate to the demands of the occasion. The supply of fresh meat to General Lee's army was precarious, and, if the army fell back from Richmond and Petersburg, there was every probability that it would cease to exist altogether.

This condition of affairs was brought about by the vigilance of the Federal Navy, which worked hard, day and night, to prevent supplies from getting in from the sea; and the only part of the coast where the blockade was sometimes open to the runners was at the port of Wilmington, where the enemy had been allowed, under an unwise management, to build heavy works at the entrance to Cape Fear River, under which the blockade-runners could take

shelter at night and bid defiance to their pursuers. This was the only rendezvous the Confederates had from the entrance of Hatteras Inlet to the capes of Florida; and so uncertain was this, that there was no knowing how soon the Federal Government would take proper measures to stop it, even if the advance of Sherman's army through the South did not cause the evacuation of Wilmington.

The Navy, it is true, did not succeed in capturing Charleston, but it closed that port against blockade-runners so completely that it was forbidden ground to them. This was well worth the time, money and fighting expended on this Confederate stronghold, for at the close of the naval campaign of 1864 the Confederates could only subsist their troops there on the meanest rations.

## SOUTH ATLANTIC SQUADRON, JANUARY, 1864.

REAR-ADMIRAL JOHN A. DAHLGREN.

LIEUTENANT-COMMANDER JOSEPH M. BRADFORD, FLEET-CAPTAIN.

### STEAM-FRIGATE "WABASH"—FLAG-SHIP.

Captain, John De Camp; Lieutenant, Lloyd Phenix; Fleet Surgeon, Wm. Johnson; Fleet Paymaster, J. O. Bradford; Assistant Surgeon, F. M. Weld; Acting-Assistant Surgeon, N. L. Campbell; Paymaster, R. J. Richardson; Chaplain, C. A. Davis; Marines: Captain, E. McD. Reynolds; Second-Lieutenant, L. E. Fagan; Ensign, H. T. French; Acting-Ensigns, A. Tuttle and T. H. Daggett; Acting-Master's Mates, J. H. Gordon, J. C. Graves, Joseph Gregory and B. O. Carpenter; Engineers: Fleet Engineer, Robert Danby; Second-Assistants, P. R. Voorhees, W. C. Williamson and Elisha Harsen; Third-Assistants, J. S. Green, H. H. Kimball, A. Michener and J. B. Place; Boatswain, Francis McLoud; Gunner, Christopher Long; Carpenter, J. G. Thomas; Sailmaker, H. W. Frankland.

### IRON-CLAD STEAMER "NEW IRONSIDES."

Captain, Stephen C. Rowan; Lieutenant Commander, Geo. E. Belknap; Lieutenant, H. B. Robeson; Surgeon, Marius Duvall; Assistant Surgeon, Edw. Kershner; Paymaster, Alex. W. Russell; Marines: First-Lieutenant, Henry A. Bartlett; Second-Lieutenant, James B. Young; Acting-Masters, G. W. Domett, Lewis West and J. M. Skillings; Ensigns, H. L. Johnson, J. J. Read and Walter Abbot; Acting-Ensigns, W. C. Wise, G. T. Davis, S. S. Hand and W. S. McNeilly; Acting-Master's Mates, J. W. Caswell, J. D. Wingate and Thomas Hollins; Engineers: Chief, Alex. Grier; First-Assistant, N. B. Littig; Second-Assistant, J. J. Noble; Third-Assistants, Everett Battelle, H. C. Beckwith, F. T. H. Ramsden and Wm. S. Wells; Boatswain, Thomas Bennett; Gunner, Charles Stewart; Carpenter, E. H. Bishop; Sailmaker, John A. Birdsall.

### STEAMER "CANANDAIGUA."

Captain, Joseph F. Green; Lieutenant, H. DeH. Manley; Surgeon; James Suddards; Paymaster, C. H. Eldredge; Acting Masters, Samuel Hall and J. L. Gifford; Acting-Ensigns, R. P. Leary and Edward Daley; Acting-Master's Mates, W. J. Vincent, James Wilbur, Adna M. Bates and W. C. Howard;

Engineers: Chief, Wm. S. Stamm; Third-Assistants, Albert Jackson, Philip Miller, E. T. Phillippi, O. B. Mills, J. J. Barry and J. Pemberton, Jr.; Boatswain, Thomas Smith; Gunner, John Gaskins; Carpenter, S. N. Whitehouse; Sailmaker, David Bruce,

### STEAMER "HOUSATONIC."

Captain, Charles W. Pickering; Lieutenant, F. J. Higginson; Assistant Surgeon, W. T. Plant; Assistant Paymaster, J. S. Woolson; Acting-Masters, J. W. Congden and J. K. Crosby; Ensign, Edw. C. Hazeltine; Acting-Ensign, G. M. McClure; Acting-Master's Mates, E. A. Butler, B. F. Jacobs, H. A. Hudson and Louis Cornthwaite; Engineers: Chief, John S. Albert; Second-Assistant, C. F. Mayer, Jr.; Third-Assistants, J. W. Hollihan, C. A. Evans, J. A. B. Smith, W. M. Barr and Charles Hopkins; Acting-Boatswain, Wm. Ray; Acting-Gunner, A. C. Holmes.

### STORE-SHIP "VERMONT."

Commander, William Reynolds; Lieutenant-Commander, Wm. C. West; Surgeon, Wm. Lowber; Assistant Surgeon, W. J. Bowdle; Paymaster, Frank C. Cosby; Acting-Assistant Paymaster, Wilbur Ives; Chaplain, John Blake; Marines: Second-Lieutenant, H. J. Bishop; Acting-Masters, W. U. Grozier, H. W. Hand, R. B. Hines, J. C. Cox and W. W. Carter; Acting-Ensigns, Andie Hartshorne, W. A. Morgan and C. J. Lawrence; Acting-Master's Mates, W. Van Wyck, S. N. Grey, J. G. Rose and F. W. Beck; Engineers: Acting-First-Assistant, John L. Peake; Acting-Second-Assistant, G. S. Geer; Acting-Boatswain, R. C. Barnard; Gunner, Geo. W. Allen; Acting-Gunner, Thos. Holland; Carpenter, C. W. Babbitt; Sailmaker, John Joins.

### IRON-CLAD STEAMER "PATAPSCO."

Commander, Thomas H. Stevens; Lieutenant, Alex. S. Mackenzie; Assistant Surgeon, Samuel H. Peltz; Acting-Assistant Paymaster, W. S. Creevey; Acting-Master, Geo. P. Lee; Acting-Ensigns, J. T. Ross, A. Kloeppel and Wm. Chase; Engineers: Second-Assistant, J. B. Carpenter; Third-Assistants,

G. F. Sweet, J. J. Ryan, DeWitt G. Davis and Wm. H. Barclay.

STEAMER "PAWNEE."

Commander, Geo. B. Balch; Lieutenant, John W. Philip; Paymaster, Geo. Lawrence; Acting-Assistant Surgeon, Henry Shaw; Acting-Masters, J. C. Champion and James P. Lindsey; Ensign, Henry Glass; Acting-Ensigns, Thomas Moore and C. J. Rogers; Acting-Master's Mates, C. H. Poor, A. A. Franzen and J. G. Bache; Engineers: Second-Assistant, Alfred Adamson; Third-Assistants, Wm. J. Clark, Jr., J. G. Brosnahan, Arthur Price and J. L. Hannum; Boatswain, James Brown; Gunner, James Hayes.

STEAMER "SONOMA."

Commander, Geo. H. Cooper; Lieutenant, Geo. W. Hayward; Assistant Surgeon, S. F. Shaw; Acting-Assistant Paymaster, F. F. Hastings; Acting-Master, Wm. M. Post; Acting-Ensigns, Wm. N. Price, S. H. Pollock and H. H. Johnson; Acting-Master's Mates, S. S. Willett, G. W. Eckert, C. C. Neil and R. W. Robins; Engineers: Acting-First-Assistant, A. B. Dunlap; Acting-Second-Assistant, A. B. Cullins; Acting-Third-Assistants, W. A. Smith, Rufus Burton and J. Hawkey; Gunner, J. M. Hogg.

IRON-CLAD STEAMER "LEHIGH."

Commander, Andrew Bryson; Lieutenant, Moreau Forrest; Assistant Surgeon, Wm. Longshaw, Jr.; Acting-Assistant Paymaster, F. C. Inlay; Acting-Master, Richard Burke; Acting-Ensigns, Edw. Tilghman, C. M. Thwing, J. E. Stickey and F. W. Towne; Acting-Master's Mate, G. W. Leland; Engineers: First Assistant, W. D. Pendleton; Second-Assistant, Alfred Hedrick; Third-Assistant, C. M. Van Tine, J. H. Thomas and S. C. McLanahan.

STEAMER "PAUL JONES."

Commander, James M. Duncan; Lieutenant, James O'Kane; Assistant Surgeon, J. W. Coles; Acting-Assistant Paymaster, J. A. Berry; Acting-Ensigns, J. Potts, Chas. Clanson, Henry Hamre and Chas. Weidenbien; Acting-Master's Mates, J. H. Manning, J. L. Rowe and C. E. Everdean; Engineers: First-Assistant, James Sheridan; Third-Assistants, James A. Chasmer, E. D. Weems, Geo. Paul and L. T. Safford; Acting-Gunner, John Brown.

STEAMER "MAHASKA."

Commander, J. B. Creighton; Lieutenant, E. C. V. Blake; Assistant Surgeon, H. S. Pitkin; Acting-Assistant Paymaster, Chas. Fairchild; Acting-Master, Benj. Dyer; Acting-Ensigns, Frederick Elliott, N. W. Black, Chas. G. Boyer and G. E. French; Acting-Master's Mate, Wm. White; Engineers: Acting-First-Assistant, G. E. Ashby; Third-Assistants, Thomas La Blanc, E. L. Hewett and N. H. Lamdin.

STEAMER "CIMMARON."

Commander, Aaron K. Hughes; Lieutenant, Adolphus Dexter; Assistant Surgeon, E. S. Olcott; Acting-Assistant Paymaster, G. W. Griffin; Acting-Master, S. A. Waterbury; Acting-Ensigns, W. H. Anderson, G. F. Howes, Chas. Renfield, J. W. North and T. R. Dayton; Acting-Master's Mates, Thomas Newton, P. J. Markoe, J. D. Reed and E. P. Crocker; Engineers: Second-Assistant, Reynolds Driver; Third-Assistants, W. H. Kelley, W. L. Bailie and G. L. Palmer; Gunner, M. A. Lane.

IRON-CLAD STEAMER "PASSAIC."

Lieutenant-Commander, Edward Simpson; Lieutenant, Wm. Whitehead; Assistant Surgeon, H. C. Eckstein; Acting-Assistant Paymaster, L. C. Tripp; Acting-Master, James Ogilvie; Acting-Ensigns, L. G. Emerson, D. B. Hawes, A. Delano, Jr. and W. H. Roberts; Acting-Master's Mate, W. H. Lewis; Engineers: First-Assistant, Henry Mason; Second-Assistant, F. H. Fletcher; Third-Assistants, William A. Drinns, Joseph Hooper and C. Kenyon.

STEAMER "NIPSIC."

Lieutenant-Commander, Wm. Gibson; Acting-Assistant Surgeon, W. J. Gilfillen; Acting-Assistant Paymaster, H. T. Mansfield; Acting-Master, W. L. Churchill; Acting-Ensigns, H. A. Greene, J. A. Winchester and A. B. Prince; Acting-Master's Mates, G. S. Johnson, W. K. Orcutt and W. H. Kitching, Jr.; Engineers: First-Assistant, S. L. P. Ayres; Second-Assistants, A. W. Morley and C. E. Emery; Third-Assistants, R. B. Plotts and B. R. Stevens.

STEAMER "CHIPPEWA."

Lieutenant-Commander, T. C. Harris; Assistant Surgeon, Louis Zenzen; Acting-Assistant Paymaster, G. A. Robertson; Acting-Master, W. H. DeWolf; Acting-Ensigns, J. M. Crocker and H. T. Blake; Acting-Master's Mates, J. C. Butler and J. A. H. Willmuth; Engineers: Second-Assistant, R. H. Thurston; Acting-Second-Assistant, Thos. Heenan; Third-Assistants, A. Sackett, C. R. Mosher and J. M. Murray.

IRON-CLAD STEAMER "NANTUCKET"

Lieutenant-Commander, Stephen B. Luce; Lieutenant, H. L. Howison; Assistant Surgeon, A. B. Judson; Acting-Assistant Paymaster, L. S. Brigham; Acting-Master, W. H. Maies; Acting-Ensigns, J. F. Otis, C. C. Starr and John Meyers; Engineers: Second-Assistants, George H. White and I. R. McNary; Third-Assistants, N. W. Buckhout and J. K. Smedley; Acting-Third-Assistant, A. L. Grow.

IRON-CLAD STEAMER "MONTAUK."

Lieutenant-Commander, John L. Davis; Lieutenant, Gilbert C. Wiltse; Acting-Assistant Surgeon, W. H. Harlin; Acting-Assistant Paymaster, J. H. Sellman; Acting-Master, Edmund Jones; Acting-Ensigns, T. F. DeLuce, I. J. McKinley and G. H. Avery; Acting-Master's Mate, Robert Craig; Engineers: Acting-Second-Assistants, C. A. Stuart and Simon Rockefeller; Third-Assistants, Jesse F. Walton, S. C. Lane and Montgomery West.

STEAMER "UNADILLA."

Lieutenant-Commander, A. W. Johnson; Assistant Surgeon, C. S. Hubbard; Acting-Assistant Paymaster, G. S. Benedict; Acting-Master, R. M. Cornell; Acting-Ensigns, Wm. Field and G. E. Thomas; Acting-Master's Mates, James Such and A. F. Taffe; Engineers: Second-Assistant, R. S. Talbot; Third-Assistants, M. T. Sunstrom, N. P. Towne and M. N. Knowlton.

STEAMER "OTTAWA."

Lieutenant-Commander, S. Livingston Breese; Assistant Surgeon, G. W. Woods; Acting-Assistant Paymaster, G. W. Huntington; Acting-Ensigns, W. H. McCormick, J. L. Gamble, Benj. Mitchell, C. H. Choate and E. M. Dimon; Acting-Master's Mates, A. W. Tripp and F. W. Turner; Engineers: Second-Assistants, J. P. Sprague, E. W. Koehl and F. C. Prindle; Third-Assistant, R. B. Hine.

IRON-CLAD STEAMER "NAHANT."

Lieutenant-Commander, J. J. Cornwell; Lieutenant, H. C. Tallman; Assistant Surgeon, D. F. Ricketts; Acting-Assistant Paymaster, D. A. Smith, Jr.; Acting-Master, C. C. Ricker; Acting-Ensigns, W. E. Thomas and S. A. Gove; Engineers: Second-Assistant, W. H. G. West; Third-Assistant, W. S. Neal and Robert Crawford; Acting-Third-Assistant, T. B. Green.

STEAMER "HURON."

Lieutenant-Commander, F. H. Baker; Assistant Surgeon, C. H. White; Acting-Assistant Paymaster, Chas. Stewart; Acting-Masters, Wm. A. Mills and W. H. Baldwin; Acting-Master's Mates, Samuel Delano, Peter O'Conner and Wm. Henderson; Engineers: Acting-First-Assistant, C. P. Roebuck; Third-Assistants, Sylvanus McIntyre, J. P. Kelly, John Lowe, Thomas Crumney and F. C. Russell.

## STEAMER "WATER WITCH."

Lieutenant-Commander, Austin Pendergrast; Acting-Assistant Surgeon, W. H. Pierson; Acting-Assistant Paymaster, L. G. Billings; Acting-Masters, C. W. Buck and W. B. Stoddard; Acting-Ensigns, J. M. Forsyth, A. T. Stover and Chas. Hill; Acting-Master's Mates, E. D. W. Parsons, C. P. Weston and H. V. Butler; Engineers: Acting-First-Assistant, Samuel Genthner; Acting-Third-Assistants, J. P. Cooper, J. Hollingsworth and I. A. Conover.

## STEAMER "MARBLEHEAD."

Lieutenant-Commander, R. W. Meade, Jr.; Assistant Surgeon, B. H. Kidder; Acting-Assistant Paymaster, James Winter; Acting-Ensigns, G. A. Harriman and G. F. Winslow; Acting-Master's Mates, B. O. Low, T. L. Fisher and F. Millett; Engineers; Acting-Second-Assistant, Frank Henderson; Third-Assistants, H. W. Bulkley, M. A. Sutherland and F. W. Bissett.

## STEAMER "WISSAHICON."

Lieutenant-Commander, George Bacon; Acting-Assistant Surgeon, G. S. Fife; Acting-Assistant Paymaster, Chas. Dutcher; Acting-Master, J. E. Jones; Acting-Ensigns, W. C. Odiorne, H. B. Francis and C. F. Dearing; Acting-Master's Mate, D. J. King; Engineers: Acting-First-Assistant, W. S. Hazzard; Acting-Third-Assistants, H. J. Tarr, Chas. E. Jevens and G. S. Odell.

## STEAMER "SENECA."

Lieutenant-Commander, Alfred Hopkins; Acting-Assistant Surgeon, A. B. C. Sawyer; Acting-Assistant Paymaster, Elijah Ward; Acting-Masters, Henry Vaughan and G. W. Ewer; Acting-Ensigns, G. H. Wood and J. H. Ankers; Acting-Master's Mates, J. G. Paine and E. W. Fiske; Engineers: Second-Assistants, Jos. Watters, H. H. Burritt and Thomas Lynch; Third-Assistant, R. T. Bennett.

## STEAMER "MEMPHIS."

Lieutenant-Commander, Thos. H. Eastman; Acting-Assistant Surgeon, Louis Michel; Acting-Assistant Paymaster, W. E. Foster; Acting-Ensigns, E. A. Magone, J. B. Childs, G. A. Churchill and S. W. Cowing; Acting-Master's Mates, J. G. Crocker, Silas Owen, J. W. Moore and J. W. DeCamp; Engineers: Acting-Second-Assistants, Chas. McCarty, and Peter Anderson; Acting-Third-Assistants, J. H. Vaile and Wm. Adams.

## IRON-CLAD STEAMER "CATSKILL."

Lieutenant-Commander, F. M. Bunce; Assistant Surgeon, Robert Willard; Acting-Assistant Paymaster, G. F. Barker; Acting-Master, G. W. Parker; Acting-Ensigns, C. P. Walters and G. W. Prindle; Acting-Master's Mate, Peter Trescott; Engineers: Second-Assistant, G. D. Emmons; Third-Assistants, J. T. Booth, Frank Marsh and Jas. Plunkett.

## STEAMER "LODONA."

Acting-Lieutenant, Edgar Broadhead; Acting-Assistant Surgeon, T. W. Meckley; Acting-Assistant Paymaster, A. M. Stewart; Acting-Master, H. S. Blanchard; Acting-Ensigns, N. W. Rathburn, H. G. McKennee, R. C. McKenzie and Le G. B. Brigham; Acting-First-Assistant Engineer, F. A. Bremen; Acting-Second-Assistants, Richard Durfee and M. C. Heath; Acting-Third-Assistants, J. Molineaux, C. A. McDowell and Fred. Wagner.

## STEAMER "FLAMBEAU."

Acting-Volunteer-Lieutenant, Edward Cavendy; Acting-Assistant Surgeon, S. B. Hoppin; Acting-Assistant Paymaster, F. V. D. Horton; Acting-Masters, A. S. Megathlin and W. L. Kempton; Acting-Ensigns, G. Cottrell, T. H. D'Estimeauville and J. P. Gallagher; Engineers: Acting-First Assistant, John Harris; Acting-Second Assistant, Edw. Allin; Acting-Third-Assistants, W. H. Anderson and Leonard Atwood.

## STEAMER "COMMODORE M'DONOUGH."

Acting-Master, J. W. Tnek; Acting-Assistant Surgeon, W. H. Campbell; Acting-Assistant Paymaster, R. Freeman; Acting-Master, Wm. Knapp; Acting-Ensigns, J. K. Winn and D. B. Hallett; Acting-Master's Mates, J. E. Goodwin and D. Lester; Engineers: Acting-Second-Assistants, S. Warren and S. S. Hetrick; Acting-Third-Assistants, Nelson Rose and W. W. Hartley.

## STEAMER "MOHAWK."

Acting-Master, Alex. Tillinghast; Acting-Assistant Paymaster, G. H. Andrews; Acting-Ensign, E. Rich, Jr.; Acting-Master's Mate, Wm. Trott; Engineers: Acting-Second-Assistant, R. K. Morrison; Acting-Third-Assistant, G. E. Whitney.

## STEAMER "HOME."

Acting-Master, Nicholas Kirby; Acting-Assistant Surgeon, W. N. Pindell; Acting-Assistant Paymaster, T. W. Burger; Acting-Ensigns, Wm. Shackford, A. E. Barnett and J. M. Smalley; Acting-Master's Mates, F. K. S. Nye, J. K. Gould and F. H. Munroe; Engineers: Acting-Second-Assistants, C. Dandreaux and C. Armberg; Acting-Third-Assistants, Paul Dandreaux, C. R. Rodker and R. De Cordy.

## STEAMER "POTOMSKA."

Acting-Volunteer-Lieutenant, Geo. E. Welch; Acting-Assistant Surgeon, S. C. Smith; Acting-Assistant Paymaster, F. H. Swan; Acting-Masters, R. P. Walter and B. W. Leary; Acting-Ensign, J. D. Wells; Acting-Master's Mate, Woodward Carter; Engineers: Acting-Second-Assistant, G. H. Guyer; Acting-Third-Assistants, Edwin Vaughan and W. L. McKay.

## STEAMER "STETTIN."

Acting-Volunteer-Lieutenant, C. J. Van Alstine; Acting-Assistant Surgeon, C. J. Pigott; Acting-Assistant Paymaster, C. M. Burns, Jr.; Acting-Master, J. M. Butler; Acting-Ensigns, G. R. Bailey, C. B. Pray and J. C. Staples; Acting-Master's Mates, Benj. Russell and C. H. Fernald; Engineers: Acting-Second-Assistant, J. B. Edwards; Acting-Third-Assistant, John Hawkins, John Ryan and Anthony Gale.

## STEAMER "IRIS."

Acting-Master, Wm. Barrymore; Acting-Master's Mates, W. W. Brandt, A. H. L. Bowie and Thomas Irving; Engineers: Acting-Second-Assistant, Thos. Fewkes; Acting-Third-Assistants, Morris McCarty and Dennis Lyng.

## STEAMER "PHILADELPHIA."

Acting-Master, Geo. R. Durand; Assistant Surgeon, J. H. Culver; Assistant Paymaster, H. L. Wait; Acting-Ensigns, L. A. Waterman, J. E. Wallis and J. Worth; Acting-Master's Mates, Geo. H. Bartlett, C. F. Moore and A. Truesdell; Engineers: Acting-Second-Assistant, C. A. Norris; Acting-Third-Assistants, W. H. Capen and Robert Mulready.

## STEAMER "O. M. PETTIT."

Acting-Master, T. E. Baldwin; Acting-Master's Mates, E. L. Smith, Charles Hanson and E. P. Crocker; Engineers: Acting-Second-Assistant, Reuben McClanahan; Acting-Third-Assistants, Aug. Wandell and Wm. P. Wynn.

## STEAMER "NORWICH."

Acting-Masters, F. B. Merriam and R. B. Arants; Acting-Assistant Surgeon, G. E. McPherson; Acting-Assistant Paymaster, G. C. Boardman; Acting-Ensigns, J. H. Linscott and S. S. Hand; Acting-Master's Mates, A. J. L. Barker, Peter Moakler, T. M. Durham and Henry Sinclair; Engineers: Acting-Second-Assistant, P. B. Robinson; Acting-Third-Assistants, A. A. Odell, Benjamin Cobb, Jr., and W. W. Thain.

## STEAMER "MARY SANFORD."

Acting-Master, Wm. Rogers; Acting-Assistant Paymaster, G. C. Bissell; Acting-Ensigns, M. J. Daly, C. A. Pike, G. W. Pease and W. Caldwell, Jr.; Acting-Master's Mates, A. F. Rich and C. Seymour; Engineers; Acting-First-Assistant, Wm. Johnson; Acting-Third-Assistants, Jas. Hare, J. L. Rooke and C. H. Hunt.

## STEAMER "E. B. HALE."

Acting-Master, Chas. F. Mitchell; Acting-Assistant Surgeon, S. N. Fisk; Acting-Assistant Paymaster, O. B. Gilman; Acting-Ensigns, Henry Stahl, G. H. Smith, J. N. Van Boskirk and Geo. Edwards; Engineers: Acting-Second-Assistant, James Fagan; Acting-Third-Assistants, D. A. Lawrence and Geo. Taylor.

## STEAMER "SOUTH CAROLINA."

Acting-Masters, James H. Magune, E. M. Baldwin and F. F. Baury; Acting-Assistant Surgeon, Geo. A. Bright; Acting-Paymaster, A. S. Kenny; Ensign, J. C. Pegram; Acting-Ensigns, G. W. Bourne, C. F. Taylor and John Gunn; Acting-Master's Mates, E. Holbrook, A. S. Hitch and S. L. Withington; Engineers: Acting-First-Assistant, J. T. Hathaway; Acting-Second-Assistants, J. H. Rowe, Henry Gornley and F. W. H. Whittaker; Acting-Third-Assistant, Thomas Slater.

## STEAMER "OLEANDER."

Acting-Master, John S. Dennis; Acting-Ensigns, Jos. Frost and A. P. Bashford; Acting-Master's Mate, Wm. C. King; Acting-Engineers: Acting-Second-Assistant, Samuel Swartwout; Acting-Third-Assistants, R. B. Dick and H. S. Brown.

## BARK "ETHAN ALLEN."

Acting-Master, J. A. Pennell; Acting-Assistant Surgeon, H. W. Mitchell; Acting-Assistant Paymaster, W. R. Woodward; Acting-Ensigns, T. M. Peakes, J. H. Bunting, Jos. McCart and Wm. Mero; Acting-Master's Mates, E. T. Dexter, G. H. Redford and C. F. Adams.

## BARK "BRAZILIERA."

Acting-Master, Wm. T. Gillespie; Acting-Assistant Surgeon, Geo. B. Todd; Acting-Assistant Paymaster, C. H. Longstreet; Acting-Ensigns, J. H. Bennett and N. C. Borden; Acting-Master's Mates, J. B. F. Smith, W. N. Smith, Isaac Severns and F. H. W. Harrington.

## BARK "A. HOUGHTON."

Acting-Master, Newell Graham; Acting-Ensigns, E. B. Cox; Acting-Master's Mate, C. H. Nicholls.

## BARK "KINGFISHER."

Acting-Masters, J. C. Dutch and S. W. Rhoades; Acting-Assistant Surgeon, W. H. Westcott; Acting-Assistant Paymaster, N. W. Blakeman; Acting-Ensigns, T. E. Chapin and Wm. Nelson; Acting-Master's Mates, H. G. Seaman and Frank Jordan.

## BARK "FERNANDINA."

Acting-Masters, E. Moses and C. C. Childs; Acting-Assistant Surgeon, S. P. Boyer; Acting-Assistant Paymaster, T. N. Murray; Acting-Ensigns, Christopher Flood and W. H. Thomas; Acting-Master's Mates, Geo. Newlin and John Wright

## BARK "MIDNIGHT."

Acting-Masters, Wm. H. Garfield and Edwin Coffin; Acting-Assistant Surgeon, J. M. Garner; Acting-Assistant Paymaster, Franklin Miller; Acting-Ensigns, Z. L. Tanner and N. Pratt; Acting-Master's Mates, A. K. Noyes and S. H. Maunders.

## SCHOONER "HOPE."

Acting-Master, John E. Rockwell; Acting-Master's Mates, W. E. Gould, Elisha Hubbard and J. S.

## SCHOONER "DAN SMITH."

Acting-Master, B. C. Dean; Acting-Ensign, Paul Armandt; Acting-Master's Mates, J. C. Vandeventer and W. W. Hunt.

## ORDNANCE SLOOP "JOHN ADAMS."

Acting-Masters, A. S. Gardner and J. P. Carr; Acting-Assistant Surgeon, Israel Bushong; Acting-Assistant Paymaster, Tracy Coit; Acting-Ensign, John Blitz; Acting-Master's Mates, Charles Henley, Benjamin Lawton, Franklin James and C. E. Cool.

## BRIG "PERRY."

Acting-Master, S. B. Gregory; Acting-Assistant Paymaster, T. A. Emerson; Acting-Ensigns, W. C. Hanford, J. H. Clark and R. R. Donnell; Acting-Master's Mates, E. H. Sheer, T. H. McDonald and C. P. Bridges.

## STORE-SHIP "SUPPLY."

Acting-Masters, D. G. McRitchie, Z. Kempton and Norran H. Penfield; Acting-Assistant Surgeon, Reuben Smith; Acting-Assistant Paymaster, B. F. Munroe; Acting-Ensigns, F. M. Montell, J. W. Butler and F. H. Phipps; Acting-Master's Mates, J. W. Almy, W. S. Howland and J. S. Carpenter.

## SCHOONER "F. A. WARD."

Acting-Master, Wm. L. Babcock; Acting-Assistant Surgeon, J. A. Fife; Acting-Master's Mates, Alonzo Elwell, N. M. Baker, Jr., and G. A. Olnstead.

## SCHOONER "RACER."

Acting-Master, Alvin Phinney; Acting-Assistant Paymaster, Eugene Littell; Acting-Master's Mates, H. C. Whitmore, D. B. Corey and J. F. Kavanaugh.

## SCHOONER "C. P. WILLIAMS."

Acting-Master, S. N. Freeman; Acting-Ensigns, Jacob Cochran; Acting-Master's Mate, Lloyd E. Daggett.

## SCHOONER "GEORGE MANGHAM."

Acting-Master, John Collins; Acting-Assistant Surgeon, C. S. Eastwood; Acting-Assistant Paymaster, J. G. Holland; Acting-Ensigns, E. Gabrielson and F. Marshall; Acting-Master's Mates, Ezra C. Colvin and G. A. Johnson.

## STEAMER "GERANIUM."

Acting-Ensign, Geo. A. Winson; Acting-Master's Mates, J. B. Newcomb, David Lee and C. T. Remmonds; Engineers: Acting-Second-Assistant, J. H. Foster; Acting-Third-Assistants, S. W. Midlam, Chas. Henry and Wm. J. Carman.

## STEAMER "LARKSPUR."

Acting-Ensign, F. B. Davis; Acting-Master's Mates; John O'Conner, E. H. Frisbie and Jacob Kemp; Engineers: Acting-Third-Assistants, T. G. Farroat and J. T. Greenwood.

## STEAMER "DAFFODIL."

Acting-Ensign, F. W. Sanborn; Acting-Master's Mates, J. C. Wentworth, C. L. Weeden, T. E. Harvey and D. Lester; Engineers: Acting-Second-Assistant, T. W. Dee; Acting-Third-Assistants, Wm. Fisher and W. F. Henderson.

## STEAMER "JONQUIL."

Acting-Ensign, Israel T. Halstead; Acting-Master's Mates, J. G. Brown and George Bowers; Engineers: Acting-Second-Assistant, David Gayring; Acting-Third-Assistants; Jesse Wright and Wm. Leonard.

## STEAMER "CARNATION."

Acting-Ensign, Wm. Boyd; Acting-Master's Mates, A. Burnham and E. H. Frisbie; Engineers: Acting-Second-Assistant, T. S. Jennings; Acting-Third-Assistants, C. W. Pleisted and T. H. Fuleher.

## STEAMER "CLOVER."

Acting-Ensign, Chas. A. Blanchard; Acting-Master's Mate, F. S. Leach; Engineers: Acting-Second-Assistant, Geo. Divine; Acting-Third-Assistant, G. C. Brown.

## SCHOONER "NORFOLK PACKET."

Acting-Ensign, Geo. W. Wood; Acting-Assistant Paymaster, Andrew Tower; Acting-Master's Mates, J. Kingsley, Timothy Ryan and Geo. Delaps.

## STEAMER "DANDELION."

Acting-Master's Mates, J. B. Russell, Louis Boun and W. R. Lyons; Engineers: Acting-Second-Assistant, J. G. Rossman; Acting-Third-Assistants, John Mulready and John Grimes.

## SCHOONER "BLUNT."

Acting-Ensign, B. D. Reed; Acting-Master's Mates, C. W. Cleaves, W. R. Pease and W. Arkins.

## STEAMER "COLUMBINE."

Acting-Master's Mates, Wm. B. Spencer, James Martin and John Davis; Engineers: Acting-Third-Assistants, H. J. Johnson and Geo. H. Luther.

## STEAMER "RESCUE."

Acting-Master's Mate, A. G. Borden; Engineers: Acting-Third-Assistants, G. W. Howe and J. G. Dennett.

## OFFICERS NOT ASSIGNED TO VESSELS.

Commanders, J. W. A. Nicholson and N. B. Harrison; Lieutenant-Commander, Wm. B. Gamble.

## CHAPTER XLVIII.

### POTOMAC FLOTILLA. INCREASE OF THE NAVY, AND IMPROVEMENTS IN NAVAL SHIPS, DURING THE YEAR 1864.

**T**HE Potomac Flotilla during 1864 remained under the command of Commander Foxhall A. Parker, a valuable officer, who conducted the affairs of his little squadron with so much efficiency that he was enabled to carry out all the objects for which the flotilla was intended.

The work of this department of the Navy was not brilliant, but it was useful. Besides the duties involved in patrolling the Potomac, the Rappahannock River was added to Commander Parker's district.

There was at one time an extensive contraband trade between Virginia and the lower part of Maryland, by which the Confederates frequently received large amounts of supplies; and the blockade-runners (such as they were) were quite as indefatigable in their attempts to provision the Confederates in Virginia as the larger vessels running the blockade on the coast.

The small craft that were engaged in this traffic between Maryland and Virginia were well adapted for the business, and calculated to avoid detection. The traders themselves were reckless and unscrupulous men, not working with any patriotic feeling to serve the Confederate cause, but to enrich themselves by the large returns they received for the supplies so much needed by private and public parties.

No greater vigilance was exhibited anywhere than was shown by the officers and men of the Potomac flotilla; and what was done by the blockaders on the coast on a large scale was equally well done by the Potomac flotilla on a small one.

It was impossible to break up this blockade-running altogether, with such a long line of communication to be patrolled, and with so small a number of vessels and boats to do it. Opportunities could almost al-

ways be found to elude the blockade, and the temptations were so great that men fearlessly risked their lives to secure the large profits that awaited them in case of a successful run. They were aided by sympathetic friends on either side, who in most cases enabled them to evade detection when they were chased to the shore. Numbers of them were, however, captured while in transit, while many of their boats were ferreted out of their hiding-places, captured and destroyed. Most of this work had to be done at night, and throughout the war the most wearing vigilance was kept up by the different commanders and officers who had been employed in the Potomac flotilla.

Besides the watchfulness required in pursuit of the blockade-runners, the flotilla was at all times ready to give its active and willing co-operation to any military movement, and this assistance was frequently called for. While the Federal Army was in the vicinity of Fredericksburg, in the spring and summer, the services of the smaller steamers were constantly invoked. They opened communication between military forces, cleared large numbers of torpedoes from the river, made it safe for the transports to move with supplies or troops, drove the Confederate bushwhackers from the banks of the river, and returned with the sick and wounded from the field of battle.

The gun-boats that served upon this duty were of very light draft, purchased for this particular work, which will account for so many vessels of inferior character being in the Navy. Consequently, those who served on board of them in a hostile country were exposed to more than ordinary peril. It was wonderful to see these slightly-built vessels go into action against the Confederate batteries, which one would suppose

from their rapid firing would soon cut them to pieces; but the stern discipline existing and precise aiming of the somewhat heavy guns of these "pasteboard" craft would, nine times out of ten, carry the day.

In these operations Commander Parker made his mark, assisted mostly by gallant volunteer officers, who, towards the end of the war, became very expert in all that related to this kind of warfare. Had a larger field of operations offered to Commander Parker, he was just the man who would have done infinite credit to himself and have conferred honor upon the Navy. The trying work and perilous duties, with the effects of a malarial climate, caused him to contract disease, which brought him to a premature death not long after the close of the war. The Navy lost in him a brave and gallant officer, who had proved himself to be efficient in whatever

COMMANDER (AFTERWARDS COMMODORE) FOXHALL A. PARKER.

COMMANDING THE POTOMAC FLOTILLA.

position he was placed. There were many like him who succumbed to disease and exposure, who, but for the war, might be living to-day.

INCREASE OF THE NAVY AND IMPROVEMENTS  
IN NAVAL SHIPS UP TO DECEMBER, 1864.

As the war progressed, it became evident that the Federal Government should not only build vessels for blockading the Southern coast and patrolling the Western and Southern rivers, but for the protection of their own coast against a foreign foe, and for the capture of the Confederate cruisers which were then committing such havoc upon Federal commerce.

No one knew at what time the United States might be involved in war with Eng-

land or France, particularly the former country, which had afforded the South so much assistance in fitting out cruisers, that matters could not go on any longer without subjecting the Federal Government to the contempt of all civilized Powers. Although the Confederate Government only managed to procure vessels from England through shifts and stratagems, yet it was very evident that the British Government was not taking vigorous steps to put a stop to a practice in violation of its "Foreign Enlistment Act," and was oblivious to the fact that these cruisers were now and then destroying British goods in Federal vessels. They were willing to suffer the smaller evil that the greater good might accrue to English commerce, which it was hoped would, through the destruction of American shipping, have a monopoly all over the world. If British goods, properly documented, were not respected on board American vessels, the end would be the destruction of all American commerce—as was seen by the unhesitating manner in which Semmes directed every vessel he captured, and chose to consider subject to condemnation, to be consigned to the flames.

There is a certain amount of respect which every civilized nation demands for its commerce—that it shall only be captured by belligerents under certain laws laid down for the protection of neutrals, and the country having its commerce subjected to captures is in duty bound to see that the law is respected; while it is the duty of each belligerent to instruct its naval commanders accordingly. But the Confederate Government took no steps in this matter, leaving its agents to work out their ends, and "burn, sink and destroy" at their discretion. It seemed as if they did not consider themselves responsible for anything that might happen on the ocean. The Confederacy was incapable of negotiating with foreign Powers, who could not recognize its diplomatic agents without practically acknowledging the independence of the Confederate States; and this point should not only have warned neutral Powers against granting belligerent rights, but it should have emboldened them to resort first to emphatic remonstrances against the manner in which the captures of the Confederates were made, and then to sending out cruisers to enforce their demands, and thus put an end to the violation of their own laws.

The right to capture an enemy's commerce on the high seas is fully recognized by the law of nations; but that law should only apply to regularly recognized governments. The Confederacy was not and could not be held responsible for anything done by its cruisers, as was shown in the end by its collapse. The United States

alone could then be held responsible for what the Confederates had done against the commerce of any other government.

There was in the latter part of 1864 a growing feeling in the Federal States against the action of Great Britain, which, though the latter began to pay more attention to its neutral obligations (owing to the strong protests of Mr. Adams, Federal minister at the Court of St. James), still allowed these cruisers to escape to sea; and several iron-clad rams, built by John Laird & Co., were preparing for sea, at Liverpool. These rams would, no doubt, have escaped but for the earnest remonstrances of the American minister, who in the most emphatic manner declared to the British Government that, to permit these vessels to depart, would be considered an act of war. Under these circumstances Her Majesty's Government had no difficulty in finding reasons for seizing and detaining the rams, after a three months' controversy over the matter.

Among the most outspoken of the members of the Federal Cabinet in regard to the violation of neutrality by the British Government in permitting the Confederate cruisers to escape its vigilance, was Mr. Gideon Welles, the Secretary of the Navy. He had appealed to Congress time after time to appropriate money to enable the Navy Department to build a class of vessels that would make it possible for him to put a stop to the depredations of the Confederate commerce-destroyers, but Congress dealt out money in such insufficient amounts that Mr. Welles could not at once equip the class of vessels desired, not only to put a stop to the destruction of Federal commerce, but to show foreign Powers that, even with the great strain that was laid upon Federal resources, the United States could not only fit out cruisers against the "Alabamas," but could build such vessels as would do good service against foreign ships-of-war, in case the Federal Government was driven to resort to the last extremity to preserve its prestige and its honor.

Mr. Welles, in his annual reports, was unceasing in his denunciations of the remissness of the British Government and the depredations of the Confederate cruisers, whom in his loyal zeal he always maintained were pirates; and he showered invectives on the commanders of those vessels in language not altogether parliamentary, but which he honestly believed to be the truth.

The Secretary had, no doubt, made efforts, with the intelligent aid of his assistant, Mr. Fox, to fit out sea vessels of a character that could pursue these cruisers with effect; but, unfortunately, there were obstacles in the way which for a time impeded the pro-

gress of his plans. In the first place, Mr. Welles attached too much importance to the blockade of the Southern ports and listened too much to the clamors of commanders of squadrons for more vessels on their stations; for inferior-built steamers could have performed that duty as well as the sea-going corvettes. Then, his plans were interfered with by Commodore Wilkes, who not only had a squadron of twelve vessels with which he patrolled the Gulf and West Indies, but also seized upon the fastest cruisers the Secretary of the Navy had sent on special duty to go in pursuit of the Confederates, and detained the vessels belonging to the neighboring stations and attached them to his squadron. In one instance, at least, there was a chance of capturing the "Alabama," which had touched at all the ports where her pursuer followed her, but the latter was just a month too late. Though the Navy Department may have been at fault in its judgment in not sending fast vessels to the channels of trade in the first instance, it more than made up for it by putting its whole energies to work to place the Navy in a condition to meet any emergency that might offer, even at the end of the war.

The Department, as well as the Administration, had been very much abused for the depredations of the Confederate cruisers, especially by those who were sufferers, and the opposition party were glad of the opportunity to berate the Government for its want of forethought in not anticipating the evils that were falling upon the Federal commerce. For the first time Congress began to be aroused to a sense of the danger that threatened the country, not only by the complete destruction of the foreign trade, but also the danger of being driven into a foreign war to preserve the Federal honor, if not its nationality. Under the plea of providing against the commerce-destroyers of the Confederacy, large strides were made in building up the Navy; which it will be seen in the end was the wisest policy to pursue, as it taught those Powers that were forgetting their neutral obligations that the policy they had hitherto pursued would no more be tolerated, and showed them that the longer the war lasted the stronger the Federal Government would grow, no matter what might be the drafts upon its treasury.

For attacks on forts and for river work the Federal Government had by 1863 a sufficient number of vessels to close the Confederate ports; and it was determined to build a number of large vessels that would be superior to any ships of their class abroad, not only in the power of their guns but in their speed.

At that moment the exigencies of the

times had stimulated the inventive faculties of American ship and engine builders to make vast improvements in vessels-of-war—in machinery, in naval ordnance and in projectiles. At the commencement of the war, the Federals may be said to have been in their infancy in such matters, and had to make great exertions to catch up with the powers of Europe; but by the end of 1864 they were quite in a condition to vindicate their rights and rebuke Great Britain and France for the unfair advantage they had taken in their hour of distress. Besides a number of single-turreted Monitors (the names of which have often appeared in these pages), there were built seven or eight double-turreted Monitors of the "Monadnock" class, which alone were quite capable of guarding the coast against the heaviest ships in the French or English navies.

Seven vessels were building at the Navy Yards, in which, to gain great speed, some of the armament had to be sacrificed. This class of vessels was represented by the "Ammonoosuc" and the "Chattanooga." There were also in process of construction twenty heavily armed vessels. Ten of these, of the "Guerriere" class, were to have covered decks, and to carry twenty heavy guns; two were to be protected against the effect of shells. The remaining ten built at the Navy Yards were of somewhat less size, but to be of great speed; and as nearly all of these were of full-sail power, they were expected to maintain their positions at sea for at least three months, and to be used on the most distant stations.

Among the wonders of the age at that time were built a set of vessels called the "Miantonomoh" class—a wooden vessel designed by the naval constructors, and built at the Navy Yards with Ericsson turrets, the machinery designed by Engineer-in-chief B. F. Isherwood, chief of the Bureau of Steam Engineering; with a high rate of speed, perfect ventilation, impregnable, and with the enormous battery of four 15-inch guns, all combined in a vessel of the moderate rate of 1,560 tons, drawing only 12 feet of water. Others of the same type, with increased tonnage and of still higher speed, were also in the course of construction, and the Federal Government had, apparently, realized at last the importance of having a powerful Navy, by which alone it could maintain its position among the nations of the earth.

Mr. Seward's earnest letters and Mr. Adams' strong protests may have had some influence upon the British Government in deciding them to carry out the terms of their "Foreign Enlistment Act," but there was a stronger argument in the heavy ships and guns that the Federals were building so rapidly; and this will ever be the case

as long as we maintain a properly equipped naval force to prevent any interference in our affairs by foreign Powers, and to enable us to assert ourselves whenever occasion may require.

The following table will explain all that the Navy Department had done from the outbreak of the war, and the exhibit shows that a great amount of zeal, intelligence and practical ability was manifested by those who were engaged in building up the Navy. It will be seen in the end that it did more to establish the standing of the United States abroad than even the advance of the Federal armies; and, among other things, it completely stopped all attempts of the Confederates to fit out cruisers in neutral ports.

It was at this crisis that Mr. Fox, Assistant Secretary of the Navy, did so much by his influence and his progressive mind, in Congress and in the Department, in furthering all the plans brought to the Secretary's notice; and it is only fair to say that, without his assistance and the ability he displayed in all professional matters, the Navy Department would not have reached the point of efficiency which at that time existed. This was appreciated by officers throughout the service; and it is evident, from the latitude given Mr. Fox by the Secretary of the Navy, that the latter leaned upon him as his ablest adviser.

#### REPORT OF THE SECRETARY OF THE NAVY.

A tabular statement is appended of the number of naval vessels, of every class, that had been constructed, or were in the course of construction, since March 4, 1861:

#### GENERAL EXHIBIT OF THE NAVY, INCLUDING VESSELS UNDER CONSTRUCTION, DEC., 1864.

No. of vessels.	Description.	No. of guns.	No. of tons.
113	Screw steamers especially constructed for naval purposes	1,426	169,231
52	Paddle-wheel steamers especially constructed for naval purposes.	524	51,878
71	Iron-clad vessels.	275	80,596
149	Screw-steamers purchased, captured, &c., fitted for naval purposes	614	60,380
174	Paddle-wheel steamers purchased, captured, &c., fitted for naval purposes.	921	78,762
112	Sailing vessels of all classes.	850	69,549
671	Total	4,610	510,396

#### COMPARATIVE STATEMENT OF THE NAVY, DECEMBER, 1863 AND 1864.

No. of vessels.	Description.	No. of guns.	No. of tons.
671	Total navy, December, 1864.	4,610	510,396
588	Total navy, December, 1863.	4,443	467,967
83	Actual increase for the year	167	42,429
26	Total losses by shipwreck, in battle, capture, &c., during the year.	146	13,084
109	Actual addition to the navy from December, 1863, to December, 1864	313	55,513

VESSELS CONSTRUCTED FOR THE NAVY SINCE MARCH 4, 1861.

No.	Description.	Guns.	Ton'age
7	Screw sloops, "Ammonoosuc" class, 17 to 19 guns, 3,213 to 3,713 tons each.....	121	23,537
1	Screw sloop "Idaho," 8 guns, 2,638 tons.....	8	2,638
8	Screw sloops, spar deck, "Java" class, 26 guns and 3,177 tons each.....	200	25,416
2	Screw sloops, spardeck, "Hassalo" class, 25 guns and 3,366 tons each.....	50	6,730
10	Screw sloops, clippers, single deck, "Contocook" class, 13 guns and 2,348 tons each.....	130	23,480
4	Screw sloops, "Kearsargs" class, 8 to 12 guns, and averaging 1,023 tons each.....	40	4,092
6	Screw sloops, "Sheuandoah" class, 8 to 16 guns and 1,367 to 1,633 tons each.....	74	8,584
2	Screw sloops, "Ossipee" class, 10 to 13 guns and 1,240 tons each.....	23	2,480
8	Screw sloops, "Serapis" class, 12 guns and 1,380 tons each.....	95	11,040
4	Screw sloops, "Resaca" class, 8 guns and 831 to 900 tons each.....	32	3,462
8	Screw sloops, "Nipsic" class, 7 to 12 guns and 593 tons each.....	71	4,744
23	Screw gun-boats, "Unadilla" class, 4 to 7 guns and 507 tons each.....	123	11,651
9	Screw tugs, "Pinta" class, 2 guns and 350 tons each.....	18	3,150
2	Screw tugs, "Pilgrim" class, 2 guns and 170 tons each.....	4	340
13	Paddle-wheel steamers, double-enders, "Octorara" class, 7 to 11 guns and 730 to 956 tons each.....	98	11,024
26	Paddle-wheel steamers, double-enders, "Sasacus" class, 10 to 14 guns and 974 tons each.....	272	25,324
7	Paddle-wheel steamers, of iron, double-enders, "Mohongo" class, 10 guns and 1,030 tons each.....	70	7,210
1	Paddle-wheel steamer, of iron, double-ender, "Wateree," 12 guns and 974 tons.....	12	974
141		1,142	175,985

IRON-CLAD VESSELS.

No.	Description.	Guns.	Ton'age
2	Sea-going casemated vessels, "Dunderberg" and "New Ironsides".....	28	8,576
3	Sea-going turret vessels, "Puritan," "Dictator," and "Roanoke".....	12	9,733
4	Double turret vessels, "Kalamazoo" class, 4 guns and 3,200 tons each.....	16	12,800
4	Double turret vessels, "Monadnock" class, 4 guns and 1,564 tons each.....	16	6,256
1	Double turret vessel, "Onondaga," 4 guns and 1,250 tons.....	4	1,250
4	Double turret vessels, "Winnehago" class, 4 guns and 970 tons each.....	16	3,880
8	Single turret vessels, "Canonicus" class, 2 guns and 1,034 tons each.....	16	8,272
9	Single turret vessels, "Passaic" class, 2 to 4 guns and 844 tons each.....	21	7,595
20	Single turret vessels, "Yazoo" class, 1 to 2 guns and 614 tons each.....	35	12,280
2	Single turret vessels, "Sandusky" and "Marietta," 2 guns each.....	4	953
3	Single turret vessels, "Ozark," "Neosho," and "Osage," 2 to 7 guns each.....	13	1,624
2	Casemated vessels, "Tuscumbia" and "Chillicothe," 6 and 3 guns respectively.....	8	768
62		189	73,988
203	Total.....	1,631	249,974

The foregoing tabular statement exhibits the number and description of vessels that had been constructed, or put in the course of construction, for the Navy after the institution of active measures for the suppression of the rebellion. Some of them were built by contract; others by the Government, in the several Navy Yards. If we add to the number those constructed under similar circumstances, and within the same period, that had been lost by shipwreck, in battle, etc., viz.: the sloops "Housatonic" and "Adirondack," and the iron-clad "Monitor," "Weehawken," "Keokuk," "Indianola" and "Tecumseh," the aggregate would be 210 vessels, 1,675 guns and 256,755 tons. Picket-boats, and small craft built for especial purposes, are not embraced in this statement.

POTOMAC FLOTILLA, JANUARY 1, 1864.

COMMANDER FOXHALL A. PARKER.

STEAMER "ELLA."

Acting-Master, J. H. Eldredge; Paymaster, J. N. Carpenter; Acting-Ensign, E. A. Roderick; Acting-Master's Mates, W. H. Flood, H. C. Eldredge and W. L. C.—LOSSES AND FRUITS OF VICTORY.—THE FAMOUS POWDER-BOAT.—DESCRIPTION OF FORTS AND BATTERIES.—THE FLEET RIDES OUT A TERRIFIC GALE.—GENERAL BUTLER'S POWDER-BOAT EXPLODED.—GREAT LOSS OF POWDER, BUT NO DAMAGE DONE TO FORT FISHER.—FIRST ATTACK ON FORT FISHER BY THE FLEET.—BATTERIES SILENCED.—LANDING OF THE ARMY.—GENERAL ORDERS.—CORRESPONDENCE BETWEEN ADMIRAL PORTER AND GENERAL BUTLER.—GENERAL BUTLER ABANDONS THE ATTEMPT TO CAPTURE FORT FISHER.—GENERAL BUTLER SUCCEEDED BY GENERAL TERRY.—CRITICISMS.—CAPTURE OF FLAG-POND BATTERY.—LIST OF VESSELS THAT PARTICIPATED IN FIRST ATTACK ON FORT FISHER.—LETTERS IN REGARD TO THE UNNECESSARY DELAY OF THE EXPEDITION.—LETTERS AND TELEGRAMS FROM SECRETARY WELLES.—REPORTS OF OFFICERS.

**I**N a communication dated September 5, 1864, Mr. Secretary Welles states that, since the Winter of 1862, he had tried to obtain the co-operation of the War Department in a joint Army and Navy attack on the defences at the entrance of Cape Fear River, N. C.

It seems the Secretary of War had decided that no troops could be spared for this purpose, and, in consequence, from small and unimportant works the huge fortification known as Fort Fisher had gradually arisen. These works bade defiance to any ordinary naval force, unsupported by troops, so that what in the first instance might have been prevented by the persistent attacks of a dozen gun-boats, grew to a series of works so formidable that it was evidently a matter of difficulty to effect their reduction—that is, if the Confederates should make a vigorous defence.

Early in the contest a squadron of light-draft gun-boats could have made their way past the small batteries and taken posses-

sion of Cape Fear River, closing that channel of blockade-runners, and paving the way for the troops to hold the point on which Fort Fisher was finally built. But this was not attempted until the fortifications were so far advanced as to become the most formidable series of works in the Confederacy.

At the entrance of Cape Fear River, the principal operations of the blockade-runners were carried on, supplying the Confederate armies with clothing, arms and munitions of war to the amount of sixty or seventy millions of dollars.

The Federal Navy Department finally became aware that, unless these supplies were cut off from the Confederate armies, the war was likely to be greatly prolonged. The blockade-runners were very fast steamers, well-manned, and with experienced pilots, and so regular were their trips to Wilmington, that their arrival was counted on almost as confidently as if they had been mail-steamers. Of course, many of them

fell into the hands of the blockaders, or were run upon the beach to escape capture. In the latter case, if protected by artillery on shore, the blockade-runners would land the most valuable portion of their cargoes and set fire to their vessels.

In September, 1864, Mr. Welles made another application for troops to co-operate with the Navy in an attack on the defences of Cape Fear River, and, being encouraged by General Grant to expect assistance, the Navy Department began to assemble at Hampton Roads a proper force of vessels for the occasion. The command of the squadron was tendered to Rear-Admiral Farragut, and on the 5th of September, 1864, Mr. Secretary Welles, in a letter to that officer, says:

"Lieutenant-General Grant has recently given the subject his attention, and thinks an army force can be spared and moved by the first day of October. Upon consultation, he is of the opinion that the best results will follow the landing of a large force under the guns of the Navy on the open beach north of New Inlet, to take possession and trench across to Cape Fear River, the Navy to open such fire as is possible on the works on Federal Point in conjunction with the army, and at the same time such force as can run the batteries to do so, and thus isolate the rebels.

"You are selected to command the naval force, and you will endeavor to be at Port Royal by the latter part of September, where further orders will await you. Bring with you to the rendezvous at Port Royal all such vessels and officers as can be spared from the West Blockading Squadron without impeding its efficiency; and when you leave, turn over the command of the squadron to the officer next in rank to yourself until the pleasure of the Department is known."

Owing to failing health, Admiral Farragut declined accepting this command, and on the 22d of September the Secretary of the Navy wrote to Rear-Admiral Porter as follows:

"SIR—Rear-Admiral D. G. Farragut was assigned to the command of the North Atlantic squadron on the 5th instant; but the necessity of rest on the part of that distinguished officer renders it necessary that he should come immediately North. You will therefore, on the receipt of this order, consider yourself detached from the command of the Mississippi squadron, and you will turn over the command, temporarily, to Captain A. M. Pennock. As soon as the transfer can be made, proceed to Beaufort, N. C., and relieve Acting-Rear-Admiral S. P. Lee, in command of the North Atlantic Blockading Squadron. Take with you your personal staff, and a number of officers, not exceeding five, may be transferred from the Mississippi to the North Atlantic squadron."

Under the above orders, Rear-Admiral Porter assumed command of the North Atlantic squadron, and visited City Point, Va., in company with Mr. Fox, Assistant-Secretary of the Navy, to confer with General Grant in regard to the necessary contingent of troops required to co-operate with the Navy in the reduction of Fort Fisher.

Admiral Porter had asked for but eight thousand troops, and a sufficient number of

vessels to fire one hundred and fifty guns in broadside. As Fort Fisher had seventy-five heavy guns mounted, the above would only be two guns afloat to one on shore, a small proportion considering that most of the naval force would be wooden ships, against heavy earth-works, protected by solid traverses. The wishes of the Secretary of the Navy were made known to General Grant, and he at once decided to send the requisite number of troops to co-operate with the Navy as soon as the ships could be prepared.

The next thing was to select a General to command, who would act in harmony with the Navy. There were plenty of able commanders, but the trouble was whom could General Grant best spare. Admiral Porter merely suggested one thing—namely, that General Butler should not go in command. North Carolina was in the district over which Butler held control, and the Admiral did not know but that the General would claim the right to go in command of troops operating in that district. It was at length decided that General Weitzel should have command of the military part of the expedition.

By the 15th of October, 1864, the ships-of-war of the fleet destined to attack Fort Fisher were assembled at Hampton Roads, to the number of about one hundred. Many of them were from other squadrons which had been depleted for the occasion. There was a great variety of vessels, as every class in the Navy was represented, from the lofty frigate down to the fragile steamer taken from the merchant service; but all mounted good guns.

Admiral Porter had quite a task before him to organize this large force and make it fit for combined service, for it was not in good condition for battle such as the occasion demanded. A regular system of drilling was at once commenced with sails, masts, yards and guns, particularly the latter, and a large portion of the time was spent in target practice. Immense quantities of shells were fired away, for the commanding officers of the ships were given *carte blanche* in this respect, the Admiral believing that it would be an ultimate saving in time of battle.

The fleet was now formed into three divisions. There were five Commodores in the fleet—Thatcher, Lanman, Godon, Schenck and Radford. The latter officer had immediate command of the iron-clads. From all these officers Rear Admiral Porter received hearty support, although, owing to the fortunes of war, he had been advanced over their heads, and naturally expected to find some little feeling in regard to it; but there was none whatever. They met the Admiral in the most cordial manner and

ever gave him their heartiest support. This was, it is true, the proper course, for success has always in time of war been recognized in all services by promotion. Several of these gentlemen were officers of great ability, and it may be wondered why they were not employed in command of independent squadrons. The wonder will be less when we consider how little was known by the Navy Department of the character and qualifications of officers. With the exception of Assistant-Secretary Fox, there seemed to be nobody at headquarters who had much comprehension of the matter, and we had so few squadrons that it was difficult to find separate commands for all who deserved them.

The Navy Department, through Assistant-Secretary Fox, showed great energy in assembling the vessels of the fleet at Hampton Roads, and they never denied Admiral Porter anything he asked for.

As soon as the fleet was fairly organized, Admiral Porter made an effort to close up the port of Wilmington, N. C., so that supplies could not get in, or cotton get out. This was a most difficult thing to do, and his predecessor, Acting-Rear-Admiral Lee, with one of the largest squadrons afloat, had never succeeded in the attempt. His officers, it is true, captured a large number of vessels, but where one was captured or destroyed two new ones were built on an improved plan.

Towards the last the English commenced building these vessels of steel—long, narrow and shallow—which were capable of great speed, and could cross the bar of Cape Fear River at all times day or night, for at night range-lights were kept burning. Once under the guns of Fort Fisher they were safe. The gun-boats generally drew too much water to follow the blockade-runners over the bar, where the depth never exceeded ten feet.

The conduct of the blockading officers was sometimes severely criticised by the Northern newspapers, who, although they had positive evidence of their watchfulness in the shape of numerous fine prize steamers, loaded with cotton, coming into Northern ports, were not satisfied unless every bottle of brandy and bunch of cigars sent to the Confederates were captured to fill the pockets of Northern prize-agents. The people at home had little idea of the arduous service performed by the blockading vessels, whose officers and men had, at the peril of their lives, to hold on to Wilmington bar at all seasons, in the endeavor to prevent the entrance and exit of blockade-runners.

The advantage was all on the side of the latter. They could choose their own time. Painted a light, neutral tint, they fearlessly approached the bar, the range lights

guiding them by night as well as if it were daylight, and a vessel within a short distance could only surmise their presence by a faint streak of light made by their wake. If the gun-boats fired, they were liable to hit each other; if they made the flash-signal agreed upon between them, the blockade-runner would make a similar one, and in the confusion, the latter, going at the rate of fifteen miles an hour, would soon pass out of sight. If the Federal vessels laid close in to the bar, they ran a risk of being carried into the breakers by the current, in which case their destruction was certain. The display of a twinkling light on board one of the gun-boats, near the bar, was the signal for a general discharge from the guns of Fort Fisher, and, although these shots were more noisy than damaging, yet a stray shell striking one of the Federal boats would have knocked it to pieces.

Sometimes the Federal vessels would discern "black smoke" in the distance; then all was bustle and excitement. Chase would be given, and a "long, low two-pipe" steamer would show herself standing in for the bar. With the slow vessels, there was often not much chance of catching one of these swift blockade-runners, but they were sometimes intercepted and driven back to Nassau or Bermuda to make a fresh attempt. Eight times in ten they succeeded in eluding the closest blockade of a coast ever maintained. The profits of a successful voyage were so great, that the English adventurers, provided with good pilots, readily took the risks, which were nothing compared with those run by the blockading vessels. If one vessel in three succeeded in running into port, it remunerated the owners largely. They were paid for their ventures in Confederate cotton at eight cents a pound, worth at that time eighty cents in England and one dollar in the North. At first the blockade-runners were insured in England against capture, so many successful voyages were made, but towards the last the insurers charged very high premiums. Admiral Lee's squadron captured or destroyed a large number of blockade-running steamers, perhaps to the value of ten millions of dollars. The shores of North Carolina were strewn with the wrecks of these vessels, which were generally run aground and set on fire to prevent the Federal Navy from deriving any benefit from their capture.

We do not know what were Admiral Lee's particular plans in regard to the blockade-runners, but it was determined, while the fleet was waiting for the Army to get ready, that a new system should be adopted to take the contraband traders by surprise. A chart was furnished to every

vessel on the blockade of Cape Fear River, upon which was described two half-circles close to the two bars at the entrance of that stream. Here were stationed twenty vessels, ranged in a half-circle, ten off each bar. At the termination of Frying-Pan Shoals was described another half-circle of about twelve miles' radius. On this circle was stationed, five miles apart, some twenty of the fastest vessels, which could communicate with each other by signal all the way round. One hundred and thirty miles from land was the third line, on which the vessels were about eight miles apart, the half-circle ending at Beaufort, N. C., on one side, and closing in on the south entrance to Cape Fear River. If a blockade-runner came out of Wilmington before daylight, she would be seen by vessels on the middle circle; and, if she escaped those, she would be chased by the vessels on the outer circle. If she started at midnight, she would be seen at midday by the vessels of the outer circle. Should a vessel approach the outer circle in order to run into Wilmington just before daylight, the outer circle would chase her off; or, if she eluded the outer circle after dark, she would be picked up by the middle circle; and instances were rare of vessels attempting to run this stringent blockade that were not captured or driven off.

The number of English steamers sent into Hampton Roads was surprising. They came in on an average of nearly one each day, and the commodores commanding divisions—who shared in these prizes—were well pleased to see them coming into port. The blockade-runners themselves were quite astonished and crowded into Nassau to concoct new plans to circumvent the Federal cruisers; but from that time the business grew more and more unprofitable, for in thirty-seven days some six million of dollars worth of property was captured or destroyed.

While General Sherman was marching through the South, he used up everything in the shape of provisions for the support of an army, and the enemy at Richmond depended in a great measure on what supplies they could get from Nassau for the maintenance of 300,000 men. By an order of the Confederate Government, one-third of the space in every vessel running the blockade was devoted to carrying provisions and stores for the Army. Had this stringent blockade been kept up for three months, the port of Wilmington would have been deserted; but this was hardly possible, for the United States Government would have been obliged soon to withdraw a large portion of the blockading vessels for service elsewhere, and the old system would likely have been resumed.

While these operations were in progress, Admiral Porter was engaged in perfecting the organization of his fleet, and his only objection to the delay was the fact that the winter was rapidly approaching, the season when storms are very severe on the coast of North Carolina. However, the delay gave Admiral Porter an opportunity to become acquainted with his officers, so that when the time came he knew where to place them. The plan of attack had been lithographed on a large scale, and each vessel assigned the position it would occupy in action. Every commanding officer had a copy of this chart, and all that was wanting now were the troops to co-operate with the Navy.

In the meantime the naval forces were not idle. One of the best executed feats of the war was the destruction of the Confederate ram "Albemarle," at Plymouth, N. C. This was most important; for, as has been already related, when the ram sunk the "Southfield" and drove off the "Miami," she attacked the flotilla under Captain Melancton Smith, and after a hard fight slipped off in the darkness and returned to Plymouth. Here she was fastened to a wharf to undergo necessary repairs after the terrible hammering received from the flotilla, and it was evident that her commanding officer did not care to make another attack until his vessel was strengthened in those parts which had been shown to be the weakest.

The engagement was criticised somewhat at the time, but it must be remembered that the vessels of the flotilla were unarmored, and that they fought gallantly against a vessel completely encased in iron; that the misfortune which happened to the "Sassacus" might have happened to one or two more, in which case not only the injured vessels, but all the others in the sounds of North Carolina, would have been at the mercy of the enemy. These considerations made it important for Captain Smith to avoid risking a defeat, and that he was successful in getting rid of the ram, and depriving her for the time being of power to do further mischief, is proof that he was master of the situation. This was the view taken of the affair by the Navy Department, as is shown by the following complimentary letter:

NAVY DEPARTMENT, }  
May 25, 1864. }

SIR—I have had great satisfaction in receiving and perusing your report, as the senior officer of the several vessels that were engaged with the rebel ram "Albemarle" and her tender on the 5th instant, in Albemarle Sound.

The Department congratulates all the officers and men of the United States Navy who participated in this remarkable contest between wooden gun-boats and a formidable armored vessel, in which the latter was forced to retreat to prevent

capture, and it particularly thanks you for the vigilant and gallant use made of the means placed at your command to thwart the designs of the rebels to regain control of the Sounds of North Carolina.

GIDEON WELLES,  
*Secretary of the Navy.*

CAPTAIN MELANCTON SMITH, U. S. N.,  
*Senior Officer commanding Sounds of North Carolina.*

Notwithstanding the satisfaction expressed at the gallant conduct of Captain Smith, the Department was greatly troubled over the fact that the "Albemarle" still existed, and might sally out from Plymouth as soon as the necessary repairs were made, and drive the Federal gun-boats from the Sounds. The Department considered that they had no vessels at their disposal fit to cope with the ram; but the attack of the "Sassacus" should have showed them that four or five double-enders, each fitted with a heavy iron shield to the stem, would have been all-sufficient to crush the ram by a simultaneous attack. The experience of the Confederate commander had assured him of this fact, which was probably the chief reason why he did not again venture out.

Under these circumstances, Lieutenant W. B. Cushing was offered a further opportunity to distinguish himself—an offer he at once accepted. He was sent to New York, to superintend the fitting out of three torpedo steam-launches, arranged according to the plans of Chief Engineer W. W. Wood and Assistant-Engineer G. W. Lay, which proved to be all that were claimed for them. About the middle of October, 1864, the launches were ready, and Cushing got away with them from the New York Navy Yard.

Cushing was not so well adapted for the command of a flotilla, even of steam-launches, as he was of a single vessel. One of his torpedo-launches sank soon after he started, and another was run ashore and surrendered to the Confederates in Chesapeake Bay, while Cushing, steaming through a rough sea, safely reached Hampton Roads, and reported to Rear-Admiral Porter, then on board his flag-ship, the "Malvern."

Lieutenant Cushing's condition at this time was pitiable. He had been subjected to terrible exposure for more than a week, had lost all his clothing except what he had on, and his attenuated face and sunken eyes bore witness to the privations he had undergone. Himself and crew had existed on spoiled ship's biscuits and water, with an occasional potato cooked before the boiler fire. Admiral Porter at once ordered Cushing to get some necessary rest and not to come near him until sent for; and in the meantime his torpedo-launch, which had been somewhat shattered and disarranged,

instructed to proceed at once to blow up the "Albemarle." Commander W. H. Maccomb, commanding in the Sounds of North Carolina, was ordered to give him all the assistance in his power, and, in case Cushing was successful, to attack and recover the town and defences of Plymouth.

On the very morning appointed for Cushing to set out, an order came from the Navy Department directing Admiral Porter to investigate some charges preferred by Mr. Secretary Seward against Cushing for violating certain neutral rights while in command of a vessel on the Southern coast.

Here was a dilemma; but the Admiral, after a brief investigation, decided that Cushing was free from blame, and the brave fellow, who dreaded a court-martial far more than he did the enemy, went

LIEUTENANT (AFTERWARDS COMMANDER) WM. B. CUSHING.

on his way rejoicing, passed through the Dismal Swamp Canal, and on the 27th of October reported to Commander Maccomb.

That night Cushing proceeded up the river in the steam torpedo-launch with thirteen officers and men, mostly those who had volunteered from Commander Maccomb's flotilla for the service. The distance from the mouth of the river to where the ram lay was about eight miles, and the stream, of an average width of two hundred yards, was lined with the enemy's pickets. The wreck of the U. S. S. "Southfield" lay a mile below the town, surrounded by some schooners, and it was understood that a gun was mounted here to command the bend in the river. In consequence of this report, an armed boat from the U. S. S. "Shamrock" was taken in tow, with orders

case the expedition was hailed by the enemy.

When the steam-launch and her tow neared the wreck of the "Southfield," there were anxious feelings on the part of the brave fellows whose lives it was thought by many would all be sacrificed on this hazardous expedition; but no one faltered, and Cushing's keen eye looked into the darkness intent only on the "Albemarle." The "Southfield" was passed by the party unobserved by the enemy, and the pickets along the river banks, depending on those at the outpost to give the alarm, were not on the alert. This was a fortunate circumstance for Cushing and his comrades, for he was thus enabled to approach unmolested within a few yards of the "Albemarle."

The look-out on board the iron-clad finally hailed, when Cushing, casting off the cutter, ordered her to proceed back to the wreck of the "Southfield" and capture the picket guard. Cushing then dashed ahead under full steam for the "Albemarle," which was secured to the wharf within a pen of logs extending about thirty feet from the vessel. A fire on shore lighted up the surroundings and Cushing's quick eye at once took in the situation. He dashed at the logs, which the steam-launch shoved aside, and struck the "Albemarle" bows on.

In the meantime the enemy had become thoroughly aroused, and the men on board the ram rushed to their quarters and opened a severe fire on the assaulting party; but they were swept away by a discharge of canister from the 12-pound howitzer mounted in the torpedo-boat's bow. A gun loaded with grape was also fired at the launch, but the fire from the howitzer disconcerted the gunner's aim and the shots were harmless. While all this firing was going on, the torpedo boom was deliberately lowered, and by a vigorous thrust Cushing drove the torpedo under the ram's overhang and exploded it. There was a tremendous crash and a great upward rush of water which filled the steam-launch. The pumps of the "Albemarle" were manned, and her commanding officer, Lieutenant Warley, encouraged his crew to try and keep the vessel free, but the water gained so rapidly through the great aperture made by the explosion that the "Albemarle" soon went to the bottom, her smoke-stack only showing the place where she had last floated. As the enemy had none of the necessary appliances at hand for raising the iron-clad, they made vigorous efforts to still further disable her, anticipating that the Federal gun-boats would soon be on the spot to try and secure the sunken vessel.

The "Albemarle," although apparently taken by surprise, had been quite prepared for the emergency. There were two field-

pieces on her deck loaded with grape, and manned by a company of artillery ready to fire at a moment's notice. That a good watch was kept on board is proven by the quickness with which the crew got to quarters, and opened fire on the torpedo-boat. It was fortunate for Cushing that he succeeded in passing the pickets along the river undisturbed, otherwise the sailors on board the "Albemarle" and the troops on shore might have given him such a warm reception as would have prevented the carrying out of his design. But Cushing seemed ever to be the child of fortune and his good luck followed him to the close of the war.

But to return to the torpedo-boat: when the fire was opened on her by the enemy, Paymaster Swann was wounded at Cushing's side, and how many others had been injured he did not know. It seemed as if a shower of grape-shot had struck the boat, but in the confusion the aim was misdirected and the grape did little injury. The torpedo, exploding directly afterwards, filled the launch with water, when, seeing that she would be captured, Cushing and others jumped into the river and swam down stream under a shower of musketry, which, however, failed to do any harm.

As soon as the Confederates saw the torpedo-launch filled with water and floating away, they sent boats to take possession of her, and captured most of her crew. Some of the latter were drowned in their efforts to reach the opposite shore; and, so far as Cushing knew at the time, only one escaped besides himself, and he in a different direction. As he swam down the stream he met Acting-Master's Mate Woodman struggling in the water, almost exhausted, and endeavored to assist him to the shore; but the attempt was a failure, and Mr. Woodman was drowned. Cushing himself could barely crawl out of the water when he succeeded in reaching the bank, half a mile below the town. He dragged himself into a swamp, and, while lying concealed a few feet from the path along the river, two of the "Albemarle's" officers passed, and from their conversation Cushing learned for the first time that the iron-clad was at the bottom of the river.

As soon as his strength would allow, Cushing plunged into the dense swamp, where he would not likely be followed, and after incredible difficulty in forcing his way through the mud and slime, he reached a point well below the town; and met a negro, whom he sent into Plymouth to find out the particulars of the sinking of the ram. The negro soon returned with assurances that the "Albemarle" was actually sunk. Thus cheered, Cushing pursued his tedious journey through the swamps, till, coming suddenly

on a creek, he found one of the enemy's picket-boats, of which he took possession, and pulled away with all his remaining strength, not knowing at what moment he might get a bullet through his brain. By 11 o'clock the following night he reached the gun-boat "Valley City," and was taken on board and cared for, after one of the most perilous adventures on record.

The blowing-up of the "Albemarle" was a very gallant achievement. It was done in the face of almost insurmountable obstacles, for, as we have shown, the enemy had taken every precaution against just such an attempt as was made. Here was a chance, and Cushing seized it. He would undoubtedly have made the attempt if he had had to run the gauntlet of the picket-firing all the way to Plymouth.

Cushing himself did not know when he arrived on board the "Valley City" who had been captured and who had escaped; but the following list from a report he subsequently prepared gives the names of the gallant fellows who risked their lives to dispose of an iron-clad that threatened the destruction of all the vessels in the Sounds of North Carolina:

"William B. Cushing, Lieutenant, commanding expedition, escaped; William L. Howarth, Acting-Master's Mate, picket-boat, missing; William Stotesbury, Acting-Third-Assistant Engineer, picket-boat, missing; John Woodman, Acting-Master's Mate, U. S. S. 'Commodore Hull,' drowned; Thomas S. Gay, Acting Master's Mate, U. S. S. 'Otsego,' missing; Charles S. Heener, Acting-Third-Assistant Engineer, U. S. S. 'Otsego,' missing; Francis H. Swan, Acting-Assistant Paymaster, U. S. S. 'Otsego,' missing; Edward T. Horton, ordinary seaman, U. S. S. 'Chicopee,' escaped; Bernard Harley, ordinary seaman, U. S. S. 'Chicopee,' missing; William Smith, ordinary seaman, U. S. S. 'Chicopee,' missing; Richard Hamilton, coalheaver, U. S. S. 'Shamrock,' missing; R. H. Kiug, landsman, picket boat, missing; ——— Wilkes, landsman, picket-boat, missing; ——— Demming, landsman, picket-boat, missing; Samuel Higgins, first-class fireman, picket-boat, drowned."

The bodies of Acting-Master's Mate Woodman and Fireman Higgins floated on shore near Plymouth, and it was a great satisfaction to know that only two of Cushing's comrades lost their lives in this desperate adventure.

We cannot hope to do justice to this remarkable episode in the naval history of the civil war. The narrative should be written in letters of gold on a tablet for the benefit of future ages; but we will here insert the official communication of the Secretary of the Navy to Lieutenant Cushing, after the latter's report had been forwarded by Admiral Porter to the Department:

NAVY DEPARTMENT, November 9, 1864.

SIR—Your report of October 30 has been received, announcing the destruction of the rebel iron-clad steamer "Albemarle," on the night of the 27th ultimo, at Plymouth, North Carolina.

When, last Summer, the Department selected you for this important and perilous undertaking, and sent you to Rear-Admiral Gregory, at New York, to make the necessary preparations, it left the details to yourself to perfect. To you and your brave comrades, therefore, belong the exclusive credit which attaches to this daring achievement. The destruction of so formidable a vessel, which had resisted the combined attack of a number of our steamers, is an important event touching our future naval and military operations. The judgment as well as the daring courage displayed would do honor to any officer, and redounds to the credit of one of twenty-one years of age.

On four previous occasions the Department has had the gratification of expressing its approbation of your conduct in the face of the enemy, and in each instance there was manifested by you the same heroic daring and innate love of perilous adventure, a mind determined to succeed, and not to be deterred by any apprehensions of defeat.

The Department has presented your name to the President for a vote of thanks, that you may be promoted one grade, and your comrades also shall receive recognition.

It gives me pleasure to recall the assurance you gave me, at the commencement of your active professional career, that you would prove yourself worthy of the confidence reposed in you, and of the service to which you were appointed. I trust you may be preserved through further trials; and it is for yourself to determine whether, after entering upon so auspicious a career, you shall, by careful study and self-discipline, be prepared for a wider sphere of usefulness on the call of your country.

Very respectfully, etc.,

GIDEON WELLES,

*Secretary of the Navy.*

LIEUTENANT W. B. CUSHING, U. S. N.,

*Washington.*

As soon as he heard of the sinking of the "Albemarle," Commander Macomb promptly prepared to carry out the orders of Admiral Porter, which directed that in case of the destruction of the ram he should proceed to recapture Plymouth. For their part, the Confederates were not idle in preparing to resist the advance of the gun-boats, although their main dependence was now taken from them. They impeded the advance of the flotilla by sinking schooners in the channel under the guns of the fortifications.

On the 29th of October, 1864, the flotilla proceeded up the Roanoke River in the following order: "Commodore Hull," "Shamrock," "Chicopee," "Otsego," "Wyalusing" and "Tacony." At the same time the "Valley City" went up the "Middle River," which joined the Roanoke above Plymouth, in order to cut off any vessels the enemy might send in that direction.

At about noon Commander Macomb came within range and opened fire on the land batteries protecting Plymouth. The fire was promptly returned, but Macomb continued to advance until he was checked by the sunken vessels and exposed to the fire of the enemy's heavy guns protected by earth-works. Present advance was out of the question, and signal was made for the vessels to retire down the river. In the

meantime the commanding officer of the "Valley City," hearing the firing cease, concluded that the Federal vessels had won the day, and ran down towards Plymouth, when, fire being opened on his vessel, he also returned to the Sound.

Thus far the expedition was a failure. Something must be done, and from the reports of the "Valley City," and a reconnaissance made by Lieutenant-Commander Earl English in a boat, it was found that there was plenty of water in the channel of "Middle River," and that any of the vessels could turn the bends with the assistance of a tug. This would enable Macomb to come out into the Roanoke River, above Plymouth, a contingency which the Confederates had not provided against.

The flotilla accordingly again got underway to try the new channel, Commander

LIEUTENANT-COMMANDER (NOW COMMODORE) WILLIAM T. TRUXTUN,  
COMMANDING THE "TACONY."

Macomb in the "Shamrock" following the tug "Bazley," Acting-Ensign M. D. Ames, having on board the pilot of the "Wyalusing;" next came the "Otsego," Lieutenant-Commander H. N. T. Arnold; "Wyalusing," Lieutenant-Commander Earl English; "Tacony," Lieutenant-Commander Wm. T. Truxtun; "Commodore Hull," Acting-Master Francis Josselyn, in the order named. Owing to the skill of the pilot, Acting-Master Alfred Everett, the vessels, with a great deal of hard work, succeeded in entering Roanoke River at 4 p. m., with the exception of the "Commodore Hull," which remained in "Middle River" to prevent the enemy from laying torpedoes there, in case the vessels should be obliged to return that way.

When the flotilla got near Plymouth the vessels commenced shelling the enemy's works, which was the first intimation the Confederates had of the approach of the Federal forces from this unexpected direction. As it was now late in the day, it was not deemed judicious to make a serious attack in the dark, but the vessels dropped close enough to the town to keep up a fire and command the channel, so that no torpedoes could be planted.

Next morning, the "Commodore Hull" joined the flotilla, and at 9 a. m. the attack was made in close order. The Confederates kept up a heavy fire, particularly on the "Commodore Hull" and the "Shamrock"; but as the vessels neared the batteries the order was given, "Go ahead at full speed!" so that the flotilla was soon pouring in a shower of grape and canister, which drove the artillerists from their guns and cleared the rifle-pits of sharpshooters. In ten minutes time the victory was complete, and Plymouth was once more in Union hands. One battery still held out, but a shell from the "Shamrock" exploding in the magazine, the fort blew up, some of the fragments falling on the decks of the steamers. The explosion caused a panic among the Confederates, who ceased firing and fled in all directions.

The Union forces were landed and took possession of the batteries without resistance. Never was victory more complete, and the news was transmitted by Rear-Admiral Porter to the Navy Department in the following dispatch:

UNITED STATES FLAG-SHIP "MALVERN," }  
HAMPTON ROADS November 11, 1864. }

SIR—I have the honor to inclose you the report of Commander William H. Macomb, in relation to the capture of the batteries and the town of Plymouth, North Carolina, which place with all its defences was captured from our land forces some time last spring.

This was a very gallant affair, and reflects great credit on the commander of the expedition and all concerned. It is a handsome finishing stroke after the blowing up of the ram.

The fruits of this capture are twenty-two cannon, thirty-seven prisoners, two hundred stand of arms, and more being picked up daily.

The flags of the forts and of the "Albemarle" and a large amount of ammunition were also taken.

I am sir, respectfully, etc.,

DAVID D. PORTER,

HON. GIDEON WELLES,

Rear-Admiral.

Secretary of the Navy.

This recapture of Plymouth was an important event, as both sides had been contending for its possession ever since the Federal forces gained a foothold in the Sounds of North Carolina. The place had been strongly fortified and armed with 9-inch navy guns, with the expectation that the Federals would hold it indefinitely; but the appearance of the "Albemarle" and her subsequent success demoralized the gar-

riation, and the Confederates were enabled to reoccupy the works.

Plymouth was not far distant from important lines of railway, and with an adequate force of Federal troops maintained at this point they would have been in constant danger. It completely commanded in both directions the Roanoke River, on which the Confederates built several iron-clad floating batteries, including the "Albemarle." Had the channel above the town been obstructed and planted with torpedoes, the "Albemarle" would never have reached Plymouth. The troops, however, rested in fancied security, relying on the gun-boats to deal with the enemy's vessels, and those on board the flotilla felt willing and able to contend with any force the Confederates might send against them.

Three heavy forts armed with twenty guns, besides the ram "Albemarle," which lay sunk at the wharf, were captured in less than an hour by a very inadequate force of vessels, and a large body of the enemy's troops were driven precipitately from the town. This was an achievement of which every officer and man in the flotilla might well be proud, for the batteries of Plymouth were manned by as good soldiers as could be found in the Confederacy; but the sudden dash of the steamers disconcerted their aim, and the grape, canister, and shrapnel falling in their ranks from the distance of only a few yards were too much for human nature to resist.

The "Commodore Hull," Acting-Master Josselyn, was very much cut up by the enemy's shot, and lost four men killed and three wounded. She was exposed to the fire of the enemy's heavy guns, and, as she neared the batteries, a heavy fire of musketry was poured in from the rifle-pits. A shell from a 9-inch gun came in on the starboard bow, killing one man and mortally wounding another, and three others slightly at the forward gun, passed through the berth-deck and ward-room, cut away the railing around the after-hatch, struck the after-port gun-carriage, where it lodged, and disabled the gun. That was good work for a single shell which did not explode. Another shell passed through the vessel from stem to stern, knocking the officers' quarters to pieces, but doing no further damage. A third shell, in passing over the hurricane-deck, cut away part of the wood-work on the port side and knocked out the bows of the second cutter. The upper works of the vessel were considerably shattered and the frame much racked by the firing and the explosion of a magazine on shore. This vessel was one of those frail craft of which we have so often spoken, in which so much was dared and done.

Lieutenant-Commander English in the

"Wyalusing," had the forethought, when the enemy began to retreat, to cover the road by which they were moving off with his guns and kept up a rapid fire with bursting shell, which caused the Confederates to throw away their arms and accoutrements, many of which were picked up. Acting-Master Mr. R. Hathaway and Acting-Ensign Foster, of the "Wyalusing," were the first to enter Fort Williams, one of the strongest works, where they planted the Union colors and captured three prisoners.

The "Shamrock," Commander Macomb's vessel, was struck six times by shot and shell, most of the enemy's projectiles passing over her. Two of her men were killed and seven wounded. These, with the killed and wounded on board the "Commodore Hull," were the only casualties on the flotilla, which was remarkable, considering the number of heavy guns the Confederates had in position, and the large number of sharpshooters in rifle-pits.

All the commanding officers of vessels spoke in the highest terms of the conduct of those under their command. Commander Macomb did not neglect to bring to the notice of the Navy Department the commanding officers who had so well sustained him on that day, 31st October, 1864. He recommended them all for the promotion they so justly deserved for a victory gained over a superior force, with a dash that must always excite admiration; but the victory was not appreciated in Washington, and the only official notice of it was a short letter from the Secretary of the Navy, commending the officers and men, and informing Commander Macomb that he would be recommended to the President for advancement ten numbers in his grade. The cases of the commanding officers of the vessels were afterwards considered by a Board of Admirals convened at Washington to apportion the rewards to be given for those who had distinguished themselves in battle; but the Board was limited to the petty figure of thirty numbers as the maximum of advancement for the most gallant exploit.

The patience of the Navy Department and of the commander-in-chief of the large fleet lying in Hampton Roads began to be severely tried by the delay in the appearance of the troops for the combined attack on Fort Fisher. The Secretary of the Navy was apprehensive that he would have to disperse the vessels to other points, whence they had been taken for this expedition, and where their absence had been greatly felt. The delay and the great expense attending it annoyed Mr. Welles so much that he appealed to the President in the hope of accelerating the shipment of the troops, saying in his letter to Mr. Lincoln that

"Every other squadron had been depleted and vessels detached from other duty to strengthen this expedition. The vessels are concentrated at Hampton Roads and Beaufort, where they remain, an immense force, lying idle, awaiting the movements of the army. The detention of so many vessels from blockade and cruising duty is a most serious injury to the public service, and, if the expedition cannot go forward for want of troops, I desire to be notified so that the ships may be relieved and dispersed for other service.

"The importance of closing Wilmington is so well understood by you, that I refrain from presenting any new arguments. I am aware of the anxiety of yourself and of the disposition of the War Department to render all the aid in its power. The cause of the delay is not from the want of a proper conception of the importance of the subject, but the season for naval coast operations will soon be gone.

"General Bragg has been sent from Richmond to Wilmington to prepare for the attack, and the autumn weather so favorable for such an expedition is passing away. The public expect this attack, and the country will be distressed if it is not made. To procrastinate much longer will be to peril its success. Of the obstacles which delay, or prevent military operations at once, I cannot judge; but the delay is becoming exceedingly embarrassing to this department, and the importance of having the military authorities impressed with the necessity of speedy action has prompted this communication to you."

Notwithstanding this urgent appeal from Mr. Welles to the President, a copy of which was sent to General Grant, there was still delay in furnishing the military forces required. It could not have been for want of troops in General Butler's command, for he occupied a strong position, backed by a large force of gun-boats, with a bridge of boats across the James, by which he could retreat, if he thought necessary, with entire safety under cover of the Navy guns. We are, therefore, forced to the conclusion that the only reason for the contingent of troops destined to co-operate in the attack on Fort Fisher not appearing in Hampton Roads, was that General Butler had determined they should not move until it suited his convenience. At that time the Confederates were so closed up in Richmond that they could make no important demonstration on the Federal lines without getting severely handled, as the different divisions of the Union Army were within supporting distance of each other. There was, then, some motive in the delay of the expedition to Fort Fisher which does not seem consistent with patriotism.

Mr. Secretary Welles had shown the greatest patience and persistence all through this affair, and it was owing to the exercise of these qualities that the expedition was finally enabled to get off. General Butler was at last forced to take some steps to show that he was not setting at defiance the orders received from General Grant early in October. Accordingly, accompanied by General Weitzel and his personal staff, General Butler went on

board the flag-ship "Malvern" at Hampton Roads, and communicated to Rear-Admiral Porter a plan for the destruction of Fort Fisher, the idea having, it seems, been suggested by the explosion of a canal-boat loaded with powder at Eric on the Thames, by which a large amount of property had been destroyed. General Butler's idea was that one hundred and fifty tons of powder confined on board a vessel and exploded within a short distance of Fort Fisher would inflict immense damage on the enemy, and he promised, if the powder-boat was prepared, he would detail the necessary troops and have them embarked as soon as possible.

Any expedient that would get the expedition off was hailed with delight by the Rear-Admiral commanding, who agreed to Butler's proposition, notwithstanding he had little faith in the project; though, strange to say, the General had met with encouragement from scientific men to whom he had disclosed his scheme. It was considered advisable to try almost any expedient, and the Navy Department did not, therefore, refuse to countenance General Butler's plan; although, as the General was then a power in the land, it would, perhaps, have favored ideas still more absurd emanating from that quarter. An officer who could disobey the orders of his immediate commander-in-chief for months, delay a large fleet assembled at infinite cost and pains to deal a final blow to the Confederacy, and finally assume command of an expedition assigned to another General, all without rebuke from headquarters, must have had immense influence. All men seemed afraid of Butler's political power: it was even potential with the President and Secretary of War, although, in justice to Mr. Secretary Welles, we must say, it had much less weight with him.

It was towards the last of November when General Butler unfolded his plan of a powder-boat, and it took some days to make all the necessary preparations to get the great torpedo ready. The steamer "Louisiana," a vessel of little value, was selected for the service, and sent from Newbern to Hampton Roads, where the immense mass of powder required was collected from the Army and Navy magazines, and carefully stowed on board in bags. To Commander A. C. Rhind, a gallant officer, who had on more than one occasion shown the coolness in the face of danger so necessary for such a perilous duty, was assigned the charge of the powder-vessel. Commander Rhind did everything possible with the means at hand to render the explosion successful.

By the time the "Louisiana" was prepared, General Butler had so identified himself with the expedition that it was evident

to all who knew him that he proposed to command the troops in person, for he was not wont to take so much trouble for any one else. General Grant probably did not know the extent of Butler's interference with the expedition, or else attributed his action to zeal for its success. It is not likely that he supposed that one of his generals would withhold orders that he had issued to a subordinate to command the troops, although it may be that even Grant felt the weight of that political power which oppressed every one who came within its influence. As soon as Butler had succeeded in gaining a secure footing in the expedition, he was all anxiety to embark his soldiers, notwithstanding there was every appearance of a gale coming on and the powder-boat was not ready. Without proper preparation, the troops were hurried into the transports, with but a few days' rations and a scant supply of water. The gale came on and the poor soldiers, cooped up in their narrow, uncomfortable quarters, were quite worn out before the expedition sailed. Fortunately, after a few days of wind and rain, the weather cleared up and the transports sailed from Hampton Roads on the 16th of December, 1864.

Up to this time there had been no *official* notice that General Butler would go on the expedition. General Grant several times went on board the "Malvern" for the purpose, no doubt, of talking the matter over with Admiral Porter, but he would scarcely put his foot on board ere General Butler would make his appearance. Butler's presence was always enough to make General Grant quiet and meditative, and he soon took his departure. General Weitzel generally accompanied General Butler on his visits to the flag-ship, but he was as taciturn as Grant, and apparently was uncertain whether he was to have command of the troops in the expedition or not. When asked one day by Lieutenant-Commander K. R. Breese, the Fleet-Captain, what were General Butler's plans, Weitzel replied that he didn't believe Butler had any, which was the general impression.

Now, here was an expedition in which it was absolutely necessary that the utmost harmony and concert of action should exist between the commanding officers; but, although Admiral Porter did his best to obtain from General Butler some statement of his intentions, he never succeeded in the attempt. Butler was furnished with copies of the Admiral's written orders to his fleet, but he sent none in return, and merely notified the Admiral that his transports would assemble off Masonboro' Inlet, thirty miles from Wilmington, where, if one of his vessels showed herself the destination of the

expedition would be immediately known to the enemy.

There was never a more beautiful day for a fleet to sail than the one on which the expedition left Hampton Roads. The Monitors had to stop at Beaufort, N. C., to coal and receive their ammunition; for now that the expedition had waited two months there was no particular hurry, and the Confederates had by this time learned the particulars of the expedition, and were prepared, as they thought, to defeat it.

Many combined operations in different parts of the world have failed from want of concert between the Army and the Navy, but none of Grant's or Sherman's operations were endangered by this cause, owing to the harmony with which the two branches of the service acted together; and both those distinguished officers were careful to express their wishes in such a way as to be agreeable to all concerned. General Butler could never be made to understand what was due to an officer of another branch of the service, hence he was frequently involving himself in difficulties with navy, and indeed with army, officers.

Neither Butler nor Weitzel were adapted to command the troops in such an expedition as that to Fort Fisher. Grant discovered this fact later in the season; but it was known in the Navy from the beginning, and the Admiral felt the need of all his good fortune to carry him safely through the ordeal. The latter remained in Hampton Roads until the last transport had started and got underway the same evening, General Butler, in his "flag-ship," remaining at the dock. That night, the General, in his fast steamer, got ahead of the fleet, and took his station, with his transports, off Masonboro' Inlet.

In the meantime, Admiral Porter had put into Beaufort, N. C., to give another look at the fittings of the powder-boat, for he determined to do everything to make the latter experiment a success, even although he knew it was all folly. When all was ready, the Admiral proceeded to the rendezvous off the entrance to Cape Fear River.

The fleet anchored off Fort Fisher, twenty-miles from shore, in twenty-five fathoms water. General Butler and his transports were at anchor off Masonboro' Inlet, quite out of sight of the naval vessels. The Admiral wrote to the General that he should send the powder-boat in and explode her on the 18th of December, after which he should attack the enemy's works. It was intimated to the General that, as the explosion would be in the nature of an earthquake, it would be prudent for him to move at least twenty miles from the scene and let his vessel's steam run down! In order to make assurance doubly sure, the General retired to

Beaufort, sixty miles from the scene of action, and there awaited the dreadful crash.

Fort Fisher and dependencies were an immense series of works, more than a mile in length, constructed of bags filled with sand, the result of immense labor from the very beginning of the civil war, and the best engineering talent in the Confederate Army. It was believed by the Confederates that this work was sufficient to repel any force of ships that might be brought against it or might attempt to pass the batteries. The latter operation was, in fact, impossible, as there was but nine feet of water on the bar of Cape Fear River at ordinary tides. The channel was tortuous, and the bar generally covered with heavy breakers, except when the wind blew from the northwest.

Fort Fisher consisted of two lines of works at right angles with each other. The land-front ran across the sandy peninsula, which was here about half a mile in width, and mounted seventeen heavy guns, bearing north, to prevent an attacking force from advancing in that direction. These guns were practically protected from a seaward fire by heavy bomb-proof casemates, with capacity for sheltering four or five thousand men. The sea-front extended from the great battery at the angle of the two faces, along the beach to the southward, a distance of over three-quarters of a mile, and was terminated by a huge erection eighty feet in height, known as the "Mound Battery." This was probably intended to command the interior of Fort Fisher, should the enemy gain a footing there; while the garrison taking shelter in the bomb-proofs could resist an enemy for a long time from those retreats. On the sea-face of the work were mounted fifty-four heavy guns protected by traverses against an enfilading fire, and some of these traverses were also bomb-proof. In the Mound Battery were three or four 150-pounder Brooke rifles, making the total number of guns in this formidable work seventy-five.

The sea-front was intended to prevent the enemy's vessels from running through New Inlet into Cape Fear River, or landing troops on Federal Point—an unnecessary precaution, since nature had placed greater obstacles to vessels of any size crossing the bar, in the shape of shoal water.

One mile westward of the Mound Battery, at the end of Federal Point, was a heavy-armed earth-work mounting six or eight 11-inch Dahlgren guns, fitted exactly as if on the deck of a ship. This was Fort Buchanan, and it was officered and manned from the Confederate Navy. It commanded the channel and a shoal called the "Rips," over which no vessel drawing more than eleven feet could pass at high water. This

is a general sketch of Fort Fisher. The details were similar to those of other fortifications of this kind.

It was the evident intention of the Confederates to prevent a landing of the Federal troops or to dislodge them as soon as they reached the shore, which might have been done had not a large force of gunboats been sent to cover the landing, a force which no army could have withstood.

At the time when the fleet arrived off Fort Fisher, the Confederates had about eighteen hundred men in the works, but they were by no means the best of troops. The commanding officer of the fort was Colonel William Lamb, a gallant and capable soldier, while Major-General Wm. H.

LIEUTENANT-COMMANDER K. RANDOLPH BREESE.  
(FLEET-CAPTAIN.)

C. Whiting, formerly of the U. S. Engineers, commanded all the defences of the Cape Fear River.

When the fleet was all ready to proceed to the attack, Commander Rhind was ordered to take the powder-boat in and explode her. It had been calm all that day, December 18, with only a light swell on, which increased at night. Fleet-Captain K. R. Breese was sent on board General Butler's vessel to inform the General what was to be done, and that the troops might be landed in the morning for the attack. The General sent word to the Admiral that he thought the attempt premature, and requested that it be postponed until the sea went down. To this Admiral Porter at once agreed, yet General Butler afterwards complained of the delay, grounding his failure on that circumstance. It was just

as well that the attempt was not made on the day appointed, for, on the following morning, a heavy gale came on from the southeast with a tremendous swell setting towards the beach, so that it was thought at one time all the vessels would have to leave the coast to avoid being driven on shore. General Butler and his transports had disappeared and sought refuge in the harbor of Beaufort.

No occurrence during the war reflects more credit on the Navy than the way in which that large fleet rode out the gale, anchored in twenty fathoms water, with the whole Atlantic Ocean rolling in upon them. As far as the eye could reach, the line of vessels extended, each with two anchors ahead and one hundred and twenty fathoms of chain on each. The wind blew directly on shore, the sea breaking heavily, and appearing as if it would sweep everything before it, yet only one vessel in all the line left her anchorage and stood out to sea as a place of safety. It was, indeed, a grand sight to see these ships riding out such a gale on such a coast in midwinter. The most experienced seaman will long remember the event as the only case on record where a large fleet rode out a gale at anchor on our coast. It was one of the features of this memorable expedition in the highest degree creditable to the seamanship of the Federal Navy.

After the gale abated, the Rear-Admiral commanding the fleet looked around in the hope of seeing something of General Butler's command, for, knowing that the wind would come out from the northwest, and blow the sea down, he wished to take advantage of the circumstance and commence the attack. As nothing was heard of the General, the Admiral made arrangements, which will appear in the reports of operations annexed.

We have noticed that the explosion of the powder-boat was postponed at the request of General Butler, after Commander Rhind had started to carry out the order to blow the vessel up. The peril of this service was very great, for it was certain that the Confederates had been fully apprised that a powder-vessel was being fitted to explode under the walls of Fort Fisher. It was therefore to be expected that the enemy would maintain a vigilant look-out, and when, through their night-glasses, an object was seen approaching the fort, they would open with shells and blow up the vessel and all on board if they could. Or a mistake might occur in the timing of the Gomer fuse, or in the clock that was to ignite the powder at a given moment, so as to allow the adventurous party on board the "Louisiana" time enough to get well clear of the vessel. There was more than one chance of a premature

explosion. Besides these dangers, there was in the smoothest weather a heavy groundswell on the beach where the "Louisiana" was to be anchored, and the rolling motion might easily disarrange the intricate machinery designed for the explosion of the powder. To risk so many valuable lives of officers and men seemed almost a crime—the game was not worth the candle—and this useless powder-boat excited more anxiety in the fleet on account of those who had volunteered for so hazardous an expedition than for the expected attack on Fort Fisher.

The officers and men who volunteered to go with Commander Rhind—himself a volunteer—were Lieutenant Samuel W. Preston of the Admiral's staff, Second-Assistant Engineer A. T. E. Mullan, Master's Mate Paul Boyden; Frank Lucas, Coxswain; William Gainn, Captain-of-the-Forecastle; Charles T. Bibber, Gunner's Mate; John Neil, Quarter-Gunner; Robert Montgomery, Captain-of-the-Afterguard; James Roberts and Dennis Conlan, Seamen; James Sullivan, Ordinary Seaman; William Horrigan, Second-class Fireman; Charles Rice, Coal-heaver. The men were all volunteers from Commander Rhind's vessel, the "Agawam."

General Butler had been again notified that the powder-boat would be exploded on the night of the 23d December, as near the beach at Fort Fisher as it was possible to get her, but the exact distance could not be estimated in the darkness. Although the "Louisiana" had low steam up, she was towed to within a short distance of her station by the steamer "Wilderness," which vessel then remained in the vicinity to take off the party from the powder-boat. The arrangements of the "Wilderness" were under the direction of Lieutenant R. H. Lamson, assisted by Mr. J. O. Bradford of the Coast Survey, and Acting-Master Geo. F. Bowen (Pilot). The "Wilderness" was under the command of Acting-Master Henry Arey, and he and his officers and men shared with the others the danger attending the enterprise.

The powder-boat was finally anchored as near the beach as possible—a somewhat difficult task, as by approaching too near the breakers the vessel would be liable to drift on shore. Commander Rhind and Lieutenant Preston then lighted the candles, while the fire of pine-knots in the "Louisiana's" cabin was started by Engineer Mullan. Commander Rhind was then obliged to let go another anchor with a short scope of chain, as he saw that the vessel would not tail in shore. This done, the party jumped into their boats, and pulled for the "Wilderness," which vessel had steamed off shore a considerable distance, and then let her steam

go down, as it was supposed that the concussion would seriously affect the boilers if a high pressure of steam was maintained.

The fuzes were set by the clocks to one hour and a half, but the explosion did not take place until twenty minutes after the expected time, when the after-part of the "Louisiana" was in flames. Exactly at 1:30 A. M. of the 24th, the powder-boat went up in the air, the shock being scarcely felt by the vessels of the fleet. For a moment the scene was illuminated, then darkness settled down, and all was still as before—no sound or movement in the fort indicating that any damage had been done. In fact, the Confederates took the explosion for that of a blockade-runner with a quantity of ammunition on board, and were not at all troubled about the matter.

When, after the lapse of twenty years, we think of this futile attempt to destroy such a powerful work as Fort Fisher at the risk of so many valuable lives, in order that the pet scheme of a Major-General of Volunteers should be carried out, we may wonder that any one should countenance such an absurdity. The only powder that was needed was that fired from the cannon of the ships, and what would have been fired from the muskets of the gallant soldiers had they been permitted by their commanding general to advance on the enemy. But these experiences will teach the soldiers and sailors of the future; and if there is ever a scheme proposed for blowing up a huge earth-work with a powder-boat, the recollection of Fort Fisher will deter people from attempting to carry it out.

It was supposed by Admiral Porter that the explosion would be heard on board the transports and bring them all in by morning; but, although the water was quite smooth, the transports seemed to keep as far as possible from Fort Fisher.

Agreeably to the orders issued the preceding evening, the fleet got underway at daylight on the 24th of December, 1864, and stood in, in line of battle. At 11:30 A. M. the signal was made to engage the forts, the "Ironsides" leading, and the "Monadnock," "Canonicus" and "Mahopac" following. The "Ironsides" took her position in the most beautiful and seamanlike manner, got her spring out, and opened deliberate fire on the fort, at that time opening on her with all its guns, which did not seem numerous in the northeast face, though what appeared to be seventeen guns were counted. These were fired from that direction, but they were silenced almost as soon as the fleet opened all their batteries.

The "Minnesota" took her position in handsome style, and her guns, after getting the range, were fired with rapidity;

while the "Mohican," "Colorado" and the large vessels marked on the plan, got to their stations, all firing to cover themselves while anchoring. By the time the last of the large vessels anchored and got their batteries into play, but a few guns of the enemy were fired, this *feu d'enfer* driving them all to their bomb-proofs.

The small gun-boats "Kansas," "Unadilla," "Pequot," "Seneca," "Pontoosuc," "Yantic" and "Huron" took positions to the northward and eastward of the Monitors, enfilading the works. The "Shenandoah," "Ticonderoga," "Mackinaw," "Tacony" and "Vanderbilt" took effective positions, as marked on the chart, and added their fire to that already begun. The "Santiago de Cuba," "Fort Jackson," "Osceola," "Chippewa," "Sassacus," "Rhode Island," "Monticello," "Quaker City" and "Iosco," dropped into position according to order, and the battle became general.

In an hour and a quarter after the first shot was fired, not a shot came from the fort. Two of the magazines in the works had been blown up by shells, and the wood-work in the fort set on fire in several places; and such a torrent of missiles were falling into and bursting over the works, that it was impossible for anything human to withstand it. Finding that the batteries were completely silenced, the ships were directed to keep up a moderate fire, in hopes of attracting the attention of the transports and bringing them to the scene of action. At sunset General Butler came in with a few transports, the rest not having arrived from Beaufort. As it was too late to do anything more, the fleet was signalled to retire for the night to a safe anchorage, which movement took place without molestation from the enemy.

Some mistakes were made this day when the vessels went in to take position, although, the plan of battle being based on accurate calculation and reliable information, it seemed almost impossible to go astray. Those vessels that had not followed the plan of battle closely were required to get underway and assume their proper positions, which was done promptly and without confusion. The vessels were placed somewhat nearer to the works, and were able to throw in their shells, which were before falling short.

One or two leading vessels having anchored too far off shore, caused those coming after them to make a like error; but when they all got into place and commenced work in earnest, the shower of shell—one hundred and fifteen per minute—was irresistible. So quickly were the enemy's guns silenced that not an officer or man in the fleet was injured by them, but there were some severe casualties by the bursting

of several 100-pounder Parrott cannon. One burst on board the "Ticonderoga," killing six of the crew and wounding seven others; another burst on board the "Yantic," killing one officer and two men; another on board the "Juniata," killing two officers, and killing and wounding ten other persons; another on board the "Mackinaw," killing one officer and wounding five men; another on board the "Quaker City," wounding two or three persons. The bursting of these guns much disconcerted the crews of the vessels, and gave them great distrust of the Parrott 100-pounder.

Some of the vessels were struck once or twice from the fort. The "Mackinaw" had her boiler perforated with a shell, and

LIEUTENANT-COMMANDER (NOW REAR-ADMIRAL)  
JOHN LEE DAVIS.

ten or twelve persons were badly scalded. The "Osceola" was struck with a shell near her magazine, and was at one time in a sinking condition, but her efficient commander stopped the leak, while the "Mackinaw" fought out the battle, notwithstanding the damage she had received. Only one vessel left the line to report damages.

Commander John Guest, in the "Iosco," at the east end of the line, showed his usual intelligence in selecting his position and directing his fire. Twice his shot cut away the flag-staff on the Mound Battery, and he silenced the guns there in a very short time, the "Keystone State" and "Quaker City" co-operating effectively.

Lieutenant-Commander John L. Davis in the "Sagoyew" with both muzzles of his

vessel disabled, got her into close action and assisted materially in silencing the works, and the "Santiago de Cuba" and "Fort Jackson" took such positions as they could get, owing to other vessels not forming proper lines and throwing them out of place, and fought their guns well. The taking of a new position while under fire by the "Brooklyn" and "Colorado" was well done, and when they got into place both ships delivered a fire that nothing could withstand. The "Brooklyn" well sustained her good name under her commanding officer, Captain James Alden, and the "Colorado" gave evidence that Commodore H. K. Thatcher fully understood the duties of his position. The "Susquehanna" was most effective in her fire, though much hampered by a vessel near her that had not found her right place. The "Mohican" went into battle gallantly and fired rapidly and with effect; and when the "Powhatan," "Ticonderoga" and "Shenandoah" got into their positions, they did good service. The "Pawtucket" fell handsomely into line, and did good service with the rest, and the "Vanderbilt" took her place near the "Minnesota" and threw in a rapid fire. The firing of the Monitors was excellent, and when their shells struck great damage was done, and the little gun-boats that covered them kept up a fire sufficient to disconcert the enemy's aim.

The Confederates fired no more after the vessels all opened on them, except a few shots from the Mound and upper batteries, which the "Iosco" and consorts soon silenced.

The men were at work at the guns five hours and were glad to get a little rest. They came out of action with rather a contempt for the enemy's batteries, and anxious to renew the battle in the morning.

On Christmas Day all the transports had arrived, and General Butler sent General Weitzel to see Admiral Porter, and arrange the programme for the day. It was decided that the Navy should again attack the works, while the Army should land and assault them, if possible, under the heavy fire of the ships. The Admiral dispatched seventeen gun-boats, under command of Captain O. S. Glisson, to cover the troops and assist with their boats in landing the soldiers. Finding the smaller vessels kept too far from the beach, which was quite bold, the "Brooklyn" was sent in to carry out the Admiral's orders. To the number before sent were added all the small vessels that were acting as reserves; and, finally, there were sent some eight or nine vessels that were acting under Commander Guest in endeavoring to find a way across the bar. This gave a hundred boats with which

to land the troops, in addition to the twenty with which the army was already provided.

At 7 A. M., on the 25th, signal was made for the ships to get underway and form in line of battle, which was quickly done. The order to attack was given, and the "Iron-sides" took the position in her usual handsome style, the Monitors following close after her. All the vessels followed according to order, and took position without a shot being fired at them, excepting a few fired at the last four vessels that got into line. The firing this day was slow, only sufficient to distract the enemy's attention while the army landed, which they were doing five miles northward of the fleet.

About three thousand men had landed, when the Admiral was notified they were re-embarking. He had seen the soldiers near the forts reconnoitering and sharp-shooting, and was in hopes an assault was deemed practicable. General Weitzel, in person, was making observations about six hundred yards off, and the troops were in and around the works. One gallant officer went on the parapet and brought away the Confederate flag that had been shot down by the Navy fire; a soldier went into the works and led out a horse, killing the orderly mounted on the animal and capturing his dispatches. Another soldier fired his musket into a bomb-proof among the Confederates, and eight or ten others who had ventured near the forts were wounded by shells from the fleet.

As the ammunition gave out, the vessels retired from action, and the iron-clads "Minnesota," "Colorado" and "Susquehanna" were ordered to open rapidly, which they did with such effect that it seemed to tear the works to pieces. The fleet drew off at sunset, leaving the iron-clads to fire through the night, expecting the troops would attack in the morning, when the ships would recommence the bombardment. The Admiral, however, received a message from General Weitzel, informing him that it was impracticable to assault; and later a letter from General Butler, assigning his reasons for withdrawing his troops; which letter, together with the Admiral's answer to the same, we shall insert in full.

In the bombardment of the 25th, the fleet fired slowly for seven hours. The enemy kept a couple of guns on the upper batteries firing on the vessels, hitting some of them several times without doing them much damage. The "Wabash" and the "Powhatan," being within their range, the object seemed mainly to disable them, but a rapid fire soon silenced the Confederate guns. Everything was coolly and systematically done throughout the day, and there was some beautiful practice.

The army commenced landing about 2 o'clock, Captain Glisson, in the "Santiago de Cuba," having shelled Flag-Pond battery to insure a safe landing, and they commenced to re-embark about 5 o'clock, the weather coming on thick and rainy. About a brigade were left on the beach during the night, covered by the gun-boats. As the troops landed, sixty-five Confederate soldiers hoisted the white flag, and delivered themselves up to the seamen landing the troops, and were conveyed to the "Santiago de Cuba." Two hundred and eighteen more gave themselves up to the reconnoitering party, all being tired of the war. We do not pretend to put our opinion in opposition to General Weitzel, whose business it was to know more of assaulting forts than a sailor could know; but we cannot help thinking that it was worth while to make the attempt after coming so far.

About noon the Admiral sent in a detachment of double-enders under Commander John Guest, to see if an entrance through the channel could be effected. The great number of wrecks in and about the bar had changed the whole formation, and where the original channel had been, Guest found a shallow bar.

The Admiral then sent Lieutenant W. B. Cushing in to sound and buoy out a channel, if he could find one, with orders for Commander Guest to drag for torpedoes and be ready to run in by the buoys when directed. A very narrow and crooked channel was partly made out and buoyed, but running so close to the upper forts that boats could not work there. Lieutenant Cushing, in his boat, went in as far as Zeke's Island, but his researches would not justify attempting the passage with six double-enders, some of which had burst their rifled Parrott guns and injured many of their men.

One boat belonging to the "Tacony" was sunk by a shell, and a man had his leg cut off; still, they stuck to their work until ordered to withdraw for other duty.

At the conclusion of his report to the Secretary of the Navy, Rear-Admiral Porter makes the following remarks:

"Allow me to draw your attention to the conduct of Commander Rhind and Lieutenant Preston. They engaged in the most perilous adventure that was, perhaps, ever undertaken; and, though no material results have taken place from the effects of the explosion that we know of, still it was not their fault. As an incentive to others, I beg leave to recommend them for promotion; also that of Lieutenant R. H. Lamson, who piloted them in and brought them off. No one in the squadron considered that their lives would be saved, and Commander Rhind and Lieutenant Preston had made an arrangement to sacrifice themselves in case the vessel was boarded—a thing likely to happen.

"I inclose herewith the report of Commander Rhind, with the names of the gallant fellows who volunteered for this desperate service. Allow me

also to mention the name of Mr. Bradford, of the Coast Survey, who went in and sounded out the place where the 'Louisiana' was to go in, and has always patiently performed every duty that he has been called on to carry out.

"My thanks are due to Lieutenant-Commander K. R. Breese, Fleet-Captain, for carrying about my orders to the fleet during the action, and for his general usefulness; to Lieutenant-Commander H. A. Adams, for his promptness in supplying the fleet with ammunition. Lieutenant M. W. Sanders, Signal-Officer, whose whole time was occupied in making signals, performed his duty well, and my aides, Lieutenant S. W. Terry and Lieutenant S. W. Preston, afforded me valuable assistance.

"I have not yet received a list of the casualties, but believe they are very few, from the enemy's guns. We had killed, and wounded, about forty-five persons by the bursting of the Parrott guns. I beg leave to suggest that no more of these guns be introduced into the service. There is only one kind of firing that is effective at close quarters, that is, from 9, 10 and 11 inch guns, they cannot be equalled.

"Until further orders, I shall go on and hammer away at the fort, hoping that in time the people in it will get tired, and hand it over to us. It is a one-sided business altogether, and in the course of time we must dismount their guns, if, as General Weitzel says, we cannot 'injure it as a defensive work.' The Government may also think it of sufficient importance to undertake more serious operations against these works.

"An army of a few thousand men investing it would soon get into it, with the aid of the Navy. When smooth water permits, I will go to work looking for a channel over the bar, which has not yet been found to my satisfaction.

"I must not omit to pay a tribute to the officers and crews of the Monitors—riding out heavy gales on an open coast without murmuring or complaining of the want of comfort, which must have been very serious. They have shown a degree of fortitude and perseverance seldom witnessed. Equally brave in battle, they take the closest work with pleasure, and the effect of their shells is terrific.

"The following are the names of the commanding officers, and I hope I shall keep them under my command: Commodore William Radford, commanding 'New Ironsides'; Commander E. S. Parrott, commanding 'Monadnock'; Commander E. R. Colhoun, commanding 'Saugus'; Lieutenant George E. Belknap, commanding 'Canonicus'; Lieutenant-Commander E. E. Potter, commanding 'Mahopac.'

"There are about one thousand men left on shore by the army who have not yet got off on account of the surf on the beach. These will be taken off in the morning, and the soldiers will then be sent home.

"I inclose general order for the attack."

REAR-ADMIRAL PORTER'S GENERAL ORDER NO. 70.

[GENERAL ORDERS NO. 70.]

NORTH ATLANTIC SQUADRON,  
U. S. FLAG-SHIP "MALVERN," }  
HAMPTON ROADS, December 10, 1864.

The chart plan of the proposed attack on the batteries of the enemy at New Inlet, mouth of Cape Fear River, will explain itself, but the order of taking position is as follows:

It is first proposed to endeavor to paralyze the garrison by an explosion, all the vessels remaining twelve miles out from the bar, and the troops in transports twelve miles down the coast, ready to steam up and be prepared to take the works by assault in case the latter are disabled.

At a given signal, all the bar vessels will run off

will go in under the forts. When the explosion takes place, all the vessels will stand in shore in the order marked on the plan.

The "New Ironsides" will steam along shore, coming from eastward, until the flag-staff on Fort Fisher bears southwest by west-half-west, and anchor (chain ready to slip) with her broadside bearing on the largest of the enemy's works, and open fire without delay. The Monitors will come up astern, anchoring not more than one length apart, directly in line along the shore, leaving space only for a gun-boat to lie outside of them, and fire between them or over them. The "New Ironsides" and Monitors will lie in not less than three and a half fathoms water, which will place them about three-fourths of a mile from Fort Fisher, and a little over a quarter of a mile from the beach.

In the meantime, the large ships will lie formed in line of battle to the eastward of the iron-clads, and heading parallel with the land in a south-half-west course, in five fathoms water.

When the signal is made to "take position," the "Minnesota" (the headmost vessel) will go ahead slowly and anchor about a mile from Fort Fisher, opening fire the moment she passes the "New Ironsides," and anchoring so that her stern gun will fire just clear of that vessel. The "Mohican" will then anchor ahead of the "Minnesota," "Colorado" ahead of "Mohican," "Tuscarora" ahead of "Colorado," "Wabash" ahead of "Tuscarora," "Susquehanna" ahead of "Wabash," "Brooklyn" ahead of "Susquehanna," "Powhatan" ahead of "Brooklyn," "Juniata" ahead of "Powhatan," with their cables ready to slip, and with not more than fifteen fathoms of chain, the fifteen-fathom shackle inside the hawse-hole.

The "Seneca," "Shenandoah," "Pawtucket," "Ticonderoga," "Mackinaw," "Maumee," "Yantic" and "Kansas" will take their positions between and outside the different vessels, as marked on the plan, anchoring with their cables ready to slip.

When the large ships and intermediate ones get fairly into position, the "Nyack," "Unadilla," "Huron" and "Pequot" will take positions between and outside the Monitors, in the order marked on the plan, keeping up a rapid fire while the Monitors are loading.

The following vessels will next take their positions as marked on the plan.

Commencing with the "Fort Jackson," which vessel will anchor ahead of the "Juniata," leaving a space between of three lengths, "Santiago de Cuba," "Tacony," "Osceola," "Chippewa," "Sasacus," "Maratanza," "Rhode Island," "Monticello," "Mount Vernon," "Montgomery," "R. R. Cuyler," "Quaker City" and "Iosco" will pass on slowly, commencing with the rear, until they form the line marked on the plan.

The reserves of each division will form a line, as per plan, out of gun-shot, ready to act as occasion may require.

This is the main plan of the battle. Circumstances may require some deviation from it, such as a partial attack (before going seriously to work) to feel the enemy's strength, all of which will be regulated by signal or by orders. Great care and coolness will be required to drop the vessels in their right places, and a too-early commencement of fire on the part of those going into position may create confusion.

As we know but little about the calibre and number of rebel guns, the vessels must concentrate their fire on the heaviest batteries; but get the range before firing rapidly. For instance, the large vessels and iron-clads concentrate on Fort Fisher, while the "Vanderbilt," "Fort Jackson," and the vessels in the line with "Fort Jackson" will open on the forts within their reach between

All the reserve vessels will prepare to attack Zeke's Island battery by taking a position where they can enfilade it, which is when the fort bears northwest. Vessels drawing fourteen feet can go within a mile and three-quarters with perfect safety, and use their rifle-guns with good effect. They can also reach the forts on Federal Point, and prevent their firing accurately on the other portions of the fleet in closer range.

All the movements of the different lines will be made by sending orders in a tug, as signals will not be seen in the smoke.

As it is desirable not to have superfluous directions, each commander will be furnished with a plan, and the matter fully discussed, and points explained at a general meeting of commanders.

Vessels in distress, and finding it necessary to retire from battle, will steer out southeast, excepting the headmost vessels, "Iosco," "Quaker City," "R. R. Cuyler," etc., which had better keep on southwest half-south course, until they clear an eight-foot shoal (at low water) outside of them.

It is not desirable that the vessels of the squadron should show themselves to the enemy until the time comes for them to act, and they will keep off shore about twenty-five miles, or far enough not to be seen, with New Inlet bearing west, in about the latitude of 33 56, longitude 77 20; that will be the rendezvous. Commanders of divisions will assemble the vessels of their divisions, get them into line, and keep them so, each division being far enough from the other to allow them to manoeuvre without interfering. When the signal is made or given to fall in line of battle, every vessel will take her station in line according to the plan of the chart, the first division forming first, and the others dropping in, in order.

As only low steam will be required, those vessels that can move and work handily with half their boilers will only use those on one side, keeping the boilers (on the side near the enemy) full of water and without steam, with water warm only, and ready to make steam in case of necessity.

Slow, deliberate firing is desirable; there will be smoke enough anyhow. Rapid and indiscriminate firing will amount to little or nothing. I hope no shot may be thrown away.

DAVID D. PORTER,  
*Rear-Admiral Commanding North Atlantic Squadron.*

LETTER OF MAJOR-GENERAL BUTLER TO REAR-ADMIRAL PORTER.

HEADQUARTERS, DEPARTMENT  
VIRGINIA AND NORTH CAROLINA, }  
December 25, 1864.

ADMIRAL—Upon landing the troops and making a thorough reconnoissance of Fort Fisher, both General Weitzel and myself are fully of the opinion that the place could not be carried by assault, as it was left substantially uninjured as a defensive work by the Navy fire. We found seventeen guns protected by traverses, two only of which were dismounted, bearing up the beach and covering a strip of land—the only practicable route—not more than wide enough for a thousand men in line of of battle.

Having captured Flag-Pond Hill battery, the garrison of which—sixty-five men and two commissioned officers—were taken off by the Navy, we also captured Half-Moon battery and seven officers and two hundred and eighteen men of the Third North Carolina Junior Reserves, including its commander, from whom I learned that a portion of Hoke's division, consisting of Kirkland's and Haygood's brigades, had been sent from the lines before Richmond on Tuesday last, arriving at Wilmington Friday night.

General Weitzel advanced his skirmish line within fifty yards of the fort, while the garrison was kept

in their bomb-proofs by the fire of the Navy, and so closely, that three or four men of the picket line ventured upon the parapet and through the sally-port of the work, capturing a horse, which they brought off, killing the orderly, who was the bearer of a dispatch from the chief-of-artillery of General Whiting to bring a light battery within the fort, and also brought away from the parapet the flag of the fort.

This was done while the shells of the Navy were falling about the heads of the daring men who entered the work, and it was evident, as soon as the fire of the Navy ceased because of the darkness, that the fort was fully manned again, and opened with grape and canister upon our picket line.

Finding that nothing but the operations of a regular siege, which did not come within my instructions, would reduce the fort, and in view of the threatening aspect of the weather, wind rising from the southeast, rendering it impossible to make further landing through the surf, I caused the troops with their prisoners to re-embark, and see nothing further that can be done by the land-forces. I shall, therefore, sail for Hampton Roads as soon as the transport-fleet can be got in order.

My engineers and officers report Fort Fisher to me substantially uninjured as a defensive work.

I have the honor to be, very respectfully, your obedient servant,

BENJ. F. BUTLER,  
*Major-General Commanding.*  
REAR-ADMIRAL PORTER,  
*Commanding North Atlantic Blockading Squadron.*

REPLY OF REAR-ADMIRAL PORTER TO MAJOR-GENERAL BUTLER.

NORTH ATLANTIC SQUADRON, )  
U. S. FLAG-SHIP "MALVERN." }

GENERAL—I beg leave to acknowledge the receipt of your letter of this date, the substance of which was communicated to me by General Weitzel last night.

I have ordered the largest vessels to proceed off Beaufort and fill up with ammunition, to be ready for another attack, in case it is decided to proceed with this matter by making *other arrangements*.

We have not commenced firing rapidly yet, and could keep any rebels inside from showing their heads until an assaulting column was within twenty yards of the works.

I wish some more of your gallant fellows had followed the officer who took the flag from the parapet, and the brave fellow who brought the horse out from the fort. I think they would have found it an easier conquest than is supposed.

I do not, however, pretend to place my opinion in opposition to General Weitzel, whom I know to be an accomplished soldier and engineer, and whose opinion has great weight with me.

I will look out that the troops are all off in safety. We will have a west wind presently, and a smooth beach about three o'clock, when sufficient boats will be sent for them.

The prisoners now on board the "Santiago de Cuba" will be delivered to the Provost-Marshal at Fortress Monroe, unless you wish to take them on board one of the transports, which would be inconvenient just now.

I remain, General, respectfully, your obedient servant,

DAVID D. PORTER,  
*Rear Admiral.*  
MAJOR-GENERAL B. F. BUTLER,  
*Commanding, etc., etc., etc.*

The abandonment of the expedition by General Butler, with his army, created the greatest indignation on the part of the

Navy, who had seen the prize so nearly within their reach. It had been the hope of the Admiral to hand over the fort to the Government as a fitting Christmas present; but now all that could be done was for the Navy to hold on in the hope that General Grant would send the troops back again, under another leader, and bring the matter to a conclusion. The Admiral sent a message as soon as possible to General Grant, requesting that this might be done, and his request was complied with, the troops re-embarked, and, under command of Brevet-Major-General Alfred H. Terry, returned to the scene of action.

In consequence of the improper interference of General Butler, in assuming command of an expedition for which General Weitzel had been designated, the former was directed to proceed to his home in Lowell, Mass., and report from that place, which virtually ended his career in the Army, while Weitzel succeeded him in command of the Army of the James. In one respect this was unfair to General Butler. It was not considered by the Army that Butler had any military ability, either natural or acquired, but he had around him men of talents and reputation, who were supposed to be his advisers. The chief of these was General Weitzel, whose counsel seems to have had great influence with Butler on all occasions, and, particularly, on the Fort Fisher expedition. Instead of asserting his claim to command the military part of the expedition, Weitzel simply figured as Butler's chief-of-staff, and while all orders were signed by General Butler, as "Major-General Commanding," General Weitzel seems to have really directed all the military operations. It was a mixed-up affair, and it was evidently General Butler's purpose to claim the credit if the fort was captured, and to let Weitzel bear the odium in case of failure.

It is not at all certain that the result of the expedition would have been different had General Weitzel had sole command of the troops, as he seems to have *advised* General Butler in all his movements. In a letter we have quoted, from General Butler to Rear-Admiral Porter, the former says:

"Both General Weitzel and myself are fully of the opinion that the place could not be carried by assault, as it was left substantially uninjured as a defensive work by the Navy fire."

Notwithstanding which statement, he inconsistently relates in the same letter that

"Gen. Weitzel advanced his skirmish line within fifty yards of the fort, while the garrison was kept in their bomb-proofs by the fire of the Navy, and so closely that three or four men of the picket line ventured upon the parapet and through the sally-port of the work, capturing a horse, which they brought off," etc.

Comment on the above is unnecessary;

yet, in the face of this condition of affairs and with the certain victory that could have been gained, General Weitzel recommended a retreat to Hampton Roads! The officer who was to have gone in command advised the one who had usurped it, that he had better abandon the field on the eve of victory and let the Navy manage the affair as best they could.

General Weitzel's course at Fort Fisher was quite in keeping with his previous record at Sabine Pass, where, with a force greatly outnumbering the enemy, he ignominiously retired, leaving two frail gun-boats to attack the Confederate works and be cut to pieces; at Baton Rouge, where he was only saved from defeat and capture by a gun-boat; and at Forts Jackson and St. Philip, which works he also reported as "substantially uninjured" by the Federal bombardment. It is possible, if General Weitzel had been in independent command with the entire responsibility resting on his shoulders, he might have viewed matters at Fort Fisher in a different light, especially when seconded by so gallant a soldier as General Curtis, who volunteered to assault the works with the military forces that were landed on the beach.

The author regrets to be obliged to criticize the acts of any officer, but the facts must be related in order to account for the utter failure of the Army in the first attack on Fort Fisher, and to show the world that the Navy was in nowise responsible for it. The official correspondence of the time contains a pretty full account of what occurred between the naval and military commanders, and a history of the Fort Fisher affair would not be complete without it.

The plea of General Weitzel, that Fort Fisher was uninjured as a defensive work, is of no avail in the light of the facts ascertained by the commanding officers of the ships. Commodore Thatcher, in his official report, says:

"On the 24th instant, an explosion took place during a heavy fire from the fleet within the main fort of the rebels, immediately after which flames were observed streaming high above the walls, naturally leading to the conclusion that we had fired the barracks and other tenements connected with the fort. During the continuance of this blaze, which continued for hours, not a gun was fired by the enemy except from the isolated work called the 'Mound Battery.'

"On the 25th instant, the range was shorter and the firing of the fleet more accurate than on the preceding day. It is my belief that not a shot or shell was fired by the advanced line of ships that did not either penetrate the earth-works of the enemy or explode within them.

"On the first day, 1,569 projectiles were fired from the 'Colorado' into the fort. This ship ('Colorado') planted 230 shot in the enemy's works on the 25th, and exploded 996 shells."

The above will give a general idea of the precision of the firing throughout the fleet.

How, under such circumstances, an engineer-officer could report the work "uninjured," especially after the strong palisades were nearly all knocked away, is beyond ordinary comprehension.

The following letter from Rear-Admiral Porter to the Secretary of the Navy gives a more detailed account of the bombardment and expresses the disappointment felt at the withdrawal of the troops :

NORTH ATLANTIC SQUADRON, }  
U. S. FLAG-SHIP "MALVERN," }  
OFF NEW INLET, December 27, 1864. }

SIR—My dispatch of yesterday will give you an account of our operations, but will scarcely give you an idea of my disappointment at the conduct of the army authorities in not attempting to take possession of the forts which had been so completely silenced by our guns; they were so blown up, burst up, and torn up, that the people inside had no intention of fighting any longer. Had the army made a show of surrounding it, it would have been ours; but nothing of the kind was done.

The men landed, reconnoitred, and, hearing that the enemy were massing troops somewhere, the order was given to re-embark.

They went away as soon as the majority of the troops were on the transports, and it coming on to blow rather fresh, about 700 were left on shore. They have been there ever since, without food or water, having landed with only twenty-four hours' rations. I opened communication with them this morning and supplied them with provisions.

To show that the rebels have no force here, these men have been on shore two days without being molested. I am now getting them off, and it has taken half the squadron (with the loss of many boats in the surf) to assist.

I can't conceive what the army expected when they came here; it certainly did not need seven thousand men to garrison Fort Fisher—it only requires one thousand to garrison all these forts, which are entirely under the guns of Fort Fisher; that taken, the river is open. Could I have found a channel to be relied on in time, I would have put the vessels in, even if I had got a dozen of them sunk; but the channel we did find was only wide enough for one vessel at right angles, and we were not certain of the soundings. There never was a fort that invited soldiers to walk in and take possession more plainly than Fort Fisher; and an officer got on the parapet even, saw no one inside, and brought away the flag we had cut down.

A soldier goes inside, through the sallyport, meets in the fort, coming out of a bomb-proof, an orderly on horseback, shoots the orderly, searches his body, and brings away with him the horse and communication the orderly was bearing to send up field-pieces.

Another soldier goes in the fort and brings out a mule that was stowed away; and another soldier, who went inside while our shells were falling, shot his musket into a bomb-proof, where he saw some rebels assembled together; he was not molested. Ten soldiers, who went around the fort, were wounded by our shells. All the men wanted was the order to go in; but because every gun was not dismounted by our fire, it was thought that the fort "was not injured as a defensive work," and that it would be to lose men to attack it. It was considered rash to attack the works with wooden ships, and even the officers who have been on the bar a long time (and witnessed the building of the works) thought that half the ships would be destroyed; and it was said that the only hope we could have of silencing the batteries was in case the powder-vessel did the damage expected.

We silenced the guns in one hour's time and had not one man killed (that I have heard of), except by the bursting of our own guns, in the entire fleet.

We have shown the weakness of this work. It can be taken at any moment, in one hour's time, if the right man is sent with the troops. They should be sent here to *stay*—to land with a month's provisions, intrenching tools, guns, and Cohorn mortars. Ten thousand men will hold the whole country. The rebels have been able to send here, all told, about 4,000 men; seventy-five of them that were sent here to observe us gave themselves up to the Navy. Two hundred and eighteen men sent on the same duty gave themselves up to our reconnoitering party, and this would have been the case all the way through.

If I can't do better, I will land the sailors, and try if we can't have full credit for what we do. I trust, sir, you will not think of stopping at this, nor of relaxing your endeavors to obtain the right kind of troops for the business, the right number, and the proper means of taking the place, even if we fail in an assault. Every attack we make we will improve in firing, and if the weather would permit, I could level the works in a week's firing,

COMMANDER (NOW REAR-ADMIRAL) JOHN C. HOWELL

strong as they are; but there is only one day in six that a vessel can anchor so close. We had a most beautiful time, and the weather for the attack was just what we wanted.

If General Hancock, with ten thousand men, was sent down here, we could walk into the fort.

I am, sir, very respectfully,

Your obedient servant,

DAVID D. PORTER,

*Rear-Admiral.*

HON. GIDEON WELLES,

*Secretary of the Navy,*

*Washington, D. C.*

ADDITIONAL REPORT OF COMMANDER J. C. HOWELL—CAPTURE OF FLAG-POND BATTERY.

U. S. STEAMER "NEREUS." }

OFF WILMINGTON, December 27, 1864. }

ADMIRAL—At 12:40 P. M., in obedience to your verbal order, I anchored off Flag-Pond battery, mooring head and stern in four and a half fathoms of water. Immediately opened fire upon the battery. No response was made by those inside; and at 2:15 P. M. a white flag was waved and the soldiers inside the fort showed themselves. A boat was immediately sent from one of the small gun-boats, the American flag planted on the fort, and the surrender of the command received by a naval officer. Some

sixty-five or seventy men, a captain and lieutenant, were captured. The "Santiago de Cuba" and "Nereus" sent boats, and, by order of Captain Glisson, the prisoners were transferred to the "Santiago de Cuba." Respectfully, Admiral,

Your obedient servant,

J. C. HOWELL,

Commander.

REAR-ADMIRAL D. D. PORTER,  
*etc., etc., etc.,*

LIST OF VESSELS, ETC., THAT PARTICIPATED IN THE  
ATTACK UPON FORT FISHER.

NORTH ATLANTIC SQUADRON,  
U. S. FLAG-SHIP "MALVERN." }  
BEAUFORT, N. C., December, 31, 1864. }

SIR—In my accounts of the actions of the 24th and 25th instant, against Fort Fisher, I omitted mentioning the names of the commanders of the different vessels, with the exception of one or two; this might look like an invidious distinction, which was not intended by any means; and though the name of each commander is well-known to the public, I desire to correct the omission, that history may give credit to those engaged in these actions.

The following are the names of all the vessels engaged with the forts, and the names of their commanders. Having so well performed their part in reducing these formidable works to a condition where they could be easily taken possession of, they are entitled to all the credit they have so well earned:

"Minnesota," Commodore Joseph Lauman; "Mohican," Commander D. Aumen; "Colorado," Commodore H. K. Thatcher; "Tuscarora," Commander J. M. Frailey; "Wabash," Captain M. Smith; "Susquehanna," Commodore S. W. Godon; "Brooklyn," Captain James Alden; "Powhatan," Commodore J. F. Schenck; "Juniata," Captain W. R. Taylor; "Kansas," Lieutenant-Commander P. G. Watmough; "Yantic," Lieutenant-Commander T. C. Harris; "Maumee," Lieutenant-Commander R. Chandler; "Mackinaw," Commander J. C. Beaumont; "Ticonderoga," Captain C. Steedman; "Pawtucket," Commander J. H. Spotts; "Shenandoah," Captain D. B. Ridgely; "Seneca," Lieutenant-Commander M. Sicard; "New Ironsides," Commodore William Radford; "Monadnock," Commander E. G. Parrott; "Canonicus," Lieutenant-Commander George E. Belknap; "Mahopac," Lieutenant-Commander E. E. Potter; "Saugus," Commander E. R. Colhoun; "Nyack," Lieutenant-Commander L. H. Newman; "Unadilla," Lieutenant-Commander F. M. Ramsay; "Huron," Lieutenant-Commander T. O. Salsbridge; "Pequot," Lieutenant-Commander D. L. Braine; "Pontoosac," Lieutenant-Commander W. G. Temple; "Nereus," Commander J. C. Howell; "Vanderbilt," Captain C. W. Pickering; "Fort Jackson," Captain B. F. Sands; "Santiago de Cuba," Captain O. S. Glisson; "Tacony," Lieutenant-Commander W. T. Truxtun; "Osceola," Commander J. M. B. Clitz; "Chippewa," Lieutenant-Commander A. W. Weaver; "Sassacus," Lieutenant-Commander J. L. Davis; "Maratanza," Lieutenant-Commander G. W. Young; "Rhode Island," Commander S. D. Trenchard; "Mount Vernon," Acting-Volunteer-Lieutenant James Trathen; "Britannia," Acting-Volunteer-Lieutenant Samuel Huse; "Quaker City," Commander W. F. Spicer; "Iosco," Commander John Guest; "Howquah," Acting-Volunteer-Lieutenant J. W. Balch; "Wilderness," Acting-Master H. Arey; "Cherokee," Acting-Volunteer-Lieutenant W. E. Dennison; "A. D. Vance," Lieutenant-Commander J. Upshur; "Moccasin," Acting-Ensign James Brown; "Gettysburg," Lieutenant R. H. Lamson; "Alabama," Acting-Volunteer-Lieutenant Frank Smith; "Keystone State," Commander H.

Porter; "Emma," Acting-Volunteer-Lieutenant T. C. Dunn; "Tristram Shandy," Acting-Ensign Ben. Wood; "Governor Buckingham," Acting-Volunteer-Lieutenant J. McDiarmid; "Little Ada," Acting-Master S. P. Crafts.

I should have mentioned that the "Saugus," Commander Colhoun, was not in the first day's fight; she arrived from Hampton Roads the morning of the 25th, just in time to take her place with the other Monitors, and anchored within eight hundred yards of Fort Fisher; though there was no response of any consequence from the fort, she did good service in knocking away traverses, etc., and only fired slowly until the army should come up. At no time during this day's work did any of the vessels open all their batteries; the order was to "fight only one division of guns from each vessel," some vessels only fired one shot or shell per minute, holding on for the moment when it was expected the troops would approach and enter, for that would have been the result. I cannot conceal my dissatisfaction, nor can the officers under my command, at the turn things have taken. My first dispatch to the department will show you how sanguine I was that the works would be ours before sunset if the troops came up. I supposed that the assaulting was a matter of course, knowing that, as soon as the troops landed and surrounded the works in the rear, the white flag would be hung out; but reports of large armies coming up to the relief of the rebels changed all the General's plans, if he ever had any. To show how absurd such apprehensions were, every rebel soldier seen gave themselves up the moment our troops were ashore, when they had nothing to fear from their own people; this would have been the case all the way through had the troops all landed.

General Butler mentions in his letter to me that he had captured Flag-Pond battery with 65 men, and Half-Moon battery with 218 men and seven officers. This is making capital out of very small material. Flag-Pond battery was some loose sand thrown up, behind which the rebels used to lie with field-pieces and fire at our blockaders when they chased runners ashore. It doesn't deserve the name of a work. Sixty-five or seventy rebels in it came forward and delivered themselves up to the Navy and were taken on board the "Santiago de Cuba." The men in Half-Moon battery (which is no work at all, and exactly like the other) came forward and delivered themselves up to the Army. They could easily have escaped had they desired to do so. There were no guns in these temporary works, and no protection in the rear. The country will scarcely be cajoled, as it has been a hundred times this war, by announcement of captures having no foundation whatever.

We all know very well that a fort on shore, unless attacked by troops at the same time ships are bombarding, will always hold out against the ships; that is, the enemy will leave the works (and let the ships fire away), and enter again when the ships have gone. We know, from the history of this war, that in no case have we failed to take a fortification where the troops did their share of the work; and this is what the troops under the command of General Butler failed to do.

The brave fellows who showed the way into the works brought off horses, mules, and flags, should have their names chronicled far and near. Had the same spirit been felt in other quarters, Christmas would have been a happier day than usual with the nation. There was evidently a misapprehension on the part of the military leader that we could not cover and protect troops on shore.

This fleet demonstrated its ability to hold on at anchor in deep water and twenty miles from shore, through a heavy gale from the southward—all gales from this direction, however, never blowing here

or blowing less as the shore is approached. The only gales to be dreaded here are the northeasters, and then the vessel would lie along the shore with their broadsides bearing on the beach.

This fleet would drive off an army of three hundred thousand men, entrenched or attacking, on such a level field as that where our troops landed.

Seven hundred men were left on the beach by General Butler when he departed for Fortress Monroe, and we had no difficulty in protecting them from the rebel army said to be in the background, which was a very small army, after all. General Bragg must have been very agreeably disappointed when he saw our troops going away without firing a shot, and to see an expedition costing millions of dollars given up when the hollowness of the rebel shell was about to be exposed.

All through this war we have lost chances never to be recovered, owing to the timidity of commanders, and their hesitating to attack what offers itself the most easy of conquest.

The report of an army coming up—which army never existed—changes the whole plan of a campaign, when in my opinion, it would be better to face the army of the enemy and see what stuff they are made of.

Here was our fleet of six hundred guns, commanding a peninsula two miles wide only, and able to cover for miles any number of troops we might land. I call this a dead failure. There is no use in mincing matters, for though the navy did all that was expected of it, or could do, we gained no results. We will only have the satisfaction of knowing that the naval part was well and handsomely done, and that we will do it again the first opportunity.

It is now blowing heavy from the southward eastward, and the larger vessels are riding it out nicely outside. This is the only wind we care for on this coast. In all the other gales we can find a lee or a partial protection.

If you, sir, have no intention of making any change in the number of vessels in this squadron, I would respectfully say, let us work this matter through; at least, defer any changes until I say that we have given up the idea of taking the forts.

The rebels will, no doubt, claim a victory. A failure is half a victory. They foreshadowed the failure in their papers, and stated what would be the cause, which came true.

I am, sir, very respectfully,

Your obedient servant,

DAVID D. PORTER,

HON. GIDEON WELLES, *Rear-Admiral.*  
*Secretary of the Navy.*

Washington, D. C.

LETTER OF REAR-ADMIRAL D. D. PORTER RELATIVE TO THE ALLEGED UNNECESSARY DELAY IN THE ATTACK.

NORTH ATLANTIC SQUADRON, }  
U. S. FLAG-SHIP "MALVERN," }  
BEAUFORT, N. C., January 9, 1865. }

SIR—I understand that there is now an attempt being made to create an impression that I delayed much longer than necessary, and could have attacked on the 18th as well as the 24th. I don't see what that has to do with the question under discussion. We went down to silence the batteries, demoralize the men in the forts, so that the Army could easily assault the works. It would be a matter of no consequence whether this was done on the 18th or the 25th, as long as we did our share of the work effectively, which, I believe, no one denies. If the Army after landing on the 25th would not undertake the assault, they would not have done so on the 18th. The delay, if any, gave them 1,000 men more, a large steamer and another transport under General Ames having come in on that day.

When General Butler was about to start from Fortress Monroe (having embarked his men in a storm, when I told him he could not possibly leave for three days), I requested him to wait a day after I sailed, as my vessels were slow, and I would have to fill up the powder-vessel; but finding that the Monitors were going, he started off for the rendezvous he had established himself, showed himself and some of the transports to the enemy, was fired at by the forts, and revealed our whole design.

Now for the log-book. On the 16th December wind was south, with a swell rolling on the beach, so that no boat could land. One hour only during the day was there a northwest breeze; on the 17th wind southwest, a heavy sea rolling in on the beach; 18th, wind east and northeast, east-northeast, east by west, blowing right on the beach; no boat could land; 19th, wind fresh, east-southeast and southwest, with a swell setting on the beach; 20th, for a little while wind west-northwest, but shifted to east-northeast, blowing fresh, heavy breakers on the beach; 21st, a gale coming on from the south and east, which ended by blowing heavy from south and west, heavy breakers on beach; 22d, wind shifted to west, all the transports out of sight; gone to make a harbor at Beaufort; at midnight wind off the land, but heavy breakers on the beach and all over the bar, heavy swell from seaward; steamed in under the land; 23d, wind north-northwest and beach comparatively smooth; steamed in and reconnoitred; still too much sea for a boat to land without capsizing; met General Butler's dispatch-boat at 5:30 P. M.; sent word to General Butler that the time was so fair that I would blow up the boat at midnight and attack in the morning. We were sixty-nine miles from Beaufort; the captain said his boat could make fourteen miles per hour; this would give him five hours to go to Beaufort, which would put him there at 11 o'clock P. M. General Butler, leaving with the transports at 6 o'clock in the morning, could have reached the bar at 1 o'clock, allowing him to make nine miles an hour, which all his transports could do. We did not attack until 12, and General Butler only came in with his own vessel and two or three transports at sunset. He saw the fort silenced, defeated, as far as the Navy was concerned, and no doubt could be left on his mind about our ability to do the same the next day. It was the preliminary attack to test the strength of the works.

The programme was made, the troops landed, and without the faintest sign of an assault beyond what was done by one or two gallant soldiers. The Army Commanders concluded that the work was "substantially uninjured as a defensive work." The letter of Lieutenant-Commander Temple, and the testimony of deserters, prove that the works would have been ours had the troops been allowed to assault, as they desired. What matters it, then, whether we attacked on the 18th or 24th? The result would have been the same. General Butler left Fortress Monroe with his troops in transports that could not lie at anchor in rough weather that was ridden out by our Monitors, tugs, and small-wheeled boats; the powder-boat "Louisiana" hanging to the stern of another vessel. General Butler, having left the ground with his vessels, where my lightest vessels held on, was not on the ground to take advantage of the first day's good weather, though that had nothing to do with the matter, as he did not do anything when the landing did take place; so what matters it when it was done?

General Butler, with all his soldier-like qualities, could scarcely be considered as good a judge of weather and the proper time of landing as myself; and, as a sensible person, would not venture to put his opinion in opposition to mine, even backed by some old sailor on his flag-ship.

I do not ascribe to him, therefore, the excuse

made for not taking Fort Fisher, when we had opened its gate for him; I attribute the report "that we had wasted time" to some of the junior members of the staff, who are not as good seamen as the General. At all events, if we lost any time in the beginning, we made up for it when we went to work; but allowing that we lost time, that the beach was as smooth as paper, it doesn't account for not taking Fort Fisher when the works were battered and burnt to that degree that there appeared no life within the walls.

The military part of the expedition was got up in most unmilitary manner; the troops were placed in inferior transports that could not condense water, and had a short allowance only on hand; the troops had four days' cooked rations (which were eaten up while lying in the storm at Hampton Roads, and ten days' other rations; there were no intrenching tools of any kind, no siege guns; the whole proceeding indicated that the General depended on the Navy silencing the works, and he walking in and taking possession. No allowance was made for contingencies, for bad weather, or for delays after getting on shore; the powder-boat when it exploded was to have done the whole thing; the walls of a strong sand fort were to have been blown down, and the rebels all to be discomfited. I thought a good deal might be done by the explosion, but still I laid in a double allowance of shell and shot, and did not depend on a doubtful experiment. Starting as that expedition did was not the way to make war; and landing troops who were full of enthusiasm, and then embarking them again when they were eager to seize the trophy laid at their feet, was not the one to improve the *morale* of the Army.

No matter what might be the delay on my part (and there was none), the General failed to take advantage of the opportunity I gave him to take the fort, when a large portion of the troops were landed and stood within one hundred and fifty feet of the works, unmolested, some few of them going on the parapet. No musketry or grape-shot were fired at him during the day; a few muskets, "about twenty," were fired after night-fall by the alarmed rebels, and one or two guns; but the "Iron-sides" opened her broadside, and the firing ceased immediately. Ten of the pickets were left by forgetfulness near the forts after night-fall, and they saw quite a number of men leave the works and embark in boats, which was the garrison leaving to prevent capture. Untillate in the day on the 26th the forts lay at our mercy, and if the men had not been brought off, the rebels would have surrendered when they marched up and the Navy opened fire. All the reasoning in the world will not make the affair appear in a better light. I have no doubt that had the Army been obliged to assault the works alone, without the fire of the Navy, they would have been well handled; but, as matters stood, we have every proof that the fort was ours.

It is useless, then, to excuse a military blunder by trying to make out that the Navy was behind time. The ships lay two months at Hampton Roads, waiting for the army to move, and we were satisfied with the reasons that General Grant gave for not sending troops. There was no necessity after all the delay for rushing into the matter unprepared, and when the weather was unfavorable; a more flimsy excuse could not be invented.

In making these statements, I do not do so for the purpose of making any excuse whatever for the naval part of the expedition; I consider that a settled thing in the estimation of the whole country; but I have so often during this war seen attempts made to cast odium on the Navy, and in self-defence I put myself on record, wishing this used only if found necessary to correct false statements.

Let quite sure the Lieutenant-General feels as I

miral, hold on where you are for a few days and I will endeavor to be back again with an increased force, and *without the former commander.*"

The remark is not very suggestive of confidence in the late management of affairs.

I am, sir, very respectfully,

Your obedient servant,

DAVID D. PORTER,

*Rear-Admiral.*

HON. GIDEON WELLES,

*Secretary of the Navy,*

*Washington, D. C.*

Mr. Secretary Welles, after reading the above dispatches, sent the following telegram in cipher to General Grant, for he was determined the Navy should succeed:

NAVY DEPARTMENT, }  
December 29, 1864. }

*Lieutenant-General Grant, City Point, Va.:*

The substance of dispatches and reports from Rear-Admiral Porter off Wilmington is briefly this: The ships can approach nearer to the enemy's works than was anticipated; their fire can keep the enemy away from their guns; a landing can easily be effected upon the beach north of Fort Fisher, not only of troops but of all their supplies and artillery; this force can have its flanks protected by gun-boats; the Navy can assist in a siege of Fort Fisher precisely as it covered the operations which resulted in the capture of Wagner. The winter also is the most favorable for operations against Fort Fisher. The largest naval force ever assembled is ready to lend its co-operation; Rear-Admiral Porter will remain off Fort Fisher, continuing a moderate fire to prevent new works from being erected, and the iron-clads have proved that they can maintain themselves in spite of bad weather. Under all these circumstances, I invite you to such a military co-operation as will insure the fall of Fort Fisher, the importance of which has already received your careful consideration.

This telegram is made at the suggestion of the President, and in hopes that you will be able at this time to give the troops, which heretofore were required elsewhere. If it cannot be done, the fleet will have to disperse, whence it cannot again be brought to this coast.

GIDEON WELLES,  
*Secretary of the Navy.*

(CONFIDENTIAL.)

NAVY DEPARTMENT, }  
Saturday, December 31, 1864. }

SIR—Lieutenant-General Grant will send immediately a competent force, properly commanded, to co-operate in the capture of the defences on Federal Point. It is expected that the troops will leave Hampton Roads next Monday or Tuesday.

This is all the information the Department has to give you, but relies upon your skill and judgment to give full effect to any more that may be arranged.

The Department is perfectly satisfied with your efforts thus far, and you will convey to all hands the satisfaction the Department feels.

I am, sir, etc.,

GIDEON WELLES.

REAR-ADMIRAL D. D. PORTER,  
*Commanding North Atlantic Blockading Squadron off Wilmington.*

After the transports had departed there was nothing for the fleet to do but to proceed to Beaufort, N. C., and fill up with

promised reinforcements. Besides, the weather was getting stormy, and it was advisable to get the smaller vessels into port.

It would not do to attempt an assault on the Confederate works with sailors, for they had been heavily reinforced by General Hoke, and, for the present, Fort Fisher was secure against attack. The troops that General Butler, in his hurry to get away, had left on the beach were embarked after the gale was over, and returned to Fortress Monroe.

This ended the first attack on Fort Fisher; which, although unsuccessful in reducing the enemy's works, was not without its valuable lessons, which contributed to cause in the second attack a final, and gratifying success.

The reports of the commanding officers

COMMODORE (AFTERWARDS REAR-ADMIRAL, JAS. F. SCHENCK.

of vessels in the North Atlantic squadron are too many and too voluminous to insert them all here, but we append some of the most graphic and interesting, which are animated with the zeal in the performance of duty which is characteristic of the naval profession :

REPORT OF COMMODORE SCHENCK, COMMANDING  
U. S. S. "POWHATAN" AND 3D DIVISION  
NORTH ATLANTIC SQUADRON.

UNITED STATES STEAMER "POWHATAN," }  
OFF BEAUFORT, N. C., January 1, 1865. }

ADMIRAL—Your General Order No. 75 did not reach me until this morning, owing to its being sent on board the "Colorado." In reply to that part of it requiring me to make a report of the part I took in the actions of the 24th and 25th ultimo, I have to state that at 1:20 P. M., on the 24th, I took my position in the line, as directed by you, with a

kedg upon my port quarter acting as a spring, letting go my port anchor with twenty-five (25) fathoms of chain, which brought my starboard broadside to bear upon the forts. I immediately opened a vigorous fire upon the batteries, paying especial attention to Fort Fisher with my 11-inch gun, and to the Mound with my two (2) 100-pounder Parrotts, and with my 9-inch guns to the batteries more immediately abreast of us. It is reported and believed on board this ship that one of the shells from our 11-inch, which exploded in Fort Fisher, set fire to it. At 2:45 P. M., finding that some of my 9-inch shell fell short, and that the "Brooklyn," being underway, occasionally interfered with my line of sight, I got underway, continuing the action, and stood into four and a-half (4½) fathoms water, from which position every shot told with great effect. From this time the action was continued underway. At 3:10 P. M. the end of our spanker gaff was shot away, and our flag came down with it; hoisted it immediately at the mizzen. About the same time, the rebel flag on Fort Fisher was shot away, and was not raised again during the action. At 3:45 P. M. the flag-staff on the Mound was shot away, which shot is claimed by our pivot rifle. At 5:20 P. M. the signal was made to discontinue the action. Hauled off, having sustained no loss of life or injury to the ship.

During this day's action we fired two hundred and thirty-six (236) 9-inch shell, fifty-four (54) 11-inch shell, and eighty-two (82) 100-pounder rifle shell. Not a shell was wasted from the 11-inch and rifles, and only a few in the early part of the action from the 9-inch guns. The starboard battery only was used in action, viz: eight (8) 9-inch guns, two (2) 100-pounder Parrott rifles, and one (1) 11-inch pivot-gun.

On the 25th I took my position as before, although nearer the batteries, and further in. The batteries between Fort Fisher and the Mound being abreast of us, my position was an admirable one for engaging these batteries, and my 9-inch guns were principally employed in doing this, as it was only by these we were annoyed, with an occasional shot from the Mound. During this day not a shot fell short, which accounts for my increased expenditure of 9-inch shell. At 2:10 P. M. we opened fire, which was replied to by the batteries abreast of us more vigorously than the day before. I am not aware of having received a single shot from Fort Fisher this day.

At 3:30 P. M. a port main shroud was shot away; soon after we were struck three (3) times in pretty rapid succession. One (1) shot struck us under No. 3 port, three feet above the water line, passing through into a store-room and depositing itself in a mattress; it is a solid 8-inch shot. Two (2) shot struck under No. 2 port twenty inches below the water line, one remaining in the side and the other going through and lodging in a beam on the orlop deck, causing the ship to leak badly. A glancing shot struck the stern of the ship, but did no material injury, and some of our running rigging shot away. At 4:10 P. M., having expended all the ammunition for 11-inch and rifles, and nearly all for my 9-inch guns, made signal, "Ammunition I am short of," which was replied to "Save some," and immediately after, "Discontinue the action," when I weighed my anchor, lifted my kedg, and hauled out of line.

During this day's action we fired four hundred and ninety-four (494) 9-inch shells, fifty-two (52) 11-inch shell, and seventy-two (72) rifle shell.

In conclusion, I beg leave to state that every officer and man on board this ship, under my command, did his duty nobly, and I have yet to hear of any complaint, either of officer or man, except as to the failure to take advantage of our two (2) days' work. With regard to the "damage apparently done to the works," I must confess that I was pay-

ing more attention to the proper management of my own battery than the general effect; but it appears to me utterly impossible that any works could withstand such a fire and not be terribly damaged; and I am also fully impressed with the belief that by a prompt and vigorous assault late in the afternoon of either day, Fort Fisher might have been taken by a comparatively small force, say one thousand (1,000) resolute men. Fort Fisher was silent, the Mound firing feebly; the only active firing from the enemy that I witnessed was from the two or three guns that annoyed me, and as long as my ammunition permitted me to fire rapidly I could keep them pretty quiet.

I have the honor to be, very respectfully, your obedient servant,

JAS. FINDLAY SCHENCK,  
Commodore Commanding U. S. Steamer  
"Powhatan," 3d Division North Atlantic Squadron.

REPORT OF COMMODORE WILLIAM RADFORD, COMMANDING U. S. S. "NEW IRONSIDES."

UNITED STATES STEAMER "NEW IRONSIDES," }  
Anchored at sea, Beaufort, bearing N. N. W., }  
Distant about five miles, Decembr 31, 1864. }

SIR—I have the honor to report that, in obedience to your orders, I took possession under the guns of Fort Fisher, from thirteen to fifteen hundred yards distant, or as near as the depth of water would permit, the Monitors "Canonicus," "Monadnock," and "Mahopac" following the "New Ironsides" in. As soon as I anchored, I opened my starboard battery, and continued a well-directed fire for some five (5) hours. Night coming on, I hauled off, in obedience to orders. On the morning of the 25th the iron-clad division again led in under the guns of Fort Fisher and took the position we occupied the day previous. The "Saugus," having arrived the night previous, took her station, and this division, in connection with the others, drove the men from the guns in the fort, they only firing one or two guns, and those at long intervals. All the Monitors were handled and fought well. Lieutenant-Commander Belknap took the in-shore berth, and is reported to have dismounted one or more guns in the fort.

Judging from the immense number of shells which struck the fort, it must have been considerably injured. Several guns were reported to have been dismounted, two explosions took place, and three fires.

The face of the fort was very much plowed up by the shells from the fleet. If the fort was uninjured (as a defensive work), no artillery known to modern warfare can injure it. My impression is, that any considerable number of troops could have stormed and taken the fort, immediately after the second day's bombardment, with but little loss.

All the officers and men belonging to the "New Ironsides" served their guns and country well; and I am greatly indebted to Lieutenant-Commander Phythian, the executive officer, for his energy and ability in getting the crew and ship in such good fighting order.

Very respectfully, your obedient servant,

WM. RADFORD,  
Commodore Commanding Iron-clad Division.  
REAR-ADMIRAL DAVID D. PORTER,  
Commanding N. A. Squadron.

REPORT OF CAPTAIN JAMES ALDEN, COMMANDING UNITED STATES STEAMER "BROOKLYN."

UNITED STATES STEAMER "BROOKLYN," }  
OFF BEAUFORT, N. C., December 30, 1864. }

SIR—I have the honor to acknowledge the receipt of General Order No. 75, which not only calls upon

they took in the action of the 24th and 25th instant, but also their impressions as to the damage done to the enemy's work, the effect of our firing, and the defensibility of the fort after we had finished the bombardment.

On the first day, the 24th, this ship was in line of attack and opened fire on Fort Fisher at 12:50 P. M., being then within good "10-second" range. The fire was kept up, with occasional intermissions for the men to rest, till 5:15 (more than four hours), when darkness intervened, and the signal was made to retire. The enemy's fire, during the whole of that time, was much less than that of one of our large ships; an occasional shot was fired from Fort Fisher; a very feeble and desultory reply to our fire was kept up by the forts between the main work and the Mound battery, which latter was heard from but five or six times during the whole afternoon.

In a word, I am satisfied from past experience, that if this ship, or any one of the larger ones, could have gotten near enough, say within two or three hundred yards, she would not only have silenced

COMMODORE (NOW REAR-ADMIRAL) WILLIAM RADFORD.

their batteries fully and entirely, but would have driven every rebel from the point.

On the second day, the 25th, this ship was sent to silence some of the enemy's earth-works, which were contiguous to the place fixed upon for the disembarking of the troops, to shell the woods, and to cover their landing. The first troops landed at about 2 P. M.; sent all our boats to assist. At 4 o'clock, just two hours after the landing commenced, the General commanding came alongside this ship and said, "It has become necessary to re-embark the troops; will you send your boats to assist?" You can judge of my surprise at the turn affairs had taken, for at that moment everything seemed propitious. The bombardment was at its height, little or no surf on the beach, and no serious indications of bad weather. Still, the order for retiring had gone forth, and our boats were employed till very late (the launch not returning till next morning) in re-embarking the troops, the surf not interfering seriously with operations till near midnight, when it

dissatisfaction, I am told, was shown by the soldiers and their officers when they were informed that they were to re-embark, and it was with some difficulty that they could be made to get into the boats. They were loud in their denunciation of the order turning them back, saying that they had gone there to take the fort, and they were going to do it before they left, etc., etc.

The next day, the 26th, the surf was too high for safe transit from the shore, and this vessel was employed in making a reconnaissance of the enemy's works. Nothing new, however, was discovered, and after exchanging a few shots with Fort Fisher we returned to the anchorage for the night. The following day all our boats were sent, and, after some difficulty, the remaining troops were safely embarked.

I have endeavored in the above to give you my ideas of the effect of our fire on the enemy's works, which was to almost silence them. In regard to the damage done, it is, under the circumstances, impossible for any one to tell without a closer inspection, for, as you remember at Forts Jackson and St. Philip, everything from the outside seemed in *statu quo*, hardly any trace of injury was apparent; but on entering and looking around, the terrible effect of the bombardment was manifest at every turn. So, too, at Fort Morgan, little or no injury could be discovered from without, but upon close examination it was found that almost every gun on its carriage was seriously damaged, if not entirely destroyed.

Now, as to the "defensibility" of the fort. The rebels, I am satisfied, considered, from the moment that our troops obtained a footing on the shore, the work (battered as it was) was untenable, and were merely waiting for some one to come and take it.

The General commanding furnishes us with proof of that fact. I think, in his letter to you, informing you of his determination to withdraw, a copy of which you sent me, he says that "three or four men ventured upon the parapet and through the sally-port of the work, capturing a horse, which they brought off; \* \* \* and also brought away from the parapet the flag of the fort." This was all done in open day and without resistance—if, indeed, there was anybody there who was disposed to question their right to such trophies. From that and other current testimony, I am satisfied that, if our troops had not been stopped in their triumphant march towards Fort Fisher, they would have been in it before dark, *in quiet possession without firing as hot.*

With great respect, I am your obedient servant,  
JAMES ALDEN, *Captain.*

REAR-ADMIRAL DAVID D. PORTER,  
*Commanding North Atlantic Squadron.*

REPORT OF COMMANDER DANIEL AMMEN, COM-  
MANDING U. S. S. "MOHICAN."

UNITED STATES STEAMER "MOHICAN," }  
OFF BEAUFORT, N. C., December 31, 1864. }

ADMIRAL—I have the honor to acknowledge the receipt of your General Order No. 75, directing commanding officers to make their report in relation to our attack on Fort Fisher and the adjacent earth-works, and also a copy of a communication to you from Major-General Benjamin F. Butler, and, in regard to some points touched upon, you request an opinion.

At about 11:30 A. M. of the 24th, the fleet got underway and stood in, in line of battle, towards Fort Fisher, bearing about west-southwest, and some six or seven miles distant. The "Mohican" was kept closely in position assigned, following the leading vessel, the frigate "Minnesota," and followed by the frigate "Colorado," and she successively by the other vessels forming the main line.

At about 1 P. M., the "Minnesota" sheered in out

of line and took up her position at anchor, opening at once on Fort Fisher, some twenty-one hundred yards distant. As per plan of battle, the "Mohican" was sheered in ahead of her, fired slowly on the fort to get a range and anchored, then opened briskly with the whole battery. The fort had opened on the "Minnesota" and on the "Mohican" previous to our anchoring. The "Colorado" sheered in ahead of us, letting go kedge astern, and then anchored and opened fiercely on the fort. The vessels forming the line then successively, with more or less success, took up their positions and opened.

The iron-clads, led by the "New Ironsides," had anchored a few minutes preceding the "Minnesota" some five or six hundred yards to the northward and westward, and were slowly getting their range when we anchored, and the outer line of vessels moved into position after the main line had anchored and opened on the Mound and several detached casemated guns.

The fire from the forts became weak as the vessels anchored and opened fire. It was soon apparent that they could not work their barbette guns without great loss of life, and the guns' crews, no doubt, retreated under shelter, with a few exceptions, where high traverses and favorable angles gave them great protection.

Different casemated guns, particularly those mounted in detached mounds and towards the Mound, continued to fire slowly, and evidently with not much effect, nor would the position of the guns served favor an effective fire. The whole body of Fort Fisher was filled with bursting shells, and only at long intervals, if at all, was a gun fired from the main work. In the meantime, owing to the wind and the set of the tide, I found that the use of the propeller and the helm would no longer enable me to bring the broadside to bear, and was obliged to weigh anchor and manoeuvre under steam, holding our position as nearly as possible, and avoiding interfering with the firing of the other vessels.

After exhausting all the filled 9-inch shells on board ready for use, the "Mohican" was withdrawn from the line at about 4:10 P. M., making signal to you of the cause, and we commenced filling shells without delay. After sunset the fleet withdrew, and the "Mohican" ran into line and anchored.

At about 9 A. M. of the 25th, signal was made to get underway and form line of battle. The "Mohican" took her position, and the fleet stood in to the attack. When nearly under fire, I was directed verbally from you "not to take position until further orders." The "Minnesota," the leading vessel of the main line, proceeded in and anchored, got underway, and, after various attempts, obtained a well-chosen position, the main line awaiting her movements. The iron-clads, having preceded during this time, were in position, firing slowly, and receiving a part of the fire of Fort Fisher. After the position of the "Minnesota" was satisfactory, I received orders from you about noon to take position close astern of the "New Ironsides," which I did without delay, firing slowly until a good range was obtained, then opened briskly on the fort. I was enabled to see, through the absence of smoke, that our fire was very effective, delivered at a short ten second range. One of the rebel guns was seen to be dismounted by our fire. Half an hour after we had anchored, the "Colorado" passed ahead of the "Minnesota" and into position, anchoring and delivering a very effective fire. The whole line soon took position, and opened very heavily, and evidently with great effect, driving the rebels from their guns, with a few exceptions, as those in casemates and other places sheltered and distant. The position of the "Mohican" enabled me to see well, as I was first at anchor within half

a ship's length of the "New Ironsides," and finding that anchoring impeded an effective use of the battery, I weighed, and, in delivering fire, drifted one or two hundred yards nearer the fort.

At 2:05 P. M. the supply of ten-second fuses and the rifle ammunition was exhausted, and the "Mohican" was withdrawn from action for the purpose of obtaining more, speaking the "Malvern" for the purpose, and obtaining none. Not being directed to go under fire again, we remained spectators near the "Minnesota" until about 4 P. M., when I received orders to aid in debarking troops, and proceeded to execute; but, instead of debarking, aided in bringing off the soldiers that had already reached the shore.

It has not been my lot to witness any operations comparable in force or in effect to the bombardment of Fort Fisher by the fleet, and I feel satisfied that any attempt to keep out of their bomb-proofs or to work their guns would have been attended with great loss of life to the rebels, and would have proven a fruitless attempt.

On the first day we delivered two hundred and seventeen (217) 9-inch shells, fifty-nine (59) one hundred-pound rifles, and eighty-nine (89) thirty-pound rifle shells. On the second day we delivered one hundred and three (103) 9-inch shells, twenty (20) one hundred-pound rifles, and twenty-five (25) thirty-pound rifle shells, making a total of five hundred and thirteen.

Our firing was effective as well as rapid, and I have to express my high appreciation of the ability and zeal of Lieutenant J. D. Marvin, the executive officer of this vessel, and of Acting-Master William Burditt, whose long and varied professional experience proved useful; Acting-Boatswain Josiah B. Aiken, owing to a deficiency of officers, had charge of the one hundred-pound rifle and served it admirably. I have to express my satisfaction at the excellent behavior of the officers and crew, and do not doubt that, when the occasion arrives when they should do so, they will stand to their guns as long as enough men remain to serve them.

In relation to the effect of the fire of the fleet on the fort, I beg leave to express my congratulations, as I did verbally on meeting you after the action. It did not require a visit to the fort to see that enormous traverses were nearly levelled, as at the southeast angle. The stockade or abatis must have been much shattered, and the debris from the parapets must have filled in the ditch greatly. I feel satisfied that everything was effected that can be by powerful batteries against a sand-work, and that we could and can keep the enemy in their bomb-proofs pending an advance of troops to the foot of the parapet.

The official letter of General Butler referred to, states that General Weitzel advanced his skirmish line within fifty yards of the fort, while the garrison was kept in their bomb-proofs by the fire of the Navy, and so closely that three or four men of the picket line ventured upon the parapet and through the sallyport of the work, is, I think, entirely confirmatory as to the effectiveness of our fire. He adds: "This was done while the shells of the Navy were falling about the heads of the daring men who entered the work;" but he appears to forget that, at any given signal from an assaulting column, this fire would cease, and the enemy be found not defending the parapet, but safely stowed away in bomb-proofs.

I do not know what more could be asked of naval guns than to afford a safe approach to the foot of the parapet, with no lines of the enemy drawn up to receive our forces; beyond that, I suppose everything would depend upon the relative forces of the combatants and the vigor of the assault; and although the work might not, in a military sense, be much injured, I would think the likelihood of car-

rying the work would be greatly increased by such disposition, without loss of life to the assaulting forces.

I have the honor to be, very respectfully, your obedient servant,

DANIEL AMMEN, *Commander.*

REAR-ADMIRAL D. D. PORTER,

*Commanding North Atlantic Squadron.*

REPORT OF LIEUTENANT-COMMANDER M. SICARD,  
COMMANDING U. S. S. "SENECA."

UNITED STATES STEAMER "SENECA,"  
December 31, 1864.

ADMIRAL—I would respectfully report that, in the action of the 24th and 25th instant, this vessel was with the vessels on the extreme right that were operating with the iron-clads.

It was evident from the first half-hour of the engagement that the enemy did not intend seriously to reply to the fire of the fleet. This vessel fired one hundred and twelve 11-inch shells and one hundred and forty 20-pounder Parrott shells at the northeast face of Fort Fisher during the two days' bombardment.

Our division fired quite slowly on the second day, and as I was quite close to the fort in the afternoon, and only fired at long intervals, the enemy fired at me several times with a heavy rifle, which, however, did no damage, being evidently hurriedly pointed. This gun could have been silenced in a few minutes if the vessels had chosen to throw away shot on it; and as it was, by an occasional shot from the division, it soon ceased its fire. I refrained from firing much towards the close of the second day's work, because I expected an assault by the troops, and I wished to save my shrapnel for the purpose of covering their advance.

I was much disappointed that the Army did not make an attempt on the fort. I saw the advance of a skirmish line, and of a reserve (comprising in all about 80 men).

They advanced quite close to the works—within pistol-shot. After that I lost sight of them until I saw two returning along the beach with the flag of the fort, which had been shot away about an hour previously by a Monitor.

At dusk, and for a short time after, there was some musketry-firing between this skirmish line and the fort, but up to dark no attempt was made by any adequate body of the Army to assault the fort.

It is my opinion that the fire of the fort was completely under the control of the fleet, and that we could stop it whenever we chose, as the fire by the two frigates on the afternoon of December 25th abundantly showed. In fact, the fort was silent nine-tenths of the time that we were engaging it. I am furthermore of the opinion that the fort could not hold out against a combined attack of the Army and Navy.

I think it a good proof of the effectiveness of the fire of the fleet, that, though our skirmishers advanced so close to the fort, no serious fire was opened on them. Indeed, I do not know from my own observation (and I was in a good position to see, that they were fired on at all in this first advance; and I scarcely think that the enemy would have suffered his flag to be upon the ground so long after it was shot away, though he must have known that we were landing troops, and that from the flag's position it was very liable to capture), unless he had been fearful to venture out and recover it under our fire.

I am, very respectfully, your obedient servant,

MONTGOMERY SICARD,

*Lieutenant-Commander, Commanding U. S. S.*

"Seneca."

REAR-ADMIRAL DAVID D. PORTER,

*Commanding North Atlantic Squadron.*

C.—FIRING NATIONAL SALUTES.—ADDITIONAL REPORTS OF OFFICERS.—OPERATIONS AFTER CAPTURE OF FORT FISHER.—CONFEDERATE GUN-BOATS AND THEIR MOVEMENTS IN JAMES RIVER.—MISCELLANEOUS OPERATIONS OF NORTH ATLANTIC SQUADRON, FROM OCTOBER, 1864, TO APRIL, 1865.

THE reader can imagine the disappointment in the North when the failure to take Fort Fisher was announced, and the numerous reports that were flying about must have considerably mystified the public. One said the whole expedition had gone back to Hampton Roads, and the chances were that, in the estimation of the public, the Navy should be consigned to oblivion. What an ignominious fate that would have been! However, the Admiral’s equanimity was not in the least disturbed. He knew that this set-back was one of the chances of war, and did not regret it, as it would show the stuff American naval officers were made of. Here was a large fleet of over seventy vessels, most of them too large to enter any harbor. They had expended nearly all their coal and ammunition; the commanders were obliged to anchor their vessels off Beaufort, N. C., on an open coast, with pro-

tection only from the northwest winds, and with a southeast gale blowing at least once a week. Yet they were ordered to repair there at once and fill up with coal and ammunition without delay.

To the Admiral’s great surprise, he found that General Butler had seized a large quantity of coal (which the Navy had in reserve) for his transports to get home with, and that the Chief of the Bureau of Equipment, through some misunderstanding, had ordered that no more be sent to Beaufort. The naval ammunition had not all arrived from Hampton Roads, and the ships bade fair to be found unprepared in case General Grant ordered the troops to return. No time was lost in sending dispatches overland to Norfolk, directing Lieutenant-Commander Nichols to hurry forward every pound of coal and ammunition available. Fortunately, a fair wind brought all this down to Beaufort, and matters looked more

cheerful; the Navy also seized the Army coal in Beaufort, upon the plea that "necessity knows no law."

It is difficult to appreciate the hardships and delays encountered by the fleet in coal-ing and getting on board the ammunition. Gale after gale swept over the coast, through all of which the ships-of-war, the coal and ammunition vessels had to ride it out. Many anchors and chains were lost, ships were damaged and boats swamped; but no one left his post. There was a dogged determination to take Fort Fisher even if the Navy had to do it alone. When the wind howled at night, and the sound of the breakers was heard booming in the distance, the Admiral would go to sleep feeling as secure as if nothing was going on, knowing that he had good sailors with brave hearts in his ships, and that no one would desert his post any more than he would in time of action. Every morning, at daylight, the officer of the watch would come down and report, "The fleet is all right, sir;" and answering, "I knew it," the Admiral would turn over and take another sleep. There was all kinds of fighting in the Navy, but this was a new phase of the matter—fighting the elements as men never fought them before. It was a new school of practice to the officers, who had been taught that ours was the worst coast in the world, and that a vessel could not there ride out a gale at her anchors. If they profited by the experience they gained on that occasion, they should feel amply repaid for any anxieties they may have felt. An officer should realize that great risks should be run to insure success. We do not wonder that Admiral Farragut said: "Porter will lose that fleet: he is rash to undertake operations when the elements are so opposed to him." It was not judicious in him, it is true, and was not an evidence of what he would have done himself; but if he had remembered the perseverance shown in getting his vessels over the bar at New Orleans, when all others had given it up, he would have said otherwise.

The moment Butler's troops re-embarked, the Admiral sent a swift steamer to General Grant and told him the situation of affairs, urging him to send "other troops and another General." Grant had made up his mind to do so the moment he heard of Butler's failure. The Admiral was daily expecting this force and dreaded its arrival before he was ready. It was a joyful sight when he saw the signals flying from each masthead, reporting, "All ready for action." He had watched all the operations with a critical eye and could see no one lagging. He endeavored, with the means at his disposal, to be impartial in supplying the materials of war. Let any one think of

a fleet of seventy vessels-of-war to be coaled and supplied with ammunition at sea, and all to be done in time to co-operate with an army that could be moved in a week! We recollect that some of the old officers with whom we sailed at different times would not go within ten miles of Cape Fear shoals in good weather, and would think any man crazy who was rash enough to anchor off Beaufort one night, much less ride out a gale there. It was rough practice, and we sincerely hope the lesson will not be lost on the young men now coming forward, many of whom participated in the events of that period. Many of them were unknown to fame, but they performed their parts well, and will show hereafter of what material the American Navy is made.

On January 8th, 1865, General A. H. Terry arrived at Beaufort, and communicated the intelligence that he was in command of the army that was to co-operate with the Navy in capturing Fort Fisher. The Navy was all ready for its share of the work; but, as a storm was approaching, the Admiral advised Terry of the fact, and suggested that his transports should go inside, where there was plenty of room for them. To his disappointment, Terry declined any advice, and decided that they should ride it out with the Navy. This beginning did not augur well for a good understanding between General Terry and the Admiral. Terry was rather cold and formal in his manner, and did not meet the Admiral at once with the frankness of a true soldier. He had, however, been a long time under the command of General Butler, who, for a wonder, had treated him very well, because he saw he was a good soldier, and a man of talent besides. Butler also relied on Terry to help him over the rough spots of soldier-life. Of course, Terry had heard *his* side of the story, and was cautious in his first approaches; but all this wore off like snow before a summer's sun when Terry found that the Admiral had but one object in view—the capture of Fort Fisher, and did not care how it was done or who got the credit of it. On his second visit Terry was quite a different man, and they soon understood each other. Here was a different person from the Admiral's last "confederate"—we wonder what Butler would say at our calling him a confederate—who was fond of display, and whose staff was exceptionally large. Terry had no staff, wore no spurs, and we do not think he owned a sword. He had a well-formed head, full of sense, which served him in lieu of feathers, sword, boots, spurs and staff—of which a General can have too many. General Terry was accompanied by General Comstock, of the Engineers, who had been on Butler's staff

in the former expedition, and this fact made the Admiral careful about expressing his views in his presence.

He learned finally to appreciate Comstock as a good officer. The Admiral was made to say a spiteful thing of him by the reporter of the War Committee, an untrue statement; and, if the General or his heirs are living when this is published, they will absolve the Admiral from saying or meaning anything disrespectful concerning him. General Grant thought highly of Comstock, and that was the latter's recommendation with the Navy. If Comstock had not been made by that same reporter of the War Committee to say some untrue things about the Admiral, the latter would have taken to him at first sight and endorsed him as an "A No. 1" engineer, as, no doubt, he was.

Admiral Porter offered to do all he could for General Terry, and explained to him how matters stood. The Admiral was not shown Terry's instructions, but afterwards saw them printed in General Grant's report. They were, in effect, "*to defer to Admiral Porter's opinions in all that related to nautical matters, and to confide in his judgment, as he was an officer who had the nerve to carry out anything he might propose.*" Had the Admiral been shown these orders, Terry and himself would have understood each other at once; but we do not think the General appreciated the Navy until after the capture of Fort Fisher, when he saw the fruits of its labors, and witnessed the unselfish sincerity with which all worked for the public good.

It was arranged that the fleet should sail from Beaufort on the 12th of January. This was done—the Navy sailing in three lines, the Army transports in another. Terry preserved quite as good order among his vessels, in the matter of sailing, as the Admiral did with his—which is saying a great deal.

At 8 o'clock A. M., on the 13th of January, 1865, the Navy commenced to land General Terry's troops, batteries and provisions, and by 2 o'clock there were 8,000 troops on shore, with all their stores and munitions-of-war. The Admiral then got underway, making signal to the fleet, and attacked the batteries, by way of diverting the minds of some of the soldiers who had been dropped into the water. So Butler would have been landed, but *he* would not be made a hero of on any such terms, and so lost his chances for the Presidency.

Quite a change had been made in the Confederate arrangements since the fleet last left Fort Fisher. The enemy gained a great deal of experience in the first bombardment, and had strengthened every weakness that had developed under the hammering from the ships. They had also

repaired all damages as far as was necessary to make the fort more enduring, and had placed a larger force within the works. The Confederate authorities had in the first instance placed too much confidence in their strong sand-works, and had no idea of the effect of a steady naval fire from three or four hundred heavy guns; but having realized this, they did the best they could in twenty days to remedy all defects. The authorities at Richmond became very much alarmed when they heard how near the fort came to falling into Federal hands, and, in consequence, President Davis selected General Bragg to command at its second defence. Bragg's name had once been a household word in the United States, but he was not so well thought of by some of the Southern politicians. It was a foregone conclusion to them that Fort Fisher would fall, under his management of affairs. To do justice to Bragg, the best General in the Southern Confederacy could not have held Fort Fisher, with the force he had, against the terrific fire that was poured upon the works by the Federal fleet.

The most important matter to the Confederates was to prevent a landing by the Federal troops, or to dislodge them as soon as they got on shore, and drive them into the sea; but this had been anticipated by having a line of sixteen or seventeen gun-boats anchored inside of the transports within one hundred yards of the beach, the "Brooklyn" with her heavy battery lying in the centre of the line; and, before a single boat was allowed to leave a transport, there was opened all along the line such a tremendous fire from the vessels reaching as far as Cape Fear River, about a thousand yards distant, that no troops could withstand it five minutes. General Terry landed his troops as rapidly as one hundred and twenty boats could put them on shore. With their intrenching tools, within an hour after landing, they had thrown up heavy intrenchments right across the land to the river, and manned them so that at the very first step the fort was comparatively cut off from all support. By two o'clock, 8,000 troops had been landed, and the artillery posted behind the breastworks. The place of landing was admirably selected, the troops being disembarked just above the neck of the Sound, interposing a small stretch of water between them and an attacking force, or compelling such force to work around the lower extreme of the Sound, either of which movements would have to be executed under the fire of the whole fleet.

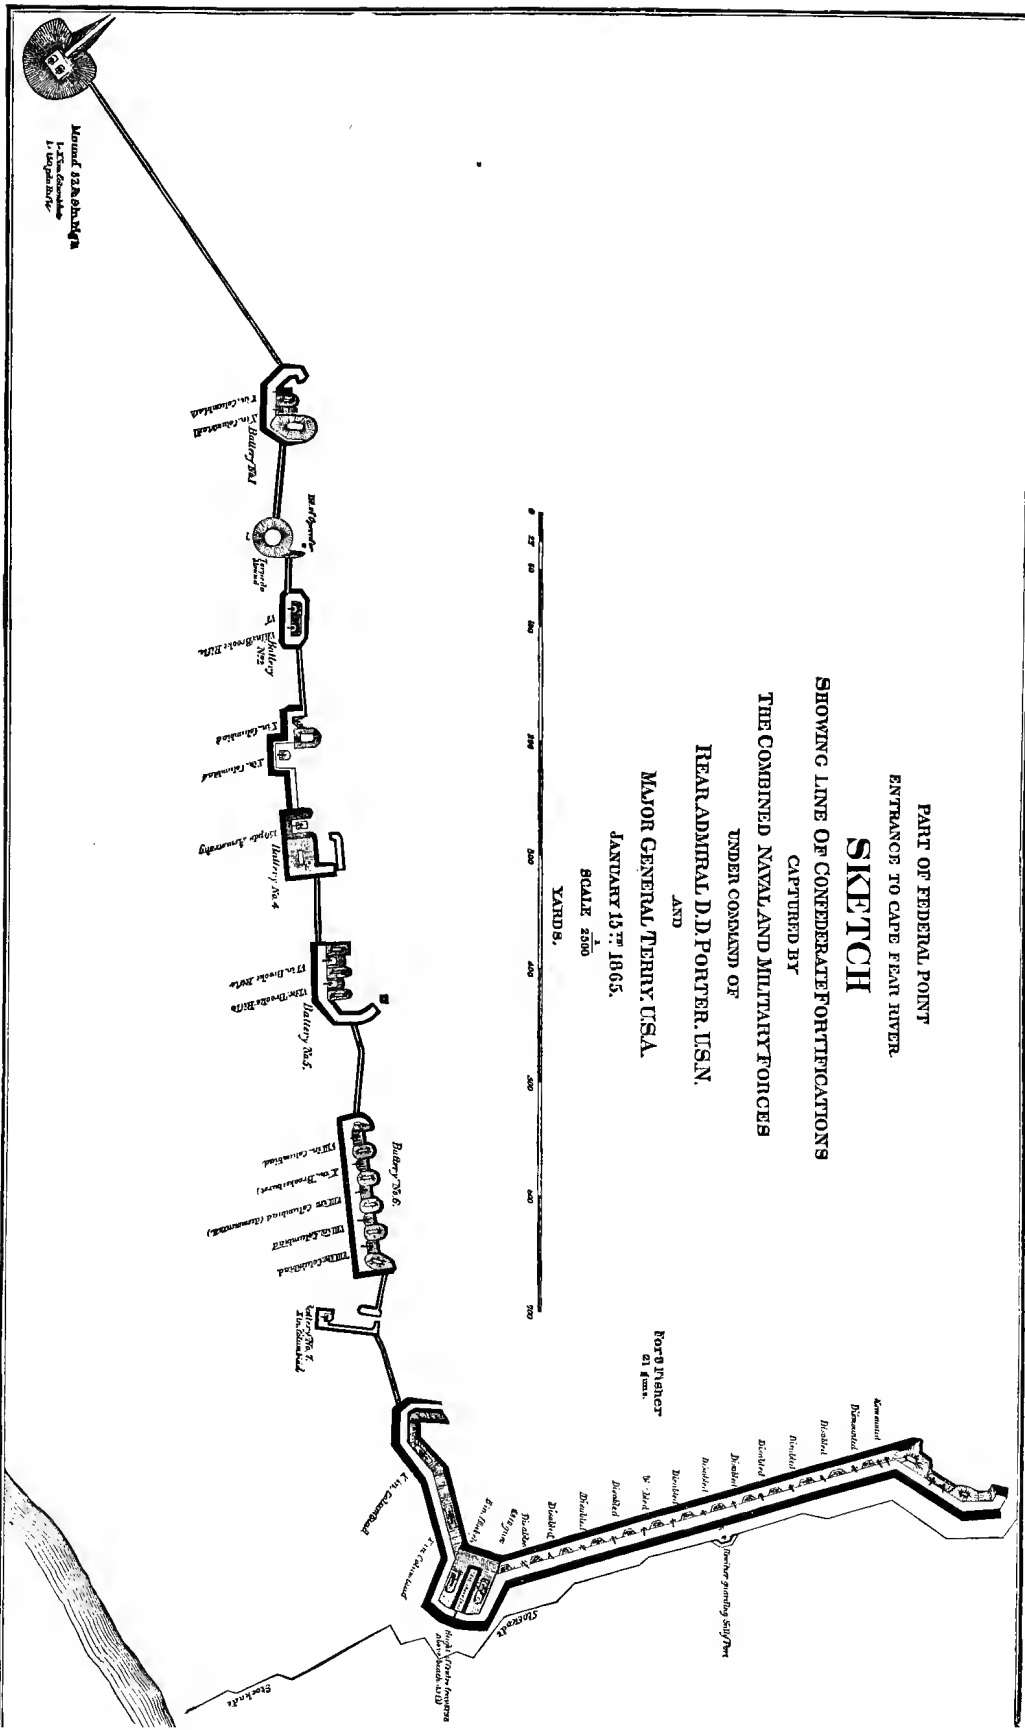

General Hoke had the immediate command of the Confederate troops, and it was his purpose to attack the Federals as they landed from the boats. His cavalry was

thrown out on the right flank to observe the Federal movements, and report the first step towards establishing a line across the neck of land to the river; but it was found in the morning that, owing to the want of vigilance on the part of the Confederates, the Federals had laid out a second line of defence during the night; General Terry's troops, passing between Hoke's cavalry and threading their way through the thick undergrowth of the marsh, made their advance to the river, and the next morning held an intrenched line on Hoke's right flank, extending nearly across the peninsula. General Bragg at first gave the order to charge the Federal troops in their works; but after a reconnaissance, which discovered the Federal force and position, he determined to withdraw, after managing to increase the number of men in the fort to 2,500, which was the force that manned the works on the second attack. The Federals, the same afternoon of the landing, pushed a reconnaissance within five hundred yards of the fort, and held the point attained.

While all these Army movements were going on, the fleet was moving into position for the attack. This time a different plan was pursued from the last. The "Iron-sides" (Commodore Radford) leading, was followed in by the Monitors "Saugus," "Canonicus," "Monadnock" and "Mahopac," taking a position within eight hundred yards of the fort, and much nearer than on the last occasion. At 7:30 A. M. the forts opened on them as they approached, but they took up their position without firing a gun until they were ready, and then opened their batteries. In this way the enemy was tempted to engage the iron-clads, so that their points of fire could be observed and the positions of their guns noted, thus showing how to dismount them. When the iron-clads were well engaged, Commander Rhind was sent in a boat to plant a buoy in four fathoms of water at the point where the "Minnesota" was to anchor, and also to serve as a guide for the other vessels.

The fleet stood in, in three columns. Line No. 1, led by the "Brooklyn," Captain James Alden, consisted of the "Mohican," Commander Daniel Ammen; "Tacony," Lieutenant-Commander W. T. Truxtun; "Kansas," Lieutenant-Commander P. G. Watmough; "Yantic," Lieutenant-Commander T. C. Harris; "Unadilla," Lieutenant-Commander F. M. Ramsey; "Huron," Lieutenant-Commander T. O. Selfridge; "Maumee," Lieutenant-Commander Ralph Chandler; "Pequot," Lieutenant-Commander D. L. Braine; "Pawtucket," Commander S. H. Spotts; "Seneca," Lieutenant-Commander M. Sicard; "Pontoosac," Lieutenant-Commander W. G. Temple; "Nereus," Commander J. C. Howell.

Line No. 2, "Minnesota," Commodore Joseph Lanman leading, consisted of the "Colorado," Commodore H. K. Thatcher; "Wabash," Captain M. Smith; "Susquehanna," Commodore S. W. Godon; "Powhatan," Commodore J. F. Schenck; "Junata," Lieutenant-Commander T. S. Phelps; "Shenandoah," Captain D. B. Ridgley; "Ticonderoga," Captain Charles Steedman; "Vanderbilt," Captain C. W. Pickering; "Mackinaw," Commander J. C. Beaumont; "Tuscarora," Commander J. M. Frailey.

Line No. 3, "Santiago de Cuba," Captain O. S. Glisson leading, consisted of the "Fort Jackson," Captain B. F. Sands; "Osceola," Commander J. M. B. Clitz; "Sassacus," Lieutenant-Commander J. L.

LIEUTENANT-COMMANDER (NOW COMMODORE) D. L. BRAINE,  
COMMANDING U. S. S. "PEQUOT"

Davis; "Chippewa," Lieutenant-Commander E. E. Potter; "R. R. Cuyler," Commander C. H. B. Caldwell; "Maratanza," Lieutenant-Commander George W. Young; "Rhode Island," Commander S. D. Trenchard; "Monticello," Lieutenant W. B. Cushing; "Alabama," Acting-Volunteer-Lieutenant A. R. Langthorne; "Montgomery," Acting-Volunteer-Lieutenant T. C. Dunn; "Iosco," Commander John Guest.

The reserve division, under Lieutenant-Commander J. H. Upshur, in the "A. D. Vance," consisted of the "Britannia," Acting-Volunteer-Lieutenant W. A. Sheldon; "Tristram Shandy," Acting-Volun-

teer-Lieutenant F. M. Green; "Lillian," Acting-Volunteer-Lieutenant T. A. Harris; "Fort Donaldson," Acting-Master G. W. Frost; "Wilderness," Acting-Master H. Arey; "Aries," Acting-Volunteer-Lieutenant F. S. Wells; "Governor Buckingham," Acting-Volunteer-Lieutenant J. Macdiarmid. The "Nansemond," Acting-Master J. H. Porter; "Little Ada," Acting-Master S. P. Crafts; "Eolus," Acting-Master E. S. Keyser, and "Republic," Acting-Ensign J. W. Bennett, being used as reserve vessels.

Some of the vessels that accompanied the last expedition were badly damaged in various ways. The "Sassacus" had both rudders disabled, but her energetic commander, Lieutenant-Commander J. L. Davis, was ready in time. The "Mackinaw," Commander J. C. Beaumont, had one of her boilers knocked to pieces, but her commander would go with but one boiler. The "Osceola," Commander J. M. B. Clitz, in the same condition—one boiler smashed up with shot and a hole near the bottom—was ready for anything, and no complaint was heard from any one. With such a disposition on the part of the officers, the Admiral anticipated the most favorable results.

The different divisions, having formed into line of battle, steamed towards Fort Fisher, the "Colorado" leading (the "Minnesota" having a hawser around her propeller). The vessels took their positions handsomely—having had some practice at that place—and delivered their fire as they fell in. The rapid fire of the Monitors and "Ironsides" kept the enemy partly away from their guns, and they inflicted no damage on the fleet, their firing being very unsteady—indeed, it was strange how they could fire at all. After the first and second lines got fairly anchored in position, the bombardment was very rapid and severe. The fire was continued without intermission from 4 o'clock P. M. until some time after dark, when the wooden vessels were ordered to haul out and anchor. The Monitors and "Ironsides" were directed to keep up the fire during the night. The enemy had long ceased to respond, and kept in his bomb-proofs. It was seen that the bombardment had damaged some of the enemy's guns, and it was determined, before the Army went to the assault, that there should be no guns within reach to arrest its progress. Having found that the enemy could still bring some heavy guns to bear, which annoyed the fleet somewhat, the Admiral determined to try another plan, and, on the morning of the 14th, ordered in all the small gun-boats carrying 11-inch guns, to fire slowly and try to dismount the guns on the face of the works where the assault was to be made. The

"Brooklyn" was ordered to throw in a pretty quick fire, to keep the enemy from working their guns. The attack was commenced at 1 P. M. and lasted till long after dark. One or two guns only were fired this day from the upper batteries, inflicting no serious damage on any of the vessels, except cutting away the maintopmast of the "Huron" and hitting the "Unadilla" once or twice. These guns were always silenced when a rapid fire was opened. The attack of the gun-boats lasted until long after dark, and one vessel was employed at a time (an hour each) in firing throughout the night.

On this evening General Terry went on board to see the Admiral and arrange the plan of battle for the next day. The troops had got rested after their long confinement on shipboard and sea-voyage, and had recovered from the drenching they received when landing through the

SURGEON (NOW MEDICAL DIRECTOR) GEORGE MAULSBY,  
FLEET-SURGEON.

surf. Having been long enough on their native element, they were eager for the attack. It was arranged between the General and Admiral that the ships should all go in early, and fire rapidly through the day until the time for the assault arrived. The hour named was 3 P. M.

The Admiral detailed 1,600 sailors and 400 marines to accompany the troops—the sailors to *board* the sea-face, while the troops assaulted on the land side. Many of the sailors were armed with cutlasses and revolvers, while a number had Sharpe's rifles or short carbines. We insert the order of attack on the fort, and the manner of approaching it.

The Admiral and General had a perfect understanding and established a system of

signals by the Army Code, by which they could converse at pleasure, even amid the din of battle, when they were nearly a mile apart. At 9 A. M., on the 15th, the fleet was directed by signal to attack in three lines, or assume position, as shown in the plan. The vessels all reached their stations at about 11 A. M., and each opened fire when anchored. The same guns in the upper batteries opened again this day, and with some effect; but no vessel was injured enough to interfere in the least with her efficiency. The fire was kept up furiously all day. The Mound Hill Battery returned a rather galling fire with its heavy guns, but the enemy was driven from its works into the bomb-proofs, so that no vessel was in the least disabled. The signal for the vessels to "change the direction of their fire," so that the troops might assault, was expected at 2 o'clock. The sailors and marines by digging ditches, or rifle-pits, had worked to within two hundred yards of the fort, and were all ready. The troops, however, did not get into position until later, and the signal was not made until 3 o'clock. The vessels then changed their fire to the upper batteries, all the steam-whistles were blown, and the troops and sailors dashed ahead, nobly vying with each other in the endeavor to reach the top of the parapet. The fleet had evidently injured all the large guns, so that they could not be fired to annoy any one. The sailors went to the assault by the flank along the beach, while the troops rushed in at the left through the palisades that had been knocked away by the fire of the fleet. All the arrangements on the part of the sailors were well carried out. They succeeded in getting up to within a short distance of the fort, and lay securely in their ditches, with but a few killed or wounded to this point. The marines were to have held the rifle-pits and cover the *boarding party*, but failed to do so. On rushing through the palisades, which reached from the fort to the sea, the head of the column received a murderous fire of grape and canister, which failed, however, to check the officers and sailors who were leading in their advance. The parapets then swarmed with Confederates, who poured in a destructive fire of musketry. At this moment, had the covering party of marines performed their duty, every one of the enemy on the parapet must have been killed or wounded.

The Admiral witnessed the whole affair, saw how recklessly the enemy exposed themselves, and what an advantage they gave the marine sharpshooters, whose guns were scarcely fired, or fired with no precision. Notwithstanding the hot fire, the officers and sailors in the lead rushed on, some even reaching the parapet, while a large

number reached the ditch. The advance was swept from the parapet like chaff; and, notwithstanding all the efforts made by commanders of companies to stop them, the men in the rear, seeing the slaughter in front, and that they were not covered by the marines, commenced to retreat; and, as there is no stopping a sailor if he fails on such an occasion at the first rush, the assault on this front had to be abandoned.

In the meantime, the troops on their side were more successful. The Confederates seeing so large a body of men advancing on the sea-front, were under the impression that this was the main attack. They, therefore, concentrated their forces at that point, and when they gave three cheers, thinking they had gained the day, they received a volley of musketry in their backs from the gallant soldiers who had been successful in gaining the highest parapets. Then commenced such a system of fighting as has seldom been beaten. The soldiers had gained two traverses, while the Admiral directed the "Ironsides" to fire on the traverses occupied by the enemy. Four, five and six traverses were carried by the troops in the space of an hour. These traverses were immense bomb-proofs, about sixty feet long, fifty feet wide and twenty feet high; seventeen of them in all being on the northeast face. Between each traverse, or bomb-proof, were one or two heavy guns. The fighting lasted until 10 o'clock at night, the "Ironsides" and the Monitors firing through the traverses in advance of the troops, while the level strip of land called Federal Point was enfiladed by the ships, to prevent reinforcements reaching the enemy. General Terry himself went into the fort, and the Admiral kept up constant communication with him, until three hearty cheers, which were taken up by the fleet, announced the capture of Fort Fisher. Finding that the General felt anxious about the enemy receiving reinforcements, the sailors and marines relieved the troops in the outer line of defences, and a large number of soldiers were thus enabled to join the forces in the fort. It will not be amiss to remark here, that we never saw anything like the fearless gallantry and endurance displayed by the troops—they fought like lions, and knew no such word as fail. They fought and chased the enemy from traverse to traverse, until they finally reached Battery Lamb, or the Mound, a work extending about 1,400 yards. At this point the Confederates broke and fled to the end of Federal Point. The victorious troops followed, and the enemy surrendered at discretion.

Thus ended one of the most remarkable battles on record, and one which did more damage to the Confederate cause than any

that took place during the war. Twenty-five hundred Confederates manned Fort Fisher: eighteen hundred were taken prisoners; the rest were killed or wounded.

We visited Fort Fisher and the adjoining works, and found their strength greatly beyond what had been conceived. An engineer might be excused for saying, they could not be captured except by regular siege. We wonder even now how it was done. The work was really stronger than the Malakoff Tower, which defied so long the combined power of France and England, and yet it was captured by a handful of men under the fire of the guns of the fleet, and in seven hours after the attack began in earnest.

We cannot say too much in praise of the conduct of the fleet during the time it had been engaged in these operations. We do not know an officer in command who did not perform his duty to the best of his ability. There may have been some who did better than others, but, after all, that may be a mere matter of opinion, or a matter of prejudice or partiality—all did their best. To make invidious distinctions would be causing matter for dispute, and we shall be content with saying that the Government might well be proud of those to whom it intrusted the command of its vessels.

The result of the attempt on the sea-face was not what the Admiral expected when he planned the attack; but it would have succeeded without severe loss had the marines done better. As it was, the Navy lost heavily, including some gallant officers who fell on the ramparts. The success was so great that the country should not complain. Men, it seems, had to die that this Union might live, and the Constitution under which we have gained our prosperity be maintained. We regret the dead heroes and shed a tear over their remains; but, if the Confederates had succeeded, we should have nothing but regret left us, and our lives would have been spent in terror and sorrow.

As soon as the forts were taken, the light-draft gun-boats were pushed into the river—that is, as soon as they could find and buoy out the channel and take up the torpedoes, which were very thick. The searchers found the wires leading to many, and underran them with boats. The torpedoes were too heavy to lift with ordinary means, and some of them must have contained at least a ton of powder. The Confederates seemed disposed to pay the fleet back for the famous torpedo "Louisiana," which exploded in their harbor and did them no harm. There was some difficulty in getting the vessels across the bar and into the river, as the channel was very narrow and the bar very shoal; a few of them got around but were hauled off again with the

tide. After three of the gun-boats were inside the bar and under the Mound, the Confederates prepared to evacuate Fort Caswell. Two steamers near the fort (the "Tallahassee" and "Chickamauga") were set on fire and blew up with a heavy explosion after the enemy had set fire to the fort. This was followed by some minor explosions. The barracks were apparently in flames all night, and some small works between Fisher and Caswell were blown up. The enemy commenced burning up everything in Wilmington, and were getting away as fast as they could. In the meantime a large force of gun-boats occupied the river between Caswell and Wilmington. The latter place was hermetically sealed against

ACTING-ENSIGN (NOW COMMANDER) ROBLEY D. EVANS, U. S. N.  
OF THE U. S. S. "POWEHATAN."

blockade-runners, and no "Alabamas" or "Floridas," "Chickamaugas" or "Tallahasseees" could ever fit out again from that port. Forty-four thousand shells were expended in the bombardment and as many more were left on hand. The fleet was much indebted to the Bureau of Ordnance for so promptly supplying it with guns and ammunition.

The number of guns captured in Fort Fisher amounted to seventy-five, many of them superb rifle-pieces of very heavy calibre. All those facing the ships were dismantled or injured, so they could not be used, or the muzzles filled up with sand or dirt, which rendered them useless. There were only two that were not rendered perfectly useless.

LIST OF OFFICERS KILLED AND WOUNDED  
DURING THE ATTACK UPON FORT FISHER.

*Killed in the assault*—Lieutenant S. W. Preston, Flag-Lieutenant; Lieutenant B. H. Porter, commanding flag ship "Malvern"; Assistant Surgeon Wm. Longshaw, U. S. steamer "Minnesota"; Acting-Ensign Robert Wiley, U. S. steamer "Montgomery."

*Killed by explosion of magazine in Fort Fisher, January 16*—Acting-Assistant Paymaster R. H. Gillett, U. S. steamer "Gettysburg"; Acting-Ensign J. S. Leighton, U. S. steamer "Gettysburg."

*Wounded in the assault*—Lieutenant-Commander W. N. Allen, U. S. steamer "Tuscarora"; Lieutenant G. M. Bache, U. S. steamer "Powhatan"; Lieutenant R. H. Lamson, commanding U. S. steamer "Gettysburg"; Acting-Volunteer Lieutenant F. F. Baur, U. S. steamer "Colorado"; Ensign R. D. Evans, U. S. steamer "Powhatan"; Ensign Ira Harris, U. S. steamer "Powhatan"; Acting-Ensign L. R. Chester, U. S. steamer "Pontoosuc"; Acting-Ensign James Bertwistle, U. S. steamer "Minnesota"; Acting-Ensign F. A. O'Connor, U. S. steamer "Minnesota"; Acting-Ensign G. W. Coffin, U. S. steamer "Gettysburg"; Acting-Ensign B. Wood, U. S. steamer "Tristram Shandy"; Acting-Master A. J. Louch, U. S. steamer "Mackinaw"; Acting-Master's Mate E. K. Green, U. S. steamer "Mackinaw"; Acting-Master's Mate J. M. Simms, U. S. steamer "Minnesota"; Acting-Master's Mate A. F. Aldridge, U. S. steamer "Tuscarora."

Total officers killed and wounded, 21.

KILLED, WOUNDED AND MISSING IN THE ATTACK  
UPON FORT FISHER, INCLUDING THE EX-  
PLOSION OF THE MAGAZINE.

Flag-ship "Malvern," 3 killed and 1 wounded; "Saugus," 1 wounded; "Pontoosuc," 7 wounded; "Kansas," 1 wounded; "Tacony," 2 killed and 12 wounded; "Canonicus," 3 wounded; "Ticonderoga," 1 killed and 6 wounded; "Iosco," 2 killed and 12 wounded; "Shenandoah," 6 killed and 5 missing; "Tuscarora," 3 killed and 12 wounded; "Rhode Island," 8 killed and 2 wounded; "Huron," 5 wounded; "Montgomery," 2 killed and 4 wounded; "Monticello," 4 killed and 4 wounded; "Wabash," (incomplete) 12 wounded; "Tristram Shandy," 2 wounded and 1 missing; "Susquehanna," 3 killed and 15 wounded; "Juniata," 5 killed and 10 wounded; "Santiago de Cuba," 1 killed and 9 wounded; "Fort Jackson," 1 killed and 10 wounded; "Yantic," 2 killed and 2 wounded; "Powhatan," 3 killed, 19 wounded and 7 missing; "Minnesota," 13 killed and 23 wounded; "Colorado," 3 killed, 14 wounded and 8 missing; "Nereus," 3 killed and 3 wounded; "Pequot," 3 killed and 5 wounded; "Gettysburg," 6 killed and 6 wounded; "Mackinaw," 2 wounded; "Mohican," 12 killed.

Total—Killed, 74; wounded, 213; missing, 22.—Total killed, wounded and missing, 309.

GENERAL ORDER ON SECOND ATTACK.

[SPECIAL ORDER NO. 10.]

NORTH ATLANTIC SQUADRON, }  
FLAG-SHIP "MALVERN," January 9, 1865. }

The following vessels will form a separate line, under the command of Lieutenant-Commander Uphur, for the purpose of landing the provisions and stores for the army, viz.: "A. D. Vance," "Fort Donaldson," "Aries," "Enma," "Lillian," "Tristram Shandy," "Britannia" and "Wilderness." The "Nansmond," "Moccasin" and "Little Ada" will act as messengers, as before.

It is proposed now that the troops shall be first landed before any attack is made on the fort by all the vessels. The "Brooklyn" will lead in with the vessels attached to her line, and anchor in a posi-

tion to cover the landing, and drive away the rebels, if there are any. The landing will probably be made at the same place as before.

Line No. 2 will anchor where their guns can reach (somewhere in about five fathoms water and not less), and where they can fire clear of the first line.

Line No. 3 will keep underway a short distance outside the other lines, ready to act as circumstances may require.

The transports will anchor in line outside line No. 1, and be ready to deliver their troops as fast as the boats go alongside. All the vessels will lower their boats as quick as they anchor, and send them to the transports; line No. 3 doing the same.

When the troops are all landed, the boats will be hoisted upon the port side, and those belonging on the starboard side will be secured alongside for towing, so that they can be manned at a moment's notice when the assault comes off.

If practicable, the "New Ironsides" and the Monitors will be ordered in to bombard the fort and dismount the guns while the troops are getting on shore. This will be done when the signal is made to the "New Ironsides" to attack, the Monitors following her.

While the vessels are firing, the commanders will keep an intelligent officer at the maintopmast-head to regulate the firing and tell the effect of the shot. The commanders of smaller vessels will have a like look-out kept at the mainmast-head. The officers aloft will note all information that may be valuable, as they can see what is going on in the river inside.

DAVID D. PORTER,

Rear-Admiral, Commanding North Atlantic Squadron.

[GENERAL ORDER NO. 78.]

NORTH ATLANTIC SQUADRON, }  
FLAG-SHIP "MALVERN," January 2, 1865. }

The order of attack for the next bombardment of Fort Fisher will be as follows:

The "New Ironsides," Commodore Radford, will lead in, and anchor with the centre of the northeast face of the fort bearing west by south half-south, the Monitors following. The iron-clads will anchor in succession, as follows: The "Mahopac," "Canonicus," and "Saugus" will anchor in a line close together, between the "New Ironsides" and the beach; and the "Monadnock" will select a position in the same line, so that she will have room to swing and bring both turrets to bear.

When these vessels are fully engaged, signal will be made to the "Brooklyn" to go in and engage the enemy, taking a position at anchor close under the stern of the "New Ironsides," with her broadside bearing on Fort Fisher. The "Brooklyn" will be followed in by the "Mohican," "Tacony," "Kansas," "Unadilla," "Huron," "Maumee," "Pawtucket," "Seneca," "Pontoosuc," "Nyack," "Yantic," and "Nereus," in the order in which they are marked on the chart. The line, when anchored, should be with the "Brooklyn," bearing about south by east. This will be line-of-battle No. 1.

Line No. 2 will take position when the leading vessel of line No. 1 is anchored, with the "Minnesota" leading, "Colorado" next, "Wabash," "Susquehanna," "Powhatan," "Juniata," "Shenandoah," "Ticonderoga." After the "Minnesota" anchors in her old place (or closer), where her guns will clear the "New Ironsides," the "Colorado" will pass her and anchor, both ships firing slowly to get their range as they go in. When the "Colorado" is anchored and firing with effect, all the vessels of line No. 2 will anchor in position, exactly as they did on a previous occasion.

The "Vanderbilt" will then anchor a little out-

side of and between the "Colorado" and "Wabash," "Mackinaw," between "Susquehanna" and "Wabash," and "Tuscarora" between "Juniata" and "Powhatan."

When line No. 2 has anchored, line No. 3 will take position, the "Santiago de Cuba" leading, which vessel will anchor with the centre of the southeast face of Fort Fisher bearing northwest half-north, or just ahead of "Ticonderoga." The "Fort Jackson" will then pass the "Santiago de Cuba," and anchor as close as she can get; the "Osceola" will pass the "Fort Jackson" and anchor, and so on with the "Sassacus," "Chippewa," "R. R. Cuyler," "Maratanza," "Rhode Island," "Monticello," "Alabama," "Montgomery," "Keystone State," "Quaker City," ending with the "Iosco."

When the signal is made to form line of battle, all the vessels of lines Nos. 1, 2 and 3 will fall in line in the order mentioned; the "Brooklyn" leading line No. 1, the "Minnesota" line No. 2, and the "Santiago de Cuba" line No. 3. When any vessel is missing, the vessels behind must close up. All the vessels can with safety get in closer than they did the last time. For this they must depend on the lead and past experience.

All firing against earth-works, when the shell bursts in the air, is thrown away. The object is to lodge the shell in the parapets, and tear away the traverses under which the bomb-proofs are located. A shell now and then exploding over a gun *en barbette* may have good effect, but there is nothing like lodging the shell before it explodes. The red lines on the chart indicate the object each vessel is to fire at, as near as we can make out the works.

In case it is determined to land the troops before engaging the forts, signal will be made. Each reserve vessel will have her boats in readiness to disembark the troops as rapidly as possible. When the signal is made, they will run in and anchor close to the shore, covering the landing with their guns. The paddle-steamers will not use their paddle-boats (but only their davit-boats) unless ordered to do so. All these things will be regulated by signal. All the precautions observed in General Order No. 75 will be observed on this occasion.

Fire deliberately. Fill the vessels up with every shell they can carry, and fire to dismount the guns, and knock away the traverses. The angle near the large ships has heavy casemates; knock it away. Concentrate fire always on one point. With the guns disabled, the fort will soon be ours.

No vessel will retire from line unless in a sinking condition, nor without permission.

So many accidents have happened with the 100-pounder rifles that I recommend, if they be used at all, the charges be reduced to seven (7) pounds; and as the time-fuzes burst after leaving the gun, fire them with a patch on or fire percussion shell.

When the troops are ready for the assault, signal will be made to "change the direction of fire," by hoisting general signal 2211, and blowing the steam-whistle, which whistle every vessel will repeat, and officers will be stationed at the hatches to pass the word. When the signal 2211 is made, all the vessels will stop firing at Fort Fisher, and concentrate their fire on the batteries to the left or above it; the "Tacony," "Kansas," "Unadilla," "Huron," "Maumee," "Pawtucket," "Seneca," "Pontoosuc," "Nyack," "Yantic" and "Nereus," giving their guns *great* elevation, and firing over to reach the river, to disturb any rebel troops that may be resting there. To avoid accidents by firing over our troops by these last-mentioned vessels, the patches will not be taken off the shell, until the assaulting column is in the works.

If the troops are driven back, the firing will be directed on Fort Fisher again when the signal is made, and this plan will be followed from time to time as assaults are made and repulsed.

There is one thing to which I beg leave to call

attention. When the range is once obtained, the officer of division shall note in a book the distance marked on the sight, so that he will not forget it. When the smoke becomes thick, and objects dim, a reference to the notes and an examination, to see if the sight is properly set, will assist very much in insuring accuracy of fire.

DAVID D. PORTER.

*Rear-Admiral, Commanding North Atlantic Squadron.*

REAR-ADMIRAL PORTER'S LANDING ORDERS.

FLAG-SHIP "MALVERN,"  
OFF NEW INLET, N. C., January 15, 1865. }  
[Landing Orders.]

The landing party will land out of gun-shot of the fort, and as fast as the boats get rid of their loads they will be shoved off, and the boat-keepers will pull off and hang to the stern of the "Nansemond," which vessel will be anchored off the landing. When the men are landed they will be formed and kept together, the marines forming by themselves.

Lieutenant S. W. Preston will have charge of the men with shovels. He will advance as near the fort as he safely can, without running the risk of a single man, and commence throwing up rifle-pits rapidly. He will first advance with a thin line of sappers, and as soon as he can get a ditch deep enough for shelter, the marines will go in, in thin squads, and occupy them. As the sand is thrown up high enough to conceal a person, other sappers will come in behind and dig it deeper. There will be required a three and a half feet ditch, and about the same height of earth thrown out. The object is to get as close to the fort as possible, and with perfect safety, so that the men will have shelter to go to in case of the enemy firing grape and canister.

The officers leading the men must make them keep under command—not show themselves until the signal is made and the Army moves to the assault. No move is to be made forward until the Army charges, when the Navy is to assault the sea or southeast face of the work, going over with cutlasses drawn and revolvers in hand. The marines will follow after, and when they gain the edge of the parapet, they will lie flat and pick off the enemy in the works. The sailors will charge at once on the field-pieces in the fort, and kill the gunners. The mouths of the bomb-proofs must be secured at once, and no quarter given if the enemy fire from them after we enter the fort. Any man who straggles or disobeys orders is to be sent to the rear under a guard. The men must keep their flags rolled up until they are on top of the parapet and inside the fort, when they will hoist them.

Remember, the sailors, when they start to board, are to go with a rush, and get up as fast as they can. Officers are directed not to leave their companies under any circumstances, and every company is to be kept together. If, when our men get into the fort, the enemy commence firing on Fort Fisher from the Mound, every three men will seize a prisoner, pitch him over the walls, and get behind the fort for protection, or into the bomb-proofs. The fleet-captain will take charge of the landing party, and all the commands will report to him. He represents me on this occasion, and all his orders will be promptly obeyed.

DAVID D. PORTER, *Rear-Admiral.*

REPORT OF FLEET-CAPTAIN K. R. BREESE.

FLAG-SHIP "MALVERN,"  
OFF FORT FISHER, N. C., January 16. }

SIR—I have to report that, in obedience to your order, I represented your flag in commanding the assault on Fort Fisher, and beg leave to state as follows:

Lieutenant S. W. Preston had charge of a force

of about ten men from each ship, with shovels and picks, and threw up within 600 yards of the fort a well-protected breastwork, and from that gradually advanced to within two hundred yards a succession of rifle-pits, which were most promptly occupied by a line of skirmishers composed of marines under Second-Lieutenant L. E. Fagan, United States marine corps. The manner in which this was done reflects most creditably upon Lieutenant Preston. As the advance was made, he came to me and reported his work finished, and asked that he might be employed in any way. Lieutenant Preston's services were most useful to me, and in his last moments he attempted to send me word that he had carried out my orders.

The assaulting party was composed of about sixteen hundred seamen and four hundred marines, divided into four lines, as follows: First line, composed of marines, Captain L. L. Dawson, United States marine corps, commanding. Second line, composed of the landing party of the first and fourth divisions of the squadron, Lieutenant-Commander C. H. Cushman, commanding. Third line,

LIEUT. SAMUEL W. PRESTON OF ADMIRAL PORTER'S STAFF.  
(KILLED IN THE ASSAULT ON FORT FISHER).

composed of the landing party of the second division of the squadron, commanded by Lieutenant-Commander James Parker, who most generously waived his seniority upon reading your order that I should represent you on shore. Fourth line, composed of the landing party of the third division of the squadron, commanded by Lieutenant-Commander T. O. Selfridge. The second, third, and fourth lines were of about equal strength.

It was intended that the men should assault in line, the marines acting as sharpshooters, and the different lines were to charge over them; but from the difficulty I had of informing myself of the time when the army was to assault, which was to guide our movements, that moment found us too far off to move to the attack unless under cover. When I discovered that the army was moving to attack the fort, I ordered the men to advance by the flank, along the beach, hoping to be able to form them for the assault under cover of the marines; but four hundred yards' distance, exposed to a most

galling fire of musketry, threw a portion of the marines into the first line, and the rest of them did not take position as they should.

The second and third lines came along, and the heads of the three lines joined and formed one compact column, which, filing up to the sea-face of Fort Fisher, assaulted to within fifty yards of the parapet, which was lined with one dense mass of musketeers, who played sad havoc with our men. Although exposed to a most severe fire from the enemy, the men were rallied three times under the personal encouragement and exposure of their commanding officers, but failed to gain much ground. A few officers and men reached the parapet. I don't know their names, but they will doubtless be found in the reports of the officers accompanying the party.

The marines, having failed to occupy their position, gave the enemy an almost unmolested fire upon us.

Men armed with Sharpe's rifles, and the few marines in the front, opened fire, but it was too feeble to be of avail. Finding the rear of the men retreating, I hastened toward it to form them under cover, and have them use their rifles; but they were too far distant for me to reach them, and I accordingly returned to a position near the works. As I did so, the remaining men, notwithstanding all attempts to stop them, fled, with the exception of about sixty, among whom were Lieutenant-Commanders James Parker, C. H. Cushman, T. O. Selfridge, and M. Sicard, and Lieutenants N. H. Farquhar and R. H. Lamson, the latter of whom was wounded, and several volunteer officers whose names I unfortunately do not know.

The fire of the enemy was so severe that the few of our men remaining had to seek such cover as they could, and there remained until dark, when a demonstration upon the part of the rebels induced all to make a rush, and most succeeded in escaping.

The country will regret the death of Lieutenant S. W. Preston, acting as my aide in carrying orders, who was killed in front; and of Lieutenant B. H. Porter, killed in the early assault, at the head of the column; and of several volunteer officers, seamen, and marines, killed during the attack.

Of Assistant Surgeon William Longshaw special mention should be made on account of his great bravery and attention to the wounded under the hottest fire, until finally he fell a victim in the very act of binding up the wounds of a marine.

I can but attribute the failure of the assault to the absence of the marines from their position, as their fire would have enabled our boarders to use their cutlasses and pistols most effectively. By this I would imply the lack of proper organization, it being impossible in the short space of time, on account of throwing so many small squads of men from the different vessels together in one mass, lacking proper company formations, and wholly unacquainted with each other, to secure such organization.

This led to the confusion exhibited, for it was not due to any want of personal valor on the part of the officers or men.

Although the officers and men were exposed to a severe fire from the enemy, to them of a novel character and upon a novel element, which would have tried veterans, yet they advanced nobly, and the survivors must be satisfied that they contributed in no small degree to the success of the army. The enemy believing, as I am informed, that the main assault was to come from us, were much surprised upon looking to their rear to find the army so far advanced in their works.

The medical officers sent on shore with the landing party established their field hospital at a work about a mile from the fort, where Assistant Surgeon B. H. Kidder took charge of the wounded who were conveyed there, and attended to their wants as well as circumstances would permit.

SECOND ATTACK  
UPON  
**FORT FISHER,**  
by the U.S. NAVY under  
REAR ADMIRAL D.D. PORTER.  
JAN. 13, 14, 15, 1865.

Showing the Position of Vessels and Line of Fire

As near as I could estimate, there were about sixty-five killed and two hundred wounded.

Lieutenant-Commander W. B. Cushing, in the extreme front, finding nothing could be done, left with the retreating men, and succeeded finally in rallying them, and, at the request of General Terry, occupied the lines near his headquarters, which enabled him to withdraw men to reinforce his force in the fort.

Being a witness to the assault of the army after our repulse, I cannot but express my admiration of the extreme gallantry of its attack.

Where one act of personal bravery was displayed on the part of the enemy, a dozen or more were conspicuous on our part; and it was the most imposing sight to see how splendidly our brave soldiers did their work.

In conclusion, I would say that I may have omitted the names of officers who have distinguished themselves by their gallantry, yet I could not fail to mention those above named, who came personally under my notice, and I trust that the commanding officers of the assaulting lines will do justice to all.

To Lieutenant-Commander James Parker I would

ADMIRAL'S SECRETARY, CARLISLE P. PORTER (NOW FIRST-LIEUTENANT U. S. MARINE CORPS).

say that I was a witness to his efforts to advance the men, to the free exposure of his person, and, although ranking me, he would let no obstacle of that nature interpose and check his endeavors to do his utmost to capture the fort.

To your secretary, Mr. C. P. Porter, acting as my aide, I am very much indebted. Though frequently sent to the rear with orders, he was most promptly back, and at the assault he was found at the front.

Although the assaulting party failed, I think it but due to those that advanced, and to the memories of the slain, to claim for them, through their strong demonstrations, a corresponding resistance from the enemy, and a weakening of the rebel defence toward our army.

I have been informed by the officers who conversed with prisoners that the enemy believed ours

their main force. In saying this, I would wish not to be understood in the least to detract from the splendid gallantry exhibited by our army, which was worthy of the highest commendation that can be bestowed.

Very respectfully,

Your obedient servant,

K. R. BREESE,

*Fleet-Captain.*

REAR-ADMIRAL DAVID D. PORTER,  
*Commanding North Atlantic Squadron.*

DISPATCH OF REAR-ADMIRAL D. D. PORTER,  
COMMANDING OFFICERS, ETC.

NORTH ATLANTIC SQUADRON,  
U. S. FLAG-SHIP "MALVERN," }  
CAPE FEAR RIVER, January 28, 1865.

SIR—After such an engagement and success as this fleet has met with, I think it due to the officers engaged to mention those particularly who, in my opinion, deserve the commendation of the Department or merit promotion. I did not think it well to mention these matters in my late official dispatch, as such reports seldom or ever give satisfaction to officers or their friends, and give rise more often to heart-burnings and jealousies, which it is desirable to avoid on an occasion like this. It is no easy matter for a commander-in-chief to do full justice to all concerned, but I will endeavor to do so to the best of my ability, without partiality to any one beyond what I must naturally feel towards those who have given me their warmest support on this occasion. I trust I need not remind the Department that our success here has, in material and facts, been greater than on any other occasion during this war. I trust that some promotions will grow out of *this*, if only to show the officers that there is reward in store for those who do the fighting. First and foremost on the list of commodores is Commodore H. K. Thatcher. Full of honest zeal and patriotism, his vessel was always ready for action, and when he did go into it, his ship was handled with admirable skill; no vessel in the squadron was so much cut up as the "Colorado"; for some reason the rebels selected her for a target. I believe Commodore Thatcher would have fought his ship until she went to the bottom, and went into the fight with a full determination to conquer or die. There is no reward too great for this gallant officer; he has shown the kind of ability naval leaders should possess—a love of fighting and an invincible courage. Commodore Joseph Lanman, commanding the "Minnesota," was selected to lead the line, his vessel being the slowest and least manageable; consequently he led into action, except on an occasion when the "Colorado" took his place. I was much pleased with the manner in which he handled his ship and fired throughout the action, the whole affair on his part being conducted with admirable judgment and coolness. I recommend him to the consideration of the Department as one on whom they can place the utmost reliance, place him in any position. Commodore S. W. Godon, commanding the "Susquehanna," is an unusually intelligent officer, and who does not need to be told a second time where to go in time of action. This is the second important affair in which he has been engaged during this war, in both of which he has acquitted himself in the most handsome manner. His ship was beautifully handled, and impressed me with her good discipline and accurate firing. To me personally he has given his warmest support, and I should fail in my duty if I did not give him the full credit he deserves. His conduct throughout this harassing affair has met my warmest approbation, and I think he is one who merits promotion when the Government thinks proper to reward those who have borne the brunt of the battle.

"Powhatan," have come up to my expectations in every respect. This officer in battle has shown himself worthy to command so fine a ship. He performed his duty most faithfully, and I am proud not only to have had him under my command, but to see him reinstated in the position to which he has done so much credit. He deserves all I can say of him, and is worthy of promotion.

Commodore William Radford, in command of that noble ship the "Ironsides," and also in command of the division of Monitors, gained my warmest admiration by his conduct throughout this affair. He has shown abilities of a very high character, not only in fighting and manœuvring his vessel, but in taking care of his division. Ready at all times for battle, and eager to go into the fight alone, he performed admirably when his guns were brought to bear on the enemy. His vessel did more execution than any vessel in the fleet; and even when our troops were on the parapet, I had so much confidence in the accuracy of his fire that he was directed to fire through the traverses in advance of our troops and clear them out. This he did most

COMMODORE (AFTERWARDS REAR-ADMIRAL) S. W. GODON,

COMMANDING THE U. S. S. "SUSQUEHANNA."

effectually, and but for this, victory might not have been ours. Having broken his rudder in a heavy gale, he rigged up a temporary one under adverse circumstances, and had his ship ready as soon as the rest. He seemed never to tire of fighting, and for three days laid within 1,000 yards of Fort Fisher without moving his anchor, and made the rebels feel that we had come there to stay. Under all and every circumstance, Commodore Radford has acquired an enviable reputation, and is deserving of the greatest promotion that can be given him. Captain James Alden, commanding the "Brooklyn," has been near me, and at times associated with me during this war. He had already done enough to deserve promotion before the commencement of operations before Fort Fisher; but if this matter was at any time doubtful, he has certainly earned promotion now. Always leading heretofore, or assisting with all his energies, he has been engaged in all the successful attacks on forts. His aid

to me on this late occasion has been very valuable. Always intelligent and energetic, he never had to be told to get ready; he always kept ready; he anticipated, which is a quality very desirable in an officer, and without which he cannot be expected to be very useful. His vessel was always in the right place and at the right time, and when his batteries opened, no frigate could have done more execution. I have spoken before of the high qualities of this officer. I consider him able and worthy to fill the highest rank, and I know that the Government has no one in its navy more full of energy, zeal or intelligence in his profession. I shall feel much disappointed if Captain Alden is not promoted to a rank he has won more than once during this rebellion. I am sure the Department will appreciate all I have said of this gallant officer. His record speaks for him.

Captain Melancton Smith, on the "Wabash," has performed his duty well. He has also made a good record at the department, and has been actively engaged in fighting since the rebellion first broke out. His old ship has done good service here; and if he had done nothing more than assist, as he has done in the capture of this place, he deserves promotion, which I hereby recommend.

I also recommend Captain Charles Steedman, commanding "Ticonderoga," and Captain D. B. Ridgley, commanding "Shenandoah." Though commanding smaller vessels than the others, and less effective in their fire, they did the best they could. This is the second important affair Captain Steedman has been in, and Captain Ridgley has been very energetic during the war against blockade-runners. I recommend them both for promotion.

Lieutenant-Commander R. K. Breese, my fleet-captain, has been with me nearly all the time since the rebellion broke out. In command of a division of the mortar fleet, which opened the way to New Orleans, he made his first record there. In the Mississippi with me for two years, engaged in harassing and dangerous duties, he always acquitted himself to my satisfaction. In charge of the mortars at the siege of Vicksburg, he helped to hasten the surrender of that stronghold. At Fort Fisher he led the boarders in the assault, and though we were not successful in getting into the work in the face of equal numbers, yet that assault helped materially to gain the day, as is generally admitted on every side. Our troops obtained a footing without much resistance and then nobly maintained what they had won. Lieutenant-Commander Breese did all he could to rally his men, and made two or three unsuccessful attempts to regain the parapet; but the marines having failed in their duty to support the gallant officers and sailors who took the lead, he had to retire to a place of safety. He did not, however, leave the ground, but remained under the parapet in a rifle-pit, using a musket, until night favored his escape. He is a clever, gallant officer, and I strongly recommend his immediate promotion to a commander.

I also recommend the promotion of Lieutenant-Commander H. A. Adams, Jr., ordnance officer, without whose services we should have been brought to a standstill more than once. He volunteered for anything and everything.

The following officers, who volunteered to lead their men in the assault on Fort Fisher, deserve particular notice. These officers volunteered for the service, and undertook what was considered by the regular army the forlorn hope of the assault. Nowhere in the annals of war have officers and sailors undertaken so desperate a service, and one which was deemed impossible by a former general and an engineer having a high reputation in the service. Twenty-one officers were killed and wounded in this service, and twenty officers and sixty men were kept for four hours under fire from the enemy's sharp-

shooters, not being able to escape until night set in. The courage of these officers deserves the highest reward. Their efforts, though unsuccessful, gained the day, as the enemy considered this the main attack, and brought superior numbers from a superior position to bear on it. The names of some of these officers will be found on record on the files of the Department, among which those of Lieutenant-Commander T. O. Selfridge and Lieutenant George M. Bache will be found most conspicuous. I recommend that Lieutenant-Commander James A. Parker, Lieutenant-Commander T. O. Selfridge, Lieutenant-Commander C. H. Cushman, Lieutenant R. H. Lamson and Lieutenant George M. Bache be promoted. The three latter were severely wounded. Though the marines did not do their duty, Captain L. L. Dawson, Captain George Butler, and Second-Lieutenants William Wallace, Charles F. Williams and Louis E. Fagan were found in the front, and fought gallantly. I recommend them to the favorable notice of the department.

To Captain O. S. Glisson, commanding the "Santiago de Cuba," I am particularly indebted for his zeal in covering the troops, landing guns,

a world-renowned name to the Monitors, and have shown what they were capable of performing when properly placed and managed. They had the hardest part of the work, and there is no end to their energy, bravery and untiring zeal.

I can draw no distinction between the following officers, whom I recommend for promotion. They were under fire most all the time, and at close quarters, and coolly performed what was required of them :

Lieutenant-Commander W. T. Truxton, commanding the "Tacony"; Lieutenant-Commander P. G. Watmough, commanding the "Kansas"; Lieutenant-Commander F. M. Ramsay, commanding the "Unadilla"; Lieutenant-Commander D. L. Braine, commanding the "Pequot"; Lieutenant-Commander Ralph Chandler, commanding the "Maumee"; Lieutenant-Commander M. Sicard, commanding the "Seneca"; Commander J. H. Spotts, commanding the "Pawtucket"; Lieutenant-Commander W. G. Temple, commanding the "Pon-toosac"; Lieutenant-Commander T. C. Harris, commanding the "Yantic"; Commander J. C. Howell, commanding the "Nereus"; Commander D. Ammen, commanding the "Mohican"; Commander J. C. Beaumont, commanding the "Mack-inaw"; Commander J. M. B. Clitz, commanding the "Oseeola"; Lieutenant-Commander J. L. Davis, commanding the "Sassacus"; Lieutenant-Commander E. E. Potter, commanding the "Chippewa"; Lieutenant W. B. Cushing, commanding the "Monticello"; Commander S. D. Trenchard, commanding the "Rhode Island"; Acting-Volunteer-Lieutenant A. R. Langthorne, commanding the "Alabama"; Acting-Volunteer-Lieutenant T. C. Dunn, commanding the "Montgomery." I also recommend for promotion Acting-Master S. P. Crafts, commanding the "Little Ada"; Acting-Master J. H. Porter, commanding the "Nansemond"; Acting-Master E. Keyser, commanding the "Eolus"—for gallant conduct throughout the action; also Acting-Volunteer John McDiarmid, commanding the "Governor Buckingham." I must refer you to the reports of different commanders for recommendations of those under their command, as it would be impossible for me to know anything in relation to them. When it is remembered that the surrender of the defences of Cape Fear River is one of the most, if not the most, important event of the war, in which the largest stronghold of the enemy was captured under adverse circumstances, the justice of promotion will be seen. Its importance will be soon felt in the fall of Richmond, to which it is as necessary now as the main artery is to the human system. I trust the Department will be liberal in its promotions. This is almost a naval affair entirely, for the idea originated in the Navy Department; and until the reputation of the Army became in danger of being reflected upon, we met from that branch of the service little or no encouragement. Few promotions have taken place during the war, and it would be gratifying to the friends of all concerned to see the advancement of those who have worked so patiently for three years, and have made so handsome a *denouement*. I have heard a matter freely discussed among the officers, to which I beg leave to draw the attention of the Department. A distribution of medals to officers would be a most popular thing. This is so common a method among modern nations, and so universally accepted as a reward for eminent services among officers and men, that I recommend its adoption in our naval service. Any one who has seen the pride with which sailors wear the medals bestowed upon them for gallant conduct can readily imagine how grateful it would be to officers. Trifling as such a mere bauble may be in intrinsic value, yet the history of war tells how valuable they are as inducements to perform gallant

CAPTAIN (NOW REAR-ADMIRAL) O. S. GLISSON,  
COMMANDING THE U. S. S. "SANTIAGO DE CUBA."

and taking his division into action; and to Captain B. F. Sands, commanding the "Fort Jackson," for performing the different duties he was called on to perform. I recommend them both for promotion.

I refer to Captain Glisson's report in relation to the commanding officers in his division.

I also recommend to the department Lieutenant-Commander T. S. Phelps, in command of the "Juniaata."

Lieutenant-Commander J. H. Upshur, in the "A. D. Vance," had charge of the reserves, and was employed night and day in landing army stores and guns, and covering the troops from the rebels outside of our lines. His guns did good execution, and though his duties prevented him from participating in the attack on the forts, I cannot withhold his name, and recommend him for advancement.

I recommend that Commander E. G. Parrott, commanding the "Monadnock," Commander E. R. Colhoun, commanding the "Saugus," Lieutenant-Commander A. W. Weaver, commanding the "Ma-

presuming in recommending what, no doubt, they already intend to adopt.

I am, sir, very respectfully, your obedient servant,  
DAVID D. PORTER, *Rear-Admiral.*

COMPLIMENTARY LETTER OF REAR-ADMIRAL  
PORTER IN REGARD TO GENERAL TERRY.

NORTH ATLANTIC SQUADRON,  
U. S. FLAG-SHIP "MALVERN," }  
OFF SMITHSVILLE, N. C., Jan. 20, 1865. }

SIR—I have been so much pleased with General Terry, and the manner in which he has conducted his part of the operations here, that I deem it worthy of a special dispatch to express what I feel.

General Terry is, no doubt, well known to his associates in the field, who have served with him, and to the Lieutenant-General who selected him for the service, but the American people should know and feel the very great service he has rendered them by his most admirable assault on these tremendous works. Young, brave and unassuming, he bears his success with the modesty of a true soldier, and is willing to give credit to those who shared with him the perils of the assault. No one could form the slightest conception of these works, their magnitude, strength and extent, who had not seen them, and General Whiting, the engineer, must have had an abiding faith in the durability of the Confederacy when he expended so many years labor on them.

The result of the fall of Fort Fisher was the fall of all the surrounding works in and near this place—Fort Caswell, a large work at the West Inlet, mounting twenty-nine guns, all the works on Smith's Island, the works between Caswell and Smithville up to the battery on Reeves' Point, on the west side of the river—in all, 169 guns falling into our hands; 2 steamers were burnt or blown up, and there never was so clean a sweep made anywhere.

A timid man would have hesitated to attack these works by assault, no matter what assistance he may have had from other quarters, but General Terry never for an instant hesitated; and though I feel somewhat flattered at the confidence he reposed in my judgment, I am quite ready to believe that he acted on his own ideas of what was proper to be done in the matter, and was perfectly qualified to judge without the advice of any one.

Throughout this affair his conduct has been marked by the greatest desire to be successful, not for the sake of personal considerations, but for the cause in which we are all alike engaged.

I don't know that I ever met an officer who so completely gained my esteem and admiration.

I have the honor to be, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

HON. GIDEON WELLES,  
*Secretary of the Navy, Washington, D. C.*

ADDITIONAL REPORT OF FLEET-CAPTAIN K. R.  
DREESE.

FLAG-SHIP "MALVERN," }  
CAPE FEAR RIVER, January 28, 1865. }

ADMIRAL—In my report of the assault of Fort Fisher, I did not mention the fact of Lieutenant-Commander Cushman being wounded, as he made so light of the affair and did not wish to be included among those mentioned as such. Since, I have learned that Lieutenant-Commander Cushman's wound was more severe than I had even thought, and I think it but right that I should mention that, though in this condition and very much fatigued from his efforts of the day, being re-

lieved by darkness from the fire of the fort, he collected together the men of his column, and posted them in the lines occupied by us that night, requiring a great exertion and constant movement until 2 A. M. the following morning.

I also would wish to bring to your notice the conduct of a young lad of the "Wabash," named Myers, who three several times left a good protection from the fire of the enemy and went to the assistance of wounded men, and under fire carried them to the friendly shelter of his hole in the sand, and this within a hundred yards of Fort Fisher. I had hoped to obtain the name of a very brave and gallant officer of the "Vanderbilt," who led their assaulting party, but have been unable to do so. This officer was conspicuous for his gallantry and most richly deserves special mention.

I would also wish to say that Acting-Lieutenant-Commander Danels, of the "Vanderbilt," suffering from ill-health and unable to keep up with the assaulting party, rendered much valuable assistance in rallying the men and in caring for the wounded. I regret that my personal acquaintance with the

LIEUTENANT BENJAMIN H. PORTER (OF ADMIRAL  
PORTER'S STAFF.)

(KILLED IN THE ASSAULT ON FORT FISHER.)

many brave officers and men around me on that day was so slight that I could not soon recognize to what ships they belonged, except in the instances named, and that, necessarily, I have failed to mention particularly some who, I saw, behaved splendidly, and have trusted to the commanding officers of columns to name them. I wish also to bear witness to the handsome manner in which Lieutenant Fagan, of the marine corps, did his duty with his sharpshooters, and to the gallantry he exhibited in advancing his men so close to the enemy's works. An additional regret I feel in the loss of Flag-Lieutenant Preston, who could so much better have done justice, that it devolves upon me to mention how well the officers and men behaved in digging rifle-pits, and of the bravery evinced by many of them in advancing under a perfectly exposed fire to within 300 yards of the fort, and digging their pits under the fire. A number were killed and wounded in the undertaking. Although these men had been hard at work all day, and were told by Lieutenant Preston that

they were not expected to join in the assault, I know of scarcely any who had arms that did not join it.

Very respectfully, your obedient servant,

K. R. BREESE, *Fleet-Captain.*

REAR-ADMIRAL DAVID D. PORTER,  
*Commanding North Atlantic Squadron.*

DISPATCH OF REAR-ADMIRAL D. D. PORTER, TRANSMITTING REPORT OF FLEET-CAPTAIN K. R. BREESE, IN REGARD TO THE DEATHS OF LIEUTENANTS PORTER AND PRESTON.

NORTH ATLANTIC SQUADRON,  
U. S. FLAG-SHIP "MALVERN,"  
CAPE FEAR RIVER, February 1, 1865. }

SIR—I inclose a communication from my fleet-captain, Lieutenant-Commander K. R. Breese, in relation to the lamented Lieutenants Preston and Porter, who fell together before the walls of Fort Fisher, and while trying to plant the Union colors on the enemy's ramparts. No eulogy passed upon these two gallant men could do them full justice. To me they had both endeared themselves by their noble qualities, and in their deaths I feel as if I had lost two members of my own family. Their names and gallant deeds during their short service in the war will long be remembered by their associates in arms, and the memory of their heroic gallantry will inspire future heroes to emulate their conduct. The officers of the squadron propose to erect a monument at Annapolis to the memory of the gallant dead, but their memories will live in history long after the stone that records their deeds has crumbled into dust. I must not omit to pay a just tribute to the memory of the noble Assistant Surgeon William Longshaw, who was shot dead near the enemy's works while engaged in an act of mercy, binding up the wounds of a sailor, and of the gallant Acting-Assistant Surgeon John Blackmer, who fell and died in the same way. Nor must I omit the name of Acting-Ensign Robert Wiley, who died fighting manfully, and endeavoring to reach the enemy's parapets. They all died like heroes, and the nation is as much bound to mourn their loss as those who have held higher positions.

They are all regretted deeply here, and their names will be forever associated with one of the most gallant attacks ever made on a powerful fortress.

I am, sir, very respectfully, your obedient servant,  
DAVID D. PORTER, *Rear-Admiral.*

HON. GIDEON WELLES,  
*Secretary of the Navy, Washington, D. C.*

REPORT OF FLEET-CAPTAIN K. R. BREESE.

NORTH ATLANTIC SQUADRON,  
U. S. FLAG-SHIP "MALVERN,"  
OFF FORT FISHER, January 18, 1865. }

ADMIRAL—In my report of the assault on Fort Fisher I have scarcely mentioned the names and services of Lieutenant S. W. Preston, your flag-lieutenant, and Lieutenant B. H. Porter, your flag-captain, thinking that by a little delay I might the more do justice. yet I seem to feel that impossible in me. Preston, after accomplishing most splendidly the work assigned him by you, which was both dangerous and laborious, under constant fire, came to me, as my aide, for orders, showing no flagging of spirit or body, and returning from the rear, whither he had been sent, fell among the foremost at the front, as he had lived, the thorough embodiment of a United States naval officer. Porter, conspicuous by his figure and uniform, as well as by his great gallantry, claimed the right to lead the headmost column with the "Malvern's" men he had taken with him, carrying your flag, and fell at its very head. Two more noble spirits the world

trepid men. Young, talented, and handsome, the bravest of the brave, pure in their lives, surely their names deserve something more than a passing mention, and are worthy to be handed down to posterity with the greatest and best of naval heroes.

Were you not so well acquainted with their characters, I should deem it my duty to speak of their high merits; but, as chief of your staff, to which they belonged, I must speak of their wonderful singleness of purpose to do their whole duty; always most cheerful and willing, desirous of undertaking anything which might redound to the credit of the service; giving me at all times the most ready assistance in my duties; combining with their intelligence a ready perception as to the best mode of accomplishing their orders, the country has lost two such servants as could ill be spared, and your staff its brightest ornaments.

Very respectfully, your obedient servant,

K. R. BREESE,

*Fleet-Captain, North Atlantic Squadron.*  
REAR-ADMIRAL DAVID D. PORTER,  
*Commanding North Atlantic Squadron.*

Thus was Fort Fisher won after a gallant attack and as gallant a defence on the

SURGEON (AFTERWARDS SURGEON-GENERAL) PHILIP S. WALES,  
OF THE U. S. S. "FORT JACKSON."

part of the Confederates as any one interested in their cause might desire. It was a terrible sight to see those men, all of one blood, sternly fighting in the dark for over four hours, almost breast to breast, shooting or bayonetting each other on the tops of the traverses or around the sides, while the "Ironsides" would explode her 11-inch shrapnel so well timed that they would burst over the heads or in amongst the struggling mass of Confederates, who were doing their utmost to hold on to the traverses behind the bomb-proof; but when the calcium-light of the "Malvern" was thrown upon these desperate soldiers, and exposed them plainly to the "Ironsides" sniping

they were swept away by the dozens. Never did men fight harder than the Confederates, and never were cooler soldiers than the Federals, who gained traverse after traverse with the aid of the wondrous fire of the "Ironsides," until they stood on the last one, when the enemy fled to the beach near the Mound, pursued by the Federal troops; and the former, having no more hope of escape, laid down their arms and submitted to their captors.

Three cheers went up from the Federal soldiers, the crews on board the ships made the welkin ring with their shouts of joy, the steam-whistles blew, the bells rang, sky-rockets filled the air, and every yard-arm was illuminated with the Coston night-signals. Not a man there but saw this was the death-blow to the rebellion. No more

COMMANDER CHARLES D. SIGSBEE,  
ENSIGN ON THE U. S. S. "BROOKLYN," AT FORT FISHER.

army provisions or clothing could enter the only open port—Wilmington. Submission might not come immediately, but the end was not far off. The soldiers who had so strenuously fought to gain the stronghold would go back rejoicing to Hampton Roads, having wiped out the disgrace inflicted through no fault of theirs, and could now, at the end of the war, join their families with the proud boast that they were the assaulters that finally carried Fort Fisher. While the Navy, that had for so many days breasted the storms of winter on the dangerous coast of North Carolina, could hope soon to haul into "Snug Harbor," where, in years to come, they could tell their companions how for thirty-five days they had fought the ocean in its wrath and defied the elements; how they coaled their ships and took in their ammunition while the vessels were rolling and pitching "like mad,"

and how they battered the heaviest earth-work in the Southern Confederacy until not a gun remained serviceable on its carriage.

Amidst all the rejoicing, the Army and Navy had to deplore the loss of a great many gallant men who freely offered their lives that their country might live and move on in the march of progress, civilization and liberty, that in future ages would make it the greatest nation on the face of the earth. The casualties of the Federal Army were 691 officers and men killed, wounded and missing, while the Navy lost 309 more. The defeated but gallant enemy went into the battle 2,500 strong and surrendered only 1,800 men.

A second casualty took place, the morning after the surrender of the fort, by the blowing up of a bomb-proof. How it happened no one knew, but about a hundred bodies were thrown up into the air, soldiers, sailors, and Confederates all mixed up together. It was a sickening sight and took away much of the pleasure of the victory; but soldiers and sailors grew accustomed to such things during the war, and the active work still before them, ere they could reach Wilmington and secure the railroad leading to Richmond, soon drove the dreadful spectacle from their minds. Regarding the gallant soldiers, who so nobly fought their way over the bomb-proofs, too much cannot be said in their praise. Terry, their leader, Ames, Curtis, Lawrence, and Pennypacker, should never be forgotten; while those in the Navy, who fought their ships so well and so persistently, will, in future years, be remembered and honored as were the heroes of 1812. when our infant Navy showed the mistress of the seas that she would one day have to divide her honors with the young Republic.

A number of the 100-pounder Parrott rifles burst while in action, and the commanders and men, having lost confidence in them, they were no longer used. The consequence was that, before the forts in Cape Fear River could be attacked, a requisition had to be made on the Bureau of Ordnance in Washington for twenty-four 11-inch guns. These were sent from New York in a fast steamer, and in ten days were all mounted on the vessels in Cape Fear River and ready for service. One Monitor, the "Montauk," had been gotten over the bar, and the gun-boat fleet was ready to move up as soon as the Army could make its preparations to advance. The Confederate General, Hoke, was intrenched about six miles above Fort Fisher, where it was said that General Bragg intended to dispute the further advance of the Federal troops—a foolish resolution, as there was a force of gun-boats

in the river that could bid defiance to all the guns the Confederates had mounted.

As soon as General Grant heard of the victory, he proceeded to Fort Fisher in a transport, taking with him General Schofield and an additional number of troops. General Schofield's seniority gave him the command of the whole, a circumstance that could not be well avoided, as the troops came from his division. As soon as possible after General Grant's arrival, preparations were made for the Army and Navy to move on up the Cape Fear River in concert.

The effect of the surrender of Fort Fisher was a stampede in all the forts south of Federal Point. Lieutenant Cushing was sent in the gun-boat "Monticello" around to Fort Caswell, a strong fortification, built in former days by the United States engineers as a protection to the Western bar. Lieutenant Cushing found Fort Caswell blown up, the works at Bald Head destroyed, Fort Shaw blown up, and Fort Campbell abandoned. These works, mounting 9 and 10 inch guns and 150-pounder Armstrongs, completely commanded the channel, and were nearly out of reach of projectiles from the seaward.

After an examination of the forts, Lieutenant Cushing hoisted the American flag on Fort Caswell and pushed on to Smithville, a heavily fortified point on Cape Fear River. The garrison departed as soon as the "Monticello" hove in sight, leaving everything in this heavy and beautiful fortification uninjured, and only two 9-inch guns spiked in the work at Deep River Point.

Up to January 20th, only one gun-boat, the "Tacony," Lieutenant-Commander W. T. Truxton, had succeeded after hard work in getting past the Rip, a bad shoal which barred the way, after passing Fort Buchanan, to the fair channel of Cape Fear River. The Admiral at once sent her to Reeves' Point, about three miles above Fort Fisher, on the "west side of the river," to disable the guns at that place, presuming that the enemy had already abandoned it in the panic.

Thus, in twenty-four hours after the capture of Fort Fisher and its outworks, all the formidable chain of works around the two entrances of Cape Fear River were in the hands of the Navy, and, for want of troops were temporarily garrisoned by sailors. Three of the forts had been built to keep out any force that could be sent against them. They were wonderful specimens of engineering skill, and a credit to the Confederate engineers who planned and constructed them. Any one seeing them would suppose that the whole Southern Confederacy had been at work throwing up fortifications.

The following is a list of the guns mounted in these works: Reeves' Point, three 10-inch guns; Smithville, four 10-inch guns; above Smithville, two 10-inch guns; Fort Caswell, ten 10-inch guns, two 9-inch guns, one Armstrong rifled gun, four rifled 32-pounders, two 32-pounder smooth-bores, three 8-inch guns, one Parrott 20-pounder, three rifled field-pieces and three 8-inch guns—total 29; forts Campbell and Shaw, six 10-inch, six 32-pounder smooth-bore, one 32-pounder rifled, one 8-inch, six field-pieces and two mortars; Smith's Island, three 10-inch guns, six 32-pounder smooth-bores, two 22-pounders rifled, four field-pieces, 2 mortars and six other guns. Grand total, 83 guns.

When General Grant went to Fort Fisher and General Schofield took command, a council-of-war was held on board the "Malvern," at which General Grant presided, and it was concluded to land an Army Corps under General Cox, at Smithville, on the west bank of Cape Fear River, march on Fort Anderson by a good road, while the gun-boats attacked it by water; but this plan was changed after General Grant left, and General Schofield undertook an expedition by way of the beach, covered by some six or eight gun-boats; but it came on to blow and rain heavily and the troops had to return, when the first plan was finally adopted.

On the 18th of February, the gun-boats having shifted their 100-pounder rifles for 11-inch guns, proceeded up the river towards Fort Anderson preparatory to an attack. The Army Corps under General Cox proceeded by the Smithville road to try and cut off the enemy if he attempted to escape from the works. The Monitor "Montauk," Lieutenant-Commander Edward E. Stone, was anchored eight hundred yards from the fort, which immediately opened fire upon her, but her thick sides and turrets resisted this fire until the other vessels could be brought into position. The river channel was very narrow, crooked and shoal, and the vessels had great difficulty in securing a berth where they could use their heaviest guns. The following gun-boats were engaged:

"Lenapee," Lieutenant-Commander John S. Barnes; "Sassacus," Lieutenant-Commander John Lee Davis; "Mackinaw," Commander J. C. Beaumont; "Maratanza," Lieutenant-Commander Geo. W. Young; "Nyack," Lieutenant-Commander L. H. Newman; "Chippewa," Lieutenant-Commander E. E. Potter; "Shawmut," Lieutenant-Commander John G. Walker; "Seneca," Lieutenant-Commander M. Sicard; "Malvern," Acting-Ensign Wm. C. Wise; "Pontoosuc," Lieutenant-Commander Wm. G. Temple; "Unadilla."

Lieutenant-Commander F. M. Ramsey; "Pawtucket, Commander J. H. Spotts; "Huron," Lieutenant-Commander Thos. O. Selfridge; "Maumee," Lieutenant-Commander Ralph Chandler; "Pequot," Lieutenant-Commander D. L. Braine.

The "Montauk" bore the fire for some hours and returned it leisurely. The Confederates, finding they could make no impression on her, reserved their fire until they could find something more vulnerable, and kept in their bomb-proofs. On the 18th, the gun-boats moved to within a thousand yards and opened a rapid and well-directed fire, which was returned with great vigor for half an hour. The Confederate fire then gradually ceased. They left the fort and retreated to Wilmington. The Army

ing on that place on both sides of the river, the gun-boats were pushing up as fast as they could find their way through the intricate channel.

Before General Cox or General Terry had reached the vicinity of Wilmington, the gun-boats reached Forts Strong and Lee. Taking a position at thirteen hundred yards distant, they opened with their 11-inch guns on the forts. The forts were in an elevated position and were armed with eight or ten heavy guns. Soon after the fleet opened fire the forts were evacuated, and the Union flag was hoisted over them by Lieutenant-Commander K. R. Breese, Chief of Staff. The channel had to be dragged for torpedoes before the gun-boats could pass up, and night came leaving them huddled together in a mass through which a boat could hardly pass.

A little before sunset, a faithful "contraband," who had escaped the vigilance of the Confederates, appeared alongside the flagship and informed the Admiral that the enemy intended sending down that night two hundred floating torpedoes with a hundred pounds of powder in each.

Orders were immediately given by the Admiral for the gun-boats to get out their fishing seines—of which each vessel in the Navy carried one—and to unite and spread them across the river in two lines. Thus there were nine hundred and sixty yards of seine presented as an obstacle to the expected torpedoes, placed about five hundred yards above the vessels, while on either side of the river fish weirs extended through the shoal water to shore. This seemed to be a perfect obstruction to floating torpedoes, but about 9 o'clock at night a black object was seen from the flagship drifting past her. The gun-boat "Shawmut" was hailed and ordered to send a boat to examine it. The officer of the boat, Acting-Ensign W. B. Trufant, standing in the bow, saw that it was a barrel and fired his revolver at it at close quarters, exploding it, by which he was dangerously wounded, two of the boat's crew killed, and one slightly wounded, while the boat was shattered. A short time after, another of the same kind exploded in the "Osceola's" wheel-house, blowing it to pieces and knocking down some bulkheads on board, but doing no damage to the hull. This was all the injury done by these ugly customers, two only escaping the nets out of the hundreds sent down. Next morning boats were sent up to the nets, when it was found that a great number of the infernal machines had been caught and held. They were all disposed of by firing muskets into them at a safe distance and exploding them.

Such were the obstacles and apparatus

LIEUTENANT-COMMANDER JOHN S. BARNES,

CHIEF-OF-STAFF WITH REAR-ADMIRAL S. P. LEE, AND COMMANDING U. S. S. "LENAPE," IN CAPE FEAR RIVER, AFTER THE ATTACK ON FORT FISHER.

came up half an hour afterwards and found the fort in possession of the Navy. In this day's fight the loss was only two killed and six wounded on the "Chippewa" and "Pequot." About fifty boats were sent out at once to drag the river for torpedoes, and, after picking up all that could be found, pushed on and transported General Cox's division over the creeks, where the Confederates had burned the bridges, so that he was delayed but a short time and was enabled to move on to Wilmington.

In the meantime, General Terry's division at or near Fort Fisher charged General Hoke's intrenchments, and the Confederates immediately retreated upon Wilmington; so that, while the Army was march-

that opposed a more rapid advance up the river; but after it had been thoroughly dragged in the morning, and all the torpedoes taken up, the gun-boats pushed on up, hoping to arrive at Wilmington before the army; but General Terry reached there before them, and the divisions of Cox and Terry shook hands in the streets of the captured city. This ended the capture of all the various works in and about Wilmington, and the Confederates retreated toward Richmond by the Wilmington railroad. Nothing more remained to be done.

A quick dispatch-vessel was sent to Hampton Roads immediately on the fall of Fort Fisher to notify the Navy Department by telegram of the result, and now the final victory was announced to the Secretary of the Navy in the same manner.

The Admiral, after making a proper distribution of the gun-boats to co-operate with the army, proceeded in the steamer "Rhode Island" to Hampton Roads, while all the vessels not needed in Cape Fear River were dispatched to their stations, or sent to several other points which the enemy still occupied.

On his arrival at Hampton Roads, the Admiral received the following letter from Secretary Welles, which, if not as ardent as some of his congratulations to other officers who had gained victories, it must be remembered that he had written so many hearty congratulations that he could not find words on this occasion to express his gratification:

NAVY DEPARTMENT, Jan. 17, 1865.

SIR—The Department has just received your brief, but highly gratifying, dispatch announcing the fall, on the 15th instant, of Fort Fisher, under the combined assault of the Navy and Army, and hastens to congratulate you and General Terry and the brave officers, soldiers and sailors of your respective commands on your glorious success.

Accept my thanks for your good work.

Very respectfully,

GIDEON WELLES, *Secretary of the Navy.*

REAR-ADMIRAL DAVID D. PORTER,

*Commanding North Atlantic Squadron,  
off Wilmington.*

The following telegram was sent immediately on the receipt of the news to the commandants of the Navy Yards:

"Fire a national salute in honor of the capture, on the 15th instant, of the rebel works on Federal Point, near Wilmington, by a combined attack of the Army and Navy.

"GIDEON WELLES."

To complete the narrative of the events described in this chapter, the following reports are added:

REPORT OF COMMODORE H. K. THATCHER.

UNITED STATES STEAM-FRIGATE "COLORADO," }  
OFF WILMINGTON, N. C., Jan. 14, 1865. }

ADMIRAL—I have the honor to report the following as the result of the operations of this ship on

the 13th instant: At 4 A. M., in obedience to signal, got underway from our anchorage, near Wilmington, and steamed towards the forts in line of battle, the "Minnesota" ahead. At 8 A. M., anchored within easy range of the coast, in six and a half fathoms (forts about five miles distance, bearing N. E. by E.), to cover the landing of troops, and sent five boats to assist in landing them from the transports. Commenced shelling the woods skirting the coast; at 8:55 ceased firing, in obedience to your signal. At 11:10 the third line of gun-boats steamed along shore, shelling the woods, while the troops were being landed rapidly. At 3 P. M., recalled boats, in obedience to your signal. At 3:15 got underway, all the troops having been successfully landed. At 3:45 proceeded to attack the forts, without regard to the "Minnesota," in accordance to your signal, followed by the rest of the line. At 4:40 opened fire upon the forts, with steam hawser fast to the "New Ironsides," and continued the action briskly, in easy range, until 5:50 P. M., when, by your order, we ceased firing, and retired from action (it being then too dark to discern objects on shore). At 7 P. M., anchored in eight fathoms. Fort Fisher bearing W. S. W., distance three miles. My casualties were, one killed (Robert Little, seaman), one severely wounded, one wounded. Hulled six times by the forts; one 150-pound solid shot through berth-deck; one 150-pound solid shot through gun-deck, cutting through side; one 150-pound solid shot through port side, above water-line, and lodging in a beam-end, where it remained; two 150-pound solid shots, striking sheet-chain and cutting it through. The enemy's shell exploded over the hull of this ship, but without serious injury. I forward herewith reports of Surgeon Jas. McLelland and of the warrant officers.

I am much gratified to have it in my power to report that the officers and crew of this ship behaved with their usual gallantry. I have to commend to your notice, especially, Lieutenant M. L. Johnson, who, in the midst of a heavy fire from the enemy, with a boat's crew of volunteers, carried a hawser from this ship to the "New Ironsides," in order to enable us to bring all the guns to bear from the port battery, and was, for more than half an hour, a target for the forts, which they availed themselves of, but fortunately without success. I cannot omit the opportunity to speak in the highest terms of Acting-Ensign W. G. Perry, who, when the action commenced, had just returned to the ship, after having been absent all day with the boats in landing troops, and, although drenched to the skin and worn out with fatigue, went immediately to the second division, which he commanded, and fought his guns splendidly through the action. In addition to this, Mr. Perry is, in all respects, worthy of an additional grade.

I am, sir, very respectfully, your obedient servant,

H. K. THATCHER, *Commodore.*

REAR-ADMIRAL DAVID D. PORTER.

*Commanding N. A. Station.*

REPORT OF COMMODORE WM. RADFORD.

U. S. SHIP "NEW IRONSIDES," }  
AT ANCHOR OFF FORT FISHER, January 15, 1865. }

SIR—I have the honor to report, that, in obedience to your orders, the iron-clad division steamed in and took their position under the guns of the battery of Fort Fisher, this ship leading; anchored at 8:29 A. M. on the 13th instant. The "Monadnock," Commander E. G. Parrott; "Canonicus," Lieutenant-Commander G. E. Belknap; "Saugus," Commander G. R. Colhoun; and "Mahopac," Lieutenant-Commander A. W. Weaver. The battery opened on this ship as we came in. I did not reply until I obtained my desired position, opening then, deliberately, to get a correct range, as the

wooden vessels were engaged landing troops, etc. The iron-clad division received the fire nearly all day alone from Fort Fisher, without receiving any very material damage, and remained in position during the night. By orders from Admiral Porter, the iron-clad division commenced the action at 10:47 A. M. on the 14th instant, and continued firing until after dark. Some of the wooden gun-boats came up, and commenced firing at 2:30 P. M., hauling off at dark, the iron-clad division maintaining their position. On the morning of the 15th we commenced the action at 7:16 A. M., and continued to fire during the day, concentrating it upon the guns of the battery which was doing the most effective work, which we invariably soon silenced or disabled. As the troops were advancing, I observed two field-pieces in the rear of the fort firing on them, which we soon silenced with some well-directed shells from this ship. When the enemy came out of their bomb-proofs to defend the fort against the storming party, I used my battery with great success against them, every shell bursting, apparently, in the right place. At 5:20 P. M. we ceased firing by orders from the flag-ship, nearly every gun on the fort facing us having been disabled in the first two days' action. I cannot close my report without speaking in the highest terms of the battery of this ship, and the manner in which it was served, for three consecutive days, my officers and men fighting all day and taking in ammunition during the night. I know of nothing surpassing it on record. I would now speak of the Monitors, and the handsome manner in which they were handled and fought during the time; and the different attacks on Fort Fisher has not only proved that they could ride out heavy gales at sea, but fight their guns in moderately smooth weather, which has been doubted by many intelligent officers.

I have the honor to be, very respectfully, your obedient servant,

WILLIAM RADFORD,

*Commodore, Commanding Iron-clad Division.*

REAR-ADMIRAL D. D. PORTER,

*Commanding North Atlantic Squadron,*

*Flag-ship "Malvern," off Fort Fisher, N. C.*

REPORT OF LIEUTENANT-COMMANDER JAMES PARKER.

UNITED STATES STEAM-FRIGATE "MINNESOTA." }  
OFF FORT FISHER, N. C., January 16, 1865. }

ADMIRAL—I have the honor to submit the following in regard to the assault made upon Fort Fisher, on the 15th instant, by the officers, sailors and marines of the fleet under your command, who were detailed for the performance of that duty. The signal for landing was made at about 10 o'clock A. M. By noon all were landed and formed on the beach.

I found Lieutenant-Commander K. R. Breese representing you in command. Although I am his senior, still, as you had assigned him to the command, I at once decided to act as his subordinate.

The sailors were formed in three divisions, according to the divisions of the fleet. To Lieutenant-Commander C. H. Cushman was assigned the command of the first division. The command of the second division fell to me; that of the third division to Lieutenant-Commander Thomas O. Selfridge.

The marines formed a fourth division, under command of Captain L. L. Dawson, of the "Colorado."

After assembling the several divisions on the beach, they were all marched by the flank to a point about a mile from Fort Fisher, and were there formed in parallel lines perpendicular to the beach, and to the fire of the fort; the marine division in the front, and the others in the order of their numbers.

The men who had been detailed for intrenching duty had, as soon as landed, been sent forward under command of Lieutenant S. W. Preston, and, under a brisk fire of grape and musketry from the fort, were engaged in digging rifle-pits.

By the time this last formation was had, the enemy had opened upon us with grape and shell, and from this time out we were constantly under fire. After forming, the force was marched to the front by the right flank of companies, until near enough for the enemy to open upon us with rifles, when the divisions were again marched by the left flank along the beach until about half a mile from the fort, where the men were ordered to lie down under cover of the crest of the beach to await the assault of the army.

The force thus rested for about half an hour, all the time under a fire of musketry and occasionally grape from the fort, by which several were wounded, and, I believe, one or two killed. At the same time, the fleet was firing over us at the fort, and many shells bursting prematurely scattered their fragments in alarming proximity. I append a plan showing the line of march from the time of landing.

At about 3 o'clock the army was observed moving to the assault, and the order was given for the sailors and marines to advance. This they gallantly did, cheering as they went "on the run" (by the flank) along the beach, and in a short time reached the point "A" marked upon the plan, at which the palisades of the fort join the beach. As soon as the fleet observed that the assault had begun, the steam-whistles were sounded, and the firing on the fort completely ceased. Observing this, the enemy opened a heavy fire upon us of musketry and grape, which soon became very hot. A few of the officers and men passed beyond the palisades, but the advance along the beach was there checked and turned along the palisades towards the fort.

In the hurry of the advance, the different divisions had somewhat intermingled, and a large number of officers and sailors and a few marines had congregated at "A," and almost every shot from the enemy carried its message of wound or death to some one of our number. Lieutenants Preston and Porter and Acting-Ensign Wiley, of the "Montgomery," had fallen dead. Lieutenants Lamson and Bache, and many other officers, both regulars and volunteers, had been killed and wounded.

Seeing the advance had been checked, the rear also at once halted, and sought the cover of the crest of the beach. Quite a large space was left between that part of the force congregated at "A" and the rest of it. The marines, with a few exceptions, were quite far down the beach. I desire to name Captain George Butler and Lieutenant William Wallace as being at the front. At this time Lieutenant-Commander Breese, who had been all the time in front of the advance, endeavored to bring the rear forward, but without avail. The officers and men at the point "A" withstood for a long time the hot fire of the enemy, now not more than sixty or seventy yards off from us, without being able to return it.

I had been fortunate enough to reach unhurt the point "B," marked upon the plan, and at this time—observing some rebels upon the parapet of the fort who were seemingly unarmed, waving their hats to us, and beckoning us forward—gave the order "forward," and advanced followed by many officers, both regular and volunteer, and men, including a few marines. As I did so, I turned to see if the rest of the men were following, and, to my intense surprise and mortification, saw that a panic had seized the force, and that they were ingloriously flying along the beach away from the fort. Some of the officers (prominent among whom I observed Lieutenant-Commander Selfridge) tried to

rally them, and their fellow-men who were near me reproached them for their shameful conduct; but in vain—all but about sixty fled.

The enemy began to cheer, and at once concentrated their whole fire upon the small band who had not fled. In an instant four officers, Lieutenant-Commander Cushman, Acting-Ensign Frederick A. O'Conner, Acting-Master's Mate Joseph M. Simms, and A. F. Aldrich (of the "Tuscarora"), were wounded and fell at my side. I saw that any further attempt at advance would, with our small number, be folly, and so ordered all who were left to seek the protection of the angle "B" of the palisades. This we did, and remained there until dark, all the while exposed to the enemy, who never failed to fire at any one who showed himself. After dark we all came safely away, bringing our wounded, our colors, and our arms. Five gallant fellows, viz., Acting-Ensign George T. Davis, of the "Wabash"; Acting-Master's Mate Aldrich, of the "Tuscarora"; Louis C. Sheppard, sailor of the "Wabash"; one man (name unknown to me), a petty officer from the "Tacony," and a private of marines, Henry Thompson, of the "Minnesota," got a few paces beyond "B." Mr. Aldrich was severely wounded, and the petty officer was killed.

I am utterly at a loss to explain the panic which, after they had so gallantly charged up to the enemy's works, and the prospect of success was so good, seized upon the force. It was certainly not want of courage, for during the long time the column had been under fire not a man had wavered, and the advance to the assault was as splendid as could have been made by veterans.

Lieutenant-Commander K. R. Breese, who commanded the assaulting party, added to his already well-earned and established reputation for bravery and cool judgment in battle. He led the advance to the palisades, and when he saw the rear delaying, endeavored, sword in hand, to bring them forward to our support. Failing to accomplish this, he returned, under a shower of bullets directed at him alone, to the sand-hills at "C," and when it seemed no longer useful to remain there, coolly followed the retreating mass. How he escaped death is a marvel to me.

Lieutenant-Commander Charles H. Cushman (wounded) and Montgomery Sicard; Lieutenants N. H. Farquhar, R. H. Lamson, Smith W. Nichols, and John R. Bartlett; Acting-Master W. H. Maies, of the "Seneca"; Acting Ensigns George T. Davis, "Wabash"; James Birtwistle and F. A. O'Connor, "Minnesota"; Dayton, of the "Nereus," and an acting-ensign from the "Gettysburg" (whose name Lieutenant Lamson will supply; Acting-Master's Mate Joseph M. Simms, "Minnesota," and A. F. Aldrich, "Tuscarora," both wounded, all behaved very gallantly, and did not retreat until I ordered them, after dark, to do so. I have named them because they are all known to me. There were others there equally brave and worthy, whose names, unfortunately, are not in my possession.

I have called the attention of my commanding officer (Commodore Lanman) to Acting Ensigns Birtwistle and O'Connor. Both these gentlemen hold their present appointments as a reward of gallant conduct under fire. They are both competent, intelligent, and perfectly correct young men, and they well deserve another step upwards. I earnestly press them upon your notice.

Acting-Master's Mate Joseph M. Simms and A. F. Aldrich, "Tuscarora," are fine young men. Simms I personally know to be eminently worthy. Of Aldrich, Commander Frailey, of the "Tuscarora," speaks in high terms. Both were severely wounded while in the extreme front; both richly merit their promotion.

I desire to say a few words in respect to Acting-Volunteer-Lieutenant-Commander Joseph D. [Name obscured], of the "Wabash." He came aboard in

command of the party from his vessel, and was of my division. Although fitter for the sick-bed of a hospital than for the field, he persisted in going to the assault. He started with us, marched until his strength gave out, and his weak body was unable to carry his brave heart forward, when, by my orders, he went into the trench thrown up by Lieutenant Preston's party. It was no fault of his that he was not found in the front of the advance when the order to charge came.

Of those gallant dead the country may well be proud. They can be ill spared, but their names will be treasured as an inspiration for the future.

Preston and Porter were killed at the front, and Assistant-Surgeon William Longshaw, Jr., after adding to the reputation for bravery which he gained under fire of the batteries at Charleston while serving on board the iron-clad "Lehigh," was shot by the enemy as he was binding up the wounds of a dying man. Their dead bodies were found lying side by side the next morning.

It is painful to write such a record, but I feel compelled to state that I often saw the rebels deliberately fire in squads at the wounded who were endeavoring to crawl away.

I cannot close this report, Admiral, without saying that, although our naval assault did not meet with the success you hoped for, still it was of vast service to the country. I have conversed, since the fort was taken, with many rebel officers and men (prisoners), and all are unanimous in saying that a large part of their force was kept at the "sea-face" to resist our attack. I know that a large force was there to resist us. It is no detraction from the eminent skill and bravery displayed by our brethren of the army to claim this much credit for our sailors.

I had hoped to send you a complete list of all those who were not affected by the panic and remained at "B." One was taken, but I am not able now to learn who has it. It will doubtless be found, and I shall forward it whenever it is found.

I congratulate you, sir, upon the great victory which the fleet under your command has, in conjunction with the army, so gloriously won, and am,

Very respectfully, your obedient servant,

JAMES PARKER, *Lieutenant-Commander.*

REAR-ADMIRAL DAVID D. PORTER,

*Com'dg North Atlantic Squadron.*

REPORT OF LIEUTENANT L. E. FAGAN, U. S. MARINE CORPS.

UNITED STATES STEAM-FRIGATE "WABASH,"  
AT SEA, January 17, 1865. }

CAPTAIN—In obedience to your order, I have the honor to make the following report concerning the part taken by the marine guard of this ship in the operations against the rebel Fort Fisher, commanding the entrance to New Inlet, N. C., on the 15th day of January, 1865.

My command consisted of three sergeants, three corporals, and thirty-eight privates; and to prevent confusion in landing, the company was divided into four sections, each commanded by a non-commissioned officer.

On the morning of the 15th instant, at 10:30 o'clock, my men were landed and formed on the beach, about two miles to the northward of Fort Fisher. I then received and formed into other companies the marines of the different vessels, until the arrival of Captain Butler, United States Marine Corps, when I turned the command over to that officer.

At 11 A. M., I was ordered by Lieutenant-Commander K. R. Breese, fleet-captain, through Captain Butler, to take my guard and advance to the support of the sailors at the front, who were throwing up intrenchments near Fort Fisher, under the direction of Lieutenant Preston, United States

Navy. I marched my company up the beach by the flank until within a mile of the rebel fort, when, finding the fire severe, I deployed my men as skirmishers across the plain, and continued to advance. Arriving at the intrenchments, I ordered my men to cover themselves from the enemy's shot, and this they partially did by throwing up heaps of sand with their bayonets and hands. After the sailors had completed their breastworks, I was ordered by Lieutenant-Commander Breese to advance my command to the extreme parallel of intrenchments; which I did, my men marching to the front, across a plain swept by fire, with alacrity and spirit. In this advance I frequently ordered my men to lie down; and as soon as the shower of grape had passed, the march was resumed at the double-quick. After a toilsome march through the sand, we reached a line of intrenchments about forty yards from the fort, which I found occupied by the skirmish line of the 147th New York Volunteers. During the advance two of my men were badly wounded, and they were at once sent to the rear. I now ordered a few of my men (good shots) to open fire on the rebel gunners, and it was owing to their skill that a field-piece inside the palisade was forced to be abandoned by the rebel artillerymen.

I now awaited further orders; but finding the beach filling up with soldiers, and supposing the attack about to be made, I collected and marched my men by the flank across the plain towards the beach, where I saw the column of sailors and marines advancing to the front. Seeing no officer to report to, I formed my men with the rest of the marines, who were in the centre of the column, the advance being composed entirely of sailors. In this manner we marched, under a severe fire of musketry from the fort, towards the northeast angle of the work, until the column halted, when I ordered my men to lie down and pick off the rebels on the parapet of Fort Fisher until the order was given to charge. My men had opened fire when I gave the word to cease firing and prepare for the assault. I now perceived a movement in front of our position, and soon after a body of men rushed past. I endeavored, by every means in my power, to prevent the retreat which I now plainly saw was initiated, but my appeals and threats were of no avail, and I then prepared myself for the worst, knowing that a retreat would be disastrous and more deadly than a charge against the fort. My command maintained its position until I saw Lieutenant-Commander F. B. Blake, United States Navy, who informed me that the assault had been for the present abandoned. I then collected my men and marched down to the beach. Having seen that the retreat was universal on the part of the naval forces, I gave several of my men permission to advance again to the front and annoy the rebels as much as possible with sharp-shooting. Shortly after, hearing that an attempt was about to be made to rally the men, I halted and allowed my men to seek cover, while, in company with Acting Lieutenant-Commander Danels, of the "Vanderbilt," I collected straggling sailors and marines, and formed the men under some sand-hills on the beach, about six hundred yards from Fisher. We had collected quite a number of men, when I received orders from Lieutenant-Commander F. B. Blake to take my men, and as many more as I could find, and report to General Terry, United States Army, the object being to occupy, with sailors and marines, a line of intrenchments in the rear, then threatened by the enemy. I collected about two hundred marines, and marched to General Terry's headquarters, where I reported, and was at once assigned to a position on the northeast line, which position the marines occupied with vigilance and attention until the morning, when we were relieved, and I embarked my command for the "Wabash."

It only remains for me to add that one sergeant and six privates, who became detached from my

guard while in the army intrenchments at the front, accompanied the army in the storming of the fort, and, as I afterwards heard from an army officer, behaved with gallantry and coolness during the hand-to-hand conflict that ensued. In conclusion, captain, I would say, that during the time the marine guard of this ship was on shore, they behaved with bravery and subordination on all occasions. It pleased the fleet-captain (Lieutenant-Commander Breese) to compliment the handsome manner in which my men advanced in skirmish line to the advanced line of intrenchments under a heavy fire, and I feel that his words of praise were not undeserved. All my men behaved well, but I would present especially to your attention the conduct of Corporal Tomlin, of the guard, who, under a heavy fire from the enemy's sharpshooters, advanced into an open plain close to the fort and assisted a wounded comrade to a place of safety. I respectfully ask that his conduct may be made known to the honorable Secretary of the Navy, so that he may receive a medal of honor.

The marine guard is at present accounted for, and on board the ship in good condition.

Enclosed please find a list of wounded.

I am, captain, very respectfully, your obedient servant,

LOUIS E. FAGAN, *Lieut. U. S. Marines,*  
*Comd'g Guard, Frigate "Wabash."*  
CAPTAIN MELANCTON SMITH, U. S. N.,  
*Commanding U. S. Steam-frigate "Wabash."*

#### REPORT OF CAPTAIN CHARLES STEEDMAN.

UNITED STATES STEAMER "TICONDEROGA," }  
OFF WILMINGTON, N. C., January 17, 1865. }

SIR—I have the honor to lay before you the following report of the part this ship took in the recent attacks upon the forts on Federal Point, which has terminated so gloriously and successfully to the two branches of the service engaged.

On the afternoon of the 13th instant, after the return of the boats employed in landing troops, in obedience to signal, I took position in line of battle, and at 5:15 P. M. anchored ahead of the line, as directed in General Order No. 78. From this point a well-directed fire was kept up on the batteries to the left of Fort Fisher, in accordance with the chart-plan furnished me. Upon hearing the signal-whistle, at 5:55 P. M., I had the battery trained upon the Mound and on the guns in its neighborhood. A continuous fire was then kept up until I received orders to withdraw from action, at 6:20 P. M.

I am happy to say that no casualties occurred on board, although several of the enemy's shots fell over and around the vessel. The only loss sustained was that of the stern kedge-anchor, caused by a rifle shot cutting its hawser.

On the 15th instant, in obedience to signal, I got underway and took position at the end of the second line. At 10:35 A. M. a storming party of sailors in three (3) boats, in charge of Ensign George W. Coffin, and the marine guard, under command of First-Lieutenant Charles F. Williams, were sent from this vessel to report to the flag-ship for orders. At the same time I received your verbal message not to move until further orders. At 11:45 P. M., in compliance with signal, I steamed up and took position ahead of the second line, about a cable's length ahead of the "Shenandoah." From this point a well-directed fire was kept up with the starboard guns on the batteries well to the left of Fort Fisher, in keeping with your programme. Before opening fire the enemy threw several heavy rifle shots over and near me, but after a couple of rounds from this ship his fire was silenced. At 1:05 P. M. I received your verbal orders to shift my berth nearer in; this was done with some little delay and considerable trouble, owing to the strength of the ebb-tide and want of a sufficient head of steam. By spreading

fires, I was enabled to get the necessary speed to give me control of the ship and to take a position nearer to the enemy's battery.

From that time my fire was kept up in the same direction as heretofore, until the signal was made to cease firing. I then asked permission to open upon the "Mound," which had turned its guns upon our assaulting columns; this being granted, a deliberate fire was directed upon that fort up to 6:30 P. M., when I discontinued firing and secured the battery for the night. For one hour and a half previous to receiving your message (by tug) to cease firing, I had not fired a single shot. It gives me great pleasure to express my entire satisfaction at the thorough and efficient manner the officers and crew performed their duty during the time we were engaged in bombarding the enemy's works. I am indebted to Lieutenant George B. White, the executive officer of this vessel, for his energetic assistance.

With this communication I transmit copies of the reports of First-Lieutenant C. F. Williams, of the marine guard, marked "A," and Ensign G. W. Coffin, who had command of the assaulting party of sailors sent from this vessel, marked "B"; also the gunner's report of expenditure of ammunition. The surgeon's report of casualties has already been forwarded. In conclusion, allow me to congratulate you, Admiral, upon this brilliant and decided success, which has resulted in planting our flag on one of the strongest fortifications possessed by the rebels.

I am, sir, very respectfully, your obedient servant,

CHARLES STEEDMAN, *Captain.*

REAR-ADMIRAL D. D. PORTER,  
*Commanding North Atlantic Squadron,  
Flag-ship "Malvern."*

REPORT OF CAPTAIN L. L. DAWSON, UNITED STATES  
MARINE CORPS.

MARINE BARRACKS, }

NEW YORK, February 15, 1865. }

ADMIRAL—I have the honor to make the following report of the part taken by the marines under my command in the recent assault upon Fort Fisher:

Upon landing, on the morning of the 15th of January, I found all the men that were to constitute the assaulting column on shore. There were about three hundred and sixty-five (365) men in line, exclusive of Lieutenant Fagan, who had been ordered by Captain Breese to occupy a rifle-pit off to the right, near the army advance, before I had reached the shore.

I hastily divided the line into four (4) companies, under command of Captain Butler, First-Lieutenant Wallace, First-Lieutenant Corrie and First-Lieutenant Parker, giving First-Lieutenant Williams charge of some twenty-five (25) skirmishers, and First-Lieutenant Meeker acting as adjutant. I received two or three orders from Captain Breese to "bring up the marines at once; that it would be late": so that I had to move off without time to equalize the companies; to number them off for pacing and marching; to select sergeants to replace officers, or post the guides of a single company or platoon. I took the marines up, and filed across the peninsula in front of the sailors, with skirmishers thrown out. Captain Breese pointed out some light intrenchments towards the main bastion of Fort Fisher, which were dug and being completed under cover of the fire of the fleet. He ordered me to advance "to those that were finished, and as soon as those nearest the fort were completed, to occupy them; and when the assault was made, that I should keep up a full fire, when the sailors would rush by me, and, when well past, the marines follow them into the fort." Thus, in the event of a repulse, we would have had cover to

I had advanced to the second line of cover, and was waiting for the nearer intrenchments to be finished, when I received an order from Captain Breese "to take the marines down on the beach, about one hundred and fifty (150) yards to the left, and that he would bring up the sailors;" "that there was splendid cover on the beach, and that Captain Breese was going that way."

I was surprised at this order, and asked the gentleman who delivered it if he was not mistaken; but he replied, "No." I immediately obeyed the order, and in a few minutes the sailors were brought up. My men were formed by the right flank when the sailors came up, the first division passed the marines, and the whole command lying down by the right flank: marines abreast of the second division, sailors on the upper side of the beach. While at this point I received no orders. I had read the Admiral's order to Captain Breese respecting the assault, and was watching the army, knowing that agreeably to that order the "army were to be seen going in over the northwest parapet of the fort before we were to move to assault the sea-face." When I heard the order, "Charge, charge!" everyone rose up and dashed forward, yelling and cheering so loudly that no order could either be heard or passed. I tried to prevent the noise, but with no success.

I maintained the same position I had started in, abreast of the second division of sailors; and as the sand was much heavier on the upper side of the beach, I could gain nothing on the first division until they got under the heavy fire of the fort, when the first company of marines got abreast with the centre of the first division of sailors. I had just reached the head of my men, after a hard run, when I saw the head of the line of sailors, who had reached the end of the stockade, begin to falter and turn back, and was myself about forty or fifty yards from the end of the stockade, on the beach. I saw some six or eight men go around the end of the stockade, but immediately return; and it was at this instant that the whole line commenced doubling up and flying, everybody for themselves, except some thirty officers and men at the head of the line, who took cover under an angle in the stockade.

The efforts of the officers to rally the men were wholly unsuccessful, the order to retreat being passed along generally. At the moment when the head of the line gave way, the marines were not near enough to open fire effectually, and were on the double-quick, and quite exhausted; nor was there the slightest cover this side of the stockade, except a few sand-hills very near the stockade. I saw that the men were hopelessly repulsed. I looked to the rear of the line, which was breaking, as well as the front, and that a good many marines were joining in the retreat, so that I at once ordered the marines to "lie down and fire at the parapet," with a view of decreasing the rebel fire, and to prevent the confusion and exposure incident to such a crowd retreating on an open beach. Nearly all the marines of the first and second companies obeyed this order; the two rear companies I could not see, but, as few were to be seen after the retreat was effected, I take it for granted that they went also.

As soon as the panic was over, I ordered those men who had lain down, and were firing, to retreat in squads, as I supposed the fleet would soon open on that bastion of the fort. I did not retreat myself, but stayed on the beach about fifty yards from the end of the stockade until sunset, watching the progress of the army.

When I went to the rear, a staff officer informed me that General Terry desired all the marines and sailors who had arms to occupy the right of General Paine's line; that the rebels were demonstrating

getting about one hundred and eighty (180) marines behind the breastworks, near General Terry's headquarters, where they remained until morning. The rebels, from the manner in which they met the assault, evidently regarded it as the main attack, as it was the first.

With the result of our attack no one was more disappointed than myself. I obeyed all the orders I received from Captain Breese promptly, and exerted myself all I could to make the assault successful; and, though a portion of the marines retreated with the sailors, it is but just to the rest to say that they remained and performed the duty of good soldiers until I passed the order to retreat.

I remain, very respectfully, your obedient servant,

L. L. DAWSON,

*Captain United States Marine Corps.*

REAR-ADMIRAL DAVID D. PORTER,  
*Commanding North Atlantic Squadron.*

REPORT OF LIEUTENANT-COMMANDER GEORGE E. BELKNAP.

UNITED STATES STEAMER "CANONICUS." }  
OFF FORT FISHER, N. C., January 17, 1865. }

SIR—I have the honor to report that during the actions of the 13th, 14th and 15th instant, which resulted in the capture of Fort Fisher, this ship engaged that work at a distance of seven hundred (700) yards, perhaps a little closer on the 15th, as the smoothness of the sea enabled me to go into shoaler water than on the preceding days, having at one time only a foot and a half of water to spare under our keel.

On the first day of the attack, the 13th, the enemy replied vigorously to our fire until late in the afternoon, when the heavierships, coming into line, soon drove them into their bomb-proofs. Soon after we had taken position, it became evident that, since the previous attack, a reinforcement of experienced artillerymen had been received in the fort, as its fire was much more accurate and spirited than before. They soon obtained our range and struck the ship frequently, while many shots fell close alongside. Upon one occasion, two shots out of three, fired simultaneously, struck the side-armor abreast the turret.

We count thirty-six (36) hits this day, and everything about the deck not shot-proof was badly cut up. Two men were knocked down and stunned at the guns by the impact of a 10-inch gun-shot upon the turret. The flag was shot away twice and gallantly replaced by Quartermaster Daniel D. Stevens.

Not content with solid shot, the enemy fired shells occasionally, to burst over the turret, and now and then the bullet of a sharp-shooter whistled over us.

On the second and third days the fire of the enemy was comparatively feeble, and principally directed at the gun-boats, and when the larger ships came into action ceased altogether. An occasional musket-shot fell near us, and when the naval-assaulting column was driven back, many of the bullets and grape-shot fired at our gallant fellows passed over us, some few striking the ship. Second-Assistant Engineer John W. Saville received a severe wound in the left thigh from a grape-shot. At this time we also received a 10-inch shot on the side-armor, fired from the water battery on the right of the sea-face of the fort.

Our fire was slow and deliberate, and every effort was made to dismount the enemy's guns, and though almost hidden by traverses, I am happy to say we succeeded in dismounting two of them. Acting-Ensign M. W. Weld knocked over a six-inch rifle on the second day, and the executive officer, Lieutenant R. S. McCook, disposed of a 10-inch columbiad on the third day of the action. I also saw a shell from the "Monadnock" dismount a gun, and a shot from the "Mahopac" knocked the muzzle off another.

We expended during the three days two hundred and ninety-seven (297) 15-inch shells.

I have to thank the officers and crew for the zeal and gallant spirit manifested throughout the fight, and for the cheerful manner in which they worked at night, taking on board ammunition after the arduous and exhausting work of the day.

I again desire to bring to your notice and that of the department, the services of the executive officer, Lieutenant R. S. McCook, to whom I am indebted for the efficiency and readiness which enabled me at all times to be prompt in all movements required of the ship. Equally fortunate in the services of Chief Engineer D. B. Macomb, I beg leave to recommend him to your favorable consideration.

The powder division was ably commanded by Acting-Master D. S. Murphy, assisted by Acting-Ensigns Seekins and Center. Acting-Ensign M. W. Weld showed great aptitude in handling the guns under the supervision of the executive officer. Assistant Paymaster R. P. Lisle, acting as aide, merits my thanks for the intelligent manner in which he attended to the duties of signal officer.

LIEUTENANT (AFTERWARDS COMMANDER) RODERICK S. MCCOOK,

EXECUTIVE OFFICER OF THE "CANONICUS."

Acting-Master and Pilot Edward A. Decker performed his duties with his accustomed coolness and discretion.

I inclose the executive officer's report of damages received, and have already forwarded the surgeon's report of casualties. I beg leave to congratulate you, Admiral, upon the brilliant victory which has crowned your efforts at this point, and which is the more gratifying, as it proves conclusively that on a former memorable occasion the possession "would have been found an easier conquest than was supposed," had the attempt been made to occupy it.

I am, sir, very respectfully, your obedient servant,

GEORGE E. BELKNAP,

*Lieutenant-Commander, Commanding.*

REAR-ADMIRAL D. D. PORTER,  
*Commanding North Atlantic Squadron, Flag-ship "Mahopac," off Fort Fisher, N. C.*

REPORT OF LIEUTENANT-COMMANDER THOMAS O. SELFRIDGE.

UNITED STATES STEAMER "HURON." }  
OFF FORT FISHER, January 17, 1865. }

SIR—I have the honor to report that having

landed with the men of this vessel to join in the land attack on Fort Fisher, I was detailed by Lieutenant-Commander Breese to command the third column of attack, composed of detachments from the ships of the third and a portion of the fourth divisions, numbering about four hundred and fifty men. Lieutenant G. M. Bache commanded the right wing, Lieutenant-Commander W. N. Allen the left wing.

I formed them in column and moved forward by the head of companies, until near our first rifle-pits, when the whole assaulting column was formed in flank alongside the beach, awaiting the signal of assault from the Army. When this was given, I moved my column forward on the double-quick, followed close on to the second, and for about half a mile under an extremely heavy and withering fire of musketry and grape.

When we finally reached the palisades, I found the columns which had proceeded me halted and lying down. Going to the front, an effort was made at this time to get the men to charge; but the fire was so heavy that the few who passed through the stockade were compelled to fall quickly back. At this moment an unexplained panic took place in the rear, which so quickly communicated itself to the whole that it was impossible to rally the men.

I remained near the fort till night, when I left, with a few, under cover of the darkness.

My column moved up with great gallantry, as by the time I got up the rebels had concentrated their whole fire upon us; and until we came to a halt all seemed to be moving well.

To Lieutenant-Commander W. N. Allen and Lieutenant G. M. Bache, both wounded, I am indebted for assistance in forming and maintaining the organization of the division.

I regret extremely that my entire unacquaintance with any of the officers or crews of my division renders it impossible for me to particularize the deserving, but until the panic all deserved praise, for none faltered.

Very respectfully, your obedient servant,  
THOMAS O. SELFRIDGE,  
*Lieutenant-Commander.*

REAR-ADMIRAL DAVID D. PORTER,  
*Commanding North Atlantic Squadron,  
Flag ship "Malvern."*

#### REPORT OF LIEUTENANT W. B. CUSHING.

UNITED STATES STEAMER "MONTICELLO," }  
OFF WILMINGTON, January, 17, 1865. }

SIR—I have the honor to report the part taken by this vessel in the actions of the 13th, 14th and 15th instant, resulting in the capture of the harbor defences of Wilmington, the loss of foreign supplies to the rebels, and the ruin of those holding the Anglo-rebel loan.

On the 13th and 14th the "Monticello" assisted in guarding the troops in landing and advancing. On the 15th instant, by your order, I took position close in by the fort and shelled the rebel privateer "Chickamauga" and three transport steamers from their position in the river, thus preventing the landing of reinforcements for the garrison. The ship's guns were then turned on the fort, and used with effect throughout the day.

At noon I landed with forty men from this vessel to take part in the naval assault on Fort Fisher. My men, and those of Lieutenant Porter of the "Malvern," led the advance of the storming party. The marines did not clear the parapet of the fort, as anticipated; hence the assault failed. Our sailors were close under the walls, subjected to a heavy fire, since the main body of the enemy had been drawn to that point to resist what they supposed to be the weight of the attack. We were forced to fall back with the loss of many of our best officers

gallantry and our diversion in its favor, had effected a lodgment that secured subsequent success. Then, finding myself apparently senior officer, I rallied as many sailors and marines as possible, and at night placed them in the trenches, as requested by General Terry, thus relieving some regiments that went to the front. In this I was greatly assisted by your son, Secretary Porter, and by Lieutenant Woodward, of the "Minnesota." Acting-Ensign Daniel W. Lakin, of this vessel, behaved gallantly and rendered material aid. My loss during the day consisted of four killed and four wounded.

I am, very respectfully, your obedient servant,  
W. B. CUSHING,  
*Lieutenant, Commanding.*

REAR-ADMIRAL DAVID D. PORTER,  
*Commanding North Atlantic Squadron, etc.*

#### REPORT OF ACTING-MASTER H. W. GRINNELL.

HEADQUARTERS SHERMAN'S ARMY, }  
FAYETTEVILLE, N. C., March 12, 1865. }

SIR—I have the honor to report that I have this day succeeded in handing to Major-General Sherman the cypher dispatch intrusted to me by Major-General Schofield at Wilmington, North Carolina, on the 4th instant.

I left the "Nyack" on the evening of the 4th in a small dug-out, with a party consisting of Acting-Ensign H. B. Colby, Thomas Gillespie, seaman, and Joseph Williams, ship's painter, armed with Sharpe's rifles and revolvers, and taking two days' rations. After proceeding up the river about twelve miles I met the enemy's advance picket-post, which I succeeded in passing without discovery; but at a point near Livingston's Creek I found the picket so strongly posted that I deemed it the more prudent course to abandon my boat, and to attempt to communicate with General Sherman's forces near the Pedee River. I left my boat on the morning of the 5th instant, and struck for the Wilmington and Whitehall road. On my way I passed through the village of Summerville, where I destroyed some arms which I found in the possession of the citizens; here I got information that a party of cavalry were endeavoring to cut me off at Livingston's Bridge, and I was reluctantly compelled to secrete myself and party in a negro hut near by; here I remained two days, when I received information that the enemy, tired of waiting, had recrossed the river, thus leaving me free to advance. At dark on the 7th instant, having secured the services of a negro guide, I started in the direction of Whitesville, advancing with caution, and moving only by night. After much tedious and difficult marching through the swamps, I reached a point near Whitesville on the morning of the 9th instant. The town was held by the enemy in strong force, and, finding traveling on foot consumed too much time, I determined to impress horses, and by a bold dash break through the pickets on the Lumbertown road. With this purpose in view, I left my bivouac in the swamps, and succeeded in passing unobserved until I reached the cross-road to Whitehall, which I found picketed. After satisfying myself that the picket had no reserve, we made a quick dash and captured two men without alarm, and before they became aware of our purpose I disarmed them, and after compelling them to follow me for about five miles I paroled them, leaving them apparently much satisfied at their release. They were members of Company A, 51st North Carolina Infantry, and represented their regiment as being much demoralized. After hard riding night and day, I reached Drowning Creek at a point near the town of Lumbertown on the afternoon of the 11th; here I first learned definitely of the whereabouts of General Sherman's forces.

I met a small scouting party near the creek, but they fled to the woods at our approach. On the

of meeting the rear scouts of General Sherman's forces on the Lumber Bridge road, about twenty miles from this place. The several roads being blocked up by wagons, artillery, etc., and our horses being quite worn out by hard riding, I did not reach these headquarters until 1 P. M. this afternoon.

General Sherman received the dispatch, and expressed himself much surprised at receiving it through the Navy, and by such a route. In parts of Robeson County I found a very large number of deserters from the rebel army, and quite a strong Union feeling.

I cannot speak too highly of the conduct of Acting-Ensign Colby, also of the two men, Thomas Gillespie and Jos. Williams, who were ever ready to encounter any danger or hardship that came in their way.

General Sherman wishing me to communicate with you as soon as possible, I leave to-night by the army tug, hoping to meet you on my way to Wilmington.

In conclusion, allow me to thank you for giving me permission to undertake this rather novel naval scout.

I am, sir, your obedient servant,

H. WALTON GRINNELL,  
*Acting-Master U. S. Navy, Commanding Expedition.*

LIEUTENANT-COMMANDER GEORGE W. YOUNG,  
*Senior Officer, off Wilmington, N. C.*

While the fleet was off Wilmington, and Admiral Porter engaged in taking that place, General Grant came very near being put to great inconvenience, if not disaster, owing to a circumstance which at the time seemed rather discreditable to the Navy. Before the fleet left Hampton Roads, every care was taken that the James River, below Howlett's Battery, should be kept so perfectly guarded by a naval force that there could be no possible chance left for the Confederate iron-clads to make an attack on the vessels below the obstructions sunk in the river, which consisted of several large schooners loaded with stones sunk in the middle of the stream, and heavy booms and chains extending from the sunken vessels to either shore and secured to anchors planted in the bank.

These obstructions were immediately under the fire of the "Onondago," a double-turreted Monitor, carrying four 15-inch guns, several double-enders, carrying 11-inch and 9-inch guns, a torpedo-boat of excellent construction, and also a battery on shore belonging to the Army. A pontoon bridge was in place below the vessels guarding the obstructions, to enable the Army of the James to retreat across the river under cover of the gun-boats, in case it was attacked by a superior force. Every arrangement had been made to prevent a disaster of any kind, and to punish the enemy in case he should attempt to make an attack. There could be no possibility of the enemy's fleet getting past the obstructions while the Federal naval force maintained its position; but, in case it should be driven away, then the Confederates could have blown up the obstruction, passed

through and broken up the pontoon bridge, thus cutting off the Army on the left bank of the James from its supports, and threatening City Point, where all the stores were gathered for the use of the Army before Richmond.

The Confederate naval force at that time in the James River, under the command of Commodore J. K. Mitchell, consisted of the iron-clad "Virginia" (4 Brooke rifles), Captain Dunnington; iron-clad "Richmond" (4 Brooke rifles), Captain Johnson; iron-clad "Fredericksburg" (4 Brooke rifles), Captain Wilson; "Nansemond," wooden (2 guns), Captain Butt; "Roanoke," wooden (1 gun), Captain Wyatt, and "Torpedo," wooden (1 gun), commanding officer unknown. This fleet, with its iron-clads and rifle-guns, was no match for the "Onondago" and the gun-boats, assisted by the torpedo-boat; but the Confederate commander, either on his own volition or by an order from his Government, determined to make an attempt to pass the obstructions and break up the pontoon bridge. At the same time General Lee was to attack the army on the left bank of the river, and, while the Confederate fleet was occupied in driving away the Union gun-boats and the "Onondago," push on to City Point, set fire to all the wharves and store-houses, and create a scene of destruction unparalleled in the annals of the war.

This might have been done under a bold and dashing commander who knew what he was about, and was willing to risk the loss of his whole fleet to gain an important advantage. The Confederate fleet in James River was not a particle of use in the defence of that stream, which was so filled with obstructions and torpedoes, backed by four heavy forts, that no man having common sense or judgment would have attempted to ascend the river, especially as there was no particular object in doing so.

The forts on the river were within supporting distance of each other, and under the command of a very able naval officer, John R. Tucker, who also had charge of the torpedo corps. The bed of the river was full of torpedoes, and a dozen vessels, no matter what their size or strength, would have been sunk before they could have reached the first obstruction above Drury's Bluff. As long as the "Onondago" floated, the Confederate vessels could not get down with safety, any more than the Federal ships could get up, and the only way to meet with any success was for the Confederates to risk a dozen lives and send down a dozen torpedo-boats, and try to destroy the double-turreted Monitor. This may have been the intention, but it was never carried out.

A night was appointed for Mitchell's fleet to make an attack on the Federal forces. At daylight, next morning, two of the iron-clads appeared around the point near Howlett's Battery and approached the obstacles, where they stopped. Commander William A. Parker, the commanding officer of the Federal naval force, had been instructed in written orders from Admiral Porter that, in case the Confederate fleet should show itself below Howlett's Battery, to get underway and proceed up close to the obstructions, to hold on there and keep up his fire as long as a Confederate iron-clad remained in sight. Strange to say, Commander Parker turned the head of his vessel down stream and seemed for a moment about to destroy the pontoon bridge; but, suddenly reflecting, he attempted to turn his ship in that narrow river, got aground, and knocked off the wings of one of his propellers. His given reason for pursuing this erratic course was "that he wanted to get down stream some distance so that he might go at the enemy with all speed." This was ridiculous, as the Confederates were on the other side of the obstructions, and could not be reached except by shot or shell. Parker proved afterwards to be of unsound mind, though it was not suspected at the time, and previous to this fiasco stood high in the naval service both as a brave man and an excellent officer. It would therefore be ungenerous to criticise his conduct, except to regret that the Admiral's original intention to leave Commander A. C. Rhind in command was not carried out, as Rhind would have destroyed the two iron-clads that appeared below Howlett's Battery.

The commanders of the two Confederate iron-clads behaved in quite as erratic a manner as the captain of the "Onondaga." They both came to anchor at a place called the Crow's Nest, a tall frame-work look-out, built by General Butler to observe the movements of the Confederate gun-boats and to communicate by signal with General Grant. The officers of the Confederate iron-clads landed in their boats and seemed to examine this structure with a great deal of curiosity. At first they determined to burn it, but finally retired satisfied with cutting their names on the timbers, and returned to their vessels.

So far it does not appear as if there was any concert of action between the two iron-clads, nor does the motive of their coming below Howlett's Battery appear. They laid at anchor all night at the look-out and seemed uncertain what to do. That night the torpedo-boat could have blown them both up, but no attempt was made from any quarter to disturb them, and, no doubt, they wondered what had become of the

up the river, very much shorn of her speed by the loss of one of her propellers. On seeing her, the two Confederate iron-clads got under way and proceeded up toward Howlett's Battery, evidently returning in search of their commander-in-chief. They did not, however, get off without some damage. When the "Onondaga" reached the obstructions, Commander Parker opened fire on the retreating vessels with all his 15-inch guns.

One of the Confederate iron-clads had just turned the point, but the rear one received a solid shot which pierced her side, inflicting some injuries to her hull, and killing and wounding several of her men. A 15-inch shell from the "Onondaga" struck the same vessel on the knuckle and entered three or four feet, but failed to explode. Another solid shot struck the iron-clad on her casemate, shattering it very much, and knocking down a number of her men. By this time she had passed the point and was shut out from further danger.

Thus ended this remarkable affair, which might have caused serious trouble if it had been conducted with any determined dash, though the fact that the "Onondaga's" shot had inflicted so much damage in so short a time is rather a proof that, if both these vessels could have passed, they would have been knocked to pieces. After this, the obstructions were further strengthened by sinking another large schooner loaded with stone, and that was the last attempt the Confederates ever made to reach City Point with their naval force. But the commander of the Federal vessels lost an opportunity to gather some laurels, an opportunity that never occurred again, while the Federal Navy lost a page in history which might have been chronicled as one of the brightest events of the war.

After the destruction of the "Albemarle" and the recapture of Plymouth, the operations in the Sounds of North Carolina were comparatively unimportant, for the occasional raids of energetic Confederate guerillas could hardly be considered of much consequence. The Confederates still held the Roanoke River above Plymouth, as there was not a sufficient naval force in the Sounds to operate successfully in that quarter. A large portion of the enemy's forces in North Carolina had been drawn off to fill up the ranks of General Joseph E. Johnston's army, which was charged with the duty of impeding General Sherman in his march to the sea.

About this time Sherman had captured Savannah and General Grant had received the news of the utter rout of Hood's army in Tennessee by General Thomas, which left Sherman at liberty to march through

the Carolinas without apprehensions of a formidable enemy in his rear, and with sufficient addition to his forces from the troops of Schofield and Terry to enable him to hold his own until he reached Goldsborough, N. C., his objective point.

The middle of January, 1865, saw Sherman's army in motion for the Carolina campaign. His right wing, under General Howard, was conveyed by water to Beaufort, South Carolina, whence it started on its march up the Charleston railroad, while the left wing, under General Slocum, with Kilpatrick's cavalry, crossed the Savannah river and moved towards Augusta. These movements were made for the purpose of deceiving the Confederates as to the point aimed at by General Sherman. The Federal troops destroyed all the railroads in their rear.

Sherman's object was to effect a junction with Grant, and by force of numbers bring the war to a close. He passed by Augusta and Charleston, since there was nothing to be gained by halting at either place. In his official report General Sherman says: "Without wasting time or labor on Branchville or Charleston, which I knew the enemy could no longer hold, I turned all the columns straight on Columbia."

From Columbia, after making a feint on Charleston, Sherman advanced to Fayetteville and Goldsborough, while preparations were making by the Federal Generals on the sea-coast to effect a junction with his army—one body of troops to advance from Wilmington, N. C., and the other from Newbern.

All the troops that had occupied Charleston, Savannah, Augusta, Wilmington and other points along the coast, had united, and did all that was possible to impede Sherman's march; but, although the Confederate forces had swelled to a considerable army, they could not withstand the Federal advance, and from desertions and other causes they soon began to melt away. Still Sherman was not master of the situation until he had driven Johnston's army, from which he had experienced the strongest resistance, back to Smithfield. The junction of Schofield with Sherman's army was made next day, the 23d of March, 1865, at Goldsborough, and General Johnston and his forces were held as in a vise until the final surrender.

These movements had changed the whole state of affairs in North Carolina. The Confederate troops along the various rivers, including the Roanoke, had either joined General Johnston or had moved off to Richmond, and Admiral Porter, taking advantage of the situation, had directed Commander Macomb to advance up the Roanoke with a naval force, destroy or cap-

ture all the enemy's depots of stores, and also an iron-floating battery said to be on the river.

On the 11th of December, 1864, Commander Macomb, in connection with a military force, proceeded up the Roanoke in the double-ender "Wyalusing," accompanied by the "Otsego" and "Valley City" the tugs "Belle" and "Bazley," and a steam-packet boat. Proceeding slowly up the stream the vessels prepared to anchor for the night at a sharp bend in the river just below Jamesville, where the commanding officer of the Army forces had agreed to communicate with the naval commander. In obedience to signal, the "Otsego" had slowed her engines and was about to let go her anchor when a torpedo exploded under her bottom on the port side, and immediately afterwards another exploded under her forward pivot-gun, which was capsized on the deck by the concussion. In three minutes the vessel sunk, her spar-deck being three feet below the water. She had anchored over a nest of torpedoes, against which the commanding officer of the expedition had been warned and directed to drag for in boats before proceeding up the river; but this officer satisfied himself by getting out spars and nets ahead of his vessels to pick up any submarine obstructions. A short time after the sinking of the gun-boat, while the tug "Bazley" was transferring her crew to the "Wyalusing," a torpedo exploded, and the "Bazley" immediately went down alongside the "Otsego." Matters became at this moment rather embarrassing, for the vessels were all anchored close together, and it was not safe to move in the dark for fear of being blown up, so a very anxious night was passed.

The sinking of the gun-boat and tug put an end to an expedition which, if successful, would have been a handsome addition to the sinking of the "Albemarle" and the recapture of Plymouth by the Navy. The "Otsego" made the number of naval vessels blown up by the Confederate torpedo corps, since the commencement of the war, about twenty. For miles along the Roanoke torpedoes were thickly planted to prevent the advance of the Navy, and at one turn in the river there were no less than forty of these destructive weapons in one group.

This was the last important naval movement undertaken in the Sounds of North Carolina. Sherman's arrival at Goldsborough, and the arrival of troops by sea at Newbern, warned the guerillas, called by the Confederates the "home forces," that they could no longer hope to hold their own in face of the overwhelming numbers which at any moment might appear in this vicinity; so they quietly dispersed, and all that por-

tion of the Confederacy fell permanently into the hands of the Unionists. But for the unfortunate sinking of the "Otsego" and the "Bazley," all the operations of the North Atlantic squadron from October, 1864, to April, 1865, would have been crowned with success.

Although the area of operations in and around Plymouth was not a large one, what thrilling incidents had occurred in that small space! First: the capture and fortification of Plymouth by the Union forces; then the appearance of the "Albemarle" and her sinking the "Southfield"; the death

of the gallant Flusser, and the retreat of the "Miami"; the attack of the "Albemarle" on the Sound flotilla; the sinking of the "Albemarle" by Cushing; the dash of Macomb upon Plymouth, recovering the place after as handsome an attack at the cannon's mouth as was ever seen anywhere; and, finally, the unfortunate sinking of the "Otsego" and "Bazley" near where the "Albemarle" lay at the bottom of the river. All these vessels were afterwards raised and lay side by side at the wharf, with the Union flag floating over them, as if they had never met in deadly strife.

Commodore, Joseph Lanman; Lieutenant-Commander, James Parker; Lieutenants, M. S. Stuyvesant and E. T. Woodward; Passed-Assistant-Surgeon, J. P. Quinn; Assistant-Surgeons, Wm. Longshaw and W. S. Fort; Paymaster, C. C. Upham; Marines: Captain, Geo. Butler; Second-Lieutenant, G. M. Welles; Acting-Master, Theo. Werholf; Acting-Ensigns, W. C. Wise, J. W. Willard, James Bertwisle, F. A. O'Connor and W. H. Jennings; Acting-Master's Mates, J. M. Simms, Fallas Eager and J. Amos Merrill; Engineers: Acting-Chief, A. R. Eddowes; Acting-First-Assistant, J. E. Cooper; Second-Assistants, Guy Samson, J. C. Cross and H. A. Delius; Third-Assistants, J. D. Lee and J. C. Kafer; Acting-Third Assistant, W. H. Mott; Pilot, F. C. Fowler; Boatswain, Wm. Bunker; Gunner, R. H. Cross; Carpenter, A. O. Goodson; Sailmaker, T. O. Bassett

#### \* "POWHATAN"—FIRST-RATE.

Commodore, James F. Schenck; Lieutenants, Geo. M. Bache and Merrill Miller; Surgeon, H. O. Mayo; Assistant-Surgeon, W. H. Johnson; Paymaster, C. P. Wallach; First-Lieutenant Marines, F. H. Corrie; Acting-Master, C. R. Wilkins; Ensigns, Ira Harris, Jr., and A. G. Kellogg; Acting-Ensigns R. D. Evans, Francis Morris and Edmund Parys; Acting-Master's Mates, Geo. P. Abbott, Geo. S. Sands and John Clitz; Engineers: Chief, John A. Grier; Acting-First-Assistant, W. H. Dobbs; Second-Assistants, W. S. Smith, James Long, John Franklin and Michael Dundon; Third-Assistant, A. C. Engard; Acting-Third-Assistant, H. F. Grier; Acting-Boatswain, James Gurney; Gunner, G. W. Omensetter; Carpenter, J. Macfarlane; Sailmaker, B. B. Blydenburg.

#### \* "SUSQUEHANNA"—FIRST-RATE.

Commodore, S. W. Godon; Lieutenant-Commander, F. B. Blake; Lieutenants, J. R. Bartlett and Geo. M. Brown; Surgeon, J. O'C. Barclay; Assistant-Surgeon, C. H. Perry; Paymaster, A. J. Clark; Chaplain, J. D. Beugless; First-Lieutenant of Marines, Wm. Wallace; Acting-Master, H. O. Porter; Ensign, E. E. Preble; Acting-Ensigns, T. F. Lacock, W. W. Rhoades and O. C. K. Benham; Acting-Master's Mates, Chas. Gainsford, W. H. Sprague, M. S. Cooper and S. T. Paine; Engineers: Chief, John Johnson; First-Assistant, I. S. Finney; Second-Assistants, James Renshaw, J. H. Hutchinson and H. A. Smith; Third-Assistants, Thomas Crummev and C. F. Marsland; Acting-Third-Assistant, Berna Cook; Boatswain, Z. Whitmarsh, Jr.; Gunner, E. J. Waugh; Carpenter, J. E. Miller; Sailmaker, J. A. Holbrook.

#### \* "NEW IRONSIDES"—FIRST-RATE.

Commodore, Wm. Radford; Lieutenant-Commander, R. L. Phythian; Lieutenants, A. R. Ma-

Nair, H. B. Rumsey and H. J. Blake; Surgeon, Edward Shippen; Assistant-Surgeon, G. A. Bright; Paymaster, George Plunkett; First-Lieutenant of Marines, R. S. Collom; Acting-Masters, H. P. Conner and John Dorey; Acting-Ensigns, Walter Pearce, W. A. Duer and J. W. King; Acting-Master's Mates, C. C. Bamford, J. F. Silva and W. E. Wilson; Engineers: Chief, Alex. Greer; Second-Assistants, J. H. Hunt, W. S. Cherry, W. J. Reid, N. P. Towne and W. S. Wells; Third-Assistants, J. K. Stevenson and A. H. Henderson; Boatswain, Wm. E. Leeds; Gunner, Wm. Cope; Carpenter, J. E. Cox; Sailmaker, G. T. Lozier.

\* "SANTIAGO-DE-CUBA"—SECOND-RATE.

Captain, O. S. Glisson; Lieutenant, N. H. Farquhar; Passed-Assistant Surgeon, A. S. Oberly; Assistant Surgeon, J. D. Murphy; Acting-Masters, J. A. Hammin and F. H. Wilks; Acting-Ensigns, T. Delano, E. C. Bowers and C. H. Pierce; Acting-Master's Mates, Richard Lyons, S. W. Kempton, E. C. Finney and R. S. Shephard; Engineers: Acting-Chief, Solon Farrer; Acting-Second-Assistants, C. R. Weaver and F. W. H. Whittaker; Acting-Third-Assistants, Geo. A. Barnard, R. E. Hurley, C. R. Merrill, Jos. Jordan and G. A. Barnard; Acting-Gunner, J. W. Irwin.

"WABASH" FIRST-RATE."

Captain, Melancton Smith; Lieutenant-Commander, C. H. Cushman; Lieutenants, E. C. V. Blake and H. C. Tallman; Surgeon, H. F. McSherry; Passed-Assistant-Surgeon, J. H. Tinkham; Acting-Assistant-Surgeon, N. L. Campbell; Paymaster, Geo. Cochran; Chaplain, C. A. Davis; Second-Lieutenant of Marines, L. E. Fagan; Acting-Masters, W. U. Crozier and S. J. White; Acting-Ensigns, G. T. Davis, Whitman Chase, E. A. Small and J. F. Brown; Acting-Master's Mates, Wm. R. Lyons, D. E. Knox, J. J. Fuller, Jr., Wm. Read, Jr., E. P. Blague, H. C. Thorburn and J. B. Lukens; Engineers: Chief, A. C. Stimers; Second-Assistants, J. S. Green, P. R. Voorhees, W. C. Williamson, A. Michener and N. W. Buckhout; Acting-Third-Assistants, J. W. Collins, W. H. Peabody and J. T. Smith; Boatswain, Charles Miller; Gunner, Cornelius Dugan; Carpenter, Wm. Hyde; Sailmaker, H. W. Frankland.

\*\* "VANDERBILT"—SECOND-RATE.

Captain, Charles W. Pickering; Acting-Volunteer-Lieutenant-Commander, J. D. Daniels; Surgeon, Joseph Wilson; Assistant-Surgeon, L. M. Lyon; Acting Assistant Paymaster, J. E. Tolfree; Captain of Marines, William H. Parker; Acting-Masters, A. M. Keith and L. F. Timmerman; Acting-Ensigns, A. P. Sampson and E. N. Snow; Acting-Master's Mates, E. B. Atkinson, Edw. Thompson, J. B. Strout, E. P. Pope and Edw. Kearns; Engineers: Acting-Chief, John Germain; Acting-First-Assistant, W. H. Golden; Acting-Second-Assistants, William Welles and A. Williams; Acting-Third-Assistants, John Hyslop, Martin Glennon, George Germain, John O'Neil, William Wright and W. H. Garrison; Boatswain, Jasper Coghlan; Gunner, George Sirian; Carpenter, T. H. Bishop; Captain's Clerk, John S. Stodder.

\*\* "JUNIATA"—SECOND-RATE.

Captain, William R. Taylor; Lieutenant-Commander, Thomas S. Phelps, (commanded at Fort Fisher); Lieutenant, F. V. McNair; Surgeon, A. C. Gorgas; Paymaster, Caspar Schenck; Acting-Master, C. H. Hamilton; Ensign, Charles McGregor; Acting-Ensigns, W. D. Price and S. S. Bissell; Acting-Master's Mates, Lewis Goeltze, W. E. Warnick and G. H. Prescott; Engineers: Chief, J. Follansbee; Acting-First Assistant, J. E. Fox; Second-Assistants, J. Van Hovenbury and John Everding; Third-Assistants, Everett Battelle and F. C. Burchard; Acting-Third-Assistants, B. F. Lewis and

Thomas Connor; Boatswain, J. A. Selmer; Gunner, D. A. Roe; Carpenter, John Mills.

\*\* "FORT JACKSON"—SECOND-RATE.

Captain, B. F. Sands; Lieutenant-Commander, Rush R. Wallace; Lieutenant, S. H. Hunt; Surgeon, Philip S. Wales; Acting-Assistant Surgeon, E. J. O'Callaghan; Paymaster, Clifton Hellen; Acting-Masters, J. S. Coney and H. F. Moffatt; Acting-Ensigns, S. K. Hopkins and J. J. Reagan; Acting-Master's Mates, H. St. C. Eytinge, J. D. Moore, G. W. Smoot, F. A. Powers and Charles Moran; Engineers: Acting-Chief, Rodney Smith; Acting-First-Assistants, Jared Day and J. A. Hill; Acting-Second-Assistants, John Herron and G. T. Gibbs; Acting-Third-Assistants, C. H. Wakefield and William M. Prentiss; Boatswain, P. A. Chason; Acting-Gunner, Thomas Reese; Carpenter, E. Thompson.

\*\* "SHENANDOAH"—SECOND-RATE.

Captain, Daniel B. Ridgely; Lieutenant, Smith W. Nichols; Surgeon, James McMaster; Acting-Assistant-Paymaster, C. M. Guild; Acting-Masters, J. S. Watson, W. H. Brice and J. A. Bullard; Ensigns, Yates Sterling and J. H. Sands; Acting-Ensigns, L. H. White and T. H. Wheeler; Acting-Master's Mate, T. D. Wendell; Engineers: Acting-Chief, Nelson Winans; Second-Assistant, E. A. Magee; Acting-Second-Assistant, J. S. Kelleper; Third-Assistants, D. M. Fulmer, F. W. Townner and William Bond; Boatswain, J. H. Polley; Gunner, George Edmonds.

\* "TICONDEROGA"—SECOND-RATE.

Captain, Charles Steedman; Lieutenant, Geo. B. White; Acting-Volunteer-Lieutenant, L. G. Vassallo; Surgeon, C. J. Cleborne; Paymaster, H. M. Denniston; Ensigns, W. W. Maclay, A. S. Crowningshield and Geo. W. Coffin; First-Lieutenant of Marines, C. F. Williams; Acting-Master's Mates, Wm. Charleston, Jr., E. A. Sibell, Wm. Cooper and L. Norton; Engineers: Chief, T. J. Jones; Second-Assistant, H. H. Barrett; Acting-Second-Assistants, R. I. Middleton and M. Smith; Acting-Third-Assistants, O. Bassett, H. M. Noyes, M. W. Thaxter and S. J. Hobbs; Boatswain, H. E. Barnes; Gunner, Joseph Smith; Acting-Carpenter, M. E. Curley; Sailmaker, J. C. Herbert.

\*\* "BROOKLYN"—SECOND-RATE.

Captain, James Alden; Lieutenant, T. L. Swann; Surgeon, George Maulsby; Assistant Surgeon, H. S. Pitkin; Paymaster, G. E. Thornton; Captain of Marines, G. P. Houston; Acting-Master, Robt. Barstow; Ensigns, D. R. Cassell, C. H. Pendleton and C. D. Sigsbee; Acting-Ensign, C. H. Littlefield; Acting-Master's Mates, Thos. Stanfield, J. W. DeCamp and R. H. Taylor; Engineers: Chief, Mortimer Kellogg; Second-Assistants, W. H. G. West, Thos. Lynch, G. E. Tower and J. A. Bullard; Acting-Second-Assistant, R. D. Giberson; Acting-Third-Assistants, John Matthews, H. H. Arthur and Timothy Flanders; Boatswain, Rob't McDonald; Acting-Gunner, John Quevedo; Carpenter, R. G. Thomas; Sailmaker, D. C. Brayton.

ORDNANCE-SHIP "ST. LAWRENCE."

Commander, D. Lynch; Acting-Master, G. W. Caswell; Acting-Ensigns, F. Hopkins, Wm. Chandler, Thomas Welsh and Ang. Dame; Acting-Assistant Surgeon, M. C. Drennan; Assistant Paymaster, W. Goldsborough; Acting-Master's Mates, G. E. Chipman and T. B. Seavey; Gunner, John Webber.

\*\* "TUSCARORA"—THIRD-RATE.

Commander, James M. Frailey; Lieutenant-Commander, Weld N. Allen; Surgeon, John Y. Taylor; Acting-Assistant Paymaster, F. J. Painter; Acting-Master, Alex. Tillinghast; Acting-Ensigns, S. L. Griffin, C. H. Carey, Oliver Swain and S. E. Willets; Acting-Master's Mates, J. A. H. Wilmuth and

A. F. Aldrich, Jr.; Engineers: Chief, A. J. Kiersted; Acting-First Assistant, Jos. A. McKnight; Acting-Second-Assistants, W. A. Andress and A. N. Gilmore; Acting-Third-Assistants, Alex. Dempster, W. B. Snow and J. H. Chesney; Acting-Gunner, Thomas Grail.

\*"MONADNOCK"—THIRD-RATE.

Commander, E. G. Parrott; Lieutenant-Commander, J. N. Miller; Acting-Masters, B. F. Milliken and S. H. Mead; Acting-Ensigns, W. B. Mix, T. W. Swift, Jr., and P. Davison; Acting-Assistant Surgeon, James Wilton; Assistant Paymaster, J. S. Woolson; Engineers: Acting-Chief, J. Q. A. Zeigler; Acting-First-Assistants, S. A. Randall and W. A. Phillips; Acting-Second-Assistants, B. C. Du Plaine and B. Smith; Acting-Third-Assistants, R. Aldridge, W. P. Whittemore, John Brice and T. J. Wilde; Gunner, P. Barrett.

"ONONDAGA"—THIRD-RATE.

Commander, Wm. A. Parker; Lieutenant-Commander, J. M. Pritchett; Passed Assistant Surgeon, A. Hudson; Acting-Assistant Paymaster, S. T. Browne; Acting-Masters, W. L. Hayes and Henry Stevens; Acting-Ensigns, J. De Kay, S. C. Norton, Jr., M. E. Wandell and J. Brennan; Acting-Master's Mate, B. Heath, Jr.; Engineers: Chief, Alex. Henderson; First-Assistants, J. C. Hull; Second-Assistants, W. Fort, W. L. Nicoll and E. M. Lewis; Acting-Second-Assistant, C. Stanton; Third-Assistant, T. Cooke; Acting-Third Assistant, Julius Hillman.

"SHAMBOCK"—THIRD-RATE.

Commander, W. H. Macomb; Lieutenant, R. K. Duer; Acting-Assistant Surgeon, P. H. Barton; Acting-Assistant-Paymaster, Louis Sands; Acting-Master, P. J. Hargous; Acting-Ensigns, G. T. Ford, J. W. Lewis, W. W. Meeter and R. B. Brown; Acting-Master's Mate, W. D. Burlingame; Engineers: Second-Assistants, W. H. Harrison, H. P. Gregory and P. H. White; Acting-Third-Assistants, O. C. Chamberlain and W. F. Blakemore; Acting-Gunner, W. Peterkin.

\*"RHODE ISLAND" SECOND RATE.

Commander, Stephen D. Trenchard; Lieutenant, F. R. Smith; Assistant-Surgeon, E. B. Bingham; Assistant Paymaster, W. L. Darling; Acting-Masters, C. O'Neill and Z. L. Tanner; Acting-Ensigns, Nichols Pratt, R. O. Lanfare and Lemuel Pope; Acting-Master's Mates, J. P. Fisher, E. E. Bradbury, H. Gardiner, G. H. Appleton and R. W. Wallace; Engineers: Acting-Chief, J. F. McCutchen; Acting-Second-Assistants, J. W. Smith and C. W. Radell; Acting-Third-Assistants, C. W. Rugg, W. J. Patterson, W. H. McCoy, J. A. Hughes and W. B. Bayley; Gunner, Henry Hamilton; Captain's Clerk, L. S. Rogers; Paymaster's Clerk, Wm. J. Bennett.

"CHICKOPEE"—THIRD-RATE.

Commander, A. D. Harrell; Lieutenant, E. A. Walker; Acting-Assistant Surgeon, G. L. Simpson; Acting-Assistant Paymaster, J. H. Mulford, Jr.; Acting-Master, J. D. Wells; Acting-Ensigns, J. A. Crossman and A. D. Henderson; Acting-Master's Mates, C. C. Johnson, G. H. Goodmanson and J. A. Belcher; Engineers: First-Assistant, F. J. Lovering; Second-Assistant, William Pollard; Third-Assistants, D. B. Egbert, A. G. Bonsall and J. B. Upham, Jr.; Acting-Gunner, W. Black.

\*"NEREUS"—THIRD-RATE.

Commander, J. C. Howell; Lieutenant, H. E. Mullan; Acting-Master, E. L. Haines; Acting-Assistant Surgeon, J. K. Walsh; Acting-Assistant Paymaster, B. F. Munroe; Acting-Ensigns, E. G. Dayton, G. M. Smith and George Anderson; Acting-Master's Mates, W. C. Cushman, Wm. Rushmore, W. B. Spencer, H. E. Giraud and Wm. Gromack; En-

Second-Assistant, Philip Eckenworth; Acting-Second-Assistants, R. F. Roswald and J. A. Patterson; Third-Assistants, T. Tilton, H. J. Allen and R. R. Throckmorton; Acting-Gunner, J. McCaffrey.

\*"MOHICAN"—THIRD-RATE.

Commander, Daniel Ammen; Lieutenant, J. D. Marvin; Surgeon, Charles Martin; Acting-Assistant Paymaster, J. C. Canning; Acting-Master, Wm. Burditt; Acting-Ensigns, B. F. Blair and H. T. Page; Acting-Master's Mates, J. A. Shaffer, J. G. Paine and C. P. Cope; Engineers: First-Assistant, H. S. Davids; Second-Assistant, J. K. Smedley; Acting-Second-Assistants, Enoch George and Charles Buckelew; Acting-Third-Assistants, James O. Herron and W. W. Chadwick; Acting-Boatswain, J. B. Aiken; Acting-Gunner, T. S. Cassidy.

"KEYSTONE STATE"—THIRD-RATE.

Commander, Henry Roland; Lieutenant, J. P. Robertson; Acting-Masters, L. E. Degn and Wm. T. Buck; Acting-Ensigns, C. M. Bird, J. C. Murphy, F. E. Ford and J. S. Ridgeway; Acting-Assistant Surgeon, A. E. Emery; Acting-Assistant Paymaster, J. W. Fairfield; Acting-Master's Mates, D. G. Conger and W. H. Howard; Engineers: Acting-First-Assistant, P. L. Fry; Acting-Second-Assistant, A. B. Kinney; Acting-Third-Assistants, Wm. Brown, Joseph Smith, J. B. Wilbur and C. A. Blake; Acting-Gunner, D. L. Briggs.

"MENDOTA"—THIRD-RATE.

Commander, Edward T. Nichols; Acting-Masters, Lathrop Wight, Maurice Digard and Thomas Smith; Acting-Ensigns, W. B. Barnes, R. B. Pray, Isaac Thayer and R. E. Peck; Acting-Master's Mates, E. S. McDonald and P. A. Cleary; Engineers: First-Assistant, A. V. Frazer; Second-Assistants, B. Bunce and D. Jones; Acting-Third-Assistants, D. R. McElroy, H. S. Ross and L. L. Poole; Acting-Gunner, James Como.

\*"TOSCO"—THIRD-RATE.

Commander, John Guest; Lieutenant, C. L. Franklin; Acting-Ensigns, William Jameson, Ulric Feilberg, Henry Baker and Paul Ware, Jr.; Acting-Assistant Surgeon, K. H. Bancroft; Acting-Assistant Paymaster, L. L. Scovel; Acting-Master's Mates, T. A. Comstock, Halsted Hemans and Charles A. Peacock; Engineers: First-Assistant, Z. Talbot; Second-Assistant, Elijah Laws; Acting-Third-Assistants, Harvey Clapp, James McNabb and C. M. S. Gerry; Acting-Gunner, T. M. Benton.

\*"OSCEOLA"—THIRD-RATE.

Commander, J. M. B. Clitz; Lieutenant, J. Weidman; Assistant Surgeon, G. F. Winslow; Assistant Paymaster, Edw. Bellows; Acting-Masters, E. B. Hussey and Willett Mott; Acting-Ensigns, S. L. La Dein, J. F. Merry and F. C. Warner; Acting-Master's Mates, Thomas Rogers, H. G. Robinson and C. S. Hardy; Engineers: Acting-First-Assistant, Thomas McCausland; Acting-Second-Assistant, Richard Doran; Acting-Third-Assistants, Robert Berryman, C. J. Cooper and E. J. Swords; Acting-Gunner, J. C. Breslyn.

\*"PAWTUCKET"—THIRD-RATE.

Commander, James H. Spotts; Lieutenant, Allen V. Reed; Acting-Ensigns, A. F. West, J. A. Stamm, J. O. Winchester and P. J. Markoe; Acting-Assistant Surgeon, Henry Johnson; Acting-Assistant Paymaster, G. A. Emerson; Acting-Master's Mates, D. H. Bellows, F. Hesselwood and L. F. Papanti; Engineers: Second-Assistants, A. H. Able, M. N. Knowlton and J. G. Cooper; Acting-Third-Assistant, N. G. Vandegrift; Gunner, J. D. Fletcher.

\*"MACKINAW"—THIRD-RATE.

Commander, J. C. Beaumont; Acting-Master, A. J. Louch; Acting-Ensigns, W. H. Penfield, J. F. Blanchard and Joseph Estes; Acting-Assistant Surgeon, J. E. Cottrell; Acting-Assistant Paymaster,

W. T. Whittemore; Acting-Master's Mates, J. A. Thomas, Solomon Barstow and E. K. Green; Engineers: First-Assistant, Jefferson Young; Second-Assistant, D. A. Sawyer; Third-Assistants, R. W. Milligan and Sylvanus McIntire; Acting-Third-Assistants, Patrick Hagan and J. W. Reed; Acting-Gunner, Thomas Keer.

\* "R. R. CUYLER"—THIRD-RATE.

Commander, C. H. B. Caldwell; Lieutenant, J. J. Reed; Acting-Assistant Surgeon, C. D. White; Acting-Assistant Paymaster, A. Wright; Acting-Master, E. Babson; Acting-Ensigns, B. P. Clough, W. H. Mentz, W. L. Hatch and A. T. Hamblen; Acting-Master's Mate, J. F. Jeffries; Engineers: Acting-Chief, J. D. Williamson; Acting-First-Assistant, D. L. King; Acting-Second-Assistants, J. Pollard and F. V. Holt; Acting-Third-Assistants, A. C. Crocker, I. H. Fuhr, G. W. Young, D. Gilliland and E. J. Crain; Acting-Gunner, E. P. Palmer.

"MATTABESSETT"—THIRD-RATE.

Commander, John C. Febiger; Lieutenant, A. N. Mitchell; Acting-Masters, J. L. Plunkett and John Fountain; Acting-Ensigns, John Greenhalgh, F. H. Brown and A. F. Dill; Acting-Assistant Surgeon, S. P. Boyer; Acting-Assistant Paymaster, H. C. Meade; Acting-Master's Mates, A. M. Beck and C. F. Fisher; Engineers: Second-Assistants, J. T. Hawkins, A. Sackett and C. J. McConnell; Third-Assistants, W. A. Mintzer, A. B. Bates and Isaiah Paxson; Acting-Gunner, Wm. H. Herring.

"MASSASOIT"—THIRD RATE.

Commander, R. T. Renshaw; Lieutenant, Geo. W. Sumner; Acting-Masters, H. Reany, C. F. Taylor and W. C. Williams; Acting-Ensigns, R. Rabadan and Chas. Wilson; Acting-Master's Mate, G. A. Burt; Acting-Assistant Surgeon, J. R. Latson; Acting-Assistant Paymaster, J. H. Stevenson; Engineers: First-Assistant, L. R. Green; Acting-Second-Assistants, J. H. Dinsmore and R. K. Monson; Acting-Third-Assistants, T. R. Jefferson and Wm. Sheehan; Acting-Gunner, Wm. B. Jarvis.

\* "SAUGUS"—FOURTH-RATE.

Commander, Edmund R. Colhoun; Lieutenant, Benj. F. Day; Acting-Master, B. W. Leary; Acting-Ensigns, C. A. Henrickson, Ira Barsley and J. P. Arnett; Acting-Assistant Surgeon, W. H. Westcott; Acting-Assistant Paymaster, G. H. Andrews; Engineers: Acting-Chief, John L. Peake; Acting-First-Assistants, Andrew Inglis and John Carren; Second-Assistant, O. C. Lewis; Acting-Second-Assistant, A. F. Rockefeller; Acting-Third-Assistant, W. J. Bradley.

"AGAWAM"—THIRD-RATE.

Commander, A. C. Rhind; Acting-Master, Thos. Symmes; Acting-Ensigns, Clinton Wiley, C. M. Anthony, C. L. Willcomb and F. H. Lathrop; Assistant Surgeon, H. P. Babcock; Assistant Paymaster, H. M. Hanna; Acting-Master's Mates, Rob't Anderson, T. P. Jones and Paul Boyden; Engineers: Acting-First-Assistant, J. F. P. Rust; Second-Assistants, A. T. E. Mullan and T. M. Jones; Third-Assistants, G. C. Nelson and H. Spear; Acting-Gunner, H. F. Dannels.

"QUAKER CITY"—SECOND-RATE.

Commander, W. F. Spicer; Lieutenant, Silas Casey, Jr.; Acting-Master, S. A. Winnerton; Acting-Ensigns, C. J. Hill, Rich. Wilkinson and F. D. Jacobson; Acting-Assistant-Surgeons, I. C. Whitehead and G. W. Gale, Jr.; Acting-Assistant Paymaster, L. A. Frailey; Acting-Master's Mates, O. W. Clapp, G. E. Sanborne, W. H. Alger and J. B. Tew; Engineers: Acting-Chief, G. W. Farrar; Second-Assistant, George J. Burnap; Acting-Second-Assistants, W. J. Howard, J. K. Hickey, Wm. Mason and J. H. Mathews; Acting-Third-Assistants, E. Prest,

Jos. R. Peterson, J. D. Wauklin and E. E. Porter; Acting-Gunner, Joseph Furlong.

\* "PONTOOSUC"—THIRD-RATE.

Lieutenant-Commander, Wm. G. Temple; Acting-Masters, B. S. Weeks and C. H. Frisbie; Acting-Ensigns, A. D. Campbell, J. J. Kane and L. R. Chester; Acting-Assistant Surgeon, W. H. Pierson; Acting-Assistant Paymaster, G. A. Lyon; Acting-Master's Mates, E. H. Richardson, F. C. Bailey, Thos. Brown and D. Lewis; Engineers: First-Assistant, Geo. J. Barry; Second-Assistants, M. T. Sumstron and E. J. Whittaker; Third-Assistant, J. H. Thomas; Acting-Third-Assistant, G. C. Brown; Acting-Gunner, C. Moran.

"EUTAW"—THIRD-RATE.

Lieutenant-Commander, H. C. Blake; Acting-Volunteer-Lieutenant, J. W. Simmons; Assistant-Surgeon, C. H. Page; Acting-Assistant Paymaster, Thos. Carstairs; Acting-Masters, C. F. Keith, S. B. Davis and T. O. Scranton; Acting-Ensigns, C. E. Rich, W. C. King and Thos. Morgan; Acting-Master's Mates, E. A. Galindo, B. C. Devine and H. Gardiner; Engineers: Second-Assistant, J. C. Stevens; Acting-Second-Assistants, J. E. Hillard and W. H. Crawford; Third-Assistant, H. C. Christopher; Acting-Third-Assistants, C. A. Satterlee and J. C. Hillman; Acting-Gunner, C. A. Sampson.

"WYALUSING"—THIRD-RATE.

Lieutenant-Commander, Earl English; Acting-Masters, W. R. Hathaway and J. G. Green; Acting-Ensigns, J. P. Perkins, H. G. C. Kruse and L. H. Fossett; Acting-Assistant Surgeon, S. Holman; Assistant Paymaster, A. J. Pritchard; Acting-Master's Mates, J. C. Green, W. H. Brown and Henry Watson; Engineers: Chief, H. H. Stewart; Acting-First-Assistant, J. McCourt; Acting-Third-Assistants, E. F. Hedden, J. J. Donohoe, E. T. Peake and S. G. Cottrell; Acting-Gunner, T. Carpenter.

\* "A. D. VANCE"—FOURTH-RATE.

Lieutenant-Commander, J. H. Upshur; Acting-Masters, G. Cottrell and C. M. Lane; Acting-Ensigns, W. W. Smith, C. F. Ware, C. E. Clark and W. J. Eldredge; Acting-Assistant Surgeons, D. W. Jones and B. F. Howell; Engineers: Acting-First-Assistant, D. C. Chester; Acting-Second-Assistants, C. G. Stevens, C. S. Servoss and George Devine; Acting-Third-Assistants, Wm. Madden, G. H. Whittemore and C. B. Nichols.

\* "YANTIC"—FOURTH-RATE.

Lieutenant-Commander, T. C. Harris; Acting-Master, L. C. McIntyre; Acting-Ensigns, J. C. Lord, S. T. Dederer, Edwd. Winemore, J. F. Churchill and B. B. Sodenberg; Acting-Assistant Surgeon, H. K. Wheeler; Acting-Assistant-Paymaster, S. B. Huey; Engineers: Second-Assistants, W. H. Messenger, J. J. Noble and H. C. Beckwith; Third-Assistant, H. F. Loveaire; Acting-Third-Assistant, George Holton; Captain's Clerk, C. M. B. Harris.

\* "SASSACUS"—THIRD-RATE.

Lieutenant-Commander, John L. Davis; Acting-Volunteer-Lieutenant, A. W. Muldaur; Acting-Ensigns, William H. Mayer, Jr., August Adler, H. W. O'Harra and David Stephen; Acting-Assistant Surgeon, G. E. McPherson; Acting-Assistant Paymaster, G. W. Garthwaite; Acting-Master's Mates, T. D. Marble and J. S. O'Brien; Engineers: Second-Assistants, J. H. Huxley, R. N. Ellis and O. W. Allison; Acting-Third-Assistants, Wm. Raynor, H. S. Mack and A. Bigelow; Acting-Gunner, Neil Martin.

"TALLAPOOSA"—THIRD-RATE.

Lieutenant-Commander, J. E. DeHaven; Acting-Master, J. H. Platt; Acting-Ensigns, Jonathan Jenney, W. A. Rich, A. E. Dunham and J. D. Babcock; Acting-Assistant Surgeon, J. E. Warner;

Acting-Assistant Paymaster, Daniel Whalen; Acting-Master's Mates, J. H. Lovejoy, S. T. Ayres and C. M. Tessimond; Engineers: First-Assistant, David Smith; Second-Assistants, J. P. Kelly and W. S. Neal; Acting-Third-Assistant W. E. Renny and G. W. Wakefield; Acting-Gunner, J. W. Whiting.

\* "TACONY"—THIRD-RATE.

Lieutenant-Commander, W. T. Truxtun; Acting-Masters, N. S. Morgan, R. Summers and S. Blunt; Acting-Ensigns, J. B. Taney, Thomas Golding, E. L. Bourne and F. H. Fisher; Acting-Assistant-Surgeon, George Hopkins; Acting-Assistant Paymaster, W. S. Hosford; Acting-Master's Mates, J. A. Orcutt and F. W. Worstell; Engineers: First-Assistant, T. M. Dukehart; Second-Assistants, C. E. Lee and H. Parker, Jr.; Acting-Third-Assistant, A. D. Wood.

NAVAL STATION, BEAUFORT.

Lieutenant-Commander, W. C. West; Acting-Assistant Paymaster, S. S. Wood, Jr.; Gunner, S. D. Hines; Carpenter, J. P. Carter.

"MERCEDITA"—THIRD-RATE.

Lieutenant-Commander, Milton Haxton; Acting-Master, J. A. French; Acting-Ensigns, H. G. Macy, Wm. Young and E. D. Pettengill; Acting-Assistant Surgeon, J. K. Walsli; Acting-Assistant Paymaster, O. F. Browning; Acting-Master's Mate, R. M. Cornell; Engineers: Acting-First-Assistant, B. F. Beckett; Acting-Third-Assistants, Wm. Lannan, D. T. Lannah, Wm. McComb, J. H. Hopkins and William Ellis; Acting-Gunner, James Addison.

\* "KANSAS"—FOURTH-RATE.

Lieutenant-Commander, P. G. Watmough; Acting-Masters, Samuel Hall, E. S. Goodwin and W. S. Folson; Acting-Ensigns, G. C. Williams, C. D. Thompson and C. B. Staples; Assistant Surgeon, Isaac Poole; Assistant Paymaster, T. Merritt; Engineers: Acting Second-Assistant, Hugh Rafferty; Acting-Third-Assistants, J. W. Stott, G. L. King and George B. Stone.

\* "MARATANZA"—THIRD-RATE.

Lieutenant-Commander, G. W. Young; Acting-Masters, D. E. Taylor and J. B. Wood, Jr.; Acting-Ensigns, J. W. Crowell, H. H. Collamore and E. Lawson; Acting-Master's Mates, W. H. Alger, A. F. Williamson, George E. Chipman and C. H. Crossman; Acting Assistant-Surgeon, J. W. Hamilton; Acting-Assistant Paymaster, C. H. Noyes; Engineers: Second-Assistants, W. H. Kilpatrick and R. L. Webb; Third-Assistants, L. R. Harvey and R. D. Taylor; Acting-Third-Assistants, E. J. Gillespie and J. L. Starkey; Acting Gunner, W. W. Bradley.

\* "MAUMEE"—FOURTH-RATE.

Lieutenant-Commander, Ralph Chandler; Acting-Master Richard Burk; Acting Ensigns, E. R. Powers, W. J. Shackford, C. P. Gifford and C. B. Nichols; Acting-Assistant Surgeon, D. P. Goodhue; Acting-Assistant Paymaster, J. H. Smoot; Engineers: Second-Assistant, T. J. McK. Daniels; Acting Second-Assistant, William Veitch; Third-Assistants, J. M. Clark, C. R. Mosher and G. A. Pfeltz.

\* "PEQUOT"—FOURTH-RATE.

Lieutenant-Commander, D. L. Braine; Acting-Masters, L. H. Beattie and W. F. Chace; Acting-Ensigns, George Lamb, H. W. Loring and A. Smalley; Acting-Assistant Surgeon, H. R. Watts; Acting-Assistant Paymaster, C. G. Hutchinson; Engineers: Second-Assistants, A. H. Fisher and G. C. Cook; Third-Assistants, James Wylie and J. W. Gardner; Acting-Third-Assistants, George W. Rymes; Captain's Clerks, J. W. Jones and O'Brian ("Keystone State").

"NYACK"—FOURTH-RATE.

Lieutenant-Commander, L. H. Newman; Acting-Master, H. W. Grinnell; Acting-Ensigns, H. B. Colby, Charles Nelson, J. W. Hopkins, G. H. Barrows and James Jordan; Acting Assistant Surgeon, B. F. Bigelow; Acting-Assistant Paymaster, C. S. Halliday; Engineers: First-Assistant, B. C. Bampton; Second-Assistant, John Fornance; Third Assistant, W. A. Windsor; Acting-Third-Assistants, W. M. Bartram and J. C. Veatch.

\* "CANONICUS"—THIRD-RATE.

Lieutenant-Commander, George E. Belknap; Lieutenant, R. S. McCook; Acting-Masters, D. S. Murphy, E. S. Goodwin and E. A. Decker; Acting-Ensigns, C. W. Seekins, M. W. Weld and F. P. Center; Assistant Surgeon, H. N. Beaumont; Assistant Paymaster, R. P. Lisle; Engineers: Chief, D. B. Macomb; Acting-First-Assistant, C. G. Conklin; Second-Assistants, F. F. McKean and J. M. Saville; Acting-Third-Assistants, William S. Brown, Wm. Keenan and J. A. Chandler.

"VICKSBURG"—THIRD-RATE.

Lieutenant-Commander, F. H. Baker; Acting-Master, F. G. Osborn; Acting-Ensigns, W. H. Otis, R. B. Elder and D. P. Cook; Acting-Assistant Surgeon, T. W. Bennett; Acting-Assistant Paymaster, T. E. Smith; Acting-Master's Mate, G. V. Demorest; Engineers: Second-Assistant, J. L. Bright; Acting-Second-Assistant, H. Harbenson; Third-Assistant, A. F. Nagle; Acting-Third-Assistants, Levi Coit and G. W. Yoe.

\* "CHIPPEWA"—FOURTH-RATE.

Lieutenant-Commander, A. W. Weaver (Lieutenant-Commander E. E. Potter commanded at Fort Fisher); Acting-Master J. W. Saunders; Acting-Ensigns, G. H. Wood, Edw. Tilghman, W. H. DeGrosse and W. A. Taylor; Acting-Assistant Surgeon, J. E. Gregory; Acting-Assistant Paymaster, J. M. Flood; Engineers: Second Assistant, Jos. Watters; Acting-Second-Assistant, A. A. Winship; Acting-Third-Assistants, R. W. Wilton and Henry Romaine.

"SACO"—FOURTH-RATE.

Lieutenant-Commander, John G. Walker; Acting-Master, W. F. Hunt; Acting-Ensigns, O. F. Wixon, T. J. Rollins, W. H. Potter and A. H. Ostrander; Passed-Assistant-Surgeon, A. Matthewson; Acting-Assistant Paymaster, C. H. Hill; Engineers: Acting-First-Assistant, A. W. Harris; Acting-Second-Assistants, J. P. Cloyd and J. A. Crouthers; Acting-Third-Assistants, W. J. Barron and W. H. Woodward.

\* "UNADILLA"—FOURTH-RATE.

Lieutenant-Commander, Francis M. Ramsey; Acting-Master, J. M. Skillings; Acting-Ensigns, John Cullaton, Wm. Field, Charles Weidenbein and Wm. Hanson; Acting-Assistant Surgeon, D. C. Burleigh; Acting-Assistant Paymaster, I. G. Hobbs; Acting-Master's Mates, C. H. Smith and E. M. Reed; Engineers: Acting-First-Assistant, B. F. Bee; Acting-Second-Assistant, L. M. Ryfenburg; Acting-Third-Assistants, Wm. D. Kay, James Curran and J. S. Larkins.

\* "MAHOPAC"—FOURTH-RATE.

Lieutenant-Commander E. E. Potter (Lieutenant-Commander A. W. Weaver commanded at Fort Fisher); Acting-Masters, C. R. Harris and D. K. Kenison; Acting-Ensigns, J. E. Jones, W. E. Jones and S. C. Holm; Assistant Surgeon, F. B. A. Lewis; Acting-Assistant Paymaster, Addison Pool; Engineers: Acting-Chief, M. T. Chevers; Acting-First-Assistant, Charles Dougherty; Acting-Second-Assistant, Wesley Randall; Acting-Third-Assistants, J. G. Brown, C. A. Enggren, C. O. Putnam and J. W. Buell.

## \* "HURON"—FOURTH-RATE.

Lieutenant-Commander, Thos. O. Selfridge ; Acting-Master, Benj. Whitmore ; Acting-Ensigns, Robert Shepperd, S. H. Munder, W. H. H. Curtis and Andrew McCleary ; Acting-Master's Mate, Eugene Coleman ; Acting-Assistant Surgeon, James McMillan ; Acting-Assistant Paymaster, C. D. Colom ; Engineers : Acting-First-Assistant, James Blenkinsop ; Acting-Second-Assistants, H. F. Hayden and M. Harloe ; Acting-Third-Assistants, T. F. Burket and E. G. Ingalls.

## \* "SENECA"—FOURTH-RATE.

Lieutenant-Commander, Montgomery Sicard ; Acting-Master, Wm. H. Males ; Acting-Ensigns, Wm. Schutz, Thomas Mason, W. B. Pierce and L. C. Owen ; Acting-Assistant Surgeon, R. H. Greene ; Acting-Assistant Paymaster, M. B. Cushing ; Engineers : Acting-First-Assistant, J. P. Sweet ; Acting-Second-Assistant, Alfred Catchpole ; Acting-Third-Assistants, S. A. Slater, A. J. Doty and T. J. Reaney.

## "HUNCHBACK"—FOURTH RATE.

Lieutenant, Joseph P. Fyffe ; Acting-Master, E. K. Valentine ; Acting-Ensigns, J. W. Thompson and C. W. Jones ; Acting-Master's Mates, J. F. Sias, J. L. Robins, T. W. Rack and F. W. Colton ; Acting-Assistant Paymaster, H. Cushing ; Engineers : Acting-First-Assistant, A. Barnum ; Acting-Second-Assistant, B. Wilson ; Acting-Third-Assistants, S. Hart, G. V. Payton, J. E. Edwards and J. W. Smith.

## \* "MONTICELLO"—FOURTH-RATE.

Lieutenant, W. B. Cushing ; Acting-Volunteer-Lieutenant, D. A. Campbell ; Acting-Masters, C. A. Pettit and E. A. Elliott ; Acting-Ensigns, W. H. Gibson, D. W. Lakin, T. B. Huntington, J. H. Puckett and J. B. Edwards ; Acting-Assistant Surgeon, J. F. Billard ; Acting-Assistant Paymaster, John Furey ; Acting-Master's Mates, Charles Croton and J. S. Clark ; Engineers : Second-Assistant, H. Missiner ; Acting-Second-Assistants, C. A. Martin and F. McKinley ; Acting-Third-Assistants, W. R. Call, and J. McCallum.

## \* "GETTYSBURG"—FOURTH-RATE.

Lieutenant, R. H. Lamson ; Acting-Master, C. B. Dahlgren ; Acting-Ensigns, A. S. Leighton, F. P. B. Sands, F. A. Gross, M. C. Keith and Charles Miller ; Acting-Assistant Surgeon, G. S. Eddy ; Acting-Assistant Paymaster, R. H. Gillette ; Acting-Master's Mate, H. J. Derbyshire and T. H. P. Gross ; Engineers : Acting-First-Assistants, G. S. Perkins, J. M. Case, E. C. Maloy and A. J. Pixley ; Acting-Third-Assistants, E. B. Carter and J. W. Homans.

## \* "MALVERN"—FOURTH-RATE (FLAG-SHIP)

Lieutenant, B. H. Porter ; Acting-Masters, J. A. Hamilton and John Price ; Acting-Ensigns, Geo. Leonard, John Hill and G. E. Kidder ; Acting-Master's Mates, W. F. Horton, Henry Gardiner, A. M. Lyon and W. D. Cobb, Jr. ; Assistant Surgeon, J. S. Ramsey ; Acting-Assistant Paymaster, A. B. Poor ; Engineers : Acting-First-Assistant, W. E. Moore ; Acting-Second-Assistants, J. J. Ashmen and F. J. Hadley ; Third-Assistant, Owen Jones ; Acting-Third-Assistants, Edwin Bond, A. H. Perry and William Finn ; Sub-Assistant J. S. Bradford, U. S. Coast Survey.

## \* "ALABAMA"—THIRD-RATE.

Acting-Volunteer-Lieutenant, A. R. Langthorn ; Acting-Master, Wm. Bates ; Acting-Ensigns, Albert Taylor, Thos. Williams and S. F. Graves ; Acting-Assistant Surgeon, D. T. T. Nestell ; Acting-Assistant Paymaster, E. K. Gibson ; Acting-Master's Mates, C. F. Ellmore, C. S. Wilcox and D. H. Hall ; Engineers : First-Assistant, Edward Farmer ; Act-

ing-Second-Assistants, J. G. Rossman, J. C. Lewis and Greenville Lewis ; Acting-Third-Assistants, Ezra Gray and Geo. Cowie, Jr.

## \* "MONTGOMERY"—THIRD-RATE.

Acting-Volunteer-Lieutenant, T. C. Dunn ; Acting-Masters, W. N. Wells and A. F. Davis ; Acting-Ensigns, E. T. Mauter, C. G. Whiting and Robt. Wiley ; Acting-Assistant Surgeon, John Blackmer ; Acting-Assistant Paymaster, J. Watson ; Acting-Master's Mates, T. J. Walker and C. A. Neill ; Engineers : Acting-First-Assistant, G. H. Wade ; Acting-Second-Assistants, John McEwen, J. Williams and J. Allen ; Acting-Third-Assistants, G. H. Brown and A. Tester.

## \* "FORT DONELSON"—THIRD RATE.

Acting-Volunteer-Lieutenant, Thomas Pickering ; Acting-Master, G. W. Frost, commanded at Fort Fisher ; Acting-Ensigns, J. W. Bennett, E. A. Butler, H. C. Leslie and J. G. Lloyd ; Acting-Master's Mates, Geo. Woodland and A. F. G. Blanfuhr ; Acting-Assistant Surgeon, M. G. Raefle ; Acting-Assistant Paymaster J. F. Dunham ; Engineers : Acting-First-Assistant, John Miller ; Acting-Second-Assistant, H. L. M. Hodges ; Acting-Third-Assistants, G. W. Rymes, L. De Arville, W. A. Fuller, J. H. Sleanman and P. M. Kafer.

## "MIAMI"—THIRD-RATE.

Acting-Volunteer-Lieutenant, Geo. W. Graves ; Acting-Masters, M. Rodgers and John Lear ; Acting-Ensign, J. R. Peacock ; Acting-Assistant Surgeon, G. H. Marvin ; Acting-Assistant Paymaster, R. F. Goodman ; Engineers : Acting-Second-Assistants, C. C. Davis and David Newell ; Acting-Third-Assistants, H. D. Heiser, A. Stewart and A. Moore.

## \* "GOVERNOR BUCKINGHAM"—THIRD-RATE.

Acting-Volunteer-Lieutenant, John Macdearmid ; Acting-Ensigns, C. H. Sawyer, L. W. Smith, D. M. Gaskins and L. P. Cassan ; Acting-Assistant-Surgeon, W. S. Parker ; Acting-Assistant Paymaster, G. B. Tripp ; Acting-Master's Mates, J. W. Gardner, F. H. Poole and W. W. Hunter ; Engineers : Acting-First-Assistant, F. E. Porter ; Acting-Second-Assistant, Eugene Mack ; Acting-Third-Assistants, Thos. Foley, Owen Kaney, James Fitzpatrick and Chas. Ward.

## \* "ARIES"—THIRD-RATE.

Acting-Volunteer-Lieutenant, F. S. Wells ; Acting-Ensigns, G. F. Morse, J. A. Brennan and Seth Hand ; Acting-Assistant Surgeon, A. C. Fowler ; Acting-Assistant Paymaster, C. A. Downes ; Acting-Master's Mates, D. McCool and F. A. Haskeil ; Engineers : Acting-Second-Assistant, Simeon Smith ; Acting-Third-Assistants, R. H. Cornthwait, T. E. Wilson and J. F. Fraser.

## "CAMBRIDGE"—THIRD-RATE.

Acting-Volunteer-Lieutenant, J. F. Nickels ; Acting-Master, S. K. Luce ; Acting-Ensigns, I. S. Bradbury and A. J. Iverson ; Acting-Assistant-Surgeon, John Spare ; Acting-Assistant Paymaster, J. J. Pratt ; Acting-Master's Mate, F. U. Northup ; Engineers : Acting-First-Assistant, G. B. Orswell ; Acting-Second-Assistants, W. W. Tunis and John Whittaker ; Acting-Third-Assistant, S. D. Edwards ; Acting-Gunner, Wm. Scott.

## "CHEROKEE"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Wm. E. Dennison ; Acting-Ensigns, T. F. DeLuce, John Parry, A. F. Parsons and C. B. Dickman ; Acting-Assistant Surgeon, E. T. T. March ; Acting-Assistant Paymaster, J. C. Osterloh ; Engineers : Acting-First-Assistant, A. W. Reynolds ; Acting-Second-Assistants, F. H. Thurber and J. H. Potts ; Acting-Third-Assistants John Gilmore and A. I. Sanborn.

## "HOWQUAH"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, J. W. Balch; Acting-Ensigns, G. P. St. John and John Sayres; Acting-Assistant Paymaster, E. W. Brooks; Acting-Master's Mates, R. B. Smith and F. P. Haskell; Engineers: Acting-Second-Assistants, W. G. McLean, D. R. Wylie and J. L. DeMott; Acting-Third-Assistants, F. W. Moores, Jr., and Arthur O'Brien.

## "EMMA"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, J. M. Williams; Acting-Ensigns, C. Zimmerman, D. S. Beete, I. S. Sampson, C. A. Stewart and I. C. Fuller; Acting-Master's Mate, R. P. Herrick; Acting-Assistant Surgeon, George Doig; Acting-Assistant Paymaster, C. H. Hammatt; Engineers: Acting-Second-Assistant, E. Barry; Acting-Third-Assistants, A. S. Churchill, J. C. Smith, R. H. Ryan, J. W. Grant, and J. C. Wells.

## "BIGNONIA"—FOURTH RATE.

Acting-Volunteer-Lieutenant, Wm. D. Roath; Acting-Ensigns, T. H. Marks and H. D. Trott; Acting-Master's Mates, G. C. Short and W. H. Howland; Engineers: Acting-Second-Assistant, John Moir; Acting-Third-Assistants, W. S. Dobson, T. McCreary and James Boyd.

## "COMMODORE BARNEY"—FOURTH-RATE

Acting-Volunteer-Lieutenant, Geo. B. Livingston; Acting-Master, J. B. Stover; Acting-Ensigns, Joseph Avant, Albert Buhner, John Aspinwall, Jr., and James Auld; Acting-Master's Mate, W. H. Richmond; Acting-Assistant Surgeon, Geo. C. Webber; Acting-Assistant Paymaster, Thomas Jernegan; Engineers: Acting-First-Assistants, Hiram Warner; Acting-Second-Assistants, C. B. Culver and D. S. Leffler; Acting-Third-Assistants, F. G. Shannon and David Reed.

## "SHOKOKON"—FOURTH RATE.

Acting-Volunteer-Lieutenant, W. B. Sheldon; Acting-Ensigns, P. C. Asserson, A. O. Kruge and D. W. Lakin; Acting-Master's Mates, R. S. Proudfit and F. Bradley; Acting-Assistant Paymaster, C. J. Todd; Engineers: Acting-First-Assistant, W. D. Forbes; Acting-Third Assistant, James Wilson.

## "DUNBARTON"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Henry Brown; Acting-Master, Hamilton Bingham; Acting-Ensigns, O. A. Thompson, C. T. Somes, Daniel Merrill and J. A. Williams; Acting-Master's Mate, H. M. Guilford; Acting-Assistant Paymaster, J. W. Holmes; Engineers: Acting-Second Assistant, Charles Bremon; Acting-Third Assistants, J. W. Mead, G. L. Shoemaker, Clark Thurston and J. T. Boyd.

## "CLEMATIS"—FOURTH-RATE.

Acting-Volunteer Lieutenant, E. D. Bruner; Acting-Ensigns, C. T. Beth, Isaac Miller and Geo. H. Gooding; Acting-Master's Mates, M. P. Butts and O. C. Currier; Engineers: Acting-Second-Assistant, Wm. Deacon; Acting-Third-Assistants, G. McAllister, W. S. Kenworthy and Wm. Snedeker.

## "TRISTAM SHANDY." FOURTH RATE

Acting-Volunteer-Lieutenant, F. M. Green; Acting-Ensign, Benj. Wood, J. H. Nash, T. M. Smith, S. T. Dederer and John Owens; Acting-Master's Mates, Robert Clifford, Maurice Wagg and F. T. Baldwin; Acting-Assistant Paymaster, F. R. Stow; Engineers: Acting-First-Assistant, W. W. Whiting; Acting-Second Assistants, W. S. Pratt and H. W. Miller; Acting-Third-Assistants, Richard Wareham, Thomas Pentony, William Gladden and Thomas Holten.

## \*"LILLIAN"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Thomas A. Harris; Acting-Master, J. S. Gilett; Acting-Ensigns, Wm. C.

Underhill, Joseph H. Clark, T. B. Tucker, Jr., and J. G. Lloyd; Acting-Master's Mate, J. P. Sturgeon; Acting-Assistant Surgeon, Charles Sturdevant; Acting-Assistant Paymaster, Herman Dorr; Engineers: Acting-Second-Assistants, J. C. Mockabee, H. W. Moore and David Morris; Acting-Third-Assistants, Henry Greatorex, T. J. Foster and A. T. Donegan.

## "CRUSADER"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Peter Hays; Acting-Master, C. Hallett; Acting-Ensigns, H. Taylor, W. W. Leonard and Geo. Kendall; Acting-Assistant Surgeon, R. H. Whedon; Engineers: Acting-First-Assistant, Cornelius Carr; Acting-Second-Assistant, W. F. Andrews; Acting-Third-Assistants, C. C. Howe, W. Barnet and J. H. Wilson.

## "MOUNT VERNON"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, James Trathen; Acting-Masters, E. W. White and F. M. Paine; Acting-Ensigns, C. G. Walstrom, H. F. Cleverly and Jason Ryon; Acting-Assistant Surgeon, W. H. Berrett; Acting-Assistant Paymaster, H. B. Brown; Acting-Master's Mate, Henry Rogers; Engineers: Acting-Second-Assistants, J. H. Horsford and H. S. Short; Acting-Third-Assistants, Geo. Ducker and Wm. H. Smith.

## "ATLANTA"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, T. J. Woodward; Acting-Masters, Curtis Redmond and D. V. N. Wrights; Acting-Ensigns, Paul Armandt, A. C. Southworth and H. Wakefield; Acting-Assistant Surgeon, Thomas Owens; Acting-Assistant Paymaster, D. S. Bostwick; Acting-Master's Mate, A. Loisons; Engineers: Acting-First-Assistant, W. S. Thompson; Acting-Second-Assistants, Wm. Collier, Wm. Gumphert and J. W. Harnett; Acting-Third-Assistants, F. O. Brown, D. A. McDermott and T. B. Speakman.

## \*"BRITANNIA."—FOURTH-RATE.

Acting-Volunteer-Lieutenants, Samuel Huse, and W. A. Sheldon (commanded at Fort Fisher); Acting-Masters, J. S. Coney and S. J. White; Acting-Ensigns, A. J. Lowell and W. H. Bryant; Acting-Assistant Surgeon, F. Nickerson; Acting-Assistant Paymaster, C. B. Culver; Acting-Master's Mates, R. L. M. Jones and W. W. Reed; Engineers: Acting-Second Assistants, J. Fernald and J. M. Barron; Acting-Third-Assistants, W. D. Butts, Samuel Dale, Jr., and F. S. Andrews.

## "BANSHEE"—FOURTH RATE.

Acting-Volunteer-Lieutenant, W. H. Garfield; Acting-Ensigns, G. W. Prindle, W. C. Gibson, Paul Greene and J. S. Young; Acting-Assistant Surgeon, J. M. Garner; Acting-Assistant Paymaster, D. P. Shuler; Engineers: Acting-First-Assistant, C. Cranston; Acting-Second-Assistants, Geo. F. Case and Thomas McNellis; Acting-Third-Assistants, J. L. Lowe, J. H. Radcliffe, J. W. Little and Charles Green.

## "MYSTIC"—FOURTH-RATE.

Acting-Masters, Wm. Wright and S. B. Meaders; Acting-Ensigns, A. T. Hamblen, H. L. Pierce and Geo. W. Conner; Acting-Assistant Surgeon, Alex. Mackenzie; Assistant Paymaster, Augustus Parrot; Engineers: Acting-First-Assistant, J. B. Lowell; Acting-Third-Assistants, Isaac Buck and T. W. De Klyne.

## "DAWN"—FOURTH RATE.

Acting-Master, J. A. Jackaway; Acting-Ensigns, W. B. Avery, E. T. Sears and P. W. Morgan; Acting-Master's Mate, S. W. Crossley; Acting-Assistant Surgeon, A. S. Lanbach; Acting-Assistant Paymaster, R. C. Peirce; Engineers: Acting-Second-

Assistant, Sam'l Tomlinson; Acting-Third-Assistants, T. K. Payson, C. W. Williams and J. D. Averill.

"WESTERN WORLD"—FOURTH-RATE.

Acting-Master, Edward Herrick; Acting-Ensigns, A. J. L. Barker, Chas. Hall, R. D. Sparrow and E. H. McDonald; Acting-Assistant Surgeon, R. F. Brooks; Acting-Assistant Paymaster, Amos D. Allen; Engineers: Acting-Second-Assistant, F. R. Shoemaker; Acting-Third-Assistants, A. Anderson, H. L. Perrine, J. E. Thumbert and Edw. G. Schwartz.

"COMMODORE HULL"—FOURTH-RATE.

Acting Masters, F. Josselyn and J. O. Johnson; Acting-Ensign, F. J. Runnells; Acting-Master's Mate, Henry Fleet; Acting-Assistant Paymaster, J. Chapman; Engineers: Acting-Third-Assistants, O. L. Smith, W. C. Remick and S. T. Hand.

"RACHAEL SEAMAN"—FOURTH-RATE.

Acting-Master, Samuel Curtis; Acting-Ensigns, E. T. Strong and D. Organ; Acting-Master's Mates, H. B. Arbecam and W. H. Wording; Acting-Assistant Paymaster, T. Thompson.

"WHITEHEAD"—FOURTH-RATE.

Acting-Master, Geo. W. Barrett; Acting-Ensign, Jarvis Wilson; Acting-Master's Mates, T. E. Quayle, T. M. Nelson and W. S. Baldwin; Engineers: Acting-Third-Assistants, G. B. McDermott and G. S. Snaith.

"DELAWARE"—FOURTH-RATE.

Acting-Masters, J. H. Eldredge and H. Vanderveer; Acting-Ensigns, Robert Price and H. Livermore; Acting-Master's Mates, George Mackay, B. Heath, Jr., and Thos. Topliff; Acting-Assistant Surgeon, J. E. Henry; Acting-Assistant Paymaster, W. W. Woodhull; Engineers: Acting-Second-Assistant, Chas. Bennett; Acting-Third-Assistants, C. H. Keener and Thos. F. Hannigan.

"DAYLIGHT"—FOURTH-RATE.

Acting-Master, H. A. Phelan; Acting-Ensigns, F. L. Harris, B. F. Macintire, C. F. Russell, C. Linderman and F. Bradley; Acting-Master's Mates, J. E. Merriman; Acting-Assistant Surgeon, J. R. May; Acting-Assistant Paymaster, F. C. Imlay; Engineers: Acting-First-Assistant, D. B. Overton; Acting-Second-Assistant, R. Pallet; Acting-Third-Assistants, J. B. Rice, H. R. Allen, A. P. Smith and Jas. Hill.

"COMMODORE MORRIS"—FOURTH-RATE.

Acting Master, R. G. Lee; Acting-Ensigns, J. D. Gossick, A. J. Kane and Jos. Ware; Acting-Master's Mate, L. Dempsey; Acting-Assistant Surgeon, R. W. Clark; Acting-Assistant Paymaster, T. Higgins; Engineers: Acting-Second-Assistants, V. Cronk and J. H. Watkins; Acting-Third-Assistants, L. L. Copeland, J. Callahan and D. A. Bandell.

"EOLUS"—FOURTH-RATE.

Acting-Master E. S. Keyser; Acting-Ensigns, Thos. Stothard, C. A. Stewart, S. M. Lane and H. N. Crockett; Acting-Assistant Paymaster, H. Jenkins; Engineers: Acting-First-Assistant, A. Rockefeller; Acting-Third-Assistants, G. L. Rockwell, J. M. Hennesy and M. L. Ruth.

"SAMUEL ROTAN"—FOURTH-RATE.

Acting-Master, W. G. Nutting; Acting-Ensigns, T. W. Spencer and W. A. Dailey; Acting-Master's Mates, J. J. Keller, W. P. Brownell and F. H. Forbes.

"RELEASE"—FOURTH-RATE.

Acting-Master, Jonathan Baker; Acting-Ensigns, C. H. Beckshafft, L. Turlow, H. C. Bowen, J. M. Taylor and F. B. Owens; Acting-Master's Mate,

F. W. Kimball; Acting-Assistant Surgeon, R. C. Tuttle; Acting-Assistant Paymaster, G. L. Ely.

"CERES"—FOURTH-RATE.

Acting-Master, H. H. Foster; Acting-Ensigns, T. S. Russell and Saml. Weskett; Acting-Master's Mate, J. B. Hopkins; Engineers: Acting-Third-Assistants, J. A. Frank, W. H. Touchton and Rich. Fowler.

"LITTLE ADA"—FOURTH-RATE.

Acting-Master, S. P. Crafts; Acting-Ensign, I. F. Atkins; Acting-Master's Mates, W. H. Joseph and G. W. Lane; Engineers: Acting-Second-Assistant, W. H. Johnson; Acting-Third-Assistants, B. Converse and J. R. Peterson.

"PAHKEE"—FOURTH-RATE.

Acting-Masters, F. R. Webb and D. W. Carrall; Acting-Ensigns, E. W. Pelton, Peter Williams, J. W. Luscomb, H. A. Winslow and A. W. Harvey; Acting-Assistant Paymaster, A. B. Thornton; Engineers: Acting-First-Assistant, G. W. Foster; Acting-Second-Assistants, E. F. Lewis and J. H. Hurton; Acting-Third-Assistant, J. B. Edson.

"WILDERNESS"—FOURTH-RATE.

Acting-Master, H. Arey; Acting-Ensigns, B. O. Low, C. F. Hull, C. E. P. Noyes and E. McKeever; Acting-Assistant Paymaster, H. M. Rogers; Acting-Master's Mate, Wm. Phyffe; Engineers: Acting-Second-Assistant, Richard Anderson; Acting-Third-Assistants, E. A. Robinson, Walter Taylor and David Bodden.

"NANSEMOND"—FOURTH-RATE.

Acting-Master, James H. Porter; Acting-Ensigns, J. B. Henderson, Wm. Hunter and Henry Waring; Acting-Assistant Paymaster, Geo. Hudson, Jr.; Acting-Master's Mate, A. K. Brown; Engineers: Acting-Second-Assistant, Edward Aspdall; Acting-Third-Assistants, C. M. Goodwin, J. T. Earl and E. A. Reilly.

"MOUNT WASHINGTON"—FOURTH-RATE.

Acting-Master, H. H. Haynie; Acting-Ensign, John Nason; Acting-Master's Mates, Theo. Morse; Engineers: Acting-Second-Assistant, Sydney Smith; Acting-Third-Assistant, F. A. Whitfield.

"ZOUAVE"—FOURTH-RATE.

Acting-Master, Jacob L. Hayes; Acting-Master's Mate, Chas. Attmore; Second Assistant Engineer, Samuel H. Magee

"BEN MORGAN"—FOURTH-RATE.

Acting-Master, A. B. Mulford.

"PHLOX"—FOURTH-RATE.

Acting-Ensign, D. F. O'Brien; Acting-Master, T. A. Wyatt (Pilot); Acting-Master's Mate, Samuel Gordon; Engineers: Acting-Third-Assistants, W. C. Wright, G. Morrison and J. H. Coombs.

"EPSILON"—FOURTH-RATE.

Acting-Ensign, F. M. Muitzer; Engineers: G. B. Polen and Chas. Gould.

"CHARLES PHELPS"—FOURTH-RATE.

Acting-Ensign, Wm. Ottiwell and C. B. Parry.

"ROMAN"—FOURTH-RATE.

Acting-Ensign, H. Merchant.

"GAMMA"—TUG.

Acting-Ensign, Henry F. Curtis; Acting-Third-Assistant Engineer, Thomas Lee.

"MOCCASIN"—FOURTH-RATE.

Acting-Ensign, James Brown; Acting-Master's Mates, Joseph Fuller, John Johnson and J. S. Sinclair; Engineers: Acting-Second-Assistant, T. T. Archer, Acting-Third-Assistants, C. H. Wilson, W. H. Garrecht and W. B. Boyd.

## "LILAO"—FOURTH-RATE.

Acting-Ensign, J. A. Chadwick; Acting-Master's Mate, D. S. Ingersoll; Engineers: Acting-Third-Assistants, W. T. Graff, J. C. Garner and J. B. Carnes.

## CHAPTER LI.

### EFFECTS OF THE FALL OF FORT FISHER, AND CRITICISMS ON GENERAL BADEAU'S MILITARY HISTORY OF GENERAL GRANT.

GENERAL BUTLER'S INFLUENCE.—CONDITION OF GENERAL LEE'S ARMY.—MOVEMENTS OF ARMIES UNDER GENERALS GRANT AND SHERMAN.—HONOR TO WHOM HONOR IS DUE.—EXTRACTS FROM GENERAL GRANT'S MEMOIRS, SHOWING THE ORIGIN OF FORT FISHER EXPEDITION.—LETTERS OF INSTRUCTION FROM GENERAL GRANT TO GENERALS BUTLER AND TERRY.—WHY GENERAL BUTLER ABANDONED THE ATTEMPT TO CAPTURE FORT FISHER AFTER FIRST ATTACK.—WHY SECOND ATTACK ON FORT FISHER WAS SUCCESSFUL.—LETTERS OF SECRETARY OF THE NAVY TO THE PRESIDENT.—CRITICISMS ON GENERAL BADEAU'S MILITARY HISTORY OF GENERAL GRANT.—INCIDENTS OF FINAL ASSAULT ON FORT FISHER.—EFFECTS OF FALL OF FORT FISHER, ETC.

**T**HERE was a great deal of acrimony and recrimination growing out of the first attack on Fort Fisher. The "Committee on the Conduct of the War" took the matter up, and it proved a feast for the politicians.

General Butler, with strong political influence, had, of course, a host of supporters, and these flew to his assistance as soon as he returned from Fort Fisher, in the hope of finding some flaw in the armor of General Grant or Admiral Porter through which they could thrust their lances.

Just as the committee were accumulating testimony in support of General Butler, the sound of the one hundred guns fired at the Washington Navy Yard, in honor of the capture of Fort Fisher, thundered through the Capitol, and the baseless fabric of evidence melted into thin air. Fort Fisher was won, and nobody cared to hear about the failure of the first attack.

Having given a detailed account of the naval operations before Fort Fisher, it now becomes in order to show the effect of the capture of that stronghold, and its influence in hastening the close of the civil war.

The capture of the defences of Wilmington closed the last door through which the Southern Confederacy received their supplies of clothing, arms and ammunition;

therefore, when Fort Fisher fell, it was only a matter of a short time when the rebellion would collapse. No matter how brave an enemy may be, or how well commanded, he must have provisions and military stores; and at this time General Lee had not enough material of war to last him three months.

General Grant confronted the Confederates at Petersburg and Richmond with a greatly superior force, and the James River was blockaded by the Navy; yet Lee held his own with his diminished army, and General Grant had to wait until necessity should bring the enemy to terms.

Despite Grant's great numerical superiority, Lee had secured the approaches to Richmond so well that all attacks on his lines were unsuccessful. Sherman, with 50,000 men, was advancing from the South, but his forces were in such position that it would have been somewhat difficult to concentrate them in case of being confronted by a large army. He had occupied Savannah after considerable resistance from Hardee, who, when he evacuated the place, marched northward to make a junction with the 40,000 men under General J. E. Johnston.

Sherman always supposed that Fort Fisher and the other defences of Wilmington would finally have surrendered to him,

had it not fallen when it did; but because Savannah and Charleston fell on the approach of the Federal troops, it was no reason that the defences of Cape Fear River should do the same. The forts about Charleston and Savannah were far less calculated to stand a siege than those at Wilmington, and it was shown, by the heavy naval bombardment of the latter, how difficult it was to injure the works sufficiently to enable an assaulting party to capture them. Even after all the guns were rendered useless, a powerful resistance was offered to the assailants, covered as were the latter by the heavy batteries of the fleet, which swept the enemy from the parapets as the troops advanced over the bomb-proofs. Sherman, with all his soldiers, could never have reduced the forts on Cape Fear River, except after a long siege, if the enemy had shown any military intelligence.

Previous to the capture of Savannah, General Sherman had informed Grant that he had initiated measures towards joining him with 50,000 infantry, and, incidentally, to capture Savannah. No doubt the General reflected that the troops from Savannah and Charleston, combined with those at Wilmington and Johnston's army of 40,000, with 20,000 from the vicinity of Richmond, would have given the enemy at least 80,000 of the best troops to meet him before he could make a junction with Grant. The enemy held the Wilmington and Weldon railroad all the way to Richmond, the points along the Sounds only were held by the Federal Navy. General Johnston was in advance of Sherman all the time; and, having assembled his army at a convenient point, it is hardly to be supposed that so skillful a commander, with a force of 80,000 men, would allow Sherman to join Grant without a struggle, which might have proved disastrous to the Union forces.

The capture of Fort Fisher by the Army and Navy put an end to any doubts on the subject. The Northern public was in such a state of excitement that it would have borne with bad grace a reverse of any kind; and, although it was impossible to prolong the rebellion owing to the exhaustion of the South, yet it would have been a great satisfaction to the latter to have dealt a final blow to their conquerors, not only to injure the prestige of the North, but to enable the South to demand better terms than they could otherwise have hoped for.

When the Federal troops entered Wilmington, all of Cape Fear River and the Wilmington and Weldon railroad were placed in possession of the Federal authorities; and, as the Navy held the principal points on the sounds of North Carolina, the United States Government could throw any

number of troops into the enemy's rear by way of the Weldon railroad, Newbern and Plymouth, and furnish them with provisions by the same routes; so that Sherman could advance through Georgia and South Carolina without fear of opposition from General Johnston, who after the fall of Fort Fisher evidently gave up the idea of successful resistance, though he did attempt to prevent Sherman reaching Goldsborough—a forlorn hope.

Mr. Lincoln appreciated the difficulty with which the Federals had to contend as long as General Johnston with a powerful army kept the field. A check to General Sherman in his progress through the Southern swamps might have prolonged the war for six months, but this could not happen after Fort Fisher had fallen and the Wilmington road was in Federal hands.

Many inaccuracies have been stated in regard to the capture of Fort Fisher and the original proposers of the expedition, and no one has done more in this direction than the "military historian." We will not pretend to criticise "General" Badeau when he treats of purely military movements in his "history" of General Grant, although our connection with the several commands of the latter have made us familiar with them; but we claim a right to express views fully in cases where the Navy was concerned, and to expose the mistakes of a writer when he undertakes to reflect upon officers of the Navy without any valid reason for so doing.

Some of the military historian's statements assign the origin of the Fort Fisher expedition other than where it belongs, for it originated in the Navy Department. General Grant in his Memoirs ingenuously disposes of these statements, and gives an impartial account of the matter, which is inserted in this history.

Some of the assertions of the military historian are also disposed of by this account from General Grant's Memoirs:

"Wilmington, North Carolina, was the most important sea-coast port left to the enemy through which to get supplies from abroad, and send cotton and other products out by blockade-runners, besides being a place of great strategic value. The Navy had been making strenuous exertions to seal the harbor of Wilmington, but with only partial effect. The nature of the outlet of Cape Fear River was such that it required watching for so great a distance that, without possession of the land north of New Inlet, or Fort Fisher, it was impossible for the Navy to entirely close the harbor against the entrance of blockade-runners.

"To secure the possession of this land required the co-operation of a land force, *which I agreed to furnish*. Immediately commenced the assemblage in Hampton Roads, under Admiral D. D. Porter, of one of the most formidable armadas ever collected for concentration upon one given point.

"This necessarily attracted the attention of the enemy, as well as that of the loyal North; and through the imprudence of the public press, and, very likely, of officers in both branches of the service, the exact object of the expedition became a subject of common discussion in the newspapers both North and South.

"The enemy, thus warned, prepared to meet it. This caused a postponement of the expedition until the later part of November, when, being *again called upon* by Hon. G. V. Fox, Assistant Secretary of the Navy, I agreed to furnish the men required at once, and went myself, in company with Major-General Butler, to Hampton Roads, where we had a conference with Admiral Porter as to the force required and the time of starting.

"A force of 6,500 men was regarded as sufficient. The time of starting was not definitely arranged, but it was thought all would be ready by the 6th of December, if not before. Learning, on the 30th of November, that Bragg had gone to Georgia, taking with him most of the forces about Wilmington, I deemed it of the utmost importance that the expedition should reach its destination before the return of Bragg, and directed General Butler to make all arrangements for the departure of Major-General Weitzel, who had been designated to command the land forces, so that the Navy might not be detained one moment.

"On the 6th of December the following instructions were given :

'CITY POINT, VIRGINIA, }  
December 6, 1864. }

'GENERAL—The first object of the expedition under General Weitzel is to close to the enemy the port of Wilmington. If successful in this, the second will be to capture Wilmington itself.

'There are reasonable grounds to hope for success, if advantage can be taken of the absence of the greater part of the enemy's forces, now looking after Sherman in Georgia. The directions you have given for the numbers and equipment of the expedition are all right, except in the unimportant matter of where they embark and the amount of intrenching tools to be taken.

'The object of the expedition will be gained by effecting a landing on the main land, between Cape Fear River and the Atlantic, north of the north entrance of the river. Should such landing be effected while the enemy still holds Fort Fisher and the batteries guarding the entrance to the river, then the troops should intrench themselves, and, by co-operating with the Navy, effect the reduction and capture of those places. These in our hands, the Navy could enter the harbor, and the port of Wilmington would be sealed.

'Should Fort Fisher, and the point of land on which it is built, fall into the hands of our troops immediately on landing, then it will be worth the attempt to capture Wilmington by a forced march and surprise. If time is consumed in gaining the first object of the expedition, the second will become a matter of after consideration.

'The details for execution are intrusted to you and the officer immediately in command of the troops.

'Should the troops under General Weitzel fail to effect a landing at or near Fort Fisher, they will be returned to the armies operating against Richmond without delay.

'U. S. GRANT, *Lieutenant-General*.  
'MAJOR-GENERAL B. F. BUTLER.'

"General Butler commanded the Army from which the troops were taken for this enterprise, and the territory within which they were to operate—military courtesies required that all orders and instructions should go through him. They were so sent; but General Weitzel has since officially in-

formed me that he never received the foregoing instructions, nor was he aware of their existence until he read General Butler's published official report of the Fort Fisher failure, with my indorsement and papers accompanying it. I had no idea of General Butler's accompanying the expedition until the evening before it got off from Bermuda Hundred, and then did not dream but that General Weitzel had received all the instructions and would be in command.

"I rather formed the idea that General Butler was actuated by a desire to witness the effect of the explosion of the powder-boat. The expedition was detained several days at Hampton Roads, awaiting the loading of the powder-boat.

"The importance of getting the Wilmington expedition off without any delay, with or without the powder-boat, had been urged upon General Butler, and he advised to so notify Admiral Porter. The expedition finally got off on the 13th of December, and arrived at the place of rendezvous, off New Inlet, near Fort Fisher, on the evening of the 15th. Admiral Porter arrived on the evening of the 18th, having put in at Beaufort to get ammunition for the Monitors.

"The sea becoming rough, making it difficult to land troops, and the supply of water and coal being about exhausted, the transport fleet put back to Beaufort to replenish; this, with the state of the weather, delayed the return to the place of rendezvous until the 24th. The powder-boat was exploded on the morning of the 24th, before the return of General Butler from Beaufort; but it would seem, from the notice taken of it in the Southern newspapers, that the enemy were never enlightened as to the object of the explosion until they were informed by the Northern press.

"On the 25th a landing was effected without opposition, and a reconnoissance under Brevet-Brigadier-General Curtis pushed up towards the fort. But, before receiving a full report of the result of this reconnoissance, General Butler, in direct violation of the instructions given, ordered the re-embarkment of the troops and the return of the expedition. The re-embarkment was accomplished by the morning of the 27th.

"On the return of the expedition, officers and men—among them Brevet-Major-General (then Brevet-Brigadier-General) N. M. Curtis, First-Lieutenant G. W. Ross, 117th New York Volunteers; First-Lieutenant William H. Walling and Second-Lieutenant George Simpson, 142d New York Volunteers—voluntarily reported to me that when recalled they were nearly into the fort, and, in their opinion, it could have been taken without much loss.

"Soon after the return of the expedition, I received a dispatch from the Secretary of the Navy, and a letter from Admiral Porter, informing me that the fleet was still off Fort Fisher, and expressing the conviction that under a proper leader the place could be taken. The natural supposition with me was, that when the troops abandoned the expedition the Navy would do so also. Finding it had not, however, I answered on the 30th of December, advising Admiral Porter to hold on, and that I would send a force and make another attempt to take the place.

"This time I selected Brevet-Major-General (now Major-General) A. H. Terry to command the expedition. The troops composing it consisted of the same that composed the former, with the addition of a small brigade numbering about one thousand five hundred, and a small siege-train. The latter it was never found necessary to land.

"I communicated direct to the commander of the expedition the following instructions :

'CITY POINT, VIRGINIA, January 3, 1865.

'GENERAL—The expedition intrusted to your command has been fitted out to renew the attempt

to capture Fort Fisher, N. C., and Wilmington ultimately, if the fort falls. You will then proceed with as little delay as possible to the naval fleet lying off Cape Fear River, and report the arrival of yourself and command to Admiral D. D. Porter, commanding the North Atlantic Blockading Squadron.

'It is exceedingly desirable that the most complete understanding should exist between yourself and the naval commander. I suggest, therefore, that you consult with Admiral Porter freely, and get from him the part to be performed by each branch of the public service, so that there may be unity of action.

'It would be well to have the whole programme laid down in writing. I have served with Admiral Porter, and know that you can rely on his judgment and his nerve to undertake what he proposes. I would, therefore, defer to him as much as is consistent with your own responsibilities.

'The first object to be attained is to get a firm position on the spit of land on which Fort Fisher is built, from which you can operate against that fort.

'You want to look to the practicability of receiving your supplies, and to defending yourself against superior forces sent against you by any of the avenues left open to the enemy. If such a position can be obtained, the siege of Fort Fisher will not be abandoned until the reduction is accomplished, or another plan of campaign is ordered from these headquarters.

'My own views are, that, if you effect a landing, the Navy ought to run a portion of their fleet into Cape Fear River, while the balance of it operates on the outside.

'Land forces cannot invest Fort Fisher, or cut it off from supplies or reinforcements while the river is in possession of the enemy. A siege train will be loaded on vessels and sent to Fort Monroe, in readiness to be sent to you if required. All others supplies can be drawn from Beaufort as you need them.

'Keep the fleet of vessels with you until your position is assured. When you find they can be spared, order them back, or such of them that you can spare, to Fort Monroe, to report for orders.

'In case of failure to effect a landing, bring your command back to Beaufort, and report to these headquarters for further instructions. You will not debark at Beaufort until so directed.

'General Sheridan has been ordered to send a division of troops to Baltimore, and place them on sea-going vessels. These troops will be brought to Fort Monroe, and kept there on the vessels until you are heard from. Should you require them, they will be sent to you.

'U. S. Grant, *Lieutenant-General.*

'BREVET-MAJOR-GENERAL A. H. TERRY.'

'Lieutenant-Colonel C. B. Comstock, aide-de-camp (now Brevet-Brigadier-General), who accompanied the former expedition, was assigned, in orders, as chief-engineer of this. It will be seen that these instructions did not differ materially from those given for the first expedition, and that in neither instance was there an order to assault Fort Fisher. This was a matter left entirely to the discretion of the commanding officer. The expedition sailed from Fort Monroe on the morning of the 6th, arriving at the rendezvous, off Beaufort, on the 8th, where, owing to the difficulties of the weather, it lay until the morning of the 12th, when it got underway and reached its destination that evening. Under cover of the fleet, the disembarkation of the troops commenced on the morning of the 13th, and by 3 o'clock P. M. was completed without loss.

'On the 14th a reconnaissance was pushed to within five hundred yards of Fort Fisher, and a small advance work taken possession of, and turned

into a defensive line against any attempt that might be made from the fort.

'The reconnaissance disclosed the fact that the front of the work had been seriously injured by the Navy fire. In the afternoon of the 15th the fort was assaulted, and after most desperate fighting was captured with its entire garrison and armament. Thus was secured, by the combined efforts of the Navy and Army, one of the most important successes of the war. Our loss was, killed, 110; wounded, 536. On the 16th and 17th, the enemy abandoned and blew up Fort Caswell and the works on Smith's Island, which were immediately occupied by us. This gave us entire control of the mouth of the Cape Fear River.'

In vol. 3, page 224, of his work, the military historian states as follows:

'While thus zealously watching the varied interests and changing circumstances in Georgia and Tennessee, as well as at Richmond and in the valley, Grant had also planned [!] to take advantage of Sherman's march by a new movement on the Atlantic coast. Wilmington, near the mouth of Cape Fear River, in North Carolina, was the only important seaport open to the enemy.

'It was originally intended that the expedition should set out in October, but through the imprudence of officers both of the Army and the Navy, and afterwards of the public press, the exact object of the enterprise became known, and the enemy thus warned prepared to resist it.'

For this reason, we suppose, the expedition was postponed until the middle of winter, so that the enemy could make his own arrangements; for the military historian says: "This caused a postponement of the expedition, but towards the end of November the project was revived, and 6,500 men were promised [!] from the Army of the James."

It would only require forty-eight hours to equip 8,000 troops and collect the transports, yet no move was made from October until the middle of December. General Grant had appointed General Weitzel to command the troops, but from the very beginning Butler made himself the prominent figure, and Weitzel had little more to say than if he had been the General's orderly. General Grant evidently supposed that Butler was acting only as the commander of a division of an army, and had a right to interfere in getting the troops ready to embark; but Butler, for some unaccountable reason, was delaying the expedition.

General Butler, with a large body of troops, held an almost impregnable position north and east of the James. General Grant held Lee and his army tight in Richmond, while a bridge of boats connected the two armies, and a large force of naval vessels, including the heaviest iron-clad, occupied the river, which was also blocked with sunken vessels filled with stones. The Federal Army had therefore nothing to fear from Lee, and certainly 8,000 men could have been spared from Butler's army.

Referring back to the military historian, who says that the Fort Fisher expedition "had been delayed in November, owing to

the indiscretion of Army and Navy officers, by which the enemy were notified of the projected movement, and were fortifying the place strongly in consequence," and who further says: "On the 30th of November Grant notified Butler that Bragg, who had been in command at Wilmington, had set out for Georgia, taking with him most of the forces"! Let us ask, then, why, with such information in his possession, did Butler delay the expedition? It can only be accounted for by that indomitable will for which he was celebrated, and feeling himself master of the situation, from his great political prestige, he did as he pleased—for the power of politics at that time overshadowed everything else, and even General Grant was careful not to ignore it.

"It is important," said Grant to Butler, "that *Weitzel* should get off during his (Bragg's) absence, and if successful in making a landing, he may, by a bold dash, succeed in capturing Wilmington." The Navy had been ready from the middle of October, and yet the military historian speaks of the delays of the Navy, and want of co-operation between Butler and the Admiral.

To illustrate how little delay there was on the part of the Navy, we give the following letter from Mr. Secretary Welles to the President:

"NAVY DEPARTMENT, Oct. 28, 1864.

SIR—You are aware that, owing to shoal water at the mouth of Cape Fear River, a purely naval attack cannot be undertaken against Wilmington. Had there been water enough for our broadside ships of the "Hartford" class, the naval attacks of New Orleans, Mobile and Port Royal would have been repeated there. I have, as you are aware, often pressed upon the War Department the importance of capturing Wilmington, and urged upon the military authorities the necessity of undertaking a joint operation against the defences of Cape Fear River, but until recently there never seems to have been a period when the department was in a condition to entertain the subject.

Two months ago it was arranged that an attack should be made on the 1st of October, but subsequently postponed to the 15th, and the naval force has been ready since the 15th inst., in accordance with that agreement. One hundred and fifty vessels-of-war now form the North Atlantic squadron.

The command, first offered to Rear-Admiral Farragut, but declined by him, has been given to Rear-Admiral Porter. Every other squadron has been depleted, and vessels detached from other duty to strengthen this expedition. The vessels are concentrated at Hampton Roads and Beaufort, where they remain—an immense force lying idle, awaiting the movements of the army.

The detention of so many vessels from blockade and cruising duty is a most serious injury to the public service, and if the expedition cannot go forward for want of troops I desire to be notified, so that the ships may be relieved and dispersed for other service.

The importance of closing Wilmington is so well understood by you that I refrain from presenting any new arguments. I am aware of the anxiety of

yourself and of the disposition of the War Department to render all the aid in its power.

The cause of the delay is not from the want of a proper conception of the importance of the subject, but the season for naval coast operations will soon be gone. General Bragg has been sent from Richmond to Wilmington to prepare for the attack; and the autumn weather, so favorable for such an expedition, is fast passing away. The public expect this attack, and the country will be distressed if it be not made. To procrastinate much longer will be to peril its success. Of the obstacles which delay or prevent military co-operation at once, I cannot judge; but the delay is becoming exceedingly embarrassing to this Department, and the importance of having the military authorities impressed with the necessity of speedy action has prompted this communication to you.

I have the honor to be, etc.,

GIDEON WELLES.

THE PRESIDENT."

According to the military historian, General Butler never received any detailed orders regarding the expedition until December 6th, at which date General Grant writes: "The first object of the expedition, *under General Weitzel*, is to close the port of Wilmington. There are reasonable grounds to hope for success, if advantage can be taken of the absence of the greater part of the enemy's forces now looking after Sherman in Georgia." This would indicate that General Grant did not intend that Butler should accompany the expedition, but that the military part of it should be managed *entirely by Weitzel*. Yet, according to the military historian—

"Butler, on the night when the troops embarked, proceeded to City Point, and informed General Grant that he was going himself, and this in violation of his commanding-general's orders! who 'did not desire to intrust the command of the expedition to Butler;' for, as repeatedly shown, although Grant was entirely satisfied with that officer's zeal and general ability, he was convinced that he lacked some qualities essential in a commander in the field. Grant did not pronounce, but he felt certain, that the peculiar talent of a successful general was not possessed by the Commander of the James. He therefore directed Butler to place Weitzel in command of the expedition, and had, in fact, committed to Butler movements in support of those of Meade, which he intended should detain him in Bermuda Hundred.

"Nevertheless, he did not now forbid Butler to accompany Weitzel. It was difficult thus to affront a commander of such high rank unless it was intended to relieve him entirely from command, and this Grant was not prepared to do without consulting the Government, which he knew would dislike and perhaps forbid the step. He fancied, besides, that Butler's object might be to witness the explosion of the powder-boat—in which he took great interest—rather than to direct the expedition itself.

\* \* \* \* \*

"It is certain, however, that it would have been better if Grant had frankly ordered Butler back to the Army of the James, to superintend the movements there.

"His dislike to wound the feelings of another should, doubtless, at this crisis have been sacrificed.

"Those who have never been placed in situations of great delicacy and responsibility, or who cannot

realize the various considerations—military, political and personal—which affect the decisions of men in power, will, doubtless, here find cause to censure Grant.”

General Grant might well have exclaimed on reading this, “Save me from my friends!” The military historian does not give his authority for the foregoing statements, but it is certain that, when General Butler reported his return from Wilmington to General Grant, the latter relieved him from command.

On the 9th of December, 1864, General Grant telegraphed to Butler at Fortress Monroe. “Let General *Weitzel* get off as soon as possible; we don’t want the Navy to wait an hour.” Yet the Navy had waited patiently from the 15th of October until the 6th of December, fifty-one days!

It will be seen throughout this narrative that we have given General Grant on all occasions credit for the highest military ability, and in this instance we do not desire to take from him one iota of it. We only refer to the revelations made by the military historian, in relation to which General Grant is not responsible.

In volume 3, page 390, of his book, the author states that :

“About the 18th of December, 1864, there was doubtless a lack of concert, and even of cordial co-operation, between the naval and military chiefs. Butler was not popular with the other branch of the service, and, after the expedition started from Hampton Roads, neither commander visited the other !”

Now, here is a paragraph that ought to make our “historian” happy. Imagine a General and an Admiral calling upon each other on the salt-sea waves, amid tumbling billows, in the dead of winter, and leaving cards !

The Admiral’s reason for not communicating with Butler personally was, that he did not see the General from the time he left Fortress Monroe until the time when the General stated he was going to leave the Navy in the lurch at Fort Fisher, and Butler did not communicate with the Admiral, as he might easily have done, because he had been informed of all that was going to be done, what he had to do, and what means would be placed at his disposal. There was no communication necessary until just before landing, when General *Weitzel* went on board the flag-ship to see Admiral Porter, who agreed to all Butler’s propositions, although some of them were needless.

To refer to that portion of the military “history,” which seems to have been written without consideration, in regard to a matter of which the author really knew nothing, or perhaps to let up General Butler, of whom he had spoken harshly, he says :

“Their written communications were few, and it was the chief-of-staff of the Admiral, and the ranking officer under Butler (*Weitzel*) [who was supposed to be in command of the Army forces], through whom the views or wishes of either were made known to each other. Porter thought that his advice was not taken at times when it should have been controlling, and Butler thought that Porter acted without duly considering or consulting him.” [!]

That is, Porter managed his fleet to suit himself, and left Butler to manage his own forces until the time came for action:

“Each was besides annoyed at delays which, though inopportune, were unavoidable, and neither made sufficient allowance for the difficulties of that branch with which he was less familiar. They seemed, indeed, to be playing at cross purposes. When Butler was supplied with coal, Porter wanted ammunition, and when Porter had all the ammunition he wanted, Butler was out of coal ! Even the elements conspired against them, and when one could ride on the open sea, the other was obliged to stay inside.” [! !]

This is the most crooked narrative ever written by one claiming to be a historian. The author affirms that there was no concert of action between General Butler and the Admiral, and yet he says (vol. 3, page 315) :

“On the morning of the 25th, Butler sent *Weitzel* to Porter to arrange the programme for the day. It was decided that the fleet should attack the fort again, while the troops were to land, and, if possible, assault under cover of the naval fire as soon as the Half-Moon and Flag-Pond Batteries were silenced. At 7 o’clock the fleet again took up a position within a mile of the fort [three-fourths of a mile], not a shot being fired by the enemy except at the last four naval vessels as they were moving into line. [This for the reason that nearly all the guns had been disabled by the ships’ fire and by the sand that had been driven by shells into their bores.]

“At 12 o’clock the batteries above the forts were reported silenced, and a detachment of about 2,300 men of General Ames’ command was landed two and a half miles north of the fort [without a gun being fired on them]. The debarkation was effected under the cover of seventeen gun-boats, which raked the woods and could drive away any force that might have opposed the landing.

“Five hundred men under General Curtis were the first to land. He pushed his skirmish-line within a few yards of Fort Fisher, causing on the way the surrender of the garrison of Flag-Pond Battery, already silenced by the naval fire. *Weitzel* accompanied Curtis and approached within 800 yards of the works. He counted seventeen guns in position bearing up the beach, observed the traverses and stockades, the glacis, ditch, and counterscarp, and decided that the work had not been materially injured by the naval fire. [!] *Weitzel*, too, had been in many unsuccessful assaults, and never in a victorious one; he had a distinct and vivid recollection of this experience, and returned to Butler and reported that it would be butchery to assault.

“Curtis was now within fifty yards of the fort [not a shot fired at him] and sent word to Ames that he could take the work, whereupon Ames sent orders for an assault. Curtis at once moved forward, but by the time he reached his position night had come on, and the fleet had nearly ceased to fire ; [and yet, Ames and Curtis, under Terry, assaulted, and continued to assault, Fort Fisher until it was taken at night.]

"Some of the rebel troops who had been driven to their bomb-proofs returned to their guns" [which they could not fire as the guns were disabled]. At this juncture the order to embark arrived and no assault was made. Curtis and the officers with him declared that the fort could have been easily carried. That at the moment when they were recalled they virtually had possession, having actually approached so close that the rebel flag (which the Navy fire had knocked down) had been snatched from the parapet, and a horse brought away from *inside* the stockade. Three hundred prisoners had been captured outside, etc. That night, Butler informed the Admiral that he and Weitzel were of the opinion that the place could not be carried by assault, having been left substantially uninjured by the naval fire!

"Seventeen guns, he said, two of which only were injured [and yet none of them fired on the troops], were bearing up the beach, covering a strip of land, the only practicable route, not more than wide enough for 1,000 men in line of battle—[the place where Curtis finally assaulted without losing a man].

"Hoke's reinforcements were approaching, and, as only the operations of a siege would reduce the fort, he had caused the troops to re-embark. 'I shall, therefore,' said he, 'sail for Hampton Roads as soon as the transport fleet can be got in order.'"

Now this is what Badeau calls "a want of concert of action" between General Butler and Admiral Porter. Of course, Porter could not join Butler in his retreat, as will be seen by Badeau's next paragraph:

"The Admiral, however, was of a different mind, and replied, 'I have ordered the largest vessels to proceed off Beaufort and fill up with ammunition, to be ready for another attack in case it is decided to proceed with this matter by making other arrangements [meaning sending another General]. We have not commenced firing rapidly yet, and could keep any rebels inside from showing their heads until an assaulting column was within twenty yards of the works. I wish some more of your gallant fellows had followed the officer who took the flag from the parapet, and the brave fellow who brought the horse from the fort. I think they would have found it an easier conquest than is supposed.'

"Butler, nevertheless, remained unshaken in his determination, and on the night of the 25th December he embarked all his troops except Curtis' command, when the surf became high and he sailed away, leaving these ashore."

They were under cover of the guns of the fleet and they were all safely taken off. On the 27th Butler arrived at Fortress Monroe, and on the 28th had an interview with General Grant, after which the General-in-chief telegraphed to the President:

"The Wilmington expedition has proved a gross and culpable failure. Many of the troops are back here. Delays and free talk of the expedition enabled the enemy to move troops to Wilmington to defeat it. After the expedition started from Fortress Monroe three days of fine weather were squandered, during which the enemy was without a force to protect himself. Who is to blame, will, I hope, be known!"

As if the blame could rest on any but the one who went to Fort Fisher in command of the troops, and disobeyed orders by not intrenching himself under the protection of the guns of the fleet.

Grant had seen enough of the Navy on the Mississippi to know that it would not back out of such an adventure as the taking of Fort Fisher. The Navy had given him sufficient evidence in much more desperate undertakings to have satisfied him that it would stay before Fisher as long as a shot or pound of coal was left.

The historian says: "This dispatch was written before Grant had heard from Porter, or from Butler's *own subordinates*; subsequently he was inclined (!) to attribute the failure to other causes." Other causes than the Navy, we suppose; and here Badeau relates the difficulties with which the fleet and transports had to contend in getting to the scene of action, and makes the following sensible remark:

"But whatever the delay, and whatever the cause, these made no difference in the result. The troops and the fleet were at the rendezvous, the work was silenced, and the landing effected before any reinforcements reached the fort."

"On the morning of the 25th only 1,600 men had arrived at Wilmington. This day General Lee telegraphed Sedden: 'Bragg reports the enemy made a landing three miles north of Fort Fisher about 2 P. M. to day, and were still landing at 5:30 P. M. General Kirkland's, the only troops arrived, except 400 of Haygoods, etc.'

"Whatever number arrived before the 27th, they made no attempt to molest Curtis' little band of 500 men, who remained on shore two days after Butler left, with no support except the guns of the fleet. On the 25th of December, therefore, there were only 2,500 men opposed to Butler's 6,500. The garrison was only about 1,600 men. It is true the latter occupied a strong work, but Butler had the most formidable fleet that was ever assembled to cover and protect his movements."

We will make one more quotation from this part of the military historian's book. It was, no doubt, reviewed by General Grant. The latter, after inquiring into all the circumstances, had sent Butler directly home to Lowell:

"Butler, indeed, maintained that he had not effected a landing, that only a third of his troops were on shore, when the sea became so rough that he could land no more. But his subordinates did not confirm this statement, and, as he was able to get all his troops except Curtis' command back to the transports, he could certainly have put them on shore if he had been at all anxious to do so."

The latter part of Badeau's remarks about Butler are not complimentary, but he tries to ease him up on the ground that

"He simply displayed on this occasion once more the unmilitary features of his character. . . . But, above all, he had not appreciated the force of Grant's order in regard to remaining and intrenching on the peninsula, or else he forgot them altogether at the crisis! Weitzel had never seen the orders, and knew nothing of them, or he would doubtless have reminded Butler of their character."<sup>(1)</sup>

Let any one read this and consider the total lack of military arrangement and the absence of obedience to the orders of the General-in-chief of the Federal armies,

a disobedience that would have rendered General Butler liable to be shot if tried by court-martial.

The military historian comments on the lack of co-operation between Butler and the naval commander, not saying decidedly where the blame rested, but rather implying that it rested with the Navy. A truth only half told often does more harm than a falsehood, although we are not aware that it did the Navy any harm in this instance. The author says:

"The lack of co-operation between Porter and Butler was at this juncture again apparent, and again most unfortunate. The Admiral was a man not only of brilliant talent but of extraordinary nerve and force of character, and though extravagant and inconsiderate in language, written as well as spoken, he understood his profession thoroughly. He was aggressive in his nature, and always favored an attack. He doubtless, in this instance, overrated the results accomplished by the fleet, but that very circumstance would have made his counsels more audacious, and audacity is sometimes a very desirable quality in a commander. If, instead of writing or sending to Porter and announcing his withdrawal, Butler, who was the senior in rank, had waived his prerogative and sought and obtained a personal interview, it is possible that he might have been convinced by the arguments or incited by the spirit of the sailor into remaining on shore. As it was, he sailed off, leaving Porter to pick up the troops he (Butler) had left; and, in his dread of incurring disaster, he incurred what to a soldier is infinitely worse, the imputation of unnecessary failure."

We don't see where the "lack of co-operation" on the Admiral's part comes in. If the author had confined the lack to Butler, he would have stated the actual fact.

The historian comments freely on the commander of the naval forces, in regard to a letter he wrote to the Navy Department, and which finally came out in investigations on the conduct of the war. In reference to the letter, the military historian says the Admiral could not be accused of concealing his sentiments. The following is the communication alluded to as part of the history of the war. There does not seem to be anything peculiar in it beyond its decided tone:

"My dispatch of yesterday will give you an account of the operations, but will scarcely give an idea of my disappointment at the conduct of the Army authorities in not attempting to take possession of the fort. Had the Army made a show of surrounding it, it would have been ours; but nothing of the kind was done. The men landed, reconnoitred, and hearing that the enemy were massing troops *somewhere*, the orders were given to embark. . . . There never was a post that invited soldiers to walk in and take possession more plainly than Fort Fisher. . . . It can be taken at any moment in one hour's time if the right man is sent with the troops. They should be sent to stay. I trust, sir, you will not think of stopping at this, nor relax your endeavors to obtain the right number of men and the means of taking the place."

Now, where the peculiarity of which the military historian has spoken exists in this

letter, we leave to others to determine. The Admiral wrote very decidedly, and it had the desired effect. Mr. Secretary Welles wrote to General Grant:

"The ships can approach nearer to the enemy's works than was anticipated; their fire can keep the enemy away from their guns.

"A landing can easily be effected upon the beach north of Fort Fisher, not only of troops, but all their supplies and artillery. This force can have its supplies protected by gun-boats.

"Admiral Porter will remain off Fort Fisher, continuing a moderate fire to prevent new works being erected.

"Under all these circumstances, I invite you to a military co-operation, as will insure the fall of Fort Fisher."

After receipt of this letter General Grant wrote to the Admiral:

"Please hold on wherever you are for a few days, and I will endeavor to send the troops back again with an increased force and *without the former commander*.

"Your dispatch to the Secretary of the Navy was only received to-day. I took immediate steps to have transports collected and am assured they will be ready with coal and water by noon of the 2d of January. There will be no delay in embarking and sending off the troops. If they effect a lodgment, they can at least fortify and maintain themselves until reinforcements can be sent. Please answer by bearer, and designate where you will have the fleet of transports congregate."

The letter of which Badeau speaks had the effect of drawing forth the above communication and bringing about the capture of Fort Fisher. Yet the Navy never received any particular credit for this operation, which was the final stab that brought the enemy to his last throes.

To those who take an interest in the naval operations of the war, some of the remarks of the military historian on Fort Fisher are interesting. In spite of many inaccuracies, he shows the pertinacity with which the Navy held on to what they had begun, and the difficulties they had encountered against the fierce gales that swept the coast during those months of December and January. Not a vessel left her post, and the Navy could have protected the landing of any number of troops.

It was manifestly the object of the military historian to give the Army more credit than was due them, and make the Navy play a secondary part in the reduction of the defences in Wilmington. The Navy covered the attack of the troops and the sailors attacked the sea-face of Fort Fisher; the garrison, supposing this to be the main attack, rushed to the sea-face, and, as Badeau says, swept the officers and sailors "away like chaff." The repulse of the naval storming party might not have happened had the troops, who were to have attacked with the sailors and marines, come to time. It was only when the whole force of the enemy was concentrated at the

sea-face that the order was given for the troops to advance, and

"Curtis' brigade at once sprung from the trenches and dashed forward in line, and in a few moments the Army occupied three or four traverses which protected them from the fire of the enemy, and there Curtis held on until Ames and Penny-packer could obtain a secure footing in the fort with him. Bell's brigade was brought up and the fort was occupied by the troops."

It must be remembered that while this assault was going on behind traverses, the "New Ironsides," with her 11-inch guns, and three Monitors, were firing through the traverses in front of the Federal soldiers, as the enemy would assemble to meet their approaches, and the Confederates were swept away by the Navy shells.

At this time General Terry requested the Admiral to reinforce the troops on the outer line by the seamen and marines who had been repulsed from the sea-face, which was done at once. This stopped the advance of General Hoke, who had commenced skirmishing with Terry's northern outposts, apparently with a design of attacking in that quarter to make a diversion. Hoke's withdrawal enabled Abbott's brigade and a regiment of colored troops to be brought into action on the southern front.

There never was harder fighting anywhere by soldiers than on this memorable occasion; and while the Federal troops behaved like heroes, it is but justice to say of the enemy that they fought equally well, and it was only after seven hours of stout resistance that they surrendered.

The military historian relates all this part of his story in a graphic manner; but, to show how essential was the fire of the Navy to the success of the assault, we mention the following incident:

"Terry, finding the advance so slow, directed Curtis to stop fighting and intrench, which so excited that officer that he exclaimed, 'Then we shall lose what we have gained.' Fortunately, the firing from the 'Ironsides' and the Monitors was so effective, that at ten o'clock P. M. every traverse was emptied and the enemy in full retreat towards the end of the sand-spit on which Fort Fisher was situated."

It would be scarcely worth while for Army or Navy to claim on this occasion more than their share of honor. Each did in its own sphere what was required, and neither could have succeeded without the aid of the other. That the naval fire was perfect was evidenced by the fact that every gun in Fort Fisher was either destroyed or so injured that they were practically useless; so that, from the moment the army advanced to the assault, they had nothing to apprehend from the enemy's heavy batteries.

In all the last seven hours' fighting the Federal army lost but 110 killed, 536

wounded, and 45 missing, while the enemy lost over 700.

The high praise bestowed on the officers of the Army by the military historian is well deserved; the assault on Fort Fisher was the most remarkable affair of the war:

"The difficulties of the weather and the season on one of the stormiest coasts, in the world were overcome, the disadvantages incident to all combined operations entirely disappeared, and the dispositions of the Admiral and the military chief at the time of the landing, and during the subsequent operations up to and including the assault, were a marvel of harmonious effect."

To all this we subscribe, only asserting that up to the time when Butler left Fort Fisher the naval co-operation with him was just as effective as with Terry.

Butler had no obstacles to overcome, Terry had many. Badeau says:

"The importance of this victory was instantly recognized by the rebels and loyal people alike. The effect was felt at home and abroad. Lee knew its significance as well as Grant, and the rejoicing at the North was not more general or heartfelt than the despondency it occasioned inside the Confederacy. The gates through which the rebels obtained their largest and most indispensable supplies was forever sealed.

"In little more than a year before the capture, the ventures of British capitalists and speculators with Wilmington alone had amounted to \$66,000,000, and \$65,000,000 worth of cotton had been exported in return. In the same period 397 vessels had run the blockade; all this was at an end. Europe perceived the inevitable consequences, and the British Government, which till now had held out hopes to the Confederate emissaries, after the fall of Fort Fisher sent a communication to Jefferson Davis, through Washington, rebuking the rebels for their stubbornness. There could be no surer evidence that the case was desperate."

We will further add that a telegraphic dispatch was captured from General Lee to the commanding officer at Fort Fisher, which read as follows: "If Fort Fisher falls, I shall have to evacuate Richmond."

The military historian remarks: "At this crisis the possession of Cape Fear River opened another base for operations into the interior. It enabled the general-in-chief to look forward to supporting Sherman's future movements and presented an opportunity to complete the isolation of Lee."

In fact, Lee, with Cape Fear River in his possession, might have prolonged the war greatly, in the hope of obtaining terms for the Confederacy, which might have been a triumph for them.

After making the proper disposition of the vessels of the fleet, the Admiral hastened to City Point in a fast steamer to witness the end. It came two months later, when Lee, having eaten up all his provisions, and threatened by large armies whom he had no longer power to resist, surrendered, and thus ended the most extraordinary war of modern times.

While our armies in many instances immortalized themselves by acts of heroism, and submitted to hardships and privations for which the country can hardly ever repay them, the Navy performed its fair share of *hard* service, and without its aid the rebellion could not have been suppressed.

As long as the Confederates could be fed, and supplied with munitions of war, it would have been extremely difficult to conquer them, for they would have prolonged the war and inflicted such injuries on the North as to finally have obtained whatever terms they might demand.

In the enthusiasm of the Northern people to welcome home the soldiers, and in the honors paid to them on all sides, the Navy seemed to have been forgotten, and but for the published dispatches of the commanding officers of the Federal naval forces, the general public would hardly have known that such an organization as the Navy existed.

From the battle of Shiloh, where the gunboats covered the retreating troops, which rallied under their protecting fire and finally gained the day, to the fall of Fort Fisher, the Navy played a more active part than was perhaps ever before taken by naval forces, and though illy supplied with the

proper kind of vessels, they seldom experienced reverses.

There were the fights of Hatteras, Port Royal, New Orleans, Mobile, Vicksburg, and all along the Mississippi and its tributaries, Red River, Arkansas, White, Tennessee, Cumberland and Ohio Rivers, Grand Gulf, Port Hudson, Charleston, Galveston, and the whole coast of Texas brought under control. This was a large field of naval operations, seldom equalled in the history of war, and never exceeded, as far as naval successes are concerned.

In this account of the Fort Fisher affair we have endeavored to do justice to all parties, but as General Butler was not partial to the Navy, and might perhaps think that a naval writer would not do him full justice, we have quoted liberally from the work of General Badeau, who had a favorable leaning toward General Butler, and who gave him credit for military qualities wherever he could possibly do so.

We have reviewed the circumstances connected with Fort Fisher at some length, because we consider such review necessary for a proper understanding of this important victory, and also with a view to correct misrepresentations which have long since been made apparent.

## CHAPTER LII.

### OPERATIONS ABOUT CHARLESTON, 1865.—FALL OF CHARLESTON, SAVANNAH, ETC.

FORMATION OF THE NAVAL BRIGADE.—OPERATIONS OF GENERALS SHERMAN AND FOSTER IN THE VICINITY OF SAVANNAH.—EXPEDITION UP BROAD RIVER AND BOYD'S CREEK.—SAVANNAH INVESTED.—EVACUATION OF SAVANNAH AND ITS DEFENCES BY THE CONFEDERATES.—THE NAVAL VESSELS AGAIN IN CHARLESTON HARBOR.—MOVEMENTS OF ARMY AROUND CHARLESTON.—NAVAL PICKETS CAPTURED.—LANDING OF NAVAL FORCES AT BULL'S BAY.—GUN-BOATS AND BATTERIES OPEN A TERRIFIC FIRE ON FORT MOULTRIE AND WORKS ON SULLIVAN'S ISLAND.—CHARLESTON EVACUATED.—ISOLATION OF THE CONFEDERACY.—NAVAL OFFICERS COMMENDED.—CONFEDERATE VESSELS CAPTURED.—INGENIOUS METHODS USED BY CONFEDERATES TO PREVENT UNION VESSELS FROM PENETRATING THE INNER HARBOR.—PLANS OF FORTS ALONG THE RIVERS.—GEORGETOWN, S. C., OCCUPIED.—THE FLAG-SHIP "HARVEST MOON" SUNK BY TORPEDOES.—ADMIRAL DAHLGREN RELIEVED.—COMPLIMENTARY LETTER FROM SECRETARY OF THE NAVY.—LIST OF VESSELS AND OFFICERS OF SOUTH ATLANTIC SQUADRON, 1865.

**I**N the latter part of November, 1864, Rear-Admiral Dahlgren received information that General Sherman had reached Milledgeville and was about to march upon Savannah. He accordingly entered into an arrangement with General Foster to co-operate with Sherman in case the latter might require assistance.

It was decided to form a naval brigade, to be furnished with two field-howitzer batteries of four guns each. All the forces that could be spared from the vessels on blockade were withdrawn, and the night of November 28th was appointed for proceeding up the Broad River and into Boyd's Creek, one of its branches, whence a short march only was necessary to reach the railroad connecting Savannah with Charleston. The vessels of the Navy selected for this service were the "Pawnee," Commander Balch; "Mingoe," Commander Creighton; "Pontiac," Lieutenant-Commander Luce; "Winona," Lieutenant-Commander Dana; "Wissahickon," Lieutenant-Commanding McClensey; "Sonoma," Lieutenant-Commander Scott; all carrying heavy guns. There were four half-companies of well-drilled seamen under Lieutenant James

O'Kane; Lieutenant-Commander E. O. Mathews commanded the Navy artillery, and the marines from the different vessels were under the command of First-Lieutenant George G. Stoddard.

After a harassing progress of twenty miles through a thick fog, Admiral Dahlgren had the satisfaction of reaching the appointed landing with five of the six vessels with which he had started, for the "Wissahickon" had grounded near the entrance of the river and did not succeed in joining the other gun-boats. The troops were somewhat later in arriving, but finally the transports were seen coming up the river, and in half an hour afterwards two batteries of naval howitzers and nine companies of seamen and marines were landed under Commander Preble, and advanced in skirmishing order, to cover the landing of the troops, Admiral Dahlgren returning to his duty afloat.

After General Foster had landed all his soldiers, an advance was made towards the railroad above Grahamsville. The Confederates had assembled in considerable force, and did all they could to impede the march of the Union forces by a fire of musketry

and field-pieces, and at length the Federal forces came to a halt before a strong earth-work commanding the road, and flanked by a heavy growth of timber and other obstructions. The troops under General Hatch assaulted the works, but were repulsed with heavy loss, while the men from the fleet did their duty with boat-howitzers and musketry.

Skirmishing and reconnaissances went on for several days, the Federals slowly advancing towards their objective point, the railroad. This was a new experience for the seamen and marines, but their spirited conduct won for them the applause of the soldiers. On the 6th of December the Army and Navy forces proceeded up the Tulfiny River, and at about 8 A. M. landed on an island. The Confederates sent troops to meet them, and for a time it looked as if the Federals would get the worst of the encounter; but the naval contingent coming rapidly on the field, and opening a heavy fire with howitzers and musketry, the enemy finally gave way, retreating in good order. This skirmishing lasted all day through a heavy rain, the seamen and marines behaving like veteran soldiers in an experience entirely new to the greater portion of their number. The object of the expedition was effected in spite of all opposition, and on the 12th of December Rear-Admiral Dahlgren opened communication with General Sherman, who was then near Savannah.

The news of Sherman's arrival in the vicinity of Savannah gave great satisfaction to the people of the North, who had begun to feel uneasy in regard to him, owing to the exaggerated reports from Confederate sources. Prompt steps were taken to place vessels-of-war at every point on the coast where the General was likely to appear, and on the 18th of December Sherman in person presented himself on board Admiral Dahlgren's flag-ship, and was warmly greeted by officers and men, who held this gallant commander in the highest respect. Arrangements were made by General Sherman with Admiral Dahlgren, that, while the former should invest Savannah on the land side, the latter should hold every avenue by water; and when it was considered that the investment was complete, Sherman summoned General Hardee, the Confederate commander, to surrender, which request being declined Sherman prepared to attack the enemy's works. The Federal army was gradually drawing down to the Savannah River, and, in order to cut off the escape of the Confederates, it was concluded to reinforce the troops under General Foster on Broad River, and make a demonstration in the direction of the railroad, while

naval cannonade, which was begun and continued by Lieutenant-Commander Scott in the "Sonoma," assisted by the schooner "Griffith," Acting-Master James Ogilvie.

In order to complete the arrangements for cutting off the escape of the enemy and to insure the co-operation of all the Federal forces in the vicinity, General Sherman visited Hilton Head in company with Rear-Admiral Dahlgren, to communicate with General Foster, and make the latter acquainted with his plans; but on his return he was overtaken by a tug, with the following telegram:

*To General Sherman:*

General Howard reports one of General Legget's brigades near Savannah, and no enemy. Prisoners say the city is abandoned and enemy gone to Hardeesville.

*From Station, near Headquarters.*

On receipt of this dispatch General Sherman hastened to his headquarters, and the Admiral to the division of vessels lying in front of Beaulieu, when the facts of the case became apparent. Lieutenant-Commander Scott, of the "Sonoma," was in possession of Forts Beaulieu and Rose Dew, and all the other fortifications had been evacuated, leaving Sherman master of Savannah and its defences.

Although, no doubt, the Army would have captured Savannah unaided, yet the Navy was of great assistance in blocking up the rivers and preventing the Confederates from sending reinforcements to General Hardee. The Navy visited many points inaccessible to the Army, and secured a large quantity of guns, ammunition and stores which the Confederates had not time to destroy. General Hardee's boast, that he held two lines of intrenchments and was in communication with superior authority, did not prevent him from beating a speedy retreat as soon as Sherman's advance-guard hove in sight of his outposts.

In all these affairs the brigade from the fleet, composed of seamen and marines, remained with General Foster's command, and the officers and men were transferred to their respective vessels only when Savannah and all the points around it were garrisoned by Sherman's troops.

As it was General Sherman's intention to move northward as soon as he had secured Savannah against any attempts on the part of the Confederates to repossess it, he requested such co-operation on the part of the Navy as could be extended; and while his army was apparently advancing on Charleston, Rear-Admiral Dahlgren determined on making further attacks on the works within the harbor of that place, which with the assistance of the army he had some hope of reducing. Sherman, however,

Charleston would necessarily fall, owing to his own interior movements.

Admiral Dahlgren now collected all his vessels near Charleston, ready to co-operate with Sherman as he approached, and to keep the rivers clear of torpedoes and light batteries, so that the Federal transports could reach certain points and supply the wants of the Union army.

In order to deceive the Confederates with regard to the point for which he was aiming in his march to the northward, General Sherman requested that the Navy would make such demonstrations as would draw the attentions of the Confederates from his operations. The gun-boat "Dai Ching" and a tug were placed in the Ossabaw River, the "Sonoma" was sent out to the North Edisto and the "Pawnee" to the Ashepoo River, with orders to drive off the enemy's troops and knock down his batteries wherever they could be reached. The "Tuscarora," "Mingoe," "State of Georgia" and "Nip-sic" were stationed at Georgetown, S. C., to prevent the enemy from erecting batteries at that point, and the "Pontiac" was in the Savannah, advancing with General Sherman's extreme left. Nearly all the Monitors of the squadron were collected at Charleston.

On the 24th of January, 1865, General Sherman marched on Pocotaligo and the Coosawatchee, and the next day made a demonstration on Salkahatchee, while the gun-boats went up the Edisto and Stono Rivers to ascertain whether the enemy intended to hold Charleston or retreat to Columbia. It would require General Slocum at least five days to get his troops clear of the swamps near Savannah, and in the meantime General Howard was, apparently, moving directly on Charleston, although with no intention of going beyond Salkahatchee.

The enemy had still a considerable force near Savannah, and his cavalry, under General Wheeler, was exceedingly active in watching the movements of the Federal army and picking up stragglers. The "Pontiac," Lieutenant-Commander Luce, was left with Slocum's command, and on the 24th anchored off Merrill's Landing or the Three Sisters, forty miles above Savannah, to cover the crossing of the river by a portion of the 20th Corps. Lieutenant-Commander Luce threw out pickets to see that the enemy did not bring guns to bear on the "Pontiac" from the high bluffs, which could not be reached by the ship's battery. This party had been warned against scouting too far from the ship, but in spite of this they were captured by a squad of Confederate cavalry.

On the evening of the 27th the scouts of General Davis' column reached the point

where the "Pontiac" was lying at anchor; and, soon after, the remainder of the 14th Corps appeared, after a most arduous march over corduroy roads which had to be constructed in advance of the forces. Here the soldiers took some needed rest, with the knowledge that they were not likely to be disturbed while the "Pontiac" lay in their vicinity, although there were reported to be two Confederate gun-boats about eighty miles up the river.

Meanwhile the "Pawnee" and "Sonoma" were making their way up the North Edisto, in company with transports conveying troops under the command of General Potter, which troops were landed at a place called White Point. Some few of the enemy were seen and shelled by the gun-boats, but the Confederates were not in force, and their guns had mostly disappeared from the river banks.

Thus, while Sherman was advancing through the enemy's country, everything was done by the Navy that could disconcert the Confederates and prevent them from annoying the Union army. At this time, owing to heavy rains, the freshets had swept away most of the bridges along the line of Sherman's march, and the movements of the gun-boats were in every respect desirable to cover the advance of the army. Almost every stream where a gun-boat could float was guarded by the Navy; their good services enabled General Sherman to reach midway on the South Carolina road by the 7th of February without molestation. The fate of Charleston was now sealed, and the only thing left the garrison to avoid capture was to evacuate the place.

On the 11th of February a movement was made by the army contingent under General Potter, and a considerable naval force under Rear-Admiral Dahlgren, consisting of the "Shenandoah," "Juniata," "Cannandaigua," "State of Georgia," "Pawnee," "Sonoma," "Ottawa," "Winona," "Wando," "Geranium" and "Iris," with launches in which to land troops at Bull's Bay. Great difficulty was experienced in finding a channel into the harbor, but a landing was finally effected; after which, the "Pawnee" and "Winona" was sent to South Edisto River to assist General Hatch, who was moving on Wellstown with his division.

On the 17th a movement was made from Stono River on the Confederates, while the iron-clads "Lehigh," the "Wissahickon" and a mortar schooner were sent up the Stono to press the right flank of the enemy, while the gun-boat "McDonough" was sent with a mortar schooner up the Filly branch to bear on his left flank. General Schimmelfennig, in command of the troops before Charleston, moved on the enemy's

front from Cole's Island. Admiral Dahlgren also sent orders to Lieutenant Hayward, commanding the battery of 11-inch guns on Cummings' Point, to open on Sullivan's Island and fire continuously through the night. The contiguous batteries were also put in operation by General Schimmelfennig, and the advance Monitors were ordered to open fire on Fort Moultrie. The cannonading during the night was sharp and continuous; the Confederates replied with a few guns from Fort Moultrie, but as the night wore on their fire entirely ceased. In fact, the main body of the enemy's troops had evacuated Sullivan's Island at about 8 P. M., leaving about one hundred and fifty men to keep up a fire and delay the knowledge of the evacuation.

On the morning of the 18th the anticipations of the Union forces that the Confederates were retreating from Charleston were confirmed. Acting-Master Gifford entered the harbor in a tug, and at Mount Pleasant met the Mayor of the city, who tendered the submission of the civil authorities to the Federal Government, and requested protection for the citizens and their property.

Rear-Admiral Dahlgren was up the Stono River when he received a message that there were indications that the Confederates were retreating from Charleston, and he immediately proceeded in his flagship to the city which for four years had resisted the continued attacks of the Army and Navy, for the reason that its strength had been underrated by the Federal Government and a sufficient force had not been sent against it. The place only fell because of the advance of General Sherman, and the fear of the garrison that they would be cut off and captured. The powerful defences on Sullivan's Island, the shapeless but still formidable ruins of Sumter, the numerous great earth-works clustered around Fort Johnson, Castle Pinckney and the heavy water batteries that lined the wharves, looked grim and terrible, though deserted. They were a monument to the zeal, ability and gallantry of those who had to the last defied the power of the Federal forces.

Charleston, the city that struck the keynote of the rebellion, now lay helpless in the power of the Federal Government; its citizens, worn out and impoverished by the long war which they had themselves inaugurated, now seemed willing to return to the shelter of the flag, since it was evident that the secession cause could not prevail. The officers of the fleet walked through the streets of the city whose out-works had so long defied them. All the houses were closed, and few of the citizens appeared. But for the presence of the negroes, it might have passed for a city

Notwithstanding the great outcry that had been made by some of the Confederate officers against General Gillmore's barbarity in firing from the "Swamp Angel" into the town, the place gave little indication of having suffered from an enemy's guns.

Here and there the ground was plowed up by a rifle-shell, or the front of a house was scarred by the fragments; but it is pleasant to be informed that the women and children received no injury.

The fall of Charleston was of course an important event at any time, since it was the Mecca of the Confederacy, on which the eyes of every Southern enthusiast were fixed. The courage and determination of its garrison inspired those who were inclined to waver in their allegiance to the Confederacy, and, while Charleston held out the cause could not be considered altogether desperate. The heroic example set by the besieged was telegraphed daily all over the South, and the name "Charleston" was a watchword everywhere. Even the most radical and uncompromising Unionists could not help admiring the courage and devotion shown by the defenders of Charleston, and the city escaped any injury from the Union forces, except such as naturally follows the occupation by troops of a place lately in hostility, where vacant houses are taken possession of and their contents not too scrupulously respected.

There was considerable disappointment expressed in the South because Charleston was so suddenly abandoned on the approach of General Sherman's army; but the Confederates in the city did not know what Sherman's intentions might be, and they very naturally thought it best to evacuate the place before the Union General should envelope them and compel their surrender. But General Sherman was anxious to join General Grant before Richmond as soon as possible and get out of the lowlands of the coast, where his soldiers were worn out with building corduroy roads through swamps, bridging the countless streams, and living in a malarious country.

The capture of Fort Fisher and other defences of Wilmington had doubtless a considerable effect on the fall of Charleston; for, now that the stronghold on Cape Fear River was taken, a small garrison could hold it, and the Union forces employed in the reduction of those works could, if necessary, march on Charleston.

Whatever claims may have been advanced that the final result was brought about by the movements of the Navy in co-operation with the Army under General Foster, we can only say that the attempt to

Stono River was bravely undertaken, although it would have probably experienced a severe repulse but for the position held by Sherman at Columbia.

The fall of Charleston was in every aspect a great success for the Union cause. Although it had long been nearly impossible for a blockade-runner to land her cargo inside the harbor, yet, even with the close watch constantly maintained, cotton could be sent out. When the city was taken this traffic was at an end, and the credit of the Confederate States in England sank to a low ebb. Henceforth the Confederate armies would be obliged to depend on the scanty supplies obtained at home, and their surrender was now considered only a matter of time.

Owing to the fall of Charleston, the Navy Department was enabled to greatly deplete the naval forces hitherto employed in that vicinity, and, although the saving thus effected was but a trifle compared with the large sums expended upon the army, yet it was a change in the right direction, as the country was beginning to feel uneasy at the vast sums daily paid from the treasury to maintain the military and naval forces.

The Confederacy was now isolated from the outer world by way of the sea, and there could no longer be a pretext for the interference of foreign powers, the trouble being at this time purely domestic. Now, also, was ended that fiction of belligerent rights which excluded United States vessels-of-war from the customary hospitalities of foreign ports. What was left of our mercantile marine could pursue its avocations without fear of molestation by Confederate cruisers, which so lately roamed the ocean at their will.

Much credit is due to the commanding naval officers at Bull's Bay for the management of their vessels, and the energy with which they responded to the Confederate batteries which were striving to prevent a landing of the troops. So effective was the fire of the gun-boats that the Confederates were soon driven away and the vessels suffered little damage.

The officers particularly commended by Rear-Admiral Dahlgren were: Captain D. B. Ridgely, Commander F. Stanly, Commander G. B. Balch, Lieutenant-Commander T. S. Fillebrown, Lieutenant-Commander A. A. Semmes, Lieutenant-Commander A. W. Johnson, Lieutenant-Commander S. B. Luce, Acting-Master W. H. Mallard and Acting-Master G. W. Parker.

At the fall of Charleston the following Confederate vessels fell into the hands of the Navy: Iron-clad ram "Columbia," steamer-transport "Lady Davis," a cigar-shaped steamer 160 feet long, two side-wheeled steamers and three torpedo-boats.

As everything relating to the defence of Charleston has a historic interest, we insert the report of Rear-Admiral Dahlgren in regard to the instructions issued by the Confederates to prevent the Union vessels from penetrating the inner harbor. At the present day these arrangements seem rather primitive, but they exhibit skill and ingenuity on the part of the Confederate engineers, and they completely answered their intended purpose, by preventing the Union vessels from proceeding to Charleston:

\* \* \* \* \*

"The only passage from the outer roads into the harbor of Charleston is less than a mile at its narrowest part, between Sullivan's Island and the shoals on which Fort Sumter is built. Across this lay the first series of obstructions. When first resorted to, these were of different kinds—of rope, or of heavy masses of timber, floating bars of railroad iron.

"It is difficult to ascertain with exactness at what time each of these were adopted. Common report was never precise, and in that respect was probably a fair exponent of the common information at the time.

"The statements of the persons who knew anything of the matter, and were acceptable, differ as to which of these were used first.

"According to Mr. Smith, who had been actually employed on this work, the rope obstructions were first put down in 1861, formed into one continuous line, and floated across the channel from Sumter to Battery Bee. But this was so frequently displaced by the current that it was cut into lengths, which, with the addition of others, were anchored at one end in two lines, and rode to the tide.

"It is probable that the casks seen on the 7th April were the turpentine barrels of this obstruction: and, moreover, a plan of the entrance, signed by Major Echols, engineer, shows the double line of rope obstructions.

"In the summer of 1863 the boom of railroad-iron was placed, consisting of several timbers banded into a mass and floating the railroad bars. And this account is so far confirmed that in December, 1863, a quantity of boom answering to this description was washed away by the winter gales and came down the channel. Some of it was hauled up on the beach of Morris Island. I saw this work in progress one day, and was told that as many as thirty-three of the bars had been secured.

"I have been at a loss to understand the exact manner in which these bars were connected to the timbers. The accounts given do not accord, and some separation had generally been effected before any of them were seen by us.

"They may have been encased in the timbers, or suspended from them, as described by Mr. Smith; but in any case they would have been difficult to remove under the heavy fire of the rebel works.

"It is probable, from the several statements, that whenever the use of the boom obstructions across the entrance between Sumter and Moultrie may have begun, the parts were not renewed as they disappeared, but were replaced from time to time by those of rope, until at last the winter freshets of 1863 and 1864 carried away the whole structure.

"The obstructions which were actually found in position between Sumter and Moultrie, after we entered, were of rope only.

"The entire line is reported to have been made up of a number of separate parts, each of which consisted of a stout shroud-laid rope, floated at intervals by buoys of pine logs, and anchored by a heavy grapnel. From this floating rope hung down at intervals six parts of a lighter rope. The exact

dimensions are variously given, as well as the numbers of floats and hangers.

"The pine buoys, which were used as samples, were thirty-nine (39) inches long and fifteen (15) inches in diameter, with a stout iron staple near each end, through which passed the part of rope that was to be floated.

"It was said to have been the design to place these parts or sections in two lines, about sixty (60) or one hundred (100) feet apart, with similar intervals. But it may be easily conceived that the intention could not be carried out with exactness in the first place, and that subsequently, in replacing sections that were lost or not visible, the plan would be still further confused, partly by the impossibility of knowing with certainty at night where the sections were missing, and partly because in doing so it seemed better to err in having too many than too few.

"Hence the directions of the lines were not maintained with exactness, and the allotted number of sections was in excess of that contemplated. Nor was the exact position and number of those which were found in place noted as well as they should have been, for the reasons already stated; and when my attention was drawn to the subject, it was too late to remedy the omission. Drawings were, therefore, necessarily made from the several parts, but it is believed they afford a fair representation of the entire whole.

"As different tugs and boats were employed at different times, there was some discrepancy in the returns sent me, which, as already stated, were not made as they should have been.

"Mr. Gray gives the whole number as 226, which, at intervals of one hundred (100) feet, would be too many to be included in the distance of one mile; but it may be explained by the continued renewal of what was supposed to be lost, and which were not so really, though not distinctly visible.

"The care and perseverance which the rebels gave to the maintenance of these rope obstructions is well shown by the report of Acting-Master Gifford (annexed); they watched them closely, and, whenever a section disappeared from sight, it was replaced.

"Our boats were always observed, and driven off if possible, and it was necessary, besides, to work with great caution, as they were near powerful batteries, and liable at any moment to a destructive fire of grape.

"The purpose of the boom obstructions was evidently to bar the passage of a vessel entirely, while that of the rope obstructions was to entangle the screw and prevent further progress, or even detain the vessel under fire of the batteries, for the grapnel which anchored the rope would also serve as a drag on the steamer, and it would be almost impossible to cut it loose when under fire.

"That the rope obstructions were in use before I took command, and afterwards, is satisfactorily ascertained from other evidence than that of Mr. Gray.

"A plan of the harbor of Charleston, signed by Major Echols,\* and dated April, 1863, exhibits two lines of obstructions, designated as rope obstructions, the general direction being from Sumter to a point midway between Fort Moultrie and Battery Bee. The delineation shows a number of dotted lines, resembling the section of rope just described: the dots indicate only four buoys. They correspond closely with the description given by Commodore Rogers of what he saw from the 'Weehawken' during the attack of 7th of April.

"In his official report he says: 'We approached very close to the obstructions extending from Fort Sumter to Fort Moultrie—as near, indeed, as I could get without running upon them. They were marked by rows of casks very near together. To the eye they appeared almost to touch one another, and

"To me they appeared thus:

"When we landed on Sullivan's Island (February, 1865), several telegrams came into my possession. One of them, dated Sumter, April 8, 1863, runs thus:

"Blue and red Coston lights indicate the enemy's boats trying to cut the net; the batteries will open with grape."

"Colonel Freemantle, of the Coldstream Guards, in the published account of his visit to Charleston, June, 1863, says:

"There are excellent arrangements of—and other contrivances to foul the screw of a vessel between Sumter and Moultrie."

"As soon as the picket and scout boats of the fleet were able to approach the entrance, the presence of the obstructions was verified; but in the obscurity of the night it was difficult to ascertain precisely what they were, particularly as the rebels were then in strong force at the locality, and very little time was permitted for examination.

"General Gillmore's impressions at the time may be gathered from the following portion of his telegram to me August 4:

"My scout has just reported that the line of floating buoys reaching from Sumter to Moultrie has disappeared since yesterday. These buoys are supposed to have torpedoes attached to them, etc."

"This disappearance was probably a mistake, owing to the difficulty of discerning with certainty objects so small at such a distance, for no report was made by the Navy pickets, and soon after Ensign Porter, who was specially charged with the duty, reported that 'two steamers and three schooners were at anchor in the centre of the channel, apparently at work on the obstructions, or else sinking others,' etc. Ensign Porter, who was very active and daring, assured me that chains formed some part of the obstructions, as he had been close enough to the buoys to feel them.

"The buoys themselves were visible to the eye from the picket Monitors which were stationed in the advance. Their reports, being verbal at first, cannot now be quoted; but subsequently I directed them to be made in writing.

"Captain J. L. Davis, commanding the 'Monitor,' reports 25th September:

"At low water to-day, a rip was discovered extending from Fort Sumter in a line to the western end of the buoys, stretching from near Moultrie in a westerly direction across the channel. At first I thought it was the meeting of the tides, but as it did not alter position I came to the conclusion some hidden obstructions might be there."

"September 26th, the 'Catskill' reports a steamer plying between Sumter and Moultrie on the previous night, supported by two iron-clads. On the 27th, the 'Nahant' reports that the obstruction buoys were counted by several officers, and the average number was about eighty (80). 'The buoys do not seem to be in a continuous line, but as if they were in groups of five or six. There seems to be another short line of larger buoys beyond the first, which I judge to be a separate obstruction across Hog Island Channel.' Which description is remarkably in accord with all the facts since ascertained.

"In October (21st), 1863, a part of the rope obstructions floated out of the harbor, and was discovered

inside the bar. The floating away of these sections—owing to various causes, sometimes to their removal by our scouts—explains the variations in the numbers of the buoys counted at different times from the Monitors; and their renewal by the rebels whenever they did disappear is fully established by the nightly experience of Acting-Master Gifford, who rarely failed to be at his post as a scout. His report, which is annexed, is of interest, as it exhibits the results of much arduous service and close observation.

“The accounts of deserters and refugees confirmed in a general way the existence and locality of the obstructions; but their opportunities for observation were seldom as good as our own, for none but those engaged in the work were allowed opportunities of knowing more than could be seen from a short distance, and the rebels were singularly fortunate in the precautions to keep their own counsel as to the nature of the submerged defences.

“The general existence of obstructions at an early date was set forth in a circular order of General Ripley (December 26, 1862), regarding the defence to be made against our attack.

“In speaking of these impediments it says: ‘The obstructions will also be designated, and under no circumstances will the enemy be permitted to reconnoitre them.’

“Besides the obstructions at the entrance, the middle channel was closed by a double row of piles extending some distance across the harbor, which were distinctly visible when the first operations were initiated against Charleston.

“In the Hog Island Channel was also a set of boom obstructions, found in April last by the ‘Clover’ while engaged in clearing away the frame torpedoes placed there.

“The massive and complicated character of these gave much trouble in their removal. They consisted of a stout chain (3-inch iron) that had been floated by blocks of timber secured to it at short intervals.

“These blocks were made of four-squared logs, fifteen (15) feet long and one (1) foot square, kept together by an iron band at each end.

“Railroad iron linked together, and suspended from squared timber, was associated with the chain-boom. This boom had been stretched across a neck in the Hog Island Channel when there was least water, and the passage so narrow that the shoals on each hand were bare at low water, and hardly five hundred (500) feet apart, besides being directly under fire from Battery Bee at 1,100 yards, and of Mount Pleasant battery at 1,000 yards. At this time they had been so much worm-eaten that they sank, but the depth at low tide would still have rendered them troublesome to all but light-draught vessels.\*

In this way the main entrance was obstructed between Sumter and Moultrie, and two of the channels leading from it were barred by piles and booms, leaving open only the main channel to the south, which was left to the control of the heavy batteries that lined it.

“These obstructions were defended by torpedoes, and by a series of batteries, iron-clads and torpedo-boats.

“After obtaining possession of the harbor, the examination which was made disclosed the use of three kinds of torpedoes. The floating torpedo was made of a small barrel, capable of containing seventy (70) pounds of powder, generally mounting two fuzes on the bilge, anchored so as to come in contact with the bottom of vessels. By means of a small weight these fuzes were kept uppermost.

“These torpedoes were well known in the squad-

ron, having been picked up and encountered at various times in the St. John's and Stono, exploding occasionally with full effect. They were liable to be lost by getting adrift; or, if not tight, might be spoiled by water; but the rebels kept a vigilant eye on them, examining them at times and replacing them. There was a regular establishment here for their fabrication, under the charge of Mr. Gray, who held the position of captain.

“A part of the correspondence of this branch is now in my hands, from which it appears that there were thirty-five (35) to forty (40) hands employed, and that Mr. Gray distributed the barrel torpedoes along the coast from Georgetown to St. John's; he also transmitted a variety of material even as far as Mobile, and his connection was direct with several commanding officers.

“Woods and Thompson were employed in the department to ‘build the torpedoes,’ as they express it.

“It appears that no great number of these was kept placed permanently in Charleston harbor, because they were dangerous to vessels moving about on the ordinary communications by water, and accidents had occurred. They could readily be put down in a very short time on the appearance of a move on our part.

“In the middle of January, for instance, when this was suspected, an order was given to put down several lines of them. Woods and Thompson placed sixteen (16) of them in the vicinity of the rope obstructions, between Sumter and Moultrie, and seven (7) at the entrance of the Hog Island Channel. Others were directed to be laid down from Fort Johnson to Castle Pinckney, which seems to have been deferred until the attack began.

“One of those near the obstructions was encountered by the Monitor ‘Patapsco,’ on the night of the 15th of January, when, in the expectation of co-operating with General Sherman, I had ordered a vigorous effort to be made to remove the rope obstructions, and the picket Monitors covered the boats so engaged.

“It seems that the work of placing these torpedoes had been completed that very night, and the ‘Patapsco’ went down, with two-thirds of her crew, almost immediately on being struck, being at the time about six hundred (600) yards from Sumter.

“Immediately after entering the harbor of Charleston, vigorous efforts were made to remove these floating torpedoes; but, although some of the very men who had put them down were employed, with the aid of steam tugs and boats, and all the ordinary appliances, to recover them, dragging and sweeping the water for many days, only four (4) could be found of the sixteen (16).

“The ‘Bibb’ came in contact with and exploded one on the 17th of March, and the ‘Massachusetts’ grazed one on the 19th, so that the balance remain undiscovered.

“A set of the same kind, placed across the mouth of the Wando, were recovered and destroyed. Acting-Master Gifford found as many as sixty-one (61) at different points of the shore, about the harbor, ready for service, or nearly so, and at hand to be put down if needed.

“At Causten's Bluff, in St. Augustine Creek (one of the approaches to Savannah), were found a number lying on a wharf all ready for immediate use. They were conveniently handled, and could be laid down rapidly and easily. Woods and Thompson say that with one boat they placed them at the rate of four in an hour.

“This kind of torpedo was the most convenient of all, and the most dangerous, though, being liable to shift with the current, they were apt to trouble those who used them. One rebel steamboat (‘Marion’) had been blown up in the Ashley River some time ago by one of them; and, in June, 1864,

\* And Captain Gray states that they were afloat up to the last that he saw of them, which was in August, 1864.

another rebel steamer, plying from Sumter up the harbor, was struck by one and beached on the shoal near Johnson, to prevent sinking in deep water, supposed at the time to have been run ashore accidentally.

"It is probable that the 'Tecumseh' was sunk at Mobile, in Admiral Farragut's attack, by one of this kind; also the 'Milwaukee,' the 'Osage,' the 'Rudolph,' and a tin-clad (48), in the recent captures of the forts.

"My own flag-ship, the 'Harvest Moon,' was destroyed by the same device, in Georgetown, and three army transports in the St. John's—'Maple Leaf,' 'Harriet Weed,' and another.

"Mr. Gray states they were placed in such numbers about the main entrance and channel, about the time of our operations against Morris Island, that it would have been impossible for any vessel to escape that entered.

"There were also permanent torpedoes. One species of these consisted of a frame of three or four heavy timbers, parallel to each other and a few feet apart, tied together by cross-timbers; at the head of each timber was a cast-iron torpedo with a fuze.\*

The frame was placed obliquely, and held by weights, so as to present its torpedoes to the bottom of a vessel approaching. Series of them were placed in particular parts of the channel.

"Four frames, mounting fifteen (15) torpedoes, were found at the entrance of Ashley River; they had been there some time, and yet were in such good condition that one exploded when towed away carelessly, and though a dozen feet from the tug the explosion hurt and knocked overboard several men.

"Frames were also found in the narrow pass of the Hog Island Channel, just as it branches from the main channel near Battery Bee, and close to the boom obstructions already described; and another set in the neck of the middle channel near Castle Pinckney.

"There is said to be another set in the shoal connecting the middle and the north channel, not removed at this date.

"One of these frames was found lying in a dock of the Cooper River, with the torpedoes mounted ready for use.

"In many cases the frames had been much worm-eaten, so that in attempting to remove them the timber broke and fell to the bottom.

"On the wharf near it and the adjoining buildings, which had been used as a factory for the torpedoes until our shells rendered it dangerous, were thirty (30) cast-iron torpedoes for framing.

"This kind of torpedo was used in the Ogeechee and Savannah Rivers, where they were distinctly visible at very low water; and probably it was one of this kind that struck the 'Montauk' in February, 1863, when attacking Fort McAllister.

"As torpedo frames could not be fixed in very deep water, another kind was used for the purpose. This was a large sheet-iron boiler, capable of containing 1,000 to 3,000 pounds of powder, to be exploded by a galvanic battery connected by an insulated wire.

"Three of these were located in the main channel between Battery Bee and Fort Johnson; the wire rope of each was led to Sullivan's Island, and all were found in good condition.

"Persevering efforts were made by the squadron divers to follow the wires from the shore to the torpedoes, but they had become so overlaid by deposits of sand as to resist all attempts to release them, and were broken several times in the proceeding. A large quantity of the wire rope was taken up. Some of the range-poles having been removed, it

was found impossible to determine with precision the exact locality where the divers could reach them without following the wires.

"A torpedo boiler ready to receive powder was found on the wharf, where the cast-iron torpedoes for the frames already mentioned were discovered, together with a large quantity of the wire rope.

"This was made in the best manner, probably in England. The copper wire was insulated by a tube of India-rubber, protected by a wrapper of hemp, and over that closely laid wire.

"In this connection I may also mention the torpedoes designed for the rams and torpedo-boats, samples of which were recovered by divers from the bed of the river, where they had been thrown.

"There were two sizes, both being elongated copper cylinders with hemispherical ends, and diameters of ten (10) inches, but one was thirty-two inches long, the others twenty-four inches.

"At the outer end were screw-sockets for eight fuzes, so as to present points of explosion in every direction. The torpedo for the bow of a ram was of copper, barrel-shaped, and tapering to a point at the outer end. It had sockets for seven fuzes on the upper bilge and end. Its contents of powder was about one hundred and thirty-four pounds.

"The three torpedo-boats in service had been sunk in the Cooper River, off the city wharves. Two have been raised, and one put in good order so as to steam about the harbor; in length about sixty-four (64) feet, and five and one-half (5½) feet in diameter, capable of steaming about five (5) knots. There were six others that were under repairs, or being completed, of which two are now ready for service. Just above those that had been sunk were the three iron-clads, 'Chicora,' 'Palmetto,' and 'Charleston,' all of which had been fired and blown up on the day we entered. The 'Chicora' alone is visible in any part, and that only a few inches of the casemate at low water.

"Up a small creek was found a fourth iron-clad, the 'Columbia,' of the same size as the 'Charleston,' but plated with six (6) inches of iron; a new well-built vessel, just ready for service.

"It seems that about a month before the entrance of the Union forces (January 12), the vessel had been docked in the creek above the city, and in getting her out of the dock she grounded. The rebels seem to have begun to extricate the vessel, but had not sufficient time before they abandoned Charleston. Why she was not destroyed is difficult to conceive, as they sank the three that were in service, and burned two new iron-clads that were not completed. This vessel was fully ready for service, even guns mounted, which, it was said, were taken out after grounding, and a portion of the plating had been removed as a preparation for lightening and floating the vessel, under the belief that they could be saved. I gave the necessary directions, and on the 26th had the satisfaction of seeing her floated, which was effected by the exertions of several officers—Lieutenant-Commander Matthews, Fleet Engineer Danby, Chief Engineer Kierstead—by Master Carpenter Davis, by Lieutenant Churchill, and the divers. This vessel has an extreme length of two hundred and sixteen (216) feet; beam, fifty-one and one-third (51⅓) feet; is plated with six (6) inches of iron; carries six (6) guns of the heaviest calibre, has two engines; high pressure, ample accommodations on berth-deck for cabin, ward-room and men, with good quarters in the casemates. Her leakage is very small, indicating no great injury from the grounding. Her steam-power was in good order, only requiring the stack-pipe and smoke-box to be replaced, and some of the interior pipe that had been cut. The 'Columbia' left on the 23d of May, in tow of the 'Vanderbilt,' and was commanded by Lieutenant

\*A model of this kind was made for me by William Flynn, a refugee who had worked on them in Charleston.

U.S. COAST SURVEY  
**DEFENCES OF CHARLESTON, S.C.**  
FORTIFICATIONS  
ON SUMMERS ISLAND

From reconnaissance made under  
direction of Major General Sigsbee  
1865.

No. 3.

"I propose to place four of my own new 10-inch guns in the casemate; one at each corner. They weigh about 16,000 pounds, and will throw a solid shot, with forty pounds of powder, which has pierced four and a half inches of good iron at two hundred yards. If the two other guns are needed they may be of 9-inch.

"Annexed are eighteen sketches illustrating the various devices which are referred to in the foregoing, as well as the defences of the harbor:

1. General plan of the harbor, showing the positions of the batteries, obstructions of booms, ropes and piles, torpedoes, barrel, frame and boiler, sites where lie the wrecks of the Monitors 'Weehawken' and 'Patapsco,' steamship 'Housatonic,' rebel steamer 'Etiwan,' etc.

"This has been prepared with great care by Captain Boutelle, from drawings on the spot, of the batteries, determination of the locality of the obstructions, etc., from observations, or from the statements of those who removed them. It is a valuable and highly executed specimen of coast survey work, which is highly creditable.

"2. Fortifications on James Island.

"3. Fortifications on Sullivan's Island.

"4. Defences of Charleston Harbor.

"These three maps were also executed by Captain Boutelle, of the coast survey.

"5, 6 and 7. Rope obstructions between Sumter and Moultrie, their anchors and floats.

"8. Portion of boom obstructions in Hog Island Channel.

"9. Barrel torpedo.

"10. Torpedo frame found in Ashley River, Hog Island and middle channel.

"11. Its torpedo.

"12. Torpedo frame and its torpedo, used in the Ogeechee near Fort McAllister, and in the Savannah River near the city.

"13. Torpedo from bow of rebel ram."

"14 and 15. Torpedoes of the 'Davids' or torpedo-boats.

"16. Specimen of the 'David' or torpedo-boat, found in Charleston.

"17 and 18. Sketch of rebel ram 'Columbia,' captured with Charleston.

"12, 16, 17 and 18 are by Second-Assistant-Engineer Smith. All the rest were made under the supervision of Captain Boutelle, of the coast survey, and with great care, from actual samples.

"The foregoing conveys the best information that I could collect by the means at my disposal in regard to the submerged impediments of the harbor; and their efficiency, when kept in good order, is not to be judged from the condition in which we found those which were composed more or less of heavy timber. The daily care and renovation that they received from the rebels had ceased for two and even three months before we handled them. The boom obstructions and frames in Hog Island Channel were reached only two to two and a half months after the city was abandoned, and the frames in the middle channel had been left unnoticed for three months. It may be conceived that daily care was indispensable to their preservation, and this they did not receive after the rebels evacuated Charleston.

"Annexed will be found the statements of various persons in regard to what they know of the various kinds of obstructions, etc., used to defend the harbor of Charleston, and also extracts from a journal found at the headquarters of the torpedo department in Charleston.

"There is no greater diversity in these accounts than might be expected from the nature of the devices and the circumstances under which the different parties obtained information of them. Quite sufficient is certain to show that these several contrivances of obstruction and torpedoes would have been as troublesome as it was expected they would

be, in connection with the heavy batteries that lined the harbor, and the rebel iron-clads

"I have the honor to be, very respectfully, your obedient servant,

"J. A. DAHLGREN,

*Rear-Admiral, Commanding South Atlantic Blockading Squadron.*

"HON. GIDEON WELLES,  
*Secretary of the Navy.*"

The best illustration that can be given of the strength of Charleston is this notice of the obstructions added to an account of its fortifications. The strong positions in which the latter were placed, and the skill displayed in their construction, show what obstacles had to be overcome by the Federal Army and Navy. A new era in military engineering had commenced on the outbreak of the civil war; and although the Confederates made use of the forts within their territory constructed of masonry, these were either strengthened by sand-bags or supported by earth-works of the most formidable description. Most of these fortifications were ultimately mounted with foreign guns of the largest size and most approved pattern; and, while we render due credit to those who overcame such gigantic obstacles, we should not fail to acknowledge the ability and energy of those who created them.

The old-fashioned system of forts was necessarily ignored by the Confederates from the first. It was impossible to build fortifications of masonry in time to meet the crisis which followed the attack on Sumter, and in the sand of the Southern coast nature had supplied an excellent material for rapidly building, at smaller expense, the military works required. We were taught by the civil war that, instead of expending millions of dollars on fortifications of masonry, we could secure the same or better results at comparatively little expense of time or labor, and have our money to spend on guns and torpedoes. The best way to understand these matters is to examine the plans of fortifications built along the Southern coast. Nothing was ever before constructed of sand-bags so formidable as Fort Fisher and the other defences of Cape Fear River, and the works at Charleston and Savannah. They were masterpieces of military engineering.

In order to show the difficulties to be encountered at Charleston, we append the general plan of the Confederate works.

When the Union forces took possession of Charleston, they were rather surprised to find but one hundred and forty-nine heavy guns in all the forts. This, however, was quite sufficient to secure the place against a naval attack, while the army-contingent was never sufficient by many thousand men to make much impression on

the land defences. At the same time the troops were useful in co-operating with the Navy to annoy the garrison. The duty of the army was harassing beyond description, and the privations of the soldiers were many. The enemy generally outnumbered the attacking force two to one, so that if Charleston could be called "in a state of siege" it was a most incomplete investment.

As for naval success in an attack on Charleston, it was out of the question. The force supplied the naval commanders-in-chief was so small, and the obstructions, torpedoes and forts so numerous, that it would have been little less than a miracle for a hostile fleet to reach the city. Had there been any doubt on this subject, it would be removed by the evidence given after the fall of Charleston by persons who had charge of the obstructions. That every effort was made to overcome the difficulties of the situation by Rear-Admiral Dahlgren and his gallant officers and men is certain. They were always ready for any adventure, no matter how hazardous. Many acts of gallantry were performed by the Army and Navy; but, take it altogether, the siege of Charleston was in the highest degree harassing and unsatisfactory to both the Army and Navy of the Union.

General Hardee evacuated Charleston to enable him to get in the advance of General Sherman and reach Raleigh and join his forces to those of General Beauregard, and with the garrison at Augusta, who were aiming to reach the same point. This left the coast of South Carolina comparatively free of Confederate troops; yet there were still points that required attention. Fortifications along the rivers had to be destroyed. In the panic at the movements of Sherman's army most of these places had been hurriedly evacuated without injuring them, and the enemy might again occupy them.

On the 25th of February, 1865, Georgetown, S. C., was occupied by the naval forces, in view of the movements of General Sherman, who might desire to be placed in communication with it before entering North Carolina. There were at this point well-constructed works, mounting sixteen guns, two of them 10-inch columbiads, but no resistance was made, the garrison having departed.

Acting-Ensign A. K. Noyes, commanding U. S. S. "Catalpa," was sent to the city of Georgetown to hoist the Union flag, the municipal authorities having offered submission, and some of the seamen climbed the dome of the town hall and ran up the Stars and Stripes. As soon as the flag was raised, a party of Confederate horseman

the alarm was given the seamen from the "Mingoe" and "Catalpa" were landed and drove off the enemy.

Gun-boats were sent as far as they could go—about forty miles—up the Cooper River, to co-operate with an army force under General Schimmelfennig, to break up any parties of Confederate troops that might still linger in the vicinity; but it was found that the enemy's forces had all crossed the Santee, burning the bridges behind them. These movements of the gun-boats involved great care to avoid the sunken torpedoes known to exist in all the rivers.

Even the "Harvest Moon," the flag ship of Admiral Dahlgren, did not escape unscathed. While proceeding down to a point two or three miles below Georgetown, this vessel, with the Admiral on board, was blown up by coming in contact with a torpedo. The shock was tremendous, the vessel shivered in every timber, bulkheads were driven in, and it seemed as if the boilers had burst and the magazine exploded. Before any one could fairly realize the situation, the "Harvest Moon" had sunk to the bottom. Had the torpedo struck the vessel a little further forward or aft there would have been great loss of life, but, as it was, only one life was lost. These infernal machines were met with when least expected, and with the greatest care in dragging for them were often overlooked.

By the end of March, 1865, the coast of South Carolina and Georgia may be said to have been free from Confederate raiders, and the inhabitants were rather glad to see the boat expedition sent out by Admiral Dahlgren. These were a check upon the parties of deserters from General Johnston's army who were trying to reach their homes, and were rendered indifferent, by poverty and suffering, on whom they subsisted. The condition of affairs all along the coast was deplorable, owing to the disasters of the civil war, and the strong hand of power was necessary to put an end to it.

By the last of May there was nothing left for Rear-Admiral Dahlgren to accomplish, and he was quite ready to be relieved from a command that had brought upon him so much labor and care, without his having accomplished what the Navy Department desired, the capture of Charleston by the fleet, a thing which under the circumstances was almost, if not quite, impossible. On the 23d of June, 1865, the Admiral was relieved from his command, and received the following complimentary letter from the Secretary of the Navy :

NAVY DEPARTMENT, June 23, 1865.

SIR—Your dispatch of the 21st instant, reporting your arrival in Washington in pursuance of the

On the receipt hereof, you will haul down your flag and regard yourself as detached from the command of the South Atlantic Squadron, which you have conducted with ability and energy for two years.

The Department takes the occasion to express to you its approbation of your services, and of the services of those who have been associated with you in efficient blockade of the coast and harbors at a cen-

tral and important position of the Union, and in the work of repossessing the forts and of restoring the authority of the Government in the insurgent States.

Respectfully,  
GIDRON WELLES,  
*Secretary of the Navy.*

REAR-ADMIRAL JOHN A. DAHLGREN,  
*Washington, D. C.*

## SOUTH ATLANTIC SQUADRON, JANUARY 1, 1865.

REAR-ADMIRAL J. A. DAHLGREN, COMMANDING.

STAFF—LIEUTENANT-COMMANDER JOSEPH M. BRADFORD, FLEET-CAPTAIN; LIEUTENANT-COMMANDER E. O. MATHEWS, FLAG-LIEUTENANT-COMMANDER; LIEUTENANT ALFRED T. MAHAN, ORDNANCE-OFFICER; LIEUTENANT JAMES O'KANE, FLAG-LIEUTENANT; ENSIGN ERNEST J. DICHMAN, AIDE; FLEET-ENGINEER, ROBERT DANBY; FLEET-PAYMASTER, JAMES H. WATMOUGH; FLEET-SURGEON, WILLIAM JOHNSON; ACTING-VOLUNTEER-LIEUTENANT AND PILOT, WM. HAFFARDS; ACTING-ENSIGN, WALTER COOPER; ACTING-ENSIGN AND SIGNAL-OFFICER, GEO. H. REXFORD.

### "CANANDAIOUA"—SECOND-RATE.

Captain, Gustavus H. Scott; Commander, N. B. Harrison; Lieutenants, S. B. Gillett and Walter Abbott; Acting-Masters, Calvin C. Childs, J. L. Gifford and R. G. Lelar; Acting-Ensigns, T. E. Harvey and Andrew Willard; Acting-Master's Mates, S. S. Willard and James Wilbar; Surgeon, C. H. Burbank; Assistant Paymaster, W. H. Anderson; Engineers: Chief, G. B. N. Tower; Second Assistant, J. J. Barry; Acting-Second Assistants, Wm. McGrath and J. W. Mellor; Acting-Third-Assistants, W. M. Smith and H. B. Goodwin; Boatswain, Charles Fisher; Gunner, E. J. Beecham.

### STORE-SHIP "NEW HAMPSHIRE."

Commander, William Reynolds; Acting-Masters, H. W. Hand, R. B. Hines, J. C. Cox and W. A. Morgan; Acting-Ensigns, C. S. Lawrence, Woodward Carter and Frank Jordan; Chaplain, John Blake; Surgeon, H. C. Nelson; Acting-Assistant Paymaster, Levi S. Bingham; First-Lieutenant of Marines, G. G. Stoddard; Acting-Master's Mates, A. B. Flynn, H. A. Rogers and Harry Lucus; Third-Assistant Engineer, William Charlton; Acting-Boatswain, Edward Hughes; Acting-Gunner, Geo. W. Allen.

### "FLAG"—THIRD-RATE.

Commander, James C. Williamson; Acting-Volunteer-Lieutenant, Wm. H. Latham; Acting-Master, Wm. Lallman; Acting-Ensigns, C. V. Kelley, S. A. Gove, E. W. Watson and John Denson; Acting-Master's Mate, Wm. Merrill; Acting-Assistant Paymaster, O. B. Seagrave; Acting-Assistant Surgeon, W. J. Burge; Engineers: Second-Assistant, I. R. McNary; Acting-Second-Assistant, Campbell McEwen; Acting-Third-Assistants, Lory Bennett, Theodore Scudder and H. A. Chase; Acting-Gunner, J. H. Pennington.

### "ST. LOUIS"—THIRD-RATE.

Commander, Geo. H. Preble; Lieutenant, Wm. F. Stewart; Acting-Master, S. W. Hadley; Acting-Ensigns, Hazard Marsh, Henry Pease, Jr., S. S. Minor and Fred. Wood; Acting-Master's Mate, F. L. Bryan; Passed-Assistant Surgeon, J. H. Macomber; Paymaster, J. S. Post; Acting-Boatswain, George Brown; Gunner, G. P. Cushman; Sailmaker, I. E. Crowell.

### "JAMES ADGER"—THIRD-RATE.

Commander, T. H. Patterson; Lieutenant, Gilbert C. Wiltse; Acting-Master, A. F. Holmes; Acting-Ensigns, G. E. Holloway, O. C. Snow and Chas. Danenhower; Acting-Master's Mates, L. W. Smith,

Robert Steel and J. W. Thode; Acting-Assistant Surgeon, W. W. Myers; Acting-Assistant Paymaster, Wilbur Ives; Engineers: Acting-Chief, E. A. Whipple; Acting-Second-Assistants, G. W. Scobey and J. B. Place; Acting-Third-Assistants, P. J. Holmes, Timothy Woodruff, Richard Morgan and John Roach; Acting-Gunner, Joseph Venable.

### "PAWNEE"—SECOND-RATE.

Commander, George B. Balch; Lieutenant, Wm. Whitehead; Acting-Masters, J. C. Champion, Thos. Moore and E. A. Magone; Ensign, Henry Glass; Acting-Master's Mates, C. H. Poor, Jr., T. L. Fisher and Jacob Kemp; Assistant Surgeon, S. F. Shaw; Assistant Paymaster, C. S. Perley; Engineers: Chief, B. E. Chassaing; Second-Assistants, W. J. Clark, Jr., Arthur Price and J. G. Brosnahan; Third-Assistant, Robert Crawford; Boatswain, James Brown; Gunner, James Hays.

### "CIMARRON"—THIRD-RATE.

Commander, Egbert Thompson; Acting-Master, Wm. E. Thomas; Acting-Ensigns, Geo. F. Howes and Charles Penfield; Acting-Master's Mate, N. Goldsmith; Acting-Assistant Surgeon, T. S. Keith; Acting-Assistant Paymaster, J. T. Lee; Engineers: Second-Assistants, J. B. Carpenter, C. E. Meyer, Jr., W. H. Kelly and W. L. Bailey.

### "MINGOE"—THIRD-RATE.

Commander, J. B. Creighton; Acting-Masters, J. W. Cangdon and J. C. Wentworth; Acting-Ensigns, Sam'l Merchant, S. R. Carlton, R. F. Dodge and J. A. Phipps; Acting-Assistant Paymaster, C. A. Cabel; Acting-Assistant Surgeon, G. H. Napheys; Engineers: First-Assistant, E. A. C. DuPlain; Acting-Second-Assistant, James Mitchell, W. F. Worrell and Levi Smetzen; Acting-Third-Assistants, Wm. Emmarick and G. G. Blake; Acting-Gunner, Andrew Harmand.

### "CATSKILL"—FOURTH-RATE.

Lieutenant-Commander, Edward Barrett; Lieutenant, Chas. W. Tracy; Acting-Masters, J. C. Hamlin and Wm. Reed; Acting-Ensigns, J. D. Barclay, E. B. Cox and Charles Clauson; Assistant Surgeon, John W. Coles; Assistant-Paymaster, H. P. Tuttle; Engineers: Acting-First-Assistant, J. F. Butler; Acting-Second-Assistants, J. G. Dennett and Jonas T. Booth; Third-Assistant, Wm. M. Barr; Acting-Third-Assistant, H. M. Test.

### "PATAPSCO"—THIRD-RATE.

Lieutenant-Commander, S. P. Quackenbush; Lieutenant, Wm. T. Sampson; Acting-Master, John

White; Acting-Ensigns, J. S. Johnson, A. B. Bashford and J. C. Brown; Assistant-Surgeon, S. H. Peltz; Acting-Assistant Paymaster, W. S. Creevey; Engineers: First-Assistant, Reynolds Driver; Acting-Second-Assistant, G. L. Palmer; Third-Assistants, D. C. Davis, G. F. Sweet and J. J. Ryan; Pilot, G. Pinckney.

"PONTIAC"—THIRD-RATE.

Lieutenant-Commander, S. B. Luce; Acting-Master, Geo. F. Winslow; Acting-Ensigns, Thomas Stevens, E. M. Clark, T. E. Lawton and James E. Carr; Acting-Master's Mates, W. H. Fitzgerald and E. L. Kemp; Acting-Assistant Paymaster, H. S. Skelding; Acting-Assistant Surgeon, J. W. Sherfy; Engineers: Second-Assistants, Francis Cronin, Cipriano Andrade and H. F. Bradford; Third-Assistants, C. F. Uber and J. G. Littig; Acting-Gunner, Chas. F. Adams.

"LEHIGH"—FOURTH-RATE.

Lieutenant-Commander, Alex. A. Semmes; Lieutenant, John H. Reed; Acting-Masters, W. N. Price and John H. Bolles; Acting-Ensigns, D. W. Hodson, J. H. Cromwell and Rich. Lanphier; Assistant-Surgeon, David V. Whitney; Acting-Assistant Paymaster, W. F. A. Torbert; Engineers: First-Assistant, W. W. Hopper; Second-Assistant, O. B. Mills; Acting-Second-Assistants, Henry Wanklin and J. H. Vaile; Acting-Third-Assistant, H. C. Wilkins.

"SANGAMON"—FOURTH-RATE.

Lieutenant-Commander, Jonathan Young; Acting-Master, S. A. Waterbury; Acting-Ensigns, C. A. Pike, R. P. Leary and G. A. Johnston; Assistant-Surgeon, W. J. Simon; Acting-Assistant Paymaster, D. Corning; Engineers: Acting-First-Assistant, W. S. Hazzard; Acting-Second-Assistant, W. J. Barrington; Third-Assistant, J. A. Kaiser; Acting-Third-Assistants, W. E. Coster and C. H. Hunt.

"NAHANT"—FOURTH-RATE.

Lieutenant-Commander, Wm. K. Mayo; Lieutenant, Henry F. Picking; Acting-Master, Wm. Shackford; Acting-Ensigns, C. J. Rogers, A. B. Prince, E. H. Frisbie and W. C. Mendell; Assistant Surgeon, S. G. Webber; Acting-Assistant Paymaster, Wm. H. Palmer; Engineers: Acting-First-Assistants, John H. Foster and T. B. Grene; Second-Assistant, L. T. Stafford; Third-Assistant, J. L. Hannum; Acting-Third-Assistant, Morris McCarty.

"PASSAIC"—THIRD-RATE.

Lieutenant-Commander, T. Scott Fillebrown; Lieutenant, H. L. Johnson; Acting-Masters, A. A. Owens and Charles Cook; Acting-Ensigns, L. A. Waterman, Richard Hepburn and Sylvester Eldridge; Assistant Surgeon, Wm. P. Baird; Acting-Assistant Paymaster, F. A. Wheeler; Engineers: First-Assistant, James Sheridan; Second-Assistants, F. H. Fletcher, Webster Lane and Joseph Hooper; Acting-Third-Assistant, G. S. Odell.

"MONTAUK"—FOURTH-RATE.

Lieutenant-Commander, E. E. Stone; Lieutenant, E. F. Brower; Acting-Master, W. W. Crowningshields; Acting-Ensigns, G. W. Bourne, W. T. Mitchell and E. Gabrielson; Acting-Assistant Surgeon, G. B. Todd; Acting-Assistant Paymaster, C. A. Robbins; Engineers: Second-Assistants, A. Adamson and J. W. Hollihan; Acting-Second-Assistants, Simeon Rockburn and Charles Amberg; Acting-Third-Assistants, J. F. Walton and Richard Bell.

"NANTUCKET"—FOURTH-RATE.

Lieutenant-Commander, Robert F. R. Lewis; Lieutenant, J. F. McGlensey; Acting-Master, J. M. Forsyth; Acting-Ensigns, G. T. Chapman, Frank

G. Walter Allen; Engineers: Acting-First-Assistant, D. F. Gerrish; Second-Assistant, C. F. Hollingsworth; Acting-Second-Assistant, F. C. Russell; Third-Assistant, H. H. Kimball; Acting-Third-Assistant, J. F. Kingsley.

"WISSAHICKON"—FOURTH-RATE.

Lieutenant-Commander, A. W. Johnson; Acting-Ensigns, H. B. Francis, H. F. Dorton and Alonzo Elwell; Acting-Master's Mates, D. J. King and Joseph Gregory, Jr.; Acting-Assistant Surgeon, S. C. Johnson; Acting-Assistant Paymaster, Chas. Dutcher; Engineers: Acting-First-Assistant, John Fallon; Third-Assistant, C. W. Kenyon; Acting-Third-Assistants, C. E. Jevins and James F. Miller.

"SONOMA"—THIRD-RATE.

Lieutenant-Commander, R. W. Scott; Acting-Master, H. M. Merrill; Acting-Ensigns, S. H. Pallock, Geo. Couch, S. G. Bryer and M. J. Daly; Acting-Master's Mate, D. W. Spinney; Acting-Assistant Surgeon, David Fairdrey; Acting-Assistant Paymaster, Wm. Sellev; Engineers: Acting-Second-Assistant, A. B. Cullins; Acting-Third-Assistants, Rufus Barton, R. G. Lewis, George Paul and John O'Keefe; Gunner, J. M. Hogg.

"NIPSIK"—FOURTH-RATE.

Lieutenant-Commander, Edmund W. Henry; Acting-Masters, George P. Lee, J. E. Stickney and H. A. Green; Acting-Ensign, Geo. E. Thomas; Acting-Master's Mates, W. S. Howland and J. C. Butler; Acting-Assistant Surgeon, W. J. Gilfillan; Acting-Assistant Paymaster, H. T. Mansfield; Engineers: First-Assistant, S. L. P. Ayres; Second-Assistant, E. W. Koehl; Third-Assistant, C. R. Roelker; Acting-Third-Assistant, Wm. J. Dougherty.

"OTTAWA"—FOURTH-RATE.

Lieutenant-Commander, James Stillwell; Acting-Master, Wm. H. Winslow; Acting-Assistant Surgeon, L. H. Willard; Acting-Assistant Paymaster, G. W. Huntington; Acting-Ensigns, Benj. Mitchell, C. H. Choate, W. H. McCormick and W. N. Smith; Engineers: Second-Assistants, Geo. H. White and R. B. Hine; Acting-Second Assistant, Wm. Ross; Acting-Third-Assistant, C. G. Mead.

"WINONA"—FOURTH-RATE.

Lieutenant-Commander, Wm. H. Dana; Acting-Masters, E. H. Sheffield and Wm. McKendry; Acting-Ensigns, Walter Sargent and J. Severns; Acting-Master's Mate, Alfred Staig; Acting-Assistant Surgeon, Charles Little; Acting-Assistant Paymaster, T. H. Dickson; Engineers: Second-Assistant, Alfred Hendrick; Acting-Second-Assistant, J. B. A. Allen, Jr.; Third-Assistant, R. L. Wamaling; Acting-Third-Assistant, C. W. Plaisted.

"DAI CHING"—FOURTH-RATE.

Lieutenant-Commander, J. C. Chaplin; Acting-Masters, J. W. Crosby and Geo. Howorth; Acting-Ensign, Walter Walton; Acting-Assistant Surgeon, J. R. Richardson; Acting-Assistant Paymaster, Edw. Sherwin; Engineers: Acting-First-Assistant, G. R. Bennett; Acting-Third-Assistants, D. Castana, J. R. Fulcher and Montgomery West.

"COMMODORE M'DONOUGH"—FOURTH-RATE.

Lieutenant-Commander, Alex. F. Crossman; Acting-Masters, Wm. Knapp and John Myers; Acting-Ensigns, N. W. White and George Glass; Acting-Master's Mates, Sam'l Flaxington and L. F. Strant; Acting-Assistant Paymaster, R. Freeman; Acting-Assistant Surgeon, D. J. Harris; Engineers: Acting-Second-Assistants, Sylvanus Warren, S. S. Hettrick and Nelson Ross.

NAVAL BATTERY.

Lieutenant, Geo. W. Hayward; Acting-Ensign, J. A. Edgerton; Acting-Assistant Surgeon, B. F.

## "SARATOGA"—THIRD-RATE.

Acting-Volunteer Lieutenant, Edgar Brodhead; Acting-Masters, B. S. Melville and C. H. Baldwin; Acting-Ensigns, Edw. Rogers and G. O. Fabeus; Acting-Master's Mates, C. H. Chase and W. A. Stannard; Acting-Assistant Surgeon, Winthrop Butler; Acting-Assistant Paymaster, Louis A. Yorke; Boat-swain, Phillip J. Miller; Gunner, Stephen Young; Carpenter, O. H. Gerry; Sailmaker, J. C. Bradford.

## "JOHN ADAMS"—THIRD-RATE.

Acting-Volunteer-Lieutenant, Alvin Phinny; Acting-Masters, C. C. Ricker, T. C. Chapin and Henry Vaughan; Acting-Ensigns, H. D. Burolett, T. S. Avery, A. A. Franzen, P. W. Fragen, G. S. Johnson and Frank Fisher; Acting-Master's Mates, W. M. Gregg, S. E. Adamson, John Ostega, Nathan Brown and Oliver O'Brien; Acting-Assistant Surgeon, N. M. Randlett; Acting-Assistant Paymaster, Arch'd McVey; Gunner, J. M. Ballard; Acting-Gunner, A. C. Holmes; Carpenter, J. G. Thomas.

## "FLAMBEAU"—THIRD-RATE.

Acting-Volunteer-Lieutenant, Edward Cavendy; Acting-Master, Gilbert Richmond; Acting-Ensigns, J. W. Griffiths, J. T. Carver, J. S. Thomles and J. M. Hudson; Acting-Master's Mate, J. F. Peterson; Acting-Assistant Surgeon, P. H. Pursell; Acting-Assistant Paymaster, F. V. D. Horton; Engineers: Acting-First-Assistant, John Harris; Acting-Second-Assistant, C. B. Curtes; Acting-Third-Assistants, A. F. Bullard and Edw. Humstone.

## "SOUTH CAROLINA"—THIRD-RATE.

Acting-Volunteer-Lieutenant, Wm. W. Kennison; Acting-Master, Wm. Bailey; Acting-Ensigns, John Gunn, E. M. Dimon, C. G. Boyer and Ansel S. Hitch; Acting-Assistant Surgeon, H. C. Vaughan; Acting-Assistant Paymaster, S. W. Tanner; Engineers: Acting-First-Assistant, J. T. Hathaway; Acting-Second-Assistants, J. H. Rowe and Henry Gormley; Acting-Third-Assistants, S. C. Lane and John Agnew.

## "LODONA"—THIRD-RATE.

Acting-Volunteer-Lieutenant, R. P. Swann; Acting-Masters, H. G. McKennee and R. C. McKenzie; Acting-Ensigns, Wm. S. McNeilly and L. B. Brigham; Acting-Assistant Surgeon, T. W. Meckly; Acting-Assistant Paymaster, A. M. Stewart; Engineers: Acting-Second-Assistant, M. C. Heath; Acting-Third-Assistants, James Mollineaux, Wm. Leonard and W. H. H. Hawes.

## "HOPE"—FOURTH RATE.

Acting-Volunteer-Lieutenant, Wm. L. Churchill; Acting-Ensign, Andy Hartshorn; Acting-Master's Mates, Wm. E. Sauld and J. S. Leon.

## "VALPARAISO"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Geo. E. Welch; Acting-Masters, H. S. Blanchard, J. W. Tuck, A. S. Gardner and S. W. Rhoades; Acting-Ensign, R. W. Parker; Engineers: Acting-Second-Assistants, E. H. Keith and John Lardner; Acting-Third-Assistant, Jesse Wright; Gunner, Wm. Bartlett; Carpenter, Samuel N. Whitehouse.

## "STETTIN"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, C. J. Van Alstine; Acting-Master, J. M. Butler; Acting-Ensigns, C. B. Pray, J. C. Staples and Wm. Jenny; Acting-Master's Mate, Edward W. Mosier; Acting-Assistant Surgeon, Robert Stone; Acting-Assistant Paymaster, C. M. Burnes; Engineers: Acting-Second-Assistant, John Hawkins; Acting-Third-Assistants, Anthony Gale, J. W. Elliott and W. W. Smith.

## "MEMPHIS"—THIRD RATE

Acting-Masters, R. O. Patterson and J. B. Childs; Acting-Ensigns, S. W. Cowing, B. D. Reed and G. C. Chamberlain; Acting-Master's Mate, John W.

Moore; Acting-Assistant Surgeon, W. H. Bates; Acting Assistant Paymaster, Wm. E. Foster; Engineers: Acting-Second-Assistants, C. H. McCarty and Peter Anderson; Third-Assistant, S. C. Mc-Lanahan; Acting-Third-Assistant, Wm. Adams.

## "MARY SANFORD"—THIRD-RATE.

Acting-Master, Z. Kempton; Acting-Ensigns, John Ross, J. F. Otis, G. W. Pease and Wm. Caldwell, Jr.; Acting-Master's Mate, N. F. Rich; Acting-Assistant Paymaster, Geo. E. Bissell; Engineers: Acting-Second-Assistant, Chas. O. Davis; Acting-Third-Assistant, A. N. Odell, Thos. Stimson and James Hare.

## "HOME"—THIRD-RATE.

Acting-Master, Benj. Dyer; Acting-Ensigns, A. E. Barnett, R. E. Anson and A. D. Anderson; Acting-Assistant Surgeon, W. W. Howard; Acting-Assistant Paymaster, Ichabod Norton; Engineers: Acting-Second-Assistant, Cornelius Dandreaan; Acting-Third-Assistants, Paul Dandreaan, T. J. Hamilton, Wm. Smith and G. W. Hughes.

## "AZALIA"—FOURTH-RATE.

Acting-Master, Fred. W. Strong; Acting-Ensign, Joseph Frost; Acting-Master's Mates, F. C. Simond and Robert N. Turner; Engineers: Acting-Second-Assistant, Chas. Gewans; Acting-Third-Assistants, W. W. Fish, F. L. Strong and J. Priest.

## "PERRY"—FOURTH-RATE.

Acting-Master, S. N. Freeman; Acting-Ensigns, R. R. Donnell and Fred. Elliott; Acting-Master's Mates, Edw. H. Sheer, T. H. McDonald and C. S. Bridges; Acting-Assistant Surgeon, Benj. Marshall; Acting-Assistant Paymaster, T. A. Emerson.

## "HARVEST MOON"—FOURTH-RATE.

Acting-Master, John K. Crosby; Acting-Ensigns, W. H. Bullis, D. P. McKeven, A. N. Bates and L. A. Cornthwait; Acting-Assistant Surgeon, A. Sumner Dean; Acting-Assistant Paymaster, L. E. Rice; Engineers: Acting-Second-Assistant, J. A. Miller and G. A. Geer; Acting-Third-Assistants, Henry Fisher and F. W. Racoe.

## "PHILADELPHIA"—FOURTH-RATE.

Acting-Master, Geo. H. Avery; Acting-Ensigns, Geo. B. Bailey, Geo. Edwards, E. R. Davison, John B. Starr and C. D. Duncan; Assistant-Surgeon, J. H. Culver; Assistant Paymaster, H. L. Wait; Engineers: Acting-First-Assistant, Robert Mulready; Acting-Third-Assistants, C. T. Wamaling and John Ryan.

## "POTOMSKA"—FOURTH-RATE.

Acting-Master, F. M. Montell; Acting-Ensigns, A. Cartes, Frank Watson, W. H. Millett and G. T. Joslin; Acting-Assistant Paymaster, H. E. Rand; Engineers: Acting-Second-Assistant, Edwin Vaughn; Acting-Third-Assistants, S. M. Van Clief, E. W. Cross and L. McNeil.

## "WANDO"—FOURTH-RATE.

Acting-Master, Fred'k T. King; Acting-Ensigns, E. K. Smith, M. A. Nickerson, Lewis Jennings and Alex. Cormack; Acting-Master's Mate, W. C. N. Sanford; Acting-Assistant Surgeon, P. C. Whidden; Acting-Assistant Paymaster, W. L. G. Thayer; Engineers: Second-Assistant, J. P. Kelly; Acting-Second-Assistant, J. J. Sullivan; Acting-Third-Assistants, Wm. Norie, T. T. Sanborn and G. W. Wakefield.

## "WAMSUTTA"—FOURTH-RATE.

Acting-Master, Charles W. Lee; Acting-Ensigns, E. R. Warren and T. R. Dayton; Acting-Master's Mates, F. L. Wheeler and Thos. Nickerson; Acting-Assistant Paymaster, Charles Loueks; Engineers: Acting-First-Assistant, William Johnston; Acting-Third-Assistants, B. F. Napheys, David McDonald and T. T. Risbell.

## "AMARANTHUS"—FOURTH-RATE.

Acting-Master, Enos O. Adams; Acting-Ensign, Wm. R. Cox; Acting-Master's Mates, Washington Van Wyck, James O'Donnell and A. D. Damon; Engineers: Acting-Second-Assistant, C. R. Jones; Acting-Third-Assistants, Samuel Fowler and H. W. Force.

## "ETHAN ALLAN"—FOURTH-RATE.

Acting-Masters, J. A. Pennell, W. L. Kempton and Jos. McCart; Acting-Ensigns, J. H. Bunting and Wm. Mero; Acting-Master's Mate, Edwards Dexter; Acting-Assistant Surgeon, Isaiah Dowling; Acting-Assistant Paymaster, Wm. R. Woodward.

## "CHAMBERS"—FOURTH-RATE.

Acting-Master, William Watson; Acting-Ensigns, William Jennings and L. P. Delan; Acting-Master's Mate, A. K. Baylor; Acting-Assistant Paymaster, W. D. Walker.

## "OLEANDER"—FOURTH-RATE.

Acting-Master, R. Price Walter; Acting-Ensigns, H. G. Seaman and Geo. Dunlap; Acting-Master's Mate, George Newlin; Engineers: Acting-Second-Assistant, Samuel Swartwout; Acting-Third-Assistants, Robert B. Dick, H. S. Brown and L. B. Joyce.

## "PARA"—FOURTH-RATE.

Acting-Master, David P. Health; Acting-Ensign, Edward Ryan; Acting-Master's Mates, John McDonough and Wm. H. Morse.

## "NORWICH"—FOURTH-RATE.

Acting-Master, W. H. DeWolf; Acting-Ensigns, J. H. Sinscatt, J. P. Chadwick and R. W. Laid; Acting-Master's Mates, Henry Sinclair and Wm. White; Acting-Assistant Surgeon, J. A. Petrie; Acting-Assistant Paymaster, C. F. Gardner; Engineers: Acting-Second-Assistant, P. B. Robinson; Third-Assistant, L. H. Lamdim; Acting-Third-Assistants, H. J. Tarr and J. B. Johnston.

## "FERNANDINA"—FOURTH-RATE.

Acting-Masters, Lewis West and George F. Hollis; Acting-Ensigns, Christopher Flood, B. H. Chadwick and Charles Sawyer; Acting-Master's Mate, Wm. C. King; Acting-Assistant Surgeon, S. B. Kenney; Acting-Assistant Paymaster, T. N. Murray.

## "HOUGHLEN"—FOURTH-RATE.

Acting-Master, E. S. Fusher; Acting-Ensigns, C. M. Shirving and Jacob Cochran; Acting-Assistant Surgeon, Israel Bashong; Acting-Assistant Paymaster, R. W. Allen.

## "DAFFODIL"—FOURTH-RATE.

Acting-Master, Wm. H. Mallard; Acting-Ensign, John McGlathery; Acting-Master's Mate, N. B. Walker; Engineers: Acting-Third-Assistants, Wm. H. Capen, Thomas Forrest and John Tucker.

## "ORVETA"—FOURTH-RATE.

Acting-Master, Wm. Fales; Acting-Ensigns, E. W. Halero, Charles Nellman and D. W. Andrews; Acting-Assistant Paymaster, Samuel A. Kay.

## "HYDRANGA"—FOURTH-RATE.

Acting-Master, Charles W. Rodgers; Acting-Master's Mates, J. B. Newcomb, J. G. Underhill and John Wolstenholme; Engineers: Acting-Second-Assistant, A. N. Kooner; Acting-Third-Assistants, H. E. Whitworth, W. B. Hall and C. M. Adams.

## "E. B. HALE"—FOURTH-RATE.

Acting-Master, Charles F. Mitchell; Acting-Ensigns, Henry Stohl, G. A. Smith, J. N. Van Buskirk, Wm. L. Pary and Wm. Lamee; Acting-Assistant Paymaster, O. B. Gilman; Engineers: Acting-Second-Assistant, Frank Marsh; Acting-Third-Assistants, D. E. Bennett, W. C. Bond and Wm. E. B...

## "C. P. WILLIAMS"—FOURTH-RATE.

Acting-Master, L. W. Parker; Acting-Ensign, J. W. North; Acting-Master's Mates, L. E. Daggett and W. J. Lane.

## "GEORGE MANGHAM"—FOURTH-RATE.

Acting-Master, John Collins, Jr.; Acting-Ensigns, J. E. Wallis and A. Tuttle; Acting-Assistant Paymaster, T. G. Holland.

## "DAN SMITH"—FOURTH-RATE.

Acting-Master, Barker Van Voorhis; Acting-Ensigns, A. H. L. Bowie and Robert Craig; Acting-Master's Mate, H. P. Diernanse.

## "GEORGE W. RODGERS"—FOURTH-RATE.

Acting-Master, Loring G. Emerson; Acting-Ensign, J. H. Handy; Acting-Master's Mate, A. Trensedale.

## "ACACIA"—FOURTH-RATE.

Acting-Masters, Wm. Barrymore and J. E. Jones; Acting-Ensigns, H. F. Blake and A. S. Rounds; Acting-Master's Mates, Wm. J. McFadden and James Hawkins; Acting-Assistant Paymaster, Joseph Foster; Engineers: Acting-Second-Assistant, T. D. Crosby; Acting-Third-Assistants, J. K. Wright; A. V. Harvey, E. H. Haggens and Robert Henry.

## "T. A. WARD"—FOURTH-RATE.

Acting-Master, Robert T. Wyatt; Acting-Ensign, W. C. Odroine; Acting-Master's Mates, M. M. Baker, Jr., and A. Olmstead.

## "RACER"—FOURTH-RATE.

Acting-Master, E. G. Martin; Acting-Ensigns, D. B. Corey and J. F. Kavanaugh; Acting-Master's Mate, James Williams; Acting-Assistant-Paymaster, Charles Smith.

## "JOHN GRIFFITH"—FOURTH-RATE.

Acting-Master, James Ogilvie; Acting-Ensigns, Wm. Knight, W. G. Pitts and Thos. Perry.

## "SARAH BRUEN"—FOURTH-RATE.

Acting-Master, Wm. F. Redding; Acting-Ensigns, S. P. Edwards and J. Richardson; Acting-Master's Mate, Wm. H. Olmey.

## "IRIS"—FOURTH-RATE.

Acting-Ensign, Wm. H. Anderson; Acting-Master's Mates, W. W. Brandt, Elisha Hubbard and Roger Conoly; Engineers: Acting-Second-Assistant, Richard Nash; Acting-Third-Assistants, Dennis Lyng and James Hankey.

## "DANDELION"—FOURTH-RATE.

Acting-Ensign, George W. Williams; Acting-Master's Mates, W. F. Vincent, J. K. Gould and James Sullivan; Engineers: Acting-Third-Assistants, E. Babbit and John McKeazer.

## "ARETHUSA"—FOURTH-RATE.

Acting-Ensign, John V. Cook; Acting-Master's Mates, I. D. Lovett and F. H. Newcomb; Engineers: Acting-Second-Assistant, Geo. W. Howe; Acting-Third-Assistant, William J. Moore and J. T. Greenwood.

## "CAMELIA"—FOURTH-RATE.

Acting-Ensign, David B. Howes; Acting-Master's Mates, Abraham Leach, F. H. Munroe and Wm. F. Lard; Engineers: Acting-Third-Assistants, Benjamin Cobb, Jr., John Grimes and John Corson.

## "SWEET BRIER"—FOURTH-RATE.

Acting-Ensign, J. D. Dexter; Acting-Master's Mates, T. J. Dill, J. R. Grove and L. H. Brown; Engineers: Acting-Second-Assistants, M. V. B. Darling and T. J. W. Cooper; Acting-Third-Assistant, J. W. Blake.

## "PETTIT"—FOURTH-RATE.

Acting-Ensign, Charles Quinn; Acting-Master's

Engineers: Acting-Second-Assistants, Reuben McClenahan and Augustus Wendell; Acting-Third-Assistants, Edw. Bannaclough and W. J. Phillips.

"GLADIOLUS"—FOURTH-RATE.

Acting-Ensign, Napoleon Boughton; Acting-Master's Mates, S. W. Byram, H. B. Eaton and Wm. C. Parker; Engineers: Acting-Third Assistant, John D. Williams, Geo. W. Beard and Augustus Straub.

"CARNATION"—FOURTH-RATE.

Acting-Ensign, William Boyd; Acting-Master's Mates, J. D. Reed, Albion Burnham and A. H. Francis; Engineers: Acting-Third-Assistants, Wm. C. Boone and D. M. Spangler.

"LABURNUM"—FOURTH-RATE.

Acting-Ensigns, Sturgis Center, J. D. Kihlbom and J. P. Thompson; Acting-Master's Mate, Peter Moakley; Engineers: Acting-Second-Assistant, James Stevens; Acting-Third-Assistants, Denis Hayes and Walter S. Jarboe.

"CATALPA"—FOURTH-RATE.

Acting-Ensign, Allen K. Noyes; Acting-Master's Mates, J. W. Mathews, A. S. Taffe and John McGee; Engineers: Acting-Second Assistant, Timothy McCarty; Acting-Third-Assistants, Nicholas Cassin and J. Nicholson.

"CLOVER"—FOURTH-RATE.

Acting-Ensign, Frank S. Leech; Acting-Master's Mate, S. H. Bryant; Engineers: Acting-Third Assistants, W. W. Shane, W. F. Henderson and M. Griffiths.

"GERANIUM"—FOURTH-RATE.

Acting-Ensign, David Lee; Acting-Master's Mates, J. D. Wingale, Benjamin Russell and Wm.

Earle; Engineers: Acting-Second-Assistants, S. W. Widlam and C. J. Henry; Acting-Third-Assistants, Geo. E. Norris and H. B. Garabedian.

"JONQUIL"—FOURTH-RATE.

Acting-Ensign, Charles H. Hanson; Acting-Master's Mates, Thos. Newton and Henry Lynch; Engineers: Acting-Third-Assistants, Wm. H. Barclay and J. C. Batchelder.

"NORFOLK PACKET"—FOURTH-RATE.

Acting-Ensigns, Geo. W. Wood and S. A. Dayton; Acting-Assistant Paymaster, Andrew Tower; Acting-Master's Mates, Charles Bedell and Allen Moore.

"BRAZILIERA"—FOURTH-RATE.

Acting-Ensigns, J. H. Bennett, N. C. Borden and Horace Dexter; Acting-Master's Mates, F. W. H. Harrington and C. A. Ansten; Acting-Assistant Surgeon, George S. Fife; Acting-Assistant Paymaster C. H. Longstreet.

"G. W. BLUNT"—FOURTH-RATE.

Acting-Ensign, G. G. Curtis; Acting-Master's Mates, W. R. Lyons.

"CHATHAM"—FOURTH-RATE.

Acting-Master's Mates, George W. Post and Wm. Woods; Engineers: Acting-Third-Assistants, Frederick Wagner and H. A. Brown.

"LARKSPUR"—FOURTH-RATE.

Acting-Master's Mates, John O'Conner, W. A. Arkins and David Wilson; Engineers: Acting-Third-Assistants, W. J. Cannon and A. L. Grow.

## CHAPTER LIII.

### OPERATIONS OF THE WEST GULF SQUADRON IN THE LATTER PART OF 1864, AND IN 1865.

JOINT OPERATIONS IN MOBILE BAY BY REAR-ADMIRAL THATCHER AND GENERAL CANBY.

GALLANT SERVICES OF COMMODORE PALMER.—BLOCKADE-RUNNERS ON TEXAS COAST.—DEMORALIZING TENACITY OF CONFEDERATE GOVERNMENT.—CUTTING OUT OF THE SCHOONER "GOLDEN BELLE."—CAPTURE OF THE "DELPHINA," "ANNIE SOPHIA," AND "PET," PRIZE-LADEN SCHOONERS.—THE STEAMER "WILL-O'-THE-WISP" BOARDED AND SET ON FIRE.—EXCITING AND HAZARDOUS ADVENTURES.—THE CONFEDERATE PRIVATEER "ANNA DALE" CAPTURED AND BURNED.—CONSPICUOUS GALLANTRY OF THE VOLUNTEER ELEMENT OF THE NAVY.—ACTING-REAR-ADMIRAL THATCHER RELIEVES COMMODORE PALMER.—SHELLING CONFEDERATE BATTERIES NEAR MOBILE.—CAPTURE OF SPANISH FORT, FORTS ALEXIS, HUGER AND TRACY.—MOBILE SURRENDERS.—OPERATIONS OF THE GUN-BOATS IN RIVERS OF ALABAMA.—CONFEDERATE RAMS "HUNTSVILLE" AND "TUSCALOOSA" SUNK.—FEDERAL GUN-BOATS SUNK BY TORPEDOES.—CONFEDERATE GUN-BOATS AND OTHER PROPERTY SURRENDERED TO THE NAVY.—CONDITIONS OF SURRENDER.—INSTRUCTIONS TO FLAG-CAPTAIN SIMPSON.—PAROLE GIVEN BY AND LIST OF OFFICERS AND MEN SURRENDERED.—ENTRANCE OF GUN-BOATS INTO BLAKELY RIVER.—COMPLIMENTARY LETTER RELATIVE TO COMMODORE PALMER.—DESTRUCTION OF CONFEDERATE RAM "WEBB."—GALVESTON SURRENDERS.—LIST OF VESSELS AND OFFICERS OF WEST GULF SQUADRON, 1865.

COMMODORE James S. Palmer commanded the West Gulf Blockading Squadron up to the time Rear-Admiral Thatcher took command in the latter part of February or early part of March, 1865. After being relieved, he continued to give Rear-Admiral Thatcher that hearty and effective support that always distinguished him in his former commands under Admiral Farragut on the Mississippi and elsewhere, marking him as one of those cool and gallant men who perhaps in time of peace would not attract much attention, but whose services in time of war are strongly marked by judgment and gallantry combined. These qualities always leave a strong impression on a ship's company that has the good fortune to possess such a commander. Whatever duty Commodore Palmer undertook he performed it

in the records of the war, where the commanders under whom he served never parted with him without the warmest eulogiums in his praise, all of which were deserved. While he had the temporary command of the West Gulf Blockading Squadron he kept the vessels of the fleet actively employed, which will be better appreciated and understood by a brief outline of the operations.

Commodore Palmer was one of those who encouraged intrepidity in young officers; and as there was not a large field for daring deeds, and as the duty of the vessels under his command was chiefly confined to the dull routine of blockading the Texas coast, no opportunity was lost to obtain distinction, and at the same time inflict injury upon the enemy.

Since the closing of the Confederate ports

made attempts to reach the coast of Texas, though it would seem that it was scarcely profitable for them to carry on their illicit trade in the Gulf, where they could be so easily cut off, and at the time when the war must have appeared to any one with an observant mind to be so rapidly approaching a close. But as long as there was life there was hope, and the Confederate Government, to the very last moment of its existence, put on a bold front and acted as if in the heyday of its power. The only way it could keep up its credit abroad was by now and then getting out a load of cotton on a steamer, or some of the schooners that had been left to them after the several raids that had been made on such coasting vessels

that the Texan soldiers—a very brave set of men—had never felt that they had been worsted in the least. On the contrary, they had not only prevented the Federal generals from making a permanent lodgment in their State, but had given a large quota of their troops to assist the Confederates in every other quarter of the Southern domain. It would have been, indeed, a grievous infliction if the Texans had succeeded in drawing to their State the remains of the Confederate armies who had not been driven to surrender, for they might have kept up the war two or three years longer, with great loss to the North in expense and with no gain to themselves.

But the same demoralization of the Con-

COMMODORE (AFTERWARDS REAR-ADMIRAL) JAMES S. PALMER.

as they possessed. Though the communications with Texas and the northern portion of the Confederacy had been almost entirely cut off by the vigilant watchfulness of the Navy on the coast and on the great river which divided the Confederacy, yet the Texans were as active as ever in carrying on operations, particularly in the introduction of arms of all kinds, provisions, clothing and military stores, apparently with a view to carrying on the war on their own account if Richmond fell, or to offer a place of retreat to those dissatisfied spirits who could see nothing good in a union with the Northern States. The Federal invasions had, so far, been so unsuccessful, and were as a rule so badly conducted

in Richmond was also felt in Texas. Though they appeared to be imbued with the popular enthusiasm that had done so much to prolong the contest, and though they had given as many proofs of devotion to the cause and evidences of endurance and noble sacrifice, yet they were not carried away with the bitterness of feeling that seemed to animate the people further north.

The Texans could see plainly enough that official mismanagement on the part of the Confederate authorities, together with the Union victories and the popular resolution of the Northern people to prosecute the war with renewed vigor had made it probable

that Texas would become the great battleground, and that, whatever way the tide of war might turn, the State would be impoverished. So far, Texas had borne no hardships that soldiers could not reasonably endure, for her plains were full of hogs and cattle, and her fields were well supplied with corn, and they had sufficient military ardor to uphold them to the last.

But there were large amounts of cotton on hand from which no revenue was derived, and attempts were now and then made to get the fabric to market in anything that would float, which, in many cases, succeeded when success was least expected. Emboldened by their first attempts, the blockade-runners from the Texan ports became more audacious, so much so that the Federal naval officers were put upon their mettle, and hence resulted a number of small but gallant affairs which, in justice to the officers concerned in them, should not be omitted. They are the small links that make up the chain of history, and were as important in the eyes of the performers as more prominent affairs.

On the 26th of December, 1864, a large schooner, named the "Golden Belle," was lying in Galveston harbor, watching a chance to evade the blockaders outside, and make a run to Havana or Nassau. Acting-Ensign N. A. Blume, of the "Virginia," asked and received permission from his commanding officer, Acting-Volunteer-Lieutenant Charles H. Brown, to go in and cut out the schooner. Obtaining volunteers from the crew for the expedition, he left with the third cutter about 8:30 P. M. Having five miles to pull against a heavy head sea, Mr. Blume did not reach Boliver Point and get in sight of the schooner until 1 A. M. of the 27th. She was lying about a quarter of a mile from Fort Jackson, about a mile from Fort Greene, and less than four hundred yards from the Confederate guard-schooner "Lecompte." When within five hundred yards of the schooner, a light was seen moving about her decks. The boat passed her and came up astern, not being discovered till alongside. She was then immediately boarded and carried, and the prisoners secured. The captors immediately made sail, slipped the schooner cable and stood down the bay, the guard-boat supposing that she had started out to run the blockade. Coolness and clever management was manifested in piloting the "Belle" out of Galveston harbor, which is an intricate one. In going out, the prize had to pass almost within hail of Fort Point on Galveston Island, then find her way in the dark through the main channel and cross the bar at the right point; all of which was done without a mistake. At daylight, the

that morning the owner of the "Golden Belle" could see her from Galveston carefully anchored under the guns of the Federals.

As it resulted, there was no loss of life on this expedition, and the glamour which generally attends a bloody affair was missing; but it was none the less a dangerous one, and all engaged in it deserve as much credit as if some had been shot. We have made it a rule to mention the names of the participants when good work was performed, and, this being a case in point, the following are entitled to a place: N. A. Blume, Acting-Ensign; William Stevenson, Master-at-Arms; James Webster, Gunner's Mate; Thomas Wallace, Coxswain; Jacob Bowman, Captain Forecastle; William Thompson, Captain Forecastle; Augustus Miller, Captain After-guard; Peter Miller, Seaman; Thomas K. Fenley, Landsman.

On January 24th, 1865, quite as clever an affair took place off Calcasieu River, by a cutting-out expedition, under Lieutenant-Commander Richard W. Meade, which was a complete success without any casualties. A three-masted schooner, loaded with cotton, was lying at the second bend of the Calcasieu River, about two and a half miles from its mouth, ready to slip out at the first opportunity, and the object of the expedition was her capture. As a large force of the enemy was encamped close at hand, it was deemed best to take a force sufficiently large to insure success. Lieutenant-Commander Meade accordingly fitted out the "Chocura's" launch and first cutter, and took forty men of her crew under his personal command. The night of the 22d of January was chosen for the attempt, and as it was cold and dark, with drizzling rain and a norther blowing, it was just such a night as a blockade-runner would select to evade the blockaders. The party left the "Chocura" at dark and pulled in silently for the river. Just as they entered it, the schooner was discovered coming down under sail with a fresh breeze. Had the boats been ten minutes later she would have reached open water and escaped. She was at once boarded and carried; but, unfortunately, her captain saw the boats before they reached his vessel, and, putting his helm hard down and letting fly his sheets, ran the schooner hard and fast aground on the flats close to the beach and not far from the enemy's force. Six prisoners were secured at once, and a boat that was towing astern was seen to push off and pull rapidly up the river, in which, doubtless, some of the crew escaped. The prize proved to be the schooner "Delphina," with one hundred and eighty bales of cotton on board—one of

the habit of making to raise money, which, though small in quantity, was none the less valuable to the captors when it could be secured. This cargo would have been worth in England over one hundred thousand dollars. Every effort was made to get the "Delphina" afloat. The after-deck load was thrown overboard and her anchor carried out; but as the norther caused the water to fall rapidly, leaving in an hour only about a foot of water alongside, the efforts to float her were unavailing. The launch grounded in the meantime, and it was deemed best not to expose the men to an attack from an overwhelming force. The schooner was therefore set on fire and the expedition returned to the "Chocura." Acting-Ensigns Tracy and Beardsley ac-

LIEUTENANT-COMMANDER (NOW CAPTAIN) R. W. MEADE.

companied Lieutenant-Commander Meade. The officers and men behaved as all men will when they are led by a judicious and gallant commander. They were not altogether unfortunate in not receiving some prize-money. Eighty bales of cotton were thrown overboard before they set fire to the schooner; this drifted out to sea, and thirty bales were picked up on the following morning, and very likely more were secured later. This was hard on the shippers; but such are the fortunes of war, and it was the only way to cripple the resources of the Confederacy. Captain Semmes, of Alabama fame, railed at Union naval officers a great deal for what he called their greedy spirit in capturing cotton coming out and arms going in, which he called destroying the property of Southern people, and makes an

excuse on this account for inflicting harm on Federal merchant-ships. It was not to be supposed that Union officers would let a vessel put to sea with a hundred thousand dollars' worth of cotton on board without using every effort to capture it, when they knew that if it reached England it would soon be converted into cash to buy arms with which to shoot Union people. There was really no greedy intent which induced officers to follow up vessels in port loaded with cotton, but simply a desire on their part to put an end to the war. Half the time the vessels and cotton were burned when it might frequently have been saved, but it was not considered worth the while to risk the lives of officers and men. This was the case on this occasion, as there was a force of three hundred cavalry at the point where the "Delphina" was burned.

The Confederates were very watchful and alert in getting vessels ready for sea and loaded with cotton bales, but the blockaders were equally so; and, if we may judge by the results, much more active in the pursuit of the blockade-runners and in the capture of them than their owners were in getting their wares to market.

On February 8, 1865, an expedition was fitted out by Commander Mullany, of the "Bienville," assisted by Commander Woolsey, of the "Princess Royal," for the purpose of destroying the steamer "Wren," a blockade-runner lying in the harbor of Galveston, and also of capturing two cotton-laden schooners that were lying at anchor under the forts, ready to go to sea when the wind and weather permitted.

Two boats were sent on this expedition, viz.: The "Bienville's" first cutter, with thirteen men, Acting-Ensign George H. French, in charge, and the "Princess Royal's" first cutter, with a crew of nine men, Acting-Ensign A. H. Reynolds, in charge, assisted by Acting-Master's Mate Lewis Johnson, the whole under the command of Acting-Ensign French, of the "Bienville." The boats left the "Bienville" about 8.30 p. m., and stood in for the harbor. Mr. French intended to pass inside the schooners and make his first attack on the "Wren," destroy her, and then capture the schooners; but he failed in this, owing to the tide, which carried him so far out of his course that he found himself close aboard the schooners. Without hesitation, orders were given Mr. Reynolds to board one, while Mr. French carried the other. Both were taken without resistance, though the crews aggregated twenty men, nearly equal to the crews of the two boats. The "Princess Royal's" cutter captured the "Annie Sophia," and the "Bienville's," the "Pet," both supposed to be English. After getting the schooners underway and secur-

ing their crews, one was placed in charge of Boatswain's Mate, Thomas Gallyer, of the "Bienville," and the other in charge of Acting-Master's Mate Johnson, with orders to proceed to the "Bienville," where they subsequently arrived in safety. Mr. French then proceeded in company with the other boat to perform the duty of destroying the "Wren"; but, finding it impracticable (owing to the strong current and wind against him, with his reduced crews) to find the "Wren," or make good headway, and having parted company from the other boat in the darkness, he concluded that it would be injudicious to proceed further, as day was approaching, and returned to his ship. On the whole, this might be called a good catch. The "Pet" had two hundred and fifty-six bales of cotton, and the "Annie Sophia" two hundred and twenty,—a handsome reward to the adventurous sailors who went on the expedition.

The dearth of blockade-running steamers made it more easy to capture this cotton, for the long, low runners generally laid well up the harbor under the protection of the forts, while the schooners had to move down to the lower bay to await a fair wind and get to sea when an opportunity offered.

Yet the steamers that did attempt to run the blockade often failed, as was the case with the "Will-o'-the-Wisp" (steamer), which was burned off Galveston by an expedition under Lieutenant O. E. McKay, of the "Princess Royal." The "Will-o'-the-Wisp" had been run on shore off the harbor of Galveston, where she was caught in the act of landing some heavy guns, and was chased on shore. On the night of the 9th of February, 1865, a boat expedition was fitted out by Commander M. B. Woolsey, consisting of two boats' crews, one from the "Princess Royal," and the other from the gun-boat "Antona," the whole under command of Lieutenant McKay, with orders to go in and destroy the steamer and prevent her landing the arms and stores she had on board. The boats shoved off from the "Princess Royal" between 2 and 3 A. M., while the ship and the "Antona" moved in toward shore and took up a position about nine hundred yards from the "Will-o'-the-Wisp." The boats soon reached and boarded the stranded steamer, set her on fire in the wheel-houses, and then returned to the "Princess Royal." She had previously been riddled by the fire of the two blockaders, and had been set on fire by their shells, so that she was almost a total wreck. The Confederates had shown their usual energy in getting out the cargo, the decks being torn up to enable them to do so. Even the engines had been taken to pieces and carried away, so that, when the boats reached her she was not

worth wrecking. Although there was no resistance offered by the enemy, the attempt made by the boats was worthy of all praise. The Confederate cavalry had thrown up heavy breastworks, and it was expected that the landing party would meet with a stout resistance.

One gallant affair would inspire another, and these cutting-out expeditions became the order of the day. When they started out, no man knew what would be the result of an expedition until it was over, or what force was likely to be encountered. The enemy, knowing the adventurous spirit of the officers of the squadron, might set a trap for them, and, instead of getting a load of cotton, they might get a load of grape-shot.

The Confederates had fitted out a privateer or vessel-of-war, or whatever name that class of vessel might be recognized under—an armed schooner, the "Anna Dale,"—which, on February 18, 1865, was lying in Pass Cavallo, Texas, waiting for part of her crew, when she intended to slip out to prey on Federal commerce. This vessel had been observed for several days apparently watching an opportunity to get to sea when the wind favored her. Lieutenant-Commander Henry Erben, Jr., of the "Panola," had been watching her closely, and at night kept picket-boats close to the inlet to see that she did not slip out without due notice from the boats. On the night of the 18th he sent in two armed boats, the gig and third cutter, to cut the schooner out, with Acting-Ensign James W. Brown in charge, assisted by Acting-Master's Mate John Rosling. The work was handsomely performed. The boats crossed the bar, which was quitesmooth at the time, and found the schooner made fast to a wharf with a battery on shore close aboard. She had a pivot-gun mounted, and everything indicated that she was an armed vessel with this battery to protect her. Lights were seen moving about the decks, and men heard talking, when Mr. Brown made a dash for the schooner, boarded her, drove all the crew below that were on deck, and fastened down the hatches. The fasts were then cut and the vessel drifted out into the stream. Sail was made on the "Anna Dale," and everything done to take her out, but she grounded, and it was determined to destroy her. The prisoners, with their baggage, were put in one of the schooner's boats with some small arms and a 12-pounder howitzer, and the vessel was then set on fire.

The "Anna Dale" proved to be a Confederate privateer, but had not yet attained the dignity of being called a cruiser. She was of seventy tons burden, well armed, and commanded by Joseph L. Stephenson, a Master in the Confederate Navy, who said

he expected twenty-five more men at sunset, and would have sailed soon after. He expressed great surprise that the boats were not fired upon by the battery, which consisted of three guns and a hundred men stationed only a short distance off. The "Anna Dale" was a fast schooner, and, had she escaped the vigilance of the blockaders and reached the northern coast, would no doubt have done much damage before she was captured.

This affair was certainly well executed and was without loss of life, which makes such events all the more acceptable. Acting-Ensign Brown was, no doubt, a gallant officer. He speaks in the highest terms of the behavior of Mr. Rosling and of Boat-swain's Mate James Brown and Quarter-Master Benton Bunker, and the boat's crew generally. It will be observed that, in most of these affairs, the acting or volunteer officers bore very prominent parts. In all this kind of duty the volunteer element of the Navy was always conspicuous, it being more congenial to them than parading the deck and following the routine of a regular man-of-war. They were a tough, brave set of men, full of resources and worthy of every trust.

Captain Semmes, of the "Alabama," in his journal of that vessel's cruise, berates the volunteer officers of the Federal Navy, and calls them a low-lived set of fellows; but it must be remembered that, in the fight between the "Kearsarge" and "Alabama," nearly all the officers of the former were volunteers raised in the merchant service, then as fine a school of seamanship as any in the world; and under the training of their gallant and efficient first-lieutenant, Thornton, made a practice in gunnery that put to shame the firing of the English gunners that are said to have joined the "Alabama" from the English naval gunnery training-ship, the "Excellent." In this, perhaps, can be found the reason why Captain Semmes did not approve of them.

#### JOINT OPERATIONS IN MOBILE BAY BY REAR-ADMIRAL THATCHER AND GENERAL CANBY.

After the capture of Wilmington, Commodore James S. Palmer was relieved of the command of the West Gulf Squadron by Acting-Rear-Admiral H. K. Thatcher, an officer of great merit, who had shown good judgment and gallantry at Fort Fisher.

The moment Rear-Admiral Thatcher arrived at the scene of his command, he placed himself in communication with that gallant and efficient military commander, General Canby, and offered all the co-operation the Navy could give toward the capture of Mobile, which still held out,

notwithstanding all the forts in the bay had surrendered and the Confederate fleet had been captured. There was not the slightest chance of arms, munitions-of-war, or provisions reaching the Confederate army through Mobile, and the enemy continued to hold it simply from the same sentiment that governed every other part of the South. Though the demoralization in the Confederacy was plainly apparent to those who had eyes to see, yet the majority could not be made to believe that the Confederates could be subjugated. They could not be made to understand that there was anything fatal, in a military point of view, in Sherman's memorable march, though they received daily news of his successful marchings, his occupation of At-

REAR-ADMIRAL HENRY K. THATCHER.

lanta, Savannah, Columbia, and his advance to Goldsborough, driving before him an army quite equal in numbers to his own, before he was joined by Generals Schofield and Terry with some thirty thousand troops, and causing the ablest generals of the Confederacy to fall back before his triumphant legions. If the demoralization of the country could ever be brought to the surface, it was when General Joe Johnston was brought to bay at Smithsville, with Sherman's hardy veterans (that had marched through the South) confronting him, and the victorious troops of Schofield and Terry, just from Wilmington, hemming him in.

Some of the most intelligent men in the Confederacy (though the most deluded) clung to the idea that it was a physical impossibility for the South to be subjugated by the troops of the North. This impossibility was clearly stated by the Confederate Congress in an address to the Southern people as late as the winter of 1864-5; that the passage of hostile armies through the Southern country, though productive of cruel suffering to the people and great pecuniary loss, gave an enemy no permanent advantage or foothold. To subjugate a country, its civil government must be suppressed by a continuing military force, or supplanted by another, to which the inhabitants would be obliged to yield obedience. They insisted that the passage of troops through their country could not produce any such result. Permanent garrisons would have to be stationed at a sufficient number of points to strangle all civil authority and overawe the people before it could be pretended by the Federal Government that its authority could be extended over the Southern States. They claimed that to subdue the South would require more soldiers than the United States could raise to garrison all the different points. In a geographical point of view, therefore, it was asserted that the conquest of the Confederate States was impracticable. The geographical point of view was decisive to those who fomented the war in the first place, who adopted this as their creed with which to delude their suffering people; and when Sherman was marching his irresistible army all through the South, they could see nothing in it but a harbinger of good to their cause; though he had passed through the country, they asserted that he had not conquered it, and had not been able to leave a single garrison on his way since he left Dalton. They argued that, even if he passed out of the Carolinas, he would be defeated then, and all the country he had passed through would be re-opened to the Confederate armies. All such sophistries might pass muster with the ignorant, and this appeal to the common herd, no doubt, had its effect; but it was most absurd and criminal, to say the least of it, for the promoters of this rebellion to try and delude those upon whom all the suffering fell, when they could see the handwriting on the wall as plainly as it was seen at the feast of Belshazzar. All the deluded people should have known that, as Sherman's army sped along, everything in the shape of a soldier left the side-points of defence and joined the fleeing mass in the front. There was no use leaving garrisons in the rear, there was nothing to garrison. Wild desolation and ruin are always left in the

could prevent it any more than Lee could prevent destruction on his march to and from Gettysburg. The fact is, the Confederacy was in its last throes when Sherman started from Columbia, and the people of the South everywhere (owing to what the promoters of the rebellion called "the decay of public spirit") were getting impatient with the hardships of the war, having no longer any confidence in the ultimate results. Yet there were places, like Mobile, that had for a time flourished, owing to the constant flow of blockade-runners to their ports, and who knew but little of the sufferings of the war, and had never, in fact, been subjected to any hardships, determined to hold on to the last, even after Charleston fell. Ever since Admiral Farragut attempted and failed to reach the city of Mobile, the channel to which would not admit the Union vessels, that city had settled down to fancied security, no doubt waiting till Richmond should fall, and they could surrender with some show of determination to resist to the last. They did no harm to the Union, but their defiant attitude was offensive, and Canby and Thatcher determined to reduce their pretensions.

On the 8th of March, 1865, Rear-Admiral Thatcher received information from General Canby that there were indications that the enemy's forces in Mobile were about to evacuate their works, and had torn up some thirty miles of the Mobile and Montgomery railroad, in the neighborhood of Pollard, and were removing the material in the direction of Montgomery, and suggesting a reconnaissance in force. This Admiral Thatcher immediately undertook with the five Monitors he had at his disposal; and proceeding to reach a point in as close proximity to the city as the shallow water and the obstructions would permit, succeeded in drawing from the enemy a heavy fire, and demonstrated that the defences were intact and the Mobilians still determined on resistance.

It was therefore determined by the two Federal commanders to make a combined attack on the works and city without delay, and on March 21st the landing commenced from the transports under cover from the gun-boats on the right bank of Fish River, at a point called Danley's Mills, about seventeen miles above its junction with Mobile Bay. The gun-boats kept shelling the woods from Point Clear to Blakely River bar, while the troops were landing, to clear the coast of the enemy's forces supposed to be lurking in that vicinity, and also to draw the fire of the enemy's batteries, should there be any erected between Point Clear and Spanish Fort. Numerous streams had

the passage of artillery. The troops set to work, as soon as landed, to construct the bridges and to make their advance, while the light-draft gun-boats kept open communications with the army along shore by boats or signals.

General Granger had the immediate command of the Army, and this accomplished officer lost no time in pressing forward his troops. The first fruits of their labor was the fall of Spanish Fort and Fort Alexis, which surrendered on the 8th of April, 1865, after a heavy bombardment of ten hours from the Army and Navy. The Navy landed a battery of heavy guns under the command of Lieutenant-Commander G. H. Gillis, late of the "Milwaukee." General Canby commended the services of this battery highly in the attack on these forts, which the Confederates regarded as the key to Mobile.

Nearly two thousand prisoners and sixteen heavy guns, with ammunition in abundance, were taken in these works, while the enemy lost heavily in killed and wounded. Apalache and Blakely Rivers were at once dragged by the sailors in boats, and sixteen large submerged torpedoes were taken up. On the 10th instant the "Octorara," Lieutenant-Commander W. W. Low, and the iron-clads were successful, by the diligent exertions of Commander Pierce Crosby, of the "Metacomet," in clearing the rivers of torpedoes, in moving up nearly abreast of Spanish Fort. From this position, Lieutenant-Commander Low, with his rifled gun, shelled forts Huger and Tracy with such effect that both forts were evacuated on the 11th instant, and the naval forces took possession, capturing a few prisoners in the adjoining marshes. The sailors held their position in these works till General Canby could garrison them with troops.

On April 12th, Rear-Admiral Thatcher moved with the gun boats, convoying 8,000 men of General Granger's force to the west side of Mobile Bay, for the purpose of attacking Mobile. On their anchoring at the objective point, it was found that the Confederates had evacuated all their defences and retreated with their gun-boats up the Alabama River. The city of Mobile was thereupon summoned to an immediate and unconditional surrender by Rear-Admiral Thatcher and General Granger (General Canby being at Blakely), on the ground that it was entirely at the mercy of the Federal forces, they being in possession of the outside forts. The officers sent to make the formal demand for the surrender of the city were met by the Mayor and other civil authorities at the City Hall, where the former addressed the following letter to the Federal commanders:

MAYOR'S OFFICE,  
CITY OF MOBILE, April 12, 1865. }

GENTLEMEN—I have the honor to acknowledge the receipt of your communication at the hands of Lieutenant-Colonel R. G. Laughlin, of the staff of Major-General Granger, commanding Thirteenth Army Corps, and Lieutenant-Commander S. R. Franklin, United States Navy, of the staff of Admiral Thatcher, demanding the immediate and unconditional surrender of this city. The city has been evacuated by the military authorities, and its municipal authority is now within my control. Your demand has been granted, and I trust, gentlemen, for the sake of humanity, all the safeguards which we can throw around our people will be secured to them.

Very respectfully, your obedient servant,

R. H. SLOUGH,

*Mayor of the City of Mobile.*

MAJOR-GENERAL GORDON GRANGER,

*Commanding Thirteenth Army Corps.*

ACTING-REAR-ADMIRAL H. K. THATCHER,

*Commanding West Gulf Squadron.*

The flag of the United States was then hoisted on the City Hall, and a portion of the troops immediately advanced to preserve order and prevent pillage. A provost guard was established, and the works around the city, which were of immense strength and extent, were garrisoned.

Thus ended the contest with Mobile, which from the beginning of the war had enjoyed great immunity from battle and strife. It had been the medium through which millions of dollars worth of arms, provisions and clothing had reached the Confederate armies, and after defying the Federal forces unnecessarily when the war was virtually over, it was evacuated in a panic before the Federal gun-boats had fired a shot into the city.

While the Army was landing in front of Mobile, the "Octorara" and three river iron-clads worked their way up the Blakely River, and thence down the Tensas, and anchored in front of the city. They were sent at once up the Tombigbee River, where the Confederate iron-clad "Nashville" and the gun-boat "Morgan" had fled. The two powerful rams, "Huntsville" and "Tuscaloosa," were sunk in the Spanish River before the place was evacuated. The naval forces were at once set to work clearing the main ship channel of torpedoes and obstructions, which proved to be a formidable task. While picking up torpedoes, the tug-boat "Ida" was blown up and destroyed, as well as a steam-launch belonging to the "Cincinnati." The tug-boat "Althea" was destroyed by a torpedo in Blakely River, and the gun-boat "Sciota" was blown up while underway, running across the bay, in twelve feet of water, making the fifth vessel (with the "Milwaukee") sunk by torpedoes since Admiral Thatcher's operations began against the city.

On May 4, 1865, Rear-Admiral Thatcher received written proposals from Commo-

dore Ebenezer Farrand, commanding the Confederate naval forces in Mobile waters, to surrender his ships, officers, men and public property generally, and desiring a meeting with the Admiral to arrange the terms. The two commanders met at Citronelle, a point about thirty-five miles above Mobile, and the surrender was agreed upon and accepted on the same basis and terms as were granted by General Grant to General Lee, by General Sherman to General Johnston, and by General Canby to General Taylor, which last surrender was made at the same place and time.

The day previous to the receipt of the proposal for surrender, Rear-Admiral Thatcher had made preparations for attacking the Confederate vessels in the Tombigbee, and the attack would have undoubtedly been made had Commodore Farrand delayed his surrender a day longer. As a matter of record, and as an interesting episode of the war, the conditions of the surrender are herewith inserted, with accompanying papers, which will be found to be interesting reading. It will be seen, on looking over the list of naval officers who surrendered, how many familiar names of those who once belonged to the United States Navy are found in that list—men who, after four years of hard work, found out how futile was the attempt to overturn a properly constituted and well-organized Government by a set of malcontents, who led away those whose true interests lay in supporting the Constitution and the flag to which they had sworn allegiance. They had no interest in supporting the political agitators who, for their own purposes and with no love of their Southern country, wanted to dis sever themselves from the great union of States which alone made their country a great one. No doubt, when those who laid down their arms on that occasion look back and remember the fallacious hopes with which they were beguiled, and how little was done to make the condition better than it was in the United States, will, in their hearts, regret the day when they were tempted by State's-rights fallacies to desert a flag whose march from the time of our first Revolution has been an onward one of glory and honor. Not a star of its galaxy had ever been dimmed until those whose duty it was to hold it aloft, beyond the reach of treason, undertook to trail it in the dust and trample it under their feet. It shines brighter after all it has gone through than ever it did before, as gold is brightened by being purified by fire.

This was the last of the naval fighting of the war. The great fabric of the rebellion, with all its supports knocked away, toppled to the ground; and all who were engaged in it, seeing the hopelessness

of their cause, seemed anxious to deliver up their trusts into the hands of the rightful proprietors, and make amends, as far as possible, for the injuries attempted against the Federal Government. Everything in Mobile and in the Confederate Navy Department was turned over in as good condition as might have been expected under existing circumstances. Among other prizes were four hundred heavy guns mounted in and about Mobile.

The Confederates evidently understood the importance of Mobile as a military base, and it was their intention to hold it at all hazards; yet, at one time, General Banks might have snatched this rich prize by weight of his superior numbers at New Orleans; but he preferred to go floundering around in the swamps and morasses of Texas and Louisiana, where no object was to be gained, and when he could not hold his own even with the large force he carried into those States.

COMPLIMENTARY LETTER TO ACTING-REAR-ADMIRAL THATCHER AND MAJOR-GENERAL GRANGER.

NAVY DEPARTMENT, April 29, 1865.

SIR—The Department has received your several dispatches, from time to time, advising it of your operations before Mobile; the last one, dated the 15th instant, announcing the surrender, on the day previous, to the Army and Naval forces commanded respectively by Major-General Granger and yourself.

The Department has watched with considerable interest, but with no fear of an unsuccessful result, the combined Army and Naval movements against the immediate defences of Mobile for the last few weeks, and after the capture of Fort Alexis and Spanish Fort, and the successful shelling resulting in the evacuation of Forts Tracy and Huger, was not surprised to learn of the retreat of the insurgent force to the interior, and the abandonment of their last formidable foothold on the coast.

Although no bloody strife preceded the capture of Mobile, the result was none the less creditable. Much had been expended to render it invulnerable, and nothing but the well-conducted preparations for its capture, which pointed to success, could have induced the rebel commander to abandon it with its formidable defences, mounting nearly four hundred guns, many of them of the newest pattern and heaviest calibre, its abundant supply of ammunition and ordnance stores, and its torpedo-planted roads and waters, without a serious conflict.

I am happy in extending to you and those under your command, and to Major-General Granger and those under his command, the congratulations for this victory, which places in our possession, with but one exception, all the chief points on the Southern coast, and bids fair to be the closing naval contest of the rebellion.

Very respectfully, etc.,

GIDEON WELLES,

*Secretary of the Navy.*

ACTING-REAR-ADMIRAL H. K. THATCHER,

*Commanding West Gulf Blockading Squadron, etc.*

CONDITIONS OF SURRENDER.

Memorandum of the conditions of the surrender

command of Commodore Ebenezer Farrand in the waters of the State of Alabama, made at Sidney, Alabama, May 4, 1865 :

*First*—The officers and men to be paroled until duly exchanged, or otherwise released from the obligations of their parole, by the authority of the Government of the United States. Duplicate rolls of all officers and men surrendered to be made, one copy to be delivered to the officer appointed by Acting-Rear-Admiral H. K. Thatcher, and the other to be retained by the officer appointed by Commodore E. Farrand; officers giving their individual paroles, and commanders of vessels signing a like parole for the men of their respective commands.

*Second*—All vessels-of-war, their guns and equipments, all small arms and ammunition and stores on board the said vessels, to be delivered over to an officer appointed for that purpose by Acting-Rear-Admiral Thatcher. Duplicate inventories of the property surrendered to be prepared; one copy to be retained by the officer delivering, and the other by the officer receiving it, for our information.

*Third*—The officers and men paroled under this agreement will be allowed to return to their homes, with the assurance that they will not be disturbed by the authorities of the United States so long as they continue to observe the condition of their paroles and the laws in force where they reside, except that persons resident of Northern States will not be allowed to return without special permission.

*Fourth*—The surrender of property will not include the side-arms or private baggage of officers.

*Fifth*—The time and place of surrender will be fixed by us, respectively, and will be carried out by officers appointed by us.

*Sixth*—After the surrender, transportation and subsistence to be furnished by Acting-Rear-Admiral Thatcher for officers and men to the nearest practical point to their respective homes.

H. K. THATCHER, *Acting-Rear-Admiral,*  
*Commanding Western Gulf Squadron.*  
 E. FARRAND, *Flag-officer,*  
*Commanding C. S. Naval Force in waters of Alabama.*

INSTRUCTIONS FROM ACTING-REAR-ADMIRAL H. K. THATCHER TO FLEET-CAPTAIN EDWARD SIMPSON.

WEST GULF SQUADRON,  
 U. S. FLAG-SHIP "STOCKDALE,"  
 OFF CITY OF MOBILE, May 8, 1865. }

SIR—Having signed and exchanged copies of an agreement with Commodore E. Farrand, commanding officer of the vessels of the Confederate States Navy in the waters of the State of Alabama, on the 4th instant, the terms of which are contained in the inclosed document, you will proceed with the United States steamer "Cincinnati" to the Tombigbee River, the point designated for the surrender of the vessels under the command of Commodore Farrand and receive from the officer appointed by Commodore Farrand the said vessels, their guns, equipments and stores, the paroles of officers for themselves individually, and for the seamen, marines, etc., on board thereof who were under the command of Commodore E. Farrand on the 4th instant. Having received the surrender of said vessels, their appurtenances and stores, you will cause them to be brought down to a safe anchorage in front of the city of Mobile and report to me. Should any of the paroled officers or men desire to remain where they now are, they may do so; the others, in accordance with the terms of surrender, will receive transportation and subsistence to the nearest practical point to their respective homes. The steamers designated in verbal orders will accompany you to the Tombigbee. Suitable officers, engineers and

crews to navigate the surrendered vessels will accompany you to the place of surrender, and they alone will man them.

Very respectfully,  
 H. K. THATCHER, *Acting-Rear-Admiral,*  
*Commanding West Gulf Squadron.*  
 COMMANDER EDWARD SIMPSON, *Fleet Captain,*  
*West Gulf Squadron.*

REPORT OF FLEET-CAPTAIN EDWARD SIMPSON.  
 UNITED STATES FLAG SHIP "STOCKDALE,"  
 WEST GULF SQUADRON,  
 OFF MOBILE, ALA., May 11, 1865. }

SIR—I have the honor to report that, in obedience to your order, I proceeded in the iron-clad steamer "Cincinnati" on the 19th instant up the Tombigbee River to Nanna Hubba Bluff for the purpose of receiving the surrender of the vessels under the command of Commodore Ebenezer Farrand, of the Confederate States Navy. The iron-clad steamer "Chickasaw" and the tin-clad "Nyanza" accompanied the "Cincinnati." On the morning of the 10th instant the vessels had all assembled at the bluff. Lieutenant-Commanding J. Myers, the officer appointed by Commodore Farrand to make the surrender, came on board, and after some consultation with me on the points of the condition of the surrender, surrendered the following vessels, viz.: "Morgan," side-wheel gun-boat; "Nashville," side-wheel iron-clad; "Baltic," side-wheel transport; "Black Diamond," side-wheel river-boat.

I received inventories of the stores on board each vessel, as well as an inventory of stores brought from the naval station, which were stored on board of the river-steamboat "Southern Republic," which vessel had been seized by Commodore Farrand for the purpose of receiving these articles when the naval station at Mobile was evacuated. A letter from the captain of the "Southern Republic" accompanies this report.

The only use that I have made of the vessel was to transport the Confederate officers and men to Mobile.

I received the accompanying rolls of all the officers and men, after which I paroled one hundred and twelve officers, two hundred and eighty-five enlisted men, and twenty-four marines. The officers gave their individual paroles in duplicate, and the commanding officers gave their paroles for the men of their respective commands.

Having completed the duty on which I was ordered, I have returned to Mobile with a portion of the vessels.

I inclose the memorandum of the conditions for the surrender, a copy of my instructions, and a copy of the instructions given to Lieutenant-Commanding J. Myers by Commodore Farrand, and also the invoices of the stores, etc., received.

Very respectfully, your obedient servant,  
 E. SIMPSON,  
*Fleet Captain, West Gulf Squadron.*  
 ACTING-REAR-ADMIRAL H. K. THATCHER,  
*Commanding West Gulf Squadron.*

INSTRUCTIONS FROM COMMODORE FARRAND, C. S. N.,  
 TO LIEUTENANT COMMANDING JULIAN MYERS,  
 C. S. N.

HEADQUARTERS NAVAL COMMAND,  
 STEAMER "SOUTHERN REPUBLIC,"  
 McDOWELL'S LANDING, May 5, 1865. }

SIR—You will proceed to Nanna Hubba Bluff for the purpose of carrying out the terms of surrender of the naval forces under my command, agreed upon on the 4th instant, a copy of which is herewith inclosed.

Very respectfully, your obedient servant,  
 EBEN. FARRAND, *Flag-officer, etc.*  
 LIEUTENANT-COMMANDING JULIUS MYERS,  
*P. N. C. S., Steamer "Southern Republic."*

PAROLE GIVEN BY, AND LIST OF, OFFICERS AND MEN SURRENDERED.

We, the undersigned, prisoners-of-war belonging to the Confederate naval forces serving under the command of Commodore Ebenezer Farrand, in the waters of the State of Alabama, this day surrendered by Commodore Ebenezer Farrand to Acting-Rear-Admiral Henry K. Thatcher, United States Navy, commanding the West Gulf Squadron, do hereby give our solemn parole of honor that we will not hereafter serve in the Navy of the Confederate States, or in any military capacity whatever, against the United States of America, or render aid to the enemies of the latter, until properly exchanged in such manner as shall be mutually approved by the respective authorities.

Done at Nanna Hubba Bluff, on the Tombigbee River, Alabama, this tenth day of May, eighteen hundred and sixty-five.

L. Rosseau, Captain; Ebenezer Farrand, Flag-officer; Charles W. Hays, Lieutenant; Julian Myers, Lieutenant; C. P. McGavy, Lieutenant; Charles E. Yeatman, Lieutenant; F. Watlington, Lieutenant; E. G. Booth, Assistant Surgeon; N. E. Edwards, Assistant Surgeon; Wm. W. J. Wells, Paymaster; Robert C. Powell, Assistant Surgeon; Wm. Fisk, Jr., Chief Engineer; Albert P. Hulse, Secretary; E. Lloyd Winder, Lieutenant; P. U. Murphy, Lieutenant; J. E. Armour, Paymaster; Lewis W. Munro, Surgeon; A. L. Myers, Master; D. R. Lindsay, Naval Storekeeper; Thos. G. Lang, Third-Assistant Engineer; D. B. Conrad, Fleet Surgeon; Geo. H. Oneal, Assistant Paymaster; J. M. Pearl, Assistant Paymaster; J. R. Jordan, First-Assistant Engineer; S. S. Herrick, Assistant Surgeon; F. B. Dorwin, Passed-Midshipman; J. S. Wooddell, Clerk; John H. Pippen, Clerk; John E. O'Connell, Second-Assistant Engineer; W. B. Patterson, Third-Assistant Engineer; Edward Cairy, Assistant Surgeon; Jos. Preble, Acting-Master; G. W. Turner, Acting-Master's Mate; W. A. Gardner, Third-Assistant Engineer; E. E. Courtin, Paymaster's Clerk; Edward P. Hersend, —; Jos. L. Wilson, Paymaster's Clerk; Jas. H. Marsh, Navy Yard Clerk; Benjamin G. Allen, Gunner; J. R. Shackett, Pilot; G. H. Lindenberger, Mechanic; W. D. Crawford, —; J. H. Hunt, A. M. M., Commanding steamer "Baltic"; Ira W. Porter, Acting-Gunner; B. H. Weaver, Acting-Assistant Engineer; J. W. Bennett, Lieutenant-Commanding; G. A. Joiner, Passed-Midshipman; Wm. Carroll, Passed-Midshipman; G. H. Wellington, Third-Assistant Engineer; Z. A. Offutt, Gunner; Howard Quigley, First-Assistant Engineer; H. S. Smith, Gunner; C. H. Mallery, Gunner; J. M. Smith, Paymaster's Clerk; George Newton, Sailmaker; Thos. L. Harrison, Lieutenant; O. S. Iglehart, Passed-Assistant Surgeon; D. G. Raney, Jr., First-Lieutenant, M. C.; W. G. Craig, Master P. N. C. S.; Jos. R. De Mahy, Master P. N. C. S.; M. M. Seay, Assistant Paymaster P. N. C. S.; N. M. Read, Assistant Surgeon; G. D. Lining, First-Assistant Engineer; J. R. Y. Fendall, First Lieutenant C. S. M.; A. P. Beinre, Passed-Midshipman; R. J. Deas, Passed-Midshipman; E. Debois, Second-Assistant Engineer; M. M. Rogers, Third-Assistant Engineer; F. A. Lombard, Third-Assistant Engineer; Charles A. Coullian, Third-Assistant Engineer; J. Fulton, Third-Assistant Engineer; G. W. Nailor, Third-Assistant Engineer; Wm. Fink, Paymaster's Clerk; F. B. Green, Master's Mate; Avery S. Winston, Master's Mate P. N. C. S.; John Curney, —; Jos. M. Walker, Pilot; W. L. Cameron, Paymaster's Clerk; Louis Williams, Engineer; M. L. Shropshire, Acting-First-Assistant Engineer; J. V. Harris, Assistant Surgeon; Benj. Herring, First-Engineer; J. P. Redwood, Clerk; E. W. Johnson, Master's Mate; James White, Master's Mate; Wm. C. Dogger, —; Wm. B. A. Campbell, First Lieutenant.

Julian M. Spencer, First-Lieutenant; Jasan C. Baker, First-Lieutenant; W. F. Robinson, Second-Lieutenant; Robert F. Freeman, Passed-Assistant Surgeon; G. W. Claiborne, Assistant Surgeon; H. E. McDuffie, Assistant Paymaster; A. N. Bully, Master; W. Youngblood, Chief-Engineer; John L. Rapier, Second-Lieutenant; Wm. Fauntleroy, Second-Assistant Engineer; Geo. J. Weaver, Second-Assistant Engineer; J. Thomas Maybury, Gunner; S. H. McMaster, Paymaster's Clerk; H. L. Manning, Master's Mate; Joseph Fry, Lieutenant-Commanding; Page M. Baker, Master's Mate; John G. Blackwood, First-Lieutenant; Wm. H. Haynes, Gunner; Hiram G. Goodrich, Third-Assistant-Engineer; John Applegate, Third-Assistant-Engineer; Jacob H. Turner, Acting-Master's Mate; Thomas A. Wakefield, Third-Assistant-Engineer; J. D. Johnson, Commander; W. W. Graves, Assistant Surgeon; W. T. J. Kunsh, Third-Assistant-Engineer; Henry D. Bassett, Acting-Constructor.

The next inclosure is the parole given by the seamen of the Confederate States Navy serving on different vessels, fifty-three in number, entered into in their behalf by Julian Myers, Acting-Fleet Captain.

The next, the parole given by one hundred and twenty men of the steamer "Morgan," entered into in their behalf by Joseph Fry, Lieutenant Commanding the "Morgan."

The next, the parole given by one hundred and twelve men of the "Nashville," entered into in their behalf by J. W. Bennett, Lieutenant Commanding the "Nashville."

The next, the parole given by twenty-four marines entered into in their behalf by D. G. Raney, Jr., First Lieutenant, Confederate States Marine Corps, commanding marines.

ENTRANCE OF GUN-BOATS INTO BLAKELY RIVER—  
COMPLIMENTARY LETTER RELATIVE TO COM-  
MODORE PALMER.

UNITED STATES FLAG-SHIP "STOCKDALE," }  
WEST GULF SQUADRON, }  
MOBILE, ALA., May 3, 1865. }

SIR—The Department was informed by Commodore Palmer, under date of February 10, 1865, that he would avail himself of the permission granted by it to return North after the fall of Mobile; and as he is now about to leave this squadron, I beg leave to say that he has rendered me most efficient and untiring service throughout the attack upon the defences of the city, which has resulted so favorably to our arms; and I am indebted to him for the admirable manner in which the vessels to be employed for this service were prepared under his supervision previous to my arrival on the station, and I part with him with reluctance and regret.

It was the belief of the enemy that it would be impossible for our Monitors and gun-boats to cross the Blakely River bar, owing to the shallowness of the water; but, should we succeed in doing so, their hope rested in our entire destruction by the innumerable torpedoes with which they had filled the river, combined with their marsh batteries; and they well knew that our success in overcoming these obstacles would be fatal to them; but by great exertions night and day we succeeded.

Commodore Palmer commanded the first division, consisting of the Monitors and "Octorara," and successfully ascended the Blakely with them, coming down the Tensas, directly in front of the city; the remainder of the gun-boats, led by the flag-ship, conveying General Granger's command for the purpose of making a joint attack in flank and front. These movements, having been anticipated by the enemy, led to the evacuation; and, although Commodore Palmer did not have the satisfaction of

position to do so effectually had not the rebels deprived him of the opportunity by flight.

Very respectfully, your obedient servant,  
H. K. THATCHER, *Acting Rear-Admiral,*  
*Commanding West Gulf Squadron.*

HON. GIDEON WELLES,  
*Secretary of the Navy.*

There seems to have been an unusual loss of Federal vessels in these combined operations, from the effects of torpedoes, which might indicate a want of due care in approaching the rivers, where it was known that quantities of these infernal machines were planted; but, because these vessels were destroyed in their anxiety to get ahead, it detracts nothing from the character of Rear-Admiral Thatcher and his officers for the apparent want of that prudence which every officer should exhibit in all military operations, who has the lives of officers and men at his disposal. It is well known now that Mobile was better supplied with torpedoes than any other point, with perhaps the exception of the James River, and those at Mobile having been put down at the last moment were more than usually dangerous.

The "Milwaukee," Lieutenant-Commander J. H. Gillis, and the "Osage," Lieutenant-Commander W. M. Gamble, were sunk at the entrance to Blakely River, the former on the 28th of March and the latter on the 29th. The tin-clad "Rodolph" was sunk by a torpedo on the 1st of April, while towing a scow with implements to try and raise the "Milwaukee." These, with the two steam-tugs, two launches, and the gun-boat "Sciota" (blown up), made eight vessels in all destroyed on this occasion. Fortunately the war was over and the Government did not need the vessels, which were valuable ones.

The following is a list of the losses experienced by the sinking of the vessels named above:

"Osage," 3 killed, 8 wounded; "Rodolph," 4 killed, 11 wounded; "Cincinnati's" launch, 3 killed; "Althea," 2 killed, 2 wounded; "Sciota," 4 killed, 6 wounded; "Ida," 2 killed, 3 wounded.

Though the war may be said to have virtually ended by the surrender of General Lee, on April 9th, 1865, and of General Joe Johnston, on April 27th, and naval and military operations against the Confederates may be said to have ceased, yet up to the last moment the Texans were apparently as active as ever in their domain, and for a short time it looked as if they were going "to fight it out on that line, if it took all summer."

One of their last acts was an attempt to run the blockade with the ram "Webb," which had made herself so famous in sink-

ing the "Indianola." The "Webb" was remarkably fast and a good sea-going vessel. She was loaded with cotton by private parties, who at the same time were prepared to fight, and had put on board a crew of forty-five men. Besides the cotton, part of her cargo was made up of rosin and turpentine.

No one was thinking of such an attempt, when the "Webb" appeared above New Orleans on April 24th, 1865, running at full speed, and passed down the river. She was flying the United States flag, and had a torpedo on a pole projecting from the bow. Every one who saw the "Webb" took her for an army transport, but, being finally recognized by some one, she received two shots in her hull, which, however, did no damage.

The "Hollyhock," Lieutenant-Commander Bancroft Gherardi; the "Florida," Acting-Volunteer-Lieutenant-Commander Wm. Budd; the "Quaker City," Commander Wm. F. Spicer, and the "Ossipee," Commander Wm. E. LeRoy, got underway as soon as they could get up steam and went in pursuit of the "Webb," the "Hollyhock" far in the lead. When the "Webb" was about twenty-five miles below New Orleans, she encountered the "Richmond," Captain Theodore P. Green, coming up the river. The chances for her escape being thus cut off, the "Webb" was headed for the left bank of the river and run ashore, and was set on fire by her commander, Edward G. Reed, formerly of the United States Navy. Her cargo, being very inflammable, she was soon ablaze from stem to stern and blew up, the crew escaping to the shore.

Thus ended the career of this remarkable ram, that had caused, at times, a good deal of uneasiness along the river and had done considerable damage. She followed in the footsteps of all the Confederate rams, and was the last one that we know of that was at that time owned by the Confederacy. The following officers of the "Webb" gave themselves up, after having been pursued to the swamps by the Navy: Lieutenant Read, her late commanding officer; Lieutenant Wm. H. Wall, Master S. P. LeBlanc, Passed-Midshipman H. H. Scott, Assistant Surgeon W. J. Addison, and Pilot James West.

It was not until the 25th of May that the Confederates began to evacuate their fortified places in Texas and return to their homes. The first place evacuated was the works at Sabine Pass, which had been a point both parties had contended for throughout the war.

About May 27th, the Confederate Army in Texas generally disbanded, taking advantage of the terms of surrender entered into and executed at New Orleans be-

tween the Confederate Commissioners and General Canby, of the U. S. Army, where all the Confederate fortifications and property was given up.

No Confederate naval force was left in Texas except the remains of the ram "Missouri," which was surrendered to the commander of the Mississippi Squadron.

Galveston was surrendered on the 7th of June, and the place taken possession of by the gun-boats under Captain B. F. Sands, who took the proper steps to buoy out the channel and take charge of the Government property. Rear-Admiral Thatcher visited the civil authorities on shore, who seemed to be well satisfied with the turn affairs had taken, and again and again reiterated their desire that there should be no disturbance of the existing state of affairs, and requesting that a portion of the gun-boats should be kept at Galveston for the protection of the city! All the forts throughout the State as far as Brownsville were

soon after garrisoned by United States troops, and thus ended the war in Texas.

When peace was concluded, the Texans were determined to observe the terms religiously. These people had fought bravely and squarely, resorting to few, if any, of the tricks and offensive measures pursued by the home-guards along the Cumberland and Tennessee Rivers; and when they laid down their arms and returned to their homes, it was evidently with the intention of not taking them up again except to defend the flag against which they had been so lately fighting.

The gallant old officer, Acting-Rear-Admiral Thatcher, was relieved a short time after from his command, which he had conducted with vigor and remarkable judgment. He was made a full Rear-Admiral for the services he had rendered during the war, and no officer in the Navy better deserved the honors he had won or the rewards he had reaped.

## WEST GULF SQUADRON, JANUARY 1, 1865.

COMMODORE JAMES S. PALMER.

STAFF—LIEUTENANT-COMMANDER S. R. FRANKLIN, FLEET-CAPTAIN; FLEET-PAYMASTER, EDWARD T. DUNN; FLEET-SURGEON, JAMES C. PALMER; FLEET-ENGINEER, WILLIAM H. SHOCK; ASSISTANT-SURGEON, THEORON WOOLVERTON; ACTING-ENSIGNS, FREDERICK T. MASON, ALEX. S. GIBSON, T. M. L. CHRYSTIE, AIDES.

### "RICHMOND"—SECOND-RATE.

Captain, Thornton A. Jenkins; Lieutenant-Commander, Edw. A. Terry; Acting-Volunteer-Lieutenant, Chas. J. Gibbs; Surgeon, L. J. Williams; Assistant Surgeon, J. McD. Rice; Paymaster, Edwin Stewart; Second-Lieutenant of Marines, C. L. Sherman; Acting-Masters and Pilots, J. W. Grivet and C. J. Lawrence; Ensign, P. H. Cooper; Acting-Ensigns, C. M. Chester, Lewis Clark and A. H. Wright; Acting-Master's Mate, T. J. Werner; Engineers: Chief, Jackson McElmell; First-Assistant, E. J. Brooks; Second-Assistants, John Wilson, A. J. Kenyon, Absalom Kirby, Robert Weir and William H. Crawford; Third-Assistant, C. W. Senter; Acting-Third-Assistant, Thomas McElmell; Boatswain, I. T. Choate; Acting-Gunner, Addison Fisk; Acting-Carpenter, O. W. Griffiths; Sailmaker, William Rogers.

### "LACKAWANNA"—SECOND-RATE.

Captain, George F. Emmons; Lieutenant-Commander, Chas. S. Norton; Lieutenants, S. A. McCarty and C. D. Jones; Surgeon, Thomas W. Leach; Acting-Assistant Surgeon, W. F. Hutchinson; Assistant Paymaster, Geo. S. Benedict; Acting-Master, John H. Allen; Ensigns, Geo. H. Wadleigh and Frank Wildes; Acting-Ensigns, Clarence Rathbone, F. A. Cook and W. J. Lewis; Engineers: Acting-Chief, W. A. R. Latimer; Second-Assistant, G. W. Roche; Acting-Second-Assistant, John Miller; Third-Assistant, I. B. Fort; Acting-Third-Assistants, G. W. Russell and T. W. Sillman; Acting-Boatswain, J. G. Briggs; Gunner, J. G. Foster.

### "POTOMAC"—FOURTH RATE.

Wood; Chaplain, Robert Given; Acting-Ensigns, R. Canfield, T. H. Baker, Thos. McLeavy, J. B. Barker and J. H. Church; Acting-Master's Mate, A. Whiting.

### "MONONGAHELA"—SECOND-RATE.

Commander, James H. Strong; Lieutenants, T. C. Bowen and Oliver A. Batcheller; Acting-Assistant Surgeon, Henry Rockwood; Assistant Paymaster, Forbes Parker; Acting-Ensigns, Geo. Gerrad, P. F. Harrington and D. W. Mullan; Acting-Master's Mate, W. B. Arnaud; Engineers: Chief, Geo. F. Kutz; First-Assistant, Joseph Trilley; Second-Assistants, John J. Bissett, Edward Cheney and P. J. Langer; Acting-Third-Assistants, A. C. Wilcox and H. L. Churchill; Boatswain, Wm. Green; Acting-Gunner, M. B. Means.

### "PORTSMOUTH"—THIRD-RATE.

Commander, Louis C. Sartori; Acting-Assistant Surgeon, William C. Lyman; Assistant Paymaster, E. Putnam; Acting-Masters, John Wallace and H. M. Peirce; Acting-Ensigns, J. F. Perkins and J. P. Pearson; Acting-Master's Mates, T. H. Jenks and T. S. Flood; Gunner, W. Cheney; Carpenter, G. E. Burcham; Sailmaker, L. B. Wakeman.

### "OSSISPEE"—SECOND-RATE.

Commander, Wm. E. LeRoy; Lieutenants, John A. Howell and Richard S. Chew; Surgeon, B. F. Gibbs; Acting-Assistant Paymaster, W. L. Pynchon; Acting-Masters, C. C. Bunker and H. S. Lambert; Acting-Ensigns, Charles E. Clark and W. A. Van Vleck; Engineers: Acting-Chief, James M. Adams; Second-Assistants, W. W. Vanderbilt and W. H. De Hart; Acting-Second-Assistants, M. H. Gerry,

## "BIENVILLE" - SECOND-RATE.

Commander, J. R. M. Mullany; Lieutenant, Henry L. Howison; Passed-Assistant Surgeon, A. C. Rhoades; Acting-Assistant Paymaster, W. W. Goodwin; Acting-Master, T. N. Meyer; Acting-Ensigns, Emile J. Enfer, G. H. French and F. O. Abbott; Acting-Master's Mates, J. R. Lee, T. H. Soule, Jr., and O. G. Spear; Engineers: Acting-Chief, Wm. F. Wright; Acting-First-Assistant, Warren Ewen; Acting-Second Assistants, P. O. Brightman and E. D. Merritt; Acting-Third Assistants, D. J. O'Keefe and Edward Torallas; Acting-Gunner, Wm. T. Laforge.

## "SEMINOLE" - THIRD-RATE.

Commander, Albert G. Clary; Acting-Volunteer-Lieutenant, George Mundy; Surgeon, J. C. Spear; Paymaster, L. S. Stockwell; Acting-Master, Wm. A. Maine; Acting-Ensigns, D. K. Perkins, Francis Kempton and W. S. Church; Acting-Master's Mates, Henry Webb and C. A. Thorne; Engineers: Acting-First Assistants, Claude Babcock and A. R. Calden; Acting-Third Assistants, Wm. Drinkwater, P. J. Hughes and Geo. Ellis.

## "ONEIDA" - THIRD-RATE.

Commander, Thomas H. Stephens; Lieutenants, C. L. Huntington and E. N. Kellogg; Surgeon, John J. Gibson; Assistant Paymaster, G. R. Martin; Acting-Ensign, Chas. V. Vridley; Acting-Master's Mates, Edward Bird and Daniel Clark; Engineers: Chief, Wm. H. Hunt; Second-Assistant, David Hardie; Acting-Second Assistants, B. S. Cooke and W. C. Barrett; Acting-Boatswain, Hallowell Dickinson.

## "PRINCESS ROYAL" - THIRD-RATE.

Commander, M. B. Woolsey; Lieutenant, Chas. E. McKay; Acting Assistant Surgeon, T. R. Chandler; Acting-Assistant Paymaster, F. T. Morton; Acting-Ensigns, A. H. Reynolds, T. A. Witham, J. J. Moule and C. K. Porter; Acting-Master's Mates, Wm. E. Cannon and Lewis Johnson; Engineers: Acting-First-Assistant, Wm. Huntley; Second-Assistant, J. E. Fallon; Acting-Third Assistants, A. J. Redmond, Peter Taylor and Geo. W. Caldwell.

## "OCTORARA" - THIRD-RATE.

Lieutenant-Commander, Wm. W. Low; Acting-Volunteer-Lieutenant, Wm. D. Urann; Assistant Surgeon, E. R. Dodge; Acting-Assistant Paymaster, J. H. Pyncheon; Acting-Masters, H. S. Young and M. W. McEntee; Acting-Ensigns, Geo. H. Dodge and J. N. Frost; Acting-Master's Mates, Geo. P. Gifford and Geo. W. Adams; Engineers: W. W. Shipman, R. B. Plotts and Joseph Knight.

## "KICKAPOO" - FOURTH-RATE.

Lieutenant-Commander, M. P. Jones; Acting-Volunteer-Lieutenant, D. C. Woods; Acting-Assistant Surgeon, Foster Thayer; Acting-Assistant Paymaster, F. B. Gilbert; Acting-Masters, S. V. Bennis and DeWayne Stebbins; Acting-Ensigns, J. W. Chandler, Ezra Bassett, F. W. Grantzour and G. G. Tripp; Acting-Master's Mates, E. R. Bradley and L. W. Sedam; Engineers: Acting-Chief, D. C. Riter; Acting-First-Assistant, G. W. Lumpkins; Acting-Second-Assistants, N. F. Johnson, Andrew Dolan and Samuel M. Sykes; Acting-Third Assistants, Wm. T. Baxter, Wm. S. Robb, John Feihl and Martin Highlands; Acting-Gunner, J. H. Howe; Acting-Carpenter, Wm. Ostermeyer.

## "METACOMET" - THIRD-RATE.

Lieutenant-Commander, James E. Jouett; Acting-Volunteer-Lieutenant, H. J. Sleeper; Assistant Surgeon, E. D. Payne; Acting-Assistant Paymaster, H. M. Harriman; Acting-Masters, C. C. Gill and H. C. Nields; Acting-Master and Pilot, R. Riggs; Acting-Ensigns, James Brown and R. N. Miller; Acting-Master's Mates, J. K. Goodwin and Chas. Harcourt; Engineers: First-Assistant, James Atkins;

Second-Assistants, C. H. Ball and G. P. Hunt; Acting-Third-Assistants, J. H. Nash, S. W. King and Patrick Maloney; Acting-Gunner, James Lamon.

## "KINEO" - FOURTH-RATE.

Lieutenant-Commander, John Watters; Lieutenant, Chas. S. Cotton; Acting-Assistant Surgeon, E. S. Perkins; Acting-Assistant Paymaster, Allen J. Clark; Acting-Ensigns, H. W. Mather, W. S. Keen and D. J. Starbuck; Engineers: Acting-Second-Assistant, J. S. Harper; Acting-Third-Assistant, Richard Thall.

## "J. P. JACKSON" - FOURTH-RATE.

Lieutenant-Commander, Bancroft Gherardi; Acting-Volunteer-Lieutenant, L. W. Pennington; Acting-Assistant Surgeon, Thomas S. Yard; Acting-Assistant Paymaster, Chas. B. Perry; Acting-Master, H. R. Billings; Acting-Masters and Pilots, James Maycock and Henry Rehder; Acting-Ensigns, W. H. Howard and Jos. H. Wainwright; Acting-Master's Mates, Achilles Kalniski and C. T. Taylor; Engineers: Acting-Second-Assistant, Charles Goodman; Acting-Third Assistants, J. D. Caldwell, Albert Mayer and J. E. Hare.

## "CAYUGA" - FOURTH-RATE.

Lieutenant-Commander, Henry Wilson; Acting-Assistant Surgeon, J. E. Parsons; Acting-Assistant Paymaster, Wm. A. Mann; Acting-Master, John Hanson; Acting-Ensigns, W. F. Dolliver, Isaac A. Abbott, Robert Morris and E. P. Stevens; Engineers: Second-Assistants, J. C. Chaffee and W. A. H. Allen; Acting-Third Assistants, Thomas Kidd and J. D. Thompson.

## "PENOBSCOT" - FOURTH-RATE.

Lieutenant-Commander, A. E. K. Benham; Acting-Assistant Surgeon, F. C. Sargeant; Assistant Paymaster, F. P. Himman; Acting Master, Charles E. Jack; Acting-Ensigns, Edw. Pendexter, T. McL. Miller, W. G. Campbell and Wm. Wingood, Jr.; Engineers: Acting-First-Assistant, W. M. Rodes; Acting-Third Assistants, Warren Howland, E. T. Henry and John Carey.

## "GENESEE" - THIRD-RATE.

Lieutenant-Commander, John Irwin; Acting-Assistant Surgeon, W. L. Wheeler; Acting-Assistant Paymaster, F. C. Alley; Acting-Masters, F. H. Grove, Wm. Hanson and Edwin Crissey; Acting-Ensigns, Sydney Hall, John Cannon and G. B. Foster; Acting-Master's Mate, J. N. Peabody; Engineers: Second-Assistants, T. W. Rae, M. W. Mather, Michael McLaughlin and Christopher Nulton; Third-Assistant, E. W. Clark; Acting-Third-Assistant, John H. Dee.

## "AROOSTOOK" - FOURTH-RATE.

Lieutenant-Commander, Joseph S. Skerrett; Acting-Assistant Surgeon, J. H. Richards; Acting-Assistant Paymaster, E. St. C. Clarke; Acting-Master, P. S. Borden; Acting-Ensigns, John Griffin and Wm. Barker; Acting-Master's Mate, Edward Culbert; Engineers: Second-Assistants, Samuel Gragg and James Entwistle; Acting-Third Assistants, Nathan Brown, L. M. Reenstjerna and J. P. Somerby.

## "VINCENNES" - THIRD-RATE.

Lieutenant-Commander, C. H. Greene; Assistant Surgeon, J. W. Newcomer; Acting-Assistant Paymaster, Samuel Jordan; Acting-Masters, A. E. Hunter and L. A. Brown; Acting-Ensign, Robert Henderson; Acting-Boatswain, John Smith; Acting-Gunner, Wm. Kneeland; Sailmaker, Geo. Thomas.

## "MILWAUKEE" - FOURTH-RATE.

Lieutenant-Commander, James H. Gillis; Acting-Volunteer-Lieutenant, F. John Grover; Acting-Assistant Surgeon, N. Brewster; Acting-Assistant Paymaster, G. S. Horne; Acting-Master, Geo. W. Garrison; Acting-Ensigns, N. T. Crocker, E. D. Springer.

R. L. E. Coombs and J. W. Crocker; Acting-Master's Mates, Geo. H. Cole, T. W. Stuart and G. W. Perigo; Engineers: First-Assistant, John Purdy, Jr.; Acting-Second-Assistants, Chas. Metzger, John Adkins, Henry Bauer, S. W. Evans and Frank Leonard; Acting-Third-Assistants, F. A. Hurd, Jacob Wahl, H. L. Dickerson, Morgan Lutton, J. Henry Blanch and W. A. Blanch.

"SEBAGO"—THIRD-RATE.

Lieutenant-Commander, Wm. E. Fitzhugh; Acting-Assistant Surgeon, T. Munson Coan; Assistant Paymaster, Henry A. Strong; Acting-Master, J. B. Rodgers; Acting Master and Pilot, J. H. Collins; Acting-Ensigns, E. D. Martin, S. G. Blood and J. T. Hamilton; Acting-Master's Mates, Thomas Elsmore and W. A. Hynard; Engineers: Acting-First Assistant, Wm. H. Morris; Acting-Second-Assistant, W. P. Ayres; Acting-Third-Assistants, Robert Miller and Franklin Babcock; Acting-Gunner, John Roberts.

"KENNEBEO"—FOURTH-RATE.

Lieutenant-Commander, Trevett Abbott; Acting-Volunteer-Lieutenant, Edward Baker; Acting-Assistant Surgeon, W. H. Taggart; Acting-Assistant Paymaster, Elisha Ward; Acting-Masters, A. L. Emerson and J. J. Butler; Acting-Ensigns, J. D. Ellis; Acting-Master's Mate, A. A. Mann; Engineers: Second-Assistant, L. W. Robinson; Acting-Second-Assistant, J. S. Pearce; Acting-Third-Assistants, J. N. Johnson and James Eccles.

"ITASCA"—FOURTH-RATE.

Lieutenant-Commander, George Brown; Surgeon, David Kindleberger; Acting-Assistant Paymaster, A. G. Lathrop; Acting-Master, Richard Hustace; Acting-Ensigns, C. H. Hurd, James Igo and E. S. Lowe; Acting-Master's Mates, Marcus Chapman and L. E. Heath; Engineers: Second-Assistants, John Borthwick and G. C. Irelan; Acting-Second-Assistant, Alfred Hoyt; Acting-Third-Assistant, C. A. Laws.

"KANAWHA"—FOURTH-RATE.

Lieutenant-Commander, Bushrod B. Taylor; Acting-Assistant Surgeon, F. W. Brigham; Acting-Assistant Paymaster, W. O. Jube; Acting-Ensigns, W. A. Purdie, R. P. Boss, F. H. Deering and E. R. Westcott; Acting-Master's Mate, James J. Clark; Engineers: Second-Assistant, M. M. Murphy; Acting-Third-Assistants, B. F. Sanborn, Anthony Higgins, W. D. Pancake and P. H. Friel.

"PEMBINA"—FOURTH-RATE.

Lieutenant-Commander, J. G. Maxwell; Acting-Assistant Surgeon, A. R. Holmes; Acting-Assistant Paymaster, Walter Fuller; Acting-Masters, Bowen Allen and F. E. Ellis; Acting-Ensigns, Wm. Lyndon, B. M. Chester, Chas. Putnam and C. L. Crandall; Acting-Master's Mate, H. T. Davis; Engineers: Third-Assistants, C. F. Nagle, C. F. Stroud and Augustus Dewitt.

"PANOLA"—FOURTH-RATE.

Lieutenant-Commander, Henry Erben; Acting-Assistant Surgeon, A. Y. Hanson; Acting-Assistant Paymaster, A. B. Robinson; Acting-Ensigns, C. V. Rummell, J. W. Brown and A. P. Gibbs; Acting-Master's Mate, John Rosling; Engineers: Second-Assistant, Howard D. Potts; Acting-Second-Assistants, S. A. Appold and J. B. McGavern; Acting-Third-Assistants, Philip Ketler and F. E. Hosmer.

"CHOCURA"—FOURTH-RATE.

Lieutenant-Commander, Richard W. Meade, Jr.; Acting-Assistant Surgeon, Charles Gaylord; Acting-Assistant Paymaster, J. G. Tobey; Acting-Master, Alfred Washburn; Acting-Ensigns, T. F. Tracy, M. Carver, Robert Beardsley, A. P. Atwood and T. G. Watson; Engineers: Second-Assistants,

Second-Assistant, O. D. Hughes; Third-Assistants, N. H. Lawton and Andrew Blythe.

"WINNEBAGO"—FOURTH-RATE.

Lieutenant-Commander, W. A. Kirkland; Acting-Assistant Surgeon, J. G. Bell; Acting-Assistant Paymaster, Henry Gerrard; Acting-Master, A. S. Meggathlin; Acting-Master and Pilot, Wm. H. Wroten; Acting-Ensigns, James Whitworth, Michael Murphy and John Morrisey, Jr.; Acting-Master's Mates, Wm. Edgar, H. C. Atter and J. L. Hall; Engineers: Acting-Chief, Simon Schultice; Acting-First-Assistant, James Munroe; Second-Assistant, John Wilson; Acting-Second-Assistant, Philip Allman; Acting-Third-Assistants, J. M. Quin, R. D. Wright, T. J. Myers, James Morris, S. W. Dalton, Jr., and John Donaldson.

"OHICKASAW"—FOURTH-RATE.

Lieutenant-Commander, George H. Perkins; Acting-Volunteer Lieutenant, Wm. Hamilton; Acting-Assistant Surgeon, J. K. Bacon; Acting-Assistant Paymaster, E. S. Wheeler; Acting-Master and Pilot, Benj. Lancashier; Acting-Ensign, G. L. Jordan; Acting-Master's Mates, F. A. Case, M. F. Keeshan, Chas. Atkins, W. A. Osborn and M. J. Jones; Engineers: Acting-Chief, Wm. Rodgers; Acting-First-Assistant, E. P. Bartlett; Acting-Second-Assistant, J. M. Maratta; Acting-Third-Assistants, Alfred Wilkinson, A. H. Goff, George Harris, Henry Duckworth and Alexander Wiggin; Gunner, J. A. McDonald.

"SELMA"—FOURTH-RATE.

Lieutenant, Arthur R. Yates; Acting-Volunteer-Lieutenant, Felix McCurley; Assistant Surgeon, Frederick Kreeker; Acting-Assistant Paymaster, C. W. Clapp; Acting-Master and Pilot, J. H. Collins; Acting-Ensigns, L. R. Vance and W. A. DeWitt; Acting-Master's Mate, T. G. Gilmore; Engineers: Second Assistants, John D. Ford and J. W. Patterson; Acting-Third-Assistants, H. W. Whiting and Edward Kenney.

"ARKANSAS"—THIRD-RATE.

Acting-Volunteer-Lieutenant, David Cate; Acting-Assistant Surgeon, E. D. G. Smith; Acting-Assistant Paymaster, E. G. Bishop; Acting-Ensigns, F. H. Beers and R. C. Dawes; Acting-Master's Mates, James Scully, T. E. Tinker and M. J. Nicholson; Engineers: Acting-First-Assistant, J. C. Cree; Acting-Second-Assistant, A. M. Clements; Acting-Third-Assistants, George Anderson and Charles Wolff.

"TRITONIA"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, George Wiggin; Acting-Master and Pilot, J. Nicholson; Acting-Ensign, F. R. Iaschke; Acting-Master's Mates, C. A. Trundy and H. P. Fish; Engineers: Acting-Second-Assistant, James Findley; Acting-Third-Assistant, Abraham Geer.

"VIRGINIA"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Charles H. Brown; Acting-Assistant Surgeon, W. H. Kinney; Acting-Assistant Paymaster, J. B. Hoff; Acting-Master, W. G. Mitchell; Acting-Ensigns, M. A. Blume and F. E. Brackett; Acting-Master's Mates, Herman Wissing and E. F. Small; Engineers: Second-Assistant, J. D. Toppen; Acting-Third-Assistants, J. S. Essler, J. E. Scribner, Charles Hoskins and Daniel Ward.

"PENGUIN"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, James R. Beers; Acting-Assistant Surgeon, H. R. Ruckley; Acting-Assistant Paymaster, T. C. Hutchinson; Acting-Master, Tolford M. Durham; Acting-Ensign, Benj. Cantlett; Acting-Master's Mates, C. G. Smith, F. C. Almy and W. A. Hannah; Acting-Engineers: Act-

Assistant, M. P. Randall; Acting-Third-Assistants, John Webster, Richard Reilly and Dewitt C. MeBride.

"CORNELIA"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, John A. Johnstone; Acting-Assistant Surgeon, J. G. Dearborne; Acting-Assistant Paymaster, A. Eastlake; Acting-Master, Geo. Ferris; Acting-Ensigns, G. A. Harriman, Frank Millett and G. F. Brailey; Acting-Master's Mates, W. H. Wood and G. H. Russell; Engineers: Acting-First-Assistant, S. R. Brumage; Acting-Second-Assistant, T. J. Lavery; Acting-Third-Assistants; J. A. Boynton and George Altham.

"BUCKTHORN"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Washington Godfrey; Acting-Master's Mates, B. F. Robinson, H. J. Wynde and H. A. Mayo; Engineers: Acting-Third-Assistants, E. R. Hubbard and W. H. Allen.

"AUGUSTA DINSMORE"—THIRD-RATE.

Acting-Volunteer-Lieutenant, M. B. Crowell; Acting-Assistant Surgeon, Ezra Pray; Acting-Assistant Paymaster, D. F. Power; Acting-Ensigns, C. F. R. Wappenhaus, T. H. Paine, C. H. Blount and F. A. G. Bacon; Acting-Master's Mate, A. S. Eldredge; Engineers: Acting-First-Assistant, John Seaman; Acting-Third-Assistants, Henry Lyon, Jr., W. E. Deaver, F. V. Christin and F. Scott.

"ANTONA"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, John F. Harden; Acting-Assistant Surgeon, S. B. Doty; Acting-Assistant Paymaster, H. M. Whittemore; Acting-Ensigns, F. W. Hearn, John Sears, W. G. Jones and John Bowman; Acting-Master's Mates, C. E. Schofield and G. T. Carey; Engineers: Acting-Second-Assistant, S. T. Reeves; Acting-Third-Assistants, Thos. Petherick, Jr., J. H. Burchmore and John Chambers.

"STOCKDALE"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Thomas Edwards; Acting-Assistant Paymasters, J. W. Day and W. R. Sherwood; Acting-Ensign, H. F. Martin; Acting-Master's Mates, S. H. Johnson, C. H. Cleveland, Daniel Dennis and George Rogers; Engineers: Acting-Third-Assistants, A. McH. Geary, Ambrose Kimball and Wm. W. Lewis.

"ELK"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Nicholas Kirby; Acting-Assistant-Surgeon, H. H. Wilkins; Acting-Assistant Paymaster, W. C. Robbins; Acting-Master and Pilot, Jacob Lindee; Acting-Ensigns, W. D. Taber and H. W. Brackett; Acting-Master's Mate, Alfred A. J. Emery; Engineers: Acting-Second-Assistants, Benj. Labree, T. H. Nelson and R. W. Mars; Acting-Third-Assistants, T. R. Thompson and John S. Hays.

"CARRABASSETT"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Ezra Leonard; Acting-Assistant Surgeon, C. W. Knight; Acting-Assistant Paymaster, D. W. Riddle; Acting-Ensign, A. L. C. Bowie; Acting-Master's Mates, A. A. Delano and John Devereux; Engineers: Acting-First-Assistant, J. W. Hindman; Acting-Third-Assistants, T. Harding, James Crooks and Jerome Haas.

"NYANZA"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, C. A. Boutelle; Acting-Assistant Surgeon, W. G. Frost; Acting-Assistant Paymaster, H. S. Gregory; Acting-Master, J. F. Beyer; Acting-Ensign, J. M. Chadwick; Acting-Master's Mate, J. H. Mallon; Engineers: Acting-First-Assistant, Wm. Doyle; Acting-Second-Assistant, Bernard Martin; Acting-Third-Assistants, R. G. Watson and Henry James.

"SCIOTA"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, J. H. Magune; Acting-Assistant Surgeon, R. P. Sawyer; Acting-Assistant Paymaster, B. H. Franklin; Acting-Ensign, Chas. A. Cannon; Engineers: Second-Assistants, Wm. F. Pratt and Daniel Dod.

"SAM HOUSTON"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Martin Freeman; Acting-Master, Wm. Stewart.

"PORT ROYAL"—FOURTH-RATE.

Acting-Master, Thomas M. Gardner; Acting-Assistant Surgeon, L. R. Boyce; Acting-Assistant Paymaster, F. K. Moore; Acting-Master, Wm. Hull; Acting-Ensigns, E. W. Snare and F. S. Hopkins; Acting-Master's Mate, E. V. Tyson, S. S. Bumpers, W. A. Prescott and Wm. Campbell; Engineers: Acting-Second-Assistant, Henry Moyles; Third-Assistant, W. C. F. Reichenbach; Acting-Third-Assistant, T. B. Brown.

"TALLAHATCHIE"—FOURTH-RATE.

Acting-Master, Thos. J. Lennekin; Acting-Assistant Surgeon, A. l'Anglois; Acting-Assistant Paymaster, J. C. Sawyer; Acting-Master and Pilot, James Redding; Acting-Ensigns, Haskell Crosby, S. H. Berino and W. B. Pease; Acting-Master's Mates, Wm. McKnight, John Smith and Thomas Pindar; Engineers: Acting-First-Assistant, D. R. Sims; Acting-Second-Assistant, W. M. Stewart; Acting-Third-Assistants, John A. Dalton and J. Moran.

"GLASGOW"—FOURTH-RATE.

Acting-Master, Richard J. Hoffner; Acting-Master and Pilot, Frank Kane; Acting-Ensign, Charles Welles; Acting-Master's Mates, F. A. Sherman, J. F. Baker, and W. H. Childs; Engineers: Second-Assistant, John F. Bingham; Acting-Third-Assistants, R. S. Lytle and John McAuliffe.

"PAMPERO"—FOURTH-RATE.

Acting-Master, Oliver Colbourn; Acting-Assistant Surgeon, E. C. Neal; Acting-Assistant Paymaster, A. B. Clark; Acting-Master's Mates, Rodger Farrell and J. L. Blauvelt.

"ARIZONA"—FOURTH-RATE.

Acting-Master, Howard Tibbits; Acting-Assistant Surgeon, S. S. Green; Acting-Assistant Paymaster, G. B. Tripp; Acting-Master, Wm. Harcourt; Acting-Ensign, F. Aug. Miller; Engineers: Acting-Second-Assistant, W. H. Thomson; Second-Assistant, P. G. Eastwick; Acting-Third-Assistant, John Lewis.

"GERTRUDE"—FOURTH-RATE.

Acting-Master, Henry C. Wade; Acting-Assistant Surgeon, Adam Shirk; Acting-Assistant Paymaster, R. R. Brawley; Acting-Ensigns, Wm. Shepard and Fred. Newell; Acting-Master's Mates, Benj. Leeds and C. A. Osborn; Engineers: Acting-Second-Assistant, W. H. Brown; Acting-Third-Assistants, J. H. Nesen, F. C. Morey and C. O. Farciot.

"POCAHONTAS"—FOURTH-RATE.

Acting-Master, E. E. Pendleton; Assistant Surgeon, C. L. Green; Acting-Assistant Paymaster, A. J. Wright, Jr.; Acting-Ensign, I. J. McKinley; Acting-Master's Mates, B. W. Tucker, Jr., J. H. Pray and J. L. Gould; Engineers: Acting-Second-Assistants, W. T. Warburton and Alex. McDonald; Acting-Third-Assistants, R. F. Carter, J. H. Doughty and W. D. Hyde.

"ARTHUR"—FOURTH-RATE.

Acting-Master, Joseph E. Stannard; Acting-Assistant Paymaster, C. E. Mitchell; Acting-Ensign, G. M. Bogart; Acting-Master's Mate, Robert Wood.

## "NEW LONDON"—FOURTH-RATE.

Acting-Master, Lyman Wells; Acting-Assistant Surgeon, Geo. M. Beard; Acting-Assistant Paymaster, E. A. Chadwick; Acting-Ensigns, J. M. C. Reville, V. W. Jones and H. Z. Howard; Acting-Master's Mate, E. J. Hennessy; Engineers: Acting-Second-Assistant, H. P. Powers; Acting-Third-Assistants, John Dunlap, James Creevy and John Quinn.

## "FORT GAINES"—FOURTH-RATE.

Acting-Master, John R. Hamilton; Acting-Ensign, S. A. Ryder; Acting-Master's Mates, W. J. Thornton, Bernard Segersteen and Wm. Brown; Engineers: Acting-Third-Assistants, Lucas Golden, Wm. Clark, Henry Moxley and Thomas Smith.

## "OWASCO"—FOURTH-RATE.

Acting-Masters, Thomas B. Sears and John Utter; Acting-Assistant Surgeon, J. J. Smith; Acting-Assistant Paymaster, Wm. B. Coleman; Acting-Master's Mates, F. C. Duncan and A. L. Stevens; Engineers: Second-Assistant, Haviland Barstow; Acting-Third-Assistants, T. H. Carton and G. W. Latham.

## "BOHIO"—FOURTH-RATE.

Acting-Master, Wm. M. Stannard; Acting-Master's Mate, Daniel Parsons.

## "METEOR"—FOURTH-RATE.

Acting-Master, Meletiah Jordan; Acting-Assistant Paymaster, John M. Skillman; Acting-Ensigns, W. S. Romme, J. L. Hall and C. H. Sawyer; Acting-Master's Mates, T. W. Jones and J. F. Porter; Engineers: Acting-Third-Assistants, Wm. Connell, Wm. Boyle, William Brown and P. J. Murphy.

## "KATAHDIN"—FOURTH-RATE.

Acting-Master, Edward Terrill; Acting-Assistant Surgeon, G. D. Buckner; Acting-Assistant Paymaster, L. D. Bradley; Acting-Master and Pilot, Bernard Crone; Acting-Ensigns, G. A. Faunce and Wm. Ross; Engineers: Second-Assistant, N. B. Clark; Acting-Second-Assistant, Thomas Tuttle; Acting-Third-Assistants, Sam'l Wallace and H. C. Reynolds.

## "ESTRELLA"—FOURTH-RATE.

Acting-Master, G. P. Pomeroy; Acting-Assistant Surgeon, T. E. Clark; Acting-Assistant Paymaster, G. L. Hoodless; Acting-Master's Mates, E. G. Caswell and Charles Sidney; Engineers: Acting-First-Assistant, R. G. Pope; Acting-Third-Assistants, Geo. R. Marble and J. F. Winters.

## "RODOLPH"—FOURTH-RATE.

## CHAPTER LIV.

### CAPTURE OF RICHMOND.—THE DESTRUCTION OF THE CONFEDERATE FLEET IN THE JAMES RIVER, Etc.

ASSEMBLING OF THE NAVAL VESSELS IN HAMPTON ROADS AND ON THE JAMES RIVER.—OPERATIONS OF THE ARMIES AROUND RICHMOND.—PRESIDENT LINCOLN VISITS CITY POINT.—THE MEMORABLE COUNCIL ON BOARD THE "RIVER QUEEN."—DECISION OF THE COUNCIL.—THE TERMS OF SURRENDER OFFERED TO GENERAL JOHNSTON.—ABILITY OF THE CONFEDERATE GENERALS.—THE EXAMPLE OF PRESIDENT LINCOLN.—THE CONFEDERATE IRON-CLADS BLOCKADED IN THE JAMES RIVER.—THE CONFEDERATE FLEET AS RE-ORGANIZED UNDER REAR-ADMIRAL SEMMES.—RICHMOND ENVELOPED.—ATTACK ON PETERSBURG.—REMOVAL OF TORPEDOES AND OBSTRUCTIONS IN THE RIVER.—RICHMOND EVACUATED.—SEMMES' INSTRUCTIONS FROM THE CONFEDERATE SECRETARY OF THE NAVY.—BLOWING UP OF THE CONFEDERATE FLEET.—END OF THE CONFEDERATE NAVY.—THE PRESIDENT VISITS RICHMOND.—AT THE RESIDENCE OF JEFFERSON DAVIS.—AN OVATION WORTHY OF AN EMPEROR.—TACTICS OF ASSASSINS.—JUSTICE CAMPBELL VISITS THE PRESIDENT.—DUFF GREEN RECEIVES A MERITED REBUKE.—PRESIDENT LINCOLN RETURNS TO WASHINGTON.—SCATTERING OF THE VESSELS OF THE NAVY.—THE WAR ENDED.—A NEW NATIONAL ANNIVERSARY.

THE naval operations on the Southern coast having terminated, owing to the capture of the enemy's ports, the vessels-of-war were distributed to other points, leaving only a sufficient number of gun-boats to preserve the peace and protect the inhabitants against the depredations of deserters from the Confederate army, who were making their way home in large numbers, and like hungry wolves eating up everything which came in their way.

Sherman's army on its march through the South has been compared by Confederate writers to a swarm of locusts; but these Confederate deserters were ten times worse than Sherman's men, who were supplied with abundant rations from their own commissariat.

The naval vessels on the coast were constantly called upon to fit out boat expeditions; which, with three or four hundred well-equipped men, would drive off the marauders and send them elsewhere in search of plunder. Thus, the Navy, not being governed by any feelings of rancor

towards the Confederate sympathizers on shore, stood ready to shield from harm many who had been the bitterest foes of the Union.

Meanwhile, a large number of naval vessels assembled in Hampton Roads and on the James River, in anticipation of coming events, for all eyes now centred on Richmond, where General Lee and his army of veterans were making their final stand with little prospect of success against the overwhelming force brought to bear on them. The Federal Army was ready to move as soon as General Grant should know to a certainty that General Sherman had reached Goldsboro', where it was expected he would come in contact with General J. E. Johnston's army of some forty thousand men, which was being daily strengthened by Confederates who had evacuated Savannah, Charleston and Wilmington.

This was one of the most anxious moments of the war. Hitherto Sherman had met with no serious opposition since leaving Columbia, but as he approached Goldsboro' the increasing numbers of the Con-

federates in his front gave evidence that he was to meet with strong resistance.

Everything had been done by General Grant that was possible to reinforce Sherman. A column of troops from Wilmington and another from Newbern were dispatched to meet him, and to repair the railroads so that supplies could be rapidly sent to the Federal armies. All these movements were observed by the enemy with intense interest, and they hoped to be able to overwhelm and defeat these detached divisions before Sherman could come up. The column from Newbern, under Schofield, was attacked by General Bragg with his army, reinforced by Hill's division of the Army of the Tennessee. According to Confederate accounts, Schofield was routed, and fifteen hundred of his men captured; but as General Schofield crossed the Neuse River and entered Goldsboro' on the 21st, it would seem that the Federal progress was little, if any, impeded. The column from Wilmington, under General Terry, reached the Neuse River a short distance above Goldsboro' on the 22d, ready to cross when it suited him to do so.

Goldsboro' was evidently one of the culminating points of the war, and it was evident that, before Sherman could finish the last stage of his march and make a junction with Schofield and Terry, he would have some hard fighting to do. It had, doubtless, seemed to the Confederate Government good policy to let Sherman advance to a point where all their forces could be easily concentrated against him, and on the result of the General's attempt to reach Goldsboro', in face of all the attending difficulties, depended, in a great measure, the ultimate course of the Confederate Government.

General Grant's movements also largely depended on the success of Sherman. The winter had been rainy, and the almost impassable condition of the Virginia roads made it impracticable to move an army with anything approaching to celerity, even as late as the end of March. This was, therefore, an anxious moment. Had it been possible for General Johnston to accumulate an army sufficiently strong to defeat Sherman, Grant could not have gone to the latter's assistance, owing to the condition of the roads. Sherman was then the central figure of the war—on his management depended the terms that would be demanded of General Lee when Grant should move on Petersburg and Richmond.

President Lincoln, being no longer able to restrain his anxiety, now proceeded to City Point, and would doubtless have been joined by the members of the Cabinet had he not expressly forbidden it.

General J. E. Johnston, Sherman had some of the ablest generals in the Confederacy to contest his march. General Beauregard had been reinforced at Charlotte, N. C., by General Cheatham and the garrison of Augusta, and was moving towards Raleigh. General Hardee, with the troops from Savannah and Charleston, was marching towards the same point, as were General Bragg and Hoke from Wilmington; so that it appeared as if Sherman would encounter an army of eighty thousand men, commanded by one who was considered by many competent judges the ablest of the Confederate generals. There was certainly no general on the other side for whose abilities Sherman had so great a respect as for those of Johnston. Beauregard, Hardee and Bragg gave him comparatively little uneasiness, and he was glad when Hood relieved Johnston at Atlanta, as he then felt assured of victory.

But the Confederate army, which in the enumeration of its parts appeared so imposing, was no match for Sherman's victorious hosts, who had gained a prestige they did not intend to forfeit. Circumstances also combined to favor Sherman's advance. When the Federal campaign in South Carolina commenced, Hardee had eighteen thousand men; when he reached Cheraw he had but eleven thousand, and at Averyboro' the number had diminished to six thousand. Most of this falling off was due to desertions, and it afforded an indication of the rapid collapse of the military enthusiasm which had once prevailed in the Southern Confederacy.

General Hardee attempted to impede Sherman's march when the latter reached the narrow territory between the Cape Fear and the Black River, but was able to effect very little, retreating as night came on towards Smithfield, N. C. On the 18th, the Federal Army moved on Goldsboro' in two columns, the 15th and 17th Corps on the direct road from Fayetteville, and the 14th and 20th Corps on the road from Averyboro'. The former column was supposed by the Confederates to be a day's march in advance of the other, and it was therefore determined to concentrate all their available troops against it on the 19th.

Then was fought the battle of Bentonville by the combined forces of Bragg and Hardee, with the object of crippling Sherman before he could effect a junction with Schofield and Terry, and the action was for a time so severe that it looked as if General Johnston would accomplish his purpose. But on the 20th General Sherman's whole army confronted the Confederates; before daybreak, on the 22d, General Johnston moved towards Smithfield, leaving many

three days' fighting, according to Confederate accounts, was 224 killed and 1,499 wounded, the small loss being accounted for by the fact that the Confederates fought under cover, which gave them a great advantage over the Federal troops. Next day (the 23d) the junction was made by General Sherman with the troops of Schofield and Terry, which disposed of General Johnston's army for the time being.

All the principal lines of railroad leading South were now within the reach of Sherman's forces or under their control, and the ultimate result could not be doubtful. It was impossible for General Johnston to retreat south without danger of his army breaking up through desertion, and his only chance was to strongly intrench himself and maintain a threatening attitude.

General Sherman felt so sure of the final surrender of General Johnston, that, after placing General Schofield in command of his army at Goldsboro', he proceeded in the little steamer "Russia" to City Point, Virginia, to confer with General Grant on the situation, arriving on the 27th of March. President Lincoln was then on board the steamer "River Queen," at City Point, and he received General Sherman with the warmth of feeling which distinguished him, for he felt that the presence of Sherman at City Point was an assurance that the latter had Johnston's army in such a position that it could do no further mischief.

The arrival of General Sherman brought joy and confidence to every one in the Army and Navy on the James River, for it was understood that he now held General Johnston in a position from which the latter could not move without precipitating a battle with over eighty thousand veteran soldiers, well supplied with everything necessary, while the Confederates were badly provided with provisions, clothing, and even ammunition.

At one time it was thought that General Johnston would endeavor to break away from Smithfield and effect a junction with General Lee. In the light of subsequent events, this is seen to have been impossible. Again, it was thought that Lee would, perhaps, evacuate Richmond and make a junction with Johnston—a movement equally impracticable, for Grant was extending his left below Petersburg, and should Lee leave his fortified lines Grant would follow him so closely that it would be impossible for him to unite with General Johnston or fall on Sherman's army. Besides, with his eighty thousand men, Sherman felt confident that he could hold his own against Johnston and Lee combined until Grant could come upon the scene with his troops.

The morning after General Sherman's arrival at City Point, a council of war was

held on board the steamboat "River Queen," at which were present the President, General Grant, General Sherman and Admiral Porter. As considerable controversy has arisen over the terms of surrender offered to General Johnston, and the truth of the matter is not generally known, we will here narrate what occurred on the occasion, as we violate no injunction of secrecy by so doing.

The principal conversation was between the President and General Sherman. The former stated his opinion at length. He feared that General Lee, seeing the Federal lines closing about him day by day, the coast completely blockaded, the Confederate army almost destitute of clothing and provisions, might attempt to break away from his fortifications at Richmond, make a junction with Johnston, and escape to the south. This was rather an extreme view to take of the matter, for, in the opinion of those best qualified to judge, such an attempt on the part of General Lee could not have succeeded. General Sherman had eighty thousand fine troops at Goldsboro', only one hundred and fifty miles from Richmond and one hundred and twenty miles from Greensboro', at which latter point the Richmond and Danville railroad, the only route by which Lee could escape, was cut. All this General Sherman explained to the President, who was somewhat reassured, yet the number of shrewd questions propounded by Mr. Lincoln was remarkable, and some of them were found difficult to answer. His topographical knowledge of the country traversed by Sherman's army, as well as other military matters he was not supposed to be familiar with, surprised those who listened to him.

Like the rest of those present at the council, the President was confident that the end of the war was close at hand, and, although a bloody battle might yet be fought, Richmond must soon be in possession of the Federal Government. It was the great desire of the President to secure the surrender of the Confederate armies without further loss of life, to which end he desired the most liberal terms should be granted. "Let them surrender and go home," he said; "they will not take up arms again. Let them all go, officers and all, let them have their horses to plow with, and, if you like, their guns to shoot crows with. Treat them liberally. We want these people to return to their allegiance and submit to the laws. Therefore, I say, give them the most liberal and honorable terms." These sentiments were worthy of the man who uttered them.

General Sherman, however, took a military view of the situation. He had made a long and toilsome march and desired to reap the honors due to a victorious general.

Feeling certain that the game was in his own hands, he did not hesitate to differ with the President, assuring the latter that he had sufficient force and strength of position to dictate his own terms to General Johnston, and he graphically illustrated, with the aid of a map, the condition of affairs at Goldsboro' and Smithfield.

"All I want," said General Sherman, "is two weeks' time in which to clothe my soldiers. I will then be ready to march on Johnston and compel him to surrender. He is short of everything, and in two weeks would have to surrender, anyway."

"Yes," replied the President, "but two weeks is a long time, and the first thing you know General Johnston will have gone south again with those veterans of his, and will keep the war going indefinitely. No, General, he must have no excuse for going away; we must have his surrender at all hazards, so be easy with him about terms."

"Mr. President," said General Sherman, "there is no possible way for Johnston to escape as he is now situated. I can command his unconditional surrender."

"What is to prevent Johnston from escaping with his army by the southern railroads while you are fitting out your men?" inquired General Grant.

"There are no southern railroads to speak of," replied Sherman, "by which Johnston could escape. My 'bummers' broke up the roads, and did their work too well to permit them to be used by any one."

"But," said General Grant, "cannot the Confederates re-lay the rails, as our troops have done from Newbern to Goldsboro'?"

Sherman smiled. "No," he said, "my boys don't do things by halves. They make a fire of the ties, and the rails are twisted until they are as crooked as rams' horns; all the blacksmiths in creation couldn't straighten them out again. Mr. President," said Sherman, turning to Mr. Lincoln, "give yourself no uneasiness; the Confederacy will collapse in a few days; we hold the line between Goldsboro' and Wilmington; my transports can come as far as Newbern; we can overrun the South without hindrance; we are masters of the situation, and General Johnston must surrender."

"All very well," said the President, "but we must make no mistakes, and my way is a sure one: Offer General Johnston the same terms that will be offered Lee; then, if he will not accept them, try your plan; but as long as the Confederates lay down their arms I don't think it matters much how they do it. Don't let us have any more bloodshed if it can be avoided. General Grant is in favor of giving General Lee the most favorable terms."

"Well, Mr. President," said General Sherman, "I will carry out your wishes to the best of my ability, and I am satisfied when Richmond falls and Lee surrenders General Johnston will follow his example."

This ended the memorable council on board the "River Queen." On what took place on that occasion might depend whether the Confederates would lay down their arms or continue hostilities, thereby reducing the South to still greater straits, if possible, than it was then in. The President, being desirous that General Sherman should rejoin his command as soon as possible, the latter returned, the afternoon of the council, in the U. S. steamer "Bat" to Newbern, N. C.

At this day the policy of Mr. Lincoln will be recognized as good, both on the ground of expediency and of humanity. We were engaged in a war, not with foreigners, but against our own countrymen, with no object except to vindicate the authority of the Federal Government. There were no knotty questions involved, it was simply a question whether the Confederates could carry on the war any longer, or whether they would return to their allegiance. Even then the Confederates were more dangerous foes than a dozen European nations would have been, although in the most straitened circumstances, deficient in food, clothing and forage, and even in ammunition, so indispensable to an army. They had still a formidable force about Richmond, which, if it could effect a junction with Johnston's army, would offer a stout resistance under those able commanders. The Federal Government had had too many proofs of the ability of the Confederate generals and the gallantry of their soldiers to need any further evidence, and had no desire to drive them to desperation by requiring a degrading submission to its authority. The Government was now in a position to display not only its military strength but its magnanimity. It was right that, when the soldiers of the North clasped hands with those who had so long and bitterly opposed them in the field, they should desire to bury the past in oblivion, and resume once more the bonds of fraternal affection. The example set by President Lincoln was followed by those who had borne the brunt of the conflict, and had learned to appreciate the courage and hardihood of their late antagonists. General Grant shared in the President's desire for the most liberal arrangements that could be entered into for the surrender of the Confederate armies; and while Mr. Lincoln had implicit confidence in Grant's military abilities, he relied no less on his good judgment and kind feeling, and it is fortunate that the last act in the bloody

drama of the civil war was under the direction of the two men acting in perfect accord, whose names will be handed down to posterity with increase of honor as the years roll by.

When General Lee surrendered at Appomattox the work of the North Atlantic Squadron was over, for all the James River region was in the hands of the Federals. Up to that time the squadron in Trent's Reach was quietly holding the Confederate iron-clads, under the command of Raphael Semmes—recently created Rear-Admiral—above Drury's Bluff, where they were quite harmless and would either have to be blown up or surrendered.

Admiral Semmes assumed command of the James River fleet on the 18th of February, 1865, relieving Commodore J. K. Mitchell. The fleet as reorganized comprised the following named vessels:

"Virginia" (iron-clad), flag-ship, four guns, Captain Dunnington; "Richmond" (iron-clad), four guns, Captain J. D. Johnson; "Fredericksburg" (iron-clad), four guns, Captain Glasse; "Hampton" (wooden), two guns, Captain Wilson (late of the "Alabama"); "Nansemond" (wooden), two guns, Captain W. K. Butt; "Roanoke" (wooden) two guns, Captain Polloc; "Beaufort" (wooden), two guns, Captain Wyatt; "Torpedo" (wooden), one gun, Captain Roberts.

This fleet was assisted in the defence of the river by shore batteries under command of naval officers—such as Drury's Bluff Battery, Battery Brooke, Battery Wood, and Battery Semmes. The Confederate vessels were not in the most efficient condition as regarded their *personnel*, which was mostly drawn from the army. The real difficulty in getting to Richmond with the Federal gun-boats was in the heavy fortifications along the James River above Howlett's Battery, the sunken torpedoes, and the obstructions in the channel, which could not be removed under fire.

While the Federal and Confederate forces on the river were in this position, General Grant was gradually enveloping Richmond with his army. The Confederate lines in the vicinity of Petersburg having been weakened by the necessity of withdrawing troops to defend Lee's extreme right at Five Forks, General Grant, on the morning of the 2d of April, ordered a vigorous assault to be made on the enemy, which gave the Federals possession of Petersburg, and rendered Richmond no longer tenable.

The night following this success, President Lincoln went on board the flag-ship "Malvern" as the guest of Admiral Porter. On every hand was heard the sound of artillery and musketry, showing that the

Federals were closing in on the Confederate lines.

The night before Richmond was evacuated by the Confederate forces, the President and Admiral Porter were seated on the upper deck of the flag-ship "Malvern," when the President made the remark to the latter: "Can't the Navy do something at this particular moment to make history?" The Admiral replied: "The Navy is doing its best just now, holding the enemy's four heavy iron-clads in utter uselessness. If those vessels could reach City Point they would commit great havoc—as they came near doing while I was away at Fort Fisher. In consequence, General Grant ordered the channel to be still further obstructed with stones, so that no vessel can pass. We can hold the fort with a very small force and prevent any one from removing the obstructions. Therefore, the enemy's iron-clads are useless."

"But, can't we make a noise?" asked the President. "Yes," replied the Admiral, "and if you desire it I will commence."

The Admiral telegraphed to Lieutenant-Commander K. R. Breese, Fleet-Captain, who was just above Dutch Gap, to have the vessels' guns loaded with shrapnel, to point in the direction of the forts and to keep up a rapid fire until directed to stop. The firing commenced about 11 o'clock P. M., and the President listened attentively while the flashes of the guns lighted up the horizon. In about twenty minutes a loud explosion shook the flag-ship and the President exclaimed: "I hope to Heaven one of our vessels has not blown up!" The Admiral assured him that the explosion was much further up the river and that it was doubtless one of the Confederate iron-clads. A second explosion soon followed, and not long after two more, which caused the Admiral to remark: "That's all of them; no doubt the forts are evacuated and to-morrow we can go up to Richmond."

By eight o'clock the following morning the work of removing the obstructions in the channel was completed sufficiently to allow the passage of the flag-ship, and several of the smaller vessels went up the river and with their boats began sweeping the stream for torpedoes. It was soon discovered that all the forts had been evacuated, and nothing was to be seen of the Confederate iron-clads except their black hulls, partly out of water.

In the meantime, General Weitzel, who was on the left bank of the James with a large body of troops, hearing the firing of the gun-boats and the explosions of the Confederate iron-clads, got all his men under arms, supposing that the Federal gun-boats were engaging the enemy's vessels and forts. A large force of Confederates in

Weitzel's front, which barred the way to Richmond, seems to have been of the same opinion, and, leaving their trenches, retreated on the city. When daylight appeared, finding that there was no force opposing him, and that the road to Richmond was clear, Weitzel marched in and took possession of the city. This was the way it appeared to the Federal officers present on the occasion; but we insert the Confederate side of the story, as told by Rear-Admiral Raphael Semmes, who certainly ought to have known something about the matter. Admiral Semmes states that when sitting down to his dinner on board his flag-ship, about 4 o'clock on the 2d of April, the day Grant had broken through Lee's lines, a special messenger brought him a letter from the Confederate Secretary of the Navy. As Semmes had not heard of the occurrences at Petersburg, he was somewhat surprised at the contents of this epistle, which were as follows :

## CONFEDERATE STATES OF AMERICA.

EXECUTIVE OFFICE,  
RICHMOND, VA., April 2, 1865. }

*Rear-Admiral Raphael Semmes, Commanding  
James River Squadron:*

SIR—General Lee advises the Government to withdraw from the city, and the officers will leave this evening accordingly. I presume that General Lee has advised you of this and of his movements, and made suggestions as to the disposition to be made of your squadron. He withdraws upon his lines towards Danville this night; and, unless otherwise directed by General Lee, upon you is devolved the duty of destroying your ships this night, and with all the forces under your command joining General Lee. Confer with him, if practicable, before destroying them. Let your people be rationed as far as possible for the march, and armed and equipped for duty in the field.

Very respectfully, your obedient servant,

S. R. MALLORY,  
*Secretary of the Navy.*

It was evident that Richmond was to have been evacuated that night, and by a curious coincidence the firing from the Federal gun-boats commenced early the same evening, which doubtless caused Semmes to expedite his movements. He signalled for all commanding officers of vessels to repair on board the flag-ship, and impressed upon them the importance of keeping the intended operations secret, lest the suspicions of the Federals might be excited.

Semmes remarks: "The sun was shining brightly, the afternoon was calm, and Nature was just putting on her spring attire." He could not help contrasting the peace and quiet of Nature "with the description of a great Government and the ruin of an entire people, which was at hand:"

"So unsuspecting were the Government subordinates of what was going on, that the flag-of-truce

Federal headquarters, a few miles below on the river, carrying backward and forward exchange prisoners. As these boats would pass the ships-of-war, filled to overflowing with the poor fellows just released from Yankee prisons, broken, wan and hollow-eyed, the prisoners would break into the most enthusiastic cheering as they passed the Confederate flag. It seemed to welcome them home. They little dreamed that it would be struck that night forever, and the fleet blown into the air that their own fetters had been knocked off in vain, and that they were to pass henceforth under the rule of the hated Yankee."

Thus mused Rear-Admiral Semmes on the eve of blowing up his squadron. Circumstances prevented him from communicating with General Lee; and, seeing that it was a case where every one must take care of himself, Semmes determined to destroy his vessels at once, especially as the Confederate Army seemed to be setting fire to everything around them, and leaving in a hurry. Semmes had originally intended to sink his vessels quietly, so that the Federals would have no idea of what was going on; but soon after dark he saw the whole horizon to the north of the James lighted up, rendering concealment on his part no longer necessary. Semmes omits to mention that the Federal gun-boats were thundering at the gates, which was the real reason for so hastily destroying the iron-clads. The officers and men were put on board the small gun-boats, and at about midnight the iron clads blew up, one after another, with a terrific explosion, adding to the grandeur of the scene already existing of burning barracks. The shells bursting as the fire came in contact with them, the signal-rockets from both sides filling the air like thousands of shooting-stars; the booming of guns in the distance, the long roll of the drums calling the troops to fall in, mingled with the sound of trumpets, all combined to make a spectacle and an uproar as though pandemonium had broken loose. It seemed as if heaven and earth had united to celebrate the conclusion of a struggle that had caused so much suffering.

That was the end of the Confederate Navy, which went up in what might have been considered a blaze of glory, but for the fact that the James River fleet had been the most useless force the Confederates had ever put afloat—the forts, torpedoes and obstructions on the river being far more formidable adversaries, and quite sufficient, if properly managed, to keep any hostile vessels from ascending the narrow channel, where, if one should happen to be sunk, it would effectually bar the progress of those behind it.

The work of the Federal Navy was all over in this quarter, and those who for many months had guarded the obstructions in the river rejoiced when the monotonous task was concluded. If warboats were sent

up, and blue lights burned, and national salutes fired, the demonstration was as much on account of the return of peace as in honor of victory. It signalized the end of that fraternal strife between people who could never live apart, but who, united under one Government, could bid defiance to the world in arms.

Whether our country will profit as much as it should do from past experience remains to be seen; but, so far, we have not given much evidence of progress in matters pertaining to the defence of our coasts and the construction of a Navy adequate to protect the nation from foreign and domestic enemies; which latter exist in every country, no matter how beneficent may be its laws.

When the channel was reported clear of torpedoes, a large number of which was taken up, Admiral Porter proceeded up towards Richmond in the "Malvern, with President Lincoln on board the steamer "River Queen." Finally, the "Malvern" grounded below the city, and the Admiral, taking the President in his barge, accompanied by a tug with a file of marines, continued on to Richmond.

About a mile below the landing, the tug was permitted to go to the relief of a party in a small steamer who were caught under a bridge and held by the current, and the barge proceeded alone. The street along the river-front was deserted, and, although the Federal troops had been in possession of the city some hours, not a soldier was to be seen. At the landing was a small house, and behind it a dozen negroes were digging with spades. Their leader, an old man, sprang forward exclaiming: "Bress de Lord, dere is de great Messiah!" and he fell on his knees before the President, his comrades following his example. The President was much embarrassed. "Don't kneel to me," he said, "kneel to God only, and thank Him for the liberty you will hereafter enjoy." It was a minute or two before the officers could get the negroes to leave the President; but time was precious. The negroes joined hands and sang a hymn, to which the President listened respectfully.

Four minutes had passed since the party had landed in apparently deserted streets; but, now that the hymn was sung, the streets seemed to be suddenly alive with the colored race, the crowd around the President became very oppressive, and it was necessary to order the boat's crew to fix bayonets and surround him to keep him from being crushed. The negroes, in their ecstasy, could not be made to understand that they were detaining the President, and would not feel that they were free unless they heard it from his own lips. Mr. Lincoln, therefore, made a few remarks, assuring

them that they were free and giving them good advice, after which the party managed to move slowly on to the city.

Passing the Libby Prison, the President paused for a moment to look at the place where so many Union soldiers had dragged out a dreadful existence. "We will pull it down!" shouted the crowd of poor whites and negroes. "No," said the President, "leave it as a monument."

As the party slowly reached the city, the sidewalks were lined with people, white and black, but there was no anger on any face. It was like a gala-day, and no man was ever accorded a warmer welcome. The heat of the weather was suffocating; the President towered a head and shoulders above the crowd, fanning himself with his hat, and looking as if he would give the Presidency for a glass of water. Now the windows flew up, and eager, peering faces seemed to ask: "Is this man, with soft eyes and kind face, the one that has been held up to us as the incarnation of wickedness, the destroyer of the South?" The city was still on fire, and the smoke almost choked the Presidential party.

While stopped a moment by the crowd, a white man in his shirt-sleeves rushed towards the President. When he got within ten feet of him he stopped, took off his hat, and cried out, "Abraham Lincoln, God bless you! you are the poor man's friend!" Just after this, a beautiful girl struggled through the crowd and presented Mr. Lincoln with a bouquet of roses. There was no cheering at this, nor any evidence of disapprobation, but it was evidently a matter of great interest, for the girl was surrounded and plied with questions on returning to the sidewalk.

What could all this mean but that the people of Richmond were glad to see the end of the war and the advent of a milder form of Government? They had, no doubt, felt that the late Government should have remained at the capital and surrendered in a dignified manner, making terms for the citizens, guarding their rights and acknowledging that they had lost the game. There was nothing to be ashamed of in such a surrender. Their armies had fought as people never fought before, and all that was wanted to make them glorious was the submission of the leaders with the troops in a dignified way, while they might have said: "We have done our best to win, but you are too strong for us; we pledge ourselves to keep the peace." Instead of remaining to protect the citizens against the ruffianism of the mob, the Confederate authorities of Richmond left that to the Federal troops, and no soldiers ever performed a trust more faithfully. At the moment when President Lincoln entered

the city, the majority of them were engaged in putting out the fires that were started by the Confederates as they left the place, determined, it would seem, to destroy the public works, so that the Federals could derive no benefit from them.

At length, a cavalry-man was encountered sitting his horse and gazing at the President with much interest. The Admiral sent him at once to inform the general-in-command of the arrival of the President, and to request a military escort to guard him and enable him to force his way through the crowd. A troop of cavalry soon arrived, the streets were cleared, and the President soon reached the mansion just vacated by Mr. Davis, and now the headquarters of Generals Weitzel and Shepley. It was a modest house, comfortably but plainly furnished.

A great crowd of civilians now assembled around this house, greeting the President with loud cheers. General Shepley made a speech, after which the President and party entered a carriage and visited the State-House, the late seat of the Confederate Congress. The building was in dreadful disorder, showing the sudden flight of the legislators.

After this inspection, Admiral Porter urged the President to go on board the "Malvern," as he began to feel the responsibility resting on him for the care of his person. The Admiral was oppressed with uneasiness until he once more stood with Mr. Lincoln on the deck of the flag-ship, and he determined the President should go nowhere again, while under his charge, without a guard of marines.

That evening, at about eight o'clock, a man hailed the "Malvern," which was then anchored off the city, saying that he had dispatches for the President. A boat was sent on shore, with orders to bring the dispatches, but not the bearer of them; but returned with neither dispatches nor man. The boat officer said the person would deliver the dispatches to no one but the President himself. After some discussion, the boat was sent back to bring the man on board, but he had disappeared. The Admiral inquired about his appearance, and from the description was *afterwards* satisfied that the pretended bearer of dispatches was Wilkes Booth. Half an hour later another hail came from the shore, which was not more than twenty yards distant. A sailor from the "Saugus" wanted to report on board. There was no such vessel in the fleet, though there was one of that name in the Navy. A boat was sent to bring the man off, but he was nowhere to be seen. These circumstances made those charged with the care of the President more suspicious, and every precaution was taken that

no one should get on board the "Malvern" without full identification. The President himself felt a little nervous, and that night a marine kept guard at his state-room door.

Next morning, at 10 o'clock, Mr. John A. Campbell, late Associate Justice of the Supreme Court of the United States, sent a request to be allowed to come on board with General Weitzel, to call on the President. He spent an hour on board, Mr. Lincoln and himself seeming to enjoy themselves very much, to judge from their laughter. After General Weitzel and Mr. Campbell had returned on shore, Admiral Porter went below, and the President said to him: "Admiral, I am sorry you were not here when Mr. Campbell was on board. He has gone on shore happy. I gave him a written permission to allow the State Legislature to convene in the Capitol in the absence of all other governments." The Admiral was astonished at this piece of information, and felt that this course would bring about complications. He found it all had been done by the persuasive tongue of Mr. Campbell, who had promised the President that, if the Legislature of Virginia could meet, it would vote the State right back into the Union, and cause all the Virginia troops to lay down their arms; that it would be a delicate compliment paid to Virginia, and would be appreciated, etc. General Weitzel agreed with Mr. Campbell, and the President was won over to agree to what would have been a most humiliating thing if it had been accomplished.

When Mr. Lincoln informed the Admiral that General Weitzel had gone on shore with an order permitting the Legislature to meet, the Admiral reminded the President that the city of Richmond was under martial law, and that no civil authority could exercise any power without the sanction of the General commanding the Army. This order should go through General Grant, who would doubtless protest against this arrangement with Mr. Campbell.

The President remarked, "Weitzel made no objection, and he commands here." "That is because he is Mr. Campbell's particular friend," replied the Admiral, "and wished to gratify him."

"Run and stop them," said the President, "and get my order back."

To make things sure, the Admiral had an order signed by the President, and directed to General Weitzel as follows: "Return my permission to the Legislature of Virginia to meet, and don't allow it to meet at all." An ambulance wagon was at the landing, and, giving the order to an officer, the Admiral said to him, "Jump into that wagon and kill the horse, if necessary, but catch the carriage which carried General Weitzel and Mr. Campbell and deliver this

order to the General." The carriage was overtaken, the President's order was sent back, and no attempt was made to induce the latter to reconsider his decision. This was a clever scheme on the part of Mr. Justice Campbell to soothe the wounded feelings of the South, and no doubt was kindly meant, but it would have created a commotion in the North.

About an hour after the departure of Mr. Campbell, a man dressed in gray homespun, with a huge rough stick in his hand, appeared at the landing and demanded to see the President. "I am Duff Green," he said; "I want to see Abraham Lincoln, and my business concerns myself alone. You tell Abraham Lincoln that Duff Green wants to see him." The officer of the deck delivered this message in the cabin, and the President said, "Let him come on board; Duff is an old friend of mine, and I would like to talk with him."

When Mr. Duff Green passed over the side, he stood defiantly on deck, scowled at the flag, then turning to Admiral Porter, whom he knew very well, said: "I want to see Abraham Lincoln." "When you come in a respectful manner," said the Admiral, "the President will see you; but throw away that cord of wood you have in your hand before entering the President's presence."

"How long is it," inquired Duff Green, "since Abraham Lincoln took to aping royalty? Man clothed in a little brief authority cuts such fantastic capers before high heaven as make the angels weep. I expect airs from a naval officer, but not from a man with Abraham Lincoln's horse-sense."

The Admiral thought, and still thinks, the man was crazy; but he made Mr. Green throw his stick overboard, which was done, with the remark: "Has it come to that? Is he afraid of assassination? Tyrants generally get into that condition."

The Admiral reported all this to the President, who remarked: "Let him come down; he always was a little queer; I shan't mind him."

When Mr. Green was shown into the cabin, the President arose and offered him his hand. "No," said Green, with a tragic air, "it is red with blood; I can't touch it. When I knew it, it was an honest hand. It has cut the throats of thousands of my people, and their blood, which now lies soaking into the ground, cries aloud to heaven for vengeance. I came to see you, not for old remembrance' sake, but to give you a piece of my opinion. You won't like it, but I don't care, for people don't generally like to have the truth told them. You have come here, protected by your Army and Navy, to gloat over the ruin and desolation you have caused. You are a second Nero, and had

you lived in his day you would have fiddled while Rome was burning."

When the fanatic commenced his tirade, Mr. Lincoln stood with outstretched hand, his mouth wreathed in a pleasant smile. He was pleased at meeting an old and esteemed friend. As Duff Green started on his talk, the outstretched hand was withdrawn, the smile left his lips and the softness in the President's eyes faded out. He was another man altogether. Green went on without noticing the change in the President's manner and appearance: "You came here," he continued "to triumph over a poor conquered town, with only women and children in it, whose soldiers have left it, and would rather starve than see your hateful presence here; those soldiers—and only a handful at that—who have for four years defied your paid mercenaries on those glorious hills, and have taught you to respect the rights of the South. You have given your best blood to conquer them, and now you will march back to your demoralized Capitol and lay out your wits to win them over so that you can hold this Government in perpetuity. Shame on you! Shame on—"

Mr. Lincoln could stand it no longer, his hair stood on end and his nostrils dilated. He stretched out his arm until his lean forefinger almost touched Duff Green's face. "Stop, you political tramp," he exclaimed; "you, the aider and abettor of those who have brought all this ruin upon your country, without the courage to risk your person in defence of the principles you profess to espouse! A fellow who stood by to gather up the loaves and fishes, if any should fall to you! A man who had no principles in the North, and took none South with him! A political hyena, who robbed the graves of the dead and adopted their language as his own! You talk of the North cutting the throats of the Southern people. You have all cut your own throats, and unfortunately have cut many of those of the North. Miserable impostor, vile intruder! Go, before I forget myself and the high position I hold! Go, I tell you, and don't desecrate this national vessel another minute!"

This was something Mr. Duff Green had not calculated upon. His courage failed him, and he fled out of the cabin, never stopping until he reached the deck, where he stood looking at the shore, seemingly measuring the distance to see if he could swim to the landing. The Admiral followed close behind him, and said to the officer of the deck, "Put that man on shore, and if he appears in sight of this vessel while we are here, have him sent away with scant ceremony."

When the Admiral returned to the cabin,

fifteen minutes later, the President was perfectly calm, as if nothing had happened, and did not refer to the subject for some hours. "This place seems to give you annoyance, sir," said the Admiral; "would you prefer going to City Point, where we are more among friends than here?" "Yes," replied the President, "let us go. I seem to be putting my foot into it here all the time. Bless my soul! how Seward would have preached and read Puffendorf, Vattel and Grotius to me, if he had been here when I gave Campbell permission to let the Legislature meet! I'd never have heard the last of it. Seward is a small compendium of international law himself, and laughs at my horse-sense, which I pride myself on, and yet I put my foot into that thing about Campbell with my eyes wide open. If I were you, Admiral, I don't think I would repeat that joke yet awhile. People might laugh at you for knowing so much more than the President."

Several incorrect accounts of the President's visit to Richmond have from time to time appeared in print, for which reason we have inserted this narrative of Mr. Lincoln's proceedings.

The President returned to Washington, and with the surrender of General Lee the war was virtually at an end; so that the services of the Navy in the James River, with the exception of a few gun-boats, could be dispensed with. The latter were needed for police duty along the river and to pick up stragglers from the Confederate army. No one but an eye-witness could realize the great change in the aspect of affairs that suddenly took place. Naval vessels headed down stream towards Fortress Monroe, then to proceed to such Navy Yards as they might be ordered to. Army transports were hurrying to City Point to remove troops and stores as might be required. Officers no longer wore an anxious look, everywhere contentment reigned, for each one was pleased that the long struggle was over and there was a prospect of soon seeing a united country.

Notwithstanding Rear-Admiral Semmes, in his Memoirs, dilates on the joy of the exchanged prisoners at once more saluting the Confederate flag waving on board his vessels, it is well known that the Confederate soldiers and sailors had for a year past been heartily tired of the war; and that their armies were gradually becoming demoralized, as was evident from the great number of desertions, which reduced Lee's forces to such a small number at the surrender. Those who remained with their General to the end may be compared to the Old Guard of Napoleon. Yet even these

veterans were anxious to reach their homes, and every one who knew anything about the matter felt with Mr. Lincoln that it was well to give them their horses with which to plow their fields, and their muskets to shoot the crows with, for which indulgence they would feel so grateful that they would probably never again raise their hands against the Government.

Had it been necessary to equip an army for the purpose of driving the French from Mexico, the very troops that had fought so persistently against the Federal Government would have been the foremost to volunteer for the service, and would have been preferred for the duty, since it was well that such unsettled spirits should have had employment, and they would have had an opportunity to strike a blow for the old flag which would tend to make them faithful to it forever. It may, therefore, be considered a misfortune that the French made their exit from Mexico on the first demand of the United States Government, for to have driven them out with a combined army of the blue and the gray would have contributed more to make our country united than all the arts of politicians.

We have several days appointed during the year for national observance—July 4th, February 22d, etc.—but there is one day which brought more happiness to the country than any other, which is the day when peace was established between the North and South, and the nation was once more restored to its entirety. There should be a national anniversary established to commemorate the return of peace—the anniversary of the day when General Lee laid down his arms with the determination never to take them up again against the Union, in which he was followed by General Johnston and all the other generals of the Confederacy.

Such a national anniversary should not be observed with any purpose of exulting over those who laid down their arms and returned to their allegiance, but simply to commemorate the return of peace and the union of the whole nation—that union on which the prosperity of all the States depends. That would be a day in which every one could take part; for he must be blind, indeed, who cannot see the innumerable blessings that have been poured upon our country.

We join hands now over the resting-places of the gallant dead and strew flowers alike on the graves of the boys in blue and the boys in gray. Let there be a common Anniversary, where all can clasp hands, and let that be the memorable day when the Confederacy laid down their arms.

## CHAPTER LV.

### OPERATIONS OF THE MISSISSIPPI SQUADRON IN THE LATTER PART OF 1864 AND IN 1865.

ACTING REAR-ADMIRAL S. P. LEE TAKES COMMAND.—LOSS OF THE TIN-CLAD “UNDINE.”—BURNING OF THE GUN-BOATS “TOWAH,” “KEY WEST” AND “ELFIN.”—OPERATIONS OF THE ARMY UNDER GENERAL THOMAS AGAINST GENERAL HOOD.—THE EFFECTIVE WORK PERFORMED BY THE SQUADRON IN CONJUNCTION WITH THE ARMY.—DESTROYING THE CONFEDERATE BATTERIES ON THE TENNESSEE RIVER.—GENERAL GEORGE H. THOMAS COMPLIMENTS THE NAVY.—GENERAL HOOD’S RETREAT AND LOSSES.—THE CONFEDERATE RAM “WEBB.”—GALLANTRY OF LIEUTENANT-COMMANDER FITCH AND HIS MEN.—END OF THE CONFEDERATE NAVY IN THE MISSISSIPPI REGION.—SURRENDER OF CONFEDERATE PROPERTY AT SHREVEPORT.—LIST OF VESSELS AND OFFICERS OF THE MISSISSIPPI SQUADRON, 1865.

**A**CTING-REAR-ADMIRAL S. P. Lee, who followed Rear-Admiral Porter in October, 1864, in the command of the Mississippi Squadron, was not fortunate on his arrival in the West.

On the 4th of November, Admiral Lee reports the loss of the “tin-clad” gun-boat “Undine” in an engagement with the Confederates on the “Tennessee.” The enemy had seven pieces of artillery against the gun-boat’s four.

On the 4th of November the light-draft gun-boats “Towah,” “Key West” and “Elfin” had a severe engagement with the enemy, lasting several hours, when Acting-Volunteer-Lieutenant E. M. King, finding it impossible to save the vessels, ordered them to be set on fire and abandoned. These gun-boats had previously recaptured and burned what was left of the “Undine” and also the transport “Venus.” The latter and seven other transports were obliged to be destroyed to prevent their falling into the hands of the enemy.

The commanding officers of these light gun-boats fought their vessels with great bravery, but they had been sent on duty that more properly belonged to iron-clads, and in contending against the enemy’s

works their ardor eclipsed their judgment. In their desire not to dim the record of the Mississippi Squadron, these officers held their position longer than they should have done, by which eleven steamers, including transports, were given to the flames.

Lieutenant-Commander Le Roy Fitch, a most gallant officer, was in command of the 10th District, Mississippi Squadron, which included the vessels destroyed. Had he been present, his good judgment would have led to a different result. Fitch arrived on the scene when the batteries of the gun-boats had been mostly disabled, and to have run the enemy’s batteries to join the gun-boats would only have added to the disaster. So he witnessed the desperate engagement from below the enemy’s works, and had time to reflect on the want of judgment displayed in sending such frail vessels against strong earth-works mounting rifled field-pieces in a narrow river full of shoals and sand-bars.

Notwithstanding it had been evident from the commencement of the civil war that Tennessee was one of the prizes for which the Confederacy would contend, and in spite of all the trouble the Federal Army and Navy had incurred to get the State under subjection, it had again been abandoned

to the tender mercies of the Confederate rangers. General Thomas, with a comparatively small force, was left to occupy the whole State, so that when General Sherman defeated Hood, at Atlanta, the latter fell back upon Tennessee, and but for the generalship and foresight of that sturdy old Roman, George H. Thomas, a great disaster would have overtaken the Union cause.

The Confederate General, Forrest, had invested Johnsonville, and Hood's entire army was reported as moving on that place, the scene of the late destruction of the gun-boats and transports. It is not likely that Acting Rear-Admiral Lee had been apprised of the advance of Hood's army into Tennessee, as otherwise he would have sent some iron-clads to that quarter, since the "tin-clads" were entirely too light to contend against the heavy batteries opposed to them.

Soon after these events, the "Carondelet" was sent to Lieutenant-Commander Fitch, who, on the 3d of December, had pushed on up to Nashville in the expectation of co-operating with General Thomas against the advancing forces of Hood. The "Carondelet," Acting-Master Charles W. Miller, was stationed to assist that portion of the army resting on the river, while the other vessels of Fitch's command were kept in readiness to move wherever they might be required. During the day, Lieutenant-Commander Fitch made constant trips up and down the river in the gun-boat "Moose," getting everything in readiness to co-operate with the Army to the best advantage.

At 9 P. M., Fitch received intelligence that the enemy's left wing had reached the river and planted batteries at Bell's Mill, four miles below Nashville by land, but, owing to the bends in the river, eighteen miles by water. It was learned that the enemy had captured two steamers, and, although the night was dark and a storm threatening, Fitch determined to recapture or destroy the vessels, so that the Confederates would derive no benefit therefrom.

The squadron moved in the following order: "Neosho," Acting-Volunteer-Lieutenant Samuel Howard; "Carondelet," Acting-Master Charles W. Miller; "Fair Play," Acting-Master Geo. J. Groves; "Moose," Lieutenant-Commander Le Roy Fitch; "Reindeer," Acting-Volunteer-Lieutenant H. A. Glassford; "Silver Lake," Acting-Master J. C. Coyle. Acting-Master Miller, in the "Carondelet," was directed to run below the enemy's lower batteries, giving them grape and canister as he passed, then round-to and fight the batteries heading up stream. The "Fair Play" was to follow close to the "Carondelet"

was to follow the "Moose," and the "Silver Lake" was to bring up the rear. All these vessels, with the exception of the "Carondelet" and "Neosho," were light gun-boats, known in the vernacular of the Mississippi Squadron as "tin-clads."

The vessels moved quietly down the river, with no lights visible, and were not seen by the enemy until the "Carondelet" opened fire on his lower battery and encampment. The Confederates sprang to arms, and volley after volley of musketry was poured into the Union vessels, while the shore batteries kept up a brisk fire.

The gun-boats responded with equal rapidity, and the narrow river was soon filled with smoke, which caused great confusion for a time, preventing the vessels from firing, while it was no hindrance to the enemy, who could see the position of the gun-boats and kept up a galling fire upon them.

The chances of the vessels coming in collision with each other, in the thick smoke, caused Lieutenant-Commander Fitch, in his flag-ship, to back up the river past the upper batteries, as that portion of the stream was clear of the smoke. In performing this manœuvre, the "Moose" was subjected to a severe fire from the enemy's 20-pounder rifles; but in a short time the fire of the "Moose" began to tell, and the enemy were driven from their guns by the shower of shrapnel. The "Reindeer," now coming to the assistance of the "Moose," the two vessels swept the field. The "Moose" and "Reindeer" were lashed side by side together, and kept up the engagement through the night. The enemy's fire was not well directed, most of their shots passing over the vessels. The latter, although a good deal cut up, were not in any way disabled, and there was no loss of life on board.

At about midnight the enemy ceased firing, and in the morning were nowhere to be seen. The "Moose" then moved down the stream and met the "Carondelet" and "Fair Play," in company with the transports the enemy had captured the day before. The enemy had been driven out of these vessels before they had time to destroy them or to remove the forage and stores with which they were loaded. The prisoners captured by the Confederates in the transports escaped from their guards and rejoined the vessels.

This whole affair, like everything else undertaken by Lieutenant-Commander Fitch, was well managed. Although his command was not a large one, this young officer was often mentioned for gallant and efficient service, and he ever displayed sound judgment, no matter in what position he was placed. His officers and men, in-

their bravery. The management of the vessels on the occasion we have just mentioned required great judgment and coolness to avoid collision. The greatest width of the stream was seventy-five yards, and it was so filled with smoke that it was almost impossible to see anything. The little flotilla arrived in Nashville with the two recaptured transports, "Prairie State" and "Prima Donna," in tow, and also the "Magnet," which had been retaken from the enemy. The loss of the Confederates in their engagement with the gun-boats was afterwards found to be considerable.

On the 4th of December the iron-clad steamer "Neosho" had joined the flotilla of Lieutenant-Commander Fitch. She carried two 11-inch smooth-bore guns and was well protected against shots from field batteries.

On the 9th of December Lieutenant-Commander Fitch started down the river with the "Neosho" and some of the lighter gun-boats of his command, together with a number of army transports. When nearly abreast of the scene of the encounter of the 3d inst., a large force of Confederates was discovered advantageously posted to dispute the passage of the vessels. Fourteen pieces of artillery at once opened on the gun-boats, accompanied by heavy volleys of musketry from rifle-pits. Fitch, with his usual judgment, had left the transports three miles in the rear under charge of Acting-Volunteer-Lieutenant Glassford, and when so furiously assailed did not hesitate a moment what to do. He ordered the pilot of the "Neosho" to proceed slowly, while the enemy's fire was deliberately returned, until the vessels arrived abreast of the lower battery. Fitch then rounded-to and fought with his vessel's head up stream using grape and canister, while the "Neosho" was receiving the concentrated fire of all the enemy's batteries.

Lieutenant-Commander Fitch's position was the only one from which he could bring his guns to bear upon the different batteries, owing to the manner in which they were sheltered behind the spurs of hills. He had also great faith in the "Neosho," which had been built to defy the enemy's field batteries. She was now in a position to test her strength and to allow her to use grape and canister at a distance of thirty yards. The enemy kept up a terrific cross-fire, and their shot and shell rattled against every part of the vessel; but the deliberate and accurate fire of the gun-boat soon drove back the sharpshooters and infantry, although the artillery, being strongly posted on the high bluffs with a plunging fire, was found more difficult to silence.

In a short time everything perishable on

the outside of the "Neosho" was demolished, yet the little vessel maintained her position for two hours and a half, until, finding that the enemy's shells were cutting away the "fair-weather pilot-house," and letting it down so that it would hide the "fighting pilot-house," and thus obstruct the sight of the commanding officer and pilot, Fitch steamed up the river again under a raking fire, and gained the convoy of transports. Finding it would be impossible to get the transports below the batteries, without having them cut to pieces, Fitch sent them back to Nashville under convoy of the "Fair Play" and "Silver Lake."

But Fitch was not to be balked by the Confederate batteries as long as his ammunition lasted. He set all hands to work to clear away the *debris*, and then proceeded down the river to his old position, taking with him the "Carondelet," a vessel which had withstood the tempest of shot and shell from Forts Henry, Donelson, Vicksburg and Grand Gulf. Having secured the "Carondelet" to the bank above the enemy's batteries, with orders not to open fire until after the "Neosho" should engage, Fitch, in the latter vessel, proceeded below the Confederate batteries, rounded-to, and opened as before.

As on the former occasion, the enemy opened also, but this time they got the worst of it, the "Carondelet," with her heavy guns, dealing destruction right and left. Two of the enemy's pieces were soon dismounted, and by dark all but two of them were silenced. These were fired as the "Neosho" proceeded up stream, there being nothing more for her to do.

This event is mentioned as an exhibition of pertinacity and courage seldom equalled. The gallant Fitch never shrunk from the performance of any duty however hazardous. He was always under fire whenever opportunity offered, not owing to chance circumstances, to which sluggards often attribute a man's reputation for heroism, but to a determined will. This gallant officer gained little promotion for his war services, and his highest recognition was a complimentary letter from the Secretary of the Navy on the occasion when he brought about the capture of General John Morgan, the celebrated Confederate partisan leader. In the engagement with the Confederate batteries, the "Neosho" was struck one hundred and ten times with shot and shell, ranging in size from 20 to 30 pounders, but she received no injury that would have prevented her from going into battle immediately afterwards.

From the 7th to the 15th of December, 1864, Lieutenant-Commander Fitch's little flotilla was most active in co-operating with

the Army, making reconnoissances and attacks on Confederate batteries whenever they showed themselves along the river. On the 14th inst., Fitch was requested to co-operate with the Army in order to capture some artillery. By a very skillful manœuvre on the part of the Army and Navy, a battery of four guns was captured. While the Navy were advancing in front, the cavalry surrounded and captured the battery. In the afternoon the same tactics were successful against another battery of four guns, which fell into the hands of the Federal cavalry. The loss of these guns was a severe blow to General Hood at that moment, for he was deficient in artillery

The efficient co-operation of the Navy on the Tennessee River, in fact, contributed largely to the demoralization of General Hood's forces, as the gun-boats chased the Confederates along the banks and gave them no rest. For thirty days and nights the officers of the gun-boats had very little rest, such was their zeal in their effort to defeat Hood's army, which had come so far to be beaten, and was never again able to make headway against the Federal forces.

In this important campaign the following was achieved by the Federal army: Fourteen thousand Confederates killed, wounded, and prisoners, including nineteen general officers, seventy guns captured, over three thousand stand of arms taken, twenty ammunition wagons, and a great quantity of ammunition. The only reason that prevented the capture of the whole Confederate army was the wretched condition of the roads, which prevented any rapid pursuit.

The Confederates were also greatly aided by the water falling in the river, preventing the gun-boats from reaching Muscle Shoals, the point where Hood crossed the Tennessee. All along the river, where the vessels of the Navy could penetrate, the destruction of pontoons and ferry flats was immense, so that the main body of the Confederate Army was forced to push on to the Shoals before they could cross the Tennessee. This destruction extended from twelve miles below Florence for a distance of one hundred and seventy-five miles, and enabled the Federal troops to cut off large portions of Hood's demoralized army, and filled the woods with Confederate stragglers.

Anything which bears the signature of that glorious hero, General George H. Thomas, will ever be interesting, and a compliment from him paid to the Navy will be appreciated. General Thomas immediately telegraphed to Acting-Rear-Admiral Lee the result of his operations against General Hood, and expressed his thanks for the aid the Army had received from the naval flotilla on the Tennessee:

UNITED STATES MILITARY TELEGRAPH, }  
PADUCAH, KENTUCKY, Dec. 30, 1864. }

[By telegraph from Headquarters Department Cumberland, Pulaski, Dec. 29, 1864.]

SIR—Your two telegrams have been received. We have been pressing the work as hard as the condition of the roads would permit, and have succeeded in taking some few prisoners—probably some five or six hundred—since the enemy crossed Duck River. From the best information I have at this time, Hood's losses since he invaded the State of Tennessee sum up as follows: Six (6) general officers killed, six (6) wounded and one (1) taken prisoner at Franklin—thirteen in all, and about six thousand (6,000) men killed, wounded and taken prisoners at same battle. On the 8th instant, at Murfreesboro', he had one (1) general officer wounded, about one thousand (1,000) men killed, and two hundred and

SURGEON NINIAN PINKNEY, FLEET SURGEON, MISSISSIPPI SQUADRON.

In this expedition the Federals found themselves, on the 15th inst., in possession of the field.

Throughout the long and harassing operations which followed the invasion of Hood into Tennessee, the Navy co-operated most zealously with the Army, patrolling the river, destroying Hood's pontoons, and conveying troops from point to point in the gun-boats in the absence of other means of transportation. In this way General A. J. Smith, that gallant officer of the Red River expedition, was enabled to effect a secure

artillery. In the battles of the 1st and 16th instant, before Nashville, he had one (1) lieutenant-general severely wounded, one (1) major-general and three (3) brigadier-generals, with four thousand four hundred and sixty-two (4 462) officers and men made prisoners, besides losing fifty-three (53) pieces of artillery and over three thousand (3,000) stand of small-arms.

During his retreat we have captured fifteen (15) more guns, and from fifteen hundred (1,500) to two thousand (2,000) prisoners, and a large number of small-arms have been picked up by the way. Citizens report that he passed this place with his army completely disorganized, except the rear-guard, composed of about five thousand (5,000) men. He destroyed a considerable quantity of ammunition at this place, besides abandoning an ammunition-train of fifteen (15) or twenty (20) wagons about a mile beyond. Your official co-operation on the Tennessee River has contributed largely to the demoralization of Hood's army.

Major-General A. J. Smith, commanding detachment of the Army of the Tennessee, will probably reach Clifton by Sunday next, January 1, 1865, where transports are expected to meet him to take his command to Eastport.

Please afford him every assistance in your power in effecting a secure lodgment at Eastport; and as I consider the "Cumberland" now entirely safe, I will be obliged to you if you will have a strong force kept in the "Tennessee" to keep open navigation on that river. In concluding this telegram, it gives me great pleasure to tender to you, your officers and men, my hearty thanks for your cordial co-operation during the operations of the past thirty days.

G. H. THOMAS,  
*Major-General.*

REAR-ADMIRAL S. P. LEE,  
*Commanding Mississippi Squadron, Chickasaw, Alabama.*

These were about the last important events in the history of the Mississippi Squadron, as the war was now drawing rapidly to a close. The retreat of Hood left the Tennessee and Cumberland Rivers comparatively free from Confederates, and there was little prospect of another invasion of the State while General Thomas remained in command. The vessels of the Mississippi Squadron were scattered along the great river, where the guerillas still carried on their operations on a small scale. Very little occurred that could embellish the pages of history. The Red River region was revisited, the Washita and Black Rivers patrolled, and every precaution taken to guard those inland waters.

At this time the Confederate ram "Webb" succeeded in making her way past all the vessels of the fleet and reached a point twenty-five miles below New Orleans, where she was destroyed, as we have heretofore mentioned. This episode created quite an excitement in the fleet for the time, but it appears that no one was to blame for the "Webb" getting so far down the river unharmed. The dash of the "Webb" was the last affair of the expiring Confederate Navy, and the last attempt to carry out a valuable cargo of cotton and naval stores; which, had it been left on the

levee at Shreveport, La., a few days longer, could have been shipped to New Orleans, openly insuring the owners a good profit.

The Confederate naval officer in command at Shreveport, Lieutenant J. H. Carter, notified the U. S. naval authorities at the mouth of Red River that he was ready to surrender to the United States Government all the property in his possession, consisting of one useless iron-clad and a quantity of naval stores. Twenty-four officers and eighteen men surrendered themselves and were paroled, and that was the last of the Confederate Navy in the Mississippi region.

When Lieutenant-Commander W. E. Fitzhugh proceeded to Shreveport to take possession of the Confederate naval property at that place, he was received in a friendly manner, and all seemed anxious that he should secure everything that had belonged to the Confederate Government. Above Alexandria, the few ravages made by the invasion of General Banks' army had been obliterated, and the people were living quietly on their farms, although deprived of many comforts to which they had been accustomed. They were delighted at the return of peace, and in their hearts, no doubt, welcomed the Union flag as an old and well-tried friend. They saw in the Union gun-boats the symbols of lawful authority, that would respect the rights of citizens and punish law-breakers; and so conscious were the civil authorities on Red River that it was necessary to have within reach the strong arm of power, that they requested a sufficient naval force should be stationed in their vicinity to overawe the malcontents, if there should be any, and assure those anxious to return to their allegiance that they should receive protection.

As a rule, however, the people of Louisiana were only too glad to lay down their arms and return to the pursuits of peace. Many of them had seen, from the time when the Navy obtained possession of the Mississippi and its tributaries, that it would be useless to contend against the power of the North. It is true that the Confederate forces in Arkansas, Louisiana and Texas showed an indomitable spirit in resisting the advance of the Federal armies, yet they received a sufficient number of checks to convince them that the subjugation of the whole country was merely a question of time.

It is a fact, which has been little commented on, that at least three hundred and fifty thousand soldiers from the slave States fought on the side of the Union, and, had Texas and Western Louisiana been securely held, there would have been a number of recruits in that quarter obtained for the Federal Army.

## MISSISSIPPI SQUADRON, JANUARY, 1865.

## ACTING REAR-ADMIRAL SAMUEL P. LEE, COMMANDING.

STAFF—LIEUTENANT-COMMANDER C. A. BABCOCK, ACTING-FLEET-CAPTAIN; LIEUTENANT F. J. NALLE, FLAG-LIEUTENANT; ACTING-VOLUNTEER-LIEUTENANT, WILLIAM G. SALTONSTALL; FLEET-SURGEON, NINIAN PINKNEY; FLEET-PAYMASTER, ELISHA W. DUNN; FLEET-ENGINEER, SAMUEL BICKERSTAFF; ACTING-MASTER, C. R. KNOWLES; ACTING ENSIGNS, WM. R. COOPER AND C. C. CUSHING.

## "ESSEX"—FOURTH-RATE.

Commander, Andrew Bryson; Acting-Volunteer-Lieutenant, J. C. Parker; Acting-Ensigns, Spencer Johnson, E. M. Wood and J. H. Barry; Acting-Master's Mates, J. A. Whitesides and R. D. Punch; Acting-Assistant Surgeon, Thomas Allan; Acting-Assistant Paymaster, Chas. W. Slamm; Engineers: Acting-Chief, Joseph K. Heap; Acting-First-Assistant, J. L. Hilliard; Acting-Second-Assistants, E. P. Sprague and C. H. Burt; Acting-Third-Assistant, Nicholas Sauer; Gunner, Charles Earnshaw; Acting-Carpenter, Geo. H. Stevens.

## "BENTON"—FOURTH-RATE.

Lieutenant-Commander, E. Y. McCauley; Acting-Master, W. J. Lees; Acting-Ensigns, P. H. Randolph and P. Frazer, Jr.; Acting-Master's Mates, William Kisnei, Hiram Simonton, A. T. Bisel, R. L. Evans and Henry Clifton; Assistant Surgeon, C. J. S. Wells; Acting-Assistant Paymaster, C. J. Lowndes; Engineers: Acting-Chief, Joseph V. Starr; Acting-First-Assistants, H. W. Fairfowl and S. L. Walkinshaw; Acting-Second Assistants, Oliver Bray, A. A. Jenks and B. A. Farmer; Acting-Third-Assistant, William Hatfield; Acting-Carpenter, Richard Ratchford.

## "MANHATTAN"—FOURTH-RATE.

Lieutenant-Commander, Edw. C. Grafton; Acting-Volunteer-Lieutenant, Robert B. Fly; Acting-Ensigns, G. B. Mott, J. B. Trott, C. H. Sinclair and J. L. Harris; Acting-Assistant Surgeon, H. W. Mitchell; Acting-Assistant Paymaster, H. G. Thayer; Engineers: Acting-Chief, C. L. Carty; Acting-Second-Assistants, W. H. Miller, J. B. Ferrand and Thomas Finnie.

## "CHOCTAW"—THIRD-RATE.

Lieutenant-Commander, J. J. Cornwell; Acting-Master, Ezra C. Beaman; Acting-Ensigns, M. B. Muncy and H. C. Marsh; Acting-Master's Mates, A. V. Forgey, E. F. Crane and James Stoddard; Assistant Surgeon, Edw. Kershner; Acting-Assistant Paymaster, E. N. Whitehouse; Engineers: Acting-Chief, N. P. Baldwin; Acting-First-Assistants, C. E. Arbuthnot and J. Blake; Acting-Second-Assistants, J. F. Stone and H. G. Moreland; Acting-Third Assistant, S. C. Babbitt; Acting-Carpenter, John A. Stuart.

## "LAFAYETTE"—FOURTH-RATE.

Lieutenant-Commander, James P. Foster; Acting-Masters, J. R. Neeld, F. G. Sampson and J. H. Welsh; Acting-Ensigns, Paul Morgan and C. H. Slocum; Acting-Master's Mates, S. O. Lovell, Wm. E. Atkins and Edw. C. Eraley; Acting-Assistant Surgeon, D. Hayden; Acting-Assistant-Paymaster, J. P. Kelly; Engineers: Acting-Chief, Robert Tate; Acting-Second-Assistants, James Wilkins, J. W. Paul and E. H. Kidd; Acting-Third-Assistant, A. A. Johnson; Acting-Gunner, Geo. Price; Acting-Carpenter, J. W. Lister.

## "BLACK HAWK"—THIRD-RATE.

Lieutenant-Commander, James A. Greer; Acting Masters, Edw. Alford and Henry Baker; Acting-Ensigns, C. A. Calvert, R. T. Howell, J. A. Jones, J. C.

Baker, A. S. Ludlow, D. A. Boies, A. H. Ahrens and Jay Nyman; Passed-Assistant-Surgeon, Michael Bradley; Acting-Assistant Paymaster, C. H. Kirkendall; Second Lieutenant of Marines, F. L. Church; Engineers: Acting-Chief, Geo. W. Walker; Acting-First-Assistant, O. G. Richey; Acting-Second-Assistant, C. B. Adams; Acting-Third-Assistants, W. B. Richey and J. W. Cassell; Gunner, John R. Halt; Acting-Carpenter, Noah Dean.

## "SYBIL"—FOURTH-RATE.

Lieutenant-Commander, John G. Mitchell; Acting-Volunteer-Lieutenant, J. W. Atkinson; Acting-Ensigns, John McCleane and Wm. Hammett, Jr.; Acting-Master's Mates, J. R. Hogle, H. B. Sprague, W. H. Smith and W. W. Rumsey; Acting-Assistant Surgeon, H. A. Bodman; Acting-Assistant Paymaster, T. B. Reed; Engineers: Acting-First-Assistant, Samuel Tubbs; Acting-Second-Assistant, F. G. Seavey; Acting-Third-Assistant, W. M. Piercy.

## "NEOSHO"—FOURTH-RATE.

Lieutenant-Commander, Robert Boyd, Jr.; Acting-Volunteer-Lieutenant, Samuel Howard; Acting-Master, E. F. Brooks; Acting-Ensigns, James Downs and W. P. Higbee; Acting-Master's Mates, C. C. Royce and C. T. Rees; Acting-Assistant Surgeon, M. A. Miller; Acting-Assistant Paymaster, W. H. Byrm; Engineers: Acting-Chief, Wm. Mills; Acting-First-Assistant, W. C. Sanford; Acting-Second-Assistant, J. S. Miles; Acting-Third-Assistants, J. F. Humphrey, W. H. Dunning and M. C. Noland; Acting-Gunner, W. T. Devlan.

## "LOUISVILLE"—FOURTH-RATE.

Lieutenant-Commander, George Bacon; Acting-Master, H. D. Coffinberry; Acting-Ensigns, R. H. Langslands, Geo. V. Mead and Chas. Smith; Acting-Master's Mates, J. J. Drew, W. H. English and J. T. Hensley; Acting-Assistant Surgeon, W. R. Semans; Engineers: Acting-Chief, Isham J. Hardy; Acting-First-Assistant, C. W. Reynolds; Acting-Second-Assistant, C. F. Degelman; Acting-Third-Assistant, L. A. Salade; Acting-Carpenter, James McKuen.

## "TENNESSEE"—FOURTH-RATE.

Lieutenant-Commander, Edward P. Lull; Acting-Master, C. W. Adams; Acting-Ensigns, W. W. Duley, A. A. Ward and J. J. P. Zettick; Acting-Master's Mates, Henry Wymann, Thos. Kennedy and J. Canaday; Assistant Surgeon, W. H. Jones; Acting-Assistant Paymaster, P. H. Tawo; Engineers: Acting-First-Assistants, W. C. Perry and Chas. Chadwick; Second-Assistant, F. C. Goodwin; Acting-Second-Assistant, B. D. Mulligan; Acting-Third-Assistants, W. J. Mack and D. S. Clarke.

## "MOOSE"—FOURTH-RATE.

Lieutenant-Commander, LeRoy Fitch; Acting-Master, W. C. Coulson; Acting-Ensigns, John Revell, D. B. Dudley and Isaac Wiltse; Acting-Master's Mates, Daniel Molony, O. W. Miles and W. S. Holden; Assistant Surgeon, W. M. Reber; Acting-Assistant Paymaster, Jas. W. Clark; Engineers: Acting-Chief, Wm. D. McFarland; Acting-First-Assistant, Thos. N. Hall; Acting-Second-Assistant, Chas.

## "OUICHITA"—FOURTH-RATE.

Lieutenant-Commander Byron Wilson; Acting-Master, Eugene Zimmerman; Acting-Ensigns, M. M. Wheeler, R. T. Lamport and J. W. Adams; Acting-Master's Mates, Rivers Drake, E. P. Marshall, A. W. Widup, S. A. Park and J. H. Moss; Acting-Assistant Surgeon, Geo. E. Francis; Acting-Assistant Paymaster, J. R. Meeker; Engineers: Acting-Chief, Thos. Hebron; Acting-First-Assistants, John S. Moore; Acting-Second-Assistants, G. T. Wilson and A. H. Tyler; Acting-Third-Assistants, Thos. Reed and F. A. Morse; Acting-Carpenter, Richard Nisbet.

## "GENERAL BURNSIDE"—FOURTH-RATE.

Lieutenant, Morean Forrest; Acting-Ensigns, David Putman; Acting-Master's Mates, Roddie Reynolds, Francis McGlincey, W. C. Mudge, Louis Hartlet, Hans Trulsen and Edw. McGaughey; Acting-Assistant Surgeon, R. J. Curtis; Acting-Assistant Paymaster, Geo. D. Rand; Engineers: Acting-First-Assistant, Benj. Chester; Acting-Second-Assistant, Wm. W. Smith; Acting-Third-Assistants, J. G. Burkley and Jos. Walter.

## "OSAGE"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, George W. Rogers; Acting-Master, Wm. S. Pease; Acting-Ensigns, W. J. Durney and Arthur O'Leary; Acting-Master's Mates, John C. Winslow and R. W. Rogers; Acting-Assistant Paymaster, J. R. Bowler; Engineers: Acting-Chief, Thos. Doughty; Acting-First-Assistant, R. J. Stone; Acting-Second-Assistants, W. C. Gabbrith and Wm. Grant; Acting-Third-Assistants, Wm. Burke and J. M. Wilson; Acting-Carpenter, C. C. Gilliland.

## "CARONDELET"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Chas. P. Clark; Acting-Master, C. W. Miller; Acting-Ensigns, Oliver Donaldson, S. D. Jordan and T. A. Quinn; Acting-Master's Mates, L. W. Hastings, W. H. H. DeGroot, Geo. F. Bean, Wm. J. Fraks and W. D. McKean, Jr.; Acting-Assistant Surgeon, D. Curtis; Acting-Assistant Paymaster, G. W. Robertson; Engineers: Acting-Chief, Chas. H. Caven; Acting-Second-Assistants, Michael Norton and W. S. Barlow; Acting-Third-Assistants, John McWilliams and Thomas Mattingly; Acting-Carpenter, Geo. W. Kenny.

## "CHILLICOTHE"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Geo. P. Lord; Acting-Master, J. M. Holmes; Acting-Ensigns, J. D. Buckley, H. A. Hannon, H. Shoemaker and R. H. Day; Acting-Master's Mates, W. S. Thomas, James Harrington and John H. Ely; Acting-Assistant Surgeon, G. C. Osgood; Acting-Assistant Paymaster, J. H. Hathaway; Engineers: Acting-Chief, A. W. Hardy; Acting-First-Assistant, Chas. Trotter; Acting-Second-Assistants, J. W. Hymen and Anthony Lane; Acting-Third-Assistant, J. W. Ferrell; Acting-Gunner, Wm. E. Keyes; Acting-Carpenter, J. H. Fink.

## "AVENGER"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Charles A. Wright; Acting-Ensigns, John Gregg, J. H. Neely and John Maloney; Acting-Master's Mates, Henry Walters, J. D. Moore and E. W. Perry; Acting-Assistant Surgeon, J. H. Moses; Acting-Assistant Paymaster, J. W. Van Cleve, Jr.; Engineers: Acting-Chief, John G. Scott; Acting-First-Assistant, J. A. Burns; Acting-Second-Assistant, S. S. Patterson; Acting-Third-Assistants, Wm. Jayne and Thomas McGarity; Acting-Carpenter, Benj. H. Brink.

## "EXCHANGE"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, James C. Gipson; Acting-Ensigns, C. L. Meany and R. W. Brown; Acting-Master's Mates, G. T. Miller, B. F. Saunders and J. W. Clawson; Acting-Assistant Surgeon, E. M. Goodwin; Acting-Assistant Paymaster, D. Davis, Jr.; Engineers: Acting-First-Assistant, A. G. Per-

kins; Acting-Second-Assistant, C. C. Streepey; Acting-Third-Assistant, B. F. Graham.

## "PITTSBURGH"—FOURTH-RATE.

Acting-Volunteer-Lieutenant-Commander, Wm. R. Hoel; Acting-Master, S. B. Coleman; Acting-Ensigns, James Ovatt and Freeman Vincent; Acting-Master's Mates, John Scott, C. B. Jones and F. M. McCord; Acting-Assistant Surgeon, F. M. Follett; Acting-Assistant Paymaster, Charles H. Gould; Engineers: Acting-Chief, Geo. H. Atkinson; Acting-First-Assistant, E. R. Pavy; Acting-Second-Assistants, W. H. Mitchell and Robert Milby; Acting-Gunner, F. C. Green; Acting-Carpenter, Wm. C. Boggs.

## "REINDEER"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, H. A. Glassford; Acting-Master, John H. Rice; Acting-Ensigns, C. W. Spooner and T. M. Lewis; Acting-Master's Mates, G. S. Upton, E. Gasaway and W. H. Burton; Acting-Assistant Surgeon, F. A. Jordan; Acting-Assistant Paymaster, W. W. Barry; Engineers: Acting-First-Assistant, A. H. Bagby; Acting-Second-Assistant, N. Conner; Acting-Third-Assistant, G. M. Hayman.

## "TAYLOR"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Fred'k S. Hill; Acting-Masters, W. T. Power and Charles Ackley; Acting-Ensigns, J. W. Lalor and W. H. C. Michael; Acting-Master's Mates, W. P. Eakle and H. S. Allen; Acting-Assistant Surgeon, Sam'l Mendenhall; Acting-Assistant Paymaster, Geo. H. Holt; Engineers: Acting-Chief, James Fleming; Acting-First-Assistant, J. R. Ramsey; Acting-Second-Assistants, Wm. Furck and Philip Sheridan; Acting-Third-Assistants, Walter Mossington and S. H. Lancaster; Acting-Carpenter, J. M. Peabody.

## "VINDICATOR"—THIRD-RATE.

Acting-Volunteer-Lieutenant, Henry H. Gorringer; Acting-Masters, J. F. Reed and D. P. Slattery; Acting-Ensigns, W. Zimmerman, B. C. Wheeler and J. W. Foster; Acting-Master's Mates, L. C. Ball, John Davis, Lewis Lehman, Henry Kane and A. A. King; Acting-Assistant Surgeon, C. E. Vaughn; Acting-Assistant Paymaster, F. W. Hanson; Engineers: Acting-Chief, Thomas Cook; Acting-Second-Assistants, Chas. Tistand, Anthony Courtway and James O'Neil; Acting-Third-Assistants, S. H. Brogan, Andrew Lusk and John Link; Acting-Gunner, Wm. H. Barton; Acting-Carpenter, James Trully.

## "HASTINGS"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, J. S. Watson; Acting-Master, Wm. Neil; Acting-Ensigns, C. H. Reed and Jas. McDonald; Acting-Master's Mates, E. C. Urner and W. H. Gray; Assistant Surgeon, James M. Flint; Acting-Assistant Paymaster, P. J. Stone, Jr.; Engineers: Acting-First-Assistant, H. L. Juce; Acting-Second-Assistants, Edwin Senior and Andrew Wilson; Acting-Third-Assistants, A. M. Wasson and Geo. W. Amsden.

## "FOREST ROSE"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, A. N. Gould; Acting-Ensigns, H. B. Graves, C. W. Johnston and Geo. G. Cox; Acting-Master's Mates, Ira Athearn, C. W. Crooker and J. M. Stewart; Acting-Assistant Surgeon, R. Cadwallader; Acting-Assistant Paymaster, A. J. Myers; Engineers: Acting-First-Assistant, Francis Marsh; Acting-Second-Assistant, Joseph Kennedy; Acting-Third-Assistant, Silas Huskey.

## "ST. CLAIR"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, James S. French; Acting-Ensigns, Joseph Sawyer, W. A. Burchard and H. O. Proctor; Acting-Master's Mates, W. S. Culbertson, James Reid and W. T. Ross; Acting-Assistant Paymaster, E. H. Johnson; Engineers:

Acting-First-Assistant, Wm. McLean; Acting-Second-Assistant, Edward Lozier; Acting-Third-Assistant, Michael J. Soden.

"LEXINGTON"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, William Flye; Acting-Ensigns, Henry Booby, J. G. Megler, C. C. Briggs and Howard Hale; Acting-Master's Mates, C. W. Botten and Ezra McDunn; Acting-Assistant Surgeon, H. M. Mixer; Acting-Assistant Paymaster, T. Doane; Engineers: Acting-Chief, W. H. Meredith; Acting-First-Assistant, A. L. Mann; Acting-Second-Assistant, Reuben Story; Acting-Third-Assistants, Jacob Vittinger and Wm. T. Neal; Acting-Gunner, Louis Frederick; Acting-Carpenter, R. Carroll.

"CINCINNATI"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Jason Goudy; Acting-Master, J. B. Williams; Acting-Ensigns, Walter Pinner and S. J. Denight; Acting-Master's Mates, J. G. Abbott, A. B. Allen and J. B. A. Conant; Acting-Assistant Surgeon, E. Dayton; Acting-Assistant Paymaster, J. R. Carmody; Engineers: Acting-Chief, J. W. Hartuper; Acting-First-Assistant, E. D. Collett; Acting-Second-Assistants, T. Guernsey and G. W. Dean; Acting-Third-Assistants, Andrew Boland and John Henry; Acting-Gunner, L. K. Ellis; Acting-Carpenter, John Cronan.

"NAUMKEAG"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, John Rogers; Acting-Ensigns, Thos. Cadwell; Acting-Master's Mates, Alex. Procter, H. R. Ferris and J. P. Popejoy; Acting-Assistant Surgeon, Edgar L. R. Draper; Acting-Assistant-Paymaster, Henry B. Mears; Engineers: Acting-First-Assistant, Edward Cage; Acting-Second-Assistant, J. A. McCormick; Acting-Third-Assistant, J. R. Byland.

"FORT HINDMAN"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, John Pearce; Acting-Master, J. J. Rogers; Acting-Ensigns, N. T. Rennell and Chas. Marsden; Acting-Master's Mates, C. F. A. McCord, S. N. Barker and E. C. Ellis; Acting-Assistant Surgeon, N. L. Gerould; Acting-Assistant Paymaster, J. R. Bowler; Engineers: Acting-First-Assistant, Thos. Girty; Acting-Second-Assistant, John Cook; Acting-Third-Assistants, D. B. Cox, Eli Powell and R. Yocum.

"BRILLIANT"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Chas. G. Perkins; Acting-Master, G. D. Little; Acting-Ensign, N. F. Vaughan; Acting-Master's Mate, C. D. Griggs; Acting-Assistant Surgeon, Milton James; Acting-Assistant Paymaster, B. Page; Engineers: Acting-First-Assistant, W. E. Willey; Acting-Second-Assistant, Jas. Cutler; Acting-Third-Assistant, C. W. Egster and R. M. Myers.

"OZARK"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Geo. W. Brown; Acting-Master, John Powell; Acting-Ensigns, Jos. Moyer, C. M. Bragg and C. M. Fuller; Acting-Master's Mates, N. T. Brown, G. A. Ege and D. C. Fralick; Acting-Assistant Paymaster, F. T. Gillette; Engineers: Acting-First-Assistants, J. H. Everhart and A. J. Sypher; Acting-Second-Assistants, J. L. Parsons and G. M. Baker; Acting-Third-Assistants, C. Beal and Southwell Lyon; Acting-Gunner, J. F. Riblett; Acting-Carpenter, H. J. Ervin.

"PEOSTA"—FOURTH-RATE.

Acting-Volunteer Lieutenant, J. E. Smith; Acting-Master, J. L. Bryant; Acting-Ensigns, C. H. Gullick, R. T. Nelson, J. W. Richards and W. W. Phillips; Acting-Master's Mates, E. A. Dumont; Acting-Assistant Surgeon, Isaac T. Coates; Acting-Assistant Paymaster, J. C. Spalding; Engineers:

jack; Acting-Second-Assistant, T. M. Sloan; Acting-Third-Assistant, G. W. Marfield; Acting-Carpenter, m. Reid.

"JULIET"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Thos. B. Gregory; Acting-Ensign, E. C. Williams; Acting-Master's Mates, G. A. Gregory, J. S. McCoy, G. W. Ball and W. M. Mullen; Acting-Assistant Surgeon, W. W. Wentworth; Acting-Assistant Paymaster, J. Linsly, Jr.; Engineers: Acting-First-Assistant, W. H. Hardin; Acting-Second-Assistant, J. G. Briggs; Acting-Third-Assistant, Thomas Hanna.

"KENWOOD"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, John Swaney; Acting-Ensigns, J. C. Weeks, J. L. Reed and N. H. Conklin; Acting-Master's Mates, M. M. Yorston and W. R. Moffatt; Acting-Assistant Paymaster, D. W. Van Houten; Engineers: Acting-First-Assistant, T. J. Mallon; Acting-Second-Assistant, W. J. Milligan; Acting-Third-Assistant, J. H. Holman.

"INDIANOLA"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, James Lanning.

"GENERAL BRAGG"—FOURTH-RATE.

Acting-Volunteer-Lieutenant, Cyrenius Deminey; Acting-Master, W. L. Holcomb; Acting-Ensigns, M. Houston and F. H. Waite; Acting-Master's Mates, James Williams, C. L. Chapman and Wm. Dickson; Acting-Assistant Surgeon, F. A. Castle; Acting-Assistant Paymaster, L. C. Stebbins; Engineers: Acting-Chief, James Miller; Acting-Second-Assistants, Jos. Anderson and J. A. Wilson; Acting-Carpenter, J. W. Kennedy.

"GENERAL PRICE"—FOURTH-RATE.

Acting-Volunteer Lieutenant, W. R. Wells; Acting-Master, H. E. Bartlett; Acting-Ensigns, J. H. Leever and D. P. Bosworth, Jr.; Acting-Master's Mates, D. McKay, P. Barclay and W. W. McCracker; Acting-Assistant Surgeon, Geo. Harvey; Acting-Assistant Paymaster, T. F. Croft; Engineers: Acting-Chief, Thos. Sheffer; Acting-First-Assistant, A. R. Calhoun; Acting-Second-Assistant, A. Campbell; Acting-Third-Assistants, J. B. Baldwin and R. A. Hyle; Acting-Carpenter, W. C. Stiver.

"PAW-PAW"—FOURTH-RATE.

Acting-Master, M. V. B. Haines; Acting-Ensigns, J. H. Rivers and W. L. Constantine; Acting-Master's Mates, John Pybus and J. D. Coriell; Acting-Assistant Surgeon, O. A. Rives; Acting-Assistant Paymaster, A. S. McWilliams; Engineers: Acting-First-Assistant, E. Reynolds; Acting-Second-Assistant, B. S. Bull; Acting-Third-Assistant, T. K. Hill.

"PRAIRIE BIRD"—FOURTH-RATE.

Acting-Master, Thomas Burns; Acting-Ensigns, J. W. Chambers and W. M. Ernst; Acting-Master's Mates, J. B. Morton, J. K. Lull, Jr., W. D. Bangs and W. D. Carley; Acting-Assistant Paymaster, Lafayette Harter; Engineers: Acting-First-Assistant, Geo. Rodabaugh; Acting-Second-Assistant, Joseph Grippin; Acting-Third-Assistant, M. G. Marsillot.

"MOUND CITY"—FOURTH-RATE.

Acting-Master, Frederick T. Coleman; Acting-Ensigns, W. H. Decker and T. J. Dean; Acting-Master's Mates, B. W. Herr, S. S. Spangler, W. M. Sterritt and C. B. Hapgood; Acting-Assistant Paymaster, Wm. H. Baer; Engineers: Acting-Chief, Edw. Merriman; Acting-First-Assistant, Alex. Magee; Acting-Second-Assistants, J. M. Hartwell, J. B. Atwood, G. N. Heisel and F. Vanzant; Acting-Gunner, T. H. Green; Acting-Carpenter, Jerome Burns.

"JUDGE TORRENCE"—FOURTH-RATE.

Wm. Sill; Acting-Master's Mate, Chas. White; Acting-Assistant Paymaster, J. H. Marshall; Engineers: Acting-Chief, P. R. Hartwig; Acting-Second-Assistants, Jasper Holman and E. C. Jones; Acting-Third-Assistant, John Denhart.

"ARGOSY."

Acting-Master, John C. Morong; Acting-Ensigns, G. T. Hazlett and A. B. Homer; Acting-Master's Mates, Peter Lake and J. A. McCreary; Acting-Assistant Paymaster, R. E. Patterson; Engineers: Acting-First-Assistant, Thos. Blanchard; Acting-Second-Assistant, Chas. Silvercahn; Acting-Third-Assistant, A. Donnelly.

"ALEXANDRIA"—FOURTH-RATE.

Acting-Master, D. P. Rosemiller; Acting-Master's Mate, D. M. Stanffer; Engineers: Acting-First-Assistant, H. C. Shibly; Acting-Second-Assistant, J. S. Willcoxan; Acting-Third-Assistant, J. W. Morton.

"MARMORA"—FOURTH-RATE.

Acting-Master, Thomas Gibson; Acting-Ensigns, D. D. Bond and Thos. West; Acting-Master's Mates, Wm. Arnold, E. C. Nye and W. B. Tice; Acting-Assistant Surgeon, Emile Gavarret; Acting-Assistant Paymaster, Chas. R. Howard; Engineers: Acting-First-Assistant, A. H. Armstrong; Acting-Second-Assistant, F. A. Cramer; Acting-Third-Assistant, C. S. Hamilton.

"FAIR PLAY"—FOURTH-RATE.

Acting-Master, George J. Groves; Acting-Ensigns, J. H. Singleton, L. R. Hamersley and J. S. De Forest; Acting-Master's Mates, C. B. Thatchner, J. W. Harbin and W. H. Roberts; Acting-Assistant Paymaster, John G. Sankey; Engineers: Acting-First-Assistant, Robert Mattratha; Acting-Second-Assistant, John Mayhugh; Acting-Third-Assistants, Wm. Davizley and C. C. Rusford; Acting-Carpenter, Thomas Manning.

"FAWN"—FOURTH-RATE.

Acting-Master, John R. Grace; Acting-Ensigns, John Sullivan and John Conden; Acting-Master's Mates, Chas. Murray, E. D. O'Bryon and J. A. Leaman; Acting-Assistant Paymaster, A. S. Apgar; Engineers: Acting-First-Assistant, Edw. C. Peck; Acting-Second-Assistants, G. W. Gough and Michael O'Reiley; Acting-Third-Assistant, C. A. Cooper.

"HUNTRESS"—FOURTH-RATE.

Acting-Master, John S. Dennis; Acting-Ensigns, J. M. Flynt and Frank Middleton; Acting-Master's Mates, H. Z. Allphin, B. F. Brumbaek and J. R. Thomas; Acting-Assistant Surgeon, H. S. De Ford; Acting-Assistant Paymaster, E. J. Hurling; Engineers: Acting-First Assistant, John Cullin; Acting-Second-Assistant, Isaac Ackley; Acting-Third-Assistant, Johnson Crawford.

"NEW ERA"—FOURTH-RATE.

Acting-Master, A. C. Sears; Acting-Ensigns, W. B. Shilleto and C. A. Schetky; Acting-Master's Mates, W. F. Renner, A. Hamilton and Henry Ufford; Acting-Assistant-Surgeon, Geo. A. Warren; Acting-Assistant-Paymaster, Wm. B. Purdy; Engineers: Acting-First-Assistant, Israel Marsh; Acting-Third-Assistants, A. W. Smith and J. W. Edmundson; Acting-Carpenter, Byard Martin.

"CRICKET"—FOURTH-RATE.

Acting-Master, M. J. Cronin; Acting-Ensigns, N. A. Closson and Ignatius Daum; Acting-Master's Mates, H. C. Bates, J. W. Summers, Louis J. Marshall and Walter Lawrence; Acting-Assistant Surgeon, Stephen Cushing; Acting-Assistant Paymaster, C. S. Dunscomb; Engineers: Acting-First-Assistant, Jebin Fox; Acting-Second-Assistant, T. C. Ridgely; Acting-Third-Assistant, R. A. Halderman.

"NYMPH"—FOURTH-RATE.

Acting-Master, Patrick Donnelly; Acting-Ensigns, F. M. Hathaway and L. Gardner; Acting-Master's Mates, W. C. Williams, W. C. Frost, C. A. Benham, F. W. Whiteside and W. W. Hosea; Acting-Assistant Surgeon, D. P. Taylor; Acting-Assistant Paymaster, Arthur Sibley; Engineers: Acting-First-Assistant, N. D. Smith; Acting-Second-Assistant, Z. Brickell; Acting-Third-Assistants, A. T. Horner and W. H. Poulson.

"NAIAD"—FOURTH-RATE.

Acting-Master, Henry T. Keene; Acting-Ensigns, R. W. Alson and B. G. Van Dyke; Acting-Master's Mates, L. A. Cole, C. H. Leaman and C. E. Townley; Acting-Assistant Paymaster, M. P. Lowry; Engineers: Acting-First-Assistant, R. P. Morrow; Acting-Second-Assistant, C. Abbott; Acting-Third-Assistants, W. H. Collins, Edw. W. Brooks and J. H. Henderson.

"GREAT WESTERN"—FOURTH-RATE.

Acting-Master, Benj. Sebastian; Acting-Ensign, D. W. Tainter; Acting-Master's Mates, A. S. Thompson, N. E. Moore, W. F. Thomas and H. P. Bosworth; Acting-Assistant Surgeon, F. W. Wunderlich; Paymaster, Geo. L. Davis; Chaplain, W. H. Stewart; Engineers: Acting-First-Assistant, G. W. Fulton; Acting-Third-Assistant, A. L. Sinis.

"FAIRY"—FOURTH-RATE.

Acting-Masters, W. E. H. Fentriss and Chas. Swendson; Acting-Ensigns, J. S. Roberts, J. S. Hurlbut and C. B. Plattenburg; Acting-Master's Mates, H. A. Thoburn and James Lawler; Acting-Assistant Surgeon, Geo. F. Beasley; Acting-Assistant Paymaster, H. T. Wright; Engineers: Acting-First-Assistant, S. H. Linn; Acting-Second-Assistant, W. H. Stiles; Acting-Third-Assistant, Lorenzo Fulton.

"SILVER CLOUD"—FOURTH-RATE.

Acting-Master, Wm. Ferguson; Acting-Ensigns, Robt Wilkinson, J. M. Reid and J. C. Hall; Acting-Master's Mates, J. M. Darrah, R. S. Critchell and J. H. Bentley; Acting-Assistant-Surgeon, O. B. Damon; Acting-Assistant Paymaster, W. H. Hathorne; Engineers: Acting-First-Assistant, B. F. Clark; Acting-Second-Assistant, W. A. Collins; Acting-Third-Assistants, J. W. Shellenberger and C. M. Milligan.

"PERI"—FOURTH-RATE.

Acting-Master, Thos. M. Farrell; Acting-Ensign, E. C. Higgins; Acting-Master's Mates, J. H. Carter and W. H. Haven; Acting-Assistant Surgeon, T. F. Leech; Acting-Assistant-Paymaster, C. W. Bull; Engineers: Acting-Third-Assistants, J. A. Goodwin, David Pace and John W. Ross.

"GENERAL THOMAS"—FOURTH-RATE.

Acting-Master, Gilbert Morton; Acting-Ensign, Richard McCallister; Acting-Master's Mates, Joseph Grenlick, A. C. Orcutt, L. D. Simonds and Hans Trulsen; Engineers: Acting-First-Assistant, G. W. Burrows; Acting-Second-Assistant, W. E. Cowle; Acting-Third-Assistants, Jackson Andrew and J. W. Miles.

"ROMEO"—FOURTH-RATE.

Acting-Master, Thomas Baldwin; Acting-Ensigns, R. P. Shaw and J. E. Ernst; Acting-Master's Mates, John Winram and W. J. Franks; Acting-Assistant Paymaster, E. R. Moffatt; Engineers: Acting-First-Assistant, J. N. McCurdy; Acting-Second-Assistant, W. E. Taylor; Acting-Third-Assistant, Wm. Teal.

"RATTLER"—FOURTH-RATE.

Acting-Master, N. B. Willetts; Acting-Ensigns, H. N. Wells, S. H. Strunk and H. E. Church; Acting-Master's Mate, John Cronin and W. N. Bock;

Acting-Assistant Surgeon, W. B. Hartman; Acting-Assistant Paymaster, George P. Peck; Engineers: Acting-First-Assistant C. F. Seager; Acting-Second-Assistants, G. W. Shields and J. H. Hume.

"SIREN"—FOURTH-RATE.

Acting-Master, James Fitzpatrick; Acting-Ensigns, T. G. Herron and Z. T. Tibbatts; Acting-Master's Mates, E. H. Thompson, J. P. Jordan, C. E. Jordon and H. W. Gray; Acting-Assistant Surgeon, Lewis Westfall; Acting-Assistant Paymaster, S. S. Davis; Engineers: Acting-First Assistant, William Bishop; Acting-Second-Assistant, James Abrams; Acting-Third-Assistant, J. R. Meredith.

"SILVER LAKE"—FOURTH-RATE.

Acting-Masters, J. C. Coyle and G. W. Bone; Acting-Masters Mates, Samuel McKee, J. S. Dubois and F. N. Schooley; Acting-Assistant-Surgeon, J. H. Mills; Engineers: Acting-First-Assistant, Sam'l Ecoff; Acting-Second-Assistant, William J. O'Neill.

"SPRINGFIELD"—FOURTH-RATE.

Acting-Master, Edm. Morgan; Acting-Ensigns, H. D. Disereus and J. E. Wright; Acting-Master's Mates, J. Cunningham, H. Homkomp and William J. Rudd; Engineer: Acting-First-Assistant R. McLean; Acting-Third-Assistants, William Bell and H. J. Spence.

"VICTORY"—FOURTH-RATE.

Acting-Master, Frederick Read; Acting-Ensigns, W. B. Trufant and John Fisher; Acting-Master's Mates, R. L. Taylor, J. L. Kelso and G. W. Kepler; Acting-Assistant Surgeon, G. W. Shields; Acting-Assistant Paymaster, Benj. Page; Engineers: Acting-First-Assistant, J. L. Winston; Acting-Second-Assistant, J. C. Jones; Acting-Third-Assistants, Sam'l Henery and G. W. Postlethwaite.

"GENERAL SHERMAN"—FOURTH-RATE.

Acting-Master, J. W. Morehead; Acting-Ensigns, E. D. Hurd and C. L. McChing; Acting-Master's Mates, D. J. Chadwick and M. Pinney; Engineers: Acting-Second-Assistants, J. W. Street and David Street; Acting-Third-Assistants, Horace Stedman and T. H. Hamilton.

"GENERAL GRANT."

Acting-Ensigns, Joseph Watson and S. H. Harbeson; Acting-Master's Mates, E. B. McSweeney, D. G. Porter and H. W. Kruse; Acting-Assistant Surgeon, W. D. Hoffman; Engineers: Acting-First-Assistant, H. W. Taylor; Acting-Second-Assistant, Edw. Costello; Acting-Third-Assistants, William McKenzie, D. Shaw and G. E. Reno.

"CHAMPION"—FOURTH-RATE.

Acting-Ensigns, Thomas Devine, M. Allen and A. Hagerup; Acting-Master's Mates, Herman Alms, Benj. Nelson, T. J. Eckert and C. F. Beall; Acting-Assistant Surgeon, Geo. O. Allen; Acting-Assistant Paymaster, Geo. F. Bennis; Engineers: Acting-First-Assistant, John Johnston; Acting-Second-Assistants, Geo. Walde and C. A. Fisher; Acting-Third-Assistants, J. J. Suor and Wm. Lingle.

"CURLER"—FOURTH-RATE.

Acting-Ensigns, H. B. O'Neill and M. G. Bailey; Acting-Master's Mate, Thomas Crawford, C. W. Dunlap and Robert S. Balestier; Acting-Assistant Surgeon, John Gorden; Acting-Assistant Paymaster, J. R. Morris; Engineers: Acting-First-Assistant, Benj. A. Hoffman; Acting-Second-Assistant, L. S. Everson; Acting-Third-Assistant, C. C. Crain.

"GAZELLE"—FOURTH-RATE.

Acting-Ensigns, A. S. Palmer, James Derring and Conrad Erickson; Acting-Master's Mates, A. G. Boggs and J. W. Mullen; Acting-Assistant Paymaster, H. A. Mitchell; Engineers: Acting-First-Assistant, A. H. Armstrong; Acting-Second-Assistants, F. M. Peak and Frank S. Wyman; Acting-Third-

"LITTLE REBEL"—FOURTH-RATE.

Acting-Ensign, Jos. P. Petty; Acting-Master's Mates, N. P. Jacobs, J. F. Rulow, Isaac H. Brown and W. H. Evans; Engineers: Acting-Second-Assistants, Julius Elliter and J. M. Miller; Acting-Third-Assistants, E. H. Burton and G. Dorsey.

"ROBB"—FOURTH-RATE.

Acting-Ensigns, James Tushy and Howard Hale; Acting-Master's Mates, J. H. Jacoby and W. L. Berrian; Engineers: Acting-First-Assistant, Benj. Everson; Acting-Second-Assistant, J. G. Moore; Acting-Third-Assistant, B. H. Collier.

"TENSAS"—FOURTH-RATE.

Acting-Ensigns, A. C. Van Pelt and Jacob Rutherford; Acting-Master's Mate, Henry Van Velsor; Engineers: Acting-Second Assistants, Sam'l Weaver and Park Scanlan; Acting-Third-Assistants, Nathan Spear and N. J. Brooks.

"VOLUNTEER"—FOURTH-RATE.

Acting-Ensigns, M. R. Haines and Louis Kenny; Acting-Master's Mates, J. A. Coleman and M. L. Kirk; Engineers: Acting-First-Assistants, Peter Wagner and G. W. Taylor; Acting-Second-Assistant, R. A. Benneon; Acting-Third-Assistant, Wm. T. Moore.

"SAMSON"—FOURTH-RATE.

Acting Ensign, Geo. W. Painter; Acting-Assistant Paymaster, H. A. Mitchell; Engineers: Acting-Chief, C. H. Christopher; Acting-First-Assistant, Wm. Paul, Jr.

"GENERAL PILLOW"—FOURTH-RATE.

Acting-Ensign, Frank W. Halsted; Acting-Master's Mates, Geo B. Hall, B. F. Craig and W. H. Dobbell; Engineers: Acting-Third-Assistants, J. T. Slack and W. H. Cornell.

"NEW NATIONAL"—FOURTH-RATE.

Acting-Ensign, J. M. Farmer; Acting-Master's Mates, J. D. Holmes, W. B. Floyd, W. E. Jelley and H. A. Taylor; Acting-Assistant Paymaster, J. W. Keley; Engineers: Acting-First-Assistant, W. O. Logue; Acting-Third-Assistants, G. W. Aikin, G. R. Bell, Oliver Rosebush and W. M. Ulix.

RECEIVING-SHIP "GRAMPUS."

Acting-Ensigns, J. W. Litherbury and Robert Howden; Acting-Master's Mates, C. J. Dananda, A. H. Lewis and W. H. Corey; Acting-Assistant Surgeon, J. J. McElhany; Acting-Assistant Paymaster, Edw. D. Hayden.

HOSPITAL-SHIP "RED ROVER."

Acting-Ensigns, Charles King and J. J. Irwin; Fleet-Surgeon, Ninian Pinkney; Passed-Assistant Surgeon, J. S. Knight; Acting-Assistant Surgeons, G. H. Bixby and J. F. Field; Acting-Assistant Paymaster, A. W. Pearson; Acting-Master's Mate, R. G. Van Ness; Engineers: Acting-Chief, Wm. J. Bufinton; Acting-First-Assistant, Wm. Sprague; Acting-Second-Assistant, W. M. Fletcher; Acting-Third-Assistants, W. H. Vanwert and J. T. English; Acting-Carpenter, Harlow Kinney.

TUG "FERN."

Acting-Ensign, John M. Kelly; Acting-Master's Mate, Jacob Bomgarnar; Engineers: Acting-Second-Assistant, John Reed; Acting-Third-Assistant, A. K. Porter.

TUG "MISTLETOE."

Acting-Ensign, James L. Lingley; Acting-Master's Mate, John Thompson; Engineers: Acting-Second-Assistant, D. S. Miller; Acting-Third-Assistant, Allison Haywood.

TUG "MIGNONETTE."

Acting-Ensign, H. D. Green; Engineers: Acting-Second-Assistant, W. L. Calhoun; Acting-Third-

## TUG "MYRTLE.

Acting-Ensign, Isaac N. Goldsmith; Engineers: Acting-Second-Assistant, Geo. Longwell; Acting-Third-Assistant, J. H. Wright.

## TUG "PANSY."

Acting-Ensign, Wm. Harris; Acting-Master's Mate, A. McCarthy; Engineer: Acting-Second-Assistant, H. A. Cady.

## TUG "LAUREL."

Acting-Ensign, W. R. Owen; Engineers: Acting-Second-Assistant, Chas. Hilling; Acting-Third-Assistant, L. E. Davis.

## TUG "DAHLIA."

Acting-Ensign, W. H. Strobe; Acting-Master's Mate, Thomas Roach; Engineer: Acting-Second-Assistant, A. R. Smith.

## TUG "HYACINTH."

Acting-Ensign, J. B. Hizerman; Acting-Master's Mate, James Malis; Engineers: Acting-Second-Assistant, M. L. Andrews; Acting-Third-Assistant, L. C. Thatcher.

## TUG "IVY."

Acting-Ensign, Perry C. Wright; Acting-Master's Mate, Daniel Sullivan; Acting-Second-Assistant Engineer, Thomas Nerley.

## TUG "THISTLE."

Acting-Ensign, R. J. Ettingham; Acting-Master's

Mate, J. W. Hambrick; Engineers: Acting-Second-Assistant, W. P. Clugsten; Acting-Third-Assistants, L. H. Jones and Byrd Allen.

## TUG "DAISY."

Acting-Master's Mates, Joseph Graham; Engineers: Acting-Second-Assistant, F. M. Magers; Acting-Third-Assistant, J. E. Henderson.

## "W. H. BROWN"—FOURTH-RATE.

Pilot, Jefferson A. French; Acting-Ensign, J. Shinn; Acting-Master's Mates, O. Deweese, Jr., R. H. Hopkins and C. W. Dimmock; Engineers: Acting-First-Assistant, R. Cutter; Acting-Second-Assistants, A. C. P. French and G. W. Hart.

## "GENERAL LYON"—FOURTH-RATE.

Pilot, Richard E. Birch; Acting-Ensigns, James Martin and Thos. Cadwell; Acting-Master's Mates, E. W. Robinson, D. V. Balthis and F. B. Chase; Acting-Assistant Paymaster, Wm. H. Doane; Engineers: Acting-First-Assistant, W. J. Hamilton; Acting-Second-Assistants, James Baldwin and R. A. Smith; Acting-Third-Assistants, G. C. Shull and H. Workhouse.

## "ABRAHAM"—FOURTH-RATE.

Paymaster, A. E. Watson; Acting-Assistant Paymaster, Louis Jorgensen; Acting-Ensign, William Wagner; Acting-First-Assistant Engineer, Enos Hoshier.

## CHAPTER LVI.

### COMMERCE-DESTROYERS.

THEIR INCEPTION, REMARKABLE CAREER, AND ENDING.

THE "FLORIDA" ("ORETO"), "CLARENCE," "TACONY," "ALEXANDRIA," "GEORGIA" ("JAPAN"), "RAPPAHANNOCK," "NASHVILLE," "SHENANDOAH" ("SEA KING"), "TUSCALOOSA," "CHICKAMAUGA" ("EDITH"), "TALLAHASSEE" ("ATLANTA"), "OLUSTEE," "CHAMELEON," ETC.—CUTTING OUT OF THE U. S. REVENUE STEAMER "CALEB CUSHING" FROM THE HARBOR OF PORTLAND, ME.—CAPTURE OF THE "FLORIDA" ON THE COAST OF BRAZIL.—AN APOLOGY TO THE BRAZILIAN GOVERNMENT.—CAPTAIN COLLINS' PUNISHMENT.—THE "FLORIDA" SUNK IN HAMPTON ROADS.—DESTRUCTION OF THE WHALING FISHERY IN THE ARCTIC OCEAN.—NEUTRALITY LAWS VIOLATED BY FOREIGN GOVERNMENTS.—SCENES ON BOARD THE CONFEDERATE CRUISERS.—ACTUAL LOSSES INFLICTED BY THE "ALABAMA" AND "SHENANDOAH."—CRITICISMS, REMARKS, ETC., ETC.

WE have told the story of the "Sumter" and "Alabama," and partly that of the "Florida," which latter, after her escape from the Federal squadron off Pensacola, particularly the "R. R. Cuyler," in January, 1863, commenced the business of destruction for which she was fitted out.

In her first attempts at destruction the "Florida" was not particularly fortunate, for in the course of ten days Captain Maffitt only succeeded in destroying three small vessels. He then put into Nassau, where, it will be remembered, the "Florida," formerly the "Oreto," had been seized by the authorities and her case brought before the courts for violation of the "Enlistment Act." The merchant to whom the vessel was consigned swore that the "Oreto" was a *bona fide* merchant vessel, while at that very moment her guns and munitions of war were on board another vessel in the harbor. When the ship returned to Nassau in July, under the name of the "Florida," her appearance at first caused considerable confusion among the witnesses and officials,

the British Foreign Enlistment Act had been committed.

However, this circumstance did not seriously influence the British authorities at Nassau. Maffitt had entered a *bona fide* Confederate port, and now that he was again in Nassau, with a regular commission, a good crew, and the Confederate flag at his peak, he received an ovation. The officials allowed the "Florida" thirty-six hours to remain in port and take coal and whatever else she might require, although the orders of the Home Government limited the supply of coal to what was supposed to be necessary to enable a Confederate cruiser to reach one of the ports of the Confederacy.

From Nassau the "Florida" proceeded to Barbadoes, where she received on board one hundred tons of coal, in further violation of the orders of the Home Government, which provided that a second supply of coal should not be allowed within three months. Doubtless, the instructions were similar to those issued by Earl John Russell to the British Minister at Washington in the case of the "Trent,"—one set to be shown to the American Secretary of State, and the other

stating the real intentions of the Government. There seemed to be the same desire at Barbadoes as elsewhere to see American commerce destroyed, and, with such a feeling in existence, the chances for the escape of Federal merchant vessels were much diminished.

The "Florida" did not commit such havoc as the "Alabama," for in the space of five months she captured but fifteen vessels, which were all destroyed in the usual style of the Confederate cruisers. Her cruising-ground extended from the latitude of New York to the southward of Bahia, in Brazil.

In the vicinity of Fernando Noronha, Maffitt picked up a vessel called the "Lapping," loaded with coal, and, by converting her into a tender, was enabled to supply himself with fuel as long as he wished to remain on the station.

On the 6th of May the brig "Clarence" was captured off the coast of Brazil, armed by Maffitt with some light guns, and placed in command of Lieutenant Charles W. Read, formerly a midshipman in the U. S. Navy—and another Confederate State's vessel-of-war was created in the shortest possible time, with orders to burn, sink and destroy; although it was doubtful if Maffitt's authority to commission vessels would have been recognized in case he should have fallen in with a superior force.

Lieutenant Read was bold and full of resources, seeming to disdain all danger. He shaped his course for the coast of the United States, and by the 10th of June had captured five vessels, four of which were destroyed. The fifth was the schooner "Tacony," and this vessel, being better suited to his purpose than the "Clarence," Read burned the latter, after transferring her crew, guns and stores to the "Tacony."

During the next fortnight the "Tacony" made ten prizes. Here was a Confederate cruiser right upon the coast, burning and sinking coasting vessels with impunity, for not a single United States vessel was to be seen. This was a new style of warfare inaugurated by the Confederacy, without the least expense to them and without any of the difficulties of violating the British Foreign Enlistment Act, or hoodwinking colonial authorities to procure necessary supplies. As to the pay of officers and men, as that was probably made in Confederate money, the expense was nothing.

Read soon tired of the "Tacony." His ideas enlarged as his vessel grew plethoric with spoils, and his prolific brain was at work devising new schemes for Federal discomfiture. The last of his prizes, a vessel called the "Archer," captured off the capes of Virginia, seemed preferable to the "Tacony," and he accordingly made her into a cruiser and burned the latter. Had

Lieutenant Read kept off shore he would doubtless have made the "Archer's" name as famous as that of her predecessor; but, not satisfied with destroying peaceable merchantmen, he longed for higher distinction, for Read had in him the stuff to make a gallant naval commander.

The career of the "Archer" was short. The news of a privateer on the coast of New England was spread far and wide. Several gun-boats were cruising up and down the coast in search of Maffitt, who was reported off Nova Scotia; but their commanders do not seem to have been aware of Read and his peculiar performances.

In the latter part of June, two days after the "Archer" had been commissioned as a cruiser, Read determined to cut out the revenue-cutter "Caleb Cushing," from the harbor of Portland, Maine. In this design he was successful; the vessel was surprised by the boats of the "Archer" and carried by boarding. The people on shore hastily manned and armed several steamers, and followed the "Caleb Cushing" to sea. As Read saw that he must be overtaken, and that he could make no successful resistance, he set fire to the "Cushing" and attempted to escape in his boats, but was captured and imprisoned in Fort Warren.

This was a remarkable raid and showed great gallantry on the part of Lieutenant Read, although the presence of a single Federal gun-boat, under an intelligent captain, would have nipped the whole scheme in the bud. As it was, Read's capture was due to the courage of private citizens, who did not know what force the Confederates had outside to back them. After the affair was settled, gun-boats flocked in from the North Atlantic Squadron in pursuit of the raiders, but too late to be of use.

After the "Florida's" cruise on the coast of Brazil, she refitted and coaled at Bermuda, and thence sailed for Brest, where she was docked and thoroughly repaired. Maffitt was relieved by Captain Joseph N. Barney, who was in turn succeeded by Captain Charles M. Morris. The "Florida" remained nearly six months at Brest, sailed from that port in February, 1864, and, after cruising for three months against American commerce, put in again at Bermuda, where Captain Morris was allowed to take in coal and provisions. The Captain announced his intention of proceeding to Mobile, but, instead of doing so, made a cruise of three months on the coast of the United States against Federal merchant vessels, proceeding thence to Teneriffe, and on the 5th of October, 1864, he arrived at Bahia.

For a wonder, the U. S. S. "Wachusett" happened to be in Bahia when the "Florida" entered the port and anchored a mile distant, while a Brazilian corvette, in anticipation

of a difficulty between the vessels, took position near the "Florida." The latter vessel had received permission from the authorities to remain in port forty-eight hours to repair and coal ship, which was twenty-four hours longer than the usual time allowed these vessels; although Captain Semmes had been allowed to do pretty much as he pleased by the Governor of Bahia, and also by the Governor of Fernando de Noronha.

American officers in pursuit of Confederate cruisers were kept in constant excitement by hearing of excesses committed by these "sea-rovers," as the latter were sometimes called, and were greatly disappointed at not falling in with them, although there was not one chance in a hundred of their doing so. The Northern press had also indulged in strictures on the Federal Navy for not overtaking the Confederate cruisers, while the Southern newspapers sneered at the Yankee officers, whom they asserted were afraid to meet the Confederate vessels for fear of being captured. All this had its effect, and Commander Napoleon Collins, of the "Wachusett," determined that the "Florida" should not do any more damage if he could prevent it. Collins thought of the violation of neutrality, and dared all the consequences, including the probable loss of his commission.

About 2 A. M. the "Wachusett" got underway, crossed the bow of the Brazilian corvette, and steered directly for the "Florida," with the intention of running her down and sinking her; but, instead of striking the Confederate ship in the gangway as was intended, the "Wachusett" crashed into the "Florida" on her starboard quarter, cutting down her bulwarks and carrying away her mainyard and mizzenmast. The crew of the "Florida" seized what arms they could lay hold of in the confusion, and fired into the "Wachusett," wounding three of her crew; but, the latter vessel pouring in a volley of small arms and discharging two broadside guns at the Confederate ship, the latter surrendered. Sixty-nine officers and men were captured, but Captain Morris and many of his officers and crew were on shore. The "Florida" was then towed out to sea, the Brazilian man-of-war offering no opposition, except that an officer was sent to inform Collins that, if he persisted in his attack on the "Florida," the fort and vessels would open fire on him, and one gun was subsequently fired by the corvette. It was afterwards claimed by the Brazilians that Commander Collins had promised to desist from his purpose of capturing the "Florida"; but this seems to be merely an excuse to account for their supineness in taking no steps to prevent

ida" out of the harbor. The fact is, the Brazilians had no intention of proceeding to extremities, fully realizing that the corvette was no match for the "Wachusett."

That the capture of the "Florida" was a deliberate violation of the rights of neutrals no one can deny, and it placed the United States Government in a very awkward position. It would have been much better for Commander Collins to have waited outside for the coming of the "Florida," even at the risk of her escaping, than to have so grossly affronted a nation whose Emperor sympathized with the Union cause. Commander Collins' action was entirely independent of instructions, and he was willing to run the risk of losing his commission in order to put a stop to the "Florida's" career.

The Federal Government at once disavowed Collins' action, and made ample apology, which the Government of Brazil accepted, only stipulating that the "Florida" and those captured in her should be sent back to Bahia. Mr. Secretary Seward did all in his power to make amends for the mistake which had been committed, denouncing it as "an unauthorized, unlawful and indefensible exercise of the naval force of the United States within a foreign country, in defiance of its established and duly recognized Government." The fact of Mr. Seward's disapproval was quite enough to make Mr. Secretary Welles give his sympathy to Commander Collins, and, although the Secretary did not express himself openly, there is little doubt that he would have been glad if all the Confederate cruisers could have been disposed of in the same manner.

Collins' action, indeed, met with the popular approval, and it would have been a difficult matter to have convicted him had he been brought to trial before a court-martial. The little regard that had been shown by neutral nations, during the civil war, to their obligations, and their favoring the Confederate cruisers, had awakened great indignation in the Northern States, so that the community was little disposed to censure Collins' action in the case of the "Florida."

Commander Collins made little effort to defend his course. In his report to the Secretary of the Navy, he says: "I thought it probable that the Brazilian authorities would forbear to interfere, as they had done at Fernando de Noronha, where the Confederate steamer 'Alabama' was permitted to take into the anchorage three American ships, and to take coal from the 'Cora Hatch' within musket-shot of the fort, and afterwards, within easy range of their guns, to set on fire those unarmed vessels. I regret, however, to state, that they fired three shotted guns at us while we were tow-

the Brazilians may have taken, it seems to have been extremely mild under the circumstances, for they had certainly a right to compel the "Wachusett" to relinquish her prize if they had had sufficient force to back their demand. The only punishment inflicted on Commander Collins was an order to take the "Florida" back to Brazil with all his prisoners, and deliver the vessel to the Brazilian Government intact. For this purpose the "Florida" was sent to Admiral Porter, at Hampton Roads, that she might be properly prepared for sea.

The expedition against Fort Fisher was then fitting out, and the Roads were crowded with vessels of every description. While the "Florida" was lying in the stream an army transport came in collision with her, but did her no damage. It was reported that the collision was intentional, and to avoid further accident Admiral Porter directed the "Florida" to be stripped of everything valuable, her guns taken out and the vessel moored securely head and stern at Newport News, just at the spot where the "Cumberland" was sunk in very deep water. An engineer was placed on board in charge, with two men to assist him in looking after the water-cocks; but, strangely enough, although the "Florida" was to all appearances water-tight when she reached Newport News, she sank that night at two o'clock in ten fathoms, and there she lay for some years after the war. This was about the best thing that could have happened to the "Florida," for the Northern people would not have been satisfied to see her sent back to Brazil to continue her depredations on their commerce, and it would have been a most humiliating duty for Commander Collins to perform. When the sinking of the vessel was reported to Admiral Porter, he merely said, "Better so"; while the Secretary of State and Secretary of the Navy never asked any questions about the matter, being too well satisfied to get the elephant off their hands.

In 1863, after the appearance of the "Alabama" and the "Florida," many attempts were made by the Confederate agents abroad to get cruisers to sea, but these attempts were not always successful, as the British Government was beginning to realize the impolicy of neglecting so completely their neutral obligations, and Mr. Adams, the American minister, lost no opportunity of calling attention to the numerous violations of the Foreign Enlistment Act which were taking place. In consequence of the determined stand taken by Mr. Adams, several iron-clads building by Laird & Co. were seized. The "Alexandria" was released in England, but was subsequently libelled at Nassau, where the courts, having learned some-

thing from the case of the "Florida," detained her until the end of the war.

Notwithstanding all the watchfulness of the American minister, the "Georgia" and "Rappahannock" got to sea in 1863. The career of the latter was brief. She had been a dispatch vessel in the Royal Navy, and was sold by the British Government to persons acting for the Confederacy. She was refitted at Sheerness under the direction of employees of the Royal Dock Yard; but the Government proposing to inspect her, in order to avoid detention she hastily put to sea with but a small portion of her crew on board, and these had been enlisted by the connivance of the Government official who aided in getting the vessel off. The "Rappahannock" was commissioned as a Confederate vessel-of-war in the British Channel, and was seized by a French gun-boat off Calais.

The "Georgia," a screw-steamer of seven hundred tons, was launched on the Clyde, and put to sea in April, 1863. A British merchant was her ostensible owner, and her guns and munitions of war were put on board the vessel off Morlaix. The case of this vessel was no greater violation of the neutrality laws than that of others; but the British Government, wishing perhaps to show that it would be neutral in 1863 if it had not been in 1861, instituted proceedings against the persons concerned in sending the "Georgia" to sea, and upon conviction they were each sentenced to pay the enormous fine of fifty pounds, a penalty not likely to deter British subjects from violating the Foreign Enlistment Act.

The career of the "Georgia" was not very exciting, although extending over a period of a year. The "Sumter," "Alabama" and "Florida" had been beforehand with her, and there was little left for the gleaner. Fifteen millions of dollars worth of United States commerce had been swept from the ocean, and the American vessels had either sought protection under other flags, or were laid up in port until the war should be over. The "Georgia," not being very successful in taking prizes, was finally taken to Liverpool, her crew discharged, and the vessel sold by Captain J. D. Bullock, agent of the Confederate Navy Department, to an English shipowner. This was a questionable transaction, and the transfer was, no doubt, made to prevent the seizure of the "Georgia" by the British authorities; for the latter, owing to the firm stand taken by Mr. Adams, had begun seriously to reflect on the probable consequences of further trespassing on the patience of the United States Government, as it was evident the collapse of the Confederacy was now not far off.

In writing of the probability that Laird's rams would be permitted to get to sea, Mr. Adams remarks:

"In the notes which I had the honor to address to your Lordship on the 11th of July and the 14th of August, I believe I stated the importance attached by my Government to the decision involved in this case, with sufficient distinctness. Since that date I have had the opportunity to receive from the United States a full approbation of their contents. At the same time I feel it my painful duty to make known to your Lordship, that in some respects it has fallen short in expressing the earnestness with which I have been in the interval directed to describe the grave nature of the situation in which both countries must be placed, in the event of an act of aggression committed against the Government and people of the United States by either of these formidable vessels."

This diplomatic remonstrance was easily understood by those who had tampered with the United States to the verge of war, and now that almost all of the American commerce left afloat had been transferred to the British flag, much to the advantage of Great Britain, they were unwilling to have that commerce depleted by hostilities with the United States, for the Federal Navy was now adding to its forces a class of steamers well adapted, in speed and armament, to repeat against Great Britain the tactics of the Confederate cruisers against the United States. It would have perhaps been better policy for the United States to have declared war with Great Britain than to have submitted longer to open violations of neutrality, for the former had little commerce to lose and could have swept the trade of the latter from the ocean.

When Mr. Adams heard that the "Georgia" was sold to a British merchant, he informed Commodore Thomas T. Craven, then in command of the U. S. "Niagara," lying in the port of Antwerp, that he must endeavor to intercept and capture the converted Confederate. The "Georgia" was captured by Commodore Craven off Lisbon, was sent to Boston and condemned by the Admiralty Court, her alleged owner never receiving a penny of the £15,000 he had paid into the Confederate treasury as the price of the vessel.

The fate of the "Nashville" has already been mentioned. In January and February, 1863, several attempts were made to destroy her as she lay above Fort McAllister, on the Great Ogeechee River. On the 27th of February, 1863, she was set on fire and blown up by shells from the Monitor "Montauk," Commander John L. Worden.

The "Shenandoah," originally called the "Sea King," was the last and the most dangerous of all the Confederate cruisers. She was a full-rigged ship of about eight hundred tons, with so-called auxiliary steam power, and very fast under either sail or steam. capable of making three hun-

dred and twenty miles in twenty-four hours under favorable circumstances, which exceeded the speed of any vessel in the U. S. Navy.

On the 8th of October, 1864, the "Sea King" cleared from London for Bombay. As she was not equipped for war purposes, there was no question in regard to her; but the same day she sailed, the steamer "Laurel" cleared from Liverpool for Nassau, with several Confederate naval officers and a cargo of cases marked "Machinery," but containing guns and their equipments. Near Madeira, the "Sea King" received her armament and stores from the "Laurel," and was transferred by her master, who had a power of sale from her owner, to Commander James J. Waddell, of the Confederate Navy, who put her in commission as the "Shenandoah."

The plans for the "Shenandoah's" operations had been carefully matured at Richmond by Commander Brooke, of the Confederate Navy, and were based upon the movements of the Pacific whaling fleet. The latter habitually cruised in the neighborhood of the Carolina Islands for sperm whale, going north to the Sea of Ochotsk for right whale, thence to Behring's Straits and the Arctic Ocean. Returning from the north, the whalers generally reached the Sandwich Islands in October or November for refreshment. The plan was for the "Shenandoah" to be at these various points simultaneously with the whaling fleet, and thus to sweep it from the sea. There was no longer much opportunity of injuring United States commerce in the ordinary channels of trade, for the "Alabama" and "Florida" had done their work pretty thoroughly, and a number of new and fast cruisers had been sent by the Federal Government to guard what remained. The new cruising-ground mapped out for the "Shenandoah" was, therefore, the most inviting field of operations now remaining for a Confederate cruiser.

The "Shenandoah" cruised three months in the Atlantic, taking several prizes, and then proceeded to Tristan d'Acunha, where the crews of the captured vessels were landed. She next proceeded to Melbourne, where she was well received and allowed to repair and refit, take in all the coal required—in short, do anything that would assist her in her attempt to destroy the American whaling fleet. In violation of the Foreign Enlistment Act, Commander Waddell was here permitted to ship forty-three men as an addition to his crew; but the Australians had little respect for their obligations as neutrals. Their ruling sentiment was hatred to the United States Government and people. This was shown in the early mining days of 1852. when the British Government

gave American merchant vessels the privilege of trading on the Australian coast on the same terms as were accorded to those of Great Britain; but the colonists placed so many restrictions on United States vessels, steam-ships especially, that the latter were driven away.

On the 18th February, 1865, the "Shenandoah" proceeded under sail to the vicinity of Behring's Straits, where a large number of whaling vessels were captured and destroyed. Until the 28th of June, the ocean was ablaze with burning ships, whose crews were subjected to very inhuman treatment. Waddell continued his operations for over two months after hostilities between the North and South had terminated, professing that he had no intimation of the surrender of the Confederate armies until the date above mentioned; but he must have known when he left Melbourne that the Confederate struggle for independence was practically at an end. When Waddell was assured that the Confederate Government had ceased to exist, instead of surrendering his vessel to the nearest United States authority as he should have done, he proceeded to Liverpool and delivered the "Shenandoah" to the British authorities.

This was the last scene in the terrible drama inaugurated by Semmes and finished by Waddell. The story of the Confederate cruisers carries with it a moral which should not be forgotten. The civil war is now remembered as a dreadful episode in our history, bringing death and misery to the North and South; but the ravages of the Confederate commerce-destroyers were inflicted upon men pursuing a peaceful avocation, and were thus of peculiar hardship.

The Confederates had in their proceedings some show of justification; but, as a mode of carrying on warfare, it was lacking in the chivalry upon which Southern officers peculiarly prided themselves. With one exception, we do not believe that a Southern officer, engaged in the business of destroying United States merchant vessels, ever boasted after the war of what he had done, or cared to dwell on events that were calculated to leave an unpleasant impression on the mind.

The destruction of United States commerce did not fulfill the object desired—to benefit the Confederate cause—on the contrary, it created great indignation, even among the peace party of the North, and caused Congress to make increased appropriations for the Navy. Indeed, but for that circumstance, it is not likely that the money allowed the Navy would have been more than enough to maintain the blockade of the Southern coast with such commercial vessels as the Navy Department could pur-

chase. The lessons of the civil war will not be lost, if ever the United States is engaged in hostilities with either of the nations that assisted the Confederates in their raid on American commerce. It is true that Great Britain made the *amende honorable*, after years of discussion, in regard to her part of the business; but, by permitting Confederate cruisers to roam at will over the ocean, the British Government taught her future foes how much mischief could be done by three or four ordinary cruisers against her own commerce, which is spread all over the world, and on which her prestige as a nation so largely depends. Other nations will, doubtless, resort to the "Alabama" mode of warfare, so inexpensive, and so easily carried on, and calculated to do so much injury to the chief commercial nation of the world.

As the original "Monitor" changed the system of building vessels of war, so the plan inaugurated by Semmes has made an entire change in the class of vessels to be used as cruisers and commerce-destroyers. Such strenuous efforts are put forth by the naval powers in this direction, that there is little difference between them in respect to the perfection of their fast steamers. After years of idle speculation, the United States have at length entered into competition for the best vessels for general war purposes, and we are not likely to forget the lesson taught us by Captain Semmes, with his carefully-considered plan of operations.

Commerce-destroying has always been practiced during war, and, in spite of the protests of civilization and humanity, it seems likely it will be practiced in the future, since it is too strong a temptation to the weaker powers to permit it to be abolished. It furnishes also a strong inducement for adventurers to enlist in vessels-of-war, with the hope of excitement and prize-money; the latter, a stimulus which will always keep a navy manned in time of war. If it should ever happen that the commerce of the ocean should be allowed to pass unmolested by belligerents, and that ships-of-war simply be kept to enter into conflict with each other or with fortifications, war would become a comparatively uninteresting business, and might be lengthened out interminably, so that, in the long run, there would be nothing gained by the departure from the old system.

The question has never been settled in the popular mind as to whether the Confederate cruisers were properly constituted vessels-of-war. The fact that most of them were fitted out in defiance of the law of the country in which they were built, and that the aiders and abettors of the scheme were liable to a heavy penalty, would seem to be a bar against their regularity. The fact

that Great Britain subsequently paid for allowing her laws to be violated to the extent of jeopardizing the peace with a friendly nation, must be taken as additional evidence against the Confederate cruisers.

Great Britain, with propriety, might have sent out her ships-of-war and captured the Confederates on the high seas, or held them on entering her ports to refit. The inviolability which is supposed to surround a national vessel should not shield her for violation of the laws of a neutral nation, especially when she belongs to a government not recognized by any other. Otherwise there would soon be an end to law and order upon the ocean, and every little island that could man a steamer might claim belligerent rights, and prey upon the enemy's commerce after the manner of the Confederate cruisers.

That the success of those vessels was due to the inaction of the British Government cannot be doubted, for, if Great Britain had been mindful of her neutral obligations, she would have remonstrated so emphatically with the Confederate Government against the actions of their ships-of-war as would soon have put an end to the career of the latter.

Although the Confederate Government claimed that their cruisers were ships-of-war, that assertion did not make them so; and the question arises, were they entitled to the privileges accorded such ships by the usages of nations? Their position was certainly anomalous, being recognized as belligerents, although the State to which they belonged had not been recognized by any Government. The only recognition accorded the Confederates by Great Britain was the Queen's proclamation of neutrality, forbidding either belligerent from taking prizes into British ports. It is difficult to understand how a nation can concede belligerent rights to another and recognize the seizure of neutral property—as did England and other powers—and yet maintain no official relations with her. The clearest and most convincing statement of this question is embraced in a work on "The Blockade and the Cruisers," by Professor James R. Soley, U. S. N. A vast amount of indulgence was shown the Confederate cruisers in every stage of their proceedings, and it is not unlikely, if a similar state of affairs should ever again occur, that neutrals will find it necessary to draw the lines closer than heretofore, in order not to be liable to penalties which are apt to follow so liberal a course as was pursued towards the Confederates, during the American civil war, by certain European governments.

So many arguments have been advanced for and against the system adopted by the

Confederate Government in fitting out cruisers, that it may not be amiss to inquire how far the said cruisers were justified in committing the havoc they inflicted on the merchant vessels of the United States. It is well for us to ascertain whether the acts of the Confederates came within the strict limitations of the law of nations, for, in case of war between any mother country and her colonies, the acts of these cruisers, if recognized as legal, would establish injurious precedents.

Every government owes it to its citizens to extend every possible safeguard around the commerce of the ocean, for it is the faith which merchants place in their governments to protect them at all hazards, which induces them to embark their property on the high seas; therefore, the different powers should combine to establish rules of action binding upon them all.

There were a dozen ways in which Great Britain might have prevented her neutrality laws from being violated. Had the authorities adhered to the terms of the Queen's proclamation, the Confederate cruisers could never have extended their operations beyond the coast of the United States, where their career would have speedily terminated after they had perhaps destroyed a few unimportant vessels. Having issued this proclamation, it was the duty of the British Government, not only to abstain from aiding in the destruction of United States commerce, but to order all Confederate cruisers to depart at once from colonial or home ports; and, in case of neglect to obey the order, the Confederates should have been summarily dealt with.

No government can afford to remain passive while its laws are being violated, for this would indicate either weakness or duplicity. If the Confederate vessels fitted out in England were sent from English ports in violation of English laws, they were not legally authorized to capture or destroy an enemy's commerce; and, if captured in their turn, the Confederate officers and men could very properly have been held for trial before the United States courts. That the Confederate cruisers were subject to capture by British vessels-of-war, for violation of British law, there can be little doubt. This would suggest that the proceedings of the Confederate cruisers were not strictly legal.

It was natural that the Confederate Government should take advantage of any flaw in British laws to enable them to get their vessels to sea; but it was due to British self-respect to be sure that those laws were not violated, and the British Government should therefore have emphatically remonstrated with the Confederate agents for their laxity in not closely respecting Brit-

ish as well as international law. No better use could have been made of British cruisers—had one of these purchased vessels escaped from a British port—than to send them in pursuit of the offending vessels.

The Confederate cruisers were British vessels, subject to the laws of Great Britain, and were commissioned as ships-of-war on the high seas; and it was supposed that the high seas being common to all nations, their being so commissioned was justifiable. But this would not obliterate the former delinquency—the violation of British laws enacted to prevent the very course pursued by the Confederate agents. The first steps taken by these agents were so clearly illegal, that the consummation of their purpose could not be lawful, and the resultant consequences were so in violation of all law, that it is not strange the Federal Government could never be brought to look upon these vessels as legitimate cruisers.

To show the very dubious character of some of the Confederate cruisers, we will mention that it was not uncommon for them to run the blockade under the British flag, with British papers, taking in cargoes of goods and carrying out cotton, and then to figure for a time as vessels-of-war, varying their character to suit circumstances. Of course, such proceedings cannot be justified by any of the usages of war. We will quote a few cases mentioned by Professor Soley, who has taken great pains to ascertain the facts, and the reader will be struck with the absurdity of claiming for vessels so irregularly fitted out the character of properly constituted ships-of-war. We cannot call them pirates or privateers, but we do say that the Confederate cruisers were not regular ships-of-war, and were acting in violation of the laws of Great Britain as well as those of the United States.

The "Japan," or "Georgia," left the Clyde registered in the name of a British subject, and remained for nearly three months still registered in the name of her ostensible owner, although during this time she was engaged in hostilities against the Federal Government. A year later she returned to Liverpool, was dismantled and sold to a British subject, the bill of sale being signed by Captain James D. Bullock, of the Confederate Navy. The "Rappahannock" left Sheerness in haste as a merchant vessel, with workmen still on board, who were carried off against their will. She assumed the character of a Confederate cruiser while crossing the British Channel, and sought admission into the port of Calais as a ship-of-war in distress! The case of the "Tuscaloosa," already mentioned, is too glaring to need discussion.

Towards the close of the civil war the Confederate Navy List must have presented a curious aspect, for one day a vessel would figure as a blockade-runner under the British flag, and the next she was a Confederate cruiser; but, strange to say, the British colonial courts could not find any law for interfering with such vessels. The blockade-runner "Edith" escaped from Wilmington, N. C., one night in October, 1864, under the name of the Confederate States steamer "Chickamauga." She was armed with a 64-pounder and a 32-pounder, and steering north along the coast destroyed several unfortunate vessels; when, her whereabouts becoming known, she was compelled to run the gauntlet into Wilmington again, and resumed her former character. What particular object it was proposed to accomplish by such proceedings as those of the "Chickamauga" is hard to conceive, for at that stage of the civil war a cruise against the coasting trade of the North could only show the desperate straits to which the Confederates were reduced, and was merely an attempt to keep up the semblance of a war on the ocean.

The "Atlanta" made two trips to Wilmington as a blockade-runner. She was then converted into a cruiser and named the "Tallahassee." Under this name she left the Cape Fear River early in August, 1864, and on the 19th of that month arrived at Halifax, after capturing and destroying several vessels. Owing to the vigilance of the authorities, who in this instance were upon the alert to prevent a violation of the neutrality laws, the "Tallahassee" was unable to obtain coal or other supplies, and was obliged to return to Wilmington. In November this vessel made another attempt, under the name of the "Olustee," and took a few prizes, but, returning to Wilmington, assumed her old character of merchant vessel and blockade-runner. She received the appropriate name of "Chameleon," and in December, 1864, went to sea under the command of Captain John Wilkinson, of the Confederate Navy, with the object of returning from Bermuda laden with provisions for the Confederate army. Although the Governor of Bermuda was duly apprised of the character of the "Chameleon," he expressed himself as satisfied that she had been sufficiently whitewashed to be admitted as a merchant vessel. The cargo was sold, a supply of stores laid in, and the vessel returned to the Confederacy, only to find that Wilmington was in Federal hands. Wilkinson then tried to get into Charleston; but, failing in his attempt, he proceeded to Nassau, landed his cargo, and the vessel was taken to Liverpool and delivered to Fraser, Trenholm & Co., the Confederate agents; but as the British au-

thorities had now become very particular in regard to the proceedings of these non-descript vessels, the "Chameleon" was seized and ultimately surrendered to the United States Government.

It is only within a late period that we have ascertained anything of the inner life on board the Confederate cruisers, for Captain Semmes' voluminous narrative of the "Sumter" and "Alabama" does not by any means supply this want. The gallant captain represents his vessels as men-of-war, with most able officers and subordinate crews, where affairs were conducted in a manner to meet the approbation of the most hypercritical person. A lately published narrative of life on board the "Alabama," written by one of the crew, represents things very differently from the rose-colored view of the commanding officer. According to this account, the usages of civilized nations were not observed by the crew of the Confederate cruiser, who were a riotous and abandoned set of men, who paid little heed to the rules and regulations of the vessel or the orders of their officers. This is not to be wondered at, when we consider that the men were shipped in illegal fashion and were most of them the lowest class of adventurers. We give a few quotations from this interesting article:

"I was pleased to find that I had not an old shipmate aboard. The best man in the port-watch, to which I belonged, was a Scotchman named Gill. He was about forty, very powerful, and could hold an ordinary man at arm's length clear off the deck. He was saturated with Calvinism, and could quote Scripture and sermons by the hour, but was, all the same, a daring, dangerous ruffian. According to his own account, he had been in numerous mutinies, in one case taking a Spanish brig, killing the officers, beaching her on the Des-eada Key, in the Leeward Islands, and getting to Porto Rico in the launch with the plunder. This man's influence was bad, and he was the cause of much of the insubordination that took place on board. \* \* \* \* \*

"We were now taking prizes rapidly, being not over four hundred miles from New York, in the 'rolling forties,' directly in the track of American commerce. The treatment of the prisoners was fairly good, and they were not ill-used on board, but the conduct of the boarding-crews was shameful; the officer in charge of the boat had no control over them, and they rushed below like a gang of pirates, breaking open the sailors' chests, and taking from the persons of the prisoners everything that took their fancy. I never saw them injure prisoners, or use their weapons, except to frighten their victims, but the wanton destruction of the clothes and effects of captured sailors was simply disgraceful. This sort of thing seriously affected the *morale* of the men, and, had we then met an enemy of equal force, but of the usual standard of man-of-war discipline, we should have made a very poor show. The prisoners were of all nationalities, but their officers all seemed to be Americans by birth, and were mostly a fine, gentlemanly lot. The old sea-dog element, so common among English shippers in the East, does not seem to exist among

they might easily be mistaken for clerks or even professors. Not so the old sailor, in command of the 'tea wagons' and East Indian ships—their walk and lingo proclaimed them sailors, and nothing else. One of the mates of a whaling-ship we took and burned was a parson-like man, and preached and prayed to his fellows. He was long and lanky, and two of our roughs began to haze him, but they mistook their calling, and in two minutes were so mauled and man-handled that it was reported aft; but the first-officer said it served them right, much to the satisfaction of the honest man between decks. \* \* \* \* \*

"November 18th (1862), we arrived at Martinique and had an 'ovation'; the exultation of the French over the disasters to Yankee commerce impressed me. A French corvette lying there gave a dinner to the officers. Gill licked two of the Frenchman's petty officers nearly to death, as his share of the entertainment, and our liberty was stopped in consequence. Forest swam on shore that night, and, eluding sharks and look-outs, was hauled into one of the berth-deck ports, with five gallons of the worst liquor I ever drank. It set the entire watch crazy. Forest kept comparatively sober, but old Gill 'bowsed up his jib' until he could scarcely stand. Such an uproar I never heard; the lanterns were lit in defiance, and, when the watch was called, the officer of the deck was saluted with all manner of 'skrim-shander.' The boatswain was knocked down and hurt by a blow from a belaying-pin, and everything loose was fired aft. The officers and marines with the sober portion of the crew now charged forward, and a terrible *melee* ensued. Gill knocked a gunner's-mate's jaw out of place, and was laid out by a capstan-bar, and finally the drunken men were secured. \* \* \* \* \*

"We now sailed for Jamaica, going into Port Royal, and had a pleasant time. Here something occurred that few knew of. An Irishman called "King-post," from his build, being short and thick, was suspected of giving the officers information of the plans of Forest and his mates. He was closely watched and he knew it, but was on his guard. He took his liberty with the others, and, of course, got drunk. Seeing Gill and another man leading a third and going towards the suburbs, I followed, and made out the third man to be King-post. I missed them, and, as I knew that Gill was well acquainted with the port, I at once conjectured that he had seen me following them, and had changed his course. An hour after, both men came back and I joined them. I asked where the Irishman was. Gill looked at me with his hard gray eyes, and significantly said: 'I dunna know, laddie, but hell haud his tongue noo; and ye had better say naithing, yir a wise fallow!' King-post never came back and was supposed to have deserted; but, no doubt, he fell a victim to those two ruffians. The crew broke all bounds here, and nearly all the petty officers were disgraced, much to their satisfaction, as they had no respect from the crew and were responsible for them to their officers. \* \* \* \* \*

It was a very common thing for the crew that boarded a prize to bring liquor back with them. Once some fifteen bottles of brandy were smuggled aboard, and all hands partook. As usual, there was a terrible time between decks. One petty officer was so badly hurt that it was thought he would die. Many of the men had grape-shot in a netted bag fastened to the wrist by a lanyard, and many a coward blow was given with these."

Whether such performances as those mentioned above were consistent with the discipline of a vessel-of-war, we must leave to the judgment of our naval readers.

It is difficult to reconcile the preceding

of the Confederate cruisers with the precedents which have governed vessels-of-war in modern times, and their toleration by European governments must be due to the fact that the said governments believed the union of the States was finally dissolved, and that the fragments would have no power to exact reparation for damages. The present condition of our country shows what a mistaken idea prevailed abroad during the civil war.

What is now chiefly required by the United States is an adequate naval establishment such as will command the respect of European powers. Under such circumstances, we would never have to fear a recurrence of such dreadful scenes as were common on board the Confederate cruisers.

In the glamour attending the remarkable cruise of Semmes, Waddell, in the "Shenandoah," has almost been lost sight of. Captain Semmes lost no opportunity of advertising himself through the vessels he bonded, through foreign vessels, or otherwise. His object was to show the people of Europe the dreadful havoc the Confederates were making on American commerce; and, although by this course he ran the risk of being followed and overtaken by the Federal cruisers, yet he was so adroit in his proceedings that he always managed to leave a cruising-ground before the United States Government could get a vessel there. Semmes frequented some of the best-known ports, where there was constant communication with England, so that the Britons were constantly informed of the effect of their policy in allowing Confederate cruisers

to be fitted out in their harbors. At the same time this news was transmitted by British packets to the United States, having its effect there, but not exactly what Semmes wanted. Semmes pursued this course, without attempt at concealment, until his vessel was sunk by the "Kearsarge."

Waddell, in the "Shenandoah," pursued an entirely different course. He followed the line of the whale fisheries which was unfrequented by other vessels, and he carried on his work, with little chance of its being found out, until he had destroyed the entire whaling fleet. The actual losses inflicted by the "Alabama"—\$6,547,609.86—was only about \$60,000 greater than those inflicted by the "Shenandoah," yet the latter was only in commission about one-half as long a time as the "Alabama." Commander Waddell kept his movements concealed, and left no trace behind him by which he could be followed. He eluded the vigilance of the United States cruisers that were in pursuit of him, and, after lightening his vessel of a portion of her cargo, delivered her to the British authorities, and she was at last turned over to the United States Government. An account of the inner life on board the "Shenandoah" has never, to our knowledge, been published, although from the records of the Court of Alabama Claims we know the exact number of vessels Waddell captured and the damage committed; but, if ever an account of this cruise is published, even in the boastful spirit which characterizes so many Confederate narratives, it will no doubt be found equally interesting with the story of the "Alabama," and quite as disreputable.

## CHAPTER LVII

### THE RAM "STONEWALL."

REMARKABLE ENERGY AND FIDELITY OF THE CONFEDERATE AGENTS ABROAD.—THE BUILDING, PURCHASE AND FITTING OUT OF CONFEDERATE CRUISERS.—THE RAM "STONEWALL" BUILT, SOLD TO THE DANISH AUTHORITIES, AND REPURCHASED BY THE CONFEDERATE GOVERNMENT.—THE RAM IN COMMISSION.—THE FEDERAL VESSELS-OF-WAR "NIAGARA" AND "SACRAMENTO" BLOCKADED IN THE PORT OF CORUNNA.—ACTIONS OF COMMODORE CRAVEN.—THE RAM PROCEEDS TO LISBON.—COMMODORE CRAVEN COURT-MARTIALED AND SENTENCED.—THE SECRETARY OF THE NAVY CENSURES THE COURT, AND THE PROCEEDINGS SET ASIDE.—COMMODORE CRAVEN RESTORED TO DUTY.—THE RAM ENDS HER CAREER AT HAVANA, AND IS FINALLY SURRENDERED TO THE UNITED STATES BY THE SPANISH AUTHORITIES.—REMARKS.

THE management of the agents of the Confederate Government abroad in supplying it with cruisers was very remarkable, and shows that the Confederacy was extremely fortunate in the selection of the officers thus employed. The agents not only succeeded in eluding the supposed vigilance of the authorities in England, but were even able to contract for two powerful rams and four corvettes in France to carry the most formidable guns then known.

One of the cleverest of these officers, and, as far as we know, the best, Captain James D. Bullock, was the principal agent in England for the purchase of vessels, and though the laws were violated in the transaction of building or purchasing, the violation rested principally with the builder or seller. In all his business transactions, it is fair to say of Captain Bullock that the only charge brought against him was too great a fidelity to the cause he had espoused, coupled with the ability he manifested in getting Confederate cruisers afloat. Though it is true that he was the prime-mover in getting these cruisers to sea, it has not been charged that he ever resorted to dishonorable means to attain his ends. It is said that he made contracts fairly and openly with builders and left it with them to de-

liver the ships at such time and place as they thought best. That the latter were adepts in violating their own laws, no one will doubt, and it is not to be supposed that the Confederate agents would hesitate to accept a well-fitted ship in a very irregular manner, as it seemed to the Federal Government, for human nature is too weak on such occasions to resist temptation.

Bullock was a man of ability. He never tired in his efforts, and if he met with difficulties at one turn he tried another; and when the British Government, seeing "the handwriting on the wall," realized the importance of not becoming involved in a war with the United States, and suddenly exercised all its power to put a stop to fitting out cruisers, Bullock transferred his talents to France, or, at least, pointed the way to constructing the vessels mentioned in that country. The career of the cruisers was nearly over; but they had been so successful that the Confederate Government was determined to show that it was able to drive off the large frigates and other vessels before the Southern ports, and raise the blockade all along the coast. Perhaps, had the vessels contracted for in France all got off together, and operated in concert, they might have created some confusion along the coast of the United States.

The Emperor had failed about that time

in securing joint action with England against Mexico, and, seeing that the Southern rebellion was fast collapsing, felt sure that the first step of the Federal Government would be to march a large army into Mexico to drive out the French troops. That army might possibly have been composed of Federal and Confederate soldiers marching shoulder to shoulder to defeat the common enemy, who, taking advantage of an intestine war, had presumed to establish an Empire right at our doors on the ruins of a sister Republic.

The construction of the vessels for the Confederate Government in France was undertaken by the builders with the tacit understanding that the French authorities would not prevent their delivery on completion. But owing, undoubtedly, to the European apprehensions, when the rams were about ready for sea, peremptory orders were given by the French Government that all the vessels should be sold. The orders were obeyed, and the "Stonewall" (then the "Sphinx") was purchased by Denmark, just as the Schleswig-Holstein war was closing. Delay in the completion and final delivery of the ram to Denmark made that government lukewarm in carrying out the terms of the purchase, as by this time the war was at an end and the ship was not required. When, therefore, a proposition was made by the builder to repurchase the "Sphinx," after delivery at Copenhagen, the Danish authorities accepted it without hesitation, and, as a natural sequence, she passed into the possession of the Confederate agents, was by them put into commission, and christened the "Stonewall." The history of the four corvettes is not pertinent, as they never came into the possession of the Confederate Government. The "Stonewall" was placed under the command of Captain Thomas Jefferson Page, an able officer, formerly of the United States Navy. She had, we regret to say, an opportunity of inflicting a humiliation upon the American Navy which was hard to bear, considering that its name almost throughout the conflict had been without a stain, and that the reputation it had gained in the war of 1812 had not diminished in the least.

The "Stonewall" got to sea January 28th, 1865, having received her stores and crew from another vessel dispatched by Captain Bullock from England, at Quiberon Bay, Belle Isle, France, but, owing to defects in the rudder casing, the "Stonewall" put in to Ferrol, Spain, for repairs, where she arrived February 2d, and fell in with the Federal frigate "Niagara" and sloop-of-war "Sacramento," under the command of Commodore Thomas T. Craven. The "Niagara" was a large and fast vessel of 4,600 tons displacement, carrying ten 150-pounder Parrott

rifles. The "Sacramento" mounted two 11-inch guns, two 9-inch guns and one 60-pounder rifle, with some smaller pieces. The "Stonewall" carried one 300-pounder Armstrong rifle in a casemate in the bow and two 70-pounder rifles in a fixed turret, aft. Her sides were armored with  $4\frac{1}{2}$  inches of iron; she had also a heavy ram. Such was the force of the three vessels now congregated in a Spanish port, the Confederate evidently determined to try consequences with the Federal vessels.

The commander of the "Niagara," not wishing to lay in the same port with the Confederate vessel, moved his ship to Corunna, where, when her repairs were completed, she was followed by the "Stonewall," which remained before the port blockading the two American ships-of-war, and, as the Commodore expressed it, "flaunting her flags in his face." Captain Page, in fact, did everything he could to provoke an encounter; and it must have been with much mortification that the Union commodore decided to remain at his anchors, and not run the risk of a battle with a foe that was represented as built with impervious sides, and with a battery (though smaller in numbers) very much superior to his own. Unfortunately, the Spaniards looking on could not be made to understand how two large vessels, mounting between them fifteen heavy guns, could decline a contest with a much smaller vessel carrying only three guns, and hence arose some misconception as to the existence of that prestige which American officers claimed for their Navy. It must have required great moral courage in an officer commanding two such ships to refrain from attacking the "Stonewall," on the ground that an engagement would result disastrously for the Union vessels. At the same time, no commander would be held justifiable, merely for the sake of making a reputation for himself, in neglecting other interests and attacking an enemy so superior to him that he would have no chance of success. But the question arises, was the "Stonewall" so superior to the "Niagara" and "Sacramento"? And it was a question that could only be ascertained by a contest at sea, when each vessel would have an opportunity of testing the other's qualities.

As the "Stonewall" was seen by the commander of the "Niagara," who was a capital sailor, she appeared to be a most powerful antagonist, and if well handled she would probably have inflicted serious injury upon the two vessels he commanded. He thought, perhaps (and so thought other professional men), that, under *certain circumstances*, the ram would have sunk the two Federal ships; while others, who have

since seen the weak points in the "Stonewall," are of the opinion that she would have been no match for the Union vessels. No results would ever be arrived at, if a commander of a vessel should be unwilling to attack another about which he knew nothing. It is very questionable whether naval actions which are based exclusively on too nice calculations, and where too much consideration is given to the risk to be run in engaging an enemy, are ever followed by any gallant results.

There was great excitement in the Navy Department on hearing the conclusion the commander of the "Niagara" had reached in regard to the "Stonewall," and that, in consequence, the Confederate vessel had proceeded to Lisbon, coaled, and continued on her way toward the coast of the United States, without being followed further than that place. The several squadrons on the coast were warned that this formidable vessel was about to attack them, and directed to keep a good look-out for her; but, as a general rule, her advent was not at all apprehended, and, if she had appeared, steps had been taken to dispose of her as all Confederate rams had been disposed of before her.

It would not be fair for any one to judge harshly of the action of the Federal commander in this matter, unless he had been placed in the same position himself. No officer should be deprived of the discretionary power due to his command, or be trammelled by the opinions of those who have no responsibility resting upon them. It would never do to establish a principle that, for the sake merely of his reputation, an officer under all circumstances should attack an iron-clad with two wooden vessels. Very little was known of the power of sea-going iron-clads at that time, and the "Stonewall," for all the commander of the "Niagara" knew, might be impervious to shot or shell, and with manœuvring powers that were unequalled by the two ships under his command. Yet there may have been some justification for censure in the want of judgment in the commodore on the 24th day of May, 1865, in not making some exertion to obtain constant and personal observation of the Confederate ram while at Ferrol, and thus ascertain the truth or falsehood of the received reports of her character. There might also be some cause for reflection on the conduct of the Federal commander in remaining quietly at anchor in the Bay of Corunna, instead of going outside with his two vessels in the same neutral water, and there making observations of the "Stonewall's" speed, power of turning, etc.; and he might, with propriety, have consulted with his junior commander, Captain Henry Walke,

of the "Sacramento," who had boldly engaged on the Mississippi River a much more powerful ram—the "Arkansas"—while in command of the "Carondelet," a much inferior vessel—at least, he might have formed with his consort some plan of attack. This was not done, perhaps for the reason that, as, in his judgment, no engagement should take place, it was useless to form plans he did not propose to undertake.

Some of these ideas were evidently paramount in the mind of the Secretary of the Navy when the commander of the "Niagara" returned to the United States, as he brought him to trial by court-martial on the following charge: "Failing to do his utmost to overtake and capture or destroy a vessel which it was his duty to encounter." The court was composed of nine of the most distinguished officers of the Navy, with Vice-Admiral Farragut as President. The court decided that Commodore Craven had been remiss in his duties, and sentenced him to two years' suspension on leave-pay. This sentence was either inadequate to the offence charged, or it was very unjust, which will be plain to the nautical reader. Secretary Welles seemed to think that, notwithstanding the opinion of nine officers of the Navy, the sentence was inadequate to the offence, and addressed a severe communication to the president of the court in returning the proceedings for revision. Whether he was right or not in doing so depends on the latitude the revising authority is allowed in disapproving the finding of a court of officers who are sworn to do their whole duty in the premises. It would seem to be an attempt to deprive them of that discretionary power which is generally a beneficent feature in a military court-martial. It also detracts from that dignity which properly belongs to such a body, holding, as it does, the power even of life and death. The following is an extract from the Department's letter, returning the record to the court for revision:

"NAVY DEPARTMENT, }  
"WASHINGTON, December 1, 1865. }

"SIR—The record of the proceedings of the court of which you are President, in the case of Commodore Thomas T. Craven, is herewith returned for a revision of the finding, which, in the opinion of the Department, is in conflict with law, and, if approved, would tend to render the provisions of law, which the accused is charged with violating, a 'dead letter.'"

Having received this letter, the court proceeded to revise its action upon the charge and specifications, and, after more mature deliberation, "doth find the charge *proven*, except the words, 'as it was his duty to have done,' and doth find the accused, Commodore Thomas T. Craven, of the charge, *guilty*, and doth award the follow-

ing punishment: That the accused, Commodore Thomas T. Craven, be suspended from duty for two years on leave-pay." In his final revision of this finding, the remarks of the Secretary of the Navy are a severe censure on the action of the court, the proceedings were set aside and the accused restored to duty.

The above is a very important part of the history of the war, which we would be glad to be able to omit; but there are facts in the case having a very important bearing upon the future actions of officers of the Navy, and it would not be right in a historian to omit that which is unfavorable to the naval service and publish only that which is creditable. This case may be referred to hereafter as a test question, and the finding of the court and the opinion of the revising power may be adduced to show what duties are enjoined on members of courts-martial, and how far the revising power can go in virtually setting aside the sentence of a court when it is not considered to be severe enough, and in censuring a court in an official letter.

It is a well-established principle in military or naval law, that when charges are brought against an officer to any one of which the penalty of death is attached, no other sentence can be awarded. The law is imperative that courts-martial shall adjudge a punishment adequate to the offence committed and only leaves it discretionary with the court to *recommend* the convicted person to clemency, that clemency to be exercised only by the revising authority. The court has no discretion but to make its finding accord with the law. In the case under consideration, the court may have deemed that the law under which the accused was tried was one of a harsh character, as, no doubt, it was as far as regards the case in question, but it was bound by a solemn obligation to administer it as it stood on the statute-books, and not to modify it to suit their own views of justice. They had full authority to make recommendations to mercy that the revising power would hardly feel justified in disregarding, especially as a similar case had never been presented to a court during the war, and when it was a question whether an officer had any discretionary power in avoiding a combat with a vessel of an entirely different character from his own, and constructed on principles many years in advance of vessels of the class he commanded.

The great mistake the court made was in endeavoring to modify the charge of which the accused was or was not guilty. They had either to say one thing or another, and that in accordance with their opinion such was the case, and the revising power could

say no more. No ill results followed the "flaunting" of the "Stonewall's" flag, and it was in some respects a very doubtful case. Three of the officers of the court, Vice-Admiral Farragut, Rear-Admiral Davis and Captain Melancton Smith, had had some rough experiences with iron-clad rams, and, under the circumstances, were, no doubt, disposed to judge leniently, and willing to allow the commander of the "Niagara" discretionary rights in regard to attacking the "Stonewall." The court made a grave mistake in not more carefully considering this matter, and in not inquiring more closely into the points of law; and for this reason it may be said that the court jeopardized, in a measure, the interests of the accused by finding him guilty of that which was not proved; inasmuch as they declared by implication that it was not his duty to have attacked the "Stonewall," the finding being as follows: "Specification of the charge proven, except in so far as the words, 'as it was his duty to have done,' declare it to have been the imperative duty of the accused to join battle with the 'Stonewall' on the 24th day of March"—(1865).

How, under the finding of the court, the commander of the "Niagara" could be censured for "want of zeal and exertion in not making constant and personal observation of the 'Stonewall' while at Ferrol, and thereby endeavoring to ascertain the truth or falsehood of the various reports of her character," does not appear; for, while qualifying their finding, they reflect upon him in three several instances: First, in the words just quoted; second, "on the conduct of the accused in remaining quietly at anchor in the bay of Corunna while the 'Stonewall' was parading about in neutral waters, flaunting her flags," etc; and, third, in that no plans were formed for concerted action between the "Niagara" and "Sacramento" by the accused. Under the circumstances, and considering the inconsistency of the court, the revising power found it impossible to determine whether the accused was guilty or not, the finding on the charge declaring him guilty, but that on the specification, not guilty. As the court adhered to its finding when the proceedings were returned for revision, the Secretary of the Navy concluded to set the proceedings aside, and restore the commander of the "Niagara" to duty.

As this case ended, the matter is left in abeyance, and it may yet happen that an officer may be tried under the same circumstances which present the simple question, Shall an officer be allowed any discretionary power in deciding whether or not to join battle with an enemy's ships or with an enemy's forts?—for the principle applies to

both. In the light of later events, the leniency of the court at that time is generally approved, and, taking into consideration the high character of the officers who composed it, it would have been but courteous to them had the revising power yielded to their opinion, which was, without doubt, the result of their honest convictions. It has been conceded that Admiral Byng, of the British Navy, was unjustly shot, to satisfy public opinion. There was no necessity on this occasion for such an example. No man could know whether or not the affair at Corunna was an error of judgment—in

fact, no one could tell whether it was not the right course to pursue. Any officer commanding two wooden ships of the same kind to-day could feel perfectly justified in avoiding a battle with a modern iron-clad ram—whether the cases are analagous, the reader must be the judge.

After all the trouble and excitement created by the "Stonewall," she never succeeded in getting beyond Havana, where, at the termination of the war, she was given up to the Spanish Government by her commander in an honorable manner and surrendered to the United States.

## CHAPTER LVIII.

### CONCLUSION.

WHEN the war ended, the United States had attained a position as a Naval power never before reached by the Republic, and could claim to be able to meet either France or England upon the ocean. Both of these nations had looked on with surprise at the rapid manner in which the Federal Government was adding to its Navy. If not anxious for the dissolution of the United States, both France and England were quick to throw their weight against it by proclamations, giving to the Confederates a character that did much to strengthen their cause, by offering them most substantial aid, and in permitting them to build, arm and equip vessels-of-war in their ports for the destruction of American commerce. Even at a time when the Federal armies had advanced so far in the enemy's country that the final result was apparent to the most indifferent observer, the Confederate sympathizers in France and England declared that the Federal Government was making no progress in subduing the Confederacy, and insisted that the Navy, in particular, was incapable of putting down the few cruisers that were destroying American commerce at their pleasure.

France, the ancient ally of the United States, that had stood by the young Republic in its hour of need, and who had always been bound to it in the closest ties of amity, under the avaricious policy of her emperor, who had his eyes fixed on Mexico, went over to England and supported her in the proclamations issued in the Queen's name, but dictated by Earl Russell. The emperor hoped to persuade England to embark in a scheme that was to benefit France only in the subjection of Mexico to French rule, and to add to the French crown that jewel which would enrich and strengthen any nation that possessed it. In his insane desire to obtain possession of that beauti-

ful country, the French emperor beheld in the supposed waning power of the United States the opportunity he sought to enable him to plant his foot firmly on the soil of the Montezumas, thinking that, once the City of Mexico was occupied by his troops, the United States would never again be in a condition to offer any obstacles to the permanent establishment of French authority. It was this ambitious project only that induced France to abandon her old friendship for the United States, and uphold England in her questionable policy of permitting the construction of Confederate cruisers in her ports. Had France remained strictly neutral, and shown England that she did not approve of the pretended neutrality the latter was practicing, the moral effect of her course would have been to prevent England from assisting the Confederates.

When the "Trent" affair took place (which did not in the least concern France), and when the British Government had taken such precipitate measures to humiliate the Federal Government—not giving it time even to make an explanation—the French emperor, through his minister in Washington, entered an entirely uncalled-for protest against the action of the United States vessel-of-war "San Jacinto," stating that such a course was as offensive to France as to England, and, in fact, to all European governments; and announcing in his dispatch the course France would pursue under like circumstances—his real policy being to urge England into a war with the United States, which would further French views in regard to Mexico. This shows the animus actuating the emperor; though the Federal Administration had its hands full at that time, his object was apparent, while the sincerity of England was strongly suspected.

The first step of the Navy Department, when it could command the money, was to

construct a Navy not only for the purpose of blockading the Southern coast, but to protect our shores from foreign foes, and hold their own upon the ocean with the cruisers of either France or England. We have shown how inadequate the Navy was at the breaking out of the rebellion even to blockade the Confederate ports, much less to offer resistance to a powerful naval antagonist; but even the first year of the war was one of wonderful development for the Navy, not only in establishing a complete blockade, but in the usefulness of naval vessels in assisting the Army to carry out plans of conquest that it could never have achieved alone.

In a very short time after the Confederacy was established, all the great rivers of the West and their tributaries were in Confederate hands, and the most inaccessible points therein armed with ponderous guns, manned by an excited soldiery. The Potomac River was blockaded almost from Alexandria to the Chesapeake; the Sounds of North Carolina were filled with powerful batteries, and the channels closed by sunken obstructions. Every port on the Southern coast was protected by well-constructed forts, and closed against the few vessels the Government owned, and for a time the Federal cause looked so hopeless that European despots might well be excused for supposing that it would be an impossible task to recover the lost domain, unprovided as the Federal Government was with ships of a character to contend with all the peculiar difficulties of navigation in the inland waters.

The difficulties to be overcome have only been described in this work in a partial way, for no description could give an adequate idea of all that was done by the Navy and how it was done. Compare the results of this great war in matters connected with the Navy alone with those of any other scene of action in Europe or elsewhere, and it will be seen that history offers no example where so much was accomplished in so short a time, or where so many events were crowded into the space of four years, in which the Navy was employed subduing a coast over four thousand miles in length, and recapturing a river-coast of more than five thousand miles.

Let us compare the operations of England and France in the Crimea with those on our own coast, and note the results. These two nations had but a small amount of territory to subdue—four hundred square miles at the most; the two great navies of the world were at their command, with a much larger *proportion* of troops than ever cooperated with the Federal naval forces during the war of the rebellion: they started

with the greatest armada the world ever saw—sixty or seventy ships of the line, and numerous other vessels-of-war, transports (filled with troops), that almost covered the sea; and still they were months making any impression upon the Russian stronghold, which did not in any way compare with Vicksburg.

The Federal Government commenced with four small vessels (carrying in all twenty-five guns), the duty of capturing or blockading the South Atlantic coast. In the Gulf of Mexico were eight more ships; in the Mediterranean, three more; seven were on the coast of Africa; two on that of Brazil; three were in the East Indies, and eight in the Pacific—scattered, in fact, all over the world; and these had to be collected to satisfy England and France that a perfect blockade could be established. They naturally ridiculed the attempt, yet in less than a year the blockade was accomplished, so that the most hypercritical sovereign could not object to it, and every foreign government acknowledged that it was the great feat of the war. All the skill and capital of England could not keep this blockade open, though they might at times succeed in getting their vessels into Southern ports to supply the Confederate armies with the means of carrying on the war. The Navy was so watchful that multitudes of English vessels were captured; the coasts of the South were strewn with the wrecks of English clipper-steamers which were chased on shore in calm and in storm by officers who seldom slept, and were scanning the horizon night and day for the sight of an incoming blockade-runner.

This was but a small part of the naval service performed. The Navy was called upon to help open the Potomac, and guard the capital; directed to capture the Hatteras forts, and the fortifications in the sounds and rivers of North Carolina. The forts at Hilton Head defied them, but naval officers, with their wooden vessels, dismantled them with shell. Forts Jackson and St. Philip, which French and English officers said would sink the whole Federal Navy, barred the way to New Orleans; the guns of the Navy opened the gates and laid New Orleans captive at the conqueror's feet.

Then came the demand that the Navy should open the Mississippi from the Ohio River to the sea, clear out the obstructions in the shape of four hundred guns, and restore the different towns on the banks of that great river to the control of the United States Government. With what was it all to be done? Could their frail vessels, improvised from river-boats and a few thin-plated vessels, be able to force the barriers that were placed on every eligible site? Yet, with the aid of the

Army, a little over two years after the war began, the Mississippi was open to the sea. The ideas of the Navy Department grew with the success of the Navy afloat, and the work-shops of the country teemed with mechanics who entered heart and soul into the business of building iron-clads that could not only cope successfully with the heavy forts of the enemy, but could remind unfriendly nations that the more severely this nation was tested, the more she would rise in her strength.

The State of Tennessee, the great prize and battle-ground (upon which the enemy expended a large portion of their resources, and through which they hoped to attack the northwestern States), was under the control of the gun-boats, and the Army was placed by their aid securely in the heart of the State. From the time a naval force was placed on the Tennessee and Cumberland Rivers, the stay of the Confederate forces was very problematical, and it cannot escape the attention of the reader how persistent were the naval officers who commanded the Western Squadron in keeping open two rivers, which were in all cases the keys to the situation.

Only two important points on the seacoast had been maintained by the enemy—Charleston and Wilmington—but, though they flourished for a time, afforded great assistance to the Confederate cause, and kept up the drooping spirits of the infatuated Confederacy, the rebellion received its death-blow on July 4th, 1863. Its after-struggles were only like those of the dying lion, that for a short time exhibits his greatest strength without power to do any injury in his dying throes, no matter how much prolonged.

At the end of the war the United States Government had just begun to realize its strength, and those who had the direction of its affairs might well feel proud of the great Army and Navy which stood ready, now that the intestine troubles were over, to take in hand those who had so insolently interfered with the Federal Government, not from any real sympathy with the Southern cause, but from a desire to see the free institutions of this country overthrown, and the whole land become a scene of anarchy—to show that man was in no place fit for self-government.

What the Navy Department and the war did towards building up a Navy, and a Navy altogether of a new type, can only be judged by a reference to the tables annexed to this chapter, which give a correct exhibit of the ships built, building, and altered, during the four years' war—a feat only one other nation (Great Britain) could have accomplished in the same space of time.

All of this Navy that is known in his-

tory as having performed the greatest feat in the war (the most complete blockade of a coast ever established), is among the things of the past. Its dissolution was even more rapid than its creation. It was allowed to dwindle away without an effort to replace those ships, that had fallen victims to decay, with others of a suitable character. The vessels were sold "under the hammer," as no longer suitable for the purposes of war, which had changed its character entirely since the beginning of the American contest. A few old vessels still remain to attest the uselessness of a branch of the service on which the Government must depend for protection in time of war with a foreign nation, or to keep the peace at home against insurrectionists of whatever character that may present themselves.

It is no compliment to the intelligence of sixty millions of people to have it said, that the United States has not one iron-clad to defend her coast; not a perfectly equipped cruiser of steel to carry her flag upon the ocean; not a single gun in her coast defences that could pierce the shield of a foreign iron-clad, and not a fortification that could resist the attack of two or three foreign-built iron-clads. We may be said to be a great nation of people, but certainly not a nation of great people; for, who will call us the latter, when there seems to be such a love of accumulating wealth, without the manly desire to have the means of defending it against the aggressions of any power that may choose to make war upon us? The Government of the United States cannot defend themselves against the weakest naval power, much less against a strong one, and we must, perforce, rely on that old system, so much in vogue in Thomas Jefferson's time, of paying tribute, as we did from 1804 to 1815 to the Barbary powers, to prevent them from preying on our commerce and carrying our citizens to captivity.

We had experience enough during the war of the rebellion to satisfy us that there were certain European governments that desired the downfall of the American Union, and it was only by means of an abject compliance with their demands that we escaped war, which would have been the signal of the complete triumph of the South and the dissolution of the Union which our forefathers exercised so much wisdom in building up. What a noble sight it would have been, after the settlement of our difficulties at home, to see the American people set to work and build a Navy that would bid defiance to any naval power in the world—to rebuild the commerce that had been driven from the sea by the "Alabamas" and "Floridas," and

which was once the pride and wealth of the nation—to give an exhibition of our wealth and resources and our indomitable will, that no nation should oppose us, or interfere with our domestic affairs. But, instead of this we stood still, while other nations worked on, and taking advantage of our lethargy robbed us of our commerce, took the carrying trade all in their own hands, and now laugh at our inane attempts to build up a Navy, which, if it ever reaches a reputable standard, will show that we are so deficient in the elementary science of naval construction that we cannot keep pace even with the modern examples that have been set us by European powers.

We can be no more exempt from war than others; indeed, our weak condition is so well understood by all the world that it only invites aggression; and, if we would not desire to rest under the imputation of being the poorest government under the sun, and unfit to take care of the interests of sixty millions of people, we must shortly awake from an apathy that would disgrace any country, and begin to provide for the national defence.

In the war of the rebellion the people on both sides exhibited the greatest examples of courage, resources and perseverance, showing what we could do were our shores to be invaded; for which, no doubt, in the opinion of the world, we have gained that reputation which generally follows heroic deeds. But all that credit would disappear to-morrow if we were involved in a foreign war: our coasts would be devastated, our harbors sealed up by a foreign foe, and we would again be obliged to pay tribute as we did to the Barbary powers of old.

Taking into consideration the situation of the United States at the present time, it looks as if the rebellion had taught us nothing, and that we are giving wild theorists of the past and present some show of reason to assert that republican forms of government are unnecessarily expensive, revolutionary, and deficient in the elements for the maintenance of a proper protection from an outside enemy or intestine foe. A government which maintains no army or navy for the preservation of law and order simply runs an even race with anarchy and rebellion. This is true of us in a tenfold degree, for we give our enemies in all quarters the opportunity of getting their forces first into the field. This applies more particularly to the Navy of the United States, which never seems to attract the attention of those who have charge of the national defence. They never for a moment think that, if the dreadful reality of war was sprung upon us, not only could any of the greater powers within twenty days lay our large sea-coast

cities in ashes, and exact any amount of tribute they might think proper, but even the smallest States, with any pretensions as naval powers, could humiliate us to any extent. This is a terrible confession to make, but it is nevertheless true, and, unless those who have these matters in charge rise to a proper conception of their duty, they may live to “reap of the whirlwind,” and receive the condemnation of the sixty millions of people who now depend on them for that protection every government owes its citizens.

The people of the United States can readily dispose of their anarchists on the land, and provide against all their revolutionary ideas by the bullet or bayonet, when they become tired of listening to these wild theorists who would upset, if they could, any government, no matter how desirable. But they are helpless when it comes to defending themselves against the attacks of heavy iron-clads, which can only be met by great vessels-of-war designed for the purpose; which we do not possess, and which there seems very little prospect of our obtaining.

There is but one remedy for the evils under which we are resting, and that is, for the people to take the matter in hand and demand a Navy that will help put down rebellion at home at its first inception, and bid defiance to those abroad who would commit aggressions upon our commerce, or treat our citizens unjustly in any part of the world.

Let us not forget that something akin to Barbary powers still exists, though in the garb of Christian civilization, and that they are not as limited in number as they were in 1804. They may have the strongest treaties binding them to us in terms of amity, but they are ever ready, like the Algerines of old, to take advantage of our weakness.

We might naturally be supposed to have retained some bitter feelings against England and France on account of the unfriendliness they exhibited when we were passing through the greatest struggle of our history as a nation, but, though we might very properly be so influenced, this idea has no foundation in fact; though it might well be impressed upon the consciences of many of the British people who do not remember with complacency the course England (as a nation) pursued, considering her intimate relations with the United States. But the Americans are a forgiving people, and forget injuries, only to have them repeated even when they know they were intended to be fatal. We found no sympathy in our great revolution, which became a struggle for our actual existence: least of all did we find it where we

had a right to expect it—in free England, who had taken the first broad step towards the emancipation of the slave. But our disappointment in finding a foe where we should have found a friend only added a vigor to our action. We found ourselves strong enough to fight our way to victory. We could well afford to do without the sympathy of either England or France; for, though the task became harder, owing to their opposition, we were perfectly conscious from the first that their aid was not needed, and that their opposition would be futile.

The adventurous Napoleon III., who staked an empire on the acquisition of Mexico by the downfall of the United States, has long since paid the penalty of his treachery in his opposition to the great

Republic, once the ally of France. Even his descendants, to the last generation, have disappeared from the face of the earth, while, in his old age, he was deprived of all he held dear—power and wealth. There seems to be a Nemesis at work in all such matters, bringing retribution where it is most deserved. England prospers, and extends her dominions, spreading freedom to all parts of the earth, and, apparently, strengthening her power; but she will live to see her colonies, one after another, going from her, each one seeking in turn to attain a larger degree of autonomy than they now possess, and she may find arrayed against her the very element on which she depended to increase her prestige, and may then miss some of that sympathy she denied us in our hour of need.

# CHAPTER LIX.

PRIZES ADJUDICATED FROM THE COMMENCEMENT OF THE REBELLION TO NOVEMBER 1, 1865,  
WITH THE NAMES OF VESSELS OR OTHER MATERIAL CAPTURED, AND THE NAMES OF  
VESSELS ENTITLED TO SHARE IN DISTRIBUTION OF PROCEEDS.

Name.	Gross proceeds.	Costs and expenses.	Am't for distribution.	Where adjudicated.	Sent to 4th Auditor for distribution.	Vessels entitled to share.
Sch. Anna Belle	\$5,743 74	\$1,355 37	\$5,388 37	Key West	July 12, 1862	Pursuit.
Sch. Adeline	4,086 87	1,244 82	2,844 05	do.	Oct. 16, 1862	Connecticut.
Sch. Aristides*	125 00	67 37	57 63	do.
