*To the Regular Officers, the Patriotic Volunteers and the Brave Sailors  
and Marines of the Navy*

THIS BOOK IS RESPECTFULLY INSCRIBED, WITH THE HOPE THAT IT WILL REMIND THOSE  
STILL LIVING OF THE MANY THRILLING SCENES THROUGH WHICH THEY PASSED FROM  
1861 TO 1865, AND ALSO ASSURE THEM THAT THE AUTHOR IS STILL ALIVE TO  
THE GREAT SERVICES THEY ALL PERFORMED, THE SACRIFICES THEY MADE,  
AND THE SMALL REWARDS THAT WERE RECEIVED BY THOSE WHO SO  
STEADFASTLY FOUGHT AN INTELLIGENT FOE THAT THIS UNION  
MIGHT BE PRESERVED TO MILLIONS YET UNBORN.

## P R E F A C E .

---

**T**HE Naval incidents of the War of 1812 with Great Britain are better understood to-day by the great mass of American readers than are the naval incidents of the Civil War between the northern and seceding States, which lasted from 1861 to 1865. In the War of 1812 half a dozen frigates and a dozen sloops of war on the ocean, and three small squadrons on the lakes, made up about the sum total of our Navy afloat when the war commenced, and those vessels performed such marvelous exploits, considering the great superiority in ships of Great Britain, that the events, comparatively few in number, have impressed themselves indelibly on the mind of every schoolboy who read of them in books that were put in their hands at an early age : events that were taught them as part of the history of a nation which, previous to that time, had not paid much attention to the Navy, or even calculated that it would become so famed.

Since that era the Navy of the United States has been making history for the country on a scale almost bewildering, and could the old pioneer captains of 1812 have been permitted to look on from their present abode (wherever that may be), we doubt not but that they would have been astonished at the large fleets we were putting afloat with such wonderful rapidity; and they would also have acknowledged that their descendants had nobly borne themselves in the war for the salvation of this Union, which was as dear to our forefathers as it is to us at the present time.

A man who undertakes to write a history of the naval events of such a war as we were forced into, has a great responsibility resting upon him. He has to be careful of his statements and the sources from which he obtains them; as a person has a right to know before he purchases a book, whether the facts stated for his perusal are taken from substantial authority, or from the common traditions which have been passed down from decade to decade, and have been finally accepted as truth.

History could not be properly written after such a fashion as the latter; it must be taken from the official naval records of the times, which, with but rare exceptions, have been found to be remarkably correct. Many of them—indeed nearly all—have been written by persons holding the most prominent positions in command, who have left the stories of their achievements written in that truthful language which carries conviction with it. No naval officer during the war would have dared to write any thing in his official reports that was not strictly correct, for there were too many witnesses (and interested ones) who would not have hesitated to impeach the veracity of any officer who made anything but a proper report.

As far as it goes this history is made up from the official record of the Navy, and the author has endeavored as far as possible to confine himself strictly to naval matters, except in cases where the Army and Navy co-operated.

Several books claiming to be naval histories were written directly after the war, but as a rule these were of a partisan character, not written particularly to do justice to the Navy but to give credit to particular individuals who had a good deal to do in the matter of ensuring success, and who no doubt deserved much of the praise that was bestowed upon them; but in all cases the authors lost sight of the main object of the history, and that is to do justice to all, and not allow themselves to be diverted from the true facts because they may have had official relations with those they took care

to applaud. There was too much of this in some histories which dwelt so much on the virtues of the heads of departments that they forgot to do justice to those who fought the battles. In all the histories the author has read there have been serious misrepresentations, *purposely* printed and written with the intention to do harm to the reputation of some who deserved not only the highest praise from the government but the truth from impartial historians.

While our Army has been written of by a thousand ready pens, the Navy has not, as a rule, been a popular theme for the historian, and now and then only do we meet with some well drawn story of the Navy and the benefits it conferred upon the country. Our Army was full of writers who could delineate in the most happy manner all the events that were transpiring around them—they were also ready with the pencil; the photographer, while he traveled with the army, would spend his days in photographing every noted scene, reprints of which were scattered broadcast over the Union, keeping the movements of our armies as clearly before the millions of people in the North as if the battles had been reflected in a mirror. The camp, the march, the bivouac, the battle-field were almost as familiar to the friends and relations of those in the field as if they had been on the spot, but there were no such means of bringing the Navy before the public. Naval ships did not travel with reporters, photographers or sketchers, there was no room for these on board ship, and if perchance some stray reporter should get on board, the discomfort of a man of war, the exacting discipline, and the freer life in camp sent him back to shore, where in most cases he only remembered his associations with the Navy as a trip without any satisfaction, and with no desire to do justice to the work of the naval service.

The author is quite aware that he may not possess all the requisites for a historian, but he thinks he can put the records in plain shape and write them down in plain English, which on the whole is quite as much as has been done by others. The object will be to show how little the work of the Navy was appreciated by the people of this country, while they lavished all their attention on the Army. It is true our Armies were entitled to all that could be showered on them by a grateful people; yet the part performed by the Navy when placed in its true light before the world, will show to advantage compare it as you may with any other branch of public service. Time with unsparing hand has swept away nearly all the men who led our fleets to battle during the war. But one or two remain, while those who were in the flower of manhood when the war was at its worst, have reached the highest honors the country had to bestow, and with no more naval duty afloat to perform, except in time of war, when they can offer their services, none the less efficient for a green old age, are waiting calmly (enjoying the rest from the hardships of the past) to reap those higher rewards for duties well performed on earth, where the sounds of battle will no more be heard, and where the laurels they have gained will never wither—these officers must not be forgotten, and wish to be remembered.

If this work does not satisfy public expectations, it may point out the way for some future historian, some patient, plodding man, who will delve into old closets and bureaux until he finds the missing links which may escape the heedless writer of this fast age.

History is better written after the lapse of years, when those who have taken part in it have all passed away, when prejudices have all been laid aside, and when the historian knows nothing of the actors' deeds besides what is told in the records. But the present age is an impatient one, and the young American who was not on the scene of action when civil discord plunged the country into the most bloody war the world ever saw, is anxious now to know all that occurred at the time that tried men's souls; they particularly desire to see how their forefathers deported themselves on fields of battle or in ships of war, and to become familiar with all the thrilling scenes which, though pleasant reading now, brought sorrow and desolation to thousands of homes, homes where to this day they worship the memory of the loved one who left them in the vigor of manhood, and on whom they never looked again.

THE AUTHOR

# CONTENTS.

NOTE.—At the commencement of each Chapter will be found a detailed syllabus of the matter therein contained. The following embraces only the principal subjects of each Chapter. See General Index for List of Vessels and Officers of Squadrons.

CHAPTER	PAGES
I. ORGANIZATION OF THE NAVY DEPARTMENT.—BLOCKADE-RUNNERS, ETC. . . . .	17-23
II. BOMBARDMENT AND FALL OF FORT SUMTER.—DESTRUCTION OF NORFOLK NAVY YARD . . . . .	24-32
III. CLOSING OF SOUTHERN PORTS.—INCREASE OF THE NAVY.—LIST OF VESSELS AND THEIR STATIONS.—PURCHASED VESSELS.—VESSELS CONSTRUCTING, ETC. . . . .	33-38
IV. DEATH OF ELLSWORTH.—CAPTURE OF ALEXANDRIA.—OPERATIONS OF THE POTOMAC FLOTILLA, ETC. . . . .	39-43
V. CAPTURE OF THE WORKS AT HATTERAS INLET.—DESTRUCTION OF THE PRIVATEER "JUDAH," ETC. . . . .	44-52
VI. NAVAL EXPEDITION AGAINST PORT ROYAL . . . . .	53-62
VII. THE "TRENT" AFFAIR.—CAPTURE OF MASON AND SLIDELL, ETC. . . . .	63-74
VIII. CAPTURE OF FERNANDINA AND THE COAST SOUTH OF GEORGIA, ETC. . . . .	75-79
IX. OPERATIONS OF ADMIRAL DUPONT IN THE SOUNDS OF SOUTH CAROLINA . . . . .	80-86
X. NAVAL ENGAGEMENT AT SOUTHWEST PASS.—OPERATIONS OF THE GULF SQUADRON, 1861.—ATTACK ON FORTS MCRÆ AND PICKENS . . . . .	87-107
XI. GOLDSBOROUGH'S EXPEDITION TO SOUNDS OF NORTH CAROLINA.—CAPTURE OF ROANOKE ISLAND . . . . .	108-118
XII. FIGHT BETWEEN THE "MONITOR" AND "MERRIMAC."—SINKING OF THE "CONGRESS" AND "CUMBERLAND" . . . . .	119-133
<del>XIII.</del> BUILDING A NAVY ON THE WESTERN WATERS —BATTLE OF BELMONT, ETC. . . . .	134-140
XIV. CAPTURE OF FORT HENRY, ETC. . . . .	141-148
XV. CAPTURE OF FORT DONELSON AND BATTLE OF SHILOH . . . . .	149-157
XVI. OPERATIONS ON THE MISSISSIPPI RIVER IN 1862 . . . . .	158-167
XVII. BOMBARDMENT AND CAPTURE OF FORT PILLOW.—BATTLE OF MEMPHIS, ETC. . . . .	168-174
XVIII. CAPTURE OF FORTS JACKSON AND ST. PHILIP.—FARRAGUT BEFORE NEW ORLEANS . . . . .	175-188
XIX. BATTLE OF THE FORTS AND CAPTURE OF NEW ORLEANS.—INTERESTING REPORTS OF COMMANDERS OF VESSELS.—MAYOR OF NEW ORLEANS, ETC. . . . .	189-234
XX. A BRAVE OFFICER'S MORTIFICATION. . . . .	235-245
XXI. FIRST ATTACK ON VICKSBURG.—RAM "ARKANSAS."—ENGAGEMENT AT PORT HUDSON . . . . .	246-264
XXII. OPERATIONS IN THE POTOMAC.—DESTRUCTION OF CONFEDERATE BATTERIES.—LOSSES BY SHIPWRECK, IN BATTLE, ETC. . . . .	265-267
XXIII. DESTRUCTION OF THE RAM "ARKANSAS."—CAPTURE OF GALVESTON.—CAPTURE OF THE "HARRIET LANE."—SINKING OF THE HATTERAS.—ATTACK ON BATON ROUGE.—MISCELLANEOUS ENGAGEMENTS OF THE GUN-BOATS. . . . .	268-282
XXIV. SECOND ATTACK ON VICKSBURG, ETC.—EXPEDITION UP THE YAZOO.—ATTACK ON HAINES' BLUFF, ETC. . . . .	283-288
XXV. CAPTURE OF FORT HINDMAN OR ARKANSAS POST, ETC. . . . .	289-294
XXVI. SIEGE OF VICKSBURG.—COMBAT BETWEEN THE FEDERAL AND CONFEDERATE GUN-BOATS.—YAZOO PASS EXPEDITION.—ENGAGEMENT WITH FORT PEMBERTON . . . . .	295-302

CHAPTER	PAGES
XXVII. EXPEDITION THROUGH STEELE'S BAYOU AND DEER CREEK . . . . .	303-309
XXVIII. THE FLEET PASSING VICKSBURG.—CAPTURE OF GRAND GULF.—ATTACK ON HAINES BLUFF.—CAPTURE OF ALEXANDRIA, LA., ETC. . . . .	310-318
XXIX. SIEGE OF VICKSBURG CONTINUED.—ATTACK ON VICKSBURG BY ARMY AND NAVY.—DESTRUCTION OF CONFEDERATE RAMS.—VICKSBURG SURRENDERS, ETC. . . . .	319-330
XXX. EXPEDITION TO YAZOO CITY.—ATTACK ON HELENA, ARK. GENERAL MORGAN'S RAID, ETC. . . . .	331-344
XXXI. OPERATIONS OF FARRAGUT'S VESSELS ON THE COAST OF TEXAS, ETC. . . . .	345-353
XXXII. NAVY DEPARTMENT.—ENERGIES DISPLAYED.—BUILDING OF IRON-CLADS . . . . .	354-366
XXXIII. OPERATIONS OF THE SOUTH ATLANTIC SQUADRON, REAR-ADMIRAL DUPONT, 1863.—ATTACK ON BATTERIES IN CHARLESTON HARBOR.—CAPTURE OF THE CONFEDERATE RAM "ATLANTA," ETC. . . . .	367-398
XXXIV. FURTHER OPERATIONS OF FLAG-OFFICER GOLDSBOROUGH IN THE SOUNDS OF NORTH CAROLINA.—CAPTURE OF FORT MACON.—BLOWING UP OF THE "MERRIMAC," ETC. . . . .	399-411
XXXV. OPERATIONS OF THE NORTH ATLANTIC SQUADRON, 1863.—REAR-ADMIRAL S. P. LEE.—LOSS OF THE "MONITOR," ETC. . . . .	412-431
XXXVI. OPERATIONS OF THE SOUTH ATLANTIC SQUADRON UNDER REAR-ADMIRAL DAHLGREN, 1863.—OPERATIONS IN CHARLESTON HARBOR, ETC. . . . .	432-452
XXXVII. OPERATIONS OF THE EAST GULF SQUADRON TO OCTOBER, 1863.—REAR-ADMIRAL BAILEY COMMANDING . . . . .	453-461
XXXVIII. REVIEW OF THE WORK DONE BY THE NAVY IN 1863 . . . . .	462-467
XXXIX. MISCELLANEOUS OPERATIONS, LAND AND SEA.—OPERATIONS IN THE NANSEMOND, CAPE FEAR, PAMUNKY, CHUCKA TUCK AND JAMES RIVERS.—DESTRUCTION OF BLOCKADE-RUNNERS.—ADVENTURES OF LIEUTENANT CUSHING, ETC. . . . .	468-479
XL. OPERATIONS AT DUTCH GAP.—MANŒUVRES OF GENERALS GRANT, SHERMAN, SHERIDAN, AND CONFEDERATE ARMIES.—ENGAGEMENT WITH RAM "ALBEMARLE," ETC. . . . .	480-493
XLI. THE RED RIVER EXPEDITION UNDER MAJOR-GENERAL BANKS, ASSISTED BY THE NAVY UNDER REAR-ADMIRAL D. D. PORTER . . . . .	494-524
XLII. RED RIVER EXPEDITION CONTINUED . . . . .	525-553
XLIII. OPERATIONS OF THE MISSISSIPPI SQUADRON UNDER REAR-ADMIRAL PORTER AFTER THE RED RIVER EXPEDITION . . . . .	554-564
XLIV. BATTLE OF MOBILE BAY . . . . .	565-600
XLV. CRUISE OF THE CONFEDERATE CRUISER "SUMTER," AND THE HAVOC SHE COMMITTED . . . . .	601-620
XLVI. ADVENTURES OF THE "ALABAMA" AND "FLORIDA."—ENGAGEMENT BETWEEN THE "KEARSARGE" AND "ALABAMA" . . . . .	621-658
XLVII. OPERATIONS OF THE SOUTH ATLANTIC SQUADRON UNDER REAR-ADMIRAL DAHLGREN DURING THE LATTER END OF 1863 AND IN 1864 . . . . .	659-676
XLVIII. POTOMAC FLOTILLA.—INCREASE OF THE NAVY, AND IMPROVEMENTS IN NAVAL SHIPS DURING THE YEAR 1864 . . . . .	677-682
XLIX. FIRST ATTACK ON FORT FISHER.—DESTRUCTION OF THE CONFEDERATE RAM "ALBEMARLE" . . . . .	683-709
I. SECOND ATTACK ON FORT FISHER, AND OTHER OPERATIONS . . . . .	710-747
II. EFFECTS OF THE FALL OF FISHER, ETC. . . . .	748-757

## CHAPTER I.

ORGANIZATION OF THE NAVY DEPARTMENT.—THE WRETCHED CONDITION OF THE NAVY AT THE OUTBREAK OF THE CIVIL WAR.—WHAT COULD HAVE BEEN DONE.—BLOCKADE RUNNERS.—LOSS TO THE CONFEDERACY.—PRIZES.—NAVAL TRIUMPHS.—FAITHFUL OFFICERS.—GIDEON WELLS.—GUSTAVUS V. FOX.—LAVISH PRAISE OF THE ARMY.—UNPREPARED FOR WAR.—PREMEDITATED SECESSION.—SEPARATE GOVERNMENT —THE NAVY AND THE HAPPY CONDITION OF AFFAIRS NOW EXISTING, &C.

**A**T the outbreak of the great rebellion our Navy was not in a condition to render that assistance which the occasion demanded; the larger portion of it was employed on foreign stations, and the Government had not at its disposal a class of vessels that could enter Southern ports and act offensively.

Had a proper naval force existed at the time the Southern people first proposed to throw off their allegiance to the Union, there would have been less difficulty in suppressing the efforts of the Secessionists, for every Southern harbor could have been taken possession of—our ports would have remained in charge of the Federal officers, and if the South did obtain supplies from Europe, they would have been obliged to land them on the open coast.

If two monitors like the "Miantonomoh" and the "Monadnock" could have entered Charleston harbor when Sumter was first threatened, they would have prevented the erection of works for the bombardment of that fort, and would have held it throughout the war, as would have been the case with all the ports on the Southern coast.

The first policy of our Government should have been to get possession of all the ports in the South, and no doubt the Administration would gladly have done so, but for their inability to carry out such designs if entertained, owing to the fact that we had no Navy of any account to commence with. Many of our vessels of war were, as a rule, too large, and drew too much water to enter the shoal Southern harbors, and a majority of them were sailing frigates and

sloops of war not at all suited to the work required of them.

Therefore, the Navy Department had to resort to a system of blockade which was called for by all European nations with which the South had held commercial relations. The Southern people once recognized as belligerents, it was necessary to close their ports, and the system of blockade resorted to is unparalleled in the naval records of the world—reaching, as it did, along the entire sweep of our Atlantic and Gulf coasts, from the Chesapeake to the mouth of the Rio Grande.

So efficiently was the blockade maintained, and so greatly was it strengthened from time to time, that foreign statesmen, who at the beginning of the war, did not hesitate to pronounce the blockade of nearly three thousand miles of coast a moral impossibility, twelve months after its establishment were forced to admit that the proofs of its efficiency were so comprehensive and conclusive that no objections to it could be made.

It is true they would point to the number of blockade runners that eluded the vigilance of our vessels, but they were fairly startled with the numbers of fast steamers which were constantly falling into our hands, and which the Government often bought and equipped for employment in capturing blockade runners. These latter were built in large numbers in England with much profit to the ship-yards of that country, but generally, as fast as they were built, they were picked up by the improvised cruisers under command of some energetic naval officers, and their loss was so greatly

felt by the Southern people that they were at times very much hampered, if not crippled.

What the loss to the Confederacy was, and how severely injured they were in their resources from abroad, by the activity and energy of the Navy, will appear from the mention of the fact that during the war 1,119 prizes were brought in, of which number 210 were fast steamers.

"There were also 355 vessels burned, sunk, driven on shore, or otherwise destroyed—a total of 1,504. The value of these vessels and their cargoes, according to a low estimate, was equal to thirty millions of dollars." They were condemned for an amount equal to twenty-eight millions of dollars.

Many may consider that keeping up a blockade was a pleasant pastime, and that officers were rewarded handsomely with prize money; but that did not obviate the hardships of the duty, nor remove the many obstacles which the officers encountered at every point.

The blockade was a military measure of vital importance, and it depended upon the manner in which it was conducted, whether the Confederacy would be deprived of arms and munitions of war, provisions, clothing, and, in fact, everything that goes toward maintaining a great military establishment.

Without the supplies which the Confederates procured from abroad, they could not have maintained their position for many months, for they were very destitute, as compared with the North, of all the appliances for making weapons of war, or for furnishing clothing and other material necessary to armies.

Hence, it might be well said that without the close blockade which was kept up by the Navy, the war might have been carried on indefinitely, while the battles would have been far more bitter and bloody than they were.

The naval battles that were fought were more exciting to the public than that close, dreary blockade, but we doubt very much if they were of any more value to the Union cause.

As long as the Confederacy could be furnished with provisions, clothing, arms and the munitions of war they could fight on, even in a desperate cause, but when the sinews of war were taken from them they collapsed.

With the capture of the last of the enemy's seaports, from which they had been drawing all their supplies, the rebellion was virtually ended. Taking into consideration the extent of coast that had to be blockaded, and the short time in which it was all accomplished, the work can scarcely be comprehended by the ordinary mind,

but it is not yet forgotten by those who managed the industrial necessities in Europe, and whose cupidity led them to embark in what was then considered a wide field for accumulating large profits, supposing at the time that our crippled Navy was incompetent to comply with the obligations imposed upon the Government in completing a *bona fide* blockade of the whole coast.

Of all the naval triumphs of the war, this was one of the greatest. There were questions raised, it is true, with regard to the competence of the blockade in certain localities, but they were seldom sustained by the courts, and foreign Governments were obliged to admit, notwithstanding the great commercial interests they had at stake, that the blockade was the most complete of any that had ever been undertaken.

At the breaking out of the rebellion, our serviceable Navy consisted of two sailing frigates, eleven sailing sloops, one screw frigate, five screw sloops of the first class, three side-wheel steamers, eight screw sloops of the second class, and five screw sloops of the third class.

Eighteen sailing vessels of various classes, five screw frigates, one screw sloop and three or four side-wheel steamers were what is called available, that is, they were laid up at the different yards; but of all these, and those in commission, there were only eight vessels that the Government could use immediately—those of the Home Squadron—and only four were steamers.

That was a poor showing for the Navy Department to commence with. Twenty-eight of the vessels in commission were on foreign stations, and by the time the Navy could be assembled the Confederates had ample time to prepare to meet them with offensive weapons, and keep them out of Southern ports.

When Mr. Toucey handed over the Navy Department to Mr. Welles, it was in a rather demoralized condition—Southern officers were resigning right and left, officers of the bureaux, even, were talking of going with their States, and there was a want of confidence in all quarters. When men who had held the highest and most influential positions in the Navy came forward and offered their resignations, there was apparently no one upon whom the Secretary could rely; distrust seemed to pervade every branch of the naval service. No commander could be sure who would be faithful to the flag, and the Secretary of the Navy could not be certain of any Southern officers being true to the Government. It was a bad state of affairs for a Secretary to commence his administration with, but the eventful year, 1861-62, will show that the operations and achievements of the Navy

were such, that great credit was reflected not only upon the Secretary but upon the personnel of the service, which so signally aided the Department in carrying out the measures tending so greatly to cripple the Confederate cause.

rebellion—or, to use the language of the present day, in persuading our Southern brethren to come back into the Union. It is but justice to the Navy Department to explain to the reader the difficulties under which that branch of the Government la-

HON. GIDEON WELLES, SECRETARY OF THE NAVY, 1861-69.

It is only intended, in this narrative, to give a comprehensive history of the naval events of the war, so that the general reader can form a rapid idea as to the conduct of naval affairs, and understand how much the Navy had to do with putting down the

bored to carry out a system of offense, on which hung the whole problem of bringing the contest to a happy conclusion.

The Navy Department is different in its organization from any other department under the Government. Its relations to

the central Government, it is true, are the same as the others, yet its operations and wants are not understood except by experts who have had a long training in the Department; a politician who takes charge of the office for the first time will find himself quite at sea, and entirely in the hands of those who run the different branches of the department.

The Secretary, then, should be considered as surrounded by his Cabinet officers, on whom he must depend at all times for such advice and council as he may need.

His chiefs of bureaux are not clerks. They are, or ought to be his advisers, and should hold to the Secretary the same relations as the heads of departments hold to the President. It depends upon the fitness of bureau chiefs whether the Secretary can conduct his department with success or not.

The Navy Department combines in itself so many branches, that it would be an impossibility for any one man to comprehend them all, much less direct them.

We have had a number of secretaries who have attempted to "run the machine on their own account," and make themselves independent of the chiefs of bureaux, but those who have made the effort have always scored a dead failure, and have left no record behind them that would inure to their benefit, publicly or privately.

It is quite clear that the head of the Navy Department should be a statesman, thoroughly acquainted with the policy of the country; he should be a constitutional lawyer, should have a thorough knowledge of international law, and of the obligations we are under to all foreign Governments; he should be familiar with all the mercantile interests of the country, and understand the relations the Navy holds to our commerce afloat. He should be a man of sound judgment in all business matters, and should possess executive ability of the highest order. Above all, he should be a man of liberal ideas; not considering that he is placed at the head of the Department to do nothing but find fault with the officers under him, but to aid them with all his power to build up a Navy, and keep it in a proper condition to defend the country. In fact, the Secretary of the Navy should be the political, judicial and financial head of the Navy Department.

When the war broke out it was very apparent that the organization of the Navy Department was very defective, and that the system of bureaux which worked fairly well in time of peace, did not work at all in time of war. It was like a balky team; it required a professional hand to guide the several bureaux which seemed to be trying to run their departments, each without re-

gard to the other, with no unanimity of opinion, and it was soon found necessary to add a professional man to the department with the title of Assistant Secretary, who should supervise all the operations of the different bureaux, and take charge, under the Secretary, of all professional matters.

The vast operations of the Department during the war were divided into two great branches, one belonging to matters pertaining particularly to the Navy, the other embracing civil transactions, together with the whole business machinery and operations of the Department.

Mr. G. V. Fox, who had formerly been an officer of the Navy, was placed at the head of the first named branch of the Department; while the Chief Clerk, Mr. Faxon, was placed at the head of the Civil Corps; he was really the representative of the Secretary of the Navy, Mr. Gideon Welles.

This organization was found necessary, owing to the defective system then existing, which exists now, and which will be found defective again if we should ever be involved in a war of any magnitude.

It was rather remarkable that the Government, after the war, should have fallen back upon the old bureau system without any professional head, when its defects were so glaring just after the commencement of hostilities.

Mr. Fox, on entering upon the duties of Assistant Secretary of the Navy, brought with him into the Department a knowledge of naval matters which could not by any possibility have been attained by a pure civilian, and though he did not, perhaps, have the prestige that would have been held by a Board of Admirals or the Board of Naval Commissioners, the success of the Navy during the war, its rapid increase in numbers and efficiency, showed that he was alive to all the requirements of the service, and was always ready to meet the demands made upon the Navy Department by the exigencies of the moment.

Congress, at all times, has been slow to recognize the importance of a Navy commensurate with the interests of this great country, and has doled out ships and sailors, even in times of great need, with a parsimony that has, on several occasions, placed the country in great straits.

It was even so in the outset of the great rebellion, and it was some time after the commencement of hostilities before our legislators could be made to understand the necessity for a large number of vessels to blockade the Southern ports, and put down the privateers and vessels of war which the Confederates were putting afloat, and which were destroying our commercial marine in all parts of the world.

Almost from the beginning, the Navy Department had proper appreciation of what the struggle was to be, and how necessary it was for the Secretary of the Navy to be provided with the means of purchasing ships, guns and supplies of all kinds, and it would be idle to say, in the light of results, that the Department did not put forth all the energy required on such an occasion—first, by gaining the confidence of Congress, and, by using the large amounts intrusted to its charge with a fair degree of economy, considering the vastness of the field of operations.

The administration of the Department was conducted with ability, which is the most convincing proof of the fitness of its officers for the important duties they were called upon to perform. It would be untrue to say that such results as happened could have been achieved by persons of ordinary capacity, or that the head of such a combination of officers was deficient in the qualities necessary to control so many grave matters as came within his jurisdiction.

The communications that were addressed to Congress from time to time, by the Navy Department, show conclusively that the officers who filled the different positions, from the Secretary down, had a very clear comprehension of the situation in all its details, and that at no time was Congress without information of all that was going on in the Navy, or of what was required to keep it in efficient condition.

It was seen very early in the struggle that the policy of England and France was unfriendly to the Union side, which was fully evinced in the case of the "Trent"

later on, and all the influence and argument of the Navy Department was brought to bear upon Congress to place our Navy in a position to meet every attempt on the part of foreign governments to meddle in our affairs. Hence it was that we finally commenced building a class of vessels that set at defiance those who seemed disposed to interfere with us, and left us, at the end of the civil war, mistress of the situation at home and abroad.

With these preliminary remarks, which do not by any means convey what is due to

those who had charge of naval matters at the Department, we will proceed to give as near as we can a short, but comprehensive, account of the various events which occurred during the war, and endeavor to show the bearing they had, not only on particular movements of the army, but the influence they exerted in the quelling of the rebellion in general.

We do not desire to take one atom of praise from our gallant soldiers, who, throughout the war, showed courage and energy unsurpassed; but we feel with many others, that while the country has been lavish of

its praise to the Army, it has not always rendered that justice to the Navy which it actually deserved.

The writer does not hesitate to say, that but for the exertions put forth by the naval branch of the government, the rebellion would not have been brought to a close so rapidly as it was.

No nation was ever more unprepared for war than were the United States when the rebellion of eleven States was thrust upon them, and when the people of the South committed their first hostile acts by seizing

GUSTAVUS V. FOX, ASS'T SECRETARY OF THE NAVY, 1861-66.

upon the forts and arsenals that were built for their protection, without the expectation that they would be used against the government. No pen could adequately express the utter impotence of the general government for attack or defence when it was called upon to perform the imperative duty of rescuing the federal fortifications from the hands of the rebels, or of yielding up all authority over them, and thereby sacrificing the life and honor of the nation.

The Navy, in particular, on which alone the government seemed disposed to depend at the first outbreak, was unquestionably in a bad condition to undertake all that was required of it.

Some there were who—rebels at heart and purpose—after holding for several years previous to the war high positions in the administration preceding that of Mr. Lincoln, had done all they could to dispose of the Navy, so that it could not be used in the event of trouble between the North and the South. The object was to destroy all its resources, to cripple the navy yards, dismantle the ships or have them on distant stations, so as to render it impossible for the Navy to strike an effective blow; or, if possible, to throw the ships and Southern yards into the hands of the Secessionists. How well they succeeded the history of the war will tell.

It may be supposed by those unfamiliar with the events of the times, that the rebellion was the result of measures forced upon the South just previous to the election of Abraham Lincoln, and that in his election they saw the death blow to the hopes they had cherished for extending slavery into new states and territories. If any one supposes that the rebellion was an impulsive measure, let him dismiss such an idea, for the writer was told by a Southern Senator in 1860, that, as far back as 1855, when the "Colorado" class of ships were built, he and others had voted to have them and all other vessels constructed of such a size and such a draft of water, that they could not enter any Southern ports; so it seems that the thought of secession had been maturing for years, and while Southern statesmen were apparently urging the building of large vessels instead of small ones, on the ground that the dignity of the Nation called for these cumbersome structures, it was really for the purpose of crippling the Government in case the Southern States should secede. In this they succeeded admirably, so much so, in fact, that these large ships were of little use in the beginning of the war, as they could enter no Southern ports, and their guns, without so doing, could not reach the opposing forts.

Young men of the present day who will

want to make themselves informed of the events of our Civil War, will scarcely believe that it was the settled purpose of the South to organize a separate government, or that they would resort to such means to carry out their plans, especially when, after a careful investigation of affairs at that time, it will be clearly perceived that they had no actual ground for complaint. On the contrary, the South for years had enjoyed more than their share of honors and emoluments, and had gained from the North compliance with urgent demands, which often passed the bounds of proper concession.

From the time Mr. Lincoln became President, all the Southern ports were in the possession of Secessionists; they were sealed against our large ships, and open to blockade runners, which immediately began to supply the South with munitions of war, thus giving that section a start, from which they were benefited for a year to come.

Had our Navy at that time consisted of some thirty small gun-boats, or a dozen monitors, the rebellion would have been unable to raise its head. Yet, with all the experience we have had before us, we are at the present time in a worse condition than we were on the breaking out of the rebellion. If to-day events occurred similar to those of 1861, we would be in a worse condition to prevent them. Why does this settled purpose to keep the Navy down exist, when it was shown so conclusively during the Civil War, that without the aid of the Navy the South would have succeeded in its attempt to dismember the Union? Does it not look as if that good service had been forgotten, and that it is determined that only a ghost of a Navy shall remain—a shadow that can be of no actual use in war, and fit to serve only as an idle pageant in time of peace?

If the Navy in the first outburst of the war did not perform any act that would show its importance in putting down the rebellion at once, it was because it was in such a crippled condition regarding its ships, while over two hundred of its officers were throwing up their commissions and hastening South to try their fortunes with the seceding States.

A retrospective view of the history of the times will show how opposed the country was to commence a war, the end of which no man could see. So much was this the case that the North humiliated itself with concessions, and it was not until violent resistance had begun on the part of the South, and the honored flag of the Republic had been fired upon, that the North awoke to the indignity, and never rested until its Army and Navy had wiped

out the foul blow that had been struck, and the Union was once again restored in all its entirety.

The Navy Department was beset with difficulties at the very beginning; the friends of the South in Congress did all they could to withhold supplies of money. Our merchant marine did not then, as now, hold out the same facilities for improvising a naval force. Six hundred vessels were demanded at once for the purposes of blockade and for putting afloat a force that could keep down the Southern privateers, and when it is considered what the Department did under all the adverse circumstances attending the execution of these requirements, the highest praise cannot be withheld from those who managed its operations.

Every man who held position of honor and trust in the Navy Department in those trying times is dead and gone, and the multiplying events of a quarter of a century have crowded out for a time the great works which emanated from their conjoint exertions; but those who will take the trouble to hunt up and read over the documentary history of the times, will find ample evidence that to the Navy Department and the Navy is the present generation largely indebted for the happy condition of affairs now existing in a united country—a prosperity never exceeded in the history of the land—and the most substantial proofs that the Navy will always be found foremost to support this union of States, no matter what may be the sacrifices made by its officers and other personnel.

**A**T thirty minutes past 4 o'clock, on April 12, 1861, the first gun of civil war was fired, the battery on James Island discharging the first howitzer shell, which fell inside Fort Sumter, blowing up a building; this was almost immediately followed by another shell, which scattered destruction all around.

Fort Moultrie then took up the assault, and in another moment the guns from the gun battery on Cummings Point, from Captain McCready's battery, from Captain James Hamilton's floating battery, the enfilading battery, and every other point where a gun could be brought to bear on Sumter, opened in succession; and the guns poured forth their wrath as if the fort standing out in the bay had been some vengeful foe on which they desired to wreak their vengeance, instead of considering that it had been placed there for their protection against all foreign enemies.

It was well understood by all those in that beleaguered fort what would be the result of building all those earth-works, and that it was only a matter of a few days or perhaps

hours, ere the South Carolinians would proceed to extremities—had they waited until the 15th of April the garrison would have been starved out, and obliged to surrender for want of provisions. But that would not have suited them; they wanted to strike a blow that would make separation inevitable, and one that would unite the whole South in the measures then pending to form a Southern Confederacy, or whatever kind of government they might finally drift into.

Major Anderson, the Commander of Sumter, received the first shot and shell in silence; the batteries at regular intervals continued to belch forth their deadly missiles, and still no answer was returned by the besieged, until about an hour after the firing commenced, then two shots were fired from Sumter and glanced harmlessly from the face of Fort Moultrie. Sumter fired no more until between six and seven o'clock when, as if enraged at the onslaught made upon it and kept up with increasing vigor, it then opened from casemate and parapet a hail of shot and shell on Moultrie, steam iron battery, and the floating battery, that fairly made them shake. This was re-

turned with great vigor by the South Carolina gunners. There were good soldiers on both sides, men trained to arms and neither to be daunted by a few shot and shell. The story of that day is known to all who read history, and it is not necessary to further refer to it, excepting in connection with the naval expedition which was fitted out in the earlier part of April to go to the relief of Sumter, the history of which will appear further on in this narrative.

Secretary Welles, with a decision worthy of the occasion, did fit out an expedition for the relief of Sumter, the last vessel of which sailed from New York on the 9th of April, but owing to various reasons did not reach Charleston harbor in time to be of any use, and the attack on the fort commenced soon after the leading vessels showed themselves off the bar. A number of the smaller vessels never arrived at all, and under the circumstances could have been of no use had they arrived twenty-four hours before the attack. The expedition arrived only to see the declaration of war between the North and the South, which was promulgated by the thunder of cannon and the hissing of the shot and shell, as they carried death and destruction to those who had been united by the strongest bonds of love and friendship. Those who from the ships witnessed the fiery shells as they crossed each other in the night, knew that this was war that would never cease until one or the other of the contending parties were deprived of the resources to carry it on; war that would oblige the Government to call forth large armies to put down rebellion on the field of battle, and to build and equip large fleets to blockade the insurgent's ports, and bombard the heavy forts the enemy had snatched from the hands of their lawful owners. The men in that fleet of succour to the besieged Sumter knew then that ten times the number of vessels could not have rendered aid to the fort in face of that terrible fire, and that their missions might better have never been undertaken. They started homeward to carry the news to the startled North, but the telegrams far out-traveled them, and as its messages on the wires were announced to an indignant people, there was but one general feeling, namely, to resist the audacity of the insurgents and bring them back to reason, if it took every man in the country to do it. The rebellion was a dreadful thing to inaugurate, to be sure, and those who undertook to bring it about must have been imbued with some other ambition than was apparent, or the desire to escape from a form of government which had so far proved the best yet known to man: there must have been greater inducements to break up this most

beneficent union than has ever appeared on the face of events.

The South was a great oligarchy, holding their millions of slaves, and they aimed to be recognized by the world as a power above the gift of the people. Perhaps the best thing that ever happened to this great country was the firing on Fort Sumter with the guns of Moultrie and other forts. Who can say that we are not a greater nation to-day, with freedom throughout the land, than we were in the days of the errors and follies of the South, and the anger and prejudices of the North, which embittered one against the other, and made the great Council Hall of the nation a place of violence and discord? All that has been swept away with the fall of slavery, and instead of it has come a union of all the States, more earnest and fraternal than before, with the Southern section of the country growing more prosperous and more happy under free labor and equal rights for all those who live in the South. In another generation people will likely bless the day when James Island and Moultrie opened their guns on Sumter, and caused to be wiped out that dark blotch on our escutcheon, which the whole world were pointing at and asking us how we could call ourselves a free country while four millions of people were held in bondage. Who knows what we might have been but for that long war, which brought so much sorrow and desolation to so many homes? Slavery, with its seductive influences, might have led us all away, and in the course of a century our country might have become a land of slaves.

Let this country not forget, then, the men who so nobly risked their lives in the cause of freedom, and let them erect monuments to those who died that this union of States might live to be an asylum for all time to come for those who love not despotism, and love liberty.

The Navy had a large share in bringing about the happy results which grew from the war, and many on both sides do not hesitate to say that, but for the Navy the South never would have been brought back into the Union—and yet, who is there that has taken the trouble to erect a monument to the sailors?

As this narrative continues people will learn with surprise that the Navy did so much towards putting down the rebellion; yet the author will scarcely find time or space to give a fair account of all the Navy did do, and must leave untold many events to be related hereafter by some more graphic historian. As years pass on, people who have been born long after the great War of the Rebellion, will long to know of

the great battles by land and sea, which took place from 1861 to 1865, and it is to be hoped that by each one contributing his mite, in the course of time a true history will be written. The best of efforts will be made in this history to make it a true if not an interesting one.

When President Lincoln entered upon the duties of his office, his position towards Virginia differed somewhat from that which he assumed towards the States farther South. It was deemed desirable that the Administration should do nothing to wound the sensitive feelings of the Virginians, and General Scott, the General-in-Chief of our Army, was particularly solicitous that the Government should give the State of Virginia no excuse to secede.

There were several reasons for this extra tenderness towards Virginia—one of the principal navy yards, filled with Southern officers, was within the limits of the State. The commanding officer, Commander McCauley, was considered loyal, and had in his day stood high in the service; but he was now old, and at a time when he should have maintained his self-possession he appears to have completely lost his head.

The Secretary of the Navy, Mr. Welles, had not yet made himself familiar with the conditions of affairs in his department. His position was a difficult one for a man advanced in years, for the duties were complicated, and such as only an expert could be expected to fathom in so short a time.

Mr. Welles was surrounded with officers and clerks, some of whose loyalty was doubted, and one bureau of the Department in particular, presided over by an officer of Southern birth and of national reputation, was the headquarters of naval officers who were plotting the downfall of the country to which they owed their position and whatever importance they possessed.

It was bad enough for officers to openly desert their flag, but far worse treachery to continue holding positions in order to hamper the Government and betray its secrets. Every official act in the Navy Department was known at once to these plotters, and immediate steps taken to render it abortive. Officers with pleasant faces, but with treason in their hearts, assembled in conclave in the Department to devise plans for the overthrow of the Government.

A short time before Fort Sumter was fired upon, the commandant of the Washington Navy Yard gave a large party at his quarters, on the occasion of the marriage of his daughter, to which the President and his cabinet were invited. A number of disloyal naval officers were present, and the house was everywhere festooned with the American flag, even to the bridal bed; yet

just after Sumter was fired on, the Commandant, with most of those under his command, including his new son-in-law, resigned their commissions and left the Washington Navy Yard to take care of itself.

At that very time the secession of Virginia had been resolved upon, which was known to these disloyal officers, although not to the Government; for the action of the Secessionists had been delayed and kept secret, so that the blow would be more decisive and enable the conspirators to seize the public property at Norfolk and elsewhere, to help them carry out their designs.

At one time it was even thought doubtful if Washington could be held, as the people at the North, unprepared for such an emergency, were slow in getting troops to the Capitol.

Those who had been plotting against the Government in the Navy Department, felt sure that the Norfolk Yard must fall into the hands of the Secessionists, as everything possible had been prepared for that event. They lost no opportunity to impress upon the mind of the Secretary of the Navy the importance of doing nothing to offend the State of Virginia and give it an excuse for seceding from the Union on the ground of invasion of "State rights;" which meant that the Government should exercise no authority over its own property within the limits of a seceding State. The Naval Department at that moment seemed powerless to preserve the public property at Norfolk against the rebel troops then assembling in Virginia. General Scott threw cold water on every attempt to hold the Norfolk Yard, on the ground that he had no troops to spare, as he could not deplete Fortress Monroe, which must be held at all hazards.

It seems a pity that the Secretary should not have selected some loyal and energetic officer, placed him in command of a few gun-boats and armed tug-boats and sent him to Norfolk with orders to bring all the vessels away, and even put the Commandant under arrest if he should interpose any obstacles. A guard of fifty marines would have been sufficient to overawe all malcontents. These proceedings would not have influenced the secession of Virginia, which was already decided upon.

The Secretary of the Navy, finding himself unable to cope with the difficulties of the situation, summoned to the Navy Department Commodore Hiram Paulding, a loyal officer, but who was now declining in years and not equal to a position which required not only energy of mind but great bodily vigor. Commodore Paulding broke up the conclave which was in the habit of meeting in the Bureau of Ordnance, for he

felt that these officers were inimical to the government, and he recommended the Secretary of the Navy to change the suspected Chief of Bureaux for another known to be loyal.

Frequent accounts reached Washington of the hostile attitude of the people in Norfolk and Portsmouth towards the government, and their determination that the Navy Department should not remove a ship or a gun from the station. Large bodies of troops were reported moving towards Norfolk to enforce this decision. In fact, Norfolk, which had for many years lived on the bounty of the government and flourished by the appropriations for the support of the Navy Yard, was now the very hotbed of secession.

COMMODORE HIRAM PAULDING.

The Southern officers could hardly restrain their impatience until the State of Virginia should secede, so anxious were they to show their gratitude to the United States Government, which had conferred upon them whatever importance they possessed, by pulling it to pieces, and endeavoring to dim the glory of the flag under which they had served from boyhood.

Most of the officers of the Navy Yard were Southern men whose honor had heretofore been unquestioned, but their heads were now so turned that they were as wild as the *sans culottes* of the French Revolution.

Commodore McCauley, who commanded the Navy Yard, had long and faithfully served the government, but was now advanced in years and no match for the wily secessionists about him, who so hampered and bewildered him, that he for a time rested under the suspicion of being lukewarm in his allegiance.

At this time there were lying at the Navy Yard the following named vessels:

The steam frigate "Merrimac," of 40 guns, the same vessel which, after being converted into an ironclad by the rebels, made such havoc among our ships at Hampton Roads; the sloop of war, "German-town," 22 guns; sloop of war, "Plymouth," 22 guns; brig, "Dolphin," 4 guns. All these could have been prepared for sea in a short time.

There were also the following named old ships which were of no great use, but they had been associated with the history of the Navy and were dear to the country. These were the "Pennsylvania," "United States," "Columbus," "Delaware," "Raritan," and "Columbia."

There was also an unfinished ship-of-the-line, the "New York," in one of the ship houses.

The sloop-of-war "Cumberland," was moored at the Navy Yard. These vessels were valued at about two millions of dollars.

Any one to see these ships lying quietly at their moorings, the officers and men going to and fro about their duties, the sentries pacing up and down guarding public property and preserving order, would have supposed that the interests of the United States Government were being well taken care of; but this was merely the calm which precedes the storm—the fearful storm which was soon to burst upon the country, when "Hope for a season bade the world farewell," and truth and honor hung their heads with shame.

Early in April the Navy Department began to get very uneasy for the safety of the Navy Yard, for it was by this time well understood that the Secessionists would make an aggressive movement on the first favorable opportunity.

The Department was most anxious to get the "Merrimac" away from the yard to a place of safety, but was informed by Commodore McCauley that it would take a month to put her machinery in working order.

The department did not seem to reflect that a few armed tow-boats with marines on board, could have been sent from New York to tow all the vessels under the guns of Fortress Monroe. One tug with a twenty four pound howitzer on board, properly handled, would have been master of the situation, and if the Navy Department had displayed a little forethought in this emergency, the government would have been saved deep humiliation and a loss in ships, guns and stores not easy to repair.

On the 31st of March 250 seamen and landsmen were ordered to be transferred from the New York Navy Yard to Norfolk, and fifty seamen were transferred to the

revenue steamer "Harriet Lane," which vessel was ordered to proceed at once to Norfolk. It shows the miserable condition of the Navy when the department had nothing but a revenue cutter to depend upon.

Days went by before anything else was attempted. On the 11th of April Commodore James Alden was ordered to report to Commodore McCauley to take command of the "Merrimac," and Chief Engineer Isherwood was sent to Norfolk to get the ship's engines in working order as soon as possible.

On the 14th the work was commenced, and on the 17th the engines were in working order—so much for the Commandant's assertion that it would take a month to get the ship ready to move, as he was made to believe.

It is no wonder, under these circumstances

The work was all done with the consent of Commodore McCauley; but when he was informed that everything was ready to fire up, he replied that next morning would be time enough. At midnight the fires were started and the engines worked at the dock, and were found to be in good order.

Next morning the Commandant was again informed that everything was ready, but he replied that he had not decided to send the "Merrimac" out. It was in vain that he was reminded of the peremptory character of the order which Mr. Isherwood had brought from the Secretary of the Navy to get the "Merrimac" out at the earliest possible moment. He only replied that he would let his decision be known in the course of the day. He gave as a reason the obstructions that had been placed in the channel, but when assured that they could

THE STEAMER "HARRIET LANE."

that the loyalty of the Commandant should have been questioned, yet he was simply influenced by officers whom he trusted and who were desirous that the "Merrimac" should be retained for the future navy of the Southern Confederacy.

In a majority of instances when Southern officers had determined "to go with their States," they turned over their commands or trusts to the government and went away with clean skirts, but in the case of navy yards this rule did not seem to hold good, as was shown at Pensacola and Norfolk; and every impediment was thrown in Commodore McCauley's way by his own subordinates to prevent his carrying out the orders of the department.

The disloyalty which existed to such an extent among the officers did not at that time extend to the mechanics, for they worked night and day until the "Merrimac's" machinery was repaired.

Then forty-four firemen and coal-heavers volunteered for the service of taking the "Merrimac" out.

be easily passed, and that every moment increased the danger, he gave orders to haul the fires, and thus the noble "Merrimac" was finally lost to us.

It is difficult at this late date to tell all the motives that influenced the Navy Department and the Commandant at Norfolk. Indecision seemed everywhere to exist, and some of the best officers in the Navy were apparently quite dazed at the course which events were taking. Commodore McCauley at one time was master of the situation, and with promptness and decision might have saved all the ships, guns, and stores, even if he judged it advisable to abandon the Navy Yard.

The Commodore probably thought that by retaining the "Merrimac" and her battery he would have a strong force to repel any attack that might be made from the outside. The old Commodore, who had fought gallantly for his country in former days, was completely acquitted of anything like disloyalty by the officers who were sent down to take the "Merrimac" away from

Norfolk, but it is unfortunate that he did not show more decision of character when the crisis came upon him.

Every officer connected with the destruction of the Norfolk Navy Yard came in for a share of censure, which is not to be wondered at when it is now known that every ship and gun could have been saved. The broadside of the "Germantown," which was all ready for sea and only waiting a crew, or the "Plymouth," in the same condition, would, with a few men on board, have saved the Navy Yard against attack, overawed Norfolk and Portsmouth, and prevented the channel from being obstructed by the Confederates.

Even when the yard was abandoned and the buildings set fire to, the work was done in a panic in which the coolest persons seem to have lost their heads. The destruction took place when the yard had been re-enforced by a regiment of Massachusetts Volunteers under Colonel Wadsworth, while the "Pawnee" of fifteen guns had brought Commodore Paulding from Washington with instructions "to save what he could and act as he thought proper."

When Commodore Paulding arrived at the Navy Yard he found that all the Southern officers had sent in their resignations and abandoned their posts. The mechanics, following their example, had left the yard in a body, and persons had even come in from outside and possessed themselves of the Government arms. It was reported that several thousand men were organizing for the purpose of seizing the yard. The powder had been taken from the Government magazine near Norfolk, and batteries were being erected along the approaches to the Navy Yard, and hulks sunk in the channel near Craney Island and Sewell's Point, three light boats having been used for the purpose; and this was done, notwithstanding the Commandant of the yard had ample force to have prevented it. Actual war existed between the Government and the inhabitants of Norfolk, who were doing all in their power to destroy public property and obstruct the public highway. Worse than all, the "Merrimac," "Germantown" and "Plymouth" had been scuttled by orders.

All the guns in the Navy Yard had been spiked, with the exception of some two hundred, as well as those on shipboard, except five heavy guns on a side on board the "Pennsylvania," which sturdy old castle commanded the whole yard; and fifty good seamen on board could have bid defiance to 5,000 Confederates in arms, and held Norfolk and Portsmouth under her

guns until every ship was hauled out of harm's way.

After the arrival of the "Pawnee" had made the yard doubly secure, the shells were drawn from the "Pennsylvania's" guns and the guns spiked!

The whole thing looked so hopeless to Commodore Paulding that, in view of the orders he had received from the Department not to let anything fall into the hands of the Confederates, he determined to destroy everything.

It must have been a painful alternative to that faithful old officer, Commodore Paulding, who abhorred everything in the shape of rebellion, to be obliged to apply the torch to the historic ships of the Navy, and destroy the other valuable property the Government had been so many years accumulating; especially since he was aware that most of the destruction might easily have been prevented, had not so many days been lost in deciding what to do.

But the fiat had gone forth, the mania for destruction had seized upon every one, as we see boys go mad over the burning of a hay-rick, which they have set fire to in wanton sport.

All the ships, except the "Cumberland," were well filled with combustibles, and the whole saturated with oil and turpentine. The ship-houses and other buildings were prepared in the same manner, and nothing left to chance so that the rebels could derive any benefit from what was left behind. The fine dry-dock that had cost millions to build was undermined, and a hundred men ran to and fro with heavy hammers trying to knock off the trunnions of the heavy guns, but with a few exceptions these attempts were failures.

It was a beautiful starlight night, April 20, when all the preparations were completed. The people of Norfolk and Portsmouth were wrapped in slumber, little dreaming that in a few hours the ships and public works which were so essential to the prosperity of the community would be a mass of ruins, and hundreds of people would be without employment and without food for their families.

The "Pawnee" had towed the "Cumberland" out of the reach of the fire, and laid at anchor to receive on board those who were to fire the public property. Commodore McCauley had gone to bed that night worn out with excitement and anxiety, under the impression that the force that had arrived at Norfolk was for the purpose of holding the yard and relieving him of responsibility, and when he was called at midnight and informed that the torch would be applied to everything, he could hardly

THE BURNING OF THE NORFOLK NAVY YARD, THE FRIGATE "MERRIMAC," AND OTHER VESSELS, APRIL 21, 1861.

realize the situation, and was chagrined and mortified at the idea of abandoning his post without any attempt to defend it.

At 2:30 A. M., April 21st, a rocket from the "Pawnee" gave the signal; the work of destruction commenced with the "Merrimac," and in ten minutes she was one vast sheet of flame. In quick succession the trains to the other ships and buildings were ignited and the surrounding country brilliantly illuminated.

The inhabitants of Norfolk and Portsmouth, roused from their slumber, looked with awe at the work of destruction, and mothers clasping their children to their breasts bewailed the fate that cut them and their offspring off from their support. Yet this was but a just retribution for the treason which the inhabitants had shown towards the best government on earth. They had killed the goose that laid the golden egg.

As the boats containing the firing party moved off down the river to the "Pawnee" and "Cumberland," the rebels from Norfolk and Portsmouth rushed into the Yard to save what they could from the flames, and were more fortunate than they expected to be. The dry-dock was not materially injured, some of the work-shops and officers' quarters were preserved, and the frigate "United States" was not much damaged. Even the "Merrimac," though burned to the water's edge and sunk, was afterwards raised and converted into the powerful ironclad which wrought such havoc in Hampton Roads and carried consternation through the North.

The loss of the Navy Yard at Norfolk was felt all through the North to be a great calamity. Misfortunes seemed accumulating, and people began to doubt whether the administration had sufficient vigor to meet the emergencies that were continually arising. The destruction of the Navy Yard seems now to have been the result of a panic which was not justified by the facts of the case, but the actors in that scene believed they were consulting the best interests of the Government. No one can doubt the loyalty of those gallant old seamen, McCauley and Paulding, for undoubt-

edly they had the best interests of the country at heart, and acted with good intent.

In the midst of our other misfortunes the loss of the Navy Yard was soon forgotten. It was abandoned by the Confederates after the defeat of the "Merrimac" by the "Monitor" in a panic quite as causeless as our own, and has not yet risen like the Phoenix from its ashes, its reconstruction progressing very slowly.

Congress has apparently viewed with distrust appropriations made for this yard, scarcely yet realizing that the people employed there are worthy of confidence in consequence of their past acts of rebellion, which caused the destruction of the most important naval station in the United States.

The greatest misfortune to the Union caused by the destruction of the Navy Yard, was the loss of at least twelve hundred fine guns, most of which were uninjured. A number of them were quickly mounted at Sewell's Point to keep our ships from approaching Norfolk; others were sent to Hatteras Inlet, Ocracoke, Roanoke Island and other points in the sounds of North Carolina. Fifty-three of them were mounted at Port Royal, others at Fernandina and at the defences of New Orleans. They were met with at Fort Henry, Fort Donelson, Island No. 10, Memphis, Vicksburg, Grand Gulf and Port Hudson. We found them up the Red River as far as the gunboats penetrated, and took possession of some of them on the cars at Duvall's Bluff, on White River, bound for Little Rock. They gave us a three hours' hard fight at Arkansas Post, but in the end they all returned to their rightful owners, many of them indented with Union shot and not a few permanently disabled.

Had it not been for the guns captured at Norfolk and Pensacola, the Confederates would have found it a difficult matter to arm their fortifications for at least a year after the breaking out of hostilities, at the expiration of which time they began to manufacture their own ordnance, and import it from abroad. Great as was, therefore, the loss of our ships, it was much less than the loss of our guns.

## CHAPTER III.

CLOSING OF THE SOUTHERN PORTS.—OPERATIONS AGAINST THE FEDERAL COMMERCE BY PRIVATEERS.—TRIPLE TASK OF THE NAVY DEPARTMENT.—INCREASE OF THE NAVY.—PURCHASES UNWISELY MADE.—BRITISH VESSELS AND THE BLOCKADE.—SUFFERERS BY THE BLOCKADE.—FLAG OFFICERS APPOINTED TO COMMANDS.—DIFFICULTIES OF THE BLOCKADING FORCES.—ENERGY AND WATCHFULNESS OF NAVAL OFFICERS.—REMARKABLE ACTIVITY OF THE CONFEDERATES.—INADEQUATE APPROPRIATIONS BY CONGRESS.—CONDITION OF THE NAVY.—LIST OF VESSELS AND THEIR STATIONS.—AVAILABLE VESSELS.—THE HOME SQUADRON.—OLD NAVY.—PURCHASED VESSELS.—VESSELS CONSTRUCTING.—REORGANIZATION OF THE SERVICE.—PROMOTIONS.—THREE GRADES ADDED.—SCHOOLS OF GUNNERY AND NAVAL TRAINING ESTABLISHED.—PATRIOTIC VOLUNTEER OFFICERS.—THE COMMERCIAL MARINE.—HIGH TRIBUTE TO THE SECRETARY OF THE NAVY.

THE Navy Department, with its limited resources, had a weighty task imposed upon it from the very outbreak of the civil war. In a very brief period the rebellion assumed such formidable proportions, and naval operations had to be maintained on such an extensive scale to include over three thousand miles of coast line, that the energy and ability of the naval authorities were put to the severest tests.

First. There was the closing of all the ports along our Southern coast under the most exacting regulations of an international blockade, including the occupation of the Potomac River from its mouth to the Federal Capitol.

Had the Potomac been blocked by the enemy's guns at any time during the war, it would have rendered the position of our armies in Virginia and around the Capitol very embarrassing.

Second. The necessity of establishing an effective organization of combined naval and military expeditions against various points on our Southern coast, including also all needful naval aid to the Army in cutting off communication with the rebels. Besides this it was seen at an early date that a large naval force would be required on the Mississippi River and its tributaries.

Third. There had to be provided a suitable number of swift vessels for the active

pursuit of the Confederate cruisers, which might elude the vigilance of our blockading forces and proceed to prey upon our commerce in every part of the world. Immediately on the breaking out of the rebellion the Confederates prepared to operate against Federal commerce, and after the escape of their first privateer the destruction of our vessels became very common.

This was the triple task the Navy Department was called upon to perform, and it is but fair to say that, considering the disadvantages under which the Department labored, never were duties better performed.

When the proclamation was issued declaring all the Southern ports under blockade, it found the Navy Department totally unprepared for such a contingency. Congress had adjourned without providing for it, and it devolved on the Secretary of the Navy to meet the difficulties of the situation in the best way he could.

There were but few vessels in the Navy which could be relied on for blockading service, and none suitable for the pursuit of Confederate cruisers, which would naturally be very swift steamers. The only thing to be done was to put into commission every vessel in the Navy that was fit to go to sea, and to purchase from the mercantile marine such as would answer for temporary service; but so few vessels in the merchant service were fit even for blockade duty

much less for ships of war, that it was with difficulty that a sufficient number could be obtained to make such a blockade as was called for by the law of nations.

Purchases were unwisely made, and some unfit vessels were thus added to the Navy—through that spirit of grasping cupidity which is sure to come to the surface in time of war.

Some men who had always been considered honest and patriotic, did not hesitate to take advantage of the necessities of their country, and deplete the Federal treasury without adding to the efficiency of the Navy, thus hampering the naval authorities at the very outset of hostilities.

Purchases and contracts were made to meet the exigencies of the times. Orders were issued to equip vessels that under ordinary circumstances would not have been considered safe to go to sea in.

The force thus hastily gathered and stationed along our coast would scarcely have been considered an "efficient blockade" if a European power had thought fit to institute close inquiries into our proceedings. Now and then a British vessel of war made her appearance for the purpose of observing that the blockade was effectual, but as far as the writer's observations are concerned, this duty was always performed in the most delicate manner, and the British commanders were satisfied with the appearance of a blockade that was far from satisfying to the Federal Government.

A great deal has been said by Boynton, the naval historian, about the exacting character of the British Government in relation to the blockade of our coasts, but we rather think his style of writing was adapted to the public sentiment of the time, which was prepared to find fault with any nation that did not sympathize with the Union cause.

The English people were the great sufferers in our war by the loss of a commerce that was absolutely necessary for them to keep their manufactories going, and they exercised no greater surveillance than the Federal Government would have done had there been a blockade of the Irish coast established.

Flag Officers were appointed to the command of the different stations, and vessels were sent to each according to the necessity of the case as fast as they could be purchased and fitted out. Under the supervision of these flag officers the coasts and harbors of the Confederates were subjected to as close a blockade as the limited force of vessels would admit.

The difficulties of the blockading forces were much increased owing to the number of great bays, sounds and rivers of the South, but in spite of all drawbacks the

duties of the blockade were remarkably well performed.

What was lacking in vessels was more than compensated for by the energy and watchfulness of the naval officers on the different stations.

The expectation of prize-money was doubtless a stimulus to both officers and men, yet there was a higher motive governing their conduct, a determination to do all in their power to put down the rebellion by cutting off foreign supplies, without which they felt the Confederate resistance would soon terminate.

One of the most remarkable features of the war was the manner in which at an early date the Confederates had seized upon and fortified so many important points on the Southern coast, actually cutting Federal vessels off from any port of shelter in stormy weather, and compelling supply vessels of the different squadrons to keep out to sea. Our ships were compelled oftentimes to anchor in heavy gales on the open coast, where in case of accident to machinery or cables a steamer would be liable to drift on shore into the heavy breakers which lined the coast, and where a sailing vessel under like circumstances would have great difficulty in clawing off a lee shore.

The Confederates doubtless considered all these circumstances when they undertook the task of freeing themselves from what they were pleased to consider the thralldom of the North. With all ports of shelter closed against the Federal Navy, and storms continually raging along the coast, they laughed at the idea of a blockade.

They did not know the energy which animated the Federal Navy when circumstances should arise to call it forth. The officers themselves did not know until called upon to act what zeal and energy they could evince, and the present generation can hardly realize the hardships and dangers of the work then performed.

To many of the survivors of those scenes it may seem like the dreams of early childhood, shadows of which flit through the mind, dim and shapeless as reflected images from misty waterfalls.

The necessity of seizing some of the Southern ports soon became apparent; for though our officers had shown great ability in taking care of their ships on the blockade in the most tempestuous weather, and at the same time had rendered it difficult for blockade runners to enter Southern ports, yet it was found that harbors of refuge were indispensable to properly carry on such extensive operations.

Great demands were made upon the Navy, notwithstanding Congress had adjourned in 1861 without making adequate appropriations, considering the condition of affairs.

WATERWITCH. MISSISSIPPI. POWHATAN. SQUADREANNA. FREEHORN. MACEDONIAN. CUMBERLAND. BROOKLYN. POCAHONTAS. SABINE. SUPPLY.  
ST. LOUIS.

HOME SQUADRON OF THE UNION NAVY.

It is true that the measures adopted by Mr. Secretary Welles in advance of the session, and which had been rendered necessary in consequence of events that had been precipitated upon the country, had been approved by Congress, but that, after all, only provided for a comparatively small force of vessels and men, not even enough for ordinary police operations along the Atlantic coast, much less a strict blockade.

In order that the condition of the Navy may be understood, the list of vessels and their stations is herewith inserted. In the eyes of one not familiar with naval affairs it appears like a large show of available vessels, but not half of them were really fit for the service required of them.

The Home Squadron consisted of twelve vessels, and of these only four were in Northern ports and available for service, viz.:

NAME.	CLASS.	NO. OF GUNS.	WHERE STATIONED.
Pawnee .. . . .	Screw Sloop . . .	8	Washington.
Crusader . . . . .	Steamer . . . . .	8	New York.
Mohawk . . . . .	Steamer . . . . .	5	"
Supply .. . . .	Storeship . . . . .	4	"
4 vessels . . . . .		25	

The remaining vessels of the Squadron were stationed as follows:

NAME.	CLASS.	NO. OF GUNS.	WHERE STATIONED.
Sabine. . . . .	Frigate . . . . .	50	Pensacola.
St. Louis. . . . .	Sloop . . . . .	20	"
Brooklyn. . . . .	Steamer . . . . .	25	"
Wyandotte. . . . .	Steamer . . . . .	5	"
Macedonian . . . . .	Sloop . . . . .	22	Vera Cruz.
Cumberland. . . . .	Sloop . . . . .	24	} Returning from Vera Cruz.
Pocahontas. . . . .	Steamer . . . . .	5	
Powhatan. . . . .	Steamer . . . . .	11	
8 vessels . . . . .		162	

The Powhatan arrived at New York March 12, 1861, and sailed early in April for Fort Pickens.

The Pocahontas reached Hampton Roads on the 12th of March, and the Cumberland on the 23d of the same month.

Of vessels on foreign stations the following had returned in obedience to orders from the Department.

FROM MEDITERRANEAN:

NAME.	CLASS.	NO. OF GUNS.	DATE OF ARRIVAL.
Richmond . . . . .	Steam Sloop . . . . .	16	July 3.
Susquehanna. . . . .	Steam Sloop . . . . .	15	June 6.
Iroquois . . . . .	Steam Sloop . . . . .	6	June 15.

FROM COAST OF AFRICA:

NAME.	CLASS.	NO. OF GUNS.	DATE OF ARRIVAL.
Constellation. . . . .	Sloop . . . . .	22	Sept. 28.
Portsmouth. . . . .	Sloop . . . . .	22	Sept. 23.
Mohican. . . . .	Steam Sloop . . . . .	6	Sept. 27.
Mystic. . . . .	Steamer . . . . .	5	Oct. 7.
Sumter. . . . .	Steamer . . . . .	5	Sept. 15.
Sun Jacinto. . . . .	Steam Sloop . . . . .	13	Nov. 15.
Relief. . . . .	Storeship. . . . .	2	Oct. 12.

FROM COAST OF BRAZIL:

Name.	CLASS.	NO. OF GUNS.	DATE OF ARRIVAL.
Congress. . . . .	Frigate . . . . .	50	August 12.
Seminole. . . . .	Steam Sloop . . . . .	6	July 6.

The following had not arrived, Dec., 1861.  
FROM EAST INDIES :

NAME.	CLASS.	NO. OF GUNS.
John Adams . . . . .	Sloop . . . . .	20
Hartford. . . . .	Steam Sloop . . . . .	16
Dacotah. . . . .	Steam Sloop . . . . .	6

The following were to remain abroad:

NAME.	CLASS.	NO. OF GUNS.	WHERE STATIONED.
Saratoga. . . . .	Sloop . . . . .	18	Coast of Africa.
Pulaski. . . . .	Steamer . . . . .	1	Coast of Brazil.
Saginaw . . . . .	Steamer . . . . .	3	East Indies.

Add to these the vessels on the Pacific coast, the steam frigate Niagara, returning from Japan, and four tenders and store-ships, and there was a total of 42 vessels, carrying 555 guns and about 7,600 men, in commission on the 4th of March, 1861.

Without awaiting the arrival of vessels from our foreign squadrons, the department early directed such as were dismantled and in ordinary at the different yards, and which could be made available, to be repaired and put in commission. They are exclusive of those lost at Norfolk Navy Yard, embraced in the following table:

NAMES.	WHERE.	ORDERED TO BE PREPARED FOR SEA SERVICE WITH DISPATCH.	PUT IN COMMISSION, OR READY FOR OFFICERS AND CREW.	SAILED.
		1861.	1861.	1861.
<i>Frigates—</i>				
Potomac. . . . .	New York . . . . .	April 27	July 30	Sept. 10
St. Lawrence. . . . .	Philadelphia. . . . .	April 20	Late in May	June 29
Santee. . . . .	Portsmouth, N. H. . . . .	April 17	May 27	June 20
<i>Sloops—</i>				
Savannah . . . . .	New York . . . . .	April 1	June 1	July 10
Jamestown. . . . .	Philadelphia. . . . .	April 9	May 18	June 8
Vincennes. . . . .	Boston . . . . .	April 9	June 24	July 12
Marion. . . . .	Portsmouth. . . . .	April 20	June 30	July 14
Dale . . . . .	" . . . . .	April 20	June 30	July 17
Preble. . . . .	Boston. . . . .	April 20	June 22	July 11
<i>Brigs—</i>				
Bainbridge . . . . .	Boston. . . . .	April 20	May 1	May 21
Perry. . . . .	New York . . . . .	April 20	May 1	May 14
<i>Steamers—</i>				
Roanoke . . . . .	New York . . . . .	April 20.	June 20	June 25
Colorado . . . . .	Boston . . . . .	April 20.	June 3	June 18
Minnesota. . . . .	" . . . . .	April 3	May 2	May 8
Wabash . . . . .	New York . . . . .	April 9	April 29	May 30
Pensacola . . . . .	Washington . . . . .			
Mississippi. . . . .	Boston . . . . .	April 6	May 18	May 23
Water Witch. . . . .	Philadelphia. . . . .	Feb. 14	April 10	April 17

When the vessels then building and purchased of every class, were armed, equipped, and ready for service, the condition of the Navy would be as follows:

OLD NAVY.

	NUMBER OF VESSELS.	GUNS.	TONNAGE.
6 Ships of the Line (useless) . . . . .		504	16,094
7 Frigates (useless). . . . .		350	12,104
17 Sloops (useless). . . . .		342	16,031
2 Brigs (useless). . . . .		12	539
3 Storeships . . . . .		7	342
6 Receiving Ships, &c . . . . .		106	6,340
6 Screw Frigates . . . . .		222	21,460
6 First-class Screw Sloops . . . . .		109	11,953
4 First-class Sidewheel Steam Sloops. . . . .		46	8,003
8 Second-class Screw Sloops . . . . .		45	7,593
5 Third-class Screw Sloops . . . . .		28	2,405
4 Third-class Sidewheel Steamers . . . . .		8	1,808
2 Steam Tenders . . . . .		4	599
		1,783	105,271

PURCHASED VESSELS.

	GUNS.	TONS.
36 Sidewheel Steamers. . . . .	160	26,680
43 Screw Steamers. . . . .	175	20,403
13 Ships. . . . .	52	9,998
24 Schooners. . . . .	49	5,324
18 Barks. . . . .	78	8,432
2 Brigs. . . . .	4	469
136	518	71,297

VESSELS CONSTRUCTING.

	GUNS.	TONS.
14 Screw Sloops. . . . .	98	16,787
23 Gunboats. . . . .	92	11,661
12 Sidewheel Steamers. . . . .	48	8,400
3 Ironclad Steamers. . . . .	18	4,600
52	256	41,448

Making a total of 264 vessels, 2,557 guns, and 218,016 tons. The aggregate number of seamen in the service on the 4th of March, 1861, was 7,600. The number in December, 1861, was not less than 22,000.

This was a very good exhibit for the Navy in less than a year after the commencement of the war, but it must be remembered that of these vessels 6 were ships-of-the-line, on the stocks, 7 sailing frigates, 17 sailing sloops-of-war, 2 brigs, 3 storeships, 6 receiving ships, 13 sailing merchant ships, 24 schooners, 18 barks and 2 brigs. All these may be said to have been of little use as blockading vessels, as a swift blockade runner would have little difficulty in eluding them.

Yet our vessels were the best the Federal government could procure, and they were used to the best advantage.

Just before the breaking out of the rebellion the Navy was in a stagnant condition for want of those inducements which infuse life into a military service.

There was little hope of promotion, and the navy list was encumbered with the names of a lot of elderly gentlemen who had long since bade farewell to any hope of advancement. Some of the younger officers had sought temporary service in the mercantile marine, many had outlived their usefulness, and lieutenants on the verge of fifty years of age, with large families of children, had to employ all their faculties to feed them.

One of the acts of the new Secretary of the Navy was to recommend a reorganization of the service to increase its efficiency.

In December, 1861, Mr. Secretary Welles recommended that the permanent organization of the line officers of the Navy should be as follows, adding three grades to the number then in existence :

Flag Officers to command Squadrons,  
 Commodores,  
 Captains,  
 Commanders,  
 Lieutenants-Commanding } to command single vessels.

Lieutenants, Masters, Passed Midshipmen, Midshipmen, Cadets.

At the same time were established the sensible rules for promotion for gallant conduct in time of war, which did so much to elevate the service, and also to retire those who from age or other disability were no longer fit for active duty.

For all this the Navy was indebted to Mr. G. V. Fox, the Assistant Secretary, whose ideas were promptly adopted by Mr. Secretary Welles. It was the first gleam of sunshine that had illuminated the Navy for half a century, and the first time that the sanction of Congress had been given to the President to appoint to the highest grades, officers on the list of Commanders who had shown themselves gallant or efficient in the performance of their duties.

The efficiency of the service was further promoted by a provision which enacted that officers should be retired from service on three-fourths of their sea pay after being forty-five years in the Navy, or on attaining the age of sixty-two years.

Towards the close of the year 1861, many important measures were recommended by the Secretary of the Navy for the improvement of the personnel of the service, which showed that he appreciated the claims of officers upon the country to which they were devoting their lives and energies.

Many officers of ability had left the Navy to cast their fortunes with the seceding States, and the result was a scarcity of officers for the vessels in service or about to go into commission. A law, therefore, passed Congress, authorizing the Secretary of the Navy to appoint from the mercantile marine for service during the war, persons who could pass satisfactory examinations and show that they possessed necessary qualifications.

In order to prepare the different classes of officers introduced into the Navy for "temporary service," schools of gunnery and naval-training were established at the different Navy Yards, where the appointees were kept busily employed under competent naval instructors learning the duties peculiar to the service.

It is with the greatest pleasure we state that the volunteer officers were, with very few exceptions, capable and patriotic; they offered their lives as freely for the preservation of the Union as did their comrades who had been brought up in the service. Composed as they were of the best material of the finest commercial marine in the world, the spirit and zeal with which they surrendered peaceful pursuits to undergo the severe discipline of the Navy, was honorable alike to themselves and to their country.

Should it ever be our good fortune once

more to build up a commercial marine such as we possessed at the outbreak of the Civil War, its officers will be our dependence in time of need to fill up the complement required by the addition of ships, that will then have to be made, to the Navy, and if they exhibit the same qualities evinced by the volunteer officers of the late war, the honor of our country will be safe in their hands.

The trained officers who are at present in the Navy would be a mere handful in case of a foreign war. They would serve as a nucleus and as instructors to those taken from the commercial marine. The cry of demagogues that the Navy is overburdened with officers, is as shallow as it is false, and should be treated with the contempt such misrepresentations deserve.

There was comparatively little opportunity during the year 1861, except at Hatteras and Port Royal, for the Navy to exhibit the zeal, courage and ability which it manifested at a later period. Yet in his report for that year, Mr. Secretary Welles pays the highest tribute of praise to the officers and men of the service.

The Honorable Secretary says:—"To the patriotic officers of the Navy and the brave men who in various scenes of naval action have served under them, the Department and the Government justly owe an acknowledgement even more earnest and em-

phatic. Courage, ability, unfaltering fidelity and devotion to the cause of their country, have been the general and noble characteristics of their conduct in the arduous and important service with which they have been intrusted. We state in all confidence, that in their hands the historic renown of the American Navy has been elevated and augmented."

This is not too much to say about the Navy, which even in the beginning of the civil war showed its determination to wrench from the grasp of the insurgents the property seized by them from the Government, and it is but just to the Secretary of the Navy, who paid its officers and men so high a tribute, to assert that he showed a spirit of loyalty and devotion to duty which was worthy of his high position, and that he met the very heavy responsibilities with which he was burdened with entire honesty of purpose, laboring faithfully to the end.

Mr. Welles made mistakes during the war, as any man in such a perplexing condition of affairs must have done, and was sometimes unjust, owing to intriguers who made representations against certain officers, by which the Secretary allowed himself to be influenced; but when left unbiased to the exercise of his own judgment he was as impartial as any man who would likely have been selected for his position.

## CHAPTER IV.

### DEATH OF ELLSWORTH.—CAPTURE OF ALEXANDRIA, VA.—POTOMAC FLOTILLA.

HARREL DESTROYS A SCHOONER IN QUANTICO CREEK.—UNDESERVED CRITICISM OF THE FLOTILLA.—THE PUBLIC OBLIGED TO ACKNOWLEDGE THE VALUE OF THE FLOTILLA.—VESSELS ARRIVING FROM FOREIGN STATIONS.—OFFICERS RESIGNING, CASHIERED, ETC., ETC.

AT the commencement of the war, many wild conjectures were made as to its duration, and many of those who had hitherto stood high in the nation's opinion, were listened to anxiously, as if on their views depended the life and safety of the country, but as the war went on it was seen that the wisest statesmen and the ablest soldiers were at fault. Indeed, as events multiplied, the question of the Republic's future baffled all human ingenuity. That which all men predicted did not come to pass, and that which all declared impossible, was constantly being done, and our leaders were compelled to adopt measures they had before rejected, not only as unsound, but impossible.

It is not our province to write about matters concerning our Army, or about the immense line of insurrection which early in the war stretched across our country in chains of military posts within supporting distance of one another, but as these increased and Rebellion continued to raise its hydra head from Chesapeake Bay to Southwestern Missouri it was found to be neces-

sary to increase the Navy, not only for the protection of our long line of sea-coast, but to guard our great lines of river transportation which the enemy was rapidly seizing upon for the purpose of strengthening their great lines of defence, the speedy maturing of their plans enabling them to get possession.

One of the first ideas of the Confederates was to get possession of the Potomac River, fortify its banks, and thereby cut off all communication between Washington and the sea. Their object was to prevent the transportation of troops from the North to the seat of government by sea, for as there was but one line of railroad between Baltimore and Washington, the Confederates were of the opinion that the North could not supply troops in sufficient numbers by that route; besides, at any moment, it might pass into the hands of the enemy. So satisfied were the rebels of this fact that they considered the fall of Washington as certain. The authorities of Maryland forbade the passage of troops across that State, heavy batteries were rapidly thrown up by the Confederates along the banks of the Poto-

mac, and parties of rebel soldiers, with their colors flying, were in sight of the Capitol on the west bank of the river.

The first thing the Navy Department effected amidst all the difficulties of the situation, was the establishment of a flotilla of small steamers, armed with light guns, upon the Potomac.

It could hardly be supposed that the Navy would attempt, with these fragile vessels, to contend with the guns in battery on shore, or that they would be of any other service than that of patrolling the river, watching every movement of the enemy along the banks, and their operations; but those who are left to remember those days, will not forget the daily watchfulness, the sleepless nights, the sickly toil, and the hazardous character of the expeditions upon which the officers and crews of those vessels were engaged.

COMMANDER JAMES H. WARD.

The first landing of Northern troops upon the Virginian shore was under cover of these improvised gun-boats, when the gallant Ellsworth landed with his Zouave regiment at Alexandria, and went to almost instant death at the hands of an assassin—an event which unimportant as it was compared with others at the time, so fired the Northern heart that it added thousands of soldiers to our armies.

In this case Alexandria was evacuated by the Confederates upon demand of a naval officer—Commander S. C. Rowan—commanding the “Pawnee,” carrying a battery of fifteen guns, and when Ellsworth’s troops were landed the American flag was hoisted on the Custom House and other prominent places by the officer in charge of a landing party of sailors—Lieutenant R. B. Lowry.

This, though not a very important achievement, gave indication of the feel-

ings of the Navy, and how ready was the service to put down secession on the first opportunity offered.

The death of Ellsworth created a great impression upon the minds of the naval officers and sailors from its brutal accompaniments, and showed them forcibly that treason would only carry in its train rapine and murder, with all the horrors attending vindictive warfare.

As early as the last of May, 1861, the Confederates had completed three batteries on the Potomac, at Aquia Creek—railroad terminus—and others above and about the landing. The guns mounted in these works were mostly rifles, giving the Confederates an advantage over our vessels, which mounted only smooth-bore thirty-two-pounders.

As the Government had already, on several occasions, shown great decision, it is remarkable that it did not at once proceed to put down this work of the Confederates in fortifying the commanding points of the Potomac, but there seemed to have been an indisposition on its part at that moment to take any hostile action; and amidst the daily increasing confusion of affairs which startled the Nation, even the Navy Department did not exhibit an unusual activity.

The Potomac flotilla was chiefly engaged in moving up and down the river, gaining information of the enemy’s movements, convoying transports to and from Washington, often fired upon, and only able to return the fire without much effect, and with no power to land and capture the batteries for want of a proper landing force—which had been declined by General Scott whenever application had been made to him. It was a national disgrace, and bespoke the weakness of a country when, at the very outset of the war, a great highway—the Potomac—could be closed, and our own people slaughtered in transit by these rebel batteries, which seemed to increase in numbers with a rapidity never conceived of, while it appeared as if they had all the military depots of the country to draw from.

It was at last determined by the Department that the Potomac flotilla should take the initiative, and make an effort to clear the river banks of the rebel batteries.

Commander James H. Ward, an energetic officer, had been placed in command of the flotilla, and on the 20th of May, 1861, he started to engage the batteries at Aquia Creek, with no expectation, we imagine, of any great success against them with the small and fragile vessels under his command. These consisted of the “Freeborn,” a paddle-wheel steamer of two hundred and fifty tons, and carrying three guns; the “Anacostia, a small screw steamer of two

hundred tons, and the "Resolute," a small craft of ninety tons and two guns.

The largest gun on board this little squadron was a thirty-two pounder, most of the others being small howitzers. The impoverished condition of the Navy may be imagined when it had to depend upon such craft as these to crush a rebellion, while two or three thousand rebel troops were in the field with batteries against them.

No one who knew anything about such matters would form any favorable idea of succeeding against land batteries with this small flotilla, but notwithstanding the disparity of force, the batteries were silenced altogether in two hours, and the Secessionists driven to their earthworks on the hills overlooking the landing. These hills proved too high for the elevation to be obtained from the guns of the vessels, and the enemy's shot falling all around them without chance of return, the flotilla was with-

keeping up an incessant fire for five hours, only ceasing upon the over-fatigue of his men. The enemy were again driven out of their works, but carried their artillery away with them. Some damage was done the flotilla, and the "Freeborn" was obliged in consequence to go to Washington for repairs; there was no loss of life, nor were there any wounded on this occasion.

The flotilla had been increased by the "Pawnee," Commander Rowan, who had reported on the previous evening. More than a thousand shot were fired by the enemy, but though a number struck the hulls of the vessels, there was no irreparable damage done. This little affair may be said to have "opened the ball" along the banks of the Potomac, and it gave the Secessionists some idea of what they might expect in the future under the energetic management of Commander Ward; but unfortunately the career of that officer was cut short soon

ATTACK ON THE AQUAIA CREEK BATTERIES BY THE U. S. STEAMERS "FREEBORN," "ANACOSTIA" AND "RESOLUTE."

drawn out of range. Little damage was done to the vessels, the enemy not proving to be very good marksmen.

This was, I believe, the first battle of the war where the enemy's batteries were engaged by the Navy, and though not an important affair, it marks an era in the struggle which shows how remiss our Government had been up to that time in not having in the Navy a class of vessels suitable for just such occasions as this, and how poor indeed was our merchant marine when it could provide nothing better than the "Freeborn," "Anacostia" and the "Resolute"—three high-sounding names, which seem now so insignificant beside the "Miantonomoh," "Puritan," etc., vessels that eventually revolutionized the navies of the world, and made us, at one time, as regards the defence of our coast, equal if not superior to England and France.

On the following day Commander Ward resumed the engagement at Aquia Creek,

after in the attack on Matthias Point, when he attempted to disperse some batteries, having also made preparations to land; but in the heat of the action, and while sighting a gun, he was shot in the abdomen and soon after died. The Navy lost a gallant officer, whose example would have inspired his men to deeds of daring if any example was needed, for it was a noticeable fact that the blue-jackets of the Navy were up with the foremost in their devotion to the flag, and viewed these hostile movements on the Potomac against the government with something akin to horror. Let us remark here, that, during the war, we do not remember an instance where a sailor was found untrue to the flag of the Union, or where one ever hesitated to volunteer for an expedition, no matter how dangerous it was.

In the affair at Matthias Point our party was overwhelmed by numbers, and Lieutenant Chaplin of the "Pawnee," who had charge of a landing party, only succeeded

in bringing off his men by his coolness and intrepidity under a perfect shower of bullets. In those days, when the war was in its infancy, the soldiers of both sides lacked that precision of fire which they acquired later in the contest, and which made the battles so bloody. But for this our repulse at Matthias Point would have been a bloody one, indeed.

Criticism of this expedition is disarmed when we reflect that the gallant officer who planned it sacrificed his own life in the performance of a duty he considered necessary to clear the Potomac of the bushwhackers that lined the banks of the stream all along, and were firing on unarmed merchant vessels and transports as they pursued their course up or down.

small affairs which took place on the river rose to importance from the fact that there was then no other field of naval enterprise.

So great were the facilities of communication between the shores of Virginia and Maryland that the Secessionists could hold intercourse with their friends in the latter State by means of small boats, and obtain not only information, but supplies of all kinds, including munitions of war which the Marylanders were too willing to provide them with. Hence it became a necessity not only to guard every salient point on the river, but to capture all boats that were secreted in the numerous creeks and nooks with which the river abounded.

This duty, apparently insignificant, was

SKIRMISH BETWEEN THE "FREEBORN" AND "RESOLUTE" AND A SECESSIONIST FORCE, AT MATTHIAS POINT.—DEATH OF CAPTAIN WARD.—JUNE 27, 1861.

Had Commander Ward lived, he would have made as high a mark as any officer in the Navy; no one ever entered the contest with more zeal and activity than he, and to this day the shock of his death has not been forgotten, though thousands died afterwards on more important occasions.

It was only when these deaths of gallant officers occurred that the country began to realize the Secessionists were animated with a fell purpose which would not be appeased until the whole land was saturated with blood and sorrow walked over the battle-fields where friends and foes lay mingled together in the arms of death.

The Potomac naturally became the first theatre of war as regards the Navy, for the Department at that moment had no ships with which to operate elsewhere, and some

in fact most important, for the mischief carried on by these small boats, which performed postal service and transported spies back and forth, was so constant that it was necessary to repress it if possible.

On the 11th of October, Lieutenant A. D. Harrel was informed that a large schooner was lying in Quantico Creek, and that a body of troops had assembled there for the purpose of crossing the Potomac, and he determined to make an attempt to destroy her.

He manned three boats, and under cover of darkness, started up the creek, boarded the schooner and set her on fire, then pulled away under a heavy volley of musketry from the rebel soldiers. The vessel was totally destroyed, and the crossing of the Secessionists put a stop to.

In all this river service performed by of-

fficers of the Navy there was great peril, and no hope of reward held out as remuneration for the risk of life. Every covert on the banks of the river held men in ambush, and many unerring riflemen, who would wait until our people attempted to land, or came near their place of concealment, when they would pull trigger on them with as much malignity as if firing upon the bloodiest pirates instead of conservators of the peace. They seemed to forget altogether that the men they were slaying not long before may have met them in amity at the festive board.

Such was the strife already begun, and it could not be hoped that it would diminish as the war progressed.

In this river work, as in all other where the Navy was called upon to act, it performed its duty with unflinching courage. The public did not know what the service had to contend with, or how much good work they were actually doing; with all their discomforts, toil and suffering they received but little commendation; the country was too busy watching the black clouds gathering in the South and West to note the ordinary events that were taking place on the Potomac, yet they formed the small links in the chain which, in the end, shackled the arms of the great rebellion.

A steamer captain coming up the river would be fired upon from some point where there were none of the flotilla in sight, and though he might receive no damage whatever, he would make complaints of what he called the useless Potomac Flotilla, which complaints would find their way to the papers, with the usual result of abuse; but in the end the public were obliged to acknowledge the value of the service, for though the intercourse between the opposite banks of the river could not be altogether prevented, it was made so harrassing and dangerous to those who followed it that its effectiveness was destroyed.

The Secessionists, finding they could neither close the river against the Government transports, nor keep it open for their friends, abandoned the plan of erecting batteries, and in 1862 withdrew from the line of the Potomac River. The patrol of

the Potomac was, however, carried on by the Navy during nearly all the war, and though the river had been freed of the hostile batteries, the duties of the officers and men still remained more or less hazardous.

The public, as a general rule, are not attracted by events which have not some brilliancy in them; they read only of battles by land and sea; they never then stopped to consider the importance of such tedious work as occurred on the great highway from Washington to the sea, nor did they ever seem to reflect that if the river was once closed the very life of the Union would be imperilled. It was only in reading over the accounts of a successful battle that they became really interested in the subject, and their minds rested simply on the central figure of the successful chief, who monopolized for the moment all the glory.

Few ever thought of all the toil and hardships officers and men had to undergo to win one of these battles, or cared what became of the workers and sufferers in the conflict. Nor, while carried away with the glamour of a great contest, did they ever reflect upon the dead and wounded, who, to secure victory, had given up their life's blood that their country might live, and the time-honored flag under which they received their first inspirations of glory might float proudly at the peak, without a stain to dim its stripes and stars.

While these apparently unimportant matters were carried on along the Potomac, the Navy Department was putting forth all its energy to get every ship to sea; vessels were beginning to arrive from foreign stations, many of the officers tinctured with secession sentiments, and handing in their resignations, some departing without, and being cashiered: about two hundred and fifty in all leaving the Navy. The ships, after undergoing hasty repairs, were put into commission as soon as possible, and from this time commenced that series of brilliant actions which gave the Navy a name it will never lose, and which ought to make it dear to the heart of every true American.

## CHAPTER V.

### CAPTURE OF THE WORKS AT HATTERAS INLET BY FLAG OFFICER STRINGHAM.—DESTRUCTION OF THE PRIVATEER "JUDAH."

DETERMINATION OF LINCOLN TO REGAIN POSSESSION OF THE SOUTHERN PORTS AND HARBORS.—A BOARD OF EMINENT CIVILIANS AND NAVAL OFFICERS CONVENED.—THE SOUNDS OF NORTH CAROLINA. THEIR DEFENCES, ETC.—HATTERAS INLET.—A SQUADRON FITTED OUT TO CAPTURE HATTERAS INLET.—VESSELS COMPOSING THE SQUADRON AND THEIR COMMANDERS.—COMMODORE STRINGHAM.—THE SQUADRON LEAVES HAMPTON ROADS.—THE SQUADRON ANCHORS AT HATTERAS ISLAND.—BOMBARDMENT AND CAPTURE OF FORTS HATTERAS AND CLARK.—THE GARRISON SURRENDER TO GENERAL BUTLER AND COMMODORE STRINGHAM.—EFFECT OF THE CAPTURE OF FORTS HATTERAS AND CLARK ON THE CONFEDERATES.—DESTRUCTION OF FORT OCRACOKE.—THE PAMLICO AND ALBEMARLE SOUNDS.—COLONEL HAWKINS SENDS A REGIMENT TO TAKE POSSESSION OF CHICACOMICO.—CAPTURE OF THE TRANSPORT "FANNY" BY CONFEDERATE STEAMERS.—PLANS OF THE CONFEDERATES FRUSTRATED.—COLONEL BROWN AND COLONEL HAWKINS JOIN HANDS.—THE "MONTICELLO" RENDERS GOOD SERVICE.—DISASTROUS RETREAT OF THE CONFEDERATES.—CUTTING OUT OF THE CONFEDERATE PRIVATEER "JUDAH."

IT was evident to any one who had studied the subject, that the United States Government could make no headway against the Confederates while the seaports and their defences remained in the hands of the latter. From the beginning President Lincoln had boldly avowed his purpose to regain possession of all the Southern ports and harbors.

A board of eminent civilians and naval officers had been convened by the Navy Department to consider the whole subject, and report upon the best means of approaching and attacking the ports then in the possession of the Secessionists; and the result of their labors, when placed in the hands of the Secretary of the Navy, was of great service in enabling the Department promptly to take proper measures for the recapture of the ports along the Southern coast.

From the beginning the Secessionists had appreciated the necessity of securing possession of the Sounds of North Carolina and defending their approaches against our gunboats. There is in this region a network of channels communicating with the

Chowan, Neuse and Roanoke Rivers by which any amount of stores and munitions of war could be sent by blockade runners to supply the South.

The numerous inlets are navigable for light draft vessels, but owing to their shallow water our vessels of war could not penetrate them.

The main channel for entering the Sounds was Hatteras Inlet, and here the enemy had thrown up heavy earthworks to protect the most important smuggling route then in operation; for, although Charleston and Mobile were considered important ports for smuggling supplies to the South, Hatteras Inlet was none the less so.

For the purpose of capturing the defences of Hatteras Inlet a squadron under command of Commodore Stringham was fitted out. It consisted of the "Minnesota," Captain Van Brunt, "Wabash," Captain Mercer, "Monticello," Commander J. P. Gillis, "Susquehanna," Captain Chauncey, "Pawnee," Commander Rowan, "Cumberland," Captain Marston, and the Revenue Steamer "Harriet Lane," Captain Faunce.

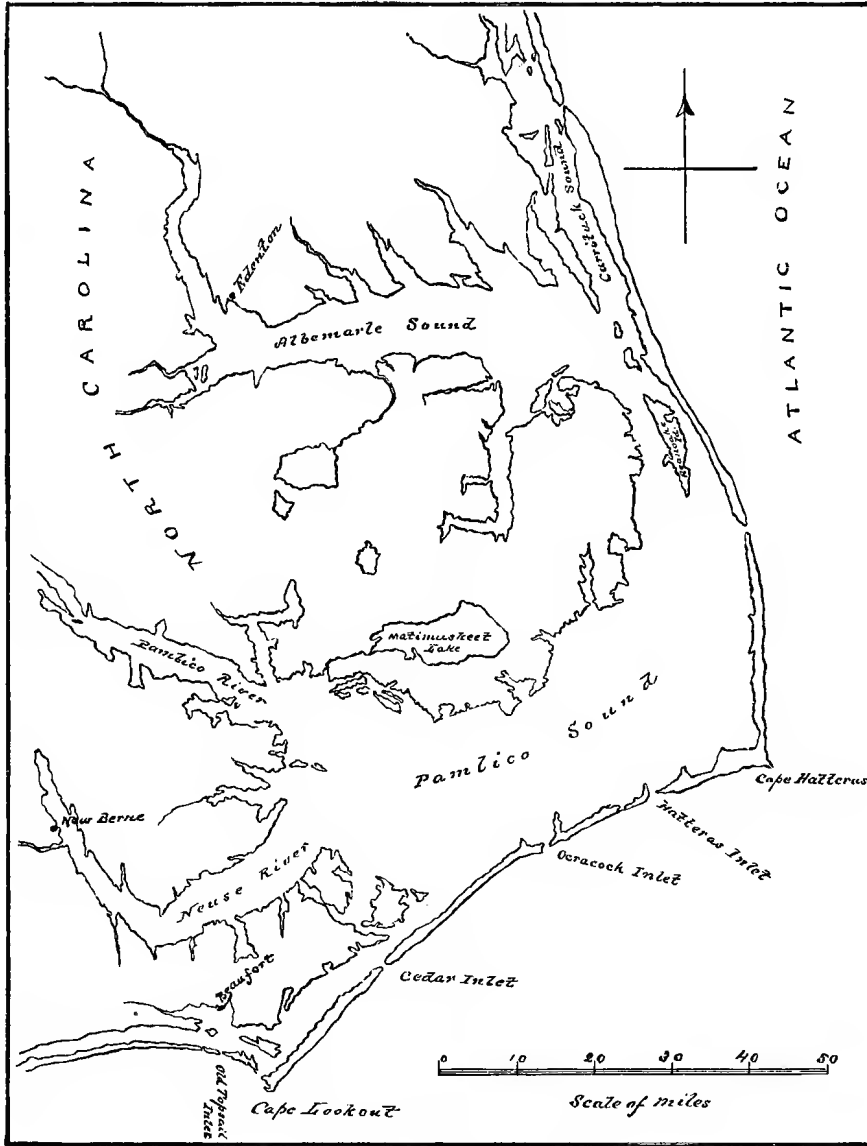

Three transports accompanied the squad-

ron. The "Adelaide," Commander Stellanwagen, "George Peabody," Lieut.-Commanding Lowry, and the "Fanny," Lieut.-Commanding Crosby. They carried about 900 troops under command of Major-General B. F. Butler.

On the 27th of August, 1861, the day after leaving Hampton Roads, the squad-

ron anchored off Hatteras Island, on the extreme southwestern point of which were Forts Hatteras and Clark, separated by a shallow bay, half a mile wide. Of these works Fort Hatteras was the larger, and together they mounted twenty-five guns.

In those days of wooden ships one gun mounted on shore was considered equal to five on shipboard, but even this allowance made the squadron superior to the forts, without considering the heavier guns and better equipments of the frigates. Part of the troops landed on the island under cover of the guns of the squadron, and at 8:45 on the morning of the 28th, the battle commenced. The "Wabash," of fifty

THE SOUNDS OF NORTH CAROLINA.

ron anchored off Hatteras Island, on the extreme southwestern point of which were Forts Hatteras and Clark, separated by a shallow bay, half a mile wide. Of these works Fort Hatteras was the larger, and together they mounted twenty-five guns.

In those days of wooden ships one gun mounted on shore was considered equal to

guns, with the "Cumberland" in tow and followed by the "Minnesota," stood in towards Fort Clark and opened fire, and were soon joined by the "Susquehanna."

The plan of attack, although afterwards followed in several cases during the Civil War, was not the best calculated to bring an engagement to a speedy conclusion. The

vessels were kept in motion in a circle or ellipse, passing and re-passing the enemy's works.

The plan has the advantage of bothering the enemy's gunners, as the ships are constantly changing their range, but it detracts from the accuracy of the fire on board the vessels and it tends to lengthen out an engagement. At Hatteras what should have been finished in six hours required twenty-four to accomplish.

In our opinion had all the larger vessels anchored in line abreast of the forts, with the smaller vessels on their flanks, the enemy's batteries would have been quickly silenced. As it was the people in the forts were almost smothered by the fire from the frigates, and their aim made so uncertain, that little damage was done to the ships. Shortly after noon the Confederate flags had disappeared from both forts, and the enemy were evidently abandoning Fort Clark, on which our troops moved up the beach and hoisted the Union flag on that work.

Fort Hatteras still kept up the fire, and at night the squadron hauled off.

At 7:30, on the morning of the 29th, the ships again opened on Fort Hatteras, and continued the fire with vigor until 11:10, when a white flag was displayed by the enemy.

Although the reduction of these works was not a very great achievement for a squadron mounting 158 guns, yet the work was well done, and little damage was received from the enemy.

As soon as the white flag was shown from Fort Hatteras, some of the light draft vessels entered the inlet and drove off the reinforcements that were evidently endeavoring to reach the forts.

At 2:30 P. M. General Butler went on board Com. Stringham's flagship, taking with him Flag Officer Samuel Barron, C. S. N., commanding naval defences of Virginia

COMMODORE SILAS H. STRINGHAM, U. S. N.  
(AFTERWARDS REAR ADMIRAL.)

and N. Carolina, Col. Martin, 7th Reg., N. C. Infantry, and Col. Andrews, commanding Forts Hatteras and Clark, who had surrendered unconditionally with their commands.

Soon after the Commodore proceeded in the "Minnesota" to New York, where all the prisoners were transferred to Governor's Island.

This was our first naval victory, indeed our first victory of any kind, and should not be forgotten. The Union cause was then in a depressed condition, owing to the reverses it had experienced. The moral effect of this affair was very great, as it gave us a foothold on Southern soil and possession of the Sounds of North Carolina, if we chose to occupy them. It was a death-blow to blockade running in that vicinity, and ultimately proved one of the

"Pawnee," who rendered useless twenty-two guns and a quantity of munitions of war.

The closing of these inlets to the Sounds of North Carolina sent the blockade runners elsewhere to find entrance to Southern markets, but as channel after channel was closed the smugglers' chances diminished and the labors of the blockading vessels were much reduced.

The great value of the Albemarle and Pamlico Sounds may be judged by reference to subsequent events, when they formed a base of operations for the enemy which we found it extremely difficult to

FORT CLARK.

CAPTURE OF THE FORTS AT HATTERAS INLET.—FLEET OPENING FIRE AND BOATS LANDING THROUGH THE SURF,  
AUGUST 28, 1861.

most important events of the war; and if we recall the pertinacity with which the Confederates fought for these Sounds, even to the end of the war, we can appreciate the value they placed upon them.

To prevent Hatteras Inlet from again falling into the hands of the Confederates, the forts were garrisoned, although difficult to hold owing to unforeseen circumstances.

Fort Ocracoke, on the inlet of that name, twenty miles south of Hatteras, was abandoned by the enemy soon after the fall of Forts Hatteras and Clark, and was destroyed by a party from the U. S. S.

break up, and it was not until the Navy had been largely increased by the addition of the proper kind of vessels, that the United States Government was able to get possession of all the important points in the Sounds.

"The subsequent operations upon Pamlico and Albemarle Sounds and their rivers show how important a base these formed for the Confederates, and how difficult it would have been to crush the rebellion had they remained in their possession."

Colonel Hawkins, who had been left in command of Fort Hatteras after its capture, found his position to be an uncomfortable and dangerous one.

The troops were subjected to annoying privations and dangerous exposure, and on one occasion narrowly escaped capture by the Confederates.

On September 29th, 1861, Colonel Hawkins sent the 20th Indiana Regiment to take possession of and fortify Chicamacomico, the northern point of Hatteras Island.

As soon as the Confederates learned the true condition of affairs, they conceived the bold design not only of capturing the six hundred men of the Indiana regiment, but of retaking the forts at Hatteras. Their plan was to land a large body of men above the Union regiment and another below, between them and Hatteras, and thus render

PLAN OF THE ATTACK ON FORTS HATTERAS AND CLARK, AUGUST 28TH AND 29TH, 1861.

These troops were but partially equipped and scantily provisioned, their supplies being sent the next day in the army transport "Fanny." Just as this vessel arrived she was met by three Confederate steamers, but their true character was not known until they opened fire, and but few of the "Fanny's" crew escaped.

retreat impossible and their capture certain. At the same time a fleet of light steamers was to pass quickly down the Sound and make a sudden attack upon the forts at the inlet.

But for unforeseen events they might perhaps have succeeded.

The Confederates having collected ten

transports, six steamers, one cotton-barge and two flat boats, carrying in all about 3,000 men, commenced their movement on the 4th of October, intending to land a part above and a part below the Indiana encampment.

Colonel Brown, commanding the Union troops, divided his forces also, intending to fight the enemy at the two points threatened, but at this juncture he received peremptory orders to retreat, and as he was now some distance from his camp and there was no time to lose, he was obliged to start on a march of forty miles without supplies of any kind.

had been re-enforced, the Confederates began a retreat up the island which proved far more disastrous to them than that of the Union troops had been, for they were at once pursued, not by marching troops, but by a gun-boat, following them on the outside of the island.

This steamer was the "Monticello," commanded by Lieutenant D. L. Braine, and she rendered good service on this occasion by inflicting heavy loss upon the enemy, and driving him on board his vessels in a thoroughly demoralized condition.

The Confederates, when first seen from the "Monticello," were marching along the

INTERIOR OF FORT HATTERAS AFTER THE BOMBARDMENT.

The Confederate steamers attempted to cut off his retreat by landing troops about eighteen miles below, and it now seemed to be reduced to a question of speed between steamers, and men wading through the loose and scorching sand.

The Confederate flotilla, however, was delayed by some of the boats getting aground, and their troops were not landed until after dark. Captain Brown, passing the fleet without being perceived, reached Hatteras light-house after a day of intense suffering and fatigue, and was soon re-enforced by Colonel Hawkins' regiment sent up from the forts to his relief.

Upon learning that the Indiana regiment

narrow strip of sand in close order, and being entirely without cover offered an excellent mark for the Union gunners.

The "Monticello's" fire was very well directed, and the bursting shells caused great havoc in the ranks of the enemy.

They soon broke and ran, many of them taking refuge in a clump of woods abreast of their steamers.

The Confederate vessels at once sent boats to bring off the troops, and as they neared the shore the soldiers rushed wildly into the water, having lost all idea of order or discipline in their great eagerness to escape.

Two of the boats loaded with men were

struck by shells and sent to the bottom, several officers were killed, and the shore for a distance of four miles was strewn with killed or wounded.

The Confederate steamers fired several times across the island at the "Monticello," but their projectiles fell short and they soon desisted. Lieutenant Braine continued his attack until 5:25 p. m., when, as he was running short of ammunition and the enemy were completely scattered and disorganized, he decided to withdraw.

#### DESTRUCTION OF THE PRIVATEER SCHOONER "JUDAH."

There is always an excitement in a cutting-out expedition that does not exist in any

circumstances, have been successful without any serious loss to the boarding party; but under whatever circumstances it may be undertaken, a "cutting-out" party is always attended with the greatest peril.

When Fort Pickens was fully manned and all the guns mounted necessary to give it a superiority over the batteries of General Bragg on the navy yard side, it was supposed that Pensacola was hermetically sealed, not only against the entrance of blockade runners, but that Pickens would prevent the exit of any hostile vessel intended to prey upon American commerce.

But this was not the case—notwithstanding that the guns of Fort Pickens commanded all the works under General Bragg,

DESTRUCTION OF FORT OCRACOKE, ON BEACON ISLAND, BY A PARTY FROM THE U. S. S. "PAWNEE.

other service during war, and many events of that kind which happened in the American and British navies hold a larger place in the memory of old sailors than some more important achievements.

One of these cutting-out expeditions took place in the harbor of Pensacola, and is worthy to be chronicled in history, for from all accounts it was a gallant affair, and most creditable to those who commanded and executed it.

There is no act in naval science requiring more skill, courage, dash and judgment than the cutting out of an armed vessel in an open roadstead, or under the guns of a ship or fort. Some of these have been at times connected with scenes of terrible slaughter; others, by taking advantage of favorable

and could have knocked them to pieces in the course of a few hours. The Confederates did not seem to attach much importance to the Union fort or its auxilliary works, and it was reported to Commodore Mervin, the commander of the naval forces off Pensacola, that the schooner "Judah" was fitting out at the Pensacola Navy Yard as a privateer to prey upon our commerce. This vessel had been seen from day to day lying in a small basin formed by the Navy Yard on one side, and a dock on the other. She could be seen from the fort and her daily progress noted, as her rigging was being fitted and other preparations being made towards sending her to sea—but not a protest was made by the guns of Fort Pickens against this cool proceeding of fit-

ting out a privateer right in the sight of the fort, and in reach of its shot and shell.

This vessel had been watched for some time by the officers of the squadron lying four miles outside, and Commodore Mervin determined to make an effort to destroy her, knowing the damage she would commit if once permitted to get out to sea.

The schooner was secured in such a position that it was very difficult for an attacking party to get at her without great exposure to themselves. The Confederates concluded that they had made her so safe that no naval force would undertake to cut her out, and General Bragg evidently attached little importance to the guns of Fort Pickens—a 10-inch Columbiad and a 12-pound field-piece, were mounted so as to command the schooner's deck and also the wharf, to which she was secured by chains—and it was reported that there were a thousand soldiers stationed in and about the yard ready to repel any number of boats that might attempt to approach the wharves. To attack the schooner under such circumstances was a perilous undertaking, but Commodore Mervin considered the destruction of this privateer of so much importance as to warrant the risk of a failure and the loss of men.

On the night of the 13th September a boat expedition was fitted out from the frigate "Colorado," consisting of the following boats: first launch, Lieut. J. H. Russell, commanding the expedition, 39 men; first cutter, Lieut. J. G. Sproston, 18 men; second cutter, F. B. Blake, 26 men; third cutter, Midshipman J. Steece, 17 men; in all the expedition there were 100 officers, sailors and marines.

The plan was for Lieut. Sproston and Midshipman Steece to land with their boats' crews and (if possible) spike the two guns mounted in the yard, while at the same time Lieuts. Russell and Blake were to attack and carry the schooner.

The attack was made on the morning of the 14th September, 1861, at 3 o'clock A. M. The schooner was found moored to the wharf, one pivot gun and two in broadside mounted, with all her crew on board ready to repel boarders.

The boats were discovered and hailed. When about one hundred yards from the wharf the sentry gave the alarm by firing his gun, and immediately after followed a volley from the schooner's deck. The sailors sprang to their oars, and in less time than one could think Lieuts. Sproston and Steece from their respective boats sprung upon the wharf, followed by their men, and made a rush to find the guns—the other boats boarding the schooner. Only one man was found guarding the guns, and he was shot down by gunner Bireton as he was in the

act of firing on Lieut. Sproston, both weapons going off at the same time. In the darkness the party became separated, and Lieut. Sproston and the gunner succeeded in finding the guns, which they immediately spiked.

Then came the contest for the schooner, which was a severe one while it lasted. In addition to the crew on deck some of the Confederates had gotten into the fore-top, from whence they poured a destructive fire upon the boats, while a hand-to-hand fight took place on the deck; but the sailors soon drove the crew of the schooner to the wharf, where they rallied, and being joined by the guard on shore (which had marched to the rescue) they kept up a continuous fire on the boarding party.

While this fight was going on, parties of the expedition were engaged in setting fire to the schooner, as it was found to be impossible to move her. An effectual fire was kindled in the cabin by Assistant-Engineer White and a coal-heaver named Patrick Driscoll. The "Judah" was soon in flames, and as there was no prospect of doing anything more, the boarding party shoved off.

By this time a large force of the enemy began to collect in the Navy Yard, and opened fire on the boats, but the officers and men, nothing daunted, returned the fire on the disorganized crowd with two howitzers loaded with grape and canister, firing six rounds before they were out of range of the enemy's sharpshooters. All this time the schooner was burning rapidly, with a great blaze, by the light of which the sailors could see where the enemy had posted themselves on shore, and they were soon scattered. The schooner blazed up so rapidly that she soon broke from her moorings and, having burnt to the water's edge, floated off and sank opposite to Fort Barrancas. The boats remained near the place until it was certain that the "Judah" would never be of any more service to the Confederates, and then returned to the "Colorado" which they reached at daylight. Here they were welcomed with that heartiness which belongs to the sailors, who were on the alert to greet their chums and look after wounded messmates.

To show the dangerous character of this expedition and the severity of the encounter, nearly one fifth of the boarding party were either killed or wounded; but the regrets that were felt for the loss of the gallant fellows who fell were somewhat compensated for (in the minds of the sailors) by the fact that their comrades had met the death of brave men fighting for the country they loved better than their lives.

This was without doubt the most gallant cutting-out affair that occurred during the war. The boarding party had not only the

crew of the schooner to contend with, but there was a force of over a thousand troops stationed a short distance off, that could be called upon at a moment's notice to drive away intruders. There was every prospect of a failure when the party started out, and no certainty whatever of success. It was one of those cases where men carried their lives in their hands, and no one there had a right to hope that he would return scatheless from such a daring adventure. The young officers who went out on this expedition have since that time been engaged in some momentous battles, but in none of them did they run such risks or require more nerve than on the night of the 13th of September, 1861, when they boarded and set fire to the

schooner "Judah" and sent her, in flames, drifting down the harbor, as a proof of what American officers and seamen were willing to undertake to put down rebellion and uphold the majesty of the law. Those officers and men may think that their brave act has been forgotten amid the grander events that dazzled the imagination; but its completeness has given it a place in history it should never lose, and in after years when millions yet unborn realize what they owe to the Navy for the work performed during an intestine war to save this galaxy of States from disruption, the burning of the "Judah," with all its attendant gallantry, will be read with as much avidity as any action of the kind that took place during the war. .

## CHAPTER VI.

### NAVAL EXPEDITION AGAINST PORT ROYAL AND CAPTURE OF THAT PLACE.

**O**WING to the increase of the Confederate forces in the States of Tennessee, Kentucky and Missouri, it became necessary to fit out armed vessels on the Western rivers. In May, 1861, Commander John Rodgers, U. S. N., was directed to report to the War Department, which in the early stages of the conflict practically assumed the control of the Western flotilla, although the vessels were under command of naval officers.

Commander Rodgers proceeded at once to the West and purchased a number of river steamers, which were fitted and armed as gunboats; and this was the commencement of the Mississippi Squadron which afterwards performed such efficient service for the Union.

Captain Andrew H. Foote was afterwards ordered to the command of the flotilla, which under him swelled to the proportions of a fleet, all his talents and energies being devoted to the task of making it a formidable force such as the necessities

of the case demanded. In this work Captain Foote was assisted by that distinguished engineer, James B. Eads, who planned and built that class of ironclads known on the Mississippi as "turtle backs," which gave such a good account of themselves during the war, and fought their way through many a bloody encounter, from Fort Henry to Grand Gulf, Port Hudson and the Red River.

After the capture of Fort Hatteras, Commodore Stringham was relieved of the command at his own request. Two squadrons were organized on the Atlantic coast, one to guard the shores of Virginia and North Carolina under Flag Officer L. M. Goldsborough; the Southern Squadron, extending from South Carolina to the Capes of Florida, was assigned to Flag Officer S. F. Dupont, and the Gulf Squadron to Flag Officer W. W. McKean.

Although the capture of the ports at Hatteras Inlet was an important achievement, yet it did not accomplish all the Navy Department aimed at.

There was no entrance to the Sounds except for vessels of very light draft of water, and there was no harbor in the vicinity where a depot could be established for large vessels to carry on operations along the Southern coast.

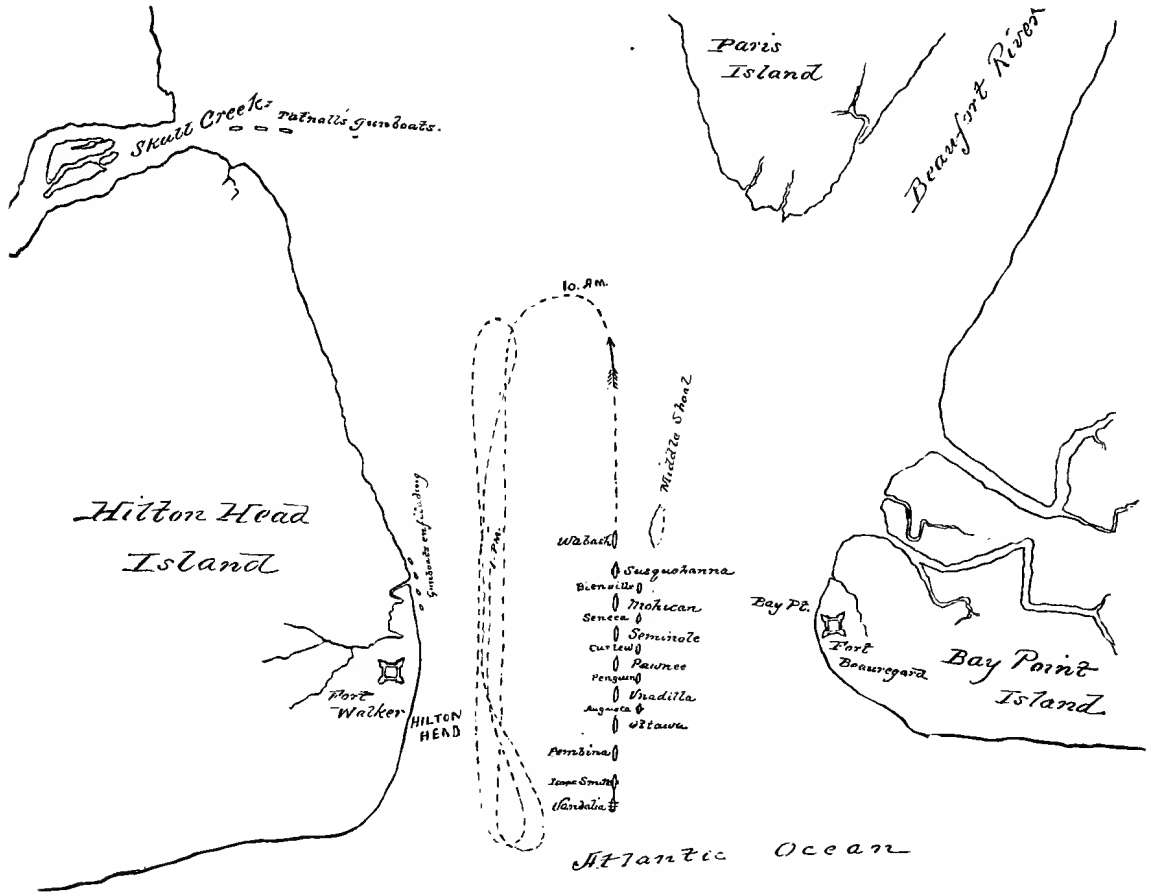

A depot was required for supplying coal, provisions and stores at a point where our ships could find safe anchorage at all times, and where machine shops and docks could be constructed for refitting vessels.

The work of supplying vessels was one of vital importance, and a harbor was also

and so well aware were the Confederates of its importance that one of their first acts was to fortify it against the entrance of our ships.

It was determined by the Government to fit out a naval expedition against Port Royal under command of Flag Officer Dupont, reinforced by an Army corps under General T. W. Sherman.

Notwithstanding that the greatest precautions were taken to keep the proposed expedition a secret, the Confederates ascertained that a movement against Port Royal was on

PLAN OF THE ATTACK ON PORTS WALKER AND BEAUREGARD, NOVEMBER 7, 1861.

needed as a base of operations against the whole Southern States.

The choice of harbors lay between Bull's Bay, Port Royal, Brunswick and Fernandina. The latter, for some reasons, was considered an available place, but finally the Department concurred in the opinion of Flag Officer Dupont that Port Royal contained all the required advantages.

Port Royal is one of the finest harbors in the United States, with water sufficient for the largest vessels. It is about equidistant between Charleston and Savannah,

foot, and with their accustomed energy prepared to receive it by mounting all the guns they could collect, with a proper force to man them.

By the 27th October, 1861, all the ships of war, transports for troops, and supply vessels had assembled at Hampton Roads, presenting a formidable appearance. They numbered fifty sail, not including twenty-five coal vessels which had sailed the day previous.

Never before in our history had any officer command of so large a fleet.

The weather had been unpleasant for some time, but now gave promise of a change for the better; and when on the 29th the signal went up from the flag-ship "Wabash"—"underway to get"—the sounds all through the fleet showed that sailors and soldiers were equally glad to move towards the scenes of glory that opened before them.

By the time the expedition reached Fort Hatteras it came on to blow a gale, which increased to a hurricane, scattering the fleet in every direction. On the fourth day out there was but one vessel to be seen from the deck of the flag-ship.

What were the feelings of Flag-officer Dupont on that occasion can be imagined. Many of the naval vessels were far from staunch. The transports, of course, were still weaker, and it was doubtful if half of them would ever be seen again.

The sufferings of the men on board the transports, the decks of which were swept by the heavy seas, were extreme and but little appreciated by those on shore who afterwards read the vivid accounts of these hardships.

Such sufferings are part of the unwritten history of the war, which because they are not surrounded by the glamor of battle have but little interest for the public.

Who is there that in reading an account of these scenes of suffering and disaster which often overtake naval and military expeditions, ever realize the sufferings of officers and men battling for their lives against the stormy ocean?

Certainly the soldiers in these transports would have dared a dozen battles on shore, rather than experience one such night of storm as raged around their vessels.

A better seaman than Dupont never trod a ship's deck, but he could do nothing for that scattered fleet; he could only trust to his subordinates, whom he knew would do all that was possible to avert disaster.

All things have an end, and the gale which had so jeopardized the expedition at length abated with less damage to the fleet than might have been expected. On the morning of the 4th of November, 1861, twenty-five vessels in company with the flag-ship "Wabash," came to anchor off the bar of Port Royal, while the remainder of the squadron were continually heaving in sight.

Although the gale was over, the safety of the expedition was by no means assured. The bar or shoalest water at the entrance of Port Royal extended ten miles out to sea. All buoys and other guides to the navigator had been removed.

As soon as the flag-ship came to anchor Captain C. H. Davis, Chief of Staff, and Assistant Boutelle of the Coast Survey, pro-

ceeded in search of the channel, which by three p. m. was sounded out and buoyed, and before dark the smaller naval vessels and the transports were anchored in Port Royal Roads. Some small Confederate steamers, under Commodore Tatnall, formerly of the U. S. Navy, were chased and took refuge under the Confederate batteries.

Next morning the "Wabash," "Susquehanna," "Vanderbilt," and "Atlantic" were piloted into deep water inside the bar, and a reconnoissance in force was made of the harbor by Commander John Rodgers and Brigadier-General Wright, with four gun-boats. These drew the fire of the batteries on Hilton Head and Bay Point, which were shown to be strongly built and fortified.

When the fleet was safely anchored within this spacious roadstead, the Flag-Officer had cause to congratulate himself on his selection of Port Royal in preference to any other point on the Southern coast for the establishment of a naval depot; and having perfected all his arrangements made preparations for battle.

The Confederates, attaching great importance to Port Royal as a strong military position, had built two large forts, Fort Walker on Hilton Head, and Fort Beauregard on Bay Point, opposite; and it seems strange that the Navy Department did not send a couple of gun-boats early in the war and prevent the enemy from erecting these works.

Of the two earthworks defending the entrance, Fort Walker was considered the stronger, and the Flag-Officer therefore determined to direct the weight of his fire upon this work, and after reducing it to make the final attack on Fort Beauregard.

The order of battle comprised a main squadron ranged in line ahead, and a flanking squadron to engage the gun-boats under Tatnall, which might prove troublesome and therefore required attention.

The following is a list of vessels which comprised the fighting squadron of Flag Officer Dupont, which operated in line ahead, steaming in an ellipse from the commencement to the close of the action.

Steam frigate "Wabash" (flagship), Commander C. R. P. Rodgers; steam frigate "Susquehanna," Captain I. L. Lardner; steam sloop "Mohican," Commander S. W. Godon; steam sloop "Seminole," Commander J. P. Gillis; steam sloop "Pawnee," Lieut.-Commanding R. H. Wyman; steam gunboat "Unadilla," Lieut.-Commanding N. Collins; steam gunboat "Ottawa," Lieut.-Commanding T. H. Stevens; steam gunboat "Paulina," Lieut.-Commanding J. P. Bankhead; sailing sloop "Vandalia," Commander F. S. Haggerty, towed by steamer "Isaac Smith."

FORT WALKER.	OTTAWA.	PENNA.	SENECA.	WABASH.	SEMINOLE.	PENGOIN.	AUGUSTA.	FORT BEAUREGARD.
	UNADILLA.	BIENVILLE.	CURLEW.			SUSQUEHANNA.		PAWNEE.
						MOHICAN.		

BOMBARDMENT AND CAPTURE OF FORTS WALKER AND BEAUREGARD AT PORT ROYAL ENTRANCE BY THE NAVAL EXPEDITION UNDER FLAG OFFICER S. F. DUPONT,

The flanking squadron consisted of the steam gunboat "Bienville," Commander Charles Steedman, leading ship; steam gunboat, "Seneca," Lieut.-Commanding Daniel Ammen; steam gunboat "Curlew," Lieut.-Commanding P. G. Watmough; steam gunboat "Penguin," Lieut.-Commanding T. A. Budd; and the steam gunboat "Augusta," Commander E. G. Parrott.

The plan of attack was to pass up mid-way between Forts Walker and Beauregard, which were distant from each other about two and one-third miles, receiving and returning the fire of both. When about two and a half miles north of Beauregard the line was to turn southward, round by the west, and close in with Fort Walker, encountering that work in its weakest flank, and enfilading in nearly a direct line its two water faces.

When abreast of Fort Walker the engines were to be slowed and the movements of the fleet reduced to a speed just sufficient to preserve the order of battle. On reaching the extremity of the shoal ground making off from Hilton Head the line was to turn north by the east and passing to the northward engage Fort Walker with the port battery nearer than when they passed it on the same course before. These evolutions were to be repeated as often as necessary.

The two forts had been constructed with great skill and were sufficiently armed, one would have thought, to have beaten off a squadron of the size of Dupont's, which was indeed scarcely large enough for so important a service.

The attack on the Hatteras forts had given a very fair idea of what our guns and shells could effect against earthworks, but those works were small affairs in comparison with the defences of Port Royal, and Commodore Stringham's force was comparatively much more powerful than that of Dupont, to say nothing of a clear sea in which Stringham had plenty of room to perform his elliptical movements.

The forts at Hatteras had inflicted little injury on the Union ships, but here it looked as if the case would be different, and that our squadron would have as much as it could attend to.

#### FORT WALKER.

Upon the sea front were mounted upon the best improved modern barbette carriages and circular railways, the following guns:

- 1 6-inch rifle.
- 6 32-pdrs. of 62cwt., 1845, navy pattern.
- 1 10-inch Columbiad, of 13,220lbs. weight.
- 1 8-inch Columbiad, 9,018lbs.
- 3 sea-coast howitzers, 7-inch, 1,600lbs. weight.

1 rifled, 6 inch.

In the left wing were:

- 1 32 pdr., same class as others before mentioned.
  - 1 sea-coast howitzer, 42 pdr., not mounted.
- Outer work in rear commanding land approach:
- 2 32-pdrs.
  - 1 8-inch heavy howitzer, mounted on navy carriage, commanding approach to angle of outer work, the only gun in embrasure.
  - 1 English siege gun, 12 pdr., behind embankment at right of right wing.
  - 1 English siege gun, mounted to the right of the magazine to command the ditch of the main work.
- In the right wing were mounted:
- 3 32-pdrs., same class as others before mentioned.
- Making a total of 23 guns.

#### FORT BEAUREGARD.

The fort had four faces upon which guns were mounted, each face looking on the water, and each gun so mounted as to command the water approach to Broad and Beaufort Rivers. The guns were 13 in number, of the following sizes:

- 5 32's, navy pattern, 1845.
  - 1 rifled, 6-inch, new.
  - 5 sea-coast guns, 42 pdrs., long and very heavy.
  - 1 ten-inch Columbiad, weight 13,226 lbs.
  - 1 8-inch Columbiad.
- Upon the outer works on the left flank were mounted
- 2 24-pdrs.

Upon outer works on right flank:

- 3 32-pdrs. of 63 cwt., navy pattern, 1845.
- Within the fort were also two field pieces, 6-pounders, old Spanish pattern, making in all 20 pieces of ordnance.

Several circumstances prevented Dupont from moving against the enemy until the 9th of November, when early in the morning the signal was made to get under way, form line of battle and prepare for action. The sailors had previously had their breakfast, for Dupont knew the necessity of looking after their comfort and not to take them into a fight on empty stomachs.

By 9 o'clock the squadron was in line ahead in close order, the flanking column in position. The vessels passed within 800 yards of Fort Walker, on which work the main line poured in its fire, while the flanking line opened on Beauregard as soon as it came within range.

It was soon evident that the accuracy of the naval fire would be too much for the Confederates. Our shells burst with great regularity inside Fort Walker, throwing sand into the guns and into the eyes of the gunners.

Commodore Tatnall, who was watching the operations from his flotilla of fragile river steamers, which were entirely unfit to go into action against our vessels, wisely withdrew into Skull Creek, a convenient waterway just north of Hilton Head.

The Confederate gunners, when they found our ships seemingly unaffected by their fire, were very much surprised, as they had expected to destroy them all. They had no idea how strong were those old wooden hulls that had so long braved the storms of ocean, or what dreadful blows those shell guns could deal out under the management of skillful officers and men.

When the ships again swept by Fort

to pieces, scattering the gun-carriages to fragments, and killing the gunners, they could bear it no longer, but turned and fled. These deluded people had believed their position impregnable and their force sufficient to sink or scatter all the ships that could be sent against them. But when they saw the fleet pass and repass with automatic regularity, the hulls and spars of the vessels showing no signs of injury, and the ponderous cannon each time firing with more rapidity and accuracy, they became panic-stricken.

What hope could they have? Their guns were shattered to pieces, and whole guns' crews swept away, while they could inflict no injury upon the wooden ships. It was

EXTERIOR OF FORT WALKER AT HILTON HEAD, MARINES LANDING.

Walker from the north, passing within five hundred yards, the fire from their batteries was withering. Again the vessels turned into the harbor, delivering their broadsides as coolly and dexterously as if they were engaged in exercising.

This was too much for the enemy's gunners, who had never formed any idea of what the effect of a fifty-gun frigate's broadside would be, firing shrapnell and shell aimed by the steady eye of American sailors, with whom the idea of rebellion was simply mutiny against the highest authority.

The Confederates stood three or four broadsides as well as could be expected, but as the ships got their range, and shells fell right in their midst, tearing everything

evident to the Confederates that the Union fleet was having its own way, and that it was only a matter of time when every gun in the forts would be destroyed and every gunner killed who remained at his post.

In addition to the broadside firing in front, the enemy's works were enfiladed by gunboats stationed on either flank. This fire distressed the garrison of Fort Walker very much, for there were no guns on either flank of the bastion to reply with. On the right flank a long 32-pounder had been shattered by a shot from the ships, and there was no gun mounted on the other. After the fourth fire a ten-inch Columbiad and a twenty-four pounder rifle gun in the fort became useless.

The whole affair on the part of Dupont's

squadron had been conducted in a masterly manner. Hardly a shot was sent from the ships that did not reach its mark. What shots did not strike the guns and kill the gunners, rebounded and fell among the troops encamped outside Fort Walker.

When the Confederates commenced to run they went in a body, officers and all, for no one cared to leave his bones in the sacred soil of Hilton Head; yet these men were doubtless as gallant soldiers as were to be found in the South. They had reckoned without their host, and had certainly forgotten the history of the Navy, and the sea fights where our ships had been made slaughter-pens ere they would strike their flag to the foe.

The Navy had come with a determination to wipe the mutineers off the face of the earth if necessary, and no one in the fleet had any idea of failure; all were as certain of victory when the first gun was fired, as if the horoscopes of the Confederates had been cast beforehand.

At a little past one o'clock P. M., the Confederates were reported as leaving Fort Walker. At this time the enflaming vessels were within 600 yards of the fort, having everything their own way, throwing in eleven-inch shells, twenty-pounder rifle shots and even shots from twenty-four-pound howitzers.

Before the close of the bombardment the steam gunboat "Pocahontas," Commander Percival Drayton, came into port and joined in the attack.

Her commanding officer was brother to General Drayton, the Confederate commander of the forts.

Commander Drayton, although attached to the South by the strongest ties of consanguinity and friendship, chose to sever them all rather than prove faithless to the Government to which he had sworn allegiance, and to which he considered himself bound by every honorable sentiment. He condemned the action of the South from the beginning, and now he had an opportunity to strike a blow for his country before the Confederate flag was hauled down, and his brother with the forces under his command had retreated from the well beaten fort.

As soon as the flag officer learned that Fort Walker was being evacuated he sent Commander John Rodgers on shore with a flag of truce, and at half past two this officer hoisted the flag over the deserted post, and three hearty cheers went up from the fleet.

The enemy had left behind them the greater portion of their effects, their main idea being evidently to get out of the reach of our shells, but they were treacherous to the last. Honorable men when defeated

accept the situation and bide their time, in the hope of getting even with their foes in a legitimate way, but on this occasion an unworthy attempt at revenge was made by the defeated foe.

Commander Rodgers went into the house which had been used as headquarters, and over which he had hoisted the American flag. A sailor moving about the premises caught his foot in a wire which was attached to some kind of torpedo. There was an explosion, a cloud of smoke, and the frame building was demolished. The sailor was knocked senseless but soon recovered, so that no loss of life occurred.

Fort Beauregard had not been considered by Dupont as an important point of attack, although fired upon at long range as the vessels wheeled into the ellipse. At sunset it was seen that the work had been abandoned, and next morning the Union flag was hoisted over that fort, and thus a permanent lodgment was gained on the Southern coast that proved of great advantage to the Union cause.

The victory had been gained entirely by the Navy, for although there were troops at hand yet they took no part in the engagement, nor was it necessary that they should. They went along simply to hold the place after the Navy had captured it, and after the works had been occupied a short time by the marines of the squadron the Flag officer turned them over to General T. W. Sherman.

Fort Beauregard made but little resistance, and hauled down its flag when it ascertained that Fort Walker was evacuated, the commanding officer remarking to his subordinates: "This work is evidently not suited for the purpose for which it was intended, and we had better leave it." Although very little firing was concentrated on Fort Beauregard, yet it had thirteen men wounded.

General Drayton, commanding the Confederate forces, reported that in Fort Walker there were ten killed and twenty wounded. In De Saussier's Regiment, one killed, four wounded severely and twenty missing—a small number, considering the severe fire to which the enemy were subjected. On board the ships eight were killed, six severely wounded and seventeen slightly wounded.

The small number of casualties on board the ships is due to the furious and destructive fire kept up on Fort Walker, which from the first rendered the Confederate gunners' aim very uncertain.

The attack on the defences of Port Royal was ably planned and skilfully executed. No time was lost by vacillating movements, and although this cannot be considered a great naval engagement, yet it

was undoubtedly one of the best exhibitions of naval tactics that occurred during the Civil War, and has stood the test of criticism both at home and abroad. It was not so momentous an affair as the battles of New Orleans, Mobile or Fort Fisher; but it was of greater importance to the country, for it was a gleam of sunshine bursting through the dark clouds which enveloped the Union horizon.

The Union forces had met with little save misfortune from the day when the Confederates fired on Fort Sumter, and the battle of Bull Run had humiliated us before the world and incited France and England to meddle in our affairs. The victory at Port Royal put new life into Union hearts.

The North had seen arsenals and fort all

short time when he would be compelled to submit.

The battle of Port Royal gave the powers of Europe (who were longing for and expecting the success of the South) notice that we could and would win back the forts that had been filched from us, and that our hearts of oak in wooden ships could bid defiance to well-constructed earthworks and solid masonry.

This affair showed conclusively that the time-honored theory that one gun on shore was equal to five on shipboard no longer held good, when applied to the heavy artillery carried by modern ships and served with skill and precision.

Dupont demonstrated that ships under steam were much more powerful factors

INTERIOR OF FORT BEAUREGARD AT BAY POINT, S. C., CAPTURED BY THE NAVAL FORCES UNDER CAPTAIN DUPONT.

along the Southern coast fall into Confederate hands with scarcely an effort made to prevent it, and now, when least expected, the Union people were exalted in their own estimation. The Navy had come to the rescue and gained a complete victory in the immediate vicinity of Charleston and Savannah, the hotbeds of secession, establishing a permanent foothold, and affording an opportunity of throwing into the heart of the South a great army, had we of the North been wise enough to force the fighting in a quarter where it would have eventually brought matters to a speedy conclusion.

This happened in the end when Sherman's legions swept through the South and the Army and Navy closed up the last outlet of the enemy, leaving it only a matter of a

against forts than when they had only sails to propel them, and that to make success certain all that was required was skill in their management, and a determination to attempt anything within the bounds of reason.

All the qualities of a great commander were possessed in an eminent degree by Dupont.

He was well informed in everything relating to naval matters, had great influence in naval circles, and at the first sign of obtaining a command he gathered around him a fine corps of officers, whose zeal and intelligence greatly lightened the labors by which he was oppressed, during his service on the Southern coast.

Dupont was a man of fine presence, and

there was something so winning in his manner to all with whom he came in contact, that no man in the Navy had more friends and admirers.

The battle of Port Royal was important

There might be more difficult places to conquer than Port Royal, but no man could hereafter decline to attack an enemy's works with a squadron of war vessels. From the experience gained at Port Royal there could

FLAG OFFICER S. F. DUPONT, U. S. N.  
(AFTERWARDS REAR ADMIRAL.)

in more ways than we have enumerated. Its moral effect counted prodigiously. It opened the way for the more important operations with wooden ships against the enemy's forts at a later period of the war.

be no difficulty in estimating hereafter what number of ships and guns would be necessary for a certain service. So no matter in what aspect we view this victory, its importance cannot be overestimated.

Later in the war it was attempted to take from Dupont some of the laurels he had won, and to mention with faint praise the work he had accomplished; but this scheme of detraction did not affect his reputation, for he lived honored and died regretted by all who knew him.

The good he did lives after him in the hearts of those in whom he implanted the seeds of discipline, and encouraged that chivalrous conduct which was once paramount in the Navy.

Dupont gave all his officers full credit for their gallantry in the affair of Port Royal; but for these particulars we must refer the reader to the official reports of the day, since this is intended to be a general review of naval events and cannot enter into all the particulars.

Flag Officer Dupont highly commends the services of Fleet-Captain C. H. Davis, Commander C. R. P. Rodgers, and some of the subordinate officers of the flag-ship; but leaves it to the commanding officers of vessels to mention the personnel of their own ships.

The first thing to be done after the capture of the forts was to establish the Army under General T. W. Sherman securely on Hilton Head Island. This Island is bordered on the north by "Skull Creek," a fair waterway of from two and one half to four fathoms, through which Tatnall escaped with his steamers, and where it was thought he should have been followed by our gunboats, though from some unexplained reason they failed to do so. A few heavy guns at Seabrook Landing, midway in Skull Creek, would have commanded a long stretch of the waterway and completely closed it against ordinary gunboats; but, as it happened, there were no defences of the kind, and our forces lost the opportunity of capturing General Drayton and all his command, who escaped either in Tatnall's steamers or in army transports.

Colonel Gilmore, of the Engineers, made a thorough survey of the vicinity, and his plans for defence were adopted, making

the island of Hilton Head secure against any attack from the enemy.

Thus our forces were established in South Carolina, a constant menace to the enemy; the hostile movements from Hilton Head keeping Georgia and South Carolina in constant alarm.

Hilton Head Island became in course of time a place of refuge for hundreds of slaves, fleeing from their masters, who had forced them to throw up intrenchments against their friends, who offered them liberty and protection.

Colonel Gilmore's reconnoissance after the battle showed the demoralized condition of the retreating enemy. The road from Fort Walker to Seabrook Landing was strewn, with accoutrements thrown away by the soldiers in their flight, and at the landing a quantity of commissary stores had been abandoned.

It may seem surprising that the Secessionists were enabled in so short a time after the breaking out of the hostilities, to erect so many formidable earth-works armed with heavy guns. This was owing to the United States Government allowing Norfolk Navy Yard, with its abundant supply of guns and munitions of war, to fall into the hands of the insurgents. From Norfolk the guns were sent all along the Southern coast, by way of the Dismal Swamp Canal, and through the inland channels with which our coast is supplied, as far as Florida. The number of guns captured at Norfolk is variously estimated from 1,400 to 1,500, but at all events the number was amply sufficient to provide a barrier against the entrance of such small vessels as we could get into commission on the first breaking out of the war.

But for the misfortune of losing, or we may say throwing away, the Norfolk Navy Yard, all the unarmed ports of the South would have easily fallen into our hands, and thus enabled us to break up blockade running at a much earlier date than we were able to accomplish it.

## CHAPTER VII.

### THE "TRENT" AFFAIR.

DETENTION OF THE BRITISH STEAMER "TRENT," AND CAPTURE OF MASON AND SLIDELL.

ONE of the first orders issued to naval officers in command afloat, should have been one instructing them particularly with regard to neutral obligations.

But this was not done; the Navy Department taking it for granted that every commander would be well posted in International Law, and would not fail to ask instructions on such matters when doubts were involved.

This want of a proper precaution came very near precipitating the United States into a war with Great Britain, at a time when it was most desirable to have no complications of any kind with foreign powers. We were likely to have enough trouble in the adjudication of liable blockade runners; but those cases would come before legally authorized Admiralty courts, and it was not likely that any injustice would be done to innocent parties, except detention, for which the parties detained could have recourse to law for damages.

In cases of non-condemnation, compensation was always allowed by the courts, and sometimes to a large amount.

There is no nation so particular in the care of its commerce as Great Britain. She keeps large fleets in all parts of the world solely for its protection, and wherever the British flag flies on a merchant vessel you will find a ship of war not far off, ready to protect it with her guns; and to this protection from their Navy do the British people owe that prosperity of their commerce which it enjoys in every part of the world.

It could readily be imagined that in a war which would so seriously affect so many branches of British trade, that the English government would observe with a jealous

eye every step taken by our government for the purpose of preventing the Confederates from receiving supplies, contraband of war, from all foreign countries; but it is only fair to say, that although there were at times English ships-of-war sent along the coast to see that the blockade was closely kept, yet there were but few instances where British officers made any protest against our method of arresting the vessels engaged in the contraband trade.

The English government itself seemed disposed to take no action in regard to the seizure of English vessels, beyond having agents in this country to be present at the proceedings of the Admiralty courts, and to report the results to their Government.

Our Admiralty courts and the British being founded pretty much on the same principles, there was not much misunderstanding between the two Governments, considering the large number of vessels that came before the prize courts. On the whole, matters went on quite pleasantly between the two countries, notwithstanding that many Americans indulged in the idea that the whole English nation was hostile to the North, and only held this feeling in check until a favorable opportunity should occur, when, with some show of reason, it could assume an offensive attitude.

With such opinions existing it would have been wiser for our Government in its then weak condition to have avoided anything that could in any way be considered unjustifiable, and to have endeavored as much as possible to prevent collisions of any kind with foreign powers, unless it was positively clear that we were in the right.

On the 8th of November, 1861, an event occurred which created the wildest excite-

ment throughout all parts of the United States and Great Britain; in fact, all Europe looked on with anxiety, anticipating a war between England and the Northern States of the Union.

This excitement grew out of the arrest of the British mail steamer "Trent" on the high seas, by Captain Charles Wilkes, of the

Eustis and McFarland, attachés to the commissioners.

The "Trent" was one of a line of British steamers which ran regularly between Vera Cruz and Havana, thence to St. Thomas, and from there to England.

The company had a contract with the British Government to carry the mails, and

CAPTAIN CHARLES WILKES.

United States frigate "San Jacinto," and taking from her four male passengers who claimed the protection of the British flag.

Two of these gentlemen were Messrs. Mason and Slidell, formerly members of the U. S. Senate, who were now bound to Europe as commissioners from the Confederate Government to the Courts of England and France; the other two were Messrs.

its steamers had ample accommodations for the passenger travel between England and the West Indies.

The "Trent" left the port of Havana on the morning of the 7th of November, under the command of Captain Moir.

Nothing of interest occurred until about noon of the 8th, when, in the narrow passage of the Old Bahama Channel, opposite

the Panador Grande light, from the "Trent" was seen a steamer ahead, apparently waiting and showing no colors.

The "Trent" at this time was on her legitimate voyage; she had touched at no port in the Southern Confederacy, and had held no communication with vessels coming from or going to the insurrectionary States; neither was she bound herself to any Southern port, but was pursuing the route usually traveled by the company's mail steamers.

Her captain had taken on board as passengers the four gentlemen above named, as he had a right to do, for the British company had no authority to question the right of these persons to travel on their steamers, as long as they paid their passage money and conformed to the rules and regulations of the vessel.

The story of this affair is best told by an officer belonging to the "San Jacinto," who states as follows :

"At about 10.40 A. M. the look-out at the mast-head reported a smoke from a steamer from the westward, and at 11 A. M. she was visible from the deck. We were all ready for her; beat to quarters, and as soon as she was in reach of our battery, every gun was trained on her from the starboard side. A shot from the pivot gun was fired across her bow; she hoisted English colors, but showed no disposition to slacken her speed or heave-to; we hoisted the star-spangled banner, and as soon as she was close upon us, fired a shell across her bow, which brought her to. Our captain hailed her and said he would send a boat on board, and gave an order to Lieut. Fairfax to board her. Fairfax went in the second cutter. At the same time Lieut. Greer was all ready in the third cutter to shove off from the port side, in case his services should be needed.

"On coming alongside of the packet, Lieut. Fairfax ordered the other officers to remain in the boat with the crew until it should become necessary to use force, and he went on board the 'Trent' alone. The captain of the mail steamer refused to show his papers and passenger list, knowing very well the object of our visit and the character and mission of the Commissioners; but Mr. Mason being recognized, a part of the armed crew was ordered from the boat and went on board. Messrs. Mason and Slidell were then requested to go on board the 'San Jacinto,' but declined, and said that they would only yield to force, Mr. Slidell remarking that it would require considerable force to take him on board the 'San Jacinto.' Lieut. Fairfax then ordered Mr. Houston to return to the 'San Jacinto' and report that the Confederate Commissioners were on board the 'Trent' (mail steamer) and refused to go on board the 'San Jacinto' by other means than force.

"Lieut. Greer then shoved off and went alongside of the 'Trent,' sent his armed crew and marines on board and stationed them at both gangways. After a gentle application of force the four gentlemen were taken in the second cutter and conveyed on board the American frigate, where they were received by Captain Wilkes at the gangway, and shown into the cabin which they afterwards occupied.

"Two other boats were sent on board the 'Trent' to remove the luggage; and the ladies belonging to the Commissioners' party having declined the hos-

pitalities offered them by Captain Wilkes on board the 'San Jacinto,' at 3.30 the 'Trent' and 'San Jacinto' parted company."

This is a condensed account of this affair, but it fully explains the manner in which the Commissioners were taken out of the "Trent."

The whole matter on board the "Trent" was conducted by Lieut. Fairfax with the utmost courtesy. He had a very unpleasant duty to perform, especially as he was much embarrassed by the presence of the ladies belonging to the party, who expressed themselves without restraint regarding the outrage which they asserted had been committed; but the lieutenant bore their reproaches with great equanimity, and performed his duty as gently as possible.

The Commissioners themselves appeared to be very much outraged by the proceedings of Captain Wilkes in taking them out of the "Trent," though he did all he could while they were on board his ship to make them forget their troubles in the comforts of a fine cabin; but nothing could have pleased these Commissioners more than the fact that they *were arrested* on the high seas on board of a British ship, with the British flag flying at the peak, and *forcibly* taken from her to an American frigate.

This was just what would suit the Confederacy and the Commissioners at the same time, for it would bring about a collision, or at least a dispute, between England and the Federal Government, and very much increase the importance of the Commissioners on their landing in England, where they expected to be received (when released) with the wildest enthusiasm.

They both were too well posted not to know the tenacity with which the British people hold on to an idea, particularly the idea that when a man or a number of men seek the protection of the English flag, he or they cannot be taken from under its folds by force of arms on the high seas without a swift demand from the British Government for ample reparation. It is an idea that does honor to the British nation, and is one that her descendants in America have cherished since 1812, when the United States went to war with England, determined to resist the right of search which the English ships-of-war claimed the right to exercise over American vessels upon the high seas.

Thoughtful people saw in the act of Captain Wilkes nothing to approve of. On the contrary, they could only see trouble ahead, unless the Federal Government should at once disavow the act of that officer, and restore Messrs. Mason and Slidell and the attachés to their liberty.

The Commissioners themselves made a protest almost immediately after getting on board the "San Jacinto," against the seiz-

ure of their persons, and laid it before Captain Wilkes, not with the expectation that it would have any effect on their detainer, but it would add to the effect of what they considered their false imprisonment, and create an extra amount of sympathy for them throughout Europe.

The following is a pretty fair statement of the Commissioners, and as it is a part of the history of the times at a very important point, it is herewith inserted :

“U. S. SHIP ‘SAN JACINTO,’  
“AT SEA, Nov. 9, 1861. } ”

“*Sir*:—We desire to communicate to you by this memorandum the facts attending our arrest yesterday on board the British mail steamer ‘Trent,’ by your order, and our transfer to this ship.

“We, the undersigned, embarked at Havana on the 7th inst. as passengers on board the ‘Trent,’ Captain Moir, bound to the Island of St. Thomas, in one of the regular passenger lines of the British Royal Mail Steamship Company, running from Vera Cruz, via Havana, to St. Thomas, and thence to Southampton, England. We paid our passage money for the whole route from Havana to Southampton to the British consul at Havana, who acts as the agent or representative of the said company; Mr. Slidell being accompanied by his family, consisting of his wife, four children and a servant, and Mr. Eustis by his wife and servants.

“The ‘Trent’ left Havana about 8 o’clock, a. m., on the morning of the 7th inst., and pursued her voyage uninterruptedly until intercepted by the United States steamer ‘San Jacinto,’ under your command, on the following day (the 8th) in the manner now to be related :

“When the ‘San Jacinto’ was first observed, several miles distant, the ‘Trent’ was pursuing the usual course of her journey along the Old Bahama or Nicholas channel, was about 240 miles from Havana, and in sight of the light-house Panador Grande; the ‘San Jacinto’ being stationary, or nearly so, about the middle of the channel, and where it was some fifteen miles wide, as since shown on the chart.

“The nationality of the ship being then unknown, when the ‘Trent’ had approached near enough for her flag to be distinguished, it was hoisted at the peak and at the main, and so remained for a time. No flag was shown by the ‘San Jacinto.’ When the ‘Trent’ had approached within a mile of the ‘San Jacinto,’ (still pursuing the due course of her voyage) a shotted gun was fired from the latter ship across the course of the ‘Trent,’ and the flag of the United States displayed at the same time at her peak.

“The British flag was again hoisted as before, and so remained.

“When the ‘Trent’ had approached, still on her course, within from two to three hundred yards of the ‘San Jacinto,’ a second shotted gun was fired from your ship again across the course of the ‘Trent.’

“When the ‘Trent’ got within hailing distance, her captain enquired what was wanted; the reply was understood that you would send a boat. Both ships being then stationary, with steam shut off, a boat very soon put off from your ship, followed immediately by two other boats with full crews armed with muskets and side-arms.

“A lieutenant in the naval uniform of the United States Navy, and with side-arms, boarded the ‘Trent,’ and in presence of most of the passengers assembled on the upper deck, said to Captain Moir that he came to demand his passenger list.

“The captain refused to produce it, and formally protested against any right to visit his ship for the purpose indicated.

“After some conversation importing renewed protests on the part of the captain against the alleged object of the visit, and on the part of the officer from the ‘San Jacinto’ that he had only to execute his orders, the latter said that two gentlemen, Mr. Slidell and Mr. Mason, were known to be on board, as also two other gentlemen (naming Mr. Eustis and Mr. McFarland), and that the orders were to take and carry them on board the U. S. Frigate ‘San Jacinto.’

“It should have been noted that on first addressing the captain the officer announced himself as a lieutenant of the United States Steamer ‘San Jacinto.’

“The four gentlemen thus mentioned being present, the lieutenant addressing Mr. Slidell, and afterward Mr. Mason, repeated that his orders were to take them, together with Mr. Eustis and McFarland, and carry them on board his ship, which orders he must execute.

“Mr. Slidell and Mr. Mason, in reply, protested, in the presence of the captain of the ‘Trent,’ his officers and passengers, against such threatened violation of their persons and their rights, and informed the lieutenant that they would not leave the ship they were in, unless compelled by the employment of actual force greater than they could resist; and Mr. Eustis and Mr. McFarland united with them in expressing a like purpose.

“The officer stated he hoped he would not be compelled to resort to the use of force, but if it should become necessary to employ it in order to execute his orders he was prepared to do so. He was answered by the undersigned that they would submit to such force alone.

“The lieutenant then went to the gangway, where his boats were, the undersigned going at the same time to their staterooms on the deck next below, followed by Captain Moir and the other passengers. The lieutenant returned with a party of his men, a portion of which were armed with side-arms, and others appeared to be a squad of marines, having muskets and bayonets.

“Mr Slidell was at this time in his stateroom, immediately by, and in full view.

“The lieutenant then said to Mr. Mason that, having his force now present, he hoped to be relieved of the necessity of calling it into actual use. That gentleman again answered that he would only submit to actual force greater than he could overcome, when the lieutenant and several of his men, by his order, took hold of him in a manner and in numbers sufficient to make resistance fruitless, and Mr. Slidell joining the group, two or more of the armed party took hold of him, and these gentlemen at once went into the boat.

“During this scene many of the passengers became highly excited, and gave vent to the strongest expressions of indignation, seeming to indicate a purpose of resistance on their part, when the squad, armed with bayonets fixed, made a sensible advance of one or two paces with their arms at the charge.

“It must be added here (omitted in the course of the narrative) that before the party left the upper deck, an officer of the ‘Trent,’ named Williams, in the naval uniform of Great Britain, and known to the passengers as having charge of the mails and accompanying them to England, said to the lieutenant that, as the only person present directly representing his Government, he felt called upon in language as strong and emphatic as he could express to denounce the whole proceeding as a piratical act.

“Mr. Slidell and Mr. Mason, together with Mr. McFarland, against whom force in like manner was used, were taken to the ‘San Jacinto’ as soon as they entered the boat. When they reached your

ship you received them near the gangway, announcing yourself as Captain Wilkes, the commander of the ship, and conducted them to your cabin, which you placed at their disposal.

"When the undersigned came on board they found the men at quarters, and the guns bearing on the 'Trent.'

"After some time occupied bringing on board our luggage and effects, the 'San Jacinto' proceeded to the northward through the Santilla channel, the 'Trent' having been detained from three to four hours.

"The foregoing is believed to be a correct narrative, in substance, of the facts and circumstances attending our arrest and transfer from the British mail steamer to the ship under your command, and which we doubt not will be corroborated by the lieutenant present, as well as by all who witnessed it.

"The incidents here given may not have been witnessed by each one of the undersigned individually, but they were by one or more of them.

"As for the most part they did not pass under your notice, we have deemed it proper to present them in the form before you, expressing the wish that if considered incorrect in any part the inaccuracies may be pointed out.

"With a respectful request that you will transmit a copy of this paper to the Government of the United States, together with your report of the transaction, to facilitate which a copy is herewith enclosed,

"We have the honor to be,

"Very respectfully,

"Your obedient servants,

"JOHN SLIDELL,

GEORGE EUSTIS,

J. M. MASON,

J. E. MCFARLAND.

"To CAPTAIN WILKES, U. S. N.,

"Commanding 'San Jacinto.'"

This is no doubt a strict version of the affair, and is corroborated by Captain Wilkes' report.

Captain Wilkes, when he parted company with the 'Trent,' made the best of his way to Boston. Why he did not go into New York or Hampton Roads, where he could have communicated at once with the Government, is unexplained, but the information of the capture was kept from the Department four days longer than it should have been.

When it was announced in the Boston papers that Captain Wilkes had seized upon the persons of two Confederate Commissioners, the excitement and joy were unbounded; though why it should have been so no one could tell.

What use two Commissioners from the Confederate States could be to the Federal Government, when their places could easily be filled by the first outgoing blockade runner, was a question no one stopped to inquire about. It was sufficient that the "San Jacinto" had important State prisoners on board, and that they had been taken from under the protecting folds of the British flag.

The conservative Bostonians completely lost their heads, and made Captain Wilkes lose his, for they gave him ovations in such quick succession that it was quite enough to make his brain whirl.

In the meantime the wires under the sea were flashing the news to England about the outrage to the British flag.

The exultation of the Confederates knew no bounds when they heard the news, and saw their cherished hope about to be realized in a difficulty—perhaps war—between England and the Northern States; in which event the success of the Confederate cause would in the estimation of the Confederacy be consummated.

In fact, everyone seemed for the moment to have lost their judgment in the joy of the capture of Mason and Slidell. Even the wisest men in the Cabinet, including Mr. Seward, did not at first realize the situation.

The President alone kept his mind clear, and did not commit himself in any way that could prejudice the case. Yet it was very plain to able jurists that the position we held on account of the capture of Mason and Slidell was not a defensible one, and the first act of the Government should have been to disavow the act of Captain Wilkes, and order him to proceed to the nearest British port and land the party he had arrested.

It no doubt would have been very humiliating to Captain Wilkes, but that was not to be considered.

A national vessel belonging to the Navy had, without any instructions whatever, stopped a British mail steamer upon the high seas, which was engaged in her usual business of carrying passengers from the West Indian ports to England, four of whom were taken from under the English flag—these persons charged with no offense.

If the Captain of the "Trent" had been guilty of any infraction of international law—had sailed from any Southern port, or had taken his passengers from any vessel at sea—then he was liable to arrest; but to prove him to be so Captain Wilkes should have taken the "Trent" into a Federal port (the nearest), and brought the case before a court of Admiralty, giving the owners of the vessel so detained an opportunity to sue for damages if she had committed no unlawful act.

But instead of that, Captain Wilkes instituted a court of Admiralty on the high seas, and undertook to condemn the persons arrested without trial, and let the vessel carrying them proceed on her voyage, on the ground that her detention by taking her into port for trial and adjudication would put the passengers to great inconvenience.

When we look back after the lapse of so many years, when the passions of men have cooled down, we can hardly realize that a nation which had gone to war with Great

Britain on the subject of this right of search, should for a moment have hesitated to do the proper thing, by at once redressing the wrong committed by its officers, instead of waiting until a demand was made for a return of the prisoners with a sufficient apology. But if there were no mistakes made in the world there would be no work done.

As soon as Captain Wilkes made his report to the Department, the Hon. Secretary of the Navy wrote him the following letter, which showed that Mr. Welles, if not sound in an international point of view, was sound in his dislike for the Confederates and all that savored of disloyalty. He no doubt touched the national heart, which at that moment did not beat with the most friendly feelings towards Great Britain. It was hard to make our people believe that England did not sympathize with the South, and that, while she was full of friendly professions towards the North, she was not ready at the first opportunity to throw her weight in the scale against us.

"NAVY DEPARTMENT, }  
"November 30, 1861. }

"SIR: I congratulate you on your safe arrival, and especially do I congratulate you on the great public service you have rendered the Union in the capture of the rebel commissioners.

"Messrs. Mason and Slidell have been conspicuous in the conspiracy to dissolve the Union, and it is well known that when seized by you they were on a mission hostile to the Government and the country.

"Your conduct in seizing these public enemies was marked by intelligence, ability, decision and firmness, and has the emphatic approval of this department.

"It is not necessary that I should in this communication (which is intended to be one of congratulation to yourself, officers and crew) express an opinion on the course pursued in omitting to capture the vessel which had these public enemies on board, further than to say that the forbearance exercised in this instance must not be permitted to constitute a precedent hereafter for infractions of neutral obligations.

"I am respectfully yours,

"GIDEON WELLES,  
"Secretary of the Navy.

"CAPTAIN CHARLES WILKES,  
"Commanding U. S. S. 'San Jacinto,'  
"Boston, Mass."

The news of the arrest of Mason and Slidell was received by Congress with great enthusiasm, and that body passed the following resolution by a decided vote:

"Resolved, That the President of the United States be requested to present to Captain Charles Wilkes a gold medal with suitable emblems and devices, in testimony of the high sense entertained by Congress of his good conduct in promptly arresting the rebel commissioners, J. M. Mason and John Slidell."

But this resolution was indefinitely postponed, and after Congress had time to examine coolly into the merits of the case, it

was never resurrected. But there is no doubt it expressed the sentiments of the loyal people of the country, who never stopped to think what the consequences might be; nor did they reflect that we were not in a condition to go to war with Great Britain on a point of this kind, where we could find no exact precedents by which to justify ourselves; and when in like cases on the part of England we had placed her in the wrong in the war of 1812, and retaliated on her so severely that she was glad to invoke peace.

In the mean time Messrs. Mason and Slidell were confined in Fort Warren (in Boston harbor), as close prisoners.

The excitement in England was intense, and all those who entertained ill-feelings against the United States and her institutions were not slow in manifesting them.

The British Government took the matter in hand at once, and preparations for war were commenced on a large scale. Troops were sent to Canada without the English Government making inquiries into the matter, or waiting to see if the United States had not some explanation to make in relation to the action of Captain Wilkes.

This was not generous conduct in a great nation towards another with which its government professed to be at amity, and which at that time (before the United States had fairly collected her armies), was struggling with many disadvantages to hold her own against the most powerful rebellion ever yet known.

Common justice should have led the English Government to extend to us the courtesy that would have been extended to France or Russia under like circumstances.

It all looked very much as if the British people were (as report stated) sympathetic with the South, and were anxious to take advantage of the opportunity and seek a quarrel with the United States, and thus secure a separation of the two sections, which would weaken both, and give to England a powerful ally that would enable her to dictate such terms to the Federal Government as would best suit her purposes.

The first step taken by the British Ministry was a demand for the surrender of the Commissioners, with an apology by the United States government for the act committed by Captain Wilkes.

It would have been so much easier for the United States to have anticipated at once the action of the British government; but diplomatists have their methods, and they sometimes lead nations to the verge of war rather than admit a defect in their system.

On the 30th of November, 1861, Mr. Seward wrote to Mr. Adams our minister to

England, informing him that Captain Wilkes had boarded a British colonial mail steamer and taken from her deck two insurgents, who were proceeding to England and France on an errand of treason against their own country. He says :

"We have done nothing on the subject to anticipate the discussion, and we have not furnished you with any explanations. We adhere to that course now because we think it more prudent that the ground taken by the British government should be first made known to us here, and that the discussion (if there must be one) shall be made here.

"It is proper, however, that you should know one fact in the case, without indicating that we attach much importance to it, namely, that in the case of the capture of Messrs. Mason and Slidell on board a British vessel, Captain Wilkes having acted without any instructions from the government, the subject is therefore free from the embarrassments which might have resulted if the act had been specially directed by us."

On the same day Lord Russell wrote to Lord Lyons, the British minister in Washington, relating the facts of the case as he had received them from the commander of the colonial steamer "Trent," and thus states the demands of his government in relation to the matter:

"Her Majesty's government, bearing in mind the friendly relations which have long subsisted between Great Britain and the United States, are willing to believe that the United States naval officer who committed the aggression was not acting in compliance with any authority from his government; or that, if he considered himself so authorized, he greatly misunderstood the instructions which he had received.

"For the government of the United States must be fully aware that the British government would not allow such an affront to the national honor to pass without full reparation, and her Majesty's government are unwilling to believe that it could be the deliberate intention of the government of the United States unnecessarily to force into discussion between the two governments a question of so grave a character, and with regard to which the whole British nation would be sure to entertain such unanimity of feeling.

"Her Majesty's government, therefore, trusts that when this matter is brought under the consideration of the government of the United States, that government will, of its own accord, offer such redress as could alone satisfy the British nation, namely, the liberation of the four gentlemen and their delivery to your lordship, in order that they may again be placed under British protection, and a suitable apology for the aggression which has been committed.

"Should these terms not be offered by Mr. Seward, you will propose them to him."

This demand seemed reasonable enough. It is what the United States would have done under like circumstances.

The official document placed Lord John Russell in a more forbearing light than the people of the United States expected of him, for he had the reputation of being not only a sympathizer with the Confederates.

but of being strongly hostile to the Federal government, which was somewhat remarkable, inasmuch as the United States of the North had proclaimed themselves as anti-slavery, both in theory and practice; it was, therefore, natural to suppose that the English, who stood before the world as the champion emancipators, should altogether sympathize with the Northern States.

If, however, there was any doubt regarding Lord Russell's sympathies, it was dissipated by a private letter which he wrote to Lord Lyons at the same time he wrote his official one.

He says in his private letter :

"In my previous dispatch of this date I have instructed you, by command of her Majesty, to make certain demands of the Government of the United States.

"Should Mr. Seward ask for delay in order that this grave and public matter should be deliberately considered, you will consent to a delay not exceeding seven days.

"If at the end of that time no answer is given, or any answer is given except that of a compliance with the demands of her Majesty's Government, your lordship is instructed to leave Washington with all the members of the legation, and to repair immediately to London.

"If, however, you should be of the opinion that the requirements of her Majesty's Government are substantially complied with, you may report the facts to her Majesty's Government and remain at your post till you receive further orders."

A copy of the first dispatch from Lord John Russell was handed to the Secretary of State, Mr. Seward, by Lord Lyons.

Our wily diplomatist and statesman was not in the least flurried or taken aback by the implied threat of the British Government. He believed in the oft-told story that the pen was mightier than the sword, and was satisfied that if the correspondence could be confined to this side of the water, he would make some points on the British Premier, if he did not get the best of the argument and prove that Captain Wilkes was altogether in the right.

Mr. Seward, in reply to Lord Russell's first dispatch, carefully states all the facts and then reviews them with a cleverness quite enough to upset the English equanimity, and if the latter were not convinced, they could not help but admire his dexterity in handling this very delicate matter.

He states to Lord Lyons as follows :

"Your Lordship will now perceive that the case before us, instead of presenting a merely flagrant act of violence on the part of Captain Wilkes, as might well be inferred from the incomplete statements of it that went up to the British Government, was undertaken as a simple, legal and customary belligerent proceeding by Captain Wilkes, to arrest and capture a neutral vessel engaged in carrying contraband of war, for the use and benefit of the insurgents.

"The question between us is, whether this pro-

ceeding was authorized by, and conducted according to the law of nations.

"It involves the following inquiries :

"First—Were the persons named and their supposed dispatches contraband of war ?

"Second—Might Captain Wilkes lawfully stop and search the 'Trent' for these contraband persons and dispatches ?

"Third—Did he exercise that right in a lawful and proper manner ?

"Fourth—Having found the contraband persons on board, and in presumed possession of the contraband dispatches, had he a right to capture the persons ?

"Fifth—Did he exercise that right of capture in the manner allowed and recognized by the law of nations ?

"If all these inquiries shall be resolved in the affirmative, the British Government will have no claim for reparation.

"The first four questions are briefly answered by himself in the affirmative, and only the fifth remains for consideration."

But admitting that Mr. Seward's inquiries are correct, he does not refer to the fact that Captain Wilkes constituted himself a Court of Admiralty upon the high seas, and undertook to make a seizure of the persons contraband of war, and omitted to seize the vessel.

If the persons seized were contraband, the vessel knowingly carrying them as passengers was contraband also, and should have been taken into a United States port and the case tried before an Admiralty Court; which would most likely have decided in favor of the "Trent" and awarded damages.

This course would have saved the United States the humiliation of making a forced apology.

England was not the only nation that took exceptions to the seizure of the persons of Mason and Slidell, for, on the 10th of December, the Minister of Foreign Affairs in France wrote to the representative of that court at Washington :

"The arrest had produced in France, if not the same emotion as in England, at least extreme astonishment and sensation. Public sentiment was at once engrossed with the unlawfulness and consequence of such an act.

"The desire to contribute to prevent a conflict perhaps imminent between two powers for which the French Government is associated by sentiments equally friendly, and the duty to uphold (for the purpose of placing the right of its own flag under shelter from any attack) certain principles essential to the security of neutrals, have, after mature reflection, convinced the French Government that it could not, under the circumstances, remain entirely silent.

"There remains therefore to invoke in explanation of the capture of Mason and Slidell only the protest that they were the bearers of official dispatches from the enemy; but this is a moment to recall a circumstance which governs all this affair and which renders the conduct of the American cruiser unjustifiable.

"The 'Trent' was not destined to a point belonging to one of the belligerents; she was carry-

ing to a neutral country her cargo and passengers, and, moreover, it was in a neutral port that the passengers were taken on board.

"The cabinet at Washington could not, without striking a blow at the principles which all neutral nations are alike interested in holding in respect, nor without taking the attitude of contradiction of its own course up to this time, give its approbation to the proceedings of the commander of the 'San Jacinto.'

"In this state of things it evidently should not (according to our view of the case) hesitate about the determination to be taken."

In view of the pressure brought to bear upon the government and the attitude taken by France, wise counsels finally prevailed; and it was determined by the Federal Government to give up Messrs. Mason and Slidell to the representatives of the British Government authorized to receive them, and instructions were sent to the commanding officer at Fort Warren to place them on a small steamer and have them delivered on board a British war steamer then lying at Provincetown.

The Commissioners and their suite were conveyed in this steamer to the island of St. Thomas, and thence by the colonial steam line which took passengers to Southampton, England, where they arrived safely. But notwithstanding the excitement in England, they were received with no official distinction.

The exultation of the Confederates at what they chose to call the humiliation of the United States was excessive, though it would have pleased them better if the Federal government had adhered to the first impulse, and refused to give up the Commissioners. This, of course, would have brought about a war between England and the United States, which would most likely have insured the temporary independence of the insurgent States; for with England's navy to back the South we could not have maintained the blockade, and all our available force would have been required to defend the Northern coast, and to commence a raid upon the English commerce in every sea.

The English may not have calculated all the damages the United States cruisers could have inflicted upon English commerce in every part of the world; a proof of which may be seen in the performances of the "Alabama," and one or two other Confederate cruisers, which caused so much havoc to our commerce that it was almost driven from the ocean.

The United States government found itself placed in a very unpleasant dilemma, having to satisfy the demands of the British government and at the same time quiet the public feeling at home, which was intense; for the idea of surrendering Mason and Slidell was scouted by thousands of

people, who, having no responsibility in the matter, gave vent to their feelings in the most unmeasured terms, not only against the British government for what was considered its arrogant demands, but against the administration for tamely submitting to them.

Unreasonable people could not be made to believe that the three hundred improvised gunboats, and the long array of frigates which ornamented our navy list, were not sufficient to set the whole British Navy at defiance. But the government had to admit its weakness as an excuse to satisfy the people at large, who were clamoring so loudly to go to war with the English at a time when we could scarcely comply with the demands made on us to perform the proper blockade duty.

The government had not only to allay the excitement existing throughout the country, but it had to defend itself against the opposition party; which was ever ready to seize upon any weak point in Mr. Lincoln's administration, bring it before the people, and endeavor to weaken the government by their cries of incapacity.

It was finally decided by the administration that the long settled policy of this country was to resist the right of search upon the high seas; and by way of being consistent we had but one course to pursue, and that was to repudiate the acts of Captain Wilkes, which would have been the better policy to pursue from the beginning.

To Mr. Seward more than any one else were the people indebted for not having the country involved in a war of great magnitude, at a time when it would have been ruin to us for three years at least; for it would have taken us that length of time to prepare for a definite resistance against England, which we were quite capable of

making at the close of the war, when we were launching our invulnerable iron-clads as fast as our machine shops and ship-yards could turn them out.

It is not improbable that neither France nor England would have taken so fierce a stand if the "Trent" affair had happened in the latter part of 1864.

Whatever may have been Mr. Seward's opinions on the subject of the "Trent" matter, and though he made a faint attempt at making an argument, yet, with

that astuteness that characterized him in all his foreign intercourse during the war, he thought it better to conform to the established principles which had always governed this nation, and avoid a foreign war in addition to what we already had on our hands.

An attempt was made to show that Mr. Seward had pursued a timid policy in opposition to the broad principles laid down by the representatives of the people, that we could claim our insurgents wherever we might find them on the high seas—on which principle we might claim the right to take them out of the packet boat running between Calais and Dover.

Laws of nations are but conventional rules for the safe guidance of governments in time of war, but are

only so far binding when they do not infringe upon a settled policy of some government, whose best interests would be jeopardized by adhering to the opinion of any international code, which the policy of a powerful government might change at any moment.

When ministers and ambassadors were of more importance than they have become since the introduction of steam and the telegraph, it might have been allowable to arrest them in transit from their own country to one where they were accredited,

U. S. FRIGATE "SAN JACINTO," CAPTAIN CHARLES WILKES, OVERHAULING THE BRITISH STEAMER "TRENT," HAVING ON BOARD THE CONFEDERATE COMMISSIONERS, MASON AND SLIDELL.

for the purpose of preventing them from laying an important treaty of alliance before an enemy's government.

Vattel says that "the *ambassador* of an enemy may be stopped in transit." An ambassador represents a person clothed with full powers to contract with some foreign government matters of high importance, and is carefully instructed by a well established government in all he has to do.

Messrs. Mason and Slidell *were not ambassadors*; they were simply commissioners from an unrecognized country of insurgents, and it was uncertain whether they would be received or not by France or by England.

It was necessary that the administration should place itself in the right before the people, and for this purpose Senator Sumner was selected to defend the government on the floor of the Senate; which he did in the most able manner, and in a way satisfactory to the public mind.

The British government confined itself to a single point of complaint, in that it appeared "that the present objections were not founded on the assumption by the American vessel-of-war of the belligerent right of search, nor on the ground that this right was exercised on board a neutral vessel between two neutral ports, nor that it was exercised on board a mail steamer sustained by a subvention from the Crown and officered in part from the Royal Navy, nor that it was exercised in a case where the penalties of contraband could not attach, but it was founded simply and precisely on the idea "that other than officers in the military or naval service cannot be taken out of a neutral vessel at the mere will of the officer who exercises the right of search, and without *any form of trial*."

As far as the English Government was concerned, it was not illiberal in confining the question at issue to one single point, and it was thought that if time had been allowed our government, it could have triumphantly met the argument advanced by the British minister.

But the British people were impatient, and clamoring for immediate redress or else demanding war. The United States was too weak at that moment to enter into a war with Great Britain on a matter where it was not certain that we were in the right, and discretion being in this instance "the better part of valor," our government, after a small show of argument, disavowed the act of their officer.

This was the wisest thing that could have been done under the circumstances, for it was better that an officer should suffer for his great mistake, than that we should have been involved in a war with so powerful a nation, on a question in which all the pow-

ers of Europe would be sure to agree with our antagonist.

The aggressive position taken by the British Government on the first important question that had arisen between it and the United States, and the evident desire of Lord John Russell to humble us "in our hour of need" before the whole world, did not leave a friendly feeling in the minds of the American people towards the English; and while there was no immediate redress for us in regard to the departure of England from principles which had governed her for over a century, and the adoption of new ones to meet the occasion, there was but one thing to be done, namely, to bide our time until we could repay in a measure the arrogance the British Government had displayed towards us.

It was not that England had claimed redress for an assumption of power on our part which we had no right to exercise, but it was the haste which Lord John Russell was in to push us to the wall, that made the English action so offensive.

On the whole this action of Captain Wilkes had a good effect in the end. It rendered our officers more circumspect in their dealings with neutral questions, and prevented them from going out of their legitimate course to pick up foreign mail steamers with Confederate emissaries on board.

It also opened the eyes of the Government and Congress to the fact that, although we might use the coasting steamers to make blockading ships-of-war, we had no vessels that could be used to contend with any arrogant nation that might feel disposed to try and humiliate us.

It was but a short time after the event of the arrest of the "Trent," that the government gave its attention to building a class of vessels that could bid defiance to the heaviest ships in the British Navy; and it is safe to say here, that those vessels were not so much intended for the purpose of putting down the rebellion, as they were to put a check on the interference of the English and French in our affairs, which we considered that no foreign power had a right to meddle with.

Notwithstanding that the United States came near being mortified before the whole world because we were not prepared to encounter a great adversary like England, and were made partially to eat "humble pie," yet the people have forgotten that we were ever forced into making a submissive explanation in a matter where at most a mistake had been made.

We might be placed in the same position to-morrow by some insignificant power, because the knowledge of those who call themselves statesmen does not extend far

enough to show them that if we want to hold any prestige amongst foreign powers, we must have a naval force adequate not only to protect our own coast but to carry war into the enemy's country.

We are more deficient to-day in naval ships, than we were in 1861. If called upon to-morrow to redress an insult, we would be no better prepared to do it than we were at the time when the English threatened us with her army and navy for "pursuing a course which is common enough in English practice."

When it suits arbitrary nations to alter established principles for others which are more in keeping with their own policy, they have no difficulty in changing.

It is said by a naval writer "this is the last haughty and unreasonable demand that Great Britain will ever make upon the United States. She has abdicated the dominion of the seas and she can never again ascend her ocean throne. Her insolent officers have for the last time lorded it with impunity over an American deck, and the threat which was made of sending the 'Warrior' to Washington, will not in any form be repeated." How little that man knew of the American people or of naval matters! He judged from the rapid manner we were putting afloat the clever creations of Ericsson's brains, that we were a progressive nation, and that having been taught one lesson of humiliation we would not let it happen again. That we would go on building up a navy (after the war) commensurate with the needs of our great country, and that the war, if it had no other good effect, would open the eyes of men in power to the fact that it is to the Navy alone we must look in all wars to protect our people, and to vindicate the honor of our flag.

But what assurance have we that we will benefit by past lessons? The exigencies of the war taught us nothing, and, like the Bourbons, we cannot learn. Our famous iron-clads, which once gave us considerable prestige, are lying about in rotten rows, and politicians are quareling over their bones. The "Warrior" with which we were once threatened, is without doubt somewhat impaired by age, but there is not to-day a single vessel or number of vessels in our entire Navy that could prevent her from being sent to Washington if the British Government thought proper to send her there.

If we have not the naval power, then, to assert any proper principle of International Law, let us not undertake to do so, until we have on hand a force that will in a measure arrest the first movement of any nation that may attempt to threaten us. The "Trent" affair was very humiliating.

Let us see to it that something like it does not happen again.

At the time of the "Trent" affair it would not have been wise in anyone to put himself in opposition to the public feeling which was then paramount. Men refuse to be convinced, no matter how logical and persuasive the argument, when it runs counter to their opinion. There was not at that time one man in ten who believed in the doctrine that we had no right to arrest bearers of treasonable dispatches when under the protection of the British flag; but now that a quarter of a century has passed away, and the passions of men have cooled down, and they are governed by reason, we can discuss those matters with a chance of being patiently listened to. It may be interesting also to read the arguments made on our side of the case, to ascertain how far right we were in demanding to hold Mason and Slidell; and though that will not help the case now, after such a lapse of years, it may be a satisfaction to the American reader to know that we made a good fight on paper, though we could not make it on the water.

In order to place ourselves right, our statesmen made diligent search through the records of the past for the lengthy discussions which arose between the United States and Great Britain, on the subject of the "right of search," when that power was truly mistress of the seas, and when, in accordance with a long-settled policy, she claimed the right to take British seamen out of any neutral vessel. Whenever the necessities of the British Navy called upon her to do so her heavy hand was laid upon American ships unsparingly; and having no navy at that time with which to assert our rights against so powerful an adversary, we had to resort to argument, in an extreme defense of the rights of neutrals, which covered much ground.

These arguments were now brought up against us in the "Trent" case, and it was shown that our statesmen in their arguments, in 1812, had specified the only classes that could be lawfully stopped in transit, namely, persons apparently in the naval or military service of an enemy. We had no answer to make to our own arguments, and had almost to resort to the same special pleading practiced by Great Britain in regard to the right of searching neutrals in 1812. Our statesmen in 1861 tried to prove that the two Commissioners, Messrs. Mason and Slidell, were far more dangerous to the United States, if let loose in Europe to work against us, than a dozen military men would be; and it was considered absurd to contend for the privilege of stopping at pleasure any man wearing an enemy's uniform, and prevent the most treason-

able characters to go unquestioned because they have not the insignia of a soldier or of a sailor. The English view was considered, on our own side, a very narrow interpretation of phrases, to say nothing of a departure from a principle which the English had always claimed to protect.

There was one thing which did not strike our statesmen—that Messrs. Mason and Slidell had committed no overt act. There was no proof that they had ever shown their dispatches, or that they had said to any one that they were bound on a mission to a foreign government—that was all mere surmise.

Some argued that it was not necessary to take the vessel into court for adjudication, as there was no question with regard to the identity of these men, or as to the official capacity in which they were acting; that it needed no military insignia to show that they were distinguished public agents, in the service of the Confederate government.

If the Captain of the "Trent" knew all these facts and was aiding and abetting

Mason and Slidell in any treasonable acts against the United States, then his vessel became liable, and Captain Wilkes, in assuming the authority to let the ship and passengers pass free, was guilty of a violation of a grave principle of international law; he could as well open a neutral ship's hatches, and take from her hold what *he might consider* contraband of war, and transferring it to his own vessel to be taken before an Admiralty Court and condemned without evidence, let the ship go. Contraband of war makes the vessel liable, be it in carrying a regiment of soldiers or munitions of war. This is the view of the case taken by the President (Lincoln), and with that wisdom which never failed him he decided to give up the prisoners, and save the nation from a war in which it was not at that time in a condition to embark. The President did not want to go back on the principles for which the United States had so strongly contended in 1812; and he was right, as all unprejudiced minds must see.

## CHAPTER VIII.

### CAPTURE OF FERNANDINA AND THE COAST SOUTH OF GEORGIA.

RECONNOITERING ALONG THE COAST.—CONFEDERATES EVACUATE THEIR DEFENCES ON TYBEE AND WARSAW ISLANDS.—A GENERAL STAMPEDE.—THE EFFECT OF DUPONT'S VICTORY.—LOST OPPORTUNITIES.—"SEA ISLANDS."—CONGREGATION OF SLAVES AT HILTON HEAD.—ENTRENCHMENTS ERECTED AT HILTON HEAD.—GENERAL STEVENS.—BEAUFORT OCCUPIED.—RECONNOISSANCE UP THE TYBEE RIVER TO FORT PULASKI.—EXPEDITION TO FERNANDINA.—COMMANDERS OF AND VESSELS COMPOSING THE EXPEDITION.—CAPTURE OF THE WORKS ON CUMBERLAND AND AMELIA ISLANDS.—FORT CLINCH OCCUPIED.—CAPTURE OF FERNANDINA.—CAPTURE OF THE STEAMER "DARLINGTON."—GENERAL LEE AND FERNANDINA.—FINE HARBORS FOR BLOCKADE RUNNERS.—GOOD SERVICE OF THE NAVY.—THE FORTS AND TOWN OF ST. AUGUSTINE SURRENDER TO THE UNION FORCES.—DUPONT ESTABLISHES GOVERNMENT AUTHORITY IN THE HARBOR OF ST. JOHNS.—RETREATING CONFEDERATES BURN SAW-MILLS AND OTHER PROPERTY.—DUPONT RETURNS TO PORT ROYAL.—PLANTING BATTERIES ON TYBEE ISLAND.—THE NAVY TAKE PART IN THE BOMBARDMENT AND CAPTURE OF FORT PULASKI.—CORDIALITY BETWEEN THE ARMY AND NAVY OFFICERS.—THE OFFICERS UNDER DUPONT.—HIGH RANK REACHED BY SOME OF DUPONT'S OFFICERS.

AS soon as Flag-officer Dupont could find the time, he sent the smaller gunboats in different directions to reconnoitre the enemy's positions up the river and along the coast. The larger vessels were sent to perform blockade duty, which at that moment, owing to the paucity of vessels, was very arduous.

Commander John Rodgers was sent with the "Seneca" and "Paulina" to examine the enemy's defences on Tybee Island, in the Savannah River, and ascertained that all the works in that quarter had been abandoned, except those at Stono Inlet.

Commander Drayton, in the "Pawnee," accompanied by one or two gunboats, entered St. Helena Sound and found on the point of Otter island some heavy fortifications; but the magazine had been blown up and the armament removed.

At the same time Commander C. R. P. Rodgers made a reconnoissance of Warsaw Sound, and found the fort on Warsaw Island dismantled and the magazine destroyed. An examination of Wilmington River showed heavy works still occupied

by the enemy. On the Ogeechee and Vernon rivers heavy earth-works were being erected by the Confederates.

Commander Drayton crossed the North Edisto Bar, and found an abandoned earth-work, intended to mount ten guns. In fact, there had been a stampede all along the coast, which indicated the moral effect of Dupont's victory on the Southern people. Had a suitable body of troops been landed on the coast at the time, Charleston and Savannah would have fallen into our possession, and have been held throughout the war, to the great detriment of the Confederates, who depended on these ports as bases of supplies. The government, however, failed at that period to take in the situation, and our statesmen were quite paralyzed with the difficulties which threatened the Union cause. The superannuated army officers, called by the administration to its councils, were altogether unequal to the emergency, and they led the government into many difficulties.

When General W. T. Sherman declared that an army of two hundred thousand men was required to put down the rebellion, he

was thought to be crazy; but the President's advisers discovered, ere the war had lasted a year, that Sherman had in no way exaggerated the difficulties of the situation.

Whatever may have been the reason of the failure to send a larger army to occupy the Southern coast as soon as the necessary gunboats could be improvised to penetrate the inlets of that region, it is certain the movement was not made until too late, and the principal theatre of war had been transferred to other points, around which the contending forces gathered, leaving the coast to be taken care of by the Navy; a duty which, we think it will be admitted, the Navy performed with great credit to themselves and to the satisfaction of the country.

From the first the Navy had to contend with the indisposition of the War Department to co-operate with it in getting up combined expeditions against the enemy. Until the battle of Cape Hatteras and Port Royal occurred, it was not supposed that the Navy would take such a prominent part in the war. It was supposed our gunboats would be barred out of the Southern ports, which the large ships could not enter, owing to their great draft of water; and, apparently, no one considered the great advance which the Navy had made in ordnance, having at that time the most powerful shells and shell-guns that had ever been known. These guns, as they were used at Port Royal, gave an example of the manner in which our heavily-armed gunboats could deal with earth-works; for it was here proven that the defenders of a fortification would all be killed if they attempted to stand to their guns in the face of such a fire as could be poured into them from naval vessels.

It was conclusively shown that our wooden steamers, armed with nine and eleven-inch Dahlgren guns, could engage the most formidable batteries on shore, with a good prospect of success.

In those days gunboats were improvised by the hundred, and if the government had been so minded, all the smaller earth-works along the Southern coast could have been easily made to yield to the Dahlgren guns.

One result of the victory at Port Royal was our obtaining possession of the famous "sea islands," which, through slave labor, had so enriched their proprietors; and it was upon these planters that the greatest injury was inflicted, as our gunboats penetrated the network of inlets along the coast, and the rich cotton harvests lay at their mercy.

The slaves took advantage of the panic, and fled with their families to seek the protection of the Union flag. A large number of them congregated at Hilton Head, and about a thousand picked up by the vessels of war were located on the southeast end

of Edisto Island, where a gunboat was stationed for their maintenance and protection. Most of these negroes were given employment and served the Union during the remainder of the war. Others found homes on the "sea islands," within Union protection, where they raised corn and sweet potatoes sufficient to satisfy their simple needs; and if they sometimes suffered from the want of clothing, food and shelter, yet they exhibited a striking example of how dear is liberty to man in whatever position of life, and how much he will undergo to secure it.

The officers of the Navy may be said to have first erected the Freedman's Bureau, and given an asylum to those poor creatures who, with all their ignorance, had still sufficient manhood to appreciate the boon of freedom, which perhaps some of them had once enjoyed on the wild shores of their native Africa.

While the Navy had been busy in penetrating the numerous inlets of the vicinity, General T. W. Sherman had constructed large and strong entrenchments on Hilton Head, outside of Fort Walker. The Army had also occupied Beaufort, a pleasant village near Port Royal, where many wealthy land-holders resided during the hot season. Posts were also established on Tybee and other islands.

The enemy gradually recovered from the panic which had seized them at the battle of Port Royal, and seemed disposed to commence offensive operations against our forces, and re-occupy the works they had so precipitately abandoned. Upon this an expedition was fitted out under General Stevens and Commander C. R. P. Rodgers, which resulted in the abandonment of any attempt of the enemy to plant batteries within range of the gunboats, whose far-reaching shells committed some havoc among them on this occasion; nor did they ever attempt to obtain a lodgment on Port Royal Island, which remained in possession of the government during the war.

A reconnoissance up the Tybee River was made by Captain C. H. Davis and Commander C. R. P. Rodgers with the "Ottawa," "Seneca," "Ellen," "Western World," and the armed launches of the "Wabash," accompanied by three transports, having on board 2,400 troops, commanded by Brigadier General H. G. Wright. The expedition crossed the bar, and reached a point nearest Fort Pulaski on its land side. No shots were fired at the vessels, as the enemy had no rifle guns mounted in that quarter, so that the expedition was enabled to accomplish its object without difficulty, and return unmolested.

Several similar expeditions were sent out under Commander John Rodgers and others,

which served to keep the enemy in a continual state of uneasiness and made our officers acquainted with all the surrounding land and water.

Having done all that was necessary in the vicinity of Port Royal, Flag Officer Dupont turned his attention towards Fernandina in Florida, twenty-five miles north of the St. John's River. On the second of March, 1862, the "Wabash," and what other vessels could be spared from blockading duty, anchored off St. Andrew's Island, twenty miles north of the entrance to Fernandina.

Hoisting his flag temporarily on board the "Mohican," Commander S. W. Godon, Dupont's squadron entered Fernandina in the following order: "Ottawa," "Mohican," "Ellen," "Seminole," "Pawnee," "Pocahontas," "James Adger," "Bienville," "Alabama," "Keystone State," "Seneca," "Huron," "Paulina," "Isaac Smith," "Penguin," "Potomska," armed cutter; "McClellan," armed transport, with a battalion of marines under Major Reynolds, and six transports containing a brigade under command of Brigadier General Wright.

The vessels anchored at 10:30 A.M. on the second of March, to examine the channel and wait for the tide. Here the Flag-officer learned from residents of Cumberland Island, that the Confederates had hastily abandoned the defences of Fernandina, and were at that moment in full retreat, carrying with them such of their munitions of war as their precipitated flight would allow.

Such was the moral effect of the Port Royal victory, that there seemed to be a stampede all along the coast as soon as our naval vessels made their appearance.

The object of taking the vessels through Cumberland Sound was to turn the heavy works on Cumberland and Amelia Islands; but on receiving intelligence that the enemy had abandoned their works, Dupont detached the light gun-boats and light draft steamers from the main line under Commander Drayton, and ordered that officer to push through the Sound with the utmost dispatch to try and save the public and private property from destruction, and to prevent those outrages, by the perpetration of which the leaders of the rebellion hoped to exasperate their deluded followers.

While this expedition was on its way through the narrow inlets, Flag-officer Dupont proceeded by sea to the main entrance of the harbor.

On entering Fernandina Harbor, Commander Drayton sent an officer to hoist a white flag on Fort Clinch, the first of the national forts on which the ensign of the Union had resumed its proper place since

the first proclamation of President Lincoln was issued.

A few scattering musket shots were fired by the enemy and that was all the defence made by them. A railway train left the town as the gun-boat arrived. Commander Drayton in the "Ottawa" gave chase to it along the river and fired several shells at the locomotive, it is said, with some damage to the train.

Commander C. R. P. Rodgers pushed ahead with the steam launches and captured the steamer "Darlington" containing military stores, and fortunately secured and held the draw-bridge of the railroad.

The same night Commander C. R. P. Rodgers ascended the St. Mary's River in the "Ottawa," and driving away the enemy's pickets, took possession of the town of St. Mary's, while a force of seamen and marines, under Lieut. Miller, was sent to hold Fort Clinch.

The whole number of guns captured amounted to thirteen, among them one eighty-pounder and one one-hundred-and-twenty pounder rifle.

Fort Clinch and the earthworks thrown up by the enemy were found to be in condition for a most vigorous defence, and it is surprising that after making such formidable preparations, the Confederates should have left without attempting any resistance.

All the batteries were as perfect as art could make them—six of them were protected by sand hills, and were so covered by the growth of the country and so isolated from each other that striking them from the sea would have been almost a matter of chance.

These earthworks and the heavy guns of Fort Clinch commanded the main ship channel so as to rake an approaching foe. Besides these was a battery of four guns on the south end of Cumberland Island, the fire of which crossed the channel inside the bar. The crookedness of the channel and shoalness of the bar gave the Confederates a great advantage, for even after vessels had passed the outer defences they would have to encounter a well-constructed masked battery at the town, which commanded the anchorage.

General Lee had pronounced Fernandina perfectly defensible against a naval attack, but he did not appreciate the brave spirits that manned our ships or the power of 11-inch guns.

It was fortunate for the Union cause that Fort Clinch and its outlying batteries fell into our hands without resistance, as the Confederates might have made it warm work for the Navy; though the latter would doubtless have prevailed in the end, owing to good discipline and accurate gunnery.

Thus, Flag Officer Dupont accomplished an important part of the plan he originally proposed, viz.: to take and hold the whole line of the sea coast of Georgia, believing that the power controlling the sea coast controls the State, a proof of which was that the heavy works at St. Simms, armed with Columbiads, had been abandoned on hearing the news from Fort Royal, and on the approach of the fleet.

Thus was virtually placed in the hands of the government the fine harbor of Brunswick, the harbor and inlets of Fernandina, the town and river of St. Mary's, and the coast and inland waters from St. Simons northward. All these places, if left undisturbed, would have afforded a fine refuge for blockade runners, which must have supplied the Confederacy with any quantity of munitions of war, and much prolonged the conflict.

From what we have narrated it will be seen that while the North was not always successful in military operations, the Navy was doing good service by drawing tighter the coil around the Confederacy and depriving them of the means of carrying on the war. Even during the short time which had elapsed since our Navy had been placed upon a respectable footing, it held all the important approaches to the Southern States, from Cape Hatteras to Florida, with the exception of Charleston, Savannah and Wilmington, which places we were not yet quite in condition to assail, and which, for the want of a sufficient Navy on the part of the North at the commencement of the war, remained in possession of the enemy till nearly the close of hostilities.

Every effort was made by the Navy to capture these places, and much gallantry was displayed, which, though often without result, still showed the indomitable spirit of the service while contending against odds greater than they were able to overcome. History has not done justice to the hard work performed at Charleston, and slurs have been cast on gallant officers who deserved all the commendation a grateful country could bestow.

The Army remained in charge of the fortifications at Fernandina, and Flag Officer Dupont proceeded in the "Wabash," accompanied by several gun-boats, and on the evening of March 8 anchored off St. Augustine, where the town and fort were quietly surrendered to the Union forces; Dupont assuring the inhabitants of kind treatment as long as they respected the government authority and acted in good faith, and that municipal authority would be left in the hands of the citizens.

Thus Dupont not only displayed the gallantry and energy of an able commander, but also the tact which he possessed in an

eminent degree; for while he was determined to restore to the government the property which belonged to it, he felt it due to the deluded people to undeceive them, by kind treatment, of the numerous misrepresentations of the Southern leaders in relation to the designs of the Federal authorities.

The places that had so far been captured could be easily held by a few gun-boats; and although the Confederate Government realized the importance of attempting to recover what they had lost, they finally gave up the idea of holding these harbors and inlets and confined their operations to the interior, where the Navy could not follow them.

The harbor of St. John's was next visited by Dupont and the government authority established. The inhabitants were assured protection while they abstained from acts of hostility, and they more readily accepted these assurances as at night the whole heavens were illuminated by the burning saw mills, set on fire by the retreating enemy, in order to prevent them from falling into the hands of the Navy, forgetting that Dupont had promised at Fernandina to respect private property.

There were many interesting incidents connected with this naval campaign which the limits of this work will not allow us to narrate. Suffice it to say, Dupont's labors were entirely successful and quite up to the expectations of the Navy Department—not always profuse in praise of its officers.

Leaving a sufficient force of gun-boats to guard the harbors and inlets, Dupont returned to Port Royal in the "Wabash."

Dupont found that during his absence from Port Royal, the Army had planted batteries of rifled guns and Columbiads on Tybee Island for the purpose of reducing Fort Pulaski; but as this was purely a military operation, the Flag Officer did not claim to interfere, although General Hunter permitted the Navy to take part in the bombardment, allowing a detachment of officers and seamen from the "Wabash" to serve one of the breaching batteries.

The detachment under Commander C. R. P. Rodgers reached Tybee Island on the 10th of April, just before the firing commenced, but too late to take part in it that day.

On the following morning the firing continued with excellent effect, the rifled shots boring through the brick work, while the shots from the Columbiads broke off great masses of masonry from the walls.

Four rifled guns in battery, about 1,600 yards distant from the fort, had been assigned to the detachment from the "Wabash," and no doubt the most skillful gunners in the ship were assigned to the management of the guns.

The Union batteries kept up a steady fire until the Confederate flag was hauled down.

Before the fort surrendered many of the barbette guns were dismounted and the fort breached in two places, so as to be quite practicable for a storming party. The garrison were convinced that it was useless to contend against the Federal batteries, as the rifled shots passed through the walls and threatened to destroy the magazine.

When General Totten, the chief of Engineers, built Fort Pulaski, it was deemed impregnable to the assault of a naval force armed with the heaviest guns then in use, 32-pounders, and he would have been astonished if he had been told that in a few years a rifled projectile would be invented that would bore through his walls and crumble them to pieces.

The guns used by the naval detachment were three 30-pounder Parrots and one 24-pounder James. Commander Rodgers speaks in high terms of the officers and men. Lieut. Irwin, Acting-Master Robinson and Midshipmen Johnson and Pearson, Lewis Brown, Captain of the Forecastle, and George H. Wood, Quartermaster.

There were many gallant affairs constantly occurring, in which reconnoitering parties from the Navy were concerned, and they gave the enemy no rest. In these affairs the Army participated whenever an opportunity offered; and here we would remark, that at no period during the war was there a more cordial co-operation between the Army and Navy than while Flag Officer Dupont commanded on the Southern coast. His courtesy to every one with whom he came in contact gained him hosts of friends, and his example was followed by his subordinates in their intercourse with the army officers; so that whatever

combined enterprise was undertaken, it was vigorously executed with perfect accord on both sides.

Among the galaxy of bright spirits who served under Dupont in the early part of his campaign, there were many who have since passed away; but their names should not be forgotten. They were among the first to set the example of attacking heavy fortifications with light-built vessels; a departure from former usage that was first made in our civil war, and is now an established rule the world over.

A commander-in-chief, no matter how clever, does not stand much chance of success against the enemy unless he is well supported by his officers; and as Dupont up to this time had been everywhere successful, we must give a portion of the credit to those who served under his command.

That Dupont was fortunate in his selection, the names of Captain C. H. Davis, Commanders John Rodgers, Drayton, C. R. P. Rodgers, Godon, Parrott, Steedman, Gillis, Prentiss, Lieutenants-Commanding Balch, Stevens, Ammen, Nicholson, Truxton, Rhind, Bankhead, Conroy, Watmough, Budd, Semmes and Phoenix, in command of vessels, will show, besides the junior officers mentioned favorably by their commanding officers.

Nearly all the commanding officers reached high rank, and the youngest of them are now well up on the list of commodores and captains.

Eleven of them attained the rank of rear-admiral; and of these six are still living, have retired from active duty, and are reaping the reward of faithful service.

They will figure again in the course of this narrative, as their service continued throughout the war.

## CHAPTER IX.

### OPERATIONS OF ADMIRAL DUPONT'S SQUADRON IN THE SOUNDS OF SOUTH CAROLINA.

ARDUOUS DUTIES PERFORMED BY DUPONT'S OFFICERS.—VARIOUS EXPEDITIONS.—VALUABLE SERVICES OF CAPT. BOUTELLE AND OFFICERS OF COAST SURVEY.—COM. C. R. P. RODGERS MAKES RECONNOISSANCE OF WARSAW INLET.—LIEUTENANT BARNES INVADES FORTS.—COMMANDER DRAYTON GOES UP THE NORTH EDISTO RIVER.—OBJECT OF THE EXPEDITIONS.—DIFFICULTIES IN THE WAY OF GUNBOATS.—OGEECHEE SOUND AND THE GREAT OGEECHEE RIVER EXAMINED.—A SECOND RECONNOISSANCE TO SAINT HELENA SOUND.—GUNBOATS ANNOYING CONFEDERATE TROOPS.—THE TORCH PLAYS A PROMINENT PART.—DESOLATION.—FRIENDSHIP OF THE BLACKS FOR THE UNION CAUSE.—EXPEDITIONS TO VARIOUS POINTS.—ADMIRAL DUPONT CONSULTS WITH GEN. THOMAS W. SHERMAN.—A JOINT EXPEDITION.—ENGAGEMENT AT PORT ROYAL AND SEABROOK FERRY.—CONFEDERATES DISPERSED.—EFFECT OF CO-OPERATION OF THE ARMY AND NAVY.—REPORTS OF OFFICERS OF THE FLEET.—EXPEDITION OF FLEET-CAPTAIN C. H. DAVIS TO WARSAW SOUND.—REGIMENTS ACCOMPANYING EXPEDITION.—TATNALL'S GUNBOATS OPEN FIRE ON UNION FLEET AND GET WORSTED.—EXCITEMENT IN SAVANNAH.—OFFICERS WHO WERE CONSPICUOUS.—PATRIOTISM OF COLORED PEOPLE.—COURAGEOUS AND HEROIC ACT OF ROBERT SMALLS, A COLORED MAN.—CAPTURING THE STEAMER "PLANTER."—GREAT SERVICES OF DUPONT ALONG COASTS OF SOUTH CAROLINA, GEORGIA AND FLORIDA.

**S**HORT references have been made to the various duties performed by Admiral Dupont's officers on the coast and in the Sounds of South Carolina, the writer not deeming that the limits of this work would permit of a more extended account of the operations of the South Atlantic Squadron.

These operations show not only a desire to meet the enemy on all occasions, but a wise forethought on the part of Admiral Dupont regarding the ultimate use which the possession of certain points would be to the government in the future. He saw that the enemy was daily exhibiting more energy and an astonishing amount of resources, with a fixed determination to carry on the war as long as they could muster a regiment or obtain powder to fire a gun.

The accounts of the various expeditions fitted out cannot be narrated in order, as the reports came in irregularly; but they will be sufficiently so to enable the reader

to judge of the important services rendered from time to time.

The enemy were continually erecting batteries, and they moved about from point to point with a rapidity that was marvelous, and embarrassing enough to test the highest qualities of a commander-in-chief to meet the various movements of so active an adversary.

The soldiers of South Carolina seemed determined that the Northerners should not plant their feet on Southern soil, if they could keep them out by earnest watching and fighting; and it is safe to say that this untiring energy was met by equal energy and perseverance on the Union side; and if the latter did not actually occupy all the points held by the Confederates, they rendered them so ineffectual to do harm that they might just as well have been taken possession of.

The coast of South Carolina is indented with many sounds, bays and inlets, most of

them accessible to small light-draft blockade runners. It required some time to become acquainted with the topography and hydrography of these places, as no charts gave an exactly fair representation of many of them; and it was to close up all these gaps in the line of blockade that the smaller vessels were employed in constant reconnoissances and skirmishes, some of which were full of danger and required nerve and daring to execute.

It must have been surprising at times to the people residing along these narrow inlets, to see good-sized gun-boats ploughing their way at full speed through their tortuous and shallow channels, where the keel of a war vessel had never before passed. It was gall and wormwood to them to witness these excursions of floating batteries, against which they soon found that their flying artillery was of no mortal use.

Admiral Dupont had in his squadron a corps of officers belonging to the coast survey, under the immediate direction of Captain Boutelle, First Assistant. The Coast Survey office had abandoned its legitimate duties at the commencement of the war, and now furnished most valuable aid by sending its officers to any squadron requiring them. Captain Boutelle was invaluable to Admiral Dupont, and frequent mention is made of the honorable service he performed in piloting vessels through these intricate inlets.

The reconnoissance in St. Helena Sound, by Commander Drayton, has been already referred to. This bay was considered invaluable for a harbor, owing to its proximity to Charleston. By its occupation the Federals would be drawing the net close

around that pugnacious fort; and by cutting off all communication with the interior of the State, through the large rivers that communicated with it, with a few gun-boats would remain masters of the situation.

Commander C. R. P. Rodgers was employed to make a reconnoissance of Warsaw Inlet, in order to ascertain the position and force of the enemy's battery there, which information was desired by the Commanding-General of our military forces, in anticipation of landing troops on Tybee Island.

On approaching within a mile of the fort, and seeing neither men nor guns, Lieutenant Barnes was sent up with a flag of truce to examine the place, and found it evacuated.

It was a heavy work, with platforms for eight guns. But the guns had been removed, the platforms cut and the magazine blown up.

The expedition (consisting of the gun-boats the "Ottawa," "Seneca," and "Pembina") then pushed on to Cabbage Island, where another battery was expected to be found. The vessels went to the mouth of the creek, through the Romilly marsh, and to the mouth of Wilmington River—a bewildering cruise

among a network of shoals, inlets and marshes, enough to test the patience of officers of the most energetic type. But these men's minds were bent on fathoming the intricacies of southern navigation, and they succeeded in obtaining their object, and before they had been three months on the southern coast every sound and inlet was as familiar to our officers as to the Southern pilots.

This expedition brought back valuable information, ascertaining the position of

REAR-ADMIRAL C. R. P. RODGERS,

(FROM PHOTOGRAPH TAKEN IN 1865.)

forts, making reconnoissances on shore with the marines of the "Savannah," until their progress was stopped by an unfordable stream and nothing more could be accomplished.

On the 16th of December, 1861, Commander Percival Drayton was sent on a reconnoissance of the North Edisto river, in the steamer "Pawnee," accompanied by the "Seneca," Lieutenant-Commanding Ammen, and the Coast Survey steamer "Vixen," Captain Boutelle, who was generally the pioneer in these expeditions and whose knowledge of the hydrography of the country gave much valuable assistance.

While Captain Drayton was examining into the condition of some works (which proved to be deserted), Lieutenant Ammen proceeded with the "Seneca" five miles up the river and burned some cotton houses and out-buildings.

A landing was made at the small town of Rockville in hopes of surprising a large body of the enemy's infantry, but they decamped in a great hurry, leaving in Commander Drayton's hands a sloop, loaded with cotton and provisions, large quantities of commissary stores, consisting of rice, sugar, bacon, corn, etc., which were removed to the "Vixen."

An encampment a mile from the water was visited and broken up, all the tents and stores being removed to the boats.

The smaller gunboats pushed on until they ran aground and could go no further. They burnt one sloop, which had been run on shore by the enemy and which could not be gotten off.

A large number of the negroes in that section greatly feared that the whites would retaliate upon them for the pleasure they had shown when the Union gunboats arrived, and now most of them claimed and obtained the protection of the Union flag.

The sentiment which pervaded the minds of naval officers in the early part of the rebellion, that the negroes were the sacred property of the Southern planters, not to be touched under any circumstances, evaporated a short time after operations had begun, and when the Southern soldiers compelled the negroes to throw up their earthworks, dig their ditches and haul their loads, while they enjoyed what comfort they could get from camp life. The Federal officers determined to remove as far as they possibly could this important factor of war from their masters, and give them that liberty to which all men are entitled. Hundreds of these negroes were removed in the gunboats and finally located on Hilton Head Island.

This expedition found the fortifications on Edisto Island entirely deserted and partially destroyed, though on these occasions

the rebels always managed to carry off the guns. Having obtained all the necessary information the vessels returned to Port Royal.

Another expedition, under Commander C. R. P. Rodgers, left Tybee Roads on the 11th of December, 1861, with the "Ottawa," "Pembina," "Seneca" and "Henry Andrew."

Entering and passing up Vernon River, they discovered a fort on the eastern end of Green Island, mounting eight guns, apparently of heavy calibre, and near it an encampment of 75 tents.

The fort was advantageously placed, and its approaches landward were well protected by marshes. It commanded not only Vernon River, but the Little Ogeechee, and Hell Gate, the passage from Vernon River into the Great Ogeechee.

The reader should have a good map of the coasts of South Carolina and Georgia by him, in order to obtain some idea of the immense net of natural defences on which the Southern engineers had erected fortifications with great skill and judgment.

These expeditions may appear to some readers to be of very little importance, but if they will carefully examine the map they will see for themselves how difficult it was for our gunboats to reach these places, which were important military points and convenient refuges for light-draft blockade runners.

It was to obtain possession of all the prominent positions held by the enemy that Admiral Dupont sent out these expeditions, and he desired to accomplish the work with as little loss as possible.

It may be asked why this last expedition did not attempt to capture the enemy's works.

In the first place, the expedition was simply a reconnoissance, and he is an unwise officer who goes to fighting and risks the object in view. In the second place, the vessels could not approach the fort nearer than two miles, which was beyond the reach of their guns.

The enemy fired at the "Pembina" with a heavy smooth-bore gun, but the shot fell far short, and the commander of the expedition did not think it well, under the circumstances, to return the fire, and give the enemy the opportunity of reporting an engagement with and the repulse of Yankee gun-boats.

Ogeechee Sound and the Great Ogeechee River were examined and no batteries found. A full reconnoissance was accomplished, by which the Commander-in-chief was placed in possession of information that would much facilitate any operations of the Army and Navy which might be decided on in the future.

On December 5th Commander Drayton again proceeded on a reconnoissance to Saint Helena Sound in the "Pawnee," accompanied by the gunboats "Unadilla," Commander N. Collins, "Isaac Smith," Lieut. Commander J. W. Nicholson, and Coast Survey steamer "Vixen," Captain Boutelle.

He reached the anchorage off the fort on Otter Island at mid-day; pushed on up Mosquito Creek (no doubt appropriately named), but found no traces of white people, except some burning buildings on Hutchison's Island. Very little was effected to repay this expedition, yet what fine harbors were found for blockade runners, what places of safety for our fleets to lie in during winter storms, and what vigilance would be required to keep these retreats from being made useful by an enemy so quick to take advantage as were the soldiers of the South!

Whenever the enemy's troops appeared they were reminded by a bursting shell that the annoying gunboat was at their heels, and would follow and harass them until they retreated from the coast.

On landing at Hutchison's Island, they found that two days before all the negroes' houses, overseer's house, and out-buildings, together with the picked cotton, had been burned.

Thus early in the war did the torch begin to play that prominent part by which hundreds were driven from their homes, and by which the Southern soldiers in their folly thought to defeat the Federals in their cherished object of securing plunder.

This system led to retaliation, which in the end impoverished the Southern people from Cape Hatteras to Florida.

An attempt had been made on the approach of the gunboats to drive off the negroes and prevent their escaping. A great many did escape, however, though some of the number were shot in the back in the attempt.

The scene of complete desolation which on this occasion met the eyes of our officers beggars description; the negroes cowering amid the smoking ruins of their homes would have touched the hardest heart. These poor creatures still clung in despair to the spot where their houses once stood, but where they could no longer find shelter, and here they bewailed in piteous accents the loss of what was once the only Paradise they had on earth. In one moment they had seen all that was most precious to them reduced to ashes; but they preferred to remain near the place where their homes once stood, in the hope of obtaining comparative liberty, rather than to follow the fortunes of their masters and remain in bondage.

The most painful spectacle of all was that of old and decrepit men and women wandering about in search of the places where they were wont to dwell, and searching with bleared eyes in the hot ashes for any little memento of by-gone days that might cheer them in the few years they had yet to live.

Little children crawled around at the risk of falling into the burning embers, while their heart-broken mothers sat alone and gazed with despair at the wreck of all they once owned—though they had only owned it at the will and pleasure of their masters.

Much sympathy was felt for these poor creatures; but it was not entirely deserved, for the gunboats had hardly dropped down the creek for the night (which they did as a matter of precaution) before signal lights were made at the very spot they had left, to inform the enemy of their departure. It could only have been done by the negroes, for there was not a white man within a mile of the plantation. This might appear like treachery on the part of the blacks, but it was only for fear of further punishment that they pretended an interest in the cause of their masters.

That strange infatuation which possessed some of the cabinet of Mr. Lincoln, that by the Constitution the negroes were the goods and chattels of the South and could not be liberated until that clause in the Constitution was annulled, did much towards bringing desolation upon these poor people, who having formed some indefinite idea of freedom, would escape to the Union lines, in the hope of receiving protection; but they were often disappointed, for though they were kindly treated they were not protected in the full sense of the word. They were allowed to hang around the camps and naval stations, and live upon the debris of the soldiers' and sailors' rations, but it cannot be said that they were actually taken care of. They were allowed to till the land around them, put up cottages of brush and straw, and eke out an existence scarcely superior to that of an animal, and that was called philanthropy.

At first the officers of the Navy were afraid to take the responsibility of openly liberating the slaves, being held back by the old idea of the right of the white man to property in human flesh which was guaranteed to him by the Constitution.

The Cabinet would not for a time approach this subject, for some of its members still adhered to the delusion that the South would never come back into the Union if the subject of slavery was tampered with in any way.

If Abraham Lincoln's emancipation act had been promulgated the day Sumter was fired upon, the liberated slaves would have

flocked to the North, and thus have deprived the Southerners of that factor in the war (the slave labor) which built their forts, hauled their loads, worked their plantations, and furnished them with food while fighting. They even attended their masters on the battle field, carried off the wounded, drove teams, etc., and every negro thus employed saved a soldier to the Confederacy.

Instead of depriving the Confederates of their services, we avoided the expense of providing for them, and left them to take care of themselves. Hundreds died from neglect: they were a shiftless, lazy people and could not take care of themselves. Many in despair wandered back to their masters, who in fact treated them better than we did, hoping some day to make use of them again, when their cause was gained, and the negro once more regarded as a chattel.

Is it any wonder that they made signal lights to inform their masters that the gun-boats had departed?

The slaves seemed on the whole to be imbued with more liberal sentiments towards the white man of the North, than the latter held for them.

It is true that they had been removed from points where they were suffering to places of shelter, but not beyond the reach of the Southern fanatics, who shot at them as they would at dogs or cats.

This was done by men who would blow up light-houses, burn villages and destroy springs, so that those favorable to the Union cause might not enjoy a glass of fresh water.

In spite of our neglectful treatment of the blacks, they were always more than friendly to us. They would assist in destroying a fort, though it might bring them lashes or death; they would give information with regard to the movements of the enemy, and would hurrah when a Union shell burst in the midst of Confederate troops. But they did not receive that aid which would have kept them from starving, and so have prevented their old masters using them to build up forts to drive the Union people away.

On the above-mentioned occasion, Commander Drayton's policy was a generous one. A large number of the negroes had left Hutchison Island after they had been burned out, and now crowded upon the beach with what was left of their goods and chattels, and prayed to be removed to another island.

They were taken away by the gunboats, and if the expedition had accomplished nothing else, the Commander would have deserved credit for thus relieving suffering humanity.

Otter Island Fort and the adjacent waters were, on this occasion, placed in charge of

Lieut.-Commanding Nicholson, who was directed to supply the negroes with food and do what he could for their comfort.

The attention of Admiral Dupont had, in January, been drawn to the fact that the enemy designed to shut up the troops on Port Royal Island, by placing obstructions in the Coosaw River and Whale Branch, by erecting batteries at Port Royal Ferry, at Seabrook, and at or near Boyd's Neck, and by accumulating troops in the vicinity in such a manner as to be able to throw a force of three thousand men upon any of these points at short notice.

On a consultation with General T. W. Sherman, it was determined to arrest the designs of the enemy and to do it in such a manner as to prevent any more attempts of the kind. A joint expedition was agreed upon, and a plan of conduct settled upon by the commanders of the Army and Navy. The first day of the year was selected for the attack.

Commander C. R. P. Rodgers was appointed to the command of the naval forces, consisting of the "Ottawa," Lieut.-Commanding Stevens, "Pembina," Lieut.-Commanding Bankhead, and four armed boats from the "Wabash," carrying howitzers, under charge of Lieutenants Upshur, Luce and Irwin, and Acting Master Kempff, all of which were to enter the Coosaw by Beaufort river; the gun-boat "Seneca," Lieut.-Com. Ammen, and the tug-boat "Ellen," Acting-Master Budd, to participate, both of which were to move up Beaufort River and approach the batteries at Seabrook and Port Royal Ferry, by Whale Branch. The armed Tug "Hale," Acting-Master Foster, was also ordered to report to the commander of the expedition.

The gun-boats reached Beaufort on the 31st December, 1862, and in order not to give the enemy notice of their approach, they remained there until after dark, when they ascended the river to within two miles of the Coosaw. At 4 o'clock the next morning the gun-boats moved up and joined General Stevens at the appointed rendezvous. Here the troops embarked, crossed the Coosaw, and landed at Haywood's plantation, and with them went the two howitzers of the "Wabash," to serve as a section of light artillery, under Lieutenant Irwin.

The troops and gun-boats engaged the enemy (who was on the alert) at Port Royal and Seabrook Ferries. The Confederates also appeared in force, in line of battle, on the right of the Federal troops, but were dispersed with some loss by the fire of the gun-boats, which was very gallant.

At sunset the enemy sent in a flag of truce, asking permission to carry off their dead and wounded; just then the gun-boats

opened fire, and before General Stevens could send a messenger to stop it, the officer who brought the flag of truce galloped off.

The enemy again showed themselves in force the next morning, but the gunboats opened such a fire on them that they soon retired to a point where they could not be followed and made no more demonstrations.

The military portion of the expedition recrossed the Coosaw and started on their return march, while the gunboats, watching the tide and their opportunity, passed down the channel, leaving the enemy to understand that they would be chased up whenever they attempted to plant batteries on sounds, inlets or rivers.

The co-operation of the Army and Navy was very complete on this occasion. The services of the officers are highly spoken of by Commander Rodgers, particularly the work of Lieut.-Commander Ammen with the "Seneca" and "Ellen" at Seabrook.

The work was performed in very narrow and crooked rivers, but with care and skillful handling the gunboats (though often aground) were brought out with but little damage.

The reports of Lieuts.-Commanding Truxton and Nicholson, though not containing an account of severe service, are instructive as showing how each officer of the fleet was kept employed in chasing up the enemy, and how the latter kept on the move.

Admiral Dupont made it a rule (and it was a very good one) to give his staff officers an opportunity to distinguish themselves where opportunity offered, without taking away from others what they might consider theirs of right, namely, to do all the fighting while the staff were attending to what might be considered their legitimate duties.

Hence we find the Fleet-Captain, Charles H. Davis, getting underway on January 26, 1862, for an expedition into Warsaw Sound. He had under his command the gunboats "Ottawa," Lieut.-Commanding Stevens; "Seneca," Lieut.-Commanding Ammen, and the armed steamer, "Isaac Smith," Lieut.-Commanding Nicholson; the "Potomaska," Lieut.-Commanding Watmough; the "Ellen," Master Budd; "Western World," "Gregory," and the two armed launches of the "Wabash," and having in company the transports "Cosmopolitan," "Delaware" and "Boston," on board of which were the 6th Connecticut, the 4th New Hampshire and the 97th Pennsylvania regiments, in all 2,400 men, commanded by Brig.-General H. G. Wright. Commander C. R. P. Rodgers accompanied the expedition.

The object of this move was to cut off the communication between Fort Pulaski and

The vessels entered Little Tybee River, or Freeborn Cut, and passed Fort Pulaski, but were not fired into, as the fort was not prepared for an enemy on this side. Preparations were at once made, however, to receive the expedition warmly on its return. The distance was that of long-range guns.

The vessels were brought to a stop, after passing Wilmington Island, by heavy piles driven in a double row across the channel; they were anchored and a reconnoissance made, in boats, of the numerous creeks with which this country was intersected.

At 5 P. M. five Confederate steamers, one of them carrying a square flag at the fore (probably Commodore Tatnall's), anchored at the mouth of the creek. They had it in their power to choose their distance, and this led to an expectation of an attack, but the night passed quietly.

At 11:15 the five steamers composing Commodore Tatnall's squadron attempted to pass down the river with some scows in tow. Commander John Rodgers, who lay at anchor in Wright River, and Captain Davis opened fire upon them, which they returned with spirit. The result of the engagement, which lasted less than half an hour, was that Commodore Tatnall and one of his squadrons were driven back; the other three vessels made good their passage down to Fort Pulaski, and afterwards passed up the river again to Savannah, where one of them sunk at the dock.

As a demonstration the appearance of the gun-boats was a success, as Savannah was thrown into a great state of excitement, and all the energies of the people were put forth to increase the military defences.

The information required by this expedition was gained without loss of life or injury to the gun-boats.

Surveys and examinations were made up Wright and Mud Rivers by Commander John Rodgers, and a great amount of good service done. The officers and boats' crews were in continual danger from the fire of bush-whacking Confederates, who were always ready for a fight.

The names of Commanders John Rodgers, Drayton, C. R. P. Rodgers, Godon, Rhind, Stevens, Balch, Ammen, Truxton, Watmough, and Semmes, were conspicuous wherever a Confederate shot was heard, or wherever there was a chance to gain a point on the enemy.

Heavy knocks were received by our gunboats from Confederate flying batteries, which would often make desperate stands behind earthworks thrown up for the occasion. The long steel shot from their Whitworth guns would pass easily through the sides of our vessels and inflict death or injury on all around. These attacks were, in

ishment from the heavy guns of the Federal vessels. Our officers and men had a most persistent enemy to deal with, but they never flinched from any kind of duty until the whole coast was under Federal control.

All along the coast and up the rivers, where gun-boats could reach, heavy earth-works were found abandoned, their magazines blown up, and their guns removed, evidently showing that the Confederates did not care to dispute with our gun-boats the occupancy of the soil. They would scarcely have finished many of their batteries before they would abandon them, and erect new works again at some other point.

A remarkable instance of patriotism on the part of the colored people was evinced in the bringing out of the armed steamer "Planter" from Charleston, and delivering her over to the naval officer blockading that port. Robert Small, who performed this courageous act, was employed on board the "Planter," which was used as a dispatch and transportation steamer attached to the Engineer Department in Charleston, under Brigadier-General Ripley.

The taking out of the "Planter" would have done credit to anyone, but the cleverness with which the whole affair was conducted deserves more than a passing notice. Small was a very clever light mulatto who had been running this steamer for some time, and he had gained the confidence of his employers to that extent that, on the 13th of May, the Captain went on shore for the night and left Small in charge. He had made all his arrangements to carry off his family, and at 4 o'clock in the morning, left the wharf with the Palmetto and Confederate flags flying, passed the forts and saluted them as he went by, by blowing his steam whistle. After getting out of reach of the Confederate guns, he hauled down the flags and hoisted a white one at the fore. All this required the greatest heroism, for had he been caught while leaving the wharf, or stopped by the forts, he would have paid the penalty with his life.

The "Planter" mounted two guns of her own, and had lying upon her deck four guns intended for the forts, one a 7-inch rifle.

Small was the pilot of the boat, and had no difficulty in making his way through

the obstructions placed in the channels. Besides the vessel and guns which he brought out, he gave much valuable information which only a man of his intelligence could impart. When he left Charleston he brought away with him eight men and five women.

Robert Small was an object of great interest in Dupont's fleet, not only for his courageous act, but for being the most intelligent slave that had yet been met with. He was one of the first, if not the first, colored man who was elected to Congress from Brunswick, S. C., and he held his own with white men who were far better educated than himself. It was not often that a negro was met with of such intelligence, from the fact that the system of slavery so tended to degrade the colored race that few, if any, could ever rise to superiority.

When Admiral Dupont gave up the command of the South Atlantic Squadron there was not much left for his successor to do in the way of gaining information along the coasts of South Carolina, Georgia and Florida. The officers under Dupont's command had made themselves so well acquainted with the hydrography and topography of the country that they needed no pilots to point the way for them through any bay or inlet.

All the sounds or inlets where a blockade runner could get in or out were so closely watched, or hermetically sealed, that few vessels attempted to communicate with the Confederacy in that direction. As a rule they had abandoned their beats, and either kept to running into Charleston or Wilmington, or went to the coasts of Alabama and Texas, where their chances were better than in the South Atlantic.

The South Atlantic coast was throughout the war the favorite ground for blockade runners, and the hardest blockading duty was performed in that quarter. Rich prizes were sometimes taken, and watchful commanders often reaped uncommon rewards; but with it all there was a monotonous watchfulness that wore men out, and many officers after the war fell into bad health, if they did not altogether succumb to the influence of a climate which in winter or summer was not conducive to longevity.

## CHAPTER X.

### NAVAL ENGAGEMENT AT SOUTH-WEST PASS.—THE GULF BLOCKADING SQUADRON IN NOVEMBER, 1861.

ATTEMPT TO BLOCKADE THE PASSES OF THE MISSISSIPPI.—ESCAPE OF THE "SUMTER."—THE "MANASSAS" RAMS THE "RICHMOND."—THE BATTLE AT THE PASS.—ATTEMPT TO DESTROY THE "VINCENNES."—FINAL RESULTS OF THE ENGAGEMENTS.—CAPTURE OF THE "ROYAL YACHT" IN GALVESTON HARBOR BY LIEUT. JAMES E. JOUETT.—ATTACK ON FORT McRAE AND FORT PICKENS BY THE "NIAGARA" AND "RICHMOND," NOVEMBER 22, 1861.—CORRECT ACCOUNT OF ATTEMPT TO RELIEVE FORT SUMTER, APRIL 12, 1861, AND OF RELIEF OF FORT PICKENS, APRIL 17, 1861.—LIST OF SHIPS AND OFFICERS OF WEST GULF BLOCKADING SQUADRON, 1861.

IT would be a pleasant task to be able to record nothing but successes and have no defeats checked against us; but that could not very well be unless we admitted that our enemy was deficient in all the qualities which distinguish the American soldier and sailor, and that we gained our victories easily because we had no one of any courage, energy or ability to contend with.

On the contrary, we had all these to meet us at every step; and our enemies, although men of the same stamp as ourselves, had their energies quickened by an amount of rancor which the Federals could never be made to feel, as they were fighting simply to preserve the Union, while the Confederates were fighting with a cherished object, to gain something new and beyond their reach, which they thought would conduce to their happiness, and of which they thought the North was trying to deprive them.

We could not expect impunity from losses and defeats upon the water any more than the soldiers could on the land; for though the Confederates had nothing like the resources of the North in naval matters, yet they put forth so much more energy and converted so many ordinary vessels into powerful rams and gunboats, that they made up in that way for what they lacked

The reader must not therefore be surprised if the Union Navy was now and then caught tripping; nor must they take it for granted that every officer in the Navy was a perfect man, patterned after some rare type, who never made mistakes or knew defeat.

In so great a field of operations as that through which our Army and Navy labored for so long a time, it would be strange indeed if a great many mistakes were not committed.

New Orleans was the Queen City of the South; the great emporium through which the Confederates at one time hoped to inflict great injury upon the North by fitting out vessels-of-war or privateers to prey upon the Northern merchant ships, and by converting the factories of this place into shops for casting guns and making small arms.

The Confederates considered that it would be a difficult matter for the Union forces to blockade the different mouths of the Mississippi, the bayous and sounds, and flattered themselves that New Orleans would become the rendezvous for all the blockade runners that had early in the war commenced to swarm upon the coast like bees about the honey flowers. But they were disappointed in their expectations, for as early as June, 1861, Commodore McKean sent the "Powhatan," Lieut. D. D. Porter, to close up the

U. S. SLOOP OF WAR "BROOKLYN," OFF PENSACOLA.

mander Charles Poor, in the "Brooklyn," to blockade Pass à l'Outre.

It was through the latter channel that the "Sumter," Captain Semmes, escaped to sea, while the "Brooklyn" was off in chase of a strange sail, and she was thus enabled to commence her career of havoc on American commerce.

This drew the attention of the Navy Department particularly to the mouths of the Mississippi, and a small squadron of vessels (quite inadequate for the purpose) was appointed to blockade the different passes.

The river Mississippi divides into several channels before reaching the Gulf of Mexico, and this division takes place at a point simply known as "the head of the passes," about fifteen miles above the mouths of the river. It was supposed that if a squadron could occupy this point it would be able to intercept anything going up or down.

It was not until the 12th of October, 1861, that this squadron reached "the head of the passes."

It was composed of the following vessels: "Richmond," screw steamer, Capt. John Pope, twenty-two 9 inch guns; "Vincennes," sloop-of-war, ten guns; "Preble," sloop, eleven guns; "Water Witch," small screw steamer, four guns.

This squadron, mounting in all forty-seven guns, seemed to be quite able to defend "the head of the passes" and not only prevent anything going up or down, but to drive off any force the Confederates could collect at that moment.

But the Confederates had already fitted out a ram (the "Manassas"), armed with one gun in the bow, covered with iron and considered of sufficient power to sink a heavy ship with one of her blows.

The Commander of the Union squadron did not seem to be aware that the enemy had a vessel of this kind on the river, or if he did, he attached but little importance to the fact, having the impression that she was nothing more than a small converted tug.

The rule that a man should never despise his enemy was never more thoroughly illustrated than on this occasion.

The "Richmond" was coaling from a schooner which lay alongside of her, not keeping any particular lookout, her crew being employed in getting the coal on board. It was 3:45 in the morning, the "Water Witch" was *not* in the advance, keeping a lookout, and the ships of war were all anchored in the stream, when the "Richmond" discovered a strange craft approaching, which immediately afterwards struck her a heavy blow abreast the port fore-channels, tearing the schooner from her fastenings, crushing in three planks of the ship's side and making a small hole two feet below the water line.

That was the only blow the ram struck, for, as we now know, she was somewhat disabled by the shock, and she moved off slowly up the river, glad to get away so easily.

This vessel proved to be the ram "Manassas," at that time one of the improvised squadron of Commodore Hollins, late of the U. S. Navy.

The "Richmond's" crew fled to their quarters as soon as she was struck, and, as soon as they could they fired a random broadside, for there was not much chance of seeing anything in the darkness which then prevailed.

The ram, it is reported, remained under the quarter of the "Richmond" for some time, apparently trying to give another blow (but in fact partly disabled), and then drifted away.

COMMODORE J. S. HOLLINS, C. S. N.

Had the "Richmond" stood up the river until daylight the "Manassas" would have fallen into her power. The "Preble" opened her port battery on the ram as it passed slowly up the river, but without any effect.

After a time the "Richmond" got underway and went a short distance above the passes, but Acting-Master Wilcox reported that she was getting too close to the starboard shore (where there was water enough to float a three-decker), and the helm was put hard a-starboard (instead of proceeding on up, as could easily have been done) and the vessel sheared off into the stream with her broadside bearing up the river; she then drifted down with the current until she neared the "head of the passes," when "ineffectual attempts were made to get her head up stream" (which could easily have been done by letting go an anchor).

The vain efforts continued until the steam-

ships had drifted a mile and a half down the Southwest Pass, when they were discontinued, the helm put up, and the vessel headed towards Pilottown, where her commander thought he would be able to turn round!

When she arrived at Pilottown she still drifted on, and strange to say, she drifted toward the exit from the river. All this time the other vessels were doing all they could to drift after the "Richmond!" In other words, having been sent to the passes to defend them, on the first appearance of an enemy they deserted their posts and made a most shameful retreat—a retreat from a few river boats that a broadside of either ship would have sent to the bottom in five minutes. In fact, it was a perfect stampede if there ever was one, and there seems to have been a desire to get into deep water, which was entirely unwarranted by the circumstances.

The "Richmond" and "Vincennes" both drifted broadside on until near the bar, when they grounded in that position (the most favorable one to receive an attack from the enemy.)

The day before Captain Pope had mounted on the "Richmond's" forecastle one of his 9-inch guns, in order to be ready for any emergency, and it served him a good turn when the time came for using it.

As soon as the enemy saw that the two ships had grounded near the bar, they came down below Pilottown and opened fire on them with some light Whitworth guns of good range, which could reach the Federal ships while the heaviest guns on the Richmond could not reach them.

The enemy kept up this fire for about two hours without doing any particular damage, the bolts from their rifles being quite small. One of them lodged in a drawer of the bureau containing Captain Pope's clothes, and there seemed to have spent itself, without doing any harm whatever.

There is no account of any injury being inflicted on the vessels, or of any one being killed or wounded. It was very much like the celebrated "battle of the kegs" which once set a whole fleet in motion.

While the firing was going on, the enemy's shot flying over and the shot from our ships falling short, it was reported to Captain Pope that several boats filled with men were leaving the "Vincennes."

Some went on board the steamer "Water Witch," others went to the "Richmond," and Captain Handy (the Commander of the "Vincennes"), in company with several of the officers, presented himself on the quarter-deck before Captain Pope, with the American flag wrapped around his waist in large folds [!], and on being asked the object of his coming in that guise, stated

that he had abandoned his ship in obedience to signal, and on being informed that no such signal had been made, he insisted that Captain Winslow of the "Water Witch" had so read it.

When Captain Winslow was asked regarding the matter, he said that he saw no such signal. It was, in fact, simply the power of imagination acting on Capt. Handy's nerves.

He did send to Capt. Winslow asking if that was not the meaning of a signal that was made by the flagship, but the answer he received was "No; it is impossible that any such signal can have been made. Get your guns out of your stern ports and defend your ship."

It appears that on leaving his ship Capt. Handy determined that nothing of her should fall into the hands of Commodore Hollins, and he therefore ordered that a slow match should be placed near the magazine, and a train of powder laid, so that by the time he reached the "Richmond" the old "Vincennes," that had performed many a useful cruise, should go up in a blaze of glory. He never reflected that his small 32-pounders might be whisked about in the air and fall upon the decks of the stranded "Richmond."

Capt. Handy's reception on board the flagship by Capt. Pope was not a flattering one. He was immediately ordered back to his vessel when it was seen that she did not blow up, and the quarter-gunner who had been directed to light the match informed them that he had cut the lighted part off and thrown it overboard.

In the mean time the steamer "McClellan" came in with stores for the squadron and some rifled-guns of large calibre, and this put the Commander of the squadron at his ease. He could now drive the Hollins flotilla off if it should reappear.

The "McClellan" was then set to work to get the grounded vessels afloat, which she finally succeeded in doing, and they crossed the bar and anchored *safely* in deep water.

Capt. Pope in his report of this unhappy affair says: "My retreat down the pass, though painful to me, was to save the ships and prevent them from being sunk and falling into the hands of the enemy [!] as it is evident to me that they had us in their power by means of the ram and fire-rafts. If I have erred in all this matter it is an error of judgment. The whole affair came upon me so suddenly that there was no time left me for reflection, but called for immediate action and decision. The ram having made her appearance next day at the mouth of the river [!] the impression is she sustained no injury from our shot, only

"It having been rumored that there was a panic on board this ship at the time she was engaged with the enemy, I state it to be false. Both officers and men maintained their coolness and determination to do their duty. My orders and those of the officers were carried out with as much coolness as if it had been an every-day affair, and their whole conduct merits high commendation.

"They would be gratified to prove their bravery by being permitted to take part in the contemplated attack on Pensacola, as requested in notes from me to you on the subject.

"In both engagements with the enemy the fire appeared to be directed to the destruction of this ship, most of the shot being apparently directed to the quarter of this vessel, presumed for the purpose of disabling our rudder and propeller."

This relation would not be complete if Capt. Handy had not had the opportunity to place himself on record, on the eve of his ship getting aground, as follows :

"SIR: We are aground. We have only two guns that will bear in the direction of the enemy.

"Shall I remain on board after the moon goes down with my crippled ship and nearly worn-out men ?

"Will you send me word what countersign my boats shall use if we pass near your ship ?

"While we have moonlight would it not be better to leave the ship ? Shall I burn her when I leave her ?

"Respectfully,  
"ROBERT HANDY."

Capt. Pope seemed quite aware of the ludicrousness of this proposition, and wrote Handy as follows :

"U. S. Str. 'RICHMOND,' }  
"SOUTH WEST PASS. }  
"October 12, 1861.

"SIR: You say your ship is aground. It will be your duty to defend your ship up to the last moment, and not to fire her unless it be to prevent her falling into the hands of the enemy.

"I do not think the enemy will be down to-night, but if they do come, fight them to the last.

"You have boats enough to save all your men. I do not approve of your leaving your ship until every effort is made to defend her from falling into their hands. Respectfully, etc.,

"JOHN POPE,  
"Captain, U. S. N.

"COM. ROBERT HANDY, U. S. N.,  
"Commanding 'Vincennes.'"

There is not much more to tell of this painful business—it would have been better to have left out the telling of it, but history cannot be written fairly if that alone is told which is creditable, and if that which smacks of the disgraceful is omitted.

There is no excuse for anything that happened in this squadron, and the mistakes made were not redeemed by any after-acts of gallantry.

To say that this stampede happened be

cause these ships were taken by surprise, and because the most extravagant reports had been spread by Hollins about the force he had in rams and fire-rafts, was all folly.

Suppose the rebels had invented the most destructive methods, which lively imaginations had invested with supernatural power, there was no reason why 47 heavy guns and 700 men should run away from such goblins.

A badly-constructed ram ran her snout into the "Richmond" and ripped off three pieces of her planking ; there were no fire-rafts, and Hollins' squadron was all a sham. His gunboats were nothing more than frail river craft with small rifled guns—like those which Bailey's division sent to the bottom after a fifteen minutes' engagement at the battle of Forts Jackson and St. Philip.

Put this matter in any light you may, it is the most ridiculous affair that ever took place in the American Navy. There is no instance during the war like it. To think that we should have to write of such a retreat is mortifying, but it stands on record, described in language that almost claims merit for the flight of the "Richmond" and her consorts, chased by a ram that was going in an opposite direction as fast as her disabled machinery would take her,—her officers thanking their stars that they got away so easily !

There is nothing that can equal the comicality of Capt. Handy's performance—laying a train with a slow match to his magazine, and then hastening away in his boats with the American flag wound around him, and his remarkable antics when he found that his ship would not blow up. This presents an example unmatched in any navy in the world.

After the ships had safely passed the bar, it was a subject of great congratulation to them that they were out of reach of Hollins, his rams and his fire-rafts; the very enemies they had been sent into the river to subdue.

New Orleans was illuminated on this occasion, and Hollins was fêted as if he had won a great victory.

Perhaps this fiasco had a good effect by causing the Confederates to underrate the Northern Navy; if so, they dearly paid for it, for only a few months afterwards all their rams, ironclads, fire-rafts, and gunboats were swept away by a squadron bravely commanded, notwithstanding the heavy forts prepared with every skill for the enemy's protection, and with all the devices human ingenuity could conceive of.

Such events as we have related are not without their benefit in time of war. They make officers more careful in their plans, and teach them that good commanders and brave men should never be taken by sur-

prise; they also warn a government to be careful whom it places in command of its ships at a time when it is required that only the bravest and best should be selected for all occasions where success is demanded or where the honor of the flag is at stake.

A small detachment of vessels, under the command of Captain Henry Eagle, was at this time blockading the coast of Texas. His particular command was the frigate "Santee." She was not a suitable vessel for this purpose (being a sailing ship), and her crew of 500 men might have performed more effective service by being divided up amongst five or six small steamers, armed with howitzers.

A good deal of force was expended in this way during the war, which might have been exerted to better purpose; but the object of the Navy Department was to have a large number of guns afloat in view of European complications, and these large sailing ships, though perfectly useless for blockading purposes, carried a large number of men who could at times be used with good effect in landing on the enemy's coast.

Among the privateers which the Confederates were fitting out was one called the "Royal Yacht," which was being prepared in Galveston harbor to be let loose on the Federal commerce. This fact was known to Captain Eagle, and he made preparations to destroy her before she could get to sea.

On the 7th of November, 1861, an expedition was fitted out and placed under the command of Lieutenant James E. Jouett, with Lieutenant John J. Mitchell, Gunner William Carter and Master's Mate Chas. W. Adams in the first and second launches, each carrying a howitzer and a picked crew of men.

At 11:40 P. M. the two boats entered the harbor unperceived, intending, if they could pass the armed schooner guarding the entrance and the Bolivar and Point forts, to try to surprise and burn the man-of-war steamer "General Rusk," lying under Pelican Island fort.

The boats succeeded in passing the schooner and two forts, but in attempting to avoid the sentinels on Pelican fort they grounded on Pelican Spit and were discovered by the enemy. It was then too late to attempt the capture of the "General Rusk" (a heavily armed vessel) as the alarm was given at once, therefore that part of the expedition was abandoned.

The boats then turned about and pulled for the schooner "Royal Yacht," which they boarded and carried after a short but sharp conflict. By this time the people in the forts were aroused and opened fire in the direction of the boarding party. Lieut.

Jouett proceeded to secure his prisoners, 13 in number, and leave the vessel; before doing which, he spiked the only gun the schooner carried and set fire to her, as she had a shot through her at the water line, and the pilot on whom Jouett had depended to take the vessel out was shot down.

Lieutenant Jouett himself was severely wounded by a boarding pike in the hands of an enemy; Mr. William Carter, gunner, was wounded, one man killed of the boat's crew and six wounded, one of whom afterwards died.

REAR-ADMIRAL JAMES E. JOUETT,

(FROM A PHOTOGRAPH TAKEN IN 1885.)

This was a gallant and well-executed affair, and no doubt the "General Rusk" would have been captured but for the discovery of the boats. A boarding party against an enemy well armed and prepared for such an event is always a dangerous affair. The odds are always in favor of those on board the vessel, but in this case the schooner was carried by one boat only, because the other one did not get alongside in time to be of much assistance.

Captain McKean, who commanded the Gulf blockading squadron, issued a public order, thanking Lieut. Jouett and his officers and men for their gallantry and coolness on this occasion, with a hope that "their names might be enrolled by a grateful country with those which in former years shed so much lustre on the American flag."

On November 22d, 1861, Commodore McKean, after consultation with General Harvey Brown at Fort Pickens, determined to make an attack on Fort McRae and its defences with the "Niagara" and "Richmond," while Fort Pickens was to open on the Confederate batteries with its guns.

It was time something should be attempted in this quarter, for from April 16th up to this time (Nov. 22d) nothing had been

fathoms and the "Richmond" in 20 feet of water, Fort McRae bearing from the "Niagara" north, distant two miles.

The vessels opened fire, but finding that the "Niagara's" shells fell short, boats were sent out and a buoy placed in 23 feet of water near the edge of the shoal—distant one and three-quarters miles from the fort. Here the "Niagara" finally anchored and again opened fire, "this time with marked effect, many of her shells falling into the sand battery and others passing through the wall of the fort [?]. The barbette guns were silenced immediately after the firing began, and the casemates visibly slackened until 5 P. M., when it ceased entirely." The vessels fired no more after sundown, but again attacked the fort in the morning, as did also Fort Pickens.

CAPTURE OF THE PRIVATEER "ROYAL YACHT" BY A VOLUNTEER CREW FROM THE FRIGATE "SANTEE," UNDER COMMAND OF LIEUT. JAMES E. JOUETT.

done to show that there was any hostile feeling between the Federal and Confederate forces at Pensacola.

Both the "Niagara" and "Richmond" were vessels of heavy draft; the former could not enter the harbor, and the latter, to co-operate with her, would have to lie a long way outside of the fort and earthworks. The "Niagara" was lightened as much as possible and her draught reduced to 21 feet.

During the night of the 21st, a position had been selected and a buoy placed to mark the spot where the ships were to anchor. On the following morning at 10 o'clock, Fort Pickens fired the signal gun and the "Niagara" stood in, followed by the "Richmond" (Captain F. B. Ellison); both ships came to an anchor with springs on their cables, the "Niagara" in four

It was thought by those on board the ships that Fort McRae and its defenses were considerably damaged by the bombardment, but that remains doubtful. There was no return of the fire from the ships during the second day of the attack, as the Confederates saw that the naval commanders had no intention of entering the harbor, and that they were unnecessarily exposing themselves to the fire of Fort Pickens. So they withdrew from their works and let the fort and ships expend their ammunition at their own pleasure. (There was a cross-fire from the ships and Fort Pickens on the enemy's sand works which it was not possible to withstand.)

The "Richmond," owing to her lighter draught of water, was able to take a position closer to the northern shore than the "Niagara," and so far in the rear of both

fort and battery that their guns could not be brought to bear upon her. For *several hours* she escaped being struck, but on the afternoon of the second day "a *masked battery* among the sand hills on the main land back of the lagoon opened fire upon her." Finding that the enemy were getting her range and fearing that she would be struck, she changed her position, and finally, as her shells were falling short, she was signalled to retire out of the line of fire. It was thought that the guns in the masked battery were rifled and of very heavy calibre [?] as their projectiles were thrown beyond the "Richmond."

At the end of the first day's bombardment the ships retired, uninjured. On the second day they took up about the same positions, but their shells failed to reach the forts, while the Commander says, "the enemy's shells fell thick about us, some passing over the ships, and far beyond them." "Therefore," says the Flag Officer, "I deemed it my duty to withdraw the ship, as to have retained our position would have been to expose both her and the crew to serious injury with no possible advantage. Our not being able to get within range was owing to the fact that the northerly wind had lowered the water and was directly *in face* of our fire."

In this bombardment of two days two shot struck the "Niagara," one abaft the fore chains, lodging in the woodwork, the other near the mizzen chains, also lodging in the woodwork, the injuries being trifling. The "Richmond" was also struck twice. A shot struck the rail and hammock nettings forward, another (a shell) exploded four feet under water, "breaking and pressing inboard several of her planks and causing a serious leak." The loss during this engagement was one man killed and seven *slightly* wounded by splinters.

Our object in mentioning this affair is not for the purpose of claiming any brilliant victory for the Navy, but to show the futility of ships engaging forts (especially sand forts) at such long ranges that their shell will not reach, and where they burst five seconds before the proper time! Nor is the bombardment mentioned as a naval exploit of any great importance, for there were no results from it which could benefit the Government in any way, beyond showing the enemy that they would not be allowed to rest quietly while they were building their sand forts and preparing to make Pensacola Harbor impregnable against Fort Pickens and the Union fleet.

Had this action on the part of Flag Officer McKean and General Harvey Brown been concerted earlier in the year it might have had the good effect of driving the Confederates out of their works some time

sooner; but from April 17, 1861, when Fort Pickens was reinforced with men and guns and made strong enough to resist any attack from the Pensacola side, up to November 22d of the same year, not a movement had been made by our Army or Navy to check the work of the Confederates in building earthworks and mounting guns.

It is more than possible that this work could have been arrested if proper steps had been taken in the first place to send in a strong naval force well backed by the Army. The Confederates would have evacuated Pensacola a month after troops had been sent to its relief, on April 17th, 1861.

There does not seem to have been any particular object in the bombardment of Fort McRae, beyond at the same time destroying the navy yard and its contents, which, it is true, was in the hands of the Confederates; but the latter did not seem at all disposed to injure anything, and why our own forces should want to destroy what the enemy were taking care of cannot be understood.

There was nothing in the yard but machinery which the enemy could not use, and guns which they had already mounted and which could not have been of a very dangerous character, as our ships were only struck twice each in a two days' bombardment.

The history of the manner in which Pensacola was held by the Confederates from April 1st, 1861 to May 9th, 1862, offers one of the most curious commentaries on the conduct of the war in this quarter. It had the best harbor in the Gulf of Mexico, belonging to the United States. It had a good navy yard, with the ordinary facilities for fitting out and repairing ships, and water enough on the bar to admit of the passage of all but five or six of the heaviest ships of the Navy. It was just the point wanted by our naval commanders from which to carry on operations against New Orleans and the coast of Louisiana and Texas, and from which to intercept blockade runners bound for Southern ports from Havana and Nassau.

Before even Fort Sumter was fired on President Lincoln saw the importance of our holding Fort Pickens, and at the same time that Secretary Welles sent his expedition to reinforce Sumter, the President and Secretary Seward sent one to reinforce Fort Pickens and prevent it from falling into the hands of the insurgents.

This is an important part of the history of the war, and as it had an important bearing on naval matters in the Gulf of Mexico, and exhibited a great want of decision or forgetfulness on the part of those who were charged with the duty of recovering the Government property, it may not be unin-

FORT PICKENS.

FORT MCRAE.

PANORAMIC VIEW OF PENSACOLA BAY, THE NAVY YARD AND FORTS.

NAVY YARD.

teresting to restate some events connected with this place during the time of its occupation by the Confederates.

In the early part of the difficulties between the North and South, and before the Confederates had taken the bold step of firing upon Fort Sumter, and when the Government was anxious to ascertain the true condition of affairs at Charleston, Mr. G. V. Fox, formerly a Lieutenant in the Navy and later the Assistant Secretary, offered his services to go to Charleston, communicate with Colonel Anderson, and return with the required information.

The late administration of Mr. Buchanan, with a policy as feeble as it was unwise, had done nothing towards asserting the authority of the government over Fort Sumter, nor taken any energetic steps for its relief, even when it became known that the insurgents were waiting only for an opportunity to seize upon it, and turn its guns against any force which the National Government might send against Charleston.

The commander at Sumter, if he was not ordered to remain supine under all provocations, was at least given to understand that it would not be agreeable to the administration if he should attempt to prevent the Southerners from erecting such earthworks as they might think proper within reasonable bounds: but that he might hold on to the government property in Fort Sumter as long as he could do so without precipitating hostilities. That was the *spirit* of the understanding between Major Anderson and the Government, if not the actual one.

Though it was known to the late administration that the insurrectionists in Charleston were openly constructing strong earthworks opposite Sumter, avowedly with the intention of forcing its surrender, yet no steps were taken to relieve Major Anderson by sending reinforcements or supplies; nor did they protest against the action of the Southern forces who were making every preparation to attack him.

The Southern leaders had been prepared for the contingency of secession before Mr. Buchanan gave up the reins of office. All their plans were well matured and all precautions taken to insure their success. Thus, when President Lincoln came into office he found himself face to face with the most perplexing state of affairs that ever beset a statesman. The little garrison at Sumter was surrounded by guns, and the indignant people of the North were demanding that it should be relieved at all hazards.

The steamer "Star-of-the-West," under Captain McGowan, of the Revenue Marine, was chartered during President Buchanan's administration, and ordered to carry provisions to the beleaguered fort; but on enter-

ing the harbor and getting within range of the guns on Morris Island, she was fired upon, and finding that he would be sunk if he persevered in going on, Captain McGowan turned his vessel about and left the harbor.

Mr. Fox presented certain plans for the relief of Sumter to the Buchanan administration, but for various reasons they were not accepted, although at first deemed feasible, even by General Scott. But on the next day (February 5th, 1861) news was received of the election of Jefferson Davis to the Presidency of the Southern Confederacy, and then General Scott intimated to Mr. Fox that probably no efforts would be made to relieve Fort Sumter.

On the 12th of March, Mr. Fox received a telegram from Postmaster-General Montgomery Blair to proceed to Washington; and when he arrived there he was induced by this gentleman to lay the same plans before President Lincoln that had been offered to President Buchanan, Mr. Blair informing Mr. Fox at the same time that General Scott had advised the President that Fort Sumter could not be relieved and would have to be given up. Having been introduced to the President by Mr. Blair, Fox unfolded his plans and was directed to call upon General Scott and discuss the matter with him.

The General did not approve Mr. Fox's plans, and informed Mr. Lincoln that it might have been practicable in February, but owing to the increased number of Confederate forts and guns it was not possible then.

These difficulties in carrying out his plans for the relief of Sumter, induced Mr. Fox to go in person to Charleston to see if he could not ascertain by the visit something that would strengthen his argument. He also wished if possible to visit Major Anderson.

In consequence, with the consent of the President, Secretary of War and General Scott, he proceeded by way of Richmond and Wilmington to Charleston and arrived there on the 25th of March. At that time there was a general feeling in Charleston and thereabout that the Government had concluded to give up Fort Sumter without an attempt to retain it.

On Mr. Fox's arrival in Charleston he sought an interview with Lieut. Hartstene, formerly of the U. S. Navy, and stated to him his desire to visit Major Anderson, and Hartstene in consequence introduced him to Governor Pickens, to whom he showed the orders under which he acted.

Governor Pickens directed Lieut. Hartstene to take Mr. Fox to Fort Sumter, where they arrived after dark and remained two hours.

Major Anderson seemed to think it was too late then to undertake to relieve Sumter by any other means than by landing an army on Morris Island. He thought an entrance from the sea impracticable, but while discussing the matter on the parapet Mr. Fox heard the sound of oars, and though the boat was very near she could not be seen through the haze and darkness of the night until she had actually reached the landing. This gave Mr. Fox the idea of supplying the fort by means of boats. He found the garrison very short of supplies, and it was decided by him and Major Anderson that he could report to the government that the fort could not hold out after the 15th of April unless supplies were furnished.

Mr. Fox made no arrangements with Major Anderson for reinforcing or supplying the fort, and very wisely did not inform him of his plans. On his return to Washington he was frequently called before the Cabinet to discuss his propositions and answer the objections of General Scott and other military authorities.

His plan was a naval one altogether, and he intended that it should be carried out by naval officers. It was simply running past batteries over 1,300 yards distant, at right angles with the enemy's fire, and there were many examples where such things had been done in perfect safety. Steamships had even been known to pass within 100 yards of a fort on a dark night without being seen.

The President inquired if there was at that time any officer of high rank in Washington who would sustain Mr. Fox in his project, directing that if one could be found he should be brought to the executive mansion.

Mr. Fox took Commodore Stringham to the President, who that morning had held a long conference with Commodore Stewart, and both declared that Sumter could be relieved on the plan Mr. Fox proposed.

On the 10th of March the President sent Mr. Fox to New York to make inquiries about obtaining vessels for the voyage, and he there consulted Messrs. George W. Blunt, Wm. H. Aspinwall and Charles H. Maxwell with regard to the necessary preparations. There were many delays in getting off the expedition, caused principally by everybody's desire to avoid a war. As late as the 4th of April the President informed Mr. Fox that he would allow the expedition to start for Charleston, but that he would in the meantime write a letter to the authorities of that place and promise that no attempt would be made to land troops if vessels were allowed to supply Sumter with provisions. There were but nine days left between the time Mr. Fox

would arrive in New York and the time when Major Anderson would be out of provisions, when he would be at liberty to surrender. In these few days Mr. Fox had to charter steamers, provide men and boats, and employ tugs, and then to pass over 632 miles before he could reach his destination.

The Secretary of the Navy had in the waters of the United States the steamers "Powhatan," "Pocahontas" and "Pawnee," which he placed at Mr. Fox's disposal. On the "Powhatan," which had gone out of commission, Mr. Fox depended for his boats and men. He arrived in New York on the 5th of April, 1861, engaged the steamer "Baltic" of Mr. Aspinwall, and delivered confidential orders to Colonel H. L. Scott, aide to the General-in-Chief, and Colonel D. D. Tompkins, Quartermaster, to supply all the needed stores.

Colonel Scott ridiculed the idea of any attempt to relieve Sumter, and by his indifference and delay half a day was lost. The recruits that he finally furnished were "entirely unfit to be thrown into a fort likely to be attacked by the Confederates."

Mr. Fox had applied to the Secretary of the Navy before leaving Washington, to have Commodore Stringham take command of the expedition; but that officer declined, as he considered it too late to be successful and likely to ruin the reputation of the officer who undertook it!

The hiring of three tugs was intrusted to Russell Sturgis, who obtained them with great difficulty on account of the danger of going to sea, and the Government had to pay the most exorbitant prices for them. These tugs were the "Yankee," the "Uncle Ben," and the "Freeborn." The "Yankee" being fitted to throw hot water. Mr. Fox received all the aid he desired in the mercantile line, and supposed that the naval vessels were all hurrying to the appointed place of meeting off Charleston.

Now on March 13th, 1861, the "Powhatan" came from sea into New York harbor. She was surveyed and found unfit for further service. Orders came from the Navy Department to put her out of commission, give the officers leave of absence, and send her crew to the receiving ship. On April 1st the stores were all landed, the ship stripped, officers granted leave of absence, crew sent to the receiving ship, and the vessel put out of commission.

To read the account of the naval historian (Boynton), the Navy Department depended on the "Powhatan" for the success of this expedition, yet on the 2d of April she was lying at the Navy Yard a "sheer hulk," preparing to go into dock!

Mr. Fox states that the "Powhatan," Captain Mercer, sailed on the 6th of April; the "Pawnee," Commodore Rowan, on the

9th; the "Pocahontas," Captain Gillis, on the 10th, the "Harriet Lane," Captain Faunce, on the 8th, the tug "Uncle Ben," on the 7th, the tug "Yankee" on the 8th, and the "Baltic," Captain Fletcher, on the 8th; rather an unusual way for an expedition to start out, and calculated to cause a failure even if there were no other obstacles in the way. Three army officers accompanied the troops.

Soon after leaving Sandy Hook a heavy gale set in, and continued during most of the passage to Charleston, and the "Baltic," the fastest and staunchest vessel, only arrived off Charleston harbor on the 12th of April, and communicated with the "Harriet Lane," the only vessel that had arrived before her. At 6 A. M. the "Pawnee" arrived, and Mr. Fox went on board of her and informed Commander Rowan of his orders to send in provisions, asking him to stand in towards the bar.

Commander Rowan replied "that his orders required him to remain ten miles east of the light and await the arrival of the 'Powhatan,' and that he was not going into the harbor to inaugurate a civil war." Mr. Fox then stood in towards the bar with the "Baltic" and the "Harriet Lane." As these vessels showed themselves, heavy guns were heard up Charleston harbor and the smoke from the batteries which had opened upon Sumter was distinctly visible. Fox then turned and stood towards the "Pawnee," intending to inform Commander Rowan of the state of affairs, and met him coming in. Rowan hailed and asked for a pilot, declaring his intention of standing in and sharing the fate of his brethren of the Army. Fox went on board the "Pawnee" and informed the Commander that the Government did not expect such gallant sacrifice, having settled naturally upon the policy indicated in the instructions to Captain Mercer and himself.

No other naval vessels arrived that day except the "Pocahontas," but the steamer "Nashville" and a number of merchant vessels arrived off the bar and awaited the result of the bombardment, thus leading the people of Charleston to suppose that there was a large naval fleet lying off the bar.

Meanwhile the weather continued very bad, with a heavy sea. Neither the "Pawnee" nor the "Harriet Lane" had the necessary boats to land men or provisions, and it is very clear to the writer that any attempt to have done so would have been madness in the face of that sea and the enemy's fire. In fact, the expedition was useless from the time the first gun was fired at Sumter. It could only have been successful provided the water had been

smooth, and the boats could have reached the fort late at night.

The moment the Confederates knew of the arrival of vessels off the bar, the bombardment commenced, and there was no stopping it then in the excited condition of the Southerners. They had been looking for the opportunity for weeks, and having found it they made the most of it, and did what they so longed to do—fired on the fort and flag which had stood there so many years to protect them.

All this time Mr. Fox was awaiting the arrival of the "Powhatan." Finding that she did not appear he went in the offing and made signals all night, so that she might find the "Baltic" in case she should arrive. The morning of the 13th was thick and foggy with a very heavy ground swell on, and the "Baltic," feeling her way in, ran aground on Rattlesnake Shoal, but got off without damage, and was obliged by the heavy swell to anchor in deep water, several miles outside of the "Pawnee" and "Harriet Lane."

One gallant army officer (R. O. Tyler), though suffering from seasickness, as were most of the troops, organized a boat's crew and exercised them for the purpose of having at least one boat (in the absence of the "Powhatan") that could go to the relief of Fort Sumter—as if one boat pulled by raw recruits could ever cross the bar, much less reach the fort under such a fire. But fortunately the adventure ended where it began, and no boat was sent.

In the morning a great volume of black smoke burst forth from Fort Sumter, through which the flash of Major Anderson's guns could be seen replying to the Confederates. The quarters in the fort were on fire, but most of the officers thought it to proceed from an attempt to smoke out the garrison with fire-rafts," as if the buildings of the officers inside the fort with all their inflammable material would not make smoke enough without the addition of fire-rafts!

It was the opinion of the naval officers that no loaded boats could reach Sumter in that heavy sea. The tug-boats, like everything else in this expedition, had gone astray, and it was determined to seize a schooner lying at the bar with a load of ice, fill her with stores and men and send her on the following night to the relief of Sumter. The records do not say who proposed this scheme—for what chance could this slow-moving vessel have had under a fire which eventually caused the surrender of the fort itself? Fortunately this plan was also abandoned, and on the 14th Major Anderson evacuated, and with his troops was taken north on the steamer "Baltic."

This ended the Sumter campaign.

It is no more than justice to Mr. Fox to state what his plan really was, and we will give his own words :

"My plan for supplying Sumter required 300 sailors, a full supply of armed launches and three tugs. The 'Powhatan' carried the sailors and launches, and when this vessel was about to leave in obedience to an order from the Secretary of the Navy, two officers, Lieut. D. D. Porter, U. S. N., and Captain M. C. Meigs, U. S. Engineers, presented themselves on board with an order from the President of the United States authorizing the former to take any vessel whatever in commission, and proceed immediately to the Gulf of Mexico.

"This order did not pass through the Navy Department, and was unknown to the Secretary of the Navy, and when signed by the President he was not conscious that his signature would deprive me of the means to accomplish an object which he held to be of such vital importance."

To tell the rest of this history we must further quote Mr. Fox's report :

"The tug 'Freeborn' was not permitted to leave New York; the tug 'Uncle Ben' was driven into Wilmington by the violence of the gale and eventually captured by the Confederates; the tug 'Yankee' reached Charlestown a few hours after the 'Baltic' left for New York with Major Anderson's command on board."

Mr. Fox from his statement seems to have relied on the "Powhatan" to assist him, and considers her absence to be the cause of failure.

On the 2d of April he had not even received the written authority to undertake this expedition, and no decision had been come to by the President until April the 4th, and it was not until the morning of April 6th that a telegraphic dispatch was received by Captain Foote (commanding New York Navy Yard) as follows: "Prepare the 'Powhatan' for sea with all dispatch. (signed) Gideon Welles." On April 1st President Lincoln wrote an order to put the "Powhatan" in commission. On April 2d the work commenced on her.

On April 5th she went into commission, and on April 6th sailed for the relief of Fort Pickens, under the command of Lieut. D. D. Porter.

On the day (April 6th) when a telegram came for Mr. Welles to prepare the "Powhatan" for sea with all dispatch, that vessel was about to sail on another mission. On the 7th, came orders for Captain Mercer to take command of the expedition to Charleston.

Supposing that the "Powhatan" had been taken in hand from her "sheer-hulk" condition on the 6th, and working on the best time, she could not have more than been ready by the 11th. She could only at the best make eight knots an hour. Charleston being 630 miles distant would require 79 hours, or three days and seven hours to make the passage. This would

have brought them to Charleston only on the evening of the 14th, when Sumter was past all help.

Mr. Fox says he depended on her splendid launches and 300 sailors. The "Powhatan" had two wheel-house launches in the shape of a half watermelon, which were perfectly useless for want of repair, and sank when they were put in the water off Fort Pickens. She had two large quarter boats that would carry 35 men each, and two smaller boats that would carry about 25 men each in smooth water. Then where could Mr. Fox find the launches and men on the "Powhatan?" Mr. Fox was not at all responsible for the failure, in fact no one connected with the Navy was to blame. The absence of the "Powhatan" had nothing to do with it. It was mostly due to the inaction of the Government, the disagreement between Army and Navy officers as to the feasibility of the plan, and the length of time elapsing between the period when Mr. Fox first proposed to relieve Fort Sumter and the time when he was allowed to get off. No one seemed desirous of helping him, and most of those whose business it was to get off the expedition threw obstacles in its way.

Whether it would have succeeded under the most favorable circumstances is doubtful, for an enemy that could (and did during the next four years) hold all approaches to Charleston against our heaviest iron-clads would not have been likely to fail in keeping out a few heavily-laden boats and tugs, with their high-pressure steam announcing their presence. We know now that boats and tugs would have been sacrificed in any attempt to relieve Sumter.

Mr. Fox, himself, manifested great courage in volunteering for such desperate service, which finally brought him into connection with the Navy Department, where his services were at that time much required. Mr. Welles showed a loyal spirit in this attempt to succour those whom the country thought should be relieved at all hazards, and he needed no defense.

The cause of the contretemps which directed the "Powhatan" from the Sumter expedition was in the organization of the Navy Department, which, with the bureau system existing then as it exists to-day, was unfit to carry on a great war. The Secretary wanted at his side an Advisory Board, or what was afterwards established, a clever man as Assistant Secretary.

The fact of sending a civilian down to Charleston to direct the movements of a naval commander, without any authority of law, was all wrong, no matter if the person had once been in the Navy. This produced complications from the very first; for no naval officer who was acquainted

with the forms and precedents of the Navy would submit quietly to what he might well consider a reflection on his corps.

There are plenty of reasons why such an expedition should fail without referring to such as did not exist, and as a large portion of history (which should have been devoted to important duties performed by naval officers) has been taken up in showing that the preparations of the Navy Department for the succor of Fort Sumter were interfered with, it is time the matter was made plain. The quotations from Mr. Fox's report explain it all.

It was fortunate that nothing was attempted after the few vessels of the expedition met at the bar, and the fact that the Confederates opened fire on Sumter the moment the vessels did appear off Charleston was proof positive that they were prepared, not only to use up Sumter, but any number of vessels that should attempt to enter the harbor.

As the "Powhatan" has so constantly been quoted by a naval historian (Boynnton), and he has stated certain matters in a way not altogether historical (though no doubt with a most sincere desire to write the truth), it may not be amiss to give a little sketch of *how* the "Powhatan" was spirited away and sent on another mission.

It is part of the history of the war, has been only incidentally alluded to by the writer, and will not in the least detract from the Fort Sumter relief expedition.

Mr. Lincoln had been installed in the Presidential office, and almost immediately after the question of relieving Fort Sumter was proposed to him (on the 12th of March), as will appear from Mr. Fox's letter, which has been quoted.

Captain Montgomery Meigs, of the Engineer Corps, had been thinking of a plan by which the Government might vindicate its authority over its own forts; and as Fort Pickens was very weakly manned by Capt. Slemmer and 25 men, and was in danger every hour of falling into the hands of the Confederates, he proposed an expedition for its relief by throwing in troops and mounting heavy guns.

Neither Mr. Seward nor Captain Meigs believed in the plan to succor Fort Sumter. In their opinion the opportunity had passed. This seemed to be the opinion of leading naval and military men and the surrender of Sumter was already looked for at an early day; many thinking it better that it should be evacuated to prevent bloodshed, and others not dreaming any plan of relief feasible.

Mr. Seward was anxious that the Administration should show its determination to maintain its authority over its forts, no matter where situated

The Sumter expedition had been settled on by the Cabinet in council, and to Secretary Welles was left the selection of the ships and the manner of conducting the whole matter.

Captain Meigs's plan, as proposed to Secretary Seward, was to charter a large steam transport that would carry 600 troops and stores, also artillery of all kinds, and with a naval vessel to protect the landing. Mr. Seward was new to all this kind of business, and was slow to act, though precious time was flying. Captain Meigs conferred with Lieut. D. D. Porter, who conceived the plan perfectly feasible, and showed a desire to go on the expedition: all of which was reported to the Secretary of State. Lieut. Porter was at that time under orders for California, and was to have left for New York to meet the California steamer on April 1st. In two or three hours he would have taken the train. A note was sent him at 2 P. M., notifying him that the Secretary of State wished to see him at his office immediately. On his arrival at the office the Secretary asked him if he knew how the Administration could prevent Fort Pickens from falling into the hands of the Confederates.

He answered promptly that he did know, and then suggested the plan proposed by Captain Meigs. "You are the very man I want," said the Secretary. "Come with me to the President." At that moment Captain Meigs came in and accompanied the party.

Those familiar with the early events of the Rebellion will remember that Fort Pickens was under the command of Captain Slemmer, of the Army, who held it with a handful of men, and was preparing to defend it against a large force of Confederates on the Pensacola side, who were daily augmenting their numbers, and making preparations to bombard the fort, as had been done at Sumter.

Pensacola, with its well-equipped Navy Yard, was too tempting a bait for the Confederates to leave, and no doubt the General commanding was ordered to put forth all the energy and science known in the art of war to encompass the destruction or capture of the formidable fort.

Lieut. Porter told the Secretary of State that if the government would give him command of the "Powhatan" (then lying in New York) and supply the troops, he would guarantee the safety of the fort. It was not known then to any of the party that the "Powhatan" was lying at the Navy Yard "stripped to a gantline," and that on or about that day she had gone out of commission preparatory to being repaired, and would be in the dry-dock in a day or two.

in commission and all ready for service, which should have been the case.

When the party reached the executive mansion, the President was evidently prepared to receive it, and was well acquainted with all the plans that had been proposed. He had talked with Mr. Seward and Captain Meigs, and was so heartily interested in the scheme, that he agreed to all that was proposed.

There was none of that indecision or "apparent inaction" (which is spoken of in Boynton's Naval History of the War) from March 4th to April, 1861. Mr. Lincoln was either belied when that expression was used, or he had learned better. He had for his advisers old men who moved and thought slowly, and his military and naval advisers were evidently more cautious than there was any justification for.

When the President was told that the "Powhatan" would have to get ready very quickly, the Commander (Mercer) changed for Lieutenant Porter, and all the orders written without the knowledge of the Navy Department (for the reason that everything would be carried on in that department in the usual red-tape style, and the whole matter would be known to the Confederates by being flashed across the wires an hour after Secretary Welles got an order to prepare the ship for sea), he merely remarked "it seems to me like a very irregular proceeding, but, Mr. Secretary, do not let me burn my fingers. I want that fort saved at all hazards."

Then Mr. Seward explained to him how, as President and Commander-in-Chief of the Army and Navy, he could issue orders from the executive mansion, without passing them through an intermediary, and that he (the Secretary of State) would satisfy Mr. Welles of the necessity of the present way of proceeding.

The President at that time had not the faintest idea that the Secretary of the Navy intended to use the "Powhatan," nor did he know the name of any vessel intended for the Sumter expedition, neither did the Secretary of State or any of the party.

It is a well-known fact now that all the orders issued by the Navy Department for the relief of Sumter were telegraphed to Charleston an hour after they were press-copied; for it was assumed at that time, when treachery was rampant in every branch of the Government, and when the insurrectionists had their spies and emissaries everywhere about the Government offices, that every man who did not openly declare his hostility to the Government was sound on the question of loyalty. It is now known that some of the meekest-looking supporters of the Government were its greatest enemies.

Secretary Seward evidently understood

the situation, and determined that *his* expedition should not come to grief for want of proper secrecy. There was no wavering then on Mr. Seward's part, there was not a particle of hesitation on the part of the President, there was no long talk to prove the practicability of the expedition. The success of the affair was all taken for granted, and in half an hour everything was settled. How was it then that the President has been represented as hesitating, and Mr. Fox had to work so hard and travel to and fro until his patience was almost exhausted?

He was twenty-five days in accomplishing what was done in this instance in half an hour. The vacillation in the Sumter case did not rest with the President, but with those who tried to shift their want of success to the President's shoulders. It was, in fact, owing to circumstances which none could foresee.

After the President had decided that there was nothing to be done but write the necessary orders, Lieut. Porter wrote out and Capt. Meigs transcribed them.

They were as follows :

"EXECUTIVE MANSION, }  
April 1st, 1861. }

"LIEUT. D. D. PORTER will take command of the steamer 'Powhatan,' or any other United States steamer ready for sea, which he may deem most fit for the service to which he has been assigned by confidential instructions of this date.

"All officers are commanded to afford him all such facilities as he may deem necessary for getting to sea as soon as possible. He will select the officers who are to accompany him.

ABRAHAM LINCOLN."

"Recommended, }  
"WM. H. SEWARD." }

"EXECUTIVE MANSION, }  
April 1st, 1861. }

"LIEUT. D. D. PORTER, U. S. NAVY :

"SIR: You will proceed to New York and with the least possible delay assume command of any naval steamer available. Proceed to Pensacola Harbor, and at any cost or risk prevent any expedition from the mainland reaching Fort Pickens or Santa Rosa.

"You will exhibit this order to any naval officer at Pensacola if you deem it necessary after you have established yourself within the harbor, and will request co-operation by the entrance of at least one other vessel.

"This order, its object, and your destination will be communicated to no person whatever until you reach the Harbor of Pensacola.

ABRAHAM LINCOLN."

"Recommended, }  
"WM. H. SEWARD." }

"WASHINGTON CITY, }  
April 1st, 1861. }

"SIR: Circumstances render it necessary to place in command of your ship, and for a special purpose, an officer who is duly informed and instructed in relation to the wishes of the Government, and you will therefore consider yourself detached; but in taking this step the Government does not intend in the least to reflect upon your efficiency or patriot-

ism; on the contrary, have the fullest confidence in your ability to perform any duty required of you. Hoping soon to be able to give you a better command than the one you now enjoy, and trusting that you will have full confidence in the disposition of the Government towards you,

"I remain, ABRAHAM LINCOLN."

"CAPTAIN SAMUEL MERCER, U. S. N."

"A true copy."

"M. C. MEIGS, Chief Engineer of expedition under Col. Brown."

"EXECUTIVE MANSION, }  
April 1st, 1861. }

"TO THE COMMANDANT OF THE NAVY YARD, NEW YORK :

"SIR: You will fit out the 'Powhatan' without delay. Lieut. Porter will relieve Capt. Mercer in command of her; she is bound on secret service, and you will under no circumstances communicate to the Navy Department the fact that she is fitting out.

ABRAHAM LINCOLN."

"WASHINGTON, EXECUTIVE MANSION, }  
April 1st, 1861. }

"All officers in the Army and Navy to whom this order may be exhibited, will aid by every means in their power the expedition under Colonel Harvey Brown, supplying him with men and material, and co-operating with him as he may desire.

ABRAHAM LINCOLN."

"A true copy."

"M. C. MEIGS,

"Chief Engineer of the expedition."

Similar orders were issued to Major-General Scott and the Adjutant-General of the Army, directing that everything should be done to make the expedition a success.

Then Capt. Meigs and Lieut. Porter called on Gen. Scott, and after a very short time he issued the necessary order for the troops to go in a chartered steamer, and there was nothing more wanted.

That night Lieut. Porter left for New York, and at 10 o'clock A. M., on April 2d, presented himself to Capt. Foote (who was acting Commandant of the Navy Yard at that time), and gave him the order to fit out the "Powhatan;" which order Foote received with much surprise at this unusual way of doing business. It required three hours to convince Capt. Foote that he must obey the President's order, and that he was not to telegraph to Secretary Welles for instructions in this embarrassing position. He at last consented to take Capt. Mercer into the conference, give him the letter for himself, and be guided by his answer. Capt. Mercer considered it absolutely necessary for Foote to carry out the President's orders to the letter. He was rather pleased with the idea of getting rid of an old, worn-out ship, and offered to stay by the vessel as her Captain, fit her out, and take her down the harbor as far as Staten Island, in order the better to conceal the intended movement. Capt. Meigs also urged Foote to obey the President's order, and he finally decided to do so, and commenced the work

of fitting out the "Powhatan" with all possible dispatch.

The "Powhatan's" engines were all apart, and they were preparing to hoist out her guns and take her into dry-dock, at 2 o'clock P. M. of that day (April 2d), when the order was issued to employ a double force of men and work them day and night until she was ready for sea. The officers who had been granted leave were telegraphed for, and on the fourth the crew was put on board. No repairs had been put on the vessel—not a pound of paint, not a new rope rove, nor a sail mended. She was in a shocking condition for any service; there was no time even to repair her boats, which were leaky (those fine boats depended upon to land the troops and provisions at Fort Sumter). On the 6th of April, four days after the "Powhatan" was taken in hand, steam was up, everything in place, the pilot on board, and the lines ready to cast off. Then a telegram came to Capt. Foote from the Navy Department: "Prepare the 'Powhatan' for sea with all dispatch." Here was a dilemma! Again Foote wanted to telegraph the state of affairs to the Secretary of the Navy, and stop the ship until he could hear from the Department. But his attention was again and again drawn to the President's order, and at last he succumbed.

Lieut. Porter stepped on board the "Powhatan" in citizen's dress, and was unobserved among the crowd of people who were bidding their friends good-by. He went into the cabin and locked himself in the Captain's state-room. The ship steamed away from the dock at one o'clock, P. M. on the 6th of April, going as far as Staten Island before Captain Mercer left her.

The moment the ship had left the yard, Foote could contain himself no longer, and he at once telegraphed to Secretary Welles that the "Powhatan" had sailed in command of Lieut. Porter under orders from the President.

The moment this telegram was received, Secretary Welles went straight to the President to request an explanation, at the same time informing him that he had depended upon the "Powhatan" to carry out his orders concerning the relief of Fort Sumter. The President was astonished, as he did not even know that the "Powhatan" had been connected with that expedition. Mr. Welles was much excited at what he considered Mr. Seward's interference with his affairs, and demanded the ship restored to him. Secretary Seward was sent for in haste, and when he came into the President's presence he found Secretary Welles in as great a state of excitement as his placid temperament would admit of.

"Give up the ship, Seward," said Mr. Lincoln, "we will get another." And Mr. Seward consenting to do so, a telegram was sent to Lieut. Porter as follows :

"Give the 'Powhatan' up to Capt. Mercer.  
"April 6, 1861. SEWARD."

While the ship was lying off Tompkinsville, Staten Island, waiting for the boat to return that had carried Capt. Mercer on shore, a swift little steamer came alongside, and Lieut. Roe of the Navy delivered Mr. Seward's telegram.

Lieut. Porter read it, and decided that there was only one thing for him to do, and that was to disobey it. The artillery for the troops was on board the "Powhatan," the steamer "Atlantic," with the troops on board, he supposed had sailed at 12 o'clock, and was ten miles ahead of him. His stopping to restore the ship would make the expedition fail, his orders were from the President and he determined to obey them. He telegraphed back :

"I received my orders from the President, and shall proceed and execute them.  
"April, 6, 1861. D. D. PORTER."

The boat was hoisted up, the ship's head put seaward, and the "Powhatan" proceeded on her voyage.

The weather was dreadful, but on the 17th of April the "Powhatan" arrived off Fort Pickens and found that the chartered steamer "Atlantic," with the Army contingent, had arrived the day before. Lieut. Porter stood in towards the bar and had crossed it and was standing for Fort McRea, with his crew at their guns, when Capt. Meigs in a large Government vessel laid right in the track of the "Powhatan" and signalled that he wanted to communicate. The ship was stopped and Capt. Meigs came on board, handing to Lieut. Porter a protest against his going inside the harbor, on the ground that Fort Pickens was unprepared for an attack from the enemy's batteries, and if the "Powhatan" entered it would draw their fire upon the fort! Capt. Meigs had obtained, before he left Washington, authority from the President to take this course of action in case the officer commanding the troops objected to the ship going in.

There was nothing to be done but listen to Col. Harvey Brown's plea, and obey the implied order of the President; and thus the opportunity was lost of reasserting the authority of the Government to have its vessels go in and out of any port as it pleased their commanders to do. As it happened there was no actual necessity for the ship to go inside, but that was not the question: it was whether the Government had any right to its own forts, ships and har-

bors; and in starting to enter the harbor, Lieut. Porter wished to test how far the Government rights would be respected, and if not respected to cause them to be so by the power of his guns.

The President and the Secretary of State had shown great decision in fitting out this expedition, and, for the times, great moral courage in permitting it to go on, with the certainty that the guns of the "Powhatan" would be liberally used in dealing with the insurgents. But the timid policy of Col. Brown and his authority to prevent the commander of the "Powhatan" from entering Pensacola harbor, took all that was exciting out of this expedition, and turned what would have been a handsome dash into simply convoy duty.

After Lieut. Porter had discussed Col. Brown's protest with Capt. Meigs, and carefully considered the matter, he reluctantly turned the "Powhatan's" head toward the steamer "Atlantic," and anchored within 20 fathoms of the beach, with hawsers to keep her broadside bearing on the Navy Yard. The work of unloading the "Atlantic" went on in safety under the guns of the "Powhatan," and that night 600 soldiers were lodged in the fort, with provisions, artillery and other munitions of war sufficient to withstand a siege. Fort Pickens could now bid defiance to the Confederate soldiers, who stood in groups on the opposite shore watching the proceedings, but with no apparent intention of interfering for the present. This indifference arose from the fact that they had no ammunition to use in the guns which they had found in the Navy Yard—but they were biding their time and would no doubt be heard from when the opportunity offered.

On the second day after the arrival of the "Powhatan," a flotilla, composed of steam tugs, schooners and large launches, filled with soldiers, was seen to be coming from the direction of Pensacola, and heading for the two ships lying outside of Santa Rosa Island. There were about twenty-five of these small vessels, but the number of troops was not known.

This flotilla approached to within a mile and a half of the beach on Santa Rosa Island, and as they were either going to land there, or reinforce the insurrectionary army, it was time to stop their approach. The 11-inch gun on board the "Powhatan" was cast loose, and a shell fired, which burst directly over the middle of the flotilla. The consequence was a rapid retreat of the expedition towards Pensacola. No doubt they had taken the "Powhatan" and "Atlantic" for two store-ships which they expected to capture. Perhaps it was intended to attack Fort Pickens, for the troops from the "Atlantic" had been landed

at night, and had not been seen by the enemy.

The "Powhatan's" 11-inch gun was re-loaded and pointed in the direction of the Navy Yard, where groups of idle soldiers were watching the operations. It was fired, and the shrapnel shell exploded in the midst of the yard, and at once cleared it of all occupants.

If the Confederates wanted an excuse to commence hostilities the opportunity had been given them; but the fact was, they were not at all prepared for such a contingency, as the troops in Charleston were, and after a year's occupation of Pensacola never advanced sufficiently with their fortifications to keep three steam frigates out of their harbor.

By the 20th of April Fort Pickens was so well protected that it could bid defiance to all the Confederate forces in that quarter, and so it remained until the end of the war.

Pensacola was evacuated by the Confederates about a year afterwards, on a scare—they thinking that Farragut's fleet was on the way to take it. The Confederates knew that they could not hold out twenty minutes against a close naval attack, and therefore wisely decamped in time. Thus the harbor of Pensacola again fell into the hands of the Government, and was of great use to the Gulf blockading squadron as a base for its operations.

The above is a strict account of the relief of Fort Pickens; there were no mistakes made, nor any hitches anywhere. In seventeen days after the matter was first broached to the President Fort Pickens was reinforced with troops enough to hold it, and armed with heavy guns which could far outmatch any possessed by the enemy. With the exception of the attack of the "Niagara," "Richmond" and Fort Pickens on Fort McRae and other forts, Nov. 22, 1861, there were no attempts made to disturb the enemy, who, as long as he remained unmolested, followed a do-nothing course, which in the end was quite as effective as if he had built a thousand-gun fort.

Mr. Boynton, a very clever and pleasant historian, and who has written the only book that has in any way done justice to the Navy, gives a different version of this affair. But Mr. Boynton was not altogether fair when anything regarding the claims of the Navy Department was concerned; he received his information from that source and naturally followed it as that to be put in his history, whereas a historian should leave nothing undone to obtain a true statement of affairs. Mr. Boynton while writing his history held an appointment under the Navy Department, which he could only hold as long as his writings were acceptable to its chief; not that we mean to say that he sur-

rendered the right of an historian to be impartial, but that in his close connection with the Navy Department, where articles were prepared for his book, he could not very well reject or revise them without severing his relations with a party who had given him an easy office, in order that he might have time to devote himself solely to writing his Naval History. Many officers of the Navy say it is simply a history of the Navy Department, but in this we do not altogether agree, for it has given the most vivid accounts of naval battles yet written, and has in *most* cases done full justice to those who made themselves prominent in the war.

It was only in cases where Mr. Boynton felt called upon to adopt the views of the Navy Department, and not follow the records, that he failed in his history.

In the case of Fort Pickens he followed the information he received from Secretary Welles, who really believed that what he asserted was a fact, viz.: that the expedition to relieve Fort Pickens was all useless, as he had provided against any contingency by instructing the Commander of the Gulf Squadron to hold himself in readiness to assist Fort Pickens in case it was threatened. He, however, did not provide for one thing—the indifference of an officer whose sympathies were with the South; who, in undertaking to carry out the Secretary's order, did it with a reservation, not to do anything to offend his friends on the other side.

Mr. Welles' orders were never carried out. The commander of the squadron laid four miles away from the fort, where he could scarce see a signal by day or by night, and with a strong wind against the boats, he could not have reached the fort to relieve it under two hours after the attack could have been made, even if he desired to do so.

As far back as January, 1861, the question of "State sovereignty" and "no coercion" was discussed in Mr. Buchanan's cabinet, and as the "no coercion" party was in the majority he was influenced by this policy, and it was owing to it and to outside sympathizers that the President refused to re-enforce Sumter. These Southern sympathizers around the President left nothing undone to delude him with the idea of the impolicy of attempting to retain any of the Southern forts by force, and it was in consequence of these representations that the following telegram was sent on January 29, 1861:

"TO CAPTAIN JAMES GLYNN, *commanding the 'Macedonian'*; CAPT. W. S. WALKER, *commanding the 'Brooklyn,' or other naval officers in command*; and LIEUT. A. J. SLEMMER, *1st Regt. Artillery, U. S. A., commanding Fort Pickens*;

"In consequence of the assurances received from Mr. Mallory in a telegram of yesterday to Messrs.

Bigler, Hunter and Slidell, with a request that it should be laid before the President, that Fort Pickens would not be assaulted, and the offer of such an assurance to the same effect from Col. Chase, for the purpose of avoiding a hostile collision, upon receiving satisfactory assurances from Mr. Mallory and Col. Chase that Fort Pickens will not be attacked, you are instructed not to land the company on board the 'Brooklyn' unless said fort shall be attacked or preparations shall be made to attack it. The provisions necessary for the supply of the fort you will land. The 'Brooklyn' and other vessels of war on the station will remain, and you will exercise the utmost vigilance and be prepared at a moment's warning to land the company at Fort Pickens, and you and they will instantly repel any attack on the fort.

"The President yesterday sent a special message to Congress, communicating the Virginia resolutions of compromise. The commissioners of the different States are to meet here on Monday, February 4th, and it is important that during their session a collision of arms should be avoided, unless an attack should be made or there should be preparations for an attack. In either event the 'Brooklyn' and the other vessels will act promptly. Your right and that of other officers in command at Pensacola freely to communicate with the Government by special messenger, and its right in the same manner to communicate with yourselves and them, will remain intact as the basis of the present instructions.

"J. HOLT, Secretary of War.

"J. TOUCEY, Secretary of the Navy."

There was no mistaking the purport of this telegram. The Confederates could assemble any number of troops they pleased at Pensacola, erect batteries, and prepare for any contingency, without the commanders of our naval vessels being able to interfere with them; at least, so these instructions were construed by Capt. Adams, the commanding naval officer, and when Gen. Scott (subsequent to Mr. Lincoln's inauguration) sent an order to land the company of troops that was on board the "Brooklyn" and place them in Fort Pickens, Capt. Adams refused to obey the order, and tried to justify himself on the ground that it would be violating the armistice which had been entered into with the Confederate leaders.

How could the government hope to put down a rebellion in the South when there was such rebellion against its orders by a captain in the Navy? The order directing the landing of these troops was dated March 12, 1861.

On April 1, 1861, Captain Adams, in a letter addressed to the Secretary of the Navy, says:

"I declined to land the men as it would be in direct violation of the orders of the Navy Department, on which I was acting; the orders to land the troops may have been given without a full knowledge of the condition of affairs—there would be no justification in taking such a step without the clearest orders from the proper authority—it would be regarded as a hostile act, and could be resisted to the utmost. It would be considered by Gen. Bragg and his officers not only a debarkation, but an act of war: it would be a serious thing to

bring on, by any precipitation, a collision which may be against the wishes of the Department. Both sides are faithfully observing the agreement entered into by the U. S. government with Mr. Mallory and Col. Chase. This agreement binds us not to reinforce Fort Pickens unless it shall be attacked or threatened; it binds them not to attack it unless we should attempt to reinforce it.

"I saw Gen. Bragg on the 30th ultimo, who reassured me that the conditions on their part should not be violated. While I cannot take on myself, under such insufficient authority as Gen. Scott's order, the fearful responsibility of an act which seems to render civil war inevitable, I am ready at all times to carry out whatever orders I may receive from the Hon. Secretary of the Navy.

"In conclusion, I beg you will please to send me instructions as soon as possible, that I may be relieved from a painful embarrassment.

"Very respectfully,

"Your obedient servant,

"H. A. ADAMS, Captain,

"Senior officer present."

This officer's motto should have been "Festina lente." He was pursuing just the course that would soonest throw Fort Pickens into the hands of the Confederates. And the date of writing (April 1, 1861), was the very day President Lincoln started on foot the Fort Pickens expedition. There were only twenty-five men in the fort under Capt. Slemmer, and at that time Naval Historian Boynton states that Mr. Welles had taken all the necessary precautions to secure Fort Pickens against an attack from the enemy.

It was not until April 6, 1861, the day on which the "Powhatan" and "Atlantic" left New York for Pensacola, that Mr. Secretary Welles answered the letter of Capt. Adams as follows:

"NAVY DEPARTMENT, April 6, 1861.

"TO CAPT. H. A. ADAMS, *Commanding Naval Force off Pensacola.*

"SIR—Your dispatch of April 1st is received. The department regrets that you did not comply with the request of Capt. Vodge to carry into effect the orders of General Scott, sent out by the 'Crusader' under the orders of this department.

"You will immediately, on the first favorable opportunity after the receipt of this order, afford every facility to Capt. Vodge by boats and other means to enable him to land the troops under his command, it being the wish and intention of the Navy Department to co-operate with the War Department in that object."

"I am, respectfully yours,

"GIDEON WELLES.

"Secretary of the Navy."

These orders were sent to Capt. Adams by a special messenger (Lieut. John L. Worden), who crossed the rebellious States to deliver them. He committed the orders to memory, in case the papers should be lost or he be arrested, but he arrived in safety, and delivered the document to Capt. Adams on the 12th of April. Capt. Vodge's company was immediately landed at Fort Pickens.

Thus from the time Capt. Vodge arrived

and was placed on board the "Brooklyn," and from the time of General Scott's orders to land the troops, dated March 12, 1861, twenty-four days elapsed before any thing was done to relieve Fort Pickens, Capt. Slemmer remaining in command of the fort all that time with only twenty-five men. Where, then, is the protection that was granted by the Navy Department?

Three days after Mr. Welles issued his instructions to have General Scott's orders obeyed, the steamer "Atlantic," chartered by Capt. Meigs, arrived and threw 600 men into the fort, with all that was necessary to resist a seige, and the next day the "Powhatan" was there to protect the fort with her batteries.

The military relief that was placed in the fort from the "Brooklyn" (75 men) was not at all adequate to its defence against Gen. Bragg's forces; not one man was ordered by the Navy Department to be landed from the ships at that time anchored off Pensacola, and this help never would have been afforded, for on or about the 20th, when a concerted signal was said to have been made for succor, the "Powhatan's" boats with marines were the only ones that responded to it. One of these boats got alongside the flagship by mistake and was detained there until daylight, with the remark that they knew nothing about concerted signals!

The historian Boynton rather sneers at the manner in which Pickens was relieved by the "Powhatan" and "Atlantic," and reflects on the brilliancy of the exploit. Certainly there was nothing brilliant about it, but it was successful, and it must have reassured the Northern people when they heard that there was some decision still left in President Lincoln's Cabinet, when they saw that a merchant steamer had thrown 600 men into Fort Pickens and that a frigate was protecting them with her guns; best of all, that the President had asserted his right to man and use the Government forts as he pleased.

If there was any compact between the Confederates and the Government, it was broken on the arrival of the "Powhatan"—for she fired upon them the moment they attempted a water expedition towards Santa Rosa Island.

All the claims for saving Fort Pickens from the enemy, put forward by anyone in favor of the Navy Department, are null and void.

Capt. Meigs puts the matter truthfully and squarely, when in answer to questions concerning the expedition, he stated:

"An order was issued on the recommendation of Secretary Seward, detaching the 'Powhatan' from the Sumter expedition, and sending her to Fort Pickens.

"In conclusion permit me to remark that this, the first successful military expedition of the war, originated with Mr. Seward; until it sailed the United States had declined every where."

The above account, in relation to the steps taken to relieve Sumter and Pickens, is perfectly correct, and the attempt of any one to detract from the credit of the Fort Pickens expedition is unworthy of consideration.

Several attempts were made to credit the Navy Department with the merit of saving Fort Pickens to the Union, and the same authority attempted to show that the Fort Pickens expedition caused the failure at Sumter. There was no necessity for making an excuse for the Secretary of the Navy, Mr. Fox, or anybody else who was concerned in the attempt to rescue Sumter. War was a foregone conclusion with the leaders at Charleston, but they still retained sufficient right feeling to wish to have some valid excuse for striking the first blow. Mr. Secretary Welles gave them the opportunity by sending down the relief vessels: the first blow had to come and the sooner it came the better.

No one can cast any reflection on Secretary Welles or Mr. Fox for the failure (if it may be so called) at Charleston. It was a matter beyond their control; they were both loyal men and did all they could to bring about the relief of the men in Fort Sumter, and their loyalty and determination to put down the rebellion was unceasing during a four years' war, which required the most eminent ability to conduct the Department in which each of them exercised that control best suited to his capacity.

If Mr. Secretary Welles does not deserve the credit of succoring Pickens in time, it is because he had not an officer in command of the squadron at Pensacola who would anticipate orders, or who was enough interested in the Union cause to take the responsibility of using active measures without instructions. Secretary Welles also labored under the disadvantage of having the general of the army sending down orders to the captain of the company on board the "Brooklyn" to land, without properly passing his orders through the Navy Department, so that there might be perfect concert of action between the commander of the troops and the commander of the vessel.

When Mr. Welles was called on to act he did act promptly, and if late in doing so it mattered very little, for the expedition inaugurated by Mr. Seward arrived a day or two after, and made the place so secure that no Confederate force could have any effect upon it.

These two places, Sumter and Pickens, on which at one time so much depended

(whether war or peace would rule the day), are too prominent subjects to pass over lightly, and if the writer has dwelt on the matter longer than the reader may think justifiable, it is because he desired to give a true account of the whole affair.

The operations of the Gulf and East Gulf blockading squadrons were mostly confined to blockading duty, with an occasional smart skirmish with the enemy. The names of the following officers are spoken of as active in the performance of all the duties which fell to their lot in this limited sphere of action: Lieut.-Commander Francis Winslow, Commander Geo. F. Emmons, Lieuts. J. C. Howell and A. F. Crossman, Commander H. S. Stellwagen, Lieut. Abbot, Capt. Cicero Price and Act.-Master Elnathan Lewis.

These officers all did good service, and gave evidence of loyalty and zeal which promised greater usefulness when employed in a wider sphere of action.

The duty in the Gulf was harrassing, and at the same time tedious and monotonous; and if not as brilliant as that performed by the Navy in other localities, it performed its share of the work of putting down the rebellion by maintaining the blockade of the Southern Coast, the most severe duty performed by any officers during the war.

#### GULF SQUADRON, 1861, VESSELS AND OFFICERS.

FLAGSHIP "NIAGARA." Captain Wm. W. McKean, Flag Officer; Lieuts., John Guest, Wm. F. Spicer, J. C. P. De Krafft, Robt. L. May and Edw. E. Potter; Fleet Surg., G. R. B. Horner; Surgeon, J. Foltz; Asst. Surg., James McAllister; Chaplain, C. S. Stewart; Paymaster, G. B. Barry; Masters, J. D. Marvin, James O'Kane, T. L. Swan, H. B. Roberson and Silas Casey, Jr.; Capt. Marines, Josiah Watson; First Lieut., Geo. Butler; Chief Engineer, Robt. H. Long; Asst.-Engineers, D. B. Maccomb, C. B. Kidd, E. A. C. DuPlaine, L. R. Green, R. H. Grinnell, A. H. Fisher and Robt. Potts; Boatswain, A. M. Pomeroy; Gunner, R. J. Hill; Carpenter, John Rainbow; Sailmaker, Stephen Seaman.

FRIGATE "SANTEE." Captain, Henry Eagle; Surgeon, T. M. Potter; Lieuts., James E. Jouett, J. J. Mitchell, B. N. Wescott, James H. Spotts; Act.-Master's Mate, Charles W. Adams; Asst.-Surg., C. H. Burbank; Paymaster, L. Warrington; Midshipmen, Frederick Rodgers, George M. Brown, S. H. Hunt; Boatswain, William Black; Carpenter, Wm. H. Edgar; Gunner, William Carter; First Lieut. of Marines, C. D. Hebb.

STEAMER "RICHMOND." Capt., F. B. Ellison; Lieuts., N. C. Bryant, A. B. Cum-

mings, Robert Boyd, Jr., Edward Terry, Byron Wilson; Surgeon, A. A. Henderson; Asst.-Surgeon, William Howell; Paymaster, Geo. F. Cutter; Boatswain, I. T. Choate; Sailmaker, H. T. Stocker; Carpenter, H. L. Dixon; Gunner, James Thayer; Act.-Master's Mate, H. W. Grinnell; First Lieut. Marines, Alan Ramsey; Chief Engineer, John W. Moore; Asst.-Engineers, Eben Hoyt, J. L. Butler, Wm. Pollard, A. W. Morley, G. W. W. Dove, R. B. Plotts, C. E. Emery.

SLOOP-OF-WAR "VINCENNES." Commander, Robert Handy; Lieut., John E. Hart; Surgeon, S. A. Engles; Paymaster, R. C. Spalding; Asst. Surgeon, Somerset Robinson; Midshipmen, O. A. Batcheller, B. F. Haskin, M. W. Sanders and E. M. Shepard; Boatswain, Jos. Shankland; Gunner, William Wilson; Sailmaker, Nicholas Lynch; Second Lieut. Marines, J. H. Higbee.

SLOOP-OF-WAR "PREBLE." Commander, Henry French; Lieut., William E. Hopkins; Surgeon, Stewart Kennedy; Paymaster, C. P. Wallach; Boatswain, John Bates; Gunner, E. J. Waugh; Carpenter, James Kinneer; Sailmaker, G. A. Wightman.

STEAMER "WATER WITCH." Commander, Wm. Ronckendorff (in August); Lieut., Francis Winslow (in October); Lieuts., J. L. Davis, James Stillwell, C. H. Cushman and Allan V. Reed; P. Asst.-Surgeon, P. S. Wales; Asst.-Engineers, Wm. C. Selden, Reynolds Driver, Edw. Scattergood, A. H. Able.

FRIGATE "POTOMAC." Capt., L. M. Powell, Lieuts., Samuel Marcy, Lewis A. Kimberly; Geo. E. Law; Master, W. S. Schley; Surgeon, J. D. Miller; Asst.-Surgeon, A. O. Leavitt; Paymaster, James D. Murray; Midshipmen, Wm. T. Sampson, C. H. Humphrey, Merrill Miller, John H. Reed, D. D. Wemple; Boatswain, C. E. Bragdon; Gunner, W. H. French; Carpenter, O. T. Stimson; Sailmaker, Geo. Thomas.

STEAMER "HUNTSVILLE." Com. Cicero Price; Lieut., Henry Erben; Midshipmen, E. C. V. Blake, Louis Kempff.

STEAMER "R. R. CUYLER." Lieut. Francis Winslow; Act.-Lieut., J. Van Ness Philip; Act.-Master, Henry K. Lapham; Midshipmen, L. R. P. Adams, A. C. Alexander, Wm. R. Bridgman.

STEAMER "HATTERAS." Com., Geo. F. Emmons; Act.-Master, Hoffman; Master's Mates, McGrath and Hazlett.

STEAMER "MASSACHUSETTS." Com., Melancton Smith.

STEAMER "NEW LONDON." Com., James Alden.

NOTE.—Names of officers obtained mostly from Navy Register of August 31, 1861.

## CHAPTER XI.

### GOLDSBOROUGH'S EXPEDITION TO THE SOUNDS OF NORTH CAROLINA.

EXPEDITION TO ROANOKE ISLAND.—REAR-ADMIRAL GOLDSBOROUGH IN COMMAND OF NAVAL FORCES.—ARMY FORCES UNDER COMMAND OF GENERAL BURNSIDE.—VESSELS AND OFFICERS IN COMMAND.—A NONDESCRIPT SQUADRON.—COMMANDER ROWAN GIVEN COMMAND.—DESCRIPTION OF ROANOKE ISLAND.—THE DEFENSES.—ATTACK ON WORKS AND VESSELS.—BARRACKS AT FORT BARTOW ON FIRE.—LANDING OF TROOPS AT ASHLEY'S HARBOR.—CAPTURE OF FORT BARTOW.—DESTRUCTION OF STEAMER "CURLEW" AND BATTERIES AT REDSTONE POINT.—"HEARTS OF OAK" IN WOODEN SHIPS.—CONFEDERATES SURRENDER TO GENERALS FOSTER AND RENO.—LOSSES OF ARMY.—ADVANTAGES OF CAPTURE OF ROANOKE ISLAND.—ESCAPE OF CONFEDERATE FLEET.—CASUALTIES AMONG NAVAL FORCES.—COMMANDER ROWAN PURSUES CONFEDERATE FLEET.—DESTRUCTION OF CONFEDERATE FLEET AND FORTS ON PASQUOTANK RIVER.—ATTEMPT TO BURN ELIZABETH CITY.—EXPEDITIONS UP RIVERS LEADING INTO SOUNDS.—BRAVERY OF LIEUT. FLUSSER.

**O**WING to the fact that the commanding officer of the Hatteras expedition did not push the advantages he had gained by the capture of Forts Hatteras and Clark, in August, 1861, the victory was almost a barren one, with the exception of its moral effect and the recapture of many of the guns which had fallen into the hands of the Confederates.

The principal entrances into the sounds of North Carolina were secured, but the Confederates had still the means not only of annoying the coast-wise commerce passing daily before these inlets, but also of supplying their armies through the intricate and numerous channels belonging to the several sounds, and known only to themselves.

In January, 1862, it was determined by the Navy Department to fit out an expedition for the purpose of capturing Roanoke Island, and getting possession of Pamlico and Albemarle Sounds.

This had become a necessity, as the Confederates had facilities for fitting out light armed and swift vessels, which could get in and out at their pleasure and attack our commerce whenever it suited their convenience. It was also known that the Confed-

erates were fitting out some powerful iron-clads in the western waters of the sounds, and it was absolutely necessary for the Federal government to obtain a foothold there before these vessels were completed. There were many other reasons why so large and important a body of water should be secured, and it was a case where the Navy only could take the initiative, and where success could only be obtained by the use of well-armed vessels-of-war.

Rear-Admiral Louis M. Goldsborough was selected to command the naval expedition, and General A. E. Burnside was directed to co-operate with him: the latter to have under his command some 17,000 troops.

The following is a list of the vessels which composed the naval part of the expedition, with the names of their commanders:

"Stars and Stripes," Lieut.-Comdg. Reed Werden; "Louisiana," Lieut.-Comdg. A. Murray; "Hetzal," Lieut.-Comdg. H. K. Davenport; "Underwriter," Lieut.-Comdg. W. N. Jeffers; "Delaware," Lieut.-Comdg. S. P. Quackenbush; "Commodore Perry," Lieut.-Comdg. C. W. Flusser; "Valley City," Lieut.-Comdg. J. C. Chaplin; "Com. Barney," Act.-Lieut.-Comdg. R. T. Renshaw; "Hunchback," Act.-Vol.-Lt.-Comdg. E. R. Colhoun; "Southfield," Act.-Vol.-Lt.-

Comdg. C. F. W. Behm; "Morse," Acting-Master Peter Hayes; "Whitehead," Acting-Master Charles French; "Lockwood," Acting-Master G. W. Graves; "Brincker," Acting-Master John E. Giddings; "I. N. Seymour," Acting-Master F. S. Wells; "Ceres," Acting-Master John McDiarmid; "Putnam," Acting-Master W. J. Hotchkiss; "Shawsheen," Acting-Master T. G. Wood-

ring his flag temporarily to the steamer "Southfield."

Hatteras Inlet, through which our vessels had to pass to get into Pamlico Sound, was not the most desirable channel in the world; on the contrary it was beset with difficulties, and only those who went on that expedition will ever know of the perilous adventures in which the officers and men were engaged.

REAR-ADMIRAL LOUIS M. GOLDSBOROUGH.

ward; "Granite," Acting-Master's Mate E. Boomer.

These vessels were placed by Admiral Goldsborough under the "general command" of Commander S. C. Rowan, who carried his divisional flag on the steamer "Delaware"

The flagship "Philadelphia" being "unfit for the purpose" took no part in the engagement; the Commander in Chief transfer-

At the time when this expedition was undertaken, the Navy Department had great difficulty in obtaining suitable vessels for its purpose. If the vessels were of light draft, they were naturally slightly built, and not calculated to contend with the winter gales which rage in the vicinity of Cape Hatteras. It will be seen by a look at the list of naval vessels employed in this expedition that the squadron was a ponder-

script affair. It was made up of river steamers, ferry-boats, tug-boats and almost anything that would turn a wheel or screw. It was a great change for our naval officers to come down from the staunch old ships of live oak (in which they had been accustomed to sail about the world) to these frail craft loaded to the water's edge with guns of heavy calibre, not knowing whether they would ever reach the place for which they were destined, much less hoping to get home safe and sound to their anxious relatives. It was a mere matter of luck with them, as their success depended on whether they should meet a gale of wind or not, while off the coast. Our government was not always careful as to what kind of vessels it purchased, and if the people of the country could have seen the craft in which our sailors went to sea and fought their country's battles they would have given them more sympathy.

But there were hearts of oak in that non-descript squadron, and they never stopped to inquire whether there was danger in the enterprise or not, or whether their vessels would sink or swim; all they cared for was to reach the post of danger, well knowing that when once in the smooth water of the sounds they would be amply repaid for any risks they might run in getting there.

The reason why such vessels had been selected for this important work was that the Navy Department had no others. Gun-boats were built as fast as possible, but all of them were of such draft of water that they could only with great difficulty cross the bars at the southern inlets. The Army transports were worse even than the so-called naval gun-boats, for the War Department had been even more unfortunate than the naval authorities in selecting vessels. They had no skill in such matters, and were easily deceived by the harpies who are always ready to take advantage of their country's need, without regard to any sacrifice of life which might result from their avarice: and yet some of these men were considered to be loyal citizens, working for the Government. They took good care to make close contracts, securing themselves from loss in case of damage to their chartered steamers.

This heterogeneous crowd of naval vessels and transports arrived at Hatteras Inlet on the morning of the 13th of January, 1862, and were all taken across the bar, where there was barely seven and one-half feet of water. They arrived at the beginning of a northeast gale which lasted two days, during which time many of the vessels were severely battered ere they could reach safe quarters.

On the 20th seventeen naval armed steamers were over the bar and safely anchored inside, under the command of Com.

S. C. Rowan. This in effect gave the Federal forces full control of Pamlico Sound, but the military command could only be retained by the capture of Roanoke Island. It was not until the 22d that Gen. Burnside was able to get all his transports over the bar and into still water.

Had the enemy been on the alert with what gun-boats they had, they would have caused great disturbance to our fleet while it was beset with dangers on the bar, where the naval vessels would have found it difficult to use their guns, and where great havoc might have been made among the closely packed troops on board the transports. The enemy's gun-boats did not take advantage of their opportunity, however, but kept close to their fortifications, merely amusing themselves by throwing an occasional shell from their long range guns at the vessels in the harbor, but never reaching the danger point.

On the 21st, Rear-Admiral Goldsborough sent a steamer out to examine a certain buoy, to see whether it was in the right place. While engaged upon this service two steamers were descried in the distance. On the fact being signalled to Com. Rowan he gave chase to them with several of his vessels, but the enemy escaped.

It must have been very evident to the Confederates, when they beheld the comparatively large force that was sent against them, that they would have a hard tussle to keep possession of the sounds; but they had a strong position, and seemed determined to maintain it.

When everything was in readiness for the movement to commence, the naval vessels were all placed under the command of Commander Rowan, who was to take the lead and open the way for the transports.

Before giving any account of the operations it will be necessary to give the readers some idea of the defenses of Roanoke Island.

This island is about ten miles long and three wide, running in a northwesterly and southeasterly direction.

By the capture of Hatteras Inlet forts the Federal Government gained possession only of Pamlico Sound, and therefore the first object of this expedition was to gain possession of Albemarle Sound and the connecting waters, through which the Confederates were carrying on an active trade. Roanoke Island barred the way between these two sounds, and the Confederates had made it a formidable barrier by the erection of heavy fortifications.

The channel connecting Pamlico and Albemarle Sounds in which Roanoke Island lies is very shallow, and could therefore be easily obstructed by sunken vessels or piles. The sheet of water on the west side of the

island is called Croatan Sound, and that on the east side Roanoke Sound. All of these waters are navigable to a certain extent, but large vessels can only pass through the western channel. (See the plan, which will more fully explain the situation than any description.)

It is quite clear that Roanoke Island in the hands of the Confederates was the key to that great chain of sounds and passages

If the Northern Government had established a formidable army in North Carolina in the neighborhood of Plymouth, Greenville and Newbern, connected by lines of communication and supported near these places by a fleet of gun-boats with powerful guns, the Wilmington Railroad, Raleigh and Welden would have been within striking distance of our army, and the Confederates would have been obliged to use more

VICE-ADMIRAL S. C. ROWAN.

running from Hatteras Inlet to the Dismal Swamp canal, and that in order to retain control of these highways it was necessary for the Unionists to capture this position at all hazards.

It was a great strategic point which enabled the Confederates to cover Norfolk in the rear, Welden and the Northeast railroads, and keep open their communications with Lee's army at Richmond.

northern railroads to obtain their supplies, even if they did not have to evacuate Richmond. The final movement of our army under Sherman in his "March to the Sea," was directed towards some of these points in North Carolina, and it was not long after this that Lee surrendered and General Joe Johnston laid down his arms.

When the Confederates found that the Hatteras forts were incapable of keeping the

Federal gun-boats out of the sounds, and that the Neuse and Pamlico Rivers must fall into our hands, they determined to fortify Roanoke Island and prevent our getting into Albemarle Sound; so that they could hold communication with Norfolk through the Currituck Inlet and save Plymouth and the Roanoke River. They were building some heavy iron-clads up that river, and all the material, machinery and guns had to be transported from Norfolk and Richmond.

The defences of Roanoke Island consisted of six separate works. Five of these guarded the water approaches and the sixth was a masked battery intended to prevent troops from landing and attacking the main works in the rear.

This last battery was armed with three guns and was flanked on either side by a dense cedar swamp, so that an army landing at this point was only supposed to be able to advance by the roadway, towards the water defence at Pork Point, where their principal work, Fort Bartow, was situated. The swamp was considered impassible, and to render further protection a barrier of fallen trees was formed on each side of the road.

The following is a list of the defences, taken from Rear-Admiral Goldsborough's report: "They consisted of two elaborately constructed works, mounting altogether twenty guns, three of them being 100-pounder rifles; four other batteries, mounting together twenty guns, a large proportion of them being of larger calibre and some of them rifled; eight steamers, mounting two guns each, and each having a rifled gun with the diameter of a 32-pounder; a prolonged obstruction of sunken vessels and piles to thwart our advance, and, altogether, a body of men numbering scarcely less than 5,000. . . ."

This was a strong position, and a large number of guns (56 in all) to meet the attack of 48 guns on our frail steamers without any protection to hull or machinery.

The naval vessels, under the lead of Com. Rowan, made the attack on the works and vessels at Roanoke Island, on February 7th, at nine o'clock in the morning.

The plan of battle was for the naval force to lead up to the attack, and engage the batteries at Pork and Sandy Points and the Confederate vessels. While this was going on the Army was to advance and land under cover of the naval fire. A naval brigade of artillery was also detailed to land from six launches, at Ashby Harbor, or, if possible, at Sandy Point, half a mile above.

The naval division under Com. Rowan was arranged in three columns, commanded respectively by Lieuts. Worden, Murray and Davenport, these to be followed by the Army transports, also in divisions.

Two days were occupied by our fleet in threading its way through the intricate channels of the marshes, owing to fogs and foul weather. These channels were so narrow that only two vessels could proceed abreast, and in this order they continued until reaching the wider and deeper waters of Croatan Sound.

The naval division, composed and commanded as stated above, was accompanied, as predetermined, by the "Picket," Capt. T. P. Ives; "Huzzar," Capt. Frederick Crocker; "Pioneer," Capt. Charles E. Baker; "Vidette," Capt. John L. Foster; "Ranger," Capt. Samuel Emerson; "Lancer," Capt. M. B. Morley, and "Chasseur," Capt. John West, of the army division. Keeping in close order it approached the enemy near enough to begin the attack, and to devote most of its firing against the fort on Pork Point (not neglecting the enemy's vessels), a battery between Pork and Weir's Points, and another on Redstone Point (see plan), all of which returned the fire of the Federal fleet, but without much effect.

The Federal vessels having obtained position the action became general between them and the enemy, the army transports also joining in with the rifle guns they had mounted.

At 1:30 the shells from our fleet set fire to the barracks behind Pork Point, and in a short time they were in full blaze and beyond control, as at this time the Federal vessels, having got their range, were throwing in a very destructive fire.

At 3 P. M. the troops shifted to light-draft steamers and boats and started to land at Ashby's Harbor. This place was guarded by a large body of the enemy with a field battery, but Commander Rowan in the "Delaware," taking up a flanking position to the southward of Pork Point, turned his 9-inch guns towards the harbor and compelled the enemy to retreat, thus clearing the way for a landing.

At 4.30 Pork Point Battery and the one next to the northward of it ceased firing; five of the Confederate steamers went behind Weir's Point disabled, and the first landing of our troops took place.

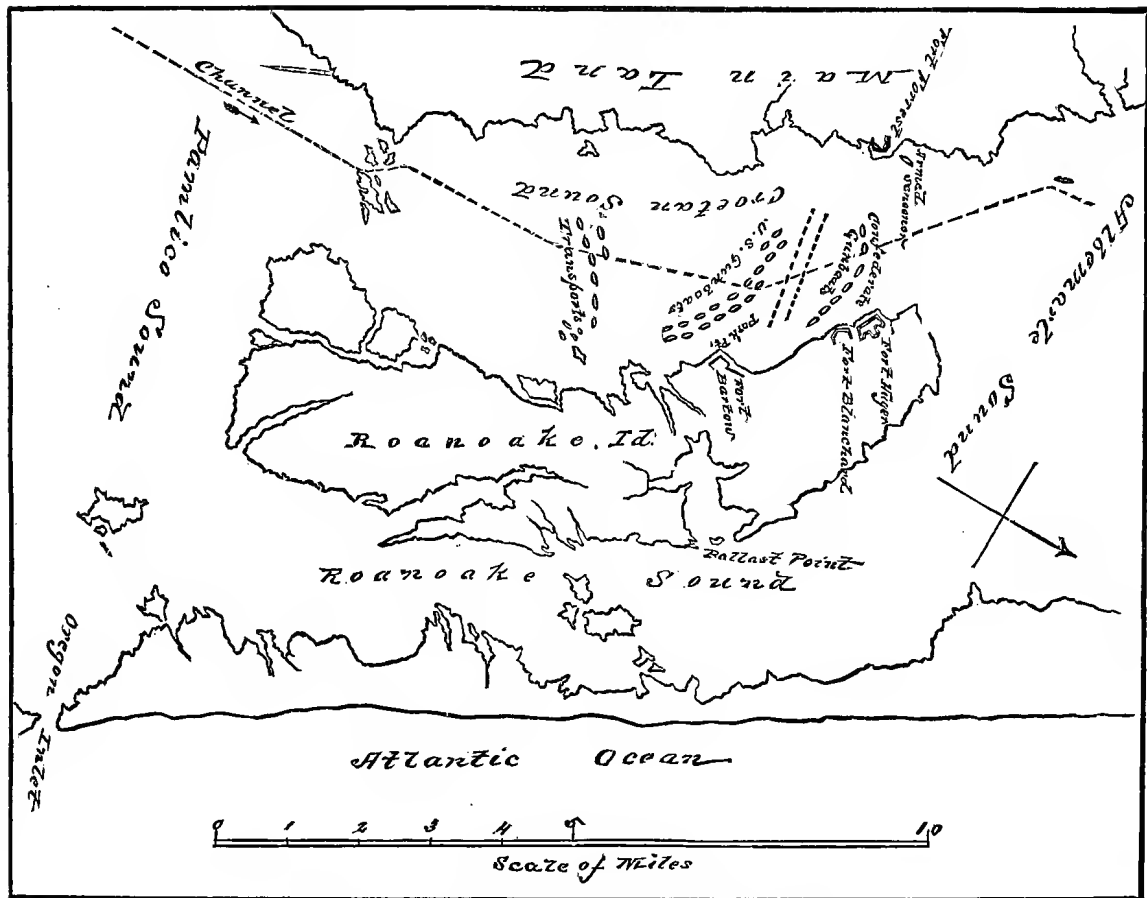

At 5 P. M. these batteries re-opened, and the enemy's steamers having repaired damages put forth again and opened fire. In a short time, however, the steamers were again obliged to retire, and one of them, the "Curlew," in a disabled condition, took refuge under the battery at Redstone Point. As evening came on, the Rear Admiral commanding made signal to cease firing—not wishing to waste ammunition.

In the course of the afternoon, six launches, under the command of Midshipman B. H. Porter, had landed their howitzers and a body of men, which were em-

ployed during the night in guarding the main road and its two forks. On the following morning they assisted in the active operations of the Army. By midnight some ten thousand of our troops had been landed safely at Ashby's Harbor.

On February 8th it was arranged by General Burnside that his forces should move at an early hour in the morning, and begin their attack upon the enemy; and as the direction they were obliged to take would bring them in the line of fire occupied by the Navy it was agreed between the two com-

to hear from Gen. Burnside. The fleet continued its fire upon the forts until the firing in the interior of the island sensibly slackened, when it was taken for granted that our troops were approaching the batteries, and carrying everything before them. Then came the order to clear the channel of obstructions, to enable the squadron to pass up and destroy the battery on Redstone Point, which had only one gun left to fire, and also the "Curlew," which lay disabled under the enemy's batteries. In two hours and a half this service was per-

MAP AND PLAN OF THE ATTACK ON ROANOKE ISLAND.

manders, that the naval fire should cease until the General gave notice that it would not interfere with his operations.

At daylight none of the enemy's vessels, except the "Curlew," could be discovered. At 9 A. M. a continuous firing in the interior of the island showed that the Army was hotly engaged with the enemy between Ashby's Harbor and Pork Point. The Admiral being thus informed of the position of our troops, and seeing that they were now beyond his line of fire, at once moved up and engaged the forts, without waiting

formed by the "Underwriter," "Valley City," "Seymour," "Lockwood," "Ceres," "Shawsheen," "Putnam," "Whithead" and "Brincker," and these vessels passed through.

Just at this moment our troops hoisted the American flag on the battery at Pork Point, and in a few minutes afterwards the enemy himself fired the works at Redstone Point and the Confederate steamer "Curlew:" both blew up early in the evening.

Thus ended the attack on the forts of Roanoke Island, the Confederate works

being now completely in the hands of the Army and Navy.

To discriminate between the two branches of the service on this occasion would be making an invidious distinction; both performed their duties in the most admirable manner, and worked together most harmoniously.

The casualties among the naval vessels were few in number, which is considered strange when the light character of these steamers is taken into account and the number of guns (56) which were brought to bear upon them by the enemy; but the fire from the eight and nine-inch shell guns and rifles of the fleet was so vigorously kept up and accurately aimed that it was the same old story of Port Royal—hearts of oak in wooden ships.

The military forces had some hard fighting on shore, and the attack was conducted with great skill. The entire force of the enemy stationed in the batteries and as sharpshooters was 4,000. Governor H. A. Wise had a force in reserve at Nag's Head, but retreated when he heard of the fate of the two forts.

The enemy's troops were well posted and their batteries well masked, so that the Federal forces were really fighting an unseen foe.

Over 150 officers and 2,500 men surrendered to Generals Foster and Reno. The losses of the Confederates are unknown, but they did not exceed 150 killed and wounded. Our Army lost 15 officers and 32 men killed, 10 officers and 264 men wounded, and 13 men missing.

Thus was a very important capture made, with but little loss of life, when it is considered that the enemy held a strong position and was completely concealed in bushes and masked batteries. The advantages which resulted from the capture of this island cannot be over-estimated. A large quantity of military stores of all kinds fell into the hands of the Federal Army which the enemy could not well spare, and altogether it was a very happy ending of what promised at first to be a very difficult undertaking.

The only regret was that the enemy's fleet escaped. These vessels mounted 16 or 17 heavy guns, and had taken a secure position behind the barricades, prepared to defend the way against the Federal fleet. Commodore Lynch (the commander of this naval force) and many, if not all, of his officers, had once served in the United States Navy; but they could not stand the attack of their old comrades and were obliged to retreat. Strange to say, all of these steamers, except the "Curlew," made good their escape. As regards vulnerability these vessels were as defective as those of the Federal fleet, and

their commanders saw from the first what the result would be, and took advantage of the darkness to move away to a safer position.

Great praise was given to General Burnside for the manner in which he conducted his part of the affair. There was no instance during the war where the Army and Navy worked together more harmoniously. It was a case where each was necessary to the other and where neither could have won alone.

History will show that, throughout the war, whenever the Army and Navy cooperated harmoniously success followed; but when difficulties occurred between the military and naval commanders the results were unsatisfactory.

By the capture of these works and their garrisons, all the sounds of North Carolina came under Federal jurisdiction, as the naval vessels and military transports were now able to reach all parts of these waters and soon swept from them all traces of the Confederate power: a great loss to the enemy and one that he deeply mourned.

The casualties in the Union fleet were 6 killed, 17 wounded, 2 missing.

Admiral Goldsborough lost no time after the surrender of the forts on Roanoke Island in chasing up the Confederate Navy, which had disappeared entirely; and on the 9th of February he directed Com. Rowan to pursue them with the following vessels: "Louisiana," Lieut.-Com. Murray; "Hetzel," Lieut.-Com. Davenport; "Underwriter," Lieut.-Com. Jeffers; "Delaware," Lieut.-Com. Quackenbush; "Commodore Perry," Lieut.-Com. Flusser; "Valley City," Lieut.-Com. Chaplin; "Morse," Acting-Master French; "Lockwood," Acting-Master Graves; "Ceres," Acting-Master McDiarmid; "Shawsheen," Acting-Master Woodward; "Brincker," Acting-Master Geddings; "Putnam," Acting-Master Hotchkiss.

This was not a very formidable squadron, but it was equal to the occasion. Late in the afternoon of the 9th this fleet of vessels entered Albemarle Sound in search of the enemy, and soon after sighted the smoke of two steamers, which were seen to be heading for Pasquotank River. Chase was given and an attempt made to cut them off, but without success, and the Confederates escaped over the bar and then up the river. The Union fleet was then anchored for the night, ten miles distant from Fort Cobb.

Commander Rowan knew very little about the condition of affairs up the river, whether there were any batteries, torpedoes or obstructions, but he well knew that if there were any forts the Confederate gun-boats would naturally seek their protection and rely on their aid in any encounter that might follow with the Federal forces. The

ATTACK ON ROANOKE ISLAND BY COMMODORE GOLDSBOROUGH'S GUN-BOATS, AND LANDING OF TROOPS UNDER COMMAND OF GENERALS  
FOSTER, RENO AND PARKS. FEBRUARY 8, 1862.

enemy could select their point of attack or defence, and the Union commander was obliged to advance against them without having the slightest idea of the strength of their position.

The little steamers under Rowan's command were certainly the frailest vessels that had ever been improvised for meeting the stern hazards of war. They carried heavy guns, however, and the gallant spirits who manned them were determined to win, no matter what the risks.

Commander Rowan's plan was to avoid a protracted combat, and to bring the enemy to close quarters as soon as possible, for the reason that his ammunition was reduced to 20 rounds for each gun in the fleet (owing to the battle of Roanoke Island). He made signal for the commanders of vessels to come on board the flagship, and after conferring with them in regard to the proper measures to be adopted he gave them their final orders.

It was naturally expected that the Confederate fleet would take position behind the battery at Cobb's Point, and there await the attack; but the result was not feared, as it had been shown in the battle of Roanoke Island that the Confederate vessels could not hold their own, even when supported by heavy forts.

The plan of attack was that the gun-boats should approach in close order and proceed up the river without firing a shot until ordered to do so, dash through the enemy's lines, crushing and sinking him if possible, or engage in hand-to-hand conflict; after capturing or destroying the steamers to take the forts in reverse and act according to signal.

The little fleet weighed anchor at daylight on the 10th of February, and proceeded up the river in the prescribed order: the "Underwriter," "Perry," "Morse" and "Delaware" keeping in advance as pickets, the little "Ceres" nearer shore on the right flank, and the "Louisiana" and "Hetzl" leading up the remainder of the flotilla. The "Valley City" and "Whitehead" were ordered to leave the line as soon as the fort was passed and attack it in reverse.

The Confederate steamers were soon discovered drawn up in order of battle behind the fort, which mounted four heavy 32-pounders. Opposite the fort on the other side of the river a large schooner was moored, mounting two heavy 32-pounders, and the enemy's line of vessels, under Commodore Lynch, was anchored diagonally across the channel between these two defences.

Thus they may be said to have held a very powerful position, and it looked almost like rashness for the Federal commander to attack an enemy so situated. But there

was no hesitation on the part of Com. Rowan or his officers. As soon as the Federal vessels got within fair range, the Confederates opened upon them from their 32-pounders from the fort and the schooner "Black Warrior," followed by the 80-pounder rifles of their gun-boats.

Though shot and shell passed thick and heavy over the foremost vessels and fell in the midst of the main column, not a shot was fired by the Federal vessels in return until they got within short range, when the signal was made "Dash at the enemy." Throttle valves were opened and the steamers put at full speed, at the same time opening fire all along the line.

Sweeping forward as rapidly as their engines could drive them they were quickly in the midst of the enemy, who were completely panic-stricken by this bold and unexpected attack and offered but a feeble resistance to the officers and men, who jumped on board their vessels with sword and pistol in hand. Those in the batteries seeing what had happened to their gun-boats immediately deserted and fled. Those on board the "Black Warrior" set fire to her and got to the shore.

Some of the steamers endeavored, unsuccessfully, to save themselves by flight, among others the flagship "Seabird," but she was run into and sunk by the "Commodore Perry" (Lieut.-Com. Flusser), and nearly all of her officers and crew made prisoners.

In fifteen minutes the whole affair was ended, all the Confederate gun-boats having been either run ashore and set fire to, or captured by hand-to-hand conflicts; and thus the fleet on which they had depended to defend the sounds against any force that could be sent there, was entirely annihilated, and there was no one left to dispute the control of the interior waters of North Carolina.

Although this was comparatively a small affair, it was one of the best conceived and best executed battles of the war, in which just as much skill and dash were displayed as in the grander achievements which took place at a later date. In fact, greater credit is due the commander of this expedition when one takes into consideration the character of the vessels which he had at his disposal and the strong position of his enemy. The attack of the Union vessels was like the spring of a pack of greyhounds upon a brood of foxes—it was just such a scene as naval officers delight in.

No one who has read an account of this dashing adventure has failed to give to the brave spirits who took part in it all the credit they deserved for the skill and daring which they exhibited throughout the affair.

After the battle was over, Com. Rowan

sent some of the steamers up to Elizabeth City. At their approach the enemy made a hasty retreat through the town, having set it on fire before their departure.

It being evident to Com. Rowan that it was the design of the enemy to throw the blame of burning the city upon the Union forces, he sent his men on shore to extinguish the flames. Having accomplished this object, and taken prisoner one of the officers belonging to the "Wise Legion," who was caught in the act of setting fire to the houses of the inhabitants, they returned immediately to their ships.

A great deal of Confederate property was destroyed at this place. The steamer "Forest," one gun-boat and a small vessel on the stocks were burned at the ship-yard, and all the machinery, boilers, railways, etc., destroyed. Also the machinery of the steamers "Seabird" and "Fanny," which had been sunk.

After this a number of expeditions were started all through the Sounds of North Carolina for the purpose of destroying the enemy's property and blocking up the canals, so that no communication could be held with Norfolk. But we cannot refer to these operations at this time, as events of far greater importance were now taking place at Hampton Roads, which require us to transfer our history to that quarter.

Before leaving the Sounds of North Carolina, we cannot but express our unqualified admiration at the happy manner in which the Army and Navy co-operated, and the brilliant results which followed from the skill and energy displayed by both branches of the service.

The Federal forces had not yet gained entire possession of the interior waters of the Sound, but that came a few months later, and will all be narrated in its proper place.

On the 9th of July, 1862, an expedition was fitted out from Goldsborough's fleet for the examination of certain rivers leading into the Sounds of North Carolina, in order to ascertain whether the enemy was fortifying the river banks or building men-of-war at the small towns in the interior.

The expedition consisted of the "Commodore Perry," Lieut. C. W. Flusser; the "Ceres," Lieut. John McDiarmid; and the "Shawsheen," Acting-Master T. T. Woodward, with a detachment of about forty soldiers in addition to their regular crews.

The first of the places to be examined was the town of Hamilton on the Roanoke River. The banks of this river were high in places and afforded many commanding positions from which an enemy upon the water could be attacked with little danger to the attacking party.

The Confederates did not fail to make the most of their opportunities, and the gun-

boats had not proceeded far on their way before they were fired upon by concealed riflemen, and although the men returned the fire promptly it was with little apparent effect. The river banks seemed lined with sharpshooters, and for ten hours the vessels, being obliged to run slowly, were kept under a galling fire.

The men were struck down by an invisible foe, who lurked in the bushes or fired from over the edge of the bluffs without any danger of being struck from the vessels.

Flusser had been ordered to go to Hamilton, and he was determined to get there, no matter what might be the consequence. This gallant officer was now placed in a most trying position, but he stood unflinchingly at his post and continued on his way. The only thing to be done was to keep the men under cover as much as possible and return the enemy's fire when opportunity offered. In spite of all precautions, however, the fleet had one man killed and ten wounded.

The Confederates deserted their forts as the steamers approached, and Hamilton was reached. Having taken possession of the Confederate steamer "Nelson" at this place, the expedition returned in safety to the Sound.

In the latter part of October, 1862, another expedition, a combined military and naval force, was started for Hamilton, and proved successful beyond all expectations. Great risks were run, some valuable lives lost, and great skill shown in the management of the gun-boats. Thus the Navy, when co-operating with the Army, always made its usefulness felt. Without the presence of the Navy to capture and destroy the enemy's improvised gun-boats, to destroy their steam transports and cut off their means of rapidly moving an army, not a single point on the Southern coast could have been wrested from the enemy, or, if captured at great expense and labor, could not have been retained without the continual watchfulness of the Navy.

This co-operation on the part of the Navy seldom failed of success, and this support to the Army was of more value to it than large numbers of men or hundreds of cannon. The Army had with them in the gun-boats a train of field-pieces no enemy could resist.

The American people as a rule, knew nothing during the war of the continuous, exhaustive and perilous labor to which the officers and men of the Navy were subjected, and in a victory sometimes made sure by the presence of the gun-boats, the Navy was nowhere mentioned. This was not the fault of the gallant soldiers who received the support of the Navy, but rather the fault of the military historians, who in almost all cases ignored the Navy altogether.

Did the limits of this paper permit, and could the numerous cases of support to the Army be specially noted, it would readily be seen that in the Sounds of North Carolina, under Goldsborough, in the rivers, bayous and inlets along the Southern coast under Dupont, on the coast of Louisiana and Texas and the whole length of the Mississippi, Tennessee, Cumberland, White, Arkansas and Red Rivers, a distance of over 3,000 miles, the Navy more or less contributed towards success; and if defeat overtook our Armies at any time while the Navy was at hand, the enemy gained no important or lasting advantage. Our Army always had a line of defense (the naval gun-boats) on which they could fall back, regain its formation and send the enemy retreating in his turn.

For the present we must leave the sounds and inlets and follow other adventures. All the sounds of North Carolina and the rivers emptying into them as far up as the gun-

boats could reach were virtually in the hands of the Federal Government.

North Carolina was no longer a base of supplies for the Confederates. The sounds and inlets of Georgia, South Carolina and Florida were nearly all closed up by the Navy, and Wilmington and Charleston were really the only two places by which the Confederacy could obtain supplies or munitions of war from abroad.

All of this work had been done within a year of the commencement of the war, in spite of delays which enabled the enemy to erect earthworks and sink obstructions that required herculean labors to remove.

Inadequate as were the vessels supplied to the Navy, the officers seldom failed to accomplish what they attempted, and it was a well-deserved compliment when an old soldier said, "every man should carry a gun-boat in his pocket, and then he could accomplish wonders."

## CHAPTER XII.

FIGHT BETWEEN THE "MERRIMAC" AND "MONITOR," MARCH 8, 1862.

APPEARANCE OF THE "MERRIMAC."—DESTRUCTION OF THE "CONGRESS" AND "CUMBERLAND."—ARRIVAL OF THE "MONITOR."—THE FIGHT.

WHILE the Federal arms were so successful in the sounds of North Carolina, a great disaster overtook the Federal cause in Hampton Roads, filling the country with dismay, and even bringing many of the Union people to doubt the success of the cause for which they had labored so hard.

When the Union naval officers set fire to the buildings of the Norfolk Navy Yard, they supposed they had taken such precautions that everything of value would be destroyed, but as soon as the Federals had departed a detachment of Virginia volunteers rushed in to extinguish the flames. The "Merrimac" had been sunk, but the lower part of her hull and her engines and boilers were substantially uninjured.

Lieutenant John M. Brooke, one of the most accomplished officers among those who had left our Navy and joined the Confederate cause, visited the scene of the conflagration, and it at once occurred to him that the "Merrimac" could be rebuilt as an iron-clad; and his plans being accepted by Mr. Mallory, the Secretary of the Confederate Navy, orders were issued to have them carried out at once.

The vessel was raised and cut down to the old berth deck, both ends for a distance of seventy feet were covered over, and when the ship was in fighting trim were just awash. On the midship section, a length of one hundred and seventy feet was built over, the sides being at an angle of fifty-five degrees, a roof of oak and pitch pine extending from the water line to a height of seven feet above the gun-deck. Both ends of this structure were rounded, so that the pivot guns could be used as bow and

stern chasers, or quartering; over the gun-deck was a light grating, making a promenade twenty feet wide.

The wood backing was covered with iron plates rolled at the Tredagar Works in Richmond. These plates were eight inches wide and two inches thick. The first covering was put on horizontally, the second up and down, making a total thickness of iron of four inches, strongly bolted to the wood-work and clinched inside.

The ram, or prow, was of cast-iron, projecting four feet, and, as was found subsequently, was badly secured. The rudder and propeller were entirely unprotected. The pilot-house was forward of the smoke-stack and covered with the same thickness of iron as the sides.

The motive power was the same as had been in the ship before; both boilers and engines were very defective, and the vessel was not capable of making more than five knots an hour.

Another able officer, formerly of the United States Navy, Lieut. Catesby ap R. Jones, had charge of the preparation of the "Merrimac's" armament, and to his skill was due the efficiency of her battery. It consisted of two seven-inch rifles, re-enforced with three-inch steel bands shrunk around the breech; these were the bow and stern pivots. There were in broadside two six-inch rifles similar to the above, and six nine-inch smooth-bores—in all ten heavy guns.

When this formidable vessel was completed the name of the "Virginia" was bestowed upon her, and she was placed under the command of Flag Officer Franklin Buchanan, who had resigned from the United States Navy, where he had reaped the high-

est rewards that could be bestowed in time of peace. He was a man of undoubted courage, and his professional ability was of the first order. Buchanan was fortunate in surrounding himself with excellent officers, men capable of performing any naval duty, and no commander was ever better seconded by his subordinates.

The crew of the iron-clad were not all seamen, but that was comparatively unimportant as there were no sails to handle. Gunners were selected from the army at Richmond,

Lindsay; Clerk, Arthur Sinclair, Jr.; Volunteer Aid, Lieut. Douglas Forrest; Captain, Kevil, commanding detachment of Norfolk United Infantry.

Thus equipped, officered and manned, the iron-clad represented at the moment the most powerful fighting ship in the world, and the Federal Government might well feel uneasy at the tidings they received of this monster which threatened to carry destruction all along the Northern coast.

The government was not, however, aware

COMMODORE FRANKLIN BUCHANAN, COMMANDER OF THE "MERRIMAC."

and they proved to be excellent men for the duty required of them.

The officers of this historic vessel were as follows:

Lieutenants, Catesby ap R. Jones (Executive and ordnance officer), Lieutenants Charles C. Simms, Robert D. Minor (Flag), Hunter Davidson, John Taylor Wood, J. R. Eggleston, Walter Butt; Midshipmen, Fonte, Marmaduke, Littlepage, Craig, Long and Rootes; Paymaster, Semple; Surgeon, Phillips; Assistant Surgeon, Algernon S. Garnett; Captain of Marines, Reuben Thorn; Engineer, Ramsay; Assistants, Tynan, Campbell, Herring, Jack and White; Boat-

swain, Hecker; Gunner, Oliver. The Confederates of the rapidity and energy with which the Confederates had conducted their work; in fact, in this instance the Navy Department was rather taken by surprise, and was not quite up to the mark, for as a general rule it had shown great energy in improvising a Navy.

There were several large steam frigates at that time which might have been cut down and covered with iron in much better fashion than was done in the case of the "Merrimac." The Department, it is true, had contracted for iron-clad vessels, but two of them were far behind time in building, and the other was a "little nondescript" that

exception of Commodore Joseph Smith, had any confidence in. This vessel, designed by John Ericsson, was to be paid for only in case she proved successful against the enemy's batteries; but had the steam frigates been cut down and plated we need have given little anxiety to the appearance of the "Merrimac" or any other vessel, and would have been first in the field with this new factor in war which was to revolutionize naval warfare.

But there are many things we cannot account for—we received humiliation at first to teach us not to underrate an enemy. Providence came to our assistance in our emergency with "Ericsson's nondescript," to show what skill and enterprise could do in behalf of the Union.

As the "Monitor" of Ericsson approached completion the Navy Department hurried the work on learning that the "Merrimac" was further advanced than they had supposed.

This was in consequence of the fact that Commander D. D. Porter had been sent to New York to examine the vessel, and report his opinion as to her capacity to deal with an enemy. After a thorough examination of all the details of the vessel, Commander Porter telegraphed to the Navy Department: "This is the strongest fighting vessel in the world, and can whip anything afloat." But when he returned to Washington a few days after he was laughed at by a high official, and a clever one at that: "Why, man," he said, "John Lenthall predicts that Ericsson's vessel will sink as soon as she is launched."

Mr. Lenthall was unquestionably high authority, but he was certainly mistaken on this occasion. Like most others he looked upon the nondescript as a clever scheme to obtain money from the government, but he subsequently did ample justice to Ericsson and built many vessels after the distinguished inventor's models, which for a time placed the United States Government ahead of all other naval powers. We did not long maintain this position however, for our statesmen do not appreciate the necessity of a navy sufficient to protect our extensive coasts and sixty millions of people, so we have fallen back into our original condition, without a single iron-clad that would command the respect of the weakest nations; yet Ericsson still lives, with vigor unimpaired and intellect as bright as when his "Monitor" saved the honor of the country nearly a quarter of a century ago.

A month before the "Monitor" was launched the Confederates, through their spies, had learned the exact condition of the vessel and the day on which she would probably be put into the water; in consequence of

on the "Merrimac" was doubled and the work carried on by day and by night. This extra energy made all the difference in the world, and doubtless gained the one day which enabled the Confederate vessel to commit such havoc without any effectual opposition.

Lieut. John L. Worden, who had been assigned to the command of the "Monitor," watched her building for several months, urging on the work by every means in his power, in which he was heartily supported by the inventor. When the vessel was launched and equipped, Lieut. Worden started at once for Hampton Roads, without a trial trip, and with no means of judging how the vessel was going to behave. At one time on his passage to Hampton Roads, he was doubtful if the little "Monitor"

LIEUT. GATESBY AP R. JONES,  
(EXECUTIVE OFFICER OF THE "MERRIMAC.")

would live through the rough seas and arrive in time to be of any assistance to our fleet; or, even if she did arrive, whether she could accomplish what her inventor claimed for her. In fact Worden was somewhat doubtful whether he should ever again set foot on land, for his vessel was almost inundated and leaking apparently enough to sink her.

In the meantime the "Merrimac," alias "Virginia," was all ready to leave the Norfolk Navy Yard on what was said to be her trial trip, and up to the last moment she was filled with mechanics working to complete her.

On the 8th of March, 1862, the iron-clad got under way and proceeded down Elizabeth River, cheered by hundreds of people

MAP SHOWING FORTRESS MONROE, NEWPORT NEWS, CHESAPEAKE BAY, JAMES RIVER, AND SURROUNDING COUNTRY.

Craney Island and through the obstructions, the ramparts of the fort were lined with soldiers who shouted success to her until their throats were hoarse. Thus the "Merrimac" started off with all the glamor of success, for there was no one on board who doubted that she could destroy the fleet then lying in the roads.

Buchanan and his officers knew the weak points of every vessel in the Federal fleet, and the number and calibre of their guns. He knew that none of their shot could pierce the "Merrimac" and that he could choose his distance and fire with his rifled guns at the ships as if at a target, should

THE "MERRIMAC."

(FROM A SKETCH MADE THE DAY BEFORE THE FIGHT.)

he think proper to do so. Instead of making it a "trial trip," as first intended, Buchanan determined to make it a day of triumph for the Confederate Navy.

At this time there was at anchor in Hampton Roads, off Fortress Monroe, the "Minnesota," of forty guns, Capt. Van Brunt; "Roanoke," of forty guns, Capt. Marston; "St. Lawrence," fifty guns, Capt. Purviance; and several army transports. Seven miles above, off Newport News, lay the "Congress," fifty guns, and the "Cumberland," thirty guns. Newport News was well fortified and garrisoned by a large Union force.

It was a beautiful day, following a storm. The water was smooth and the vessels in the Roads swung lazily at their anchors. Boats hung to the swinging booms, washed clothes on the lines, nothing indicated that an enemy was expected, and no one had, apparently, the least idea that the "Merrimac" was ready for service. The utmost ignorance seems to have prevailed in our squadron with regard to her capacity to do harm.

The writer was in Hampton Roads a short time previous to the appearance of the "Merrimac," and while standing on the wharf a decent looking mechanic landed from a small boat. He told the writer that he had escaped from Norfolk, where he had been employed on the "Merrimac," which vessel he said was very formidable and nearly completed. His account of affairs

when the man was taken to Captain Van Brunt, that officer questioned him fiercely and then roughly dismissed him, as if he considered him an impostor. The writer was of a different opinion and wrote at once to Mr. Fox, Assistant Secretary of the Navy, urging him to hurry up the "Monitor," but no one in the squadron seemed to anticipate any danger.

Rear Admiral Goldsborough was in the sounds of North Carolina and could easily have left what was there to be done to the skill of the gallant Rowan, but he evidently apprehended no danger from the "Merrimac" or he would have returned at once to Hampton Roads. One would have thought that the Federals could have learned through spies how near the "Merrimac" was ready for service, and all the particulars regarding her. Many things which ought to have been done were left undone, but of this it is useless to repine.

As the squadron lay quiet, little dreaming of the danger that was so near, "three small steamers" were reported to the senior officer at 12:45 P. M. coming around Sewell's Point. It was soon ascertained by her large smoke stack that one of these vessels was the "Merrimac," and great excitement prevailed. Signal was made to the "Minnesota" to slip her cables, get underway and pursue the enemy; but when within a mile and a half of Newport News the frigate grounded and remained fast during the events which took place that day and the one following.

The "Merrimac" stood straight for the "Congress" and "Cumberland," and when she was within three-quarters of a mile the latter vessel opened on her with heavy pivot guns, closely followed by the "Congress." Paymaster McKean Buchanan, a brother of the Confederate commander, was an officer of the "Congress," and the "Merrimac" passing that vessel steered direct for the "Cumberland," the Confederate Flag Offi-

THE "MONITOR" IN BATTLE TRIM.

cer hoping that the "Congress" would surrender on seeing the fate of her consort, and that his brother would thus escape. In passing the "Congress" the "Merrimac" delivered her starboard broadside, which was quickly returned, and a rapid fire from both vessels was maintained on the iron-clad. The "Merrimac" continuing her course, struck the "Cumberland" at right angles, under the fore channels on the starboard side, and the blow, though hardly perceptible on board the iron-clad, seemed to those on board the "Cumberland" as if the whole ship's side had been smashed in.

helm hard-a-starboard, and turned slowly, while the two Union ships poured in a continual fire, which apparently fell harmless on the iron plating of the enemy. On the other hand, as the iron-clad swung round from the "Cumberland," the "Congress" lay with her stern to the enemy, which raked her three times, fore and aft. In fact, the "Congress" was a mere target for the enemy's shot and shell, with little danger of the latter being injured in return.

In the meantime the "Cumberland" was settling in the water from the effects of the great opening in her side, and although it was evident to all on board that the day was lost, and that the ship must inevitably go to the bottom, these brave fellows kept

pearing beneath the waves, and his gallant crew fighting to the last.

Of course as long as the "Cumberland" kept up her fire the enemy returned it, their shells inflicting death on all sides. Those who had escaped from below were decimated by the merciless shot and shell poured into them by the enemy as they stood crowded together on the spar deck. There is little generosity or sentimentality in war; the object is to kill and wound, and this was too favorable an opportunity to be neglected. In the absence of Com. Radford, Lieut. George N. Morris was in command of the "Cumberland," and his heroism inspired his crew to the deeds which they performed on that eventful day. Of the "Cumberland's" crew one hundred and twenty-

THE CONFEDERATE RAM "MERRIMAC" SINKING THE "CUMBERLAND."

up a rapid fire until driven by the water from the lower deck guns, when they retreated to the upper deck and continued to fight the pivot guns till the "Cumberland" went down with her colors still flying.

During the whole war there was no finer incident than this, and the bravery of the officers and men of the "Cumberland" even won the applause of the enemy.

Commander William Radford, of the "Cumberland," was engaged that day on a Court of Inquiry, which was sitting on board one of the vessels in Hampton Roads. When the "Merrimac" was reported as coming down, all else was lost sight of, and procuring a horse, Radford started at full speed for Newport News; but he only reached there in time to see his ship disap-

one were either killed outright or drowned, while of those saved a large portion were wounded.

When the commanding officer of the "Congress" saw the fate of the "Cumberland," and realized how little chance there was for him, he slipped his cable, set his foretopsail and endeavored to get closer in shore so as to have the assistance of the land batteries, but the ship ran ashore, where she continued the unequal contest for more than an hour after the sinking of her consort, the "Merrimac" lying at a safe distance and boring her through and through with her shells, and finally setting her on fire.

While this unequal contest was progressing between the "Merrimac" and the "Congress," the two Confederate gun-boats ac-

companying the iron-clad joined in the fray. They were both armed with rifle guns. In a few minutes they dismounted one of the stern guns of the "Congress" and knocked off the muzzle of another, so that, not being able to bring any of her broadside guns to bear, she lay perfectly helpless. Her gallant commanding officer, Lieut. Joseph B. Smith, was killed, her decks were strewn with killed and wounded, and further resistance was hopeless. The colors were accordingly hauled down and a white flag hoisted. A Confederate tug ran alongside the "Congress," and the officer in charge ordered the crew out of the ship, saying he intended to set fire to her.

The garrison at Newport News, not comprehending the state of affairs, opened on the Confederate vessel with artillery and musketry, so that she was obliged to leave the side of the "Congress" with only thirty-nine prisoners.

Although the white flag was still flying, the "Merrimac" again opened fire on the "Congress." This was certainly most inhuman, since the crew of the "Congress" were not responsible for the act of the troops on shore. The Confederates claim that two of their officers were killed on board the tug while assisting the Union wounded out of the "Congress," and that many of our own men were killed and wounded by the fire of the shore batteries.

The "Congress" having been set on fire, Lieut. Pendergrast and most of the crew undertook to escape to the shore in small boats, or by swimming, leaving the ship with the white flag still flying at her mainmast head.

Flag-officer Buchanan claimed that he was unable to take possession of his prize owing to the fire from the shore, for which reason he ordered hot shot to be fired into the "Congress" until she was set on fire. Buchanan and his flag-lieutenant, Lieut. Minor, personally directed this matter, and while doing so both were severely wounded. The command of the "Merrimac" then devolved on Lieut. Jones.

Notwithstanding the heavy armor of the "Merrimac," her loss in killed and wounded was twenty-one, showing the good use of their artillery made by the Union ships. The armor was, however, but little damaged by the Federal shot, although the Confederates asserted that at one time they were under the fire of one hundred heavy guns afloat and ashore!

Everything on the outside of the "Merrimac" seems to have been badly injured. The muzzles of two of the guns were shot off, the anchors, smoke-stack and steam pipes were shot away, railing, staunchions, boat davits, every thing was swept clean. The flagstaff was repeatedly shot away, and

During the engagement the "Roanoke" and "St. Lawrence," in tow of tugs, made every effort to join in the combat, but like the "Minnesota," they ran on shore some two miles above Fortress Monroe.

While the above incidents were taking place, the day had passed, and the commanding officer of the "Merrimac," finding he could not take possession of the "Congress," abandoned her to the flames. How glorious it must have seemed to this officer, who served nearly half a century under the stars and stripes, to see that flag hauled down by rebel hands, and those gallant men, who had once served under and admired him, ruthlessly slaughtered at his

CAPTAIN JOHN ERICSSON, INVENTOR OF THE "MONITOR."

cool command! He may have thought it glory then, but in after years, we believe, regret possessed him, and contributed to shorten his life.

At five o'clock P. M. the "Merrimac" turned towards the "Minnesota," which ship lay aground apparently at her mercy, but the pilots would not attempt the middle channel with the ebb tide, and night was fast approaching. So the "Merrimac" returned to Sewell's Point and anchored. In passing the "Minnesota" the iron-clad opened fire, but only a single shot struck the frigate; the gun-boats, however, accompanying the "Merrimac" did much greater damage with their rifled guns, though they were finally driven off by the heavy guns which the "Minnesota" carried forward.

The ten-inch pivot gun of the "Minnesota" produced no effect on the iron clad, the shot glancing like pebbles from her sides, and it was plain that the "Minnesota," as soon as the tide would allow the Confederate vessel to come to close quarters,

as the "Congress" and the "Cumberland" had been. The commanding officer of the Union frigate therefore made all preparations to abandon his ship and set her on fire, anticipating an attack early next morning.

Thus closed one of the most memorable days of the civil war, a day which carried gloom and sorrow to the hearts of all loyal citizens. The authorities at Washington were dismayed, and it appeared to those most familiar with the circumstances that this was the crisis of the Union cause.

All through the South there were scenes of rejoicing; bonfires blazed on the hill tops, and everywhere the Confederates ex-

sons had confidence, and which had not yet reached the scene of action. What hope could there be for the "Minnesota," hard and fast aground, or for the frigate "Roanoke," with her disabled machinery, or the "St. Lawrence" with no machinery at all! The commanding officers must either destroy their vessels and escape into Fortress Monroe or let them fall into the hands of the enemy.

But the avenger was at hand, and at nine o'clock that night Ericsson's little "Monitor," under the command of Lieut. John L. Worden, arrived from New York, after experiencing trials and difficulties sufficient to have appalled an ordinary officer.

REAR-ADMIRAL JOHN L. WORDEN, COMMANDER OF THE "MONITOR."

pected that the next news would be the total destruction of the Federal fleet at Hampton Roads, and the advance of the "Merrimac" to Washington.

As a result of their victory the Southern people saw an abandonment of the advance on Richmond, the capture of Washington, the laying of the seaboard cities under contribution, the raising of the blockade of the Southern coast, and the recognition of the Confederate Government by the powers of Europe.

There was apparently nothing between them and success, for the Federal Government had no means of arresting the disaster which threatened it, except a diminutive, experimental war vessel in which few per-

It was a great relief to the officers and men of the squadron to know that an iron-clad of any kind was at hand to assist them, but when they saw the little "nondescript," her decks level with the water, and appearing above it only her pilot-house and a small turret, in which latter were two eleven-inch guns, and compared her with the apparently invulnerable iron-clad of the enemy, they could not feel very sanguine of the result of the coming conflict.

Lieutenant Worden was ordered to proceed at two o'clock A. M. and take position alongside the "Minnesota" to be ready to receive the "Merrimac."

The morning dawned clear and bright, and everything looked so calm and peaceful

that it was hard to realize that two hundred and fifty men had the previous day given up their lives in defence of their flag in a contest hopeless from the beginning.

The flag still floated from the "Cumberland," whose light masts appeared above the surface of the water, marking the spot where the dead slept their last sleep in the shattered wreck, while the smoke from the burning "Congress" ascended to heaven, a funeral pyre over the corpses which strewed the decks of that ill-fated ship.

The "Minnesota," badly cut up, still lay hard and fast aground, and it was evident to all that should the "Monitor" fail them there was nothing but destruction to look forward to.

As the "Merrimac" approached the frigate the crew of the latter went to quarters, the drum sounding more like a funeral knell than a summons to triumphant battle, but, contrary to expectation, the "Merrimac" passed the frigate and "Monitor" and headed towards Fortress Monroe. At the "Rip Raps" she turned into the main channel by which the "Minnesota" had gone up and again rapidly approached the latter.

When the "Merrimac" was within the distance of a mile, the "Minnesota" opened fire with her stern guns and at the same time the "Monitor" was signalled to attack.

Worden showed his confidence in the "Monitor" and her eleven-inch guns by

NEWPORT NEWS.

MINNESOTA.

MERRIMAC.

FORTRESS MONROE.

THE "MONITOR" AND "MERRIMAC."—THE FIGHT AT SHORT RANGE.

The crew of the "Merrimac" were astir at early daylight preparing for the conflict, and as soon as it was fairly light the ironclad was under way and heading towards the "Minnesota." On approaching their expected prey the Confederates discovered a strange-looking craft which they knew at once to be Ericsson's "Monitor," of which they had received a description from their spies at the North. The "Monitor" was but a pigmy in appearance alongside the lofty frigate which she guarded, and the enemy anticipated little difficulty in overcoming her. Still, her arrival was inopportune for the Confederates, causing a change in their plans, which were to destroy the "Minnesota" and then the remainder of the squadron.\*

\* Confederate account.

steering directly for the Confederate ironclad. The latter slowed her engines and paused as if to survey her little adversary and ascertain her character; but if there was any doubt on board the "Merrimac" there was none on board the "Monitor," which kept straight on her course, and the Confederates saw that in a few moments she would be directly alongside of them.

The "Merrimac" opened fire from her forward gun upon what seemed more like a large floating buoy than a man-of-war, but not having a frigate's broadside to aim at the shot passed harmlessly over. The "Monitor's" answering guns were better aimed. The solid eleven-inch shots struck the "Merrimac" fairly, with a blow that resounded through the vessel. This was re-

turned by a broadside from the "Merrimac," but those shots that struck the turret glanced harmlessly off.

Both vessels then turned and approached each other still closer, the "Monitor" firing about every seven minutes, each shot striking the "Merrimac." The latter vessel, having lost part of her smoke-stack the day before, was not working so well, the chief engineer reporting that the draft was so poor that it was with great difficulty he could keep up steam. The "Merrimac" drew twenty-three feet of water, and was thus confined to a narrow channel, while the "Monitor" drawing but twelve feet could take any position and always keep within range of her antagonist's guns, and though the enemy had many more guns, the "Monitor" stuck so close to her adversary that the latter could use but a small proportion of them. Worden's plan was to keep near to his enemy and endeavor to break in her sides with his solid shot.

The "Merrimac" kept up as rapid a fire as possible upon what was visible of the "Monitor," pausing now and then when the smoke cleared off to see whether the little vessel had been demolished, but always finding her apparently unharmed and active as ever, pouring in her solid shot and shaking the great iron-clad's huge frame in a manner which her officers feared might in the long run cripple their ship, unless they could manage in some way to cripple their antagonist.\* The "Merrimac's" fire was then concentrated upon the "Monitor's" pilot-house, as the turret seemed impervious to their shot.

More than two hours had passed in this apparently unequal duel, the Confederates had made no impression on the "Monitor" and their own wounds were *apparently* slight, since the "Monitor" had not yet succeeded in penetrating the "Merrimac's" heavy armor.

The "Monitor" had on board some forty steel shot which it was intended to fire with heavy charges in case of an encounter with the "Merrimac," but previous to leaving New York, Lieut. Worden received orders from the Bureau of Ordnance not to use those shot with the increased charges, as fifteen pounds of powder was as much as the eleven-inch guns would bear. Worden felt obliged to conform to these instructions, as the responsibility of bursting the guns would have fallen upon him. It was subsequently proved by experiment that the eleven-inch Dahlgrens would easily bear twenty-five pounds of powder, and this difference in the charge of the guns, as is now known, would have made all the difference in the world in the final result. The "Merrimac's" armor would have been

broken, and she would have laid at the mercy of the "Monitor," as her speed was not sufficient to have enabled her to escape.

Lieut. Jones having occasion to visit the "Merrimac's" gun-deck saw a division standing at ease, and inquiring of the officer in command why he was not firing, that individual replied, "After firing for two hours I find I can do the enemy about as much damage by snapping my fingers at him every two minutes and a half.\*"

As Lieut. Jones found he could make no impression on the "Monitor" with his shot, he determined to run her down or board her, and for nearly an hour he maneuvered for position, but his ship was too unwieldy for that kind of work. The "Monitor"

LIEUT. SAMUEL DANA GREENE.

(EXECUTIVE OFFICER OF THE "MONITOR.")

danced around her like a yacht around a three-decker, pouring in her shot and endeavoring to find a vulnerable point.

At last Jones thought he saw a chance of ramming the "Monitor," and gave the order to go ahead at full speed, but before the great vessel could gather headway the agile "Monitor" turned, and the disabled prow of the "Merrimac" gave a glancing blow which did no harm whatever.

Again the "Monitor" came upon the "Merrimac's" quarter, her bow actually against the ship's side, and at this distance fired twice. Both shots struck about half way up the "Merrimac's" armor, abreast of the after pivot, and so severe was the blow that the side was forced in several inches. The crew of the after guns were knocked over by the concussion,

bleeding from the nose and ears. A few more shots in the same place would have made an opening, and had Worden known this at the time, he would doubtless have taken the responsibility of using double charges of powder and the steel shot, and thereby secured a complete victory.

While the vessels were together on this occasion, boarders were called away on board the "Merrimac," and started to get on "the little cheese-box on a shingle," as the enemy called her, but the "Monitor" slipped quickly astern and opened her batteries upon the quarter ports. So for hours this struggle was continued with apparently little results.

Thousand of spectators with beating hearts watched the conflict from Fort Monroe, and from the ships. It seemed to them as if the battle would never end, but at length the Confederate commander, thinking it useless to try his broadsides on the "Monitor" any longer, steered off towards the "Minnesota," which opened on the "Merrimac" with all her broadside guns and the ten-inch pivot. The "Merrimac" returned the fire with her rifled bow gun, and a shell passed through the frigate, tearing four rooms into one, and exploding a couple of charges of powder, which set fire to the ship, but the flames were promptly extinguished. Another shell passed through the boiler of the tug "Dragon," causing an explosion.

Then the "Minnesota" concentrated her broadside upon the "Merrimac," and kept up an incessant fire; and, although it is said fifty shots struck the slanting roof of the iron-clad, they did no apparent damage.

By the time the "Merrimac" fired her third shell the little "Monitor" had come up with her again, and placed herself between the "Minnesota" and the enemy, compelling the latter to change her position. While doing this the "Merrimac" grounded and the "Minnesota" poured into her the fire of all the guns she could bring to bear. As soon as the "Merrimac" got off the bottom, she proceeded down the bay, then suddenly turned and attempted to run the "Monitor" down, but failing in the attempt she concentrated all her broadside guns on the little vessel, which was keeping up a rapid fire.

Suddenly the "Monitor" was seen to move away from the "Merrimac" in rather an erratic manner, and it was at this instant that Lieut. Worden was so disabled that he could no longer direct the movements of his vessel. He was looking through one of the slits in the pilot house, when a shell exploded in front of the opening, driving the powder into his face and eyes, rendering him blind and helpless. He

the executive officer, Lieut. S. D. Greene, who was in the turret, with instructions to continue the action, and the vessel was again headed towards the enemy and her fire recommenced.

During the time between the fall of Lieut. Worden and the arrival of Lieut. Greene in the pilot house, the "Monitor" was entirely under control of the man at the wheel, who having no one to direct him, and doubtless being excited by the fall of his commanding officer, steered off on another course without any particular aim or object. This is substantially the view given of the occurrence by Prof. Soley in his work, "The Blockade and the Cruisers," and he obtained his information from the late Commander Greene.

LIEUT. GEORGE U. MORRIS.

(ACTING COMMANDER OF THE "CUMBERLAND.")

Prof. Soley further says: "Seeing the 'Monitor' draw off, Van Brunt, under the supposition that his protector was disabled and had left him, prepared for the worst, and made ready to destroy his ship; but at this point the 'Merrimac' withdrew to Norfolk. Greene fired at her twice, or at most three times. He then returned to the 'Minnesota,' and remained by her until she got afloat." This is no doubt a correct version of the affair. The "Merrimac" moved off (those on board of her glad to do so in an apparently creditable manner), knowing that if the battle lasted much longer the "Monitor" would be successful.

When the Confederates saw the "Monitor" moving away, they naturally concluded she was disabled, or had run short of ammunition, and their first idea was to proceed again to the attack of the "Minnesota."

By Capt. Van Brunt's account, the "Mer-

did head towards his ship, and realizing his helpless condition he made every preparation to destroy the "Minnesota," determined that she should not fall into the hands of the enemy. Capt. Van Brunt goes on to say: "A short time after the 'Merrimac' and her consorts had changed their course, and were heading for Craney Island."

In writing history it is no more than fair that both sides should have a hearing. Lieut. Greene, in his report to the Secretary of the Navy, dated March 12, 1862, says:

"At 8 A. M. perceived the 'Merrimac' underway and standing towards the 'Minnesota;' hove up anchor and went to quarters

"At 8:45 A. M. we opened fire on the 'Merrimac,' and continued the action until 11:30 A. M., when Capt. Worden was injured. Capt. Worden then sent for me to take charge of the vessel. We continued the action until 12:15 P. M., when the 'Merrimac' retreated to Sewell's Point, and we went to the 'Minnesota' and lay by her."

LIEUT. JOSEPH B. SMITH.  
(ACTING COMMANDER OF THE "CONGRESS.")

This is rather a meagre report of so important a transaction, but no one else in the squadron at Hampton Roads, so far as known, says anything about the matter except Capt. Van Brunt, who writes: "For some time after this the Confederates concentrated their whole battery upon the turret and pilot-house of the 'Monitor,' and soon after the latter stood down for Fortress Monroe."

A Confederate officer on board the "Merrimac" says: "At length the 'Monitor' withdrew over the middle ground where we could not follow, but always maintaining a position to protect the 'Minnesota.' To have run our ship ashore on a falling tide

return for an hour and at two P. M. steamed for Sewell's Point and thence to the dockyard at Norfolk. Our crew were thoroughly worn out from the two days' fight. Although there is no doubt that the 'Monitor' first retired, the battle was a drawn one as far as the two vessels engaged were concerned, but in its general results the advantage was with the 'Monitor.'"

This seems to be a fair statement and its author pays a high tribute to the "Monitor." He says: "The 'Monitor' was well handled and saved the 'Minnesota' and remainder of the fleet at Fortress Monroe," which seems evident enough, for had the "Monitor" failed to appear every vessel in the roads must have been captured or destroyed.

There is glory enough in this fact for the little "Monitor" without claiming more for her. She saved not only the squadron, but the honor of the nation, and her gallant commander is fully entitled to all the honors he received. Had he not been disabled at such an inopportune moment he would, in our opinion, have compelled the "Merrimac" to surrender; for the tide was ebbing and in another hour the "Merrimac" could not have maneuvered and would have grounded; the "Monitor" then could have taken position under the iron-clad's stern and knocked her frame in.

Thus ended this remarkable engagement, which, in the bravery and ability displayed on both sides, has never been excelled; and the foreign officers who witnessed the conflict, could judge from it how desperately we could meet a foe attempting to invade our shores.

It is stated by the Confederate authority, to whom we referred, that "the 'Merrimac' was not penetrated by any of the shot fired by the 'Monitor.' Had the fire been concentrated on one spot the shield could have been forced; or had larger charges been used the iron on the 'Merrimac' could not have withstood them. Most of the 'Monitor's' shot struck obliquely, in most cases breaking both courses of iron, but not injuring the vessel's backing. When struck at right angles the wood backing would be broken but not penetrated." These are matters of interest, since it has been a mooted point as to the amount of damage the "Merrimac" received. The "Monitor," we know, received none, except to her pilot-house, and could have fought all day without danger of vital injury to her hull or machinery, but the "Merrimac" was obliged to go into dry-dock to be very thoroughly repaired.

The joy of the Confederates at the news of the first day's fight in Hampton Roads, was much dampened when the information came that the "Merrimac" was obliged to leave

out effecting anything. It was a severe disappointment, since they had reckoned on the capture of the whole Union fleet in the Roads, and an advance of the "Merrimac" upon Washington.

As soon as the "Merrimac" was again ready for service, on the 29th of March, 1862, Commodore Josiah Tatnall was ordered to command her instead of the cool and judicious Catesby Jones, who had conducted the engagement with the "Monitor" with so much skill and bravery. Commodore Tatnall had a high reputation in the old Navy as a brave and chivalric officer. The writer served as his executive officer in some desperate encounters with the enemy during the Mexican War, and knew him as

supplied with steel-pointed solid shot, and one hundred tons of ballast were put on board to increase the vessel's draught and bring her weak point under water, though this decreased her speed. The "Merrimac" was greatly improved, when a month later, on the 11th of April, she left the Navy Yard, and steamed down towards Hampton Roads, accompanied by six gun-boats.

Commodore Tatnall fully expected the "Monitor" to be ready to meet him as soon as he had passed Sewell's Point, but the Federal authorities had grown wary. The fleet had been re-enforced by the "Vanderbilt," fitted as a powerful ram, and she lay ready to attack the "Merrimac" in conjunction with the "Monitor." Could the

COMMODORE JOSIAH TATNALL.

well as one man can know another. Tatnall was ready for any desperate service, but he lacked Catesby Jones' coolness and judgment.

Up to the time Tatnall took command the iron-clad had been in dock undergoing repairs, and it would seem from this circumstance that she had been more roughly handled by the "Monitor" than the Confederates chose to admit. At all events they were convinced that she was not fit to cope with the "Monitor" in her original condition. The hull for four feet below the water line was covered with two-inch iron, a new and heavier ram was strongly secured to the bow, the damage to the armor was repaired, and wrought-iron port

"Vanderbilt" have but struck the "Merrimac," going at half speed, she would have penetrated her as easily as a knife opens a watermelon.

To Tatnall's surprise no one seemed to notice his appearance, the "Monitor" and her consorts lying quietly at anchor below Fortress Monroe. The "Monitor" was just as we left her after the fight; she needed but trifling repairs, while the "Merrimac" had been long enough in dock to make her doubly strong. The "Monitor" had been kept in readiness in case the "Merrimac" attempted to pass the fleet and make towards Washington, although the Confederate vessel could hardly have passed the Kettle Bottom shoals in the channel of the

The officers of the "Merrimac," knowing Tatnall's reputation, expected a desperate engagement at the outset, but he showed more than ordinary judgment when he found how matters stood. He had requested permission from the Confederate government to act on his own discretion and to pass Fortress Monroe if he thought proper; but this was denied him for prudential reasons. While the "Merrimac" remained intact it was supposed that Norfolk would be secure against attack, and the way for an army to Richmond would be barred by the iron-clad; all of which was in a measure true. For equally prudent reasons the "Monitor" was kept out of battle for the present, and lay off Fortress Monroe under command of Lieut. Jeffers. There were no Federal war vessels above Fortress Monroe, but there were three merchant sailing vessels within the bar off Hampton.

Tatnall ordered Lieut. Barney, in the "Jamestown," to go in and bring them out. This was accomplished, although the gunboat was fired on by the forts. Two of the vessels contained supplies for the Federal Army.

This was a humiliation and should not have been suffered, but prevented at all hazards, especially as the crew of an English corvette cheered the Confederates as they towed their prizes away.

"That night the 'Merrimac' lay at anchor above Sewell's Point, and a few days later she went within gunshot of the fort at the Rip Raps, with which she exchanged a few rounds. It is said that the 'Merrimac' opened fire, hoping that the 'Monitor' would go out and meet her, when by numerous devices it was intended to board the little vessel, smother the officers and crew, put out the fires and tow her into Norfolk! The 'Monitor,' however, lay quietly at anchor biding her time, and the 'Merrimac's' engines breaking down, she was obliged to return to Norfolk.

"On the 8th of May the 'Merrimac' again appeared and found the 'Monitor,' 'Galena,' 'Nantucket' and a number of heavy ships shelling the works at Sewell's Point; but on the appearance of the iron-clad they all returned below Fortress Monroe. Tatnall stood direct for the 'Monitor,' which retreated with the other vessels, the 'Merrimac' and consorts following close down to the Rip Raps, where shot passed over the ship and a mile beyond. Tatnall remained for some hours in the Roads until finally in disgust he gave an order to Lieut. Jones to fire a gun to windward and take the ship back to her buoy."

The above Confederate account does not agree with the report of Rear Admiral Goldsborough, who says:

"By direction of the President our vessels shelled Sewell's Point yesterday, mainly with a view to see the practicability of landing a body of troops thereabouts. The 'Merrimac' came out but was even more cautious than ever. The 'Monitor' was kept well in advance and so that the 'Merrimac' could have engaged her without difficulty had she been so disposed, but she declined to do so, and soon returned and anchored under Sewell's Point."

This disposes of the statement that the

"Merrimac" and consorts, for the writer can find nothing on record to substantiate the Confederate account. There is every reason to believe the commander of the "Merrimac" was willing to let the "Monitor" alone, for he was too clever a man to risk his vessel against all the ships awaiting his attack.

The Federals were evidently desirous to draw him as far as possible from his base and then overwhelm him with the "Monitor," heavy frigates and powerful rams that were prepared to attack him.

That was the last appearance of the "Merrimac." According to a Confederate account: "On the 9th of May, while at anchor off Sewell's Point, it was noticed at

LIEUT. JOHN TAYLOR WOOD, OF THE "MERRIMAC."

(AFTERWARDS COMMANDER OF THE PRIVATEER "TALLAHASSEE.")

sundown that the Confederate flag was not flying over the batteries. A boat was sent on shore and found them abandoned. Lieut. Pembroke Jones was then dispatched to Norfolk, and returned with the news that Norfolk was evacuated, and the Navy Yard on fire."

That determined the fate of the "Merrimac." Her occupation was gone, and to prevent her from falling into the hands of the Federal Government, she was blown up and entirely destroyed.

Several plans had been proposed to save the vessel for further use, such as lightening her and getting her up the James River as a protection to Richmond, but they were found impracticable.

It was just as well that the Merrimac's career ended thus, for she would never have been of any more use in Confederate hands, and her officers and crew would have fallen

who ventured to attack the "Monitor," backed as she was by an overwhelming force. The Federal government had made a great mistake in not being prepared for the "Merrimac" on her first appearance; they were not going to be caught again, and in their precautions to this effect they rather overdid the matter. The lesson was not lost on the Government during the war. The experience we gained by the loss of the "Congress" and "Cumberland" was worth a dozen frigates, although we mourned the brave fellows who fell gloriously fighting for their country.

Had there been no "Merrimac" we should never have built those magnificent iron-clads, which for a time placed our Navy in the front rank of the navies of the world, and enabled us to bid defiance to England and France, who were too much inclined to meddle with our affairs.

The "Merrimac" taught our legislators the necessity of being more liberal in our naval expenditures, and to build armored vessels such as would not only be able to stand the heaviest seas, but to batter down the strongest forts, or destroy any enemy's vessel that came upon our coast.

After the war was over the lesson was unfortunately soon forgotten, and in a few years the Navy, which was so powerful at the close of the rebellion, relapsed into an insignificance from which it will take long to recover; while other nations, taking advantage of our experience, have gone on building iron-clads which astonish the world with their power.

To this day the principle of the "Monitor" is recognized in every navy in the world, and the fame of Ericsson promises to endure for centuries to come.

The "Monitor" did not long outlast her huge antagonist. She was lost a few months afterwards in a gale off Cape Hatteras in attempting the impossible, for it was never intended she should be used as a cruiser. She was not intended to ride out heavy gales, and of this the government had had proof in her first voyage to Hampton Roads, when she was very near going to the bottom. When she foundered she carried down with her some brave fellows who stood by her to the last. May they rest in peace!

After reading all the accounts which have been published in regard to this engagement, we come to the conclusion that the "Monitor" was too much for the "Merrimac." The latter was damaged so much that she had to remain some time in dock for repairs. For a short time after Lieut. Worden was wounded, the "Monitor" headed away from her antagonist until Lieut. Greene could get into the pilot-house, and the commanding officer of the "Merrimac" took advantage of this circumstance to return to Norfolk.

Catesby Jones was too clever an officer not to know that if he should get aground in the narrow channel the "Monitor" would certainly capture him. Had Worden not been wounded the "Merrimac" would have been captured as it was.

After the "Merrimac" retreated Worden was removed to Washington, where he received every attention his condition required, and all the honors the government could bestow for his skill and bravery, which had averted a terrible catastrophe and humiliation. To Worden belongs the credit of having performed one of the most important achievements of the war.

## CHAPTER XIII.

### BUILDING A NAVY ON THE WESTERN RIVERS.—BATTLE OF BELMONT.

JAMES B. EADS ENGAGED TO BUILD GUN-BOATS.—DEPOT ESTABLISHED AT CAIRO.—NAVY YARD AT MOUND CITY.—FLAG-OFFICER FOOTE IN COMMAND OF MISSISSIPPI SQUADRON.—CAPTAIN PENNOCK AND ASSISTANTS.—THE "TAYLOR," "LEXINGTON" AND "CONESTOGA."—GRANT SEIZES PADUCAH.—COMMANDER WATKINS ATTACKS THE BATTERIES NEAR COLUMBUS.—BATTLE OF BELMONT.—GRANT GAINS TWO VICTORIES IN ONE DAY.—EFFICIENT SERVICES RENDERED BY GUN-BOATS.—THE WESTERN FLOTILLA, ETC., ETC.

**T**O enable us to keep pace with the progress of events we must now turn our attention in another direction, and see what the Navy was doing in the western rivers.

Early in 1862 the attention of the Navy Department was directed towards the West. The necessity of building gun-boats there to assist the Army in its operations had become evident to the dullest comprehension.

There were more than four thousand miles of navigable rivers, the control of which was absolutely necessary to the Federal Government to enable it to crush out rebellion, and the only way to obtain this control was to build a fleet peculiarly adapted to smooth and shallow waters, while carrying the heaviest smooth-bore and rifled ordnance.

Strange as it may at this day appear, some of the Army officers argued that gun-boats would be useless to co-operate with the Army in the West, as the Confederates would establish heavy forts all along the rivers, and knock the vessels to pieces; in April, 1862, after the war had progressed for a year, General Leonidas Polk seized upon the heights near Belmont, Ky., and mounting heavy guns there blocked the way for Army transports from Cairo to the sea. Then the Army began to talk of improvising a Navy of their own, and the Navy Department sent Commander John Rodgers to St. Louis to superintend the construction of an army flotilla.

While the North had its Ericsson, the West was fortunate in possessing in the

person of Mr. James B. Eads, the very man for the occasion. Mr. Eads undertook to build seven large gun-boats, heavily plated on the bow and lighter on the sides, which were calculated to carry very heavy ordnance.

It is strange how slowly even the cleverest of men receive new ideas. These gun-boats, intended for service in the smooth waters of the western rivers, could have been plated with iron sufficient to have turned the heaviest shot, instead of which they were only partially covered, and owing to this defect met with many mishaps. In three months three of the vessels were ready to receive their armament.

As the Army were now making great demands for gun-boats, Com. Rodgers was authorized to purchase three river steamers and convert them into war-vessels without plating. These were the first gun-boats that fired a shot in support of the Union, and became well known for their many encounters with the enemy, and for valuable services throughout the war.

Flag-officer Andrew H. Foote was ordered to command the Mississippi Squadron on the 6th of September, 1862, and he took with him to the West a number of officers whose names will appear from time to time in our pages—a more gallant set of men never trod the deck of a vessel-of-war.

Foote, Rodgers, Eads and their assistants put forth all their energies to get the squadron ready for service, as the enemy were fortifying the banks of the rivers in Tennessee and Bell's base of the river at

Columbus barred the way against vessels from above. The civilians who had charge of the building of the gun-boats were not skilled in the construction of war-vessels, and the time of the naval officers was therefore completely occupied in supervising the work of construction; but with their aid Mr. Eads soon completed an efficient flotilla, which obtained a fame in the annals of the war surpassed by no other vessels.

One of Flag-officer Foote's first acts was to establish a depot at Cairo, Illinois, where his vessels could be repaired and could replenish their stores; and those who remember the Navy Yard at Mound City, near Cairo, and the large fleet which grew from the small squadron first put afloat, will wonder why we should require so many navy yards at the present time when we hardly fit out a dozen vessels in a year.

Com'r A. M. Pennock was placed in command of the depot at Cairo, the navy yard being literally afloat in wharf boats, old steamers, tugs, flat-boats, or even rafts, as the government owned no land at that point; but when the station was subsequently established at Mound City, just above Cairo, the Union exulted in the possession of a real navy-yard of some ten acres, which although sometimes under

able size, although its machine shops, carpenter shops, etc., were all afloat in steamers. Capt. Pennock had charge of the naval station until the close of the war, and his services called forth the unqualified

commendation of the several commanders-in-chief of the Mississippi Squadron under whom he served. Capt. Pennock's first assistants at the naval station were Lieutenants I. P. Sanford and O. H. Perry, Chief Engineer, Capt. Geo. D. Wise, U. S. A., Quartermaster, and Acting Naval Constructor Romeo Friganza, the latter sent from New York navy yard to fill this important position.

This, then, was all the establishment the Navy Department at that time considered necessary to keep in repair the Mississippi Squadron, that was expected to successfully control an active enemy occupying thousands of miles of navigable rivers, where the nature of the country offered every advantage to an enterprising foe.

The difficulties with which the Navy had to contend on the Atlantic coast were many, and their duty was harassing, but

at least they had generally sea-room and intervals of rest. An officer could retire to repose without the expectation of having a volley of musketry crash through his state-

REAR-ADMIRAL A. H. FOOTE.

not risk being knocked over by some cowardly bushwhacker, who would watch all day for the chance of picking off somebody on board a gun-boat—just as in peaceful times he had laid in wait for a coon or a wild turkey. In the West a man carried his life in his hands, yet few took pains to avoid the danger, although always in readiness to meet and repel attacks upon their vessels. Coolness and courage were at all times required, and a readiness for duty that interfered with the natural rest, so essential a preservative of vitality.

The three wooden gun-boats which formed the advance guard of the Western Flotilla, were the "Taylor," "Lexington" and "Conestoga," which had been so altered from river steamers that they became efficient vessels of war. The "Taylor" mounted six sixty-four-pounder guns in broadside and one thirty-two-pounder in the stern; the "Lexington" mounted four sixty-four-pounders in broadside and one thirty-two-pounder astern, and the "Conestoga" carried two thirty-two-pounders in broadside and one light gun in the stern—not a very formidable flotilla to encounter strong earthworks, many of them mounting rifle guns of great range.

The Confederates had not at first attempted to extemporize a river navy, although they were not long in following the Federal example; and the Navy Yard at Memphis, turned over to the State of Tennessee with all its appliances, by act of Congress, was soon in full blast preparing vessels to attack anything we might put upon the rivers. But our light gun-boats showed themselves not only fit for picket duty and for clearing the banks of bushwhackers, but even to take a hand in shelling heavy batteries.

At this period of the war General Grant had been transferred to the command of the District of Southeast Missouri, and on the 4th of September, 1861, he established his head-quarters at Cairo, Illinois. His district included Southern Illinois and so much of Western Kentucky and Tennessee as might fall into possession of the national forces. It comprised the junction of the Mississippi, Ohio, Tennessee and Cumberland Rivers, and was at the time the most important point of operations in the West.

Kentucky, in the early part of the war, endeavored to preserve a neutral position between the contending sections, but the Confederate General Polk soon violated this neutrality, seizing Columbus, some twenty miles below Cairo, and threatening Paducah; whereupon Grant seized this latter place and garrisoned it. Thus the two armies were near each other. Grant had nothing but ordinary transports to operate with,

from the banks of the river by the Confederate light artillery.

On the 14th of September Commander Henry Walke, in command of the "Taylor," under orders from Flag-officer Foote, proceeded down the river towards Columbus to make reconnoissance, accompanied by officers of General Grant's staff. At Norfolk, six miles below Cairo, the "Taylor" took on board a hundred men of the Ninth Illinois Regiment, and then approached Columbus to ascertain the strength of the batteries. "These batteries were built upon what was called the Iron Banks, at the first Chickasaw Bluff, which rose from two to three hundred feet above the river, overlooking its course for a distance of twenty miles north and south. The Confederate batteries were placed on the spurs of the bluff, one of them, fifty feet above the water, mounting two heavy guns, with a floating battery of sixteen heavy guns moored at Columbus landing. Their heaviest rifled guns were planted and pivoted on the summit of the river banks, where they commanded a long range up the river and towards their rear."

When Com. Walke arrived off these works, he fired eight or ten eight-inch shells into them, killing and wounding several of the enemy, and the reconnoissance having been completed the vessel returned to Cairo.

The "Taylor" and "Lexington" were constantly employed on such service, and their value soon became apparent to the army officers, who had at first thought they would be of little use.

Soon after the above mentioned reconnoissance, General Grant wrote to Commander Walke, requesting the services of the gun-boats to accompany him to Belmont landing, and on the 16th of November, 1861, the General started down the river with 3,100 men in transports, convoyed by the "Taylor," Com. Walke, and the "Lexington," Com. R. N. Stembel.

Grant landed his troops at Hunter's Point, on the Missouri side, out of range of the Columbus batteries, and marched direct on Belmont, three miles distant, where the Confederates had posted their camp in an open space protected by fallen timber. By nine o'clock Grant's entire command was hotly engaged, except one battalion left at the landing as a reserve, and to protect the transports.

General Grant had requested Com. Walke, with the two gun-boats, to attack the batteries at Columbus as a diversion, which was done. As the gun-boats were under fire of some twenty heavy guns having a plunging fire, it was necessary to manage them with great skill to prevent their being disabled, and they moved around in short

possible. When their object was accomplished the gun-boats withdrew, as it would have been madness to have continued longer under the fire of such heavy guns.

In the mean time Grant had been fighting four hours and his horse had been shot under him. The officers' example stimulated the men, who though novices in war fought like veterans, driving the enemy to the river, capturing all his artillery and several hundred prisoners, and breaking up the camp.

Instead of pursuing the enemy as they huddled together under the river bank, the Federal soldiers began to plunder the camp. Meanwhile, Confederate transports, crowded with men, were discovered coming up the river from Columbus, and Grant

have whipped them once and can do it again." As soon as the men found that Grant meant to fight, not to surrender, they charged the enemy, who disappeared in the woods.

Grant pushed on to the landing and most of his men went on board the transports. A detachment was sent back to gather up the wounded, and it was, for a time, undisturbed. Then Grant in person went to withdraw his reserve force, which he found had already returned to the transports, thus leaving the General completely outside his army. Ascending a knoll he discovered the enemy advancing in line of battle in greatly increased force, with the evident intention of getting above the transports and cutting them off. The General

BATTLE OF BELMONT.

endeavored to reform his men in order to get back to his own steamers before these troops could land, but it was not until he had ordered the camp to be set on fire that his men would cease plundering. The fire drew the attention of the artilleryists at Columbus, who opened on the Federal troops.

The march back to the transports then began, but the defeated enemy, finding no notice was being taken of them, reformed in the woods just above Belmont, where three regiments from Columbus joined them, and this combined force was interposed between Grant and his transports. Some of the troops cried out "we are surrounded." "Well," said Grant, "in that case, we must cut our way out as we cut our way in; we

saw that it was impossible to save the party who were out in search of the wounded, so he turned and rode slowly back towards the transports to avoid attracting attention.

The enemy's fire was opened on the transports, which were about getting under way, leaving Grant behind, but a plank was hastily run out from one of the vessels and he rode on board. At that moment the "Taylor" and "Lexington" opened upon the enemy in a corn-field about fifty yards distant with grape and canister, mowing them down "in swaths," as General Badeau expresses it, and causing them to retreat in great confusion. By five o'clock the last of our transports was out of range of the enemy's batteries, officers and men equally pleased with having gained a victory, which

but for the gun-boats would have been a bloody defeat. It is true the soldiers in the transports kept up a constant fire on the enemy, but being raw troops they no doubt aimed too high, as did the Confederates, and there was very little execution done; but in the case of the gun-boats there was no mistake, their guns were handled by trained men directed by experienced officers, and such was the rapidity and accuracy of their fire that the enemy fled in all directions.

Thus Grant gained two victories in one day, and against double his own force, for the Confederates admit having 7,000 men in action. Grant lost 485 in killed, wounded and missing; 125 of the wounded fell into the enemy's hands, but in lieu of these Grant captured 175 prisoners and two guns. The Confederate loss was 685 killed and wounded, mostly by the gun-boats.

Soon after the defeat of the enemy and the departure of the transports, General McClelland discovered that some of his soldiers had been left behind, and at his request Capt. Walke returned and succeeded in recovering most if not all these, together with forty of the enemy's wounded, who had been left on the field, proof positive that the Confederates had retreated in a panic.

The assistance given the army by the gun-boats disposed of the question "as to the utility and practicability of gun-boats carrying on hostilities on the rivers, where it was believed the batteries on the banks could prevent their passage." It is strange how an opposite idea could have been entertained by those who ought to have known better.

In Gen. Grant's official report he says: "The gun-boats convoyed the expedition and rendered most efficient service. Immediately upon our landing they engaged the enemy's batteries on the heights above Columbus, and protected our transports throughout. For a detailed account of the part taken by the gun-boats I refer with pleasure to the accompanying report of Capt. Walke, senior officer."

This was warm commendation from Gen. Grant, who was moderate in his praise of men, but it scarcely gave an idea of the service performed by the gun-boats that day. The Confederates had to land their troops that crossed from Columbus three miles below, giving the men a long march. The gun-boats "Taylor" and "Lexington" attacked the batteries three times during the day, and kept up a fire on the enemy all along the banks. When our soldiers retreated to the transports the gun-boats covered them so with their fire that they received little injury.

This battle was claimed by both sides, which is apt to be the case with raw troops;

although they had less than one-half the enemy's force.

The gallant conduct of Commanders Walke and Stembel does not appear to have secured even a passing notice from the Secretary of the Navy, which was certainly a great injustice to two officers who had demonstrated so plainly the efficiency of gun-boats on the Western rivers.

It was a part of the Confederate plan early in the civil war to seize and hold Missouri and Kansas, thus threatening the free States in the Northwest, to hold Kentucky and Tennessee, cross the Ohio, and make the Northern States the theatre of war, thus punishing the Northern people for their obstinacy in declining to yield to the demands of the secessionists. This plan, which had been discussed long before the Southern States seceded, would doubtless have been carried out had it not been for the multitude of men in the North who sprang to arms and frustrated the Confederate plans. Lee had to retreat from Pennsylvania, where it was determined that the Confederates should endure all the hardships of war to teach them the folly of rebellion.

To circumvent the grand schemes of the enemy in the West, it was necessary that we should have a naval force on all the rivers, and Attorney General Bates seems to have been the first person in the government to point out the necessity of such a force to get possession of all the tributaries of the Mississippi, and finally of the great river itself to the sea. Mr. Bates' ideas were not at first considered practicable; even the veteran Secretary of the Navy, Mr. Welles, who is credited with a vast knowledge of naval matters, seemed to doubt, and stated that "there was with many great incredulity as to the utility and practicability of the use of gun-boats on the Western waters, where it was believed batteries on the banks could prevent their passage." The Secretary might have observed that the enemy's batteries on the Potomac did not stop even ordinary transports.

At first the naval forces on the Western rivers were put under the direction of the War Department, as it was supposed the armed vessels would be a mere appendage of the land forces; and there does not seem to have been a man in the Cabinet at that time who knew the difference between a gun-boat and a transport.

In July, 1861, Quartermaster General Meigs contracted with Mr. Eads to build a number of iron-clad gun-boats for the Western waters, and from the fact that Gen. Meigs contracted for them it is presumed the War Department paid for them, and that the Navy Department had not then risen to the height of the occasion. Seven

tons, to draw six feet of water, to be plated with two and a half inch iron, and steam nine knots. They were to be each 175 feet long and 51½ wide, their sides at an angle of 35 degrees from the water line, their gun decks being but a foot above the surface of the water. The bow and stern were at an angle of 45 degrees, and the wheel for propelling the vessels was placed in the stern. Of course these vessels had many imperfections, as we were new in the business of building iron-clads, and seem to have had very little idea what thickness of iron plating was necessary to turn the heavy shot of the enemy.

The iron-clads carried four thirty-two pounders on each side, three nine or ten-inch guns in their bow ports, and two lighter

with the others to the Navy Department, her name was changed to "Baron de Kalb," as there was already a "St. Louis" in the Navy. In the course of the succeeding twenty days the "Carondelet," "Cincinnati," "Louisville," "Mound City," "Cairo" and "Pittsburg" followed in rapid succession. An eighth vessel, the "Benton," superior in every respect to the above, was undertaken. She was originally a wrecking boat, purchased by General Fremont and sent to Mr. Eads, whose ideas developing as he went on building, he produced from this wrecking boat an iron-clad of remarkable strength.

Thus in one hundred days this energetic man constructed a squadron of iron-clad gun-boats, aggregating five thousand tons,

U. S. GUN-BOATS "TAYLOR" AND "LEXINGTON."

guns in the stern. A casemate enclosed the wheel at the stern, and there was a conical pilot-house forward covered with iron. The writer is particular in describing these vessels, as they performed such remarkable service all through the war, and notwithstanding their defects and the vicissitudes they experienced, no vessels in the Navy engaged in so many successful battles or made such a record for their commanding officers.

Within two weeks after the contract with Eads was signed, four thousand men were busily engaged in constructing the vessels. The work was pushed night and day, and on the 12th of October, 1861, the "St. Louis" was launched at Carondelet, Missouri, forty-five days after her keel was laid. When this vessel was transferred

ready for their armament of one hundred and seven heavy guns. Such a performance needs no eulogy, and even had Mr. Eads done no more in the cause of the Union, he would have been entitled to the thanks of the nation. Since then he has gone on executing great works, and his reputation as a civil engineer is world-wide.

A ninth powerful vessel, the "Essex," was afterward added to this formidable flotilla. She carried nine heavy guns, and though built in later fashion was not equal to the "Benton."

When Flag-officer Andrew H. Foote took command of the Western Flotilla in September, 1862, it consisted of these nine "iron-clads" (so-called), three wooden gun-boats, the "Taylor" "Lexington" and

"Conestoga," which had been purchased and equipped by Commander John Rodgers, and thirty-eight mortars mounted on rafts.

This service was of a somewhat anomalous character, since the gun-boats were under control of the army, and their accounts were under the supervision of the Quartermaster General. There was no navy yard at first where the vessels could be refitted or repaired, but Flag-officer Foote, with his energetic assistants, overcame the impediments that retarded his operations, and displayed the highest qualities as a naval commander by establishing an efficient force on the Western rivers, and by leading it to victory in subsequent engagements with the enemy.

Previous to the time when Foote took command of the squadron, the "Taylor," "Lexington" and "Conestoga" were constantly employed by General Grant, with

the commanders mentioned, in making reconnoissances, during which they came frequently under fire of the enemy's batteries, which even at that early day infested the banks of the rivers. In one of these affairs the "Conestoga" particularly distinguished herself.

The Commander-in-Chief of a squadron may be very energetic himself and possess all the qualities necessary for his position, but he cannot succeed unless he is assisted by brave and efficient officers. The mention of subordinate officers has been too much neglected by naval historians, a fault which in this account the writer would wish to avoid. Nothing is more pleasing to an officer than to see himself credited with faithful service, though there are some officers so avaricious in this regard that they would fain monopolize all the glory to themselves. Such men should write their own histories.

## CHAPTER XIV.

### BATTLE AND CAPTURE OF FORT HENRY BY THE NAVY.

COMMANDING POSITIONS OF FORTS HENRY AND DONELSON.—GRANT GIVEN PERMISSION TO ATTEMPT THE CAPTURE OF THE FORTS.—FOOTE'S GUN-BOATS AND THE ARMY UNDER GRANT LEAVE CAIRO.—LANDING OF THE ARMY AT BAILEY'S FERRY.—DEFENSES OF FORT HENRY.—FORT HIEMAN EVACUATED.—THE GUN-BOATS OPEN FIRE ON FORT HENRY.—DESCRIPTION OF THE BATTLE BY A CONFEDERATE HISTORIAN.—THE "ESSEX" DISABLED.—COMMODORE WILLIAM D. PORTER WOUNDED.—FORT HENRY SURRENDERS.—CAPTAIN WATKINS TAKES POSSESSION OF THE FORT.—LOSSES.—GALLANT FOOTE.—DREADFUL SCENES OF THE ENGAGEMENT DESCRIBED BY AN OFFICER OF THE "ESSEX."—VESSELS ENGAGED IN ATTACK ON FORT HENRY.

**S**HORTLY after the battle of Belmont the Confederates established a strong line of operations reaching to the centre of Kentucky. On their left was Columbus, where they had collected a strong force and 140 guns. One of their largest armies was at the junction of the Louisville and Nashville, and Memphis and Ohio Railroads (the northernmost point then held by the Confederates west of the Alleghany Mountains). These armies threatened Northern Kentucky and protected Nashville and Middle Tennessee.

At the centre of this strategic line the Tennessee and Cumberland Rivers formed the natural avenues into all the disputed territory north of the cotton States. These two streams approach within twelve miles of each other, at a point near the boundary between Kentucky and Tennessee. Here, at a bend in each river, the Confederates had erected two batteries, Fort Henry, on the Tennessee, and Fort Donelson, on the Cumberland. These forts completely commanded the navigation of the two rivers, and by forbidding any advance of the Union gun-boats or transports, prevented the transportation of our army by water, either into Kentucky or Tennessee.

The reader may think it strange that the Confederates, with nothing like the Federal resources, should be able to throw up so many formidable fortifications on coast and river, and mount them with heavy guns, and will naturally ask where the guns came from.

The answer to this question is that, by our terrible blunder in surrendering the Norfolk Navy Yard at the commencement of the war, we put into the hands of the Confederates 1,400 guns of all calibres. Our Navy had already recaptured 211 of these Norfolk guns, and it remains to be seen what account it will render of those which now confront it at Columbus, Fort Henry and Fort Donelson.

Grant knew the nature of these works better than any other officer, and saw that Bowling Green and Columbus could both be turned as soon as Henry and Donelson fell. Halleck and others were making great strategic movements, which amounted to nothing, but Grant kept his mind steadily fixed on these two forts, knowing the effect their fall would have.

On the 23d of January Grant visited Halleck at St. Louis, and urgently requested permission to make the attempt to take Forts Henry and Donelson; both of which General C. F. Smith, who had made a reconnoissance, reported could easily be done.

The gun-boats at that time were subject to General Halleck's orders, and Flag-officer Foote, who commanded them, had recommended a united movement of Army and Navy against the forts. The desired permission was finally granted to these officers, but the gallant commander of the Army contingent was greatly hampered by detailed instructions furnished by the Commander-in-Chief.

Grant started from Cairo on the 2d of February, 1862, with 17,000 men in transports, and Foote accompanied him with seven gun-boats. After reconnoitering the forts the Army landed at Bailey's Ferry, just out of reach of the enemy's fire.

The Confederates had erected their works at Fort Henry on both sides of the river, with a garrison of 2,800 men, under Brigadier-General Tighlman. The main fortification was on the eastern bank. It was a strong field-work with a bastioned front, defended by seventeen heavy guns, twelve of which bore on the river. Embrasures had also been formed by placing sand-bags on the parapets between the guns. On the land side there was an entrenched camp, and beyond this an extended line of rifle-pits, located on commanding ground. The earth-works covered the Dover road, by which alone communication could be held with Fort Donelson. The heights on the west commanded Fort Henry, but the works at this point were unfinished.

Grant's plan was to land and attack the enemy in the rear, while Foote was to attack their batteries in front with the gun-boats.

When the Confederates discovered this plan they prepared for a determined resistance. New lines of infantry cover were established and additions were made to the fortifications on both sides of the river. Tighlman at once ordered up re-enforcements from Danville and the mouth of Sandy River, as well as from Fort Donelson.

The country around Fort Henry was all under water from the overflow of the Tennessee River, which impeded the movements of the troops on both sides. The rain fell in torrents on the night of the 5th of February, and Grant having an insufficiency of transports was obliged to send some of his steamers back to Cairo to bring up part of his command. He did not therefore succeed in getting all his men on shore until 11 P. M.

The original plan was to invest Fort Hieman on the west bank simultaneously with Fort Henry, in order to prevent re-enforcements, and also the escape of the garrisons. The Confederates perceiving the impossibility of holding both works against such a force, evacuated Fort Hieman, and gave all their attention to defending Fort Henry.

Grant was ignorant of this withdrawal, and that night ordered General C. F. Smith to seize the heights on the west with two brigades. The rest of Grant's force, under Gen. McClernand, was to move at 11 A. M. on the 6th to the rear of Fort Henry, and take position on the road leading to Fort Donelson and Dover, where they could intercept fugitives and hold themselves in readiness to take the works by storm promptly on the receipt of orders.

COMMODORE FOOTE'S IRONCLAD GUN-BOATS AT CAIRO.

The fleet got under way at two o'clock on the day of the battle in the following order: The "Essex," 9 guns, Com. Wm. D. Porter, on the right; "Cincinnati" (flag ship), 13 guns, Com. Stembel, on the left of the "Essex;" "Carondelet," 13 guns, Com. Walke, on the left of the "Cincinnati;" and the "St. Louis," 13 guns, Lieut. Paulding, on the left of all. The "Conestoga" (wooden), 3 guns, Lieut. Phelps; "Taylor" (wooden), 9 guns, Lieut. Gwin; "Lexington" (wooden), 9 guns, Lieut. Shirk. These vessels all told mounted 76 guns; but as they were obliged to fight "bow on" and could therefore only use their bow guns, there were only twelve guns brought into action by the iron-clads and five or six by the wooden vessels, which were well in the rear.

The position of Fort Henry had been selected with great care. It stood at the end

the naval discipline and accuracy of fire soon told on the troops in the fort.

The battle is described as follows by a Confederate historian:

"A few moments before the surrender, the scene in and around the fort exhibited a spectacle of fierce grandeur; many of the cabins and tents in and around the fort were in flames (from the Federal shells)—added to the scene were the smoke from the burning timber, and the curling of the dense wreaths of smoke from the guns, the constantly recurring spatter and whizzing of fragments of bursting shells, the deafening roar of artillery, the black sides of five or six gun-boats, belching fire at every port-hole, and the army of General Grant, 10,000 strong, deploying around our small army, attempting to cut off its retreat. The gallant Tighman, exhausted and begrimed with powder and smoke, stood erect at the middle battery and pointed gun after gun, and remarked, 'It is vain to fight longer, our gunners are disabled, our guns dismounted—we can't hold out five minutes longer,' and finally he ordered the white flag to be hoisted."

When the gun-boats had obtained a sta-

ATTACK ON FORT HENRY.

of a straight reach in the river, which its guns commanded for two miles. Two 64-pounders were planted on an elevation above the fort, which might, however, have been stormed and taken by our own troops, and turned against the enemy.

The gun-boats moved on up to within a mile of the fort, firing an occasional shot, and finally moved to within a third of a mile of the batteries, when the firing commenced in earnest from both sides.

General Grant and Flag-officer Foote had intended to have the Army and Navy make a simultaneous attack, but it is a pretty difficult matter to time such events. In combined movements something always happens to delay one party or the other; in this instance the roads were dreadful, and the Army was so delayed that it did not reach the fort until some time after its surrender to the Navy. For over an hour the guns on both sides kept up a deafening roar, but

tionary position and were able to get their range, almost every shot and shell went to its mark, and the destruction caused was marvelous; but with all the damage our fire was doing to the enemy they fought like devils, and only gave in when it was no longer possible to hold out.

The gun-boats did not get off "scot free" in this attack; they had their share of damage as well as the fort, and a fair share of killed and wounded. About twenty minutes before the Confederates surrendered, the gun-boat "Essex" was pierced through the boilers by a shot, which resulted in wounding and scalding 29 officers and men, including her gallant commander, William D. Porter. She drifted out of the fight totally disabled, and took no further part in it.

After the "Essex" dropped out, the firing from the fort continued with undiminished

mained in position, and was continued without intermission until the flag was hauled down, after a hotly-contested action of one hour and fifteen minutes.

At the end of the battle a boat containing the Adjutant General and Captain of Engineers went alongside the flagship and reported that Brig. Gen. Lloyd Tighlman, the commander of the fort, wished to communicate with the naval commanding officer. Lieuts. Stembel and Phelps were then sent on shore to hoist the American flag on Fort Henry, and a request was sent to Gen. Tighlman that he visit the flagship, which he did, and surrendered himself a prisoner.

All the prisoners were received on board the fleet, and thus ended the battle of Fort Henry.

Besides the General and his staff there were 60 or 70 prisoners, and a hospital ship containing 60 invalids, all of whom were treated with that kindness which naval officers always extend to an enemy in distress. Captain Walke of the "Carondelet" was directed to go on shore and take charge of the fort and all within it until the arrival of the Army, which took place an hour afterward, when everything was handed over to Gen. Grant.

This was a well-fought battle on both sides, and the gun-boats were skillfully handled by the naval commanders. The gallant Foote might well feel proud to be the first to remove that absurd idea that "gun-boats would not prove serviceable in Western waters as they could not resist the fire of heavy guns in earthworks."

On taking possession of the fort Commander Walke beheld a perfect scene of destruction. Everything in and about the works was either knocked to pieces or set on fire; and it is remarkable that with such evident effects of the naval fire so few of the enemy were disabled (six killed and seventeen wounded).

Twenty heavy guns fell into our hands as well as a large amount of military stores. The "Essex" was the only gun-boat that suffered any severe damage from the enemy's fire. But the Confederate practice was excellent, and the iron-clads were frequently struck. According to Flag-officer Foote's report the "Cincinnati" was struck thirty-one times, the "Essex" fifteen times, the "St. Louis" seven times and the "Carondelet" six times, though Commander Walke claims to have been struck much oftener.

The "Essex" lost 29 men killed and wounded by scalding steam, and also nine soldiers who were serving on board of her. The casualties on the other vessels were few and unimportant, as their iron plating (though only two and a half inches thick), had done them good service.

tween gun-boats and shore batteries in Western waters. It was an unequal contest against a fort that mounted 20 heavy guns, but it was so quickly settled that it gave the Confederates a great dread of the iron-clads; and in building forts thereafter, they were more careful not to have them in accessible places.

Where all did their duty so well it would be hard to discriminate. Each one received his full meed of praise from Foote, and their conduct on this occasion was long remembered by the people of the country, for it was now clearly demonstrated that the naval vessels on the Western rivers could sustain the fire of the heaviest batteries, notwithstanding the high authority to the contrary.

To give an idea of some of the dreadful scenes to which our gun-boats were liable, we insert an interesting letter written after the battle of Fort Henry, by James Laning, the Second Master of the "Essex," in which he thus describes the engagement:

"On February 1st, 1862, the iron-clad gun-boat 'Essex,' whilst lying off Fort Holt, received orders from Flag-officer A. H. Foote, commanding the Western flotilla, to proceed up the Tennessee River, and anchor some five miles below Fort Henry, blockading the river at that point. The iron-clads 'Carondelet,' Commander Henry Walke; the 'Cincinnati,' Commander Stembel, and the 'St. Louis,' Lieutenant Commanding Leonard Paulding, were completed and put into commission a few days previous, making, with the 'Essex,' four iron-clads, besides the wooden gun-boats 'Taylor,' 'Lexington' and 'Conestoga,' now ready for offensive operations.

"On the 5th of February, after reconnoitering up the Tennessee to Fort Henry, we fired a few shots at the fort and returned towards our anchorage. The enemy made no reply, and apparently took no notice of our shots, until we were well on our way back. When about two, or two and a half miles distant, the fort fired a rifle shot, which passed over our boat to the right and cut down a number of saplings on shore. In a few moments another shot, fired with more precision, passed over the spar-deck amongst the officers; through the officers' quarters, visiting in its flight the steerage, commander's pantry and cabin, passing through the stern; doing, however, no damage except breaking some of the captain's dishes, and cutting the feet from a pair of his socks, which happened to be hanging over the back of a chair in his cabin. These shots reaching us at so great a distance, rather astonished us, as the enemy intended they should.

"After this reconnoissance it was decided to remove the torpedoes from the island chute, and instead of going up the main channel, to steam up the chute, and forming line of battle under cover of the timber on the island, advance towards the fort and open fire as we reached the head of the island at the distance of a mile to a mile and a half, and continue advancing. The wooden gun-boats, 'Taylor' and 'Lexington,' were, therefore, ordered to remove the torpedoes, which they did without much difficulty. The army, which was encamped on both sides of the river, was to move at daylight on the morning of the 6th, so as to make a land attack, and prevent the escape of the garrison, whilst the gun-boats were to attack as before men-

"On the afternoon of the 5th, Flag-officer Foote came on board the 'Essex,' and our crew were called to quarters for drill and inspection. After putting them through the evolutions he addressed the crew and admonished them to be brave and courageous, and above all to place their trust in Divine Providence. The writer, who was in command of the battery, was especially charged with the importance of wasting no shots. 'Remember,' said he, 'that your greatest efforts should be to disable the enemy's guns, and be sure you do not throw any ammunition away. Every charge you fire from one of those guns cost the government about eight dollars. If your shots fall short you encourage the enemy. If they reach home you demoralize him, and get the worth of your money.' After commending all to the care of Divine Providence he left us, and repaired on board the 'Cincinnati,' which was his flag ship at that time.

"During the night of the 5th, or morning of the

it was conceded that one gun on land was about equal to three on water.

"Upon arriving at the head of the island, the flagship 'Cincinnati' opened fire, which was the signal to commence the general engagement. The writer had, however, received orders from Capt. Porter not to fire until he had particularly noted the effect of the 'Cincinnati' shots, so as to profit by their mistakes, if they made any, in elevation. The first three shots from the flagship fell short, so there was \$24 worth of ammunition expended. A lesson, however, had been learned on board the 'Essex,' and orders were at once given to increase elevation. At that moment the captain's aide appeared on the gun-deck with orders to fire high, and blaze away; and before I could repeat the order, the No. 2 port-bow gun belched forth her fiery flame, and sent a nine-inch shell plump into the breastworks, which, exploding handsomely, caused a considerable scattering of earth, and called forth

REAR ADMIRAL R. N. STEMBEL, COMMANDER OF THE "CINCINNATI."

(FROM A PORTRAIT TAKEN IN 1883.)

6th, a heavy rain fell, which very much retarded the movements of the army, and made the roads so heavy that they did not succeed in reaching the scene of action until after the fort had surrendered. The naval forces, after waiting until 11 o'clock A. M., got under way and steamed up the river. Arriving at the island chute, the line of battle was formed, the 'Essex' on the extreme right, the 'Cincinnati,' with Flag-officer Foote on board, on our left, the 'Carondelet' on her left, and the 'St. Louis' on the extreme left—the wooden boats taking position in our rear under cover of the island, and firing over us at long range.

"As we could only use the bow batteries on each boat, we could only bring, on the four iron-clads, 11 guns to bear. The fort, although mounting 17 guns, could only bring 11 of them to bear on the island chute, so it was a fair and square fight, and the problem was about to be solved whether iron-clad gun-boats could compete with mud fortifica-

a cheer from the fleet, whilst it produced great consternation in the fort. The 'Essex' had therefore won the honor of putting the first shot into the enemy's breastworks.

"And here I must record the fact, in justice to the memory of a brave man, who lost his life in that engagement, that the honor of that shot belonged to Jack Matthews, captain of the No. 2 gun. Jack was an 'old tar,' who had seen much service on men-of-war in both the English and American navies, and was always restive under the command of a volunteer officer. Jack, ever on the alert to put in the first licks, and feeling, no doubt, jealous and insubordinate, had increased the elevation of his gun, and just as I was in the act of repeating the captain's order, pulled his lockstring and blazed away.

"The fort seemed a blaze of fire, whilst the boom of the cannon's roar was almost deafening. The wind was blowing across our bows, carrying the

tion to the view. Our fleet kept slowly approaching the fort, and gradually shortening the distance. Our shells, which were fused at 15 seconds, were reduced to 10, and then to five seconds. The elevation of the guns was depressed from seven degrees to six, five and four, and then three degrees, and every shot went straight home, none from the 'Essex' falling short.

"Twenty or thirty minutes after the action had begun, some one of the officers ventured to call the attention of Capt. Porter to the fact that the officers on the other vessels were leaving the spar-decks and going below. 'Oh, yes,' says Porter. 'I see; we will go too, directly.' Just then a shot struck the pilot-house, making the splinters fly terribly, as no plating had as yet been put on it. At this the order was given for all to go below, and soon all joined us on the gun deck. Capt. Porter, on coming below, addressed the officers and crew, and complimented the first division for their splendid execution, asking us if we did not want to rest, and give three cheers, and they were given with a will.

"By orders I turned over the command of the battery to the third master, and ordered the first division to give way to the second. Capt. Porter then ordered the first division to the stern battery. This was a precautionary measure, the importance of which could scarcely be estimated at that time, but became dreadfully apparent a few moments after. A few of my men, however, reluctant to quit the scene of action, lingered by their guns on the forward gun deck; amongst the number was Jack Matthews. In the twinkling of an eye the scene was changed from a blaze of glory to a carnival of death and destruction. A shot from the enemy pierced the casemate just above the port-hole on the port side, then through the middle boiler, killing Acting Master's Mate S. B. Brittan, Jr., in its flight, and opening a chasm for the escape of the scalding steam and water. The scene which followed was almost indescribable. The writer, who had gone aft in obedience to orders only a few moments before (thus providentially saved), was met by Fourth Master Walker, followed by a crowd of men rushing aft. Walker called to me to go back; that a shot from the enemy had carried away the steam pipe. I at once ran to the stern of the vessel, and looking out of the stern port saw a number of our brave fellows struggling in the water. The steam and hot water in the forward gun deck had driven all who were able to get out of the ports overboard, except a few who were fortunate enough to cling to the casemate outside. On seeing the men in the water, I ordered Mr. Walker to man the boats and pick them up; Capt. Porter, who was badly scalded, being assisted through the port from outside the casemate by the surgeon, Dr. Thomas Rice, and one of the men.

"When the explosion took place Captain Porter was standing directly in front of the boilers, with his aide, Mr. Brittan, at his side. Heat once rushed for the port-hole on the starboard side, and threw himself out, expecting to go into the river. A seaman (John Walker) seeing his danger, caught him around the waist, and supporting him with one hand, clung to the vessel with the other, until, with the assistance of another seaman, who came to the rescue, they succeeded in getting the captain on to a narrow guard or projection, which ran around the vessel, and thus enabled him to make his way outside, to the after port, where I met him. Upon speaking to him, he told me that he was badly hurt; and that I must hunt for Mr. Riley, and if he was disabled I must take command of the vessel, and man the battery again. Mr. Riley was unharmed, and already in the discharge of his duties as Captain Porter's successor. He had been saved by a sailor (John W. Eagle) from going overboard in such the same manner that Captain Porter had

been. This man Eagle was Captain of No. 1 gun, and like Jack Matthews, would not leave his gun, and although badly wounded, with his right hand in a sling, he begged me, with tears in his eyes, not to remove him, but to let him fight his gun. I reported the case to Captain Porter, who decided to let him remain; and this brave fellow fought his gun most admirably through the action, and then 'capped the climax' of his bravery and heroism by grasping the casemate with his wounded hand, and clasping Executive Officer Riley with the other one as he was falling overboard, sustaining him until both regained a footing on the projection before mentioned.

"In a very few minutes after the explosion our gallant ship (which had, in the language of Flag-officer Foote, fought most effectually through two-thirds of the engagement) was drifting slowly away from the field of glory; her commander badly wounded, a number of her officers and crew dead at their posts, whilst many others were writhing in their last agony. As soon as the scalding steam would admit, the forward gun-deck was explored. The pilots, who were both in the pilot-house, were scalded to death. Marshall Ford, who was steering when the explosion took place, was found at his post at the wheel, standing erect, his left hand holding the spoke, and his right hand grasping the signal bell-rope. Pilot James McBride had fallen through the open hatchway to the deck below; he was still living, but died soon after. The captain's aide, Mr. S. B. Brittan, Jr., had fallen by the shot as it passed through the gun-deck before entering the boiler. A seaman named James Coffey, who was shot-man to the No. 2 gun, was on his knees in the act of taking a shell from the box to be passed to the loader. The escaping steam and hot water had struck him square in the face, and he met death in that position. Jack Matthews had gone overboard badly scalded. He was picked up by the boats. Third Master Theo. P. Terry was severely scalded, and died in a few days. He was a brave officer.

"Our loss in killed, wounded and missing amounted to 32. Of these three were killed instantly, four died that night, several were drowned (the number not definitely known), and about one-half the wounded recovered.

"The Flag-officer continued approaching nearer and nearer to the fort, pouring shot and shell from the boats at still shorter range . . . until they showed the white flag to surrender.

"When I told Captain Porter that we were victorious, he immediately rallied, and raising himself on his elbow, called for three cheers, and gave two himself, falling exhausted on the mattress in his effort to make a third. A seaman named Jasper P. Breas, who was badly scalded, sprang to his feet, naked to the waist, his jacket and shirt having been removed to dress his wounds, exclaiming: 'Surrendered! I must see that with my own eyes before I die.' Before any one could interfere, he clambered up two short flights of stairs to the spar-deck, where he was gladdened with the sight of his own flag proudly and victoriously floating in the breeze. He shouted, 'Glory to God!' and sank exhausted on the deck. Poor Jasper died that night, that his country might live.

"The 'Essex' fired seventy-two shots from two 9-inch guns during the battle. In obedience to battle orders, I had instructed the powder boys to keep count of the number of charges served to each gun. Job Phillips, a boy fourteen years old, was powder-boy of No. 1 gun. After the action, I asked Job how many shots his gun had fired. He referred me to a memorandum on the whitewashed casemate; where with a rusty nail he had carefully and accurately marked every shot his gun had fired; and his account was corroborated by the gunner in the magazine. This may be considered as a striking example of coolness and bravery in a boy of fourteen, who had never before been under fire."

## SECRETARY WELLES TO FLAG-OFFICER FOOTE.

"NAVY DEPARTMENT, }  
February 13, 1862. }

"SIR: Your letter of the 7th inst., communicating the details of your great success in the capture of Fort Henry, is just received. I had previously informed you of the reception of your telegraphic dispatch, announcing the event, which gave the highest satisfaction to the country.

"We have to-day the report of Lieutenant Commanding Phelps, with the gratifying results of his successful pursuit and capture and destruction of the Confederate steamers, and the disposition of the hostile camps as far up the Tennessee as Florence. I most cordially and sincerely congratulate you, and the officers and men under your command, on these heroic achievements, accomplished under extraordinary circumstances, and after surmounting great and almost insuperable difficulties. The labor you have performed, and the services you have rendered in creating the armed flotilla of gunboats on the Western waters, and in bringing together for effective operation the force which has earned such renown, can never be overestimated. The Department has observed, with no ordinary solicitude, the armament that has so suddenly been called into existence, and which under your well-directed management has been so gloriously effective.

"I am, respectfully,

"Your obt' servant,

[Signed] "GIDEON WELLES.

"Flag-officer A. H. FOOTE, U. S. N.,  
"Commanding Gun-boat Flotilla, &c., Cairo, Ill."

## OFFICIAL THANKS TO THE ARMY AND NAVY.

The State of Ohio deemed this battle sufficiently important to merit a vote of thanks, as appears from the following:

"Relative to a vote of thanks to General Grant, Flag Officer Foote and others, for their courage and gallantry exhibited in the bombardment of Fort Henry. Resolved by the General Assembly of the State of Ohio, That the thanks of the people of Ohio be, and through their representatives are, hereby tendered to General Grant and Flag-officer Foote, and the brave men under their command, for the courage, gallantry and enterprise exhibited in the bombardment and capture of Fort Henry, a victory no less brilliant in itself than glorious in its results, giving our Army a foothold in Tennessee, and opening the way for early advance to the capital of the State.

"Resolved, That the Governor transmit copies of these resolutions to said officers, with the request that the same be read to the men under their command.

"JAMES L. HUBBELL,

"Speaker of the House of Representatives.

"B. STANTON, President of the Senate.

"Passed, February 14, 1862."

The following is a list of the vessels and officers engaged in attack on Fort Henry:

GUN-BOAT "CINCINNATI."—R. N. Stembel, U. S. N., Commander; William R. Hoel, First Master; Oscar H. Pratt, Second Master; Charles G. Perkins, Third Master; John Pearce, Fourth Master; R. H. Attenborough, Pilot; Isaac D. Gaugh, Pilot; John Ludlow, Surgeon; Baron Proctor, Paymaster; William D. McFarland, Chief Engineer; Samuel H. Lovejoy, First Assistant Engineer; James Armstrong, Second Assistant Engineer; William J. Shannon, Third Assistant Engineer; James McB. Stembel, Master's Mate; Philip Shell, Mas-

ter's Mate; John R. Hall, U. S. N., Acting Gunner; Thomas B. Gregory, Carpenter; Jacob Vitinger, Armorer.

GUN-BOAT "CONESTOGA."—S. L. Phelps, U. S. N., Lieutenant Commanding; John A. Duble, First Master; Charles P. Noble, Second Master; Benjamin Sebastian, Third Master; Richard H. Cutter, Fourth Master; Aaron M. Jordan, Pilot; William Attenborough, Pilot; William H. Wilson, Assistant Surgeon; Alfred Phelps, Acting Paymaster; Thomas Cook, Chief Engineer; Alexander Magee, First Assistant Engineer; Charles Marshall, Second Assistant Engineer; Michael Norton, Third Assistant Engineer; James Kearney, Master's Mate; Henry Hamilton, U. S. N., Acting Gunner; Andrew Woodlock, Carpenter; James O'Neil, Armorer.

GUN-BOAT "ESSEX"—William D. Porter,

IRON-CLAD GUN-BOATS "ST. LOUIS," "CARONDELET"  
AND "ESSEX."

U. S. N., Commander; Robert K. Riley, First Master; James Laning, Second Master; Theodore P. Ferry, Third Master; George W. Walker, Fourth Master; James McBride, Pilot; Marshall H. Ford, Pilot; Thomas Rice, Surgeon; Joseph H. Lewis, Paymaster; Charles M. Blasdell, Chief Engineer; R. J. Stearns, First Assistant Engineer; George D. Simms, Second Assistant Engineer; Jeremiah Wetzel, Third Assistant Engineer; S. B. Brittan, Master's Mate; Matthias B. Snyder, Gunner; Thomas Steel, Carpenter; —Fletcher, Armorer.

GUN-BOAT "LEXINGTON."—James W. Shirk, U. S. N., Lieutenant Commanding; Jacob S. Hurd, First Master; Martin Dunn, Second Master; James Fitzpatrick, Third Master; Sylvester Poole, Fourth Master; James McCamant, Pilot; William Ford, Pilot; George W. Garver, Assistant Surgeon; Augustus F. Taylor, Acting Paymaster; Samuel Vroon, Gunner; Richard Carroll, Carpenter; Reuben Story, Armorer.

GUN-BOAT "TAYLOR."—William Gwin, U. S. N., Lieutenant Commanding; Edwin Shaw, First Master; Jason Goudy, Second Master; James Martin, Third Master; Patrick McCarty, Fourth Master; John Sebastian, Pilot; David Hiner, Pilot; Thomas H. Kearney, Assistant Surgeon; William B. Coleman, Acting Paymaster; Samuel Goble, Chief Engineer; D. Edward Weaver, First Assistant Engineer; Edward W. Goble, Second Assistant Engineer; Oscar S. Davis, Third Assistant Engineer; Ferdinand T. Coleman, Master's Mate; Herman Peters, U. S. N., Acting Gunner; Thomas Russell, Carpenter; Elihu Stevens, Armorer.

GUN-BOAT "ST. LOUIS."—Leonard Paulding, U. S. N., Lieutenant Commanding; John V. Johnson, First Master; James Y. Clemson, Second Master; Charles S. Kendrick, Third Master; Alexander Fraser, Fourth Master; John B. McDill, Assistant Surgeon; Llewellyn Curry, Acting Paymaster; Frank A. Riley, Pilot; Robert G. Baldwin, Pilot; William Carswell, Chief Engineer; T. F. Ackerman, First Assistant Engineer; James L. Smith, Second Assistant Engineer; John Wilcoxsen, Third Assistant Engineer; Sydney H. McAdam, Master's Mate; James P. Paulding, Master's Mate; John A. McDonald, U. S. N., Acting Gunner; Robert H. Medill, Carpenter; — Sypher, Armorer.

GUN-BOAT "CARONDELET."—Henry Walke, U. S. N., Commander; Richard M. Wade, First Master; John Doherty, Second Master; Charles C. Gray, Third Master; Henry A. Walke, Fourth Master; William Hinton, Pilot; Daniel Weaver, Pilot; James S. McNeely, Assistant Surgeon; George J. W. Nixsin, Acting Paymaster; William H.

Faulkner, Chief Engineer; Charles H. Caven, First Assistant Engineer; Samuel S. Brooks, Second Assistant Engineer; Augustus F. Crowell, Third Assistant Engineer; Theodore L. Gilmore, Master's Mate; Edward E. Brennand, Master's Mate; Richard Adams, Gunner; Oliver Donaldson, Carpenter; H. H. Rhodes, Armorer.

By referring to the public or official dispatches of the war, the names of the commanders and officers above mentioned will be found constantly referred to in battles with the enemy, and were very frequently distinguished by acts of bravery and heroism creditable alike to themselves and the naval service. The position of the Navy in the West at that time was an anomalous one, belonging as they did neither to one or the other branches of the service; and the hands of the naval commander were so tied down by the orders of General Halleck, that he could make no move without his permission. The same may, however, be said of General Grant, who was completely handicapped by his own superior.

There was only one killed and eleven wounded on the iron-clads in this battle at Fort Henry, a small number for so long a fight, but this is accounted for by the fact that the accuracy of the gun-boats' fire was so great, and the discharges so rapid, that the enemy were constantly driven from their batteries—even the great bravery of their Commander (General Loyd Tighlman), and the example he set in firing the guns himself, could not induce the Confederates to stand up to their work under such a fire, especially after seven of the fort's guns had been dismounted.

## CHAPTER XV.

### CAPTURE OF FORT DONELSON AND BATTLE OF SHILOH.

GRANT'S MESSAGE TO HALLECK.—THE ARMY IN FRONT OF DONELSON.—THE GUN-BOATS PUSH UP THE TENNESSEE RIVER.—BURNING OF THE CONFEDERATE TRANSPORTS.—FORT DONELSON AND ITS STRATEGIC POSITION.—THE GUN-BOATS OPEN FIRE ON THE FORT.—THE GUN-BOATS ARE CRIPPLED AND WITHDRAW.—FLAG-OFFICER FOOTE WOUNDED.—GALLANTRY OF CAPTAIN WATKINS.—LOSSES.—GENERAL GRANT'S VICTORY.—RESULTS.—GUN-BOATS REPAIR TO CAIRO.—GRANT PREPARES TO ADVANCE TOWARDS SHILOH.—BATTLE AT PITTSBURG LANDING (SHILOH).—SERVICES RENDERED BY THE GUN-BOATS "LEXINGTON" AND "TAYLOR."—CAPTAIN GWIN'S REPORT.—THE NAVY AIDS MATERIALLY IN SAVING THE ARMY FROM DESTRUCTION.—A TERRIBLE BATTLE AND GREAT LOSS OF LIFE.—THE CONFEDERATES AS FIGHTERS.—EXTRACTS FROM RECORDS OF THE TIMES.—CONGRATULATORY ORDERS, &C.

ON the 8th of February, 1862, Gen. Grant telegraphed to Gen. Halleck: "Fort Henry is ours; the gun-boats silenced the batteries before the investment was completed. I shall take and destroy Fort Donelson on the 8th, and return to Fort Henry."

The same reasons which had induced Grant to undertake the capture of Fort Henry still urged him to take Fort Donelson; that is, to get the control of the Tennessee and Cumberland Rivers and be able to penetrate into the heart of Tennessee with his troops and Foote's gun-boats.

On the 7th of February his cavalry penetrated to within a mile of Fort Donelson, but they could obtain no information as to the strength of the place or the number of troops.

Foote was notified of Grant's intentions, and was requested to have what gun-boats he could muster ready to attack the batteries before the army made its assault. But the great rise in the Tennessee River prevented Grant from completing his proposed movement. The water overflowed the river banks, and gave the army as much as it could do to save its stores and tents from the flood.

In the meantime three gun-boats, under Lieut. Phelps, had pushed on up the Tennessee as far as Florence, Alabama, greatly alarming the inhabitants, but carrying

comfort to the loyal citizens, who were glad to see the old flag floating over their waters.

When about twenty-five miles above the fort, Phelps found the draw at the railroad-crossing closed, and the machinery for working it disabled, but men were landed, in an hour the draw was opened, and the following gun-boats passed through: "Taylor," Lieut.-Com. Gwin; "Lexington," Lieut.-Com. Shirk, and the "Conestoga," "Lieut.-Com. Phelps.

In a short time this flotilla caused the enemy to abandon and burn three steam transports, filled with military stores, submarine batteries, powder, cannon and projectiles. These vessels exploded with such force as to endanger the Union gun-boats. Skylights were broken, doors forced open and the light upper decks raised bodily. This did not stop the progress of the latter, however, and they proceeded up the river, doing good work in breaking up railroads and destroying camp equipage wherever they could find it. At a place called Cerro Gordo, they came across the steamer "Eastport," which was being converted into a gun-boat—a strong, powerful vessel, afterwards used as a gun-boat and ram by the Federal Government. She had been abandoned and scuttled, and her suction-pipes broken, but the leaks were stopped, and the vessel raised and taken back to Fort Henry.

On the 8th of February the flotilla arrived

at Chickasaw, near the state line, and seized two steamers. They then proceeded up to Florence, Alabama, near the mussel shoals, where three steamers had been set on fire by the Confederates. A force was landed and a large amount of stores, marked "Fort Henry," were saved from the burning vessels; also a quantity that had been landed and stored.

The results of this expedition were three steamers and one gun-boat seized, six steamers burned by the enemy to prevent their falling into our hands, all the timber and saw-mills in the neighborhood destroyed, and a large quantity of stores captured. From the 6th to the 10th of the month the labors of this little flotilla were immense, and its gallant commander inflicted damage upon the enemy which was irreparable.

In the course of this raid our officers met the most gratifying proofs of loyalty wherever they went. Across Tennessee, and in those portions of Alabama and Mississippi which they visited, men, women and children came in crowds and shouted their welcome to the old flag under which they had been born. A reign of terror had existed all along the river, and loyal people did not dare to express their thoughts openly. They intimated to our officers, however, that if arms were placed in their hands they would not hesitate to espouse the Union cause and put down rebellion in their midst.

This shows exactly what kind of a government the secession leaders intended to substitute for the one under which these people had lived so contentedly, in the enjoyment of freedom of speech and all the other rights which belong to every free American.

This expedition had an excellent effect wherever it appeared, and it showed the necessity of further increasing our naval force on the Western waters, in order to have a sufficient number of gun-boats on all the rivers to keep them open, to drive the guerrilla army away from their banks, and also to give confidence to the Union people, who only needed some such support to induce them to proclaim their sentiments openly.

Grant lost no time in getting together a force which he deemed sufficient for the attack on Fort Donelson. Reinforcements were rapidly coming in from various quarters, and Halleck, who up to this time had thrown every objection in the way of the expedition, now seemed anxious to take the credit of the movement to himself, and was doing all he could to hurry troops, stores and siege implements to the scene of action. On the 10th he informed Grant that large re-enforcements would be sent to him.

Grant did not, however, wait for these re-enforcements, but while Halleck was

Foote that he was only waiting for the return of the gun-boats to attack Fort Donelson.

This fortification was the strongest military work in the entire theatre of war. It was situated on the west bank of the Cumberland River, north of the town of Dover, on a peculiarly rugged and inaccessible series of hills which rose abruptly to the height of one hundred feet. Every advantage had been taken of the character of the ground. The country was densely wooded, but the timber had been felled far out in advance of the breastworks, and the limbs, cleaned and sharpened, were formed into an almost impenetrable abatis.

Two streams which emptied into the Cumberland formed the right and left defenses of the Confederate breastworks, which extended nearly three miles, and were strongly entrenched with secondary lines of rifle pits and detached batteries posted on commanding heights.

It was a marvelous work and evidently a difficult place to take, provided the enemy had a sufficiently strong garrison to hold all points of his line of defense.

The main fort was built on a precipitous height, close by a deep gorge open to the South. It was three-quarters of a mile from the breastworks, and overlooked both the river and the interior. It covered a hundred acres of ground and was defended by fifteen heavy guns and two carronades.

There were heavy water-batteries placed to control the river navigation, and the whole armament of the batteries, including the light artillery, was sixty-five pieces.

The garrison numbered (as well as could be ascertained) 21,000 men, a great part of whom had recently been thrown into the works by the Confederates, who appreciated the importance of the position as fully as Grant did, and were now straining every nerve to hold it.

While Grant was making his movements in the rear of the fort, so as to completely surround it and prevent the escape of any of the garrison, the gun-boats on the water side were preparing for the attack.

Foote, according to his own report, did not consider himself properly prepared for such an adventure, as his force was not sufficiently strong to make an attack on the fort; but at the earnest request of Halleck and Grant, he felt called upon to do what he could, and at 3 P.M. on the 14th, he moved up with his fleet in the following order: iron-clads, "St. Louis," (flag-ship), Lieut. Paulding; "Carondelet," Com. Walke; "Louisville," Com. Dove; "Pittsburg," Lieut. E. Thompson; gun-boats: "Taylor," Lieut.-Com. Gwin; "Conestoga," Lieut.-Com. Phelps, the two latter in the rear.

during part of which time the iron-clads were within 400 yards of the fort, the flagship "St. Louis," and the iron-clad "Louisville," had their wheels disabled and drifted out of action.

The fire of the fort, which had during the greater part of the engagement been very rapid and accurate, was now concentrated on the remaining vessels of the fleet, and soon proved too hot for them. The iron-clads "Pittsburg" and "Carondelet" were much cut up between wind and water, and with the wooden gun-boats were finally compelled to drop out of action. The flagship "St. Louis" had received fifty-nine shots, four of which were between wind and water, and one in the pilot-house which killed the pilot and wounded the flag-officer himself.

Foote says in his report: "Notwithstanding our disadvantages, we have every reason to believe that in fifteen minutes more, could the action have been continued, it would have resulted in the capture of the forts. The enemy's fire had slackened, and he was running from his batteries when the two gun-boats, 'St. Louis' and 'Louisville,' dropped out of action owing to their crippled condition, seeing which, the enemy returned to his guns and again opened fire from the river batteries, which had been silenced."

This was evidently not a success on the part of the Navy, as the gun-boats were compelled to retire; the "St. Louis" and "Louisville," in consequence of having their rudders crippled, and the "Carondelet" and "Pittsburg" because they were not able to withstand the concentrated fire of the enemy.

It has been asked, "If the enemy was deserting his batteries and it was thought that in fifteen minutes more the gun-boats would have been victorious, why were not the drifting vessels lashed alongside of the "Carondelet" and "Pittsburg" and thus brought back into action, where they could have taken part with the Army in obtaining the victory, and have obtained more than a passing notice by army historians?" As it was, the only notice they obtained was the statement that "the gun-boats were so disabled as to be unfit to take any part of importance in the succeeding operations." This mention of the Navy was disingenuous, to say the least, and is not history. The "Carondelet" and "Pittsburg," though struck pretty often, were still intact and fit for any service, and their two commanders would have been glad to have availed themselves of the opportunity to run past the batteries and enfilade them on the side where they were least protected.

There are two ways of fighting batteries on river heights; one is to engage them at

the other, to remain at long range, where the enemy's fire would be uncertain, especially if the vessels were kept well apart.

All these things will be considered after a fight is over, but no one knows what he would do unless placed in like circumstances. In this case the flag-officer had received a serious wound in the foot, and in addition to the physical pain which he suffered, he was no doubt taken by surprise at meeting with such a reception at Fort Donelson after having made such short work with Fort Henry.

Nothing is said in official reports or general orders about the gallant attack made by Captain Walke in the "Carondelet."

On the morning of the 13th (before Foote had arrived), General Grant requested Captain Walke to take a position and throw shells into the fort in order to create a diversion, which he hoped to be able to take advantage of.

Captain Walke immediately complied with this request, and threw 139 15-second and 10-second shells into the enemy's works, receiving in return a fire from all the batteries. The "Carondelet" was only struck twice, however, as most of the projectiles passed over her. One 128-lb. solid shot passed through the front casemate, and glancing over the barricades which protected the boiler, struck and burst a steam-heater and then fell into the fireroom. No other damage was done, and it is thus shown how much more difficult it is to strike one vessel moving about than a number of vessels in groups.

Foote's vessels were struck about fifty times each by 128 and 32-lb. shot, and had fifty-four officers and men killed and wounded.

We regret that we cannot chronicle a victory for the gun-boats, but it was a fair stand-up fight while it lasted, and Foote did not hesitate to take the bull by the horns and engage the enemy at 600 yards, the best distance for the forts and the worst for the vessels; and, although the gun-boats were forced to drop out of action, they lost no credit in so doing.

There was one omission in this naval attack, which is due to the history of the times, and should be mentioned. Had the flag-officer sent his remaining gun-boats past the batteries at night, when the darkness would have prevented the enemy from estimating his distance, these vessels would have been ready on the following day to enfilade the works in their weakest point; and what is more important still, they would have cut off all hope of escape of the garrison. The transports in which Floyd and Pillow with 5,000 men escaped across and up the river, would all have fallen into our hands.

interesting affair we feel obliged to say that all the credit for the capture of Fort Donelson belongs to the Army, as there was no truth in the statement that the enemy were so demoralized by the attack of the gun-boats, that they could not be brought into effective use on the following day in the actions which resulted in their defeat and the surrender of 16,000 men, sixty-five guns and 17,600 small-arms to General Grant. (Twenty-five hundred of the Confederates were killed and wounded during the siege.)

This victory belonged exclusively to General Grant and no one can take from him one iota of the credit of that great military feat, in which he showed his fitness to lead the armies of the Union. The results of this victory were that "the whole of Kentucky and Tennessee at once fell into the hands of the national forces—the Tennessee and Cumberland rivers were opened to national vessels for hundreds of miles. Nashville, the capital of Tennessee and a place of great strategic importance, fell. Bowling Green had become untenable as soon as Donelson was attacked, and was abandoned on the 14th of February, the day before the Confederate works on the Cumberland were carried, while Columbus and the other end of the strategic line were evacuated early in March, thus leaving the Mississippi river free from the Confederate flag from St. Louis to Arkansas.

The news of this victory was very encouraging to the Union people, especially when they beheld its results. When city after city fell and stronghold after stronghold was abandoned, and they saw that it was all in consequence of the capture of Fort Donelson, it is not strange that the national amazement and gratification knew no bounds, and it is only to be regretted that the Navy should not have had a greater share in the honors.

Grant was made a Major-General, and we only regret that the opportunity did not serve to make Foote a Rear-Admiral and give some promotion to his gallant officers.

It is always difficult to procure reliable information with regard to the force of the enemy, either of men or guns. In this case the report of Flag-officer Foote was very indefinite, and he only gives a general idea of what he had to contend against.

He says, "the enemy must have brought over twenty heavy guns to bear upon our vessels from the water-batteries and the main fort on the side of the hill, while we could only return the fire with twelve bow guns from the four boats.

It is not the intention of the writer to mention all the small affairs in which the gun-boats performed splendid service, such as making reconnoissances up and down the rivers or skirmishing with the enemy's boats

and light batteries, unless some definite object was gained or some serious injury inflicted on the enemy, as the limits of this book forbid it. It is his intention, however, to fully describe the work of the Navy in Western waters, and when it is possible to give every officer due credit for what he accomplished, without, as a rule, going beyond official reports.

After the battle of Fort Donelson, Foote's gun-boats had to go to Cairo for repairs, which they sorely needed, and to replenish their crews, for they were all very much in want of men.

As fast as the vessels were made ready for service they were kept moving in the work of reconnoitering down towards Columbus, or else they were employed on the Cumberland and Tennessee rivers to deter the enemy from erecting batteries along the banks; also to assure the inhabitants that they would be protected by the Federal government, and that the Confederates would soon be driven out of the State.

These, however, are mere details of duty which cannot be brought out in a history of this kind. The fall of Forts Henry and Donelson compelled the Confederates to change their plans almost immediately. Their line of defense was moved farther South and was now established on the following points: Island No. 10, Fort Pillow and Memphis on the Mississippi, a point in Tennessee near Pittsburg, and the town of Chattanooga. All of these points were strongly fortified and defended by large armies, thus closing up East Tennessee, and preventing our armies from marching southward.

On the 15th of February, Gen. Grant was assigned to the new military district of West Tennessee, with limits undefined, and Gen. W. T. Sherman to the command of the district of Cairo.

Grant commenced at once to concentrate his forces and make his dispositions to meet the new order of defense established by the Confederates. His first step was to send Gens. Wright and McClernand up to Pittsburg, while he remained himself at Savannah, superintending the organization of the new troops which were arriving from Missouri, and making preparations to advance towards Pittsburg Landing (Shiloh).

The account of the famous battle which soon occurred at this place must be left to military writers, but the battle of Shiloh with its changes of fortune from hour to hour, its keen anxieties, splendid fighting on both sides, and the splendid victory which was finally wrenched from the enemy after he had driven our troops back upon the river, will always be remembered by those who have read the history of that day.

our troops, having been driven by the enemy from point to point and ridge to ridge, had reached the river bank and were brought to bay. Here the gun-boats "Lexington" and "Taylor" rendered good service, and the national troops, rallying under the cover of their guns, made a superb resistance, and although the enemy flung himself fiercely upon the Union lines he was again and again driven back.

The military historians have not done justice to the work of the gun-boats at this important juncture. Croly disposes of the subject by saying: "the gun-boats were of some importance as they had been for some time previous engaged in checking the advance of the enemy on the extreme left." Badeau, the historian, also speaks of the gun-boats "being employed during the night in throwing shells amongst the enemy's troops, which annoyed them greatly and set fire to the woods, which were ablaze all around them."

It is not likely that the two gun-boats would be idle at Pittsburg Landing while our Army was being driven back by the enemy, and it is the belief of many officers that without the aid of these vessels the Federal army would have been annihilated. But there are no reliable Army accounts of the matter and we must be satisfied with the statement that "the Federal troops with their backs to the river, and no cover but the gun-boats, there made an unconquerable stand."

The following account, taken in substance from Boynton's Naval History, seems to be the most correct version of the part taken by the gun-boats "Taylor" and "Lexington," in the battle of Shiloh:

"From the beginning of the fight until after one o'clock P. M., the wooden gun-boats 'Lexington' and 'Taylor' had been moving up and down the stream, anxious to render some assistance, but received no orders to do so. At that time Lieut.-Com. Gwin, of the 'Taylor,' having as yet received no instructions from any quarter, and growing impatient as shot and shell fell around the vessels, sent an officer to communicate with Gen. Hurlburt and requested permission to open on the Confederates. Gen. Hurlburt expressed his thanks for this offer of support, saying that without aid he could not hold his position for an hour, and indicated the proper line of fire. At 10 o'clock the 'Taylor' opened fire on the enemy, and with such effect that in a short time the Confederate batteries at that point were silenced.

"About 4 o'clock the 'Taylor' dropped down to Pittsburg Landing to communicate with Gen. Grant. His reply was that Lieut. Gwin must use his own judgment in the case.

"Directly after the 'Taylor' and 'Lexington' went up in company and took up a position only three-quarters of a mile above the landing.

"In thirty-five minutes the enemy's batteries on the right were again silenced, thus relieving the national troops on the left, but at half-past 5 p. m. our lines had been so forced in towards the river that the enemy gained a position on our left only a short distance from the landing and massed

pected, and not without cause, to crush what remained of the organization of the national army. Between our position and where the enemy had prepared for this last rush, was a ravine which they must cross in the assault, and here the two gun-boats took up a position. At the same time Col. Webster, of Gen. Grant's staff, hastily collected some scattered guns and placed them where they would play on the left flank of the enemy's line when they should advance.

"This was the decisive point in the battle. The next half hour would settle the question whether or not a victorious Confederate army should occupy and lay under contribution the States north of the Ohio.

"There was a brief lull in the firing while the Confederate host was making its final preparations, and our troops were being collected in a semi-circular mass with the centre not half a mile from the river. Our men (with the exception of the shameless skulkers) had fought bravely, but were now in a disorganized condition, and it seemed as if their main dependence must now be upon the guns which Col. Webster had collected to check the advance of the enemy.

"The delay was for a few moments only, and they came preceded by a storm of shot from their batteries which swept over all the intervening space and up to the very banks of the river.

"As stated by Gen. Grant, their troops were massed so as to strike the main blow at our left, so that by turning it they could seize the transports and stores. It did not occur to the enemy that this would bring their column under the guns of the gun-boats at point-blank range.

"The 'Lexington' and 'Taylor' had rounded off opposite the ravine, so that their batteries could be brought to bear upon the dense mass swarming in across the line of fire."

So far Mr. Boynton: Capt. Gwin will tell the rest:

"\* \* \* Both vessels opened a heavy and well-directed fire on them, and in a short time, in conjunction with our artillery on shore, succeeded in silencing their artillery, and driving them back in confusion.

"At 6 P. M. the 'Taylor' opened deliberate fire in the direction of the enemy's right wing, throwing 5 and 10-second shell. \* \* \*"

"At 9 P. M. the 'Taylor' again opened fire, \* \* \* throwing 5, 10 and 15-second shell, and an occasional shrapnel from the howitzer at intervals of ten minutes, in the direction of the enemy's right wing, until 1 A. M., when the 'Lexington' relieved us, and continued the fire at intervals of fifteen minutes until 5 A. M., when, our land forces having attacked the enemy, forcing them gradually back, it made it dangerous for the gun-boats to fire."

In this engagement the "Taylor" fired 188 shell, and the "Lexington" about the same number, and it can be imagined what gaps were made in the enemy's ranks by our expert gunners, when they were massed at the ravine for a rush upon our disorganized troops, already driven nearly to the river.

The military historian says, "the gun-boats gave mutual support at this moment." Boynton says, "thus, on the same day, the Navy on the Western rivers received the surrender of one of the Confederate fortifications on the Mississippi, and aided very materially in saving from destruction our Army at Pittsburg Landing by repelling the

ing their army by the destructive broadsides of the steamers' heavy guns, and holding them back during the night until Nelson and Buel were ready to attack."

The reader can take either version of the story that suits him best.

There is a tradition in the Navy which will go down to posterity, that the "Taylor" and "Lexington" prevented part of our Army on that day from being driven into the river, and turned the enemy back when he considered that victory was in his hands.

Lieut. Gwin in writing to Foote, puts it

by both parties, but the Federals remained masters of the field.

It broke up the delusion of many in the North who, up to this time, had believed that after a few heavy defeats the Southern people would return to their allegiance. For here it was seen that after the victories of Donelson and Shiloh, and the capture of Columbus, Nashville and Bowling Green, no perceptible effect was made upon the resolution of the Confederates. Their energy was not in the least diminished.

Gen. Grant himself believed that the contest was to be prolonged and desperate, and

REAR-ADMIRAL HENRY WALKE, (COMMANDER OF THE "CARONDELET.")

modestly thus: "Your 'old wooden boats,' I feel confident, rendered invaluable service on the 6th instant to the land forces." And so will think the reader.

Why Gen. Grant did not have a large number of gun-boats at Pittsburg Landing is not understood, as it was a most favorable position for their use, and the 60,000 Confederates spread over a large area of ground would have offered many opportunities for them to throw in an effective fire.

The battle of Shiloh was a terrible one, and the losses on both sides were very

as we go on with the history of events it will be seen that his view was the correct one. The more the Confederates were beaten the harder they fought, and even when they had "robbed the cradle and the grave" to fill up their ranks, and when many of them were satisfied that their cause was hopeless, they fought on as if engaged in some pastime in which they took great delight.

In conclusion we would call attention to the fact that the victories which perched upon the banners of the Federal army were frequently due in a great measure to the

which were easily transported from place to place, and could deliver a fire which no army could return or withstand.

#### BATTLE OF FORT DONELSON.

The following extracts from the records of the times are interesting, as throwing light on the history of those affairs :

It is now stated by one of our most brilliant writers of history and biography that Foote sent the "Carondelet" to Fort Donelson upon a reconnoissance, and other friends of the Admiral are evidently led into the same error; but on the contrary, to our knowledge, he never approved or disapproved of Commander Walke's co-operation with General Grant, nor did he reply or allude to the following letters upon that subject. And it is evident that no other officer would have taken the responsibility of revoking the orders for the "Taylor," "Lexington" and "Conestoga" to join the "Carondelet" upon the reconnoissance at Fort Donelson, but the flag-officer himself. And as he was previously informed of all the circumstances, by the letters of Commander Walke, there was no explanation asked for, or made, when they met on the night of the 13th. The flag-officer, however, seemed to be satisfied when Commander Walke informed him that the "Carondelet" would be ready for battle again as soon as she had replenished her ammunition, early on the following morning. We may, however, be assured by the remarks in Pollard's *Southern History of the War*, that if four or five steamers, instead of one, had menaced Fort Donelson on the 11th of February, a day or two before the enemy's re-enforcements had arrived, the effect would have been much more discouraging to the enemy. General Grant, being under the impression at least that Foote's flotilla could not assist him immediately, instructed Commander Walke to proceed without delay to commence the attack on Fort Donelson in connection with our Army before the enemy could receive re-enforcements or could strengthen his position.

The following is the letter referred to, preceding the battle of Fort Donelson.

FROM COMMANDER WALKER TO FLAG-OFFICER FOOTE.

"U. S. GUN-BOAT 'CARONDELET,' }  
"Paducah, Feb 10th, 1862. }

"SIR:—I received instructions from General Grant this evening, to proceed with this vessel to Fort Donelson, on the Cumberland river, to co-operate with our Army in that vicinity. I expect to meet you before I reach there. The 'Alps' will take me in tow. I will call at this place. General Grant will send the 'Taylor,' 'Lexington,' and 'Conestoga' after me.

"We heard that you were on your way to Fort Donelson but had been no tidings of you here to

"The 'Taylor' has just returned from up the Tennessee River, as far as navigable. She, with the 'Lexington' and 'Conestoga,' destroyed or captured all the enemy's boats, broke up their camps, and made a prize of their fine new gun-boat.

"I write this in anticipation of not seeing you before I leave here, as I am (or the 'Carondelet' is) very slow, and General Grant desires that I should be at Fort Donelson as soon as I can get there. But I hope you will overtake me, or send me your orders upon this occasion, as I am now acting upon your general instructions repeated at Fort Henry. I expected to send this letter from here to-night, but am disappointed in this also.

"Most respectfully and truly,

"Your obt's servant,

"H. WALKER,

"Commander U. S. N.

"To Flag-officer A. H. FOOTE, U. S. N.,

"Commander U. S. Naval Forces, Western Waters."

This letter explains the part taken by the "Carondelet" in the battle of Fort Donelson. After the capture of Fort Henry, Flag-officer Foote was requested by Generals Halleck and Grant to co-operate with the latter in an attack on Fort Donelson, situated on the west bank of the Cumberland river, near the town of Dover. The fort was stronger, both in natural position and artificial defenses, than Fort Henry, and a land attack was more difficult, as there were heights above, below, and all around the works. The "Carondelet" had the honor of commencing the attack on Fort Donelson; having arrived before the fort two days in advance of the other gun-boats, she fired upon the enemy's works on the morning of February 12th; and also, at the request of General Grant, made a diversion in his favor on February 13th, as narrated in the following report of Commander Walke to Admiral Foote.

"U. S. GUN-BOAT 'CARONDELET,' }  
"Near Fort Donelson, Cumberland River, Feb. 15th. }

"SIR:—I arrived here (towed by the 'Alps') on the 12th instant, about 11:20 A. M., and seeing or hearing nothing of our Army, I threw a few shells into Fort Donelson, to announce my arrival to General Grant, as he had previously requested. I then dropped down the river a few miles, and anchored for the night, awaiting General Grant's arrival.

"On the morning of the thirteenth, I weighed anchor, and came again to this place, where I received a dispatch from General Grant, informing me that he had arrived the day before, and had succeeded in getting in position, almost entirely investing the enemy's works.

"Most of our batteries' (he writes) 'are established, and the remainder soon will be. If you will advance with your gun-boat at 10 o'clock in the morning, we will be ready to take advantage of any diversion in our favor.'

"I immediately complied with these instructions by throwing some 139 15-second and 10-second shell into the fort; receiving in return the enemy's fire from all their batteries; most of their shot passing over us, and but two striking us, one of which was a 128-pounder solid shot. It passed through our port casement forward, and glancing over our barricade at the boilers, and again over the steam-drum, struck and burst the steam boiler, and fell into

though the splinters wounded slightly some half-dozen of our crew. I then dropped down to this anchorage, but the sound of distant firing being heard we again attacked the fort, throwing in some forty-five shell, and receiving little damage.

"I returned to this place to await further orders, when I received a second dispatch from General Grant, stating that you were expected on the following morning. I am, sir, most respectfully,

"Your ob't servant,

"H. WALKER.

"Commander U. S. Navy.

"Flag-officer A. H. FOOTE,

"Commanding U. S. N. Forces in Western Waters."

In this engagement the "Carondelet" commenced firing on the fort at a distance of a mile and a quarter, the enemy replying immediately as the vessel advanced, the attack lasting from ten o'clock in the morn-

ing to meridian, and being renewed in the afternoon. Three of the enemy's guns were reported to be disabled.

ble naval authorities. A few particulars are called for from those who were present on that occasion to dispel the idea that Fort Donelson was captured by our fleet, under Admiral Foote, for in reality it was taken by General Grant, with the Army.

The following are a few quotations from reliable correspondence on the reconnoissance. A reliable correspondent of the Army on this occasion writes: "According to the admission of the rebel officers the casualties from the attacks by the 'Carondelet' were greater than those which resulted from the combined attack of the whole fleet the next day. The attack of the next day on the water batteries was neither the most brilliant nor the most suc-

UPPER BATTERY. WATER BATTERY. GEN. GRANT'S ARMY ATTACKING THE ENEMY, IN THE DISTANCE. U. S. GUNBOATS.

BATTLE OF FORT DONELSON.

cessful effort of the siege. About the only result was that a single gun of the enemy was dismantled and the unequalled fighting qualities of the fleet demonstrated. The gunnery was generally of a different character."

Query: Is it at all improbable that the deliberate firing of one gun-boat by experienced gunners, with heavy rifled guns of long ranges, should do as much execution in six hours, upon a battery of twelve or fifteen guns of much less range, than the firing of four such gun-boats with less experienced crews, upon these batteries at close quarters for one hour and a half, at various distances, and much less deliberation?

Our naval history is silent on some important facts in its version of this event, viz.: that four gun-boats were to have participated therein to make it more effective, and that three of them failed to obey the orders of General Grant and Commander Walker to accompany the "Carondelet" on this reconnoissance; but it gives an unfavorable view of the "Carondelet" alone on this occasion, especially in comparison with the brilliant action, or "what was expected to be the decisive battle, the next day;" which is represented as having resulted in the surrender of Fort Donelson, by our highest possi-

In reference to the reconnoissance and the bombardment on the following day, Captain Morgan made the same statement to the officers on board the "Carondelet" on Sunday, the morning of the surrender.

#### NEWSPAPER CORRESPONDENTS ON THE ACTION.

The *Missouri Republican* of February 28th, 1862, has this report in its correspondence of the day before the battle: "During the day much uneasiness was felt as to the gun-boat fleet. It was therefore with no little gratification that information was at last received about noon on Thursday, that the *avant courier* of the fleet, the 'Carondelet,' Commander Walke, had arrived below the fort. In the afternoon the report of her guns was received with cheer upon cheer by the troops encircling the beleaguered fort.

"Commander Walke's operations this afternoon, although partaking more of the nature of a reconnoissance, were considered by the rebel officers, as I have since ascertained, as one of the most formidable attacks they have had to encounter. Hidden behind a jutting promontory of the river bank, the 'Carondelet,' herself secure from all heavy shot of the columbiads of the fort, hurled shell upon shell into the water batteries of the fortifications. The commander of these batteries has recently informed me that the fire of the 'Carondelet' did more actual damage to his guns than the heavy bombardment of the following day."

Another reliable army correspondent writes: "The rebel officers commanding the river batteries also assure me that the practice of our gunners, in the excitement of the *bombardment*, was much inferior to that displayed in *reconnoissance*, when matters were conducted with more deliberation." And this is corroborated by the official reports in the Southern press.

The *Chicago Times'* correspondent reports: "The 'Carondelet's' movements led to several skirmishes, though of no serious nature. They were covered by a gallant cannonade of the gun-boat 'Carondelet,' the only one that arrived. Thus single-handed one hundred and thirty-eight rounds were thrown into the enemy's works, and she was finally compelled to withdraw, having received a shot from the enemy's 128-pounder gun in her bow, crippling her severely, and wounding seven men. She fell back but a short time, to repair damages and put her wounded on board the transport 'Alps.' At 1:15 P. M., she commenced firing again upon the fort, and kept up a brisk fire until she had expended all or nearly all of her long-range

shell, when at dusk she retired from the contest, having annoyed the enemy and encouraged our Army."

The "Carondelet" anchored about three miles below the fort, at about 4 in the afternoon. Admiral Foote arrived at 11:30 P. M., with the partially iron-clad "St. Louis" (flag steamer, Lieut. Paulding), "Louisville" (Commander Dove), and "Pittsburg" (Lieut. Eggt. Thompson); also the wooden gun-boats "Conestoga" (Lieut. Phelps), and "Taylor" (Lieut. Gwin), and several transports with re-enforcements for General Grant of 8,000 men. About midnight Captain Walke reported in person to the flag-officer.

#### AFTER THE BATTLE OF FORT DONELSON.

Three gun boats remained until after the surrender of Fort Donelson, which took place on Sunday, February 16th, when they steamed up the river above the fort to Dover. There our officers and men met in good cheer. Our usual "divine service" was then performed on board the "Carondelet," as the most appropriate way of giving thanks to God, "the only Giver of victory," and under such circumstances it makes a very happy impression on all sincere hearts.

The "Carondelet" had had two 32 or 42-pounder shot in her bow "between wind and water," and leaked badly; her hull and her crew being more cut up and disabled than any other gun-boat of the squadron. As General Grant could then dispense with her services, she returned to Cairo for repairs. Arriving there on the morning of the 17th, Commander Walke reported to the flag-officer the success of our arms, and the surrender of Fort Donelson to General Grant. Flag-officer Foote immediately issued the following

#### CONGRATULATORY ORDER

"February 17th, 1862.

"Flag-officer Foote, the Commander-in-chief of the Naval Forces on the Western waters, while he congratulates the survivors of the distinguished gun-boat, 'Carondelet' in the several actions so bravely fought, sympathizes with the wounded who have gloriously periled their lives in honor of the Union and the dear old flag. He also sympathizes with the friends of those gallant dead, who could not have died in a more glorious cause. Let us thank God from the heart, and say, 'Not unto us alone, but unto Thy Name, O Lord, belongs the glory of the triumph of our arms.'

"[Signed] "A. H. FOOTE,  
"Flag-officer."

The above order was read to the officers and crew assembled on board the "Carondelet," and then returned to the flag-officer by the bearer, in compliance with his verbal order.

## CHAPTER XVI.

### OPERATIONS ON THE MISSISSIPPI.

OPERATIONS AGAINST FORT COLUMBUS AND ISLAND NO. 10.—RUNNING OF THE BATTERIES BY THE GUN-BOATS "CARONDELET" AND "PITTSBURG."—EVACUATION OF BATTERIES ALONG THE TENNESSEE SHORE AND SURRENDER OF ISLAND NO. 10.—ADVANCE ON FORT PILLOW BY THE ARMY AND NAVY.—ATTACK ON FORT PILLOW.—EVACUATION OF FORT PILLOW BY THE CONFEDERATES.—BATTLE BETWEEN THE ENEMY'S RAMS AND THE UNION GUN-BOATS, &C., &C.

WHEN the gun-boats were obliged to drop down before the fire of the works at Fort Donelson, Flag-officer Foote proceeded to Cairo to repair some of his vessels, leaving behind him the iron-clads "Louisville," Commander B. M. Dove, "Carondelet," Commander Henry Walke, and the "St. Louis."

From all accounts the "Carondelet" seems to have suffered more than any other vessel in the fleet, both in killed and wounded and damage to her hull. Commander Dove, the senior officer present, reports on the 16th of February that the condition of the "Carondelet's" wounded would not admit of their being moved, or the guns to be used, and it is difficult to understand why a vessel in such a condition should not have been sent to a dock-yard and her wounded placed in the hospital; but the "Carondelet" was a sturdy craft and was always found in the front of battle.

Commander Dove, as senior officer, had the satisfaction of receiving the surrender of Fort Donelson. He says: "On approaching near enough two white flags were seen flying from the upper fort. \* \* \* I proceeded in a tug, with a white flag flying, and landed at the foot of the hill below the fort. I was met by a Major who handed me his sword, which I declined to receive, thinking it proper to consult with General Grant. I took the Major on board the tug and proceeded up to General Buckner's headquarters, where I found General Wallace. General Grant arrived about half an

hour after the fort had surrendered." \* \* \* Commander Dove seemed to have the proper idea on this occasion in declining to claim anything, as the fort properly fell to the Army.

As soon as Flag-officer Foote was able he proceeded with the "Conestoga," Lieut.-Com. Phelps, and the "Cairo," Lieut.-Com. Bryant, on an armed reconnoissance up the river, taking with him Colonel Webster, Chief of General Grant's staff, who, with Lieut.-Com. Phelps, took possession of the principal works and hoisted the Union flag.

Foote had applied to General Halleck for permission to advance up the Cumberland on Nashville, and just as he was about moving for that point Halleck telegraphed to Grant: "Don't let the gun-boats proceed higher than Clarksville," an order in keeping with the "conservative policy" that seemed to influence General Halleck on all occasions. The latter seemed to wish to direct all the battles himself by telegraph, and to give as little authority as possible to General Grant, who being on the ground knew the exact situation of affairs. This was certainly not the way to conquer such an indomitable enemy as that with which the national government had to contend; but the gun-boats did finally move up to Nashville, with an army force in company, and took peaceful possession of the capital of Tennessee.

Foote finding there was nothing further to be done on the Tennessee and Cumberland Rivers, turned his attention to Fort Columbus, which still held out, though by

all the rules of Jomini it ought to have surrendered when Donelson fell, the great strategic line of the enemy having been broken and most of Tennessee lying at the mercy of the Federal Army. As Columbus still declined to yield, Flag-officer Foote, in company with General Cullom of Halleck's staff, started with four iron-clads, ten mortar-boats and three transports, containing a thousand soldiers, to make a reconnoissance in force. As the expedition neared Fort Columbus it was met by a flag of truce, with a message from General Polk to the effect that he hoped the courtesies he had extended to the captured Union officers would be reciprocated should an opportunity occur.

Having accomplished the object of the reconnoissance, Foote returned to Cairo, February 23, with a view to complete all the gun-boats and mortar-rafts and make the necessary preparations for the work required of him.

In the meantime the gun-boats in condition for service were busy assisting the Army to move where it desired, and patrolling the river and clearing the flying artillery from the banks.

On the 1st of March Lieut.-Com. Gwin learned that the enemy were fortifying Pittsburg Landing, and proceeded up the river in the "Taylor," followed by the "Lexington," Lieut.-Com. James W. Shirk. When within 1,200 yards of the landing the gun-boats were fired on by the Confederate batteries, consisting of six or eight field-pieces, some of them rifled, but did not notice the attack till they were within a thousand yards, when they opened fire and soon silenced the enemy.

The gun-boats then continued on till abreast of where the enemy had posted his heaviest batteries, and under cover of a fire of grape and canister, a force was landed in two boats from each of the vessels, including a portion of Co. C, Capt. Phillips, and Co. K, Lieut. Rider, of the 32d Illinois Volunteers (sharpshooters). The boats of the "Taylor" were commanded by Master J. Goudy, and those of the "Lexington" by Master Martin Dunn.

It was found on landing that besides the artillerists, the enemy had two regiments of infantry and one of cavalry, and this little landing party held them in check until their object was accomplished, viz.: to ascertain the enemy's force and purpose, and to destroy a building in the vicinity of which the batteries had been placed.

This little affair was well conducted, and much information was gathered in regard to fortifications being erected by the enemy. Lieut.-Com. Gwin, the leader of the expedition, was one of the most gallant officers in the Western Flotilla, and delighted in such service, where the usefulness of

On board the "Taylor" there was one killed and six wounded, including Capt. Phillips, of the Army; on board the "Lexington" there were two killed and two missing, small casualties considering the heavy force opposed to the gun-boats. The enemy's loss was said to be nine killed and upwards of one hundred wounded.

On the same day that the above affair took place, Flag-officer Foote sent Lieut.-Com. Phelps to Columbus with a flag of truce. As he drew near the fort he saw that the Confederates were burning their winter quarters and removing their heavy guns from the bluff. Of the latter two were cast in Richmond, and named respectively, "Lady Davis" and "Lady Polk."

In their hurry to get away the Confederates had left the water batteries intact. A large force of cavalry was drawn up ostentatiously on the bluff, but these were the only troops in sight; while the fires burning in the town of Columbus and along the river showed that the enemy were determined to destroy everything they could not carry away.

The Confederates often made a Moscow of a town when forced to abandon it, which certainly did not convince the wretched inhabitants that the Confederates were their best friends. Indeed, there was often an inhumanity in their proceedings which added unnecessarily to the horrors of war. The writer knew General (formerly Bishop) Polk before the war. He was a fine specimen of a man, a kind master to his numerous slaves, in short, a Christian gentleman. His case shows how the influence of war will demoralize the best of men.

From March 4th to the 16th, the wooden gun-boats, "Taylor" and "Lexington," were actively employed on the Tennessee and Cumberland conveying troops—for without such assistance the Army could not have moved—and obtaining information of the enemy's movements.

This information was to the following effect: At Corinth, Mississippi, eighteen miles from the Tennessee River, the junction of the Mobile and Ohio, and Memphis and Charleston railroads, there were from fifteen to twenty thousand Confederate troops; at Henderson Station, eighteen miles from the Tennessee River and thirty-five miles by rail from Corinth, there were some ten or twelve thousand more, with daily accessions from Columbus and the South; at Bear Creek Bridge, seven miles back of Eastport, Mississippi, eight or ten thousand men were throwing up fortifications; and at Chickasaw, Alabama, there were being erected heavy batteries, supplied, no doubt, with the guns taken from the Norfolk Navy Yard.

It was learned from a reliable source that

back from Murfreesboro on Decatur, Alabama, the point where the Memphis and Charleston Railroad crosses the Tennessee River and joins the railroad leading to Nashville; showing that the Confederates were making every exertion to hold on to Tennessee, which was to them the most important of all the States, except, perhaps, Virginia; since it was wedged in between five secession States: and the Confederates, while they held it, could keep the Federal troops from advancing South. Should the latter obtain possession they would control Northern Mississippi, Alabama and Georgia, with parts of North Carolina and Virginia. With the Cumberland and the Tennessee Rivers, and all the railroads in the Union possession, the rebellion would have been

COMMANDER JAMES W. SHIRK.

confined to the other States, and the resources of Tennessee would have been lost to the Confederate cause. It would have been better to have thrown three hundred thousand men at once into Tennessee and crushed the rebellion there, instead of losing a greater number in the end and prolonging the war for four years.

On the 4th of March Flag-officer Foote got under way from Cairo, and proceeded down the river towards Columbus. Besides the flag-ship "Benton," there were the "Mound City," Commander A. H. Kilty; "Louisville," Commander B. M. Dove; "Carondelet," Commander H. Walke; "Cincinnati," Commander R. N. Stembel; "St. Louis," Lieut.-Commanding L. Paulding; "Pittsburgh," Lieut.-Commanding E.

J. W. Shirk, with four transports, each having five mortar-boats in tow; also a magazine boat and a provision boat. The squadron was accompanied by troops under General Buford, in four steamers, half a dozen tugs, and a large number of barges and lighters in tow.

As this expedition approached Columbus the Union flag was seen floating from the ramparts. It had been taken possession of two days before by a company of cavalry scouts from Paducah, under Col. Haas.

The enemy had already fortified certain positions further South on the Mississippi, and had also re-inforced Island No. 10. Gen. Pope, with an army of ten thousand men, hastened to occupy New Madrid, on the west bank of the Mississippi, below Island No. 10, and he at once detected the weakness of the enemy's position. Pope established a line of batteries from New Madrid to a point fifteen miles below Island No. 10, thus shutting the enemy off from his only source of supply along the river; for everywhere, on both sides of the river for sixty miles, nothing but swamps existed, through which provisions could not be transported.

Having established his batteries, it was Gen. Pope's intention to cross the river with his army and attack the enemy's position from below, and to do this the aid of gun-boats was necessary. In anticipation of this, the enemy had erected batteries at every point where they would be likely to do harm to the Federal squadron.

Gen. Pope, seeing that a floating force was indispensable to the success of his operations, requested Flag-officer Foote to send down a gun-boat past the enemy's batteries at night; but as the gun-boats were slow-moving machines and difficult to manage in the strong current of the Mississippi, the Flag-officer informed the General that he would send him two tugs through a bayou, and would endeavor to get two gun-boats down to him in time.

On the 20th of March the squadron, with the mortar vessels, were lying above Island No. 10, throwing shells into the enemy's batteries, occasionally dismounting a gun, but doing no material damage; but so urgent was Gen. Pope's appeal for a gun-boat that Flag-officer Foote, for the first time, summoned a council of his commanding officers. To use Foote's own words, "The officers, with one exception, were decidedly opposed to running the blockade, believing it would be certain destruction to all the vessels that should attempt it." There were six forts, with over fifty guns bearing on the vessels. Foote does not mention who was the exception, and who in this instance was certainly a wiser man than his brother officers. Running the

much practiced, but as the war progressed it was found not to be a very dangerous thing by night, and often practicable even in the daytime.

Foote on this occasion remarked: "When the object of running the blockade is adequate to the risk, I shall not hesitate to do it." He had a difficult task before him in assisting Gen. Pope to drive the enemy from Island No. 10 and the adjacent heights along the Mississippi, where they altogether are stated to have mounted seventy heavy guns, in addition to a "floating battery" of sixteen guns; but making every allowance for exaggeration, there certainly were mounted not less than seventy-five guns in the immediate vicinity. If the Union gun-boats could hold the river above, and New Madrid be occupied by a large force of troops, with batteries placed along the river below the enemy's works and to the edge of the great swamp surrounding them, the Confederate garrison would be hemmed in, and must yield when its supplies gave out.

The Confederate fortifications were placed at such a height above the river that the fire of the gun-boats had little effect on them. Foote therefore determined to open on the enemy with his 13-inch mortars, from which he expected much better results. There is, however, a great difference in using mortars against forts constructed of masonry, and earth-works on high hills. Now and then a gun would be dismantled, but it was immediately replaced, and the garrison were well protected against bursting shells. To attack the enemy from above was a matter of great difficulty and responsibility. The current of the river was not less than four miles an hour, and the iron-clads were not able, under the most favorable circumstances, to do much more than stem it. In case of accident to machinery they would drift helplessly under the enemy's guns. To fight bow on, and depend upon the stern wheel to back up stream while fighting would have been absurd, so that in this case the commander-in-chief of the squadron was in a dilemma. While much was expected of him he was obliged by circumstances to observe a caution which was not agreeable to his enterprising spirit.

On the morning of the 16th of March the mortar-boats were placed in the best possible position and opened fire on the enemy's batteries, driving several regiments out of the works. The mortars were under charge of Capt. Maynardier, U. S. Army, and Lieut. J. P. Sanford, U. S. Navy.

On the morning of the 17th the gun-boats commenced an attack. The "Benton," "Cincinnati" and "St. Louis" were lashed together, on account of the deficient steam power of the "Benton" which was other-

squadron. The fire of the gun-boats was not very effective; they were at a distance of nearly two miles and the enemy's batteries, separated from each other, presented but small targets to fire at. The fire was kept up from mid-day until night-fall. The "Benton" was struck four times, but the most serious disaster was the bursting of a rifled gun on board the "St. Louis," by which fifteen men were killed and wounded.

In the official records only three gun-boats are mentioned as taking part in the engagement of March 17th, whereas the "Carondelet" and "Mound City" were actively engaged on the west side of the river.

Until the 26th of March these attacks with gun-boats and mortars were maintained without important results, as the enemy kept but few men exposed to the fire.

At this time the squadron at Island No. 10 comprised six iron-clads, one wooden gun-boat and sixteen mortar-rafts, while, according to Flag-officer Foote, the Confederates had thirteen gun-boats, besides five below New Madrid.

Foote soon saw that it was a positive necessity that Gen. Pope should transport his troops to the opposite side of the river in order to turn the enemy's flank; and the idea of running the blockade having been abandoned, it was proposed to open a way through a bayou which traversed the swamp on the west side of the Mississippi, and came out to the river again at New Madrid.

In this labor the Army and Navy co-operated, and for nineteen days and nights the work of cutting a canal through the swamp was prosecuted, the men undergoing every hardship with the utmost cheerfulness. Soldiers and sailors stood in mud and water up to their waists, cutting away trees, and hauling along the tugs and transports on which Pope depended to cross his troops over the Mississippi.

When these vessels reached New Madrid, the soldiers there received them with great enthusiasm. "Now," they said, "we shall cross over and drive the Confederates out." But the work was not yet finished. These unarmed steamers could not be used for the purpose of transporting troops in the face of the enemy and the gun-boats he had improvised, and the question was again asked: "Is it possible for any of our iron-clads to run the gauntlet of the batteries?" But Flag-officer Foote still hesitated for reasons already given, and, furthermore, General Halleck had notified him that measures had already been taken which would compel the enemy to evacuate his works. If the gun-boats were to run the batteries, Foote thought it advisable to diminish the risk as much as possible, and therefore an expedition was organized to seize upon the upper

one ten-inch Columbiad and other guns. The boats from the "Benton," "St. Louis," "Cincinnati" and "Pittsburg" carried, beside their crews, fifty soldiers of Co. A., 42d Regiment, Illinois Volunteers, making in all one hundred men, exclusive of officers, all under command of Col. George W. Roberts of the above named regiment.

The boats surprised the sentinels, who fired their muskets and fled. The garrison and the crew of the Confederate gun-boat "Grampus" were at once aroused, but Col. Roberts lost no time in landing his men and spiking the battery; after which the party re-embarked and returned to the squadron. On this battery of eleven heavy guns the enemy had depended to sink any of our vessels that might attempt to run by their works.

There was also a floating battery moored

way. She might have drifted down the river without a shot being fired at her, yet there was danger that she might run ashore and be found at daylight a fair mark for the enemy, or the pilot, in the intense darkness, might mistake the channel, or the plunging fire from the enemy's batteries might penetrate the boilers, in which case a horrible fate awaited many of her crew. It was the first venture in running batteries, and therefore more creditable to all concerned, for even in after times, when such feats became more common, there was always an element of uncertainty in the enterprise.

The "Carondelet" passed the first battery unobserved, but at the second a sheet of flame issued from the heavy guns, and the huge shot ricocheted along the water, but did no harm to the Union vessel. The

THE GUN-BOAT "CARONDELET" RUNNING THE BATTERIES AT ISLAND No. 10.

at the head of the island which it was important to remove; so on the following day the guns of the squadron were concentrated on this latter obstruction with such effect, that the crew of the battery cut the lashings and drifted from under fire of the gun-boats to take new position some distance below.

After these two impediments had been removed the passage of the enemy's batteries was considered practicable, and Com. Walke, of the "Carondelet," volunteered to perform this perilous duty. His ingenuity and that of his officers was taxed to the utmost to prepare the "Carondelet" to resist the enemy's shot. First-Master Hoel of the "Cincinnati," one of the best pilots on the Mississippi, whose gallantry finally placed him in command of an iron-clad, volunteered to pilot the vessel.

On the night of the 4th of April, in storm and darkness, the "Carondelet" got under-

"Carondelet" steamed steadily on without noticing these attentions, while fort after fort took up the fire, until seventy powerful guns joined in the melee; doing no harm, but adding to the grandeur of the storm. Now and then the "Carondelet" became visible to the enemy through the vivid flashes of lightning. In half an hour the vessel was below Island No. 10 and soon passed beyond the reach of the Confederate batteries.

Then the sound of minute guns coming faintly from below assured those who were waiting anxiously in the squadron that the "Carondelet" was safe, and that General Pope could now bid defiance to the enemy's gun-boats and cross his troops to the other side of the Mississippi. Upon this, cheer after cheer went up from the gun-boats, and made the Confederates aware that the time had arrived when their position was no longer tenable.

That night the "Carondelet" lay unscathed just below New Madrid, and early next morning steamed up to the landing, where she was warmly welcomed by the soldiers who had so long looked for aid of this kind, without which they were hopeless of turning the enemy's position.

The enemy's gun-boats, armed with long-range rifles, had been harrassing Pope's command from below, and from their position could do a great deal of havoc to the light transports on which Pope depended to pass his troops over the river. The enemy had thirteen gun-boats, improvised from river steamers, but as soon as the "Carondelet" appeared they departed for Memphis.

Flag-officer Foote, finding that the risk of running the batteries was less than he had supposed, and urged by General Pope to send him another iron-clad, dispatched the "Pittsburgh," Lieut.-Com. Egbert Thompson, which vessel ran the batteries on a stormy night under pretty much the same circumstances as the "Carondelet," and like her received no injury.

As soon as the "Pittsburgh" arrived below Island No. 10 she was sent with the "Carondelet" to drive away some field batteries which the enemy had placed to prevent the Union troops crossing the river. This was accomplished, and the enemy seeing they could no longer hold their works began to evacuate them, leaving all their guns and munitions of war in the hands of the victors.

Island No. 10 surrendered on the 7th of April to Flag-officer Foote just as he was preparing to attack with the gun-boats above, in conjunction with the forces under General Buford. Seventeen officers, three hundred and sixty-eight privates, one hundred sick, and one hundred men employed on the enemy's transports, surrendered to the Navy from steamers afloat. Two wharf boats loaded with provisions were also captured. The floating battery of sixteen guns and most of the gun-boats were sunk, but were easily raised again.

The Confederate works consisted of eleven forts mounting seventy guns, from 32 to 100-pounders. The magazines were well supplied, and there were also large quantities of provisions. The works were very strong, and built with great skill. Six thousand prisoners fell into General Pope's hands.

Commander Walke in the "Carondelet," supported by the "Pittsburgh," silenced the heaviest battery below Island No. 10 and spiked the guns, picking up a number of fine sixty-four pounders left behind by the Confederates in their flight.

The precipitancy with which the enemy retreated when the gun-boats appeared below Island No. 10 was astonishing. It was the

eral Pope had looked forward from the time he moved his army to New Madrid.

Foote would no doubt have sent the iron-clads down past the batteries sooner than he did, had not General Halleck notified him of a plan which he had in view to capture Island No. 10 and all the batteries on the Tennessee shore. The credit, however, fell where it was due, to Pope and Foote, for their harmonious co-operation, and to Commander Walke and Lieut.-Com. Thompson, who so gallantly passed the enemy's batteries.

The victory at Island No. 10, although a bloodless one, was as important as the battle of Shiloh. It opened a long stretch of the Mississippi River, down which our forces were continually working their way toward the sea. By this victory and the great battle at Shiloh, was broken up the second line of defences which the Confederates had established from the Mississippi to Chattanooga, and all their attempts to penetrate the Northern States in this direction were foiled. It does not in the least detract from the gallantry of our Army to say that neither of these victories would have been won without the aid of the Navy. Though the latter was but an auxiliary to the Army yet it was a most valuable one, and should receive the credit to which it is entitled.

In concluding our account of the capture of Island No. 10, we avail ourselves of the opportunity to make a few remarks relative to those who worked so faithfully to bring about the result. We have already stated that General Pope considered it essential to the success of his plans that at least two of the gun-boats should run the blockade and join him below Island No. 10, and that Commander Walke volunteered to perform what was considered a very hazardous duty, and performed it unflinchingly.

It occurs to the writer that such a service was worthy a much warmer eulogium than Commander Walke received for his successful conduct of a perilous undertaking; for these "iron-clad" gun-boats were really a very vulnerable class of vessels, and utterly inadequate to resist the plunging shot from the enemy's elevated batteries. A single shot going in above and coming out through the bottom would have completely crippled a vessel. It could hardly be anticipated that any boat could pass so many heavy works, even at night with rain and storm to help her, and yet receive no damage, and it was the merest accident that the "Carondelet" was not struck by the enemy's shot. As to the passage of the "Pittsburgh," she was sent down after it was ascertained that the "Carondelet" had received no damage whatever, and hence her commanding officer was not entitled to the same amount of credit as Commander

When the "Carondelet" did arrive below the enemies batteries, her performances rounded greatly to the credit of her commander and his officers. At the request of General Pope, Walke attacked and silenced every battery below the point where the Federal troops were to be landed, and spiked the guns so that the enemy could not return and use them.

It would seem in regard to these transactions that the accuracy of official reports may be called in question, and that we must rely on other sources than the published histories of the war. The intention of the writer is to make as few digressions in his account of affairs as possible, but justice demands that corrections shall be made, especially when due credit has been heretofore withheld.

Due credit in regard to services on the Western rivers has often been withheld from both Army and Navy, and this injustice is nowhere more distinctly manifested than in the capture of Island No. 10, and the heavy batteries which lined the Tennessee shore. The work of the Army was a master-piece of strategy, and the part played by the Navy was scarcely inferior. The work performed was indeed creditable to all concerned.

Farragut maintained that whatever errors are made by contemporary historians, posterity will always give honor to whom honor is due; and sincerely hoping that such is the case, the writer will endeavor to do justice in these pages.

The surrender of Island No. 10 and the adjacent works opened the Mississippi all the way to Fort Pillow, another stronghold which could only be conquered by a combined army and navy force.

Gen. Pope, with twenty thousand men in transports protected by gun-boats, now moved towards Fort Pillow, and prepared to attack the enemy's works. Five Confederate gun-boats were desried down the river, but their size and strength could not be ascertained. The Confederates had improvised a river flotilla, but nothing could be learned concerning it.

Pope's first idea was to reach the enemy's works by landing five miles above them, while the gun-boats and mortars attacked them from the river; but finding this plan impracticable, it was proposed to cut a canal, as was done at Island No. 10, through the Arkansas shore to a point opposite Fort Pillow, and thus pass some of the gun-boats below the fortifications.

At this time Flag-officer Foote was suffering from the effects of his wound, so that it was impossible for him to attend to his manifold duties, and a few days after he relinquished active service, never again to resume it, and the command of the squad-

a gallant officer, well qualified for this important duty.

The sudden withdrawal of Gen. Pope with nearly all his force from before Fort Pillow, to proceed to Pittsburg Landing by order of Gen. Halleck, had quite disappointed Foote. He saw no immediate prospect of taking Fort Pillow and did not care to remain, while suffering so much from his wound, merely to keep up a blockade. Only two regiments of soldiers under Col. Fisk remained of all Pope's army.

Fort Pillow mounted forty guns and there were nine gun-boats below the fort and at Memphis. In addition, at this time the enemy were building a number of heavy gun-boats along the Mississippi; among them, at New Orleans, the iron-plated "Louisiana," of sixteen guns (which vessel figured so prominently in Farragut's attack on Forts Jackson and St. Philip), and the ram, "Arkansas."

The following letter will throw some light on the siege of Island No. 10, and give credit where it is justly due :

SECRETARY WELLES TO FLAG-OFFICER FOOTE.

"By telegraph from NAVY YARD, WASHINGTON, }  
April 10, 1862. }

"To Flag-officer Foote, Commanding Gun-boat Flotilla:

"A nation's thanks are due to you, and the brave officers and men of the flotilla on the Mississippi, whose labor and gallantry at Island 10, which surrendered to you yesterday, has been watched with intense interest. Your triumph is not the less appreciated because it was protracted and finally bloodless. To that Being who has protected you through so many perils, and carried you onward to successive victories, be praise, for His continued goodness to our country; and especially for this last great success of our arms. Let the congratulations of yourself and your command be also extended to the officers and soldiers who co-operated with you. [Signed]

"GIDEON WELLES, *Secretary of the Navy.*"

The following is the general order issued immediately after the receipt of the telegram from the Secretary of the Navy, in answer to that of Flag-officer Foote :

[General Order, No. 7.]

"U. S. FLAG-STEAMER 'BENTON,' }  
ISLAND No. 10. April 11, 1862. }

"It is with the highest gratification that the Commander-in-Chief promulgates to the officers and men under his command, comprising the gun and mortar-boats, ordnance-boats, tugs, transports, and others, as well as to General Buford, and officers and soldiers of the Army, who so effectually co-operated in the reduction of Island No. 10, the following telegram received from the Secretary of the Navy; and he trusts that the future will be crowned with the same success to our arms as the past has been; and may we all, in letter and spirit, as suggested by the Honorable Secretary, render our hearty thanks to God for His goodness in giving us the victory

## SECRETARY WELLES TO FLAG-OFFICER FOOTE.

NAVY DEPARTMENT, *April 12, 1862.*

"SIR:—The Department desires you to convey to Commander Henry Walke, and the officers and men of the 'Carondelet,' also to Acting First Master Hoel, of the 'Cincinnati,' who volunteered for the occasion, its thanks for the gallant and successful services rendered in running the 'Carondelet' past the rebel batteries on the night of the 4th inst. It was a daring and heroic act, well executed and deserving a special recognition. Commendation is also to be extended to the officers and crew of the 'Pittsburg,' who in like manner on the night of the 7th inst. performed a similar service. These fearless acts dismayed the enemy, enabled the army under General Pope to cross the Mississippi, and eventuated in the surrender to yourself of Island 10, and finally, to the capture by General Pope, of the forts on the Tennessee shore, and the retreating rebels under General Mackall. I would also, in this connection, render the acknowledgements which are justly due the officers and crew of the several boats, who, in conjunction with a detachment of the Forty-second Illinois regiment, under Colonel Roberts, captured the first rebel battery and spiked the guns on Island No. 10, on the night of the 1st inst.; such services are duly appreciated by the Department, which extends its thanks to all who participated in the achievement.

"I am respectfully, your obedient servant,

"GIDEON WELLES.

"Flag-officer A. H. FOOTE,

"Commanding Gun-boat Flotilla."

"Forwarded with the order that this paper, which the commander-in-chief is most happy in transmitting to the brave and gallant officers and men to whom it refers, shall be publicly read on board the 'Carondelet' and 'Pittsburg,' and afterwards retained by Commander Walke, who commanded with so much ability and gallantry (assisted by First-Master Hoel, of the gun-boat 'Cincinnati'), below New Madrid, which enabled the Army to cross the Mississippi at that point, and to secure, with the aid of the flotilla above, the possession of Island No. 10, and the adjacent batteries on the Tennessee shore.

"A. H. FOOTE, *Flag-officer.*

*Commanding Naval Forces, Western Waters*

"OFF FORT PILLOW, *April 22, 1862.*"

ENGAGEMENT OF THE "CARONDELET" AND "PITTSBURG" WITH THE ENEMY IN THE VICINITY OF NEW MADRID, APRIL 6TH, 1862.

"U. S. Flag Steamer 'BENTON,'  
ISLAND NO. 10, *April 11, 1862.* }

"SIR:—I have the honor to enclose a report from Commander Walke, of the gun-boat 'Carondelet,' detailing the services rendered by him, and the 'Pittsburg,' Lieutenant-Commander Thompson, in the vicinity of New Madrid; from which it will be seen that the boats opened upon, and effectually silenced and captured several heavy batteries on the Tennessee side of the river, on the 6th and 7th instants, without which destruction it would have been impossible for General Pope to have crossed over the river, for the purpose of attacking the Confederates in the rear at No. 10, while the gun and mortar-boats would make the attack in front.

"There has been an effective and harmonious co-operation between the land and naval forces, which has, under Providence, led to the glorious result of the fall of this stronghold, No. 10, with the garrison and munitions of war, and I regret to see in the dispatches of Major-General Halleck, from St. Louis, no reference is made to the capture of the forts, and the continuous shelling of the gun and mortar-boats, and the Navy's receiving the sur-

contributed to the victory—a bloodless victory—more creditable to humanity than if thousands had been slain.

"I also enclose reports from Lieutenants-Commanding Gwin and Shirk, of the gun-boats 'Taylor' and 'Lexington,' on the Tennessee, giving a graphic account of that great battle, and the assistance rendered by these boats near Pittsburg; stating that 'when the left wing of our Army was being driven into the river, at short range, they opened fire upon and silenced the enemy, and, as I hear from many army officers on the field, totally demoralizing his forces, and driving them from their position in a perfect rout, *in the space of ten minutes.*'

"These officers and men, as well as those of Commander Walke, and the officers and men of the 'Carondelet' and 'Pittsburg,' behaved with a degree of gallantry highly creditable to themselves and the Navy.

"I proceed to-day with the entire flotilla to New Madrid, and leave to-morrow for Fort Pillow, or the next point down the river which may attempt to resist the raising the blockade.

"I have the honor to be, very respectfully, your obedient servant,

[Signed] "A. H. FOOTE, *Flag-officer.*

"Hon. GIDEON WELLES, *Secretary of the Navy,*  
*Washington, D. C.*"

Flag-officer Davis assumed command of the squadron on the 9th of May, 1862, and had little time for reflection before he became engaged in active operations. The heights of Fort Pillow had been repeatedly shelled by the gun-boats and bombarded by the mortars, with little perceptible effect on the works. The Confederate gun-boats occasionally showed themselves around the bend in the river, but on the first movement of the squadron they would scud away. Exaggerated reports were rife about the formidable rams that were at Memphis ready to attack our fleet, among them the monster "Louisiana," which the Confederates boasted could alone clear out all the Union vessels. It was impossible to tell how much truth there was in these reports, but the gun-boats had orders to keep up steam and be prepared at all times for battle.

On the 10th of May, the Union squadron lay in two divisions: the first division of these iron-clads, with the flag-ship "Benton," moored on the Tennessee shore; the second, of four gun-boats, moored on the Arkansas shore, with bows down stream. At a little past seven o'clock A. M., eight Confederate gun-boats, four of them fitted as rams, came around the point above Fort Pillow and steamed up the river, evidently prepared for battle. The enemy's leading vessel made directly for mortar-boat No. 16, which for the moment was unprotected. Acting-Master Gregory and his crew behaved with great spirit, and during the action fired the mortar eleven times nearly point blank at the enemy. The morning being hazy signals could not be distinctly made out, nor could the enemy's vessels approaching be seen as

Com. Stembel, the leading vessel in the line of iron-clads, hastened to the support of the mortar-boat, followed immediately by the "Mound City," Com. Kilty; and both were repeatedly struck by the Confederate rams before the latter were disabled and driven away. The boiler or steam-pipe of one of the leading vessels of the enemy was exploded by a shot from the flag-ship "Benton," Lieut.-Com. Phelps, and three of the enemy's vessels, including the one encountered by the "Cincinnati," were disabled and drifted down the river. A fifty-pound rifle shot from the "Carondelet" passed through the boilers of another of the enemy's vessels, rendering her helpless

ate vessels made great holes in the "Mound City" and the "Cincinnati," and were considerably damaged themselves, they all succeeded in escaping. The "Cincinnati," after proceeding some distance up the river, sunk near the Tennessee side. The "Cairo" assisted the "Mound City" to the first island above the scene of action, where she also sunk.

The incidents of this engagement are so lightly passed over by Flag-officer Davis, that it is difficult to get much information from the official reports. The enemy's side of the affair can best be learned by the following dispatch of the Confederate Commander-in-chief :

MOUND CITY.

CARONDELET.  
MORTAR.

CINCINNATI.

VAN DORN.  
GEN. PRICE.SUMTER.  
BRAGG. LITTLE REBEL.

BATTLE OF FORT PILLOW. FIRST POSITION.

for the time being. All these disabled vessels might have been captured had there been any means at hand of towing them up stream, but the motive power of the gun-boats was so limited that they could scarcely make any headway against the current, and they had to be continually on the watch to avoid drifting under the enemy's batteries.

This was the first naval engagement of the war, pure and simple, where the squadrons of both sides were pitted against each other. Our iron-clads showed themselves unsuited in respect to steam power, to cope with swift river vessels that could ram them

"FLAG-BOAT 'LITTLE REBEL,' }  
FORT PILLOW, May 12, 1862. }

"SIR:—I have the honor to report an engagement with the Federal gun-boats at Plum Point Bend, four miles above this place. Having previously arranged with my officers the order of attack, our boats left their moorings at 6 A. M., and proceeding up the river passed around a sharp point, which soon brought us in full view of the enemy's fleet, numbering eight gun-boats and twelve mortars. The Federal gun-boat 'Carondelet' ['Cincinnati'] was lying nearest us, guarding a mortar-boat that was shelling the fort. The 'General Bragg,' Captain Leonard, dashed at her, she firing her heavy guns and retreating towards a bar where the depth of water would not be sufficient for our boats to follow. The 'Bragg' continued boldly on under fire of nearly their whole fleet and struck her a

rounded down the river under a broadside fire, and drifted until her tiller rope, that had got out of order, could be re-adjusted.

"A few moments after the 'Bragg' struck her blow, the 'General Sterling Price,' First-officer J. E. Harthorne, ran into the same boat aft, a little starboard of her amidships, carrying away her rudder, sternpost and a large piece of her stern. This threw the 'Cincinnati's' stern towards the 'Sumter,' Captain M. W. Lamb, which struck her running at the utmost speed of his boat.

"The 'General Earl Van Dorn,' Capt. Folkerson, running according to orders in the rear of the 'Price' and 'Sumter,' directed his attention to the 'Mound City,' at the time throwing broadsides into the 'Price' and 'Sumter'; and, as she proceeded, by skilful shots from her 32-pounder silenced a mortar-boat that was filling the air with its terrible missiles; the 'Van Dorn' still holding on to the 'Mound City.' In the act of striking, the 'Mound City' sheered and the 'Van Dorn' struck her a glancing blow, making a hole four feet deep in her starboard forward quarter, evidenced by the splinters left on the iron bow of the 'Van Dorn.'

"At this juncture, the 'Van Dorn' was above four of the Federal boats, as the remaining boats, 'General Jeff Thompson' and 'Colonel Lovell,' Capt. Hart, were entering boldly into the contest in the prescribed order. I perceived from the flag-boat that the Federal vessels were taking positions where the water was too shallow for our boats to get at them, and as our cannon were far inferior both in number and size, I signalled our boats to fall back, which was accomplished with a coolness which deserves the highest commendation.

"I am happy to inform you that while exposed at close quarters to a most terrible fire for thirty minutes, our boats, though struck repeatedly, sustained no serious injuries.

"General Jeff Thompson was on board the 'General Bragg,' his officers and men were divided among the boats. They were all at their posts ready to do good service should the occasion offer.

"To my officers and men I am highly indebted for their courage and promptness in executing all orders.

"On the 11th instant, I went in the 'Little Rebel' in full view of the enemy's fleet, and saw the 'Carondelet' ['Cincinnati'] sunk near the shore, and the 'Mound City' sunk on the bar.

"The position occupied by the enemy's gun-boats above Fort Pillow, offers more obstacles to our mode of attack than any between Cairo and New Orleans, but of this you may rest assured that they will never penetrate further down the Mississippi River.

"Our casualties were two killed and one wounded.

"[Signed.] J. E. MONTGOMERY.

"Senior Captain Commanding,  
"River Defence Fleet."

On the Federal side there were only four wounded, Commander Stembel seriously, Fourth-Master Reynolds and two seamen slightly. This was a small list of casualties for such a desperate brush, and would seem to indicate rather indifferent gunnery practice on the part of the Federals, who, with their heavy ordnance, ought to have swept the enemy from the face of the water, as his vessels were of wood and lightly built.

The attack on the Federal vessels was, however, by a new method; for this was the first time ramming had been practiced on this river during the war, and the "Cincinnati" and "Mound City" had been put *hors de combat* almost at the beginning of the action.

The Confederate Commander-in-chief was not accustomed to command vessels *en masse* and does not seem to have understood the necessity of concert of action. Each Confederate vessel seems to have been fighting on her "own hook." There is no doubt they received more damage than they were willing to admit.

All their damages were, however, quickly repaired at Memphis, where they had a good navy yard with all the necessary appliances.

It appears evident that our gun-boats did not altogether act in concert, probably owing to their want of speed. In the case of the flag-ship, her deficiency in speed kept her behind the rest, but when she did join the battle, her heavy guns told on the enemy and everything gave way before her.

It is exceedingly difficult to give a correct account of this engagement, owing to the many conflicting versions which were published in the West at the time, but we know enough to be satisfied that victory remained with the Federal squadron.

The report of Flag-officer Davis was of course intended to represent the true position of the vessels, but he was new to the command, and the iron-clads smaller than the "Benton" were so much alike, that any one was liable to mistake one for the other at the distance of a mile, and give another vessel credit for work done by her consort. On this occasion if reports were made to the Commander-in-chief, they were not published in the annual report of the Secretary of the Navy; but notwithstanding the conflicting statements, it appears certain that every officer and man on board the Union gun-boats did their duty, and drove off a fearless and enterprising enemy, who had a flotilla well equipped for the purpose intended.

Flag-officer Davis had the satisfaction of winning the first naval squadron fight, and certainly deserved the thanks of the Navy Department for himself, his gallant officers and crew; especially since all in the squadron had shown such courage and energy, ever since the day when Foote first left Cairo with the gun-boats and mortars.

BOMBARDMENT AND EVACUATION OF FORT PILLOW.—COL. ELLET'S RAM FLOTILLA.—CAPTURE OF A CONFEDERATE TRANSPORT.—THE VESSELS COMPOSING THE CONFEDERATE FLEET.—BATTLE OF MEMPHIS.—CAPTURE OF THE CITY.—DESTRUCTION OF THE CONFEDERATE FLEET.—A BRILLIANT VICTORY.—NOBLE ACTION OF THE COMMANDER OF THE "MONARCH."—CAPTURE OF FORTS UP THE WHITE RIVER.—EXPLOSION OF THE STEAM CHEST OF THE "MOUND CITY."—VALUABLE LIVES LOST.—SAVING THE CREWS OF THE CONFEDERATE VESSELS.—CONFEDERATE ACCOUNTS.

**A**FTER this river battle, Flag-officer Davis commenced a heavy and continuous bombardment of Fort Pillow, which lasted up to the 4th of June, and gave the enemy great annoyance, although he continued to reply with a constant and well-directed fire. But the Confederate guns were defective, and their shell often exploded before reaching the point intended to be struck.

Davis determined to have no more surprises, and two of the gun-boats were detailed to guard the mortar-rafts until evening, when they were towed to a position where they would be under the protection of the fleet until morning.

The constant explosion of the bombs in the fort or in the air, by which numbers of the garrison were killed, had its effect at last. The enemy saw that it was now only a matter of time, and that the Union forces must win in the end. The Confederate troops at Iuka, Corinth and other places in West Tennessee, were being gradually driven back, and once more the base of operations was to undergo a change in obedience to the law of strategy.

Fort Pillow had to be evacuated, and when the Confederates did evacuate a position they generally did so with an unaccountable haste. In this case they may have heard that an army was marching on them from the rear, or that Pope was returning with a great force from Pittsburg Landing. Whatever it was, something had a very demoralizing effect upon the garrison,

and the guns of the fort were no longer well aimed or rapidly fired.

On the night of June 4th, a great many explosions were heard in the fort, which indicated to the officers of the fleet that the enemy was preparing to evacuate. The Flag-officer on receiving this intelligence, gave orders for the gun-boats to get under way at 4 o'clock on the morning of June 5th, and to move down the river in the following order: "Benton," "Mound City," "Louisville," "Carondelet," "Cairo," and "St. Louis." (The "Mound City" had been fished up out of the river and repaired, but the "Cincinnati" was still at Cairo.)

Since the battle with the Confederate rams a new organization had been added to the Union fleet in the shape of a ram flotilla, commanded by a very gallant man, Col. Charles Ellet, of the U. S. Army. These vessels were simply ordinary river steamers converted into rams, though not in a very effective manner. They had been strengthened with timber and had the boilers partially protected from shot, but they were not nearly so well designed as the Confederate rams. They were named the "Monarch," "Queen of the West," "Switzerland" and "Lancaster," all commanded by an Ellet, brother, son, or nephew, all gallant men, and ready for any enterprise.

The Flag-officer assigned a proper position to Col. Ellet, and the combined fleet proceeded down the river to Fort Pillow, which they found to be abandoned.

Capt. Davis sent for Col. Fitch U. S. A.

and turned over the fort to him. This officer brought a detachment of his troops over in a transport without delay, and the American flag was soon floating over this stronghold, which at one time seemed able to defy all the gun-boats and armies of the Republic.

Large army spoils were captured, and many heavy guns (40 at least); for although the Confederates had set fire to the works, they had neglected to make the destruction

At 8 P. M. the fleet anchored at the lower end of Island No. 45, a mile and a half above the City of Memphis. The mortar-boats, tow-boats, ordnance and commissary vessels, anchored for the night at Island 44.

At daylight the enemy's fleet of rams and gun-boats, now numbering eight vessels, was discovered lying at the levee at Memphis. They dropped below Railroad Point, and returning again arranged themselves below the city.

REAR-ADMIRAL CHAS. H. DAVIS.

complete and retired with their usual precipitancy.

At noon the fleet again steamed down the river, leaving the "Pittsburg" and "Mound City" to co-operate with the Army.

At a bend in the river on the way down, a Confederate transport came in sight of the fleet, but turned and attempted to escape. She was captured by a fast tug, with a body of armed men, under the command of Lieut. Joshua Bishop: she proved a valuable prize.

At 4.20 the Union flotilla got under way in the following order: Flagship "Benton," Lieut.-Com. Phelps; "Louisville," Com. B. M. Dove; "Carondelet," Com. H. Walke; "Cairo," Lieut.-Com. N. E. Bryant; "St. Louis," Lieut.-Com. Nelson McGunnegele.

They dropped down the river according to signal, and prepared for battle. The Confederate gun-boats opened fire upon our fleet as it moved down, with the seeming intention of having the city injured by the return fire: but due care was taken in re-

ACTION OF THE GUN-BOATS AT MEMPHIS, JUNE 6 1862.

gard to this matter, and shot and shell were sent among the Confederates with good effect.

At this moment the ram fleet was several miles up the river, though coming down rapidly, and it was necessary for our gunboats to maneuver so as to enable it to overtake them.

The Confederate vessels (still under the command of Montgomery) were the rams "General Van Dorn," "General Price," "General Lovell," "General Beauregard" and "General Jeff Thompson," mounting each four heavy guns; the "General Bragg" and "General Sumter," mounting three guns, and the "Little Rebel," mounting two guns.

When the battle had fairly commenced, two of the army rams, the "Queen of the West," Col. Charles Ellet, and the "Monarch," Lieut.-Col. Ellet (a younger brother), dashed fearlessly ahead of the gunboats and ran for the enemy's fleet. At the first encounter they sank one and disabled another of the Confederates, who were taken greatly by surprise, as they did not know that we had any rams, but took them for transports.

The rams were closely followed by the Union gunboats in order of battle, under the lead of Flag-officer Davis, and opened a vigorous fire which was kept up until the end of the battle.

Up to the time of the attack by the Union rams, the enemy had kept up a spirited and rapid fire, but as the vessels closed it became necessary for the gunners on both sides to exercise more care.

The "Queen of the West" being in advance of the "Monarch," was now badly rammed by the "Beauregard," which vessel, in company with the "General Price," then made a dash at the "Monarch" as she approached them, but missed their mark and crashed together, the "Beauregard" cutting the "Price" down to the water line and tearing off her port wheel. The "Monarch" then rammed the "Beauregard," and she quickly sank in the river opposite Memphis, being struck at the same time in the boilers by a shell from an iron-clad.

The "General Lovell" having been struck by the "Queen of the West," or the "Monarch" (as the latter claims), went to the bottom so suddenly as to take a number of her officers and crew down with her. The "General Price," "Queen of the West" and "Little Rebel" being disabled (the latter by a shot through her steam-chest), were run ashore on the Arkansas side of the river to prevent their sinking. By this time the best part of the Confederate rams and gunboats had been disabled and the fight now became a running one. The ram "Van Dorn" escaped down the river and was pursued by the "Switzerland" and

Thompson" was set on fire by the shells from the iron-clads, and ran into the right bank of the river, where she burnt to the water's edge, and finally blew up. The "Sumter" and "Bragg" were somewhat cut up, but did not sink, and thus of all the Confederate fleet, the "Van Dorn" alone escaped.

The commander of the "Monarch," after disabling the "Beauregard" and putting her in a sinking condition, towed her into shoal water and saved her crew. This was a noble action, as enemies in combat do not often stop to save sinking ships that have been firing into them. But this was not the only instance where humanity was shown during this battle: when it was known in the fleet that some of the enemy's vessels were sinking, and a cry came up for help, the flagship "Benton" lowered her boats and sent her officers and men to the rescue of their bitter foes. So eager was the rush to undertake this duty that the first boat was swamped.

How glorious was this conduct when compared with the treatment which the sailors of the "Cumberland" and "Congress" received at Hampton Roads, when they were struggling in the water and subjected to a murderous fire from the guns of the victorious "Merrimac." At Hampton Roads the cry was "Death to the Federals!" At Memphis it was "Help for the drowning Confederates!"

The battle had carried most of the Union vessels ten miles below Memphis, and they now found themselves to have been successful beyond all hopes. The enemy was completely swept away, as if his vessels had been made of paper—a result which our officers had hardly expected since the gallant action at Plum Point, in which these same vessels, under Montgomery, proved such formidable foes.

Rear-Admiral Davis had no military authority over the ram fleet. He could only request co-operation, which the Commander, Col. Ellet, was eager to give. The latter fought well, but unfortunately his vessels did not keep together and therefore did not accomplish as much as they would have done by a combined attack. Three of the rams did not get into action until after the "Queen of the West" and "Monarch" had made their charge upon the enemy. Had they made a rush at the same time, it is probable that five of the enemy's vessels would have been sunk, and not even the "Van Dorn" would have escaped. However, as matters turned out, it was a brilliant victory, and the Union commander had every reason to be satisfied with it.

The Confederates fought with a coolness and energy that entitled them to the greatest credit, and although the "Van Dorn"

saw that he could be of no further use to his friends.

Capt. Maynardier, who commanded the mortar batteries, accompanied the fleet in a tug and rendered good service. When the "Beauregard" was disabled he steamed alongside of her and made her crew prisoners—he also received many persons of the Confederate fleet, who returned and delivered themselves up after their vessels had been deserted. Rear-Admiral Davis says: "It is with pleasure that I call the attention of the Department to his personal zeal and activity, the more conspicuous because displayed while the mortar-boats under his command could take no part in the action."

Two of the enemy's rams, the "Price"

slow moving and awkward iron-clads off the face of the river. Who can tell what they felt when they saw the Confederate fleet sunk, blown up, or burnt—for it was an awful sight to see a ship going down in an instant with all on board, not even her masts appearing above the deep waters of the Mississippi. Can any one who witnessed the battle ever forget the heart-rending shrieks of drowning men as the waters closed over their heads, or the sounds of woe that went up from relatives and friends upon the river bank who witnessed the appalling scene!

The "Lovell" was the first vessel that went to the bottom, giving the spectators a fair idea of what would be the fate of all

QUEEN, MONARCH, PRICE, LITTLE REBEL, VAN DORN, JEFF. THOMPSON, BRAGG, SUMTER, LOUISVILLE, CAIRO, ST. LOUIS, BENTON, CARONDELET, BEAUREGARD, LOVELL.

BATTLE OF MEMPHIS, ENEMY RETREATING.—(DRAWN BY REAR-ADMIRAL WALKER.)

and the "Bragg," were sea-going vessels, strongly built and heavily armed, each of them being superior to any in Ellet's fleet. No doubt the enemy calculated a great deal on them. They were saved and refitted, and afterwards formed part of the Union fleet in Western waters. The "Sumter" and "Little Rebel" were also saved and made use of, but all the rest were destroyed by sinking or blowing up.

To those who stood on the river bank at Memphis, this battle must have appeared like a horrid dream, so different was the result from what they had anticipated. Here were assembled the relatives of those who manned the powerful and swift vessels, which were fully expected to wipe the

rest. Many human beings were buffeting the waves while the battle was going on, and the cry for help arose above the sounds of conflict. No aid could reach them from the shore, and their friends clasped their hands over their faces to shut out the agonizing sight.

But even in the excitement of battle, humanity was uppermost in the hearts of our brave western sailors; boats were lowered with that rapidity which can only be seen on board a vessel-of-war, and the sinking wretches, who a moment before had given up all hope, were rescued and taken to a place of safety.

The "Monarch," even before the battle was ended, towed the "Beauregard" on to

a shoal, while Capt. Pike, of the Ordnance department, went along-side and helped the wounded into his tug. Bright, amid all the horrors of that day, will shine these deeds of humanity, and our sailors may feel a more glorious pride in having saved their helpless enemies than in having conquered them.

The capture of Memphis was a terrible blow to the South, for this city had been of great use to the Confederacy as a base of supplies for their armies in Tennessee, which supplies we had not up to this time been able to intercept. This naval success opened the river all the way down to Vicksburg, and three other depots of supplies were soon to fall into our hands, when our fleet penetrated the Yazoo River in the heart of the enemy's country.

For the second time Rear Admiral Davis won a strictly naval victory, and won it without a single mistake. He was no doubt much assisted by the two rams, "Queen of the West" and "Monarch," which by their gallant and unexpected attack did so much to demoralize the enemy.

The Confederate account of this battle differs very little from the Union one, the only exception being in the case of the "General Lovell," which vessel, they say, was sunk by a shot from the fleet, and not by being rammed by the "Queen of the West." The Confederates ought to know which is the correct version.

Rear-Admiral Davis, in his report, makes no distinction among his officers. He simply says, "the officers and men of the flotilla performed their duty." The proof of the manner in which it was performed was the total annihilation of the enemy's forces.

Take the battle, together with its results, it was one of the handsomest achievements of the war, but it did not receive that general notice which it deserved.

If Mr. Secretary Welles, who was liberal with his eulogistic letters to those whom he approved of, ever congratulated Rear-Admiral Davis and his officers for their brilliant success, it nowhere appears in the Secretary's Report for 1862. But history will eventually give due credit to all the brave men who served their country faithfully in the time of her greatest need. The prejudices and jealousies of the times will have passed away, and the truthful historian who takes time to examine the records carefully, will give to each his proper place, and render justice to those who have not yet received it. The writer of this work regrets that his space is so limited that he can only do partial justice to the scenes enacted in the war.

In the battle just described, there were only three men wounded and one killed in

struck by the enemy's shot—which looks like a cheap victory; yet it was none the less important. The city of Memphis was surrendered that day to the Army and Navy, and garrisoned at once by the Indiana Brigade under Colonel Fitch.

A great deal of property fell into the hands of the Federal troops, who kept possession of the place until the end of the war, and soon converted it into a loyal city.

The Confederates had now to seek a new strategic line of defence: they established their fifth Gibraltar at Vicksburg, where the gunboats will catch up with them after a while.

#### EXPEDITION AGAINST ST. CHARLES, ON THE WHITE RIVER.

On June 16th, 1862, Rear-Admiral Davis sent an expedition up the White River to destroy some batteries located at St. Charles. The expedition was under the charge of Com. Kilty, and was composed of the gun-boats "Mound City," "St. Louis," "Lexington," and "Conestoga," and several transports with troops under Col. Fitch, U. S. A.

The Confederates had mounted batteries at this point and had obstructed the river with piles and sunken vessels.

On June 17th, Com. Kilty reconnoitered the place in a tug, and having gained the desired information, at six o'clock next morning the gun-boats got under way in the following order: "Mound City," "St. Louis," "Lexington," "Conestoga," and opened fire on the enemy's works.

The "Mound City" had advanced to within 600 yards of the forts, when a well-directed shell penetrated her port casemate, killing three men and exploding in the steam-chest. The ship was instantly filled with scalding steam, and many of the crew jumped overboard in their agony. All boats were manned and sent to pick up these men, and as the ship was disabled she was towed out of action by the "Conestoga."

The "St. Louis," Lieut.-Com. McGunegle, moved close up to the forts and continued to pour in shot and shell, while the enemy kept firing on the "St. Louis" and also on the men who were struggling in the water. A more dastardly thing never was done in the history of the war, and was very different from the conduct of the Federals at Memphis, where, as stated above, boats were lowered in the heat of battle to pick up the drowning enemy.

At this moment Col. Fitch made signal for the gun-boats to cease firing, and having gained a position he immediately charged the enemy's works and carried them without the loss of a single man. Eight of the enemy were killed and twenty-

Fry (formerly a Lieutenant in the U. S. Navy), Commander of the post. All their guns and ammunition fell into the hands of the Federals. The batteries consisted of two 12-pounder brass pieces, two 9-pounder parrot guns (rifled) and two 42-pounder sea-coast howitzers.

The victory was a complete one, but the loss of life on board the "Mound City" was frightful. To describe the scene after the explosion is beyond the power of any pen. Among the scalded and suffering was Com. Kilty, who, a moment before the accident, was seen coolly walking the deck and fighting his ship most gallantly. All honor to his name.

Out of the entire crew of the "Mound City" (175 officers and men), only three officers and twenty-two men escaped uninjured; eighty-two died from wounds or scalding, and forty-three were either drowned or killed in the water. The wounded men received the greatest care and consideration, and were finally sent to Memphis on board the "Conestoga" and an army transport.

To Lieuts. McGunnegle, Shirk and Blodgett is due the highest honor, not only for

their bravery during the action, but for their humanity in providing for the comfort of the poor fellows who were so badly scalded. Dr. George W. Garber, of the "Lexington," and Dr. William H. Nelson, of the "Carondelet," also deserve great credit for their judicious care of the wounded.

With regard to Col. Fitch, who stormed and carried the fort with his soldiers, we have only to say that he exhibited that cool courage and judgment which he had always displayed since co-operating with the Navy at Island No. 10.

This victory, though a small one, was very important, as it opened the White River to our gun-boats and transports, and showed the enemy the futility of attempting to bar the way against our vessels with Confederate batteries. It also showed what could be done by a small force of the Army and Navy when working together harmoniously.

Although the Confederates congratulated themselves on the great death-roll of the "Mound City," they had to bear the ignominy of having fired upon drowning men, which almost debarred them from the clemency of their victors.

## CHAPTER XVIII.

### CAPTURE OF FORTS JACKSON AND ST. PHILIP, AND THE SURRENDER OF NEW ORLEANS.

PHILIP CAPITULATE.—FLAG OF TRUCE VIOLATED.—EXPLOSION OF THE "LOUISIANA."—MISCELLANEOUS INCIDENTS.—FARRAGUT BEFORE NEW ORLEANS.—CONGRATULATORY LETTERS OF HON. GIDEON WELLES.

ON the 12th of November, 1861, President Lincoln ordered that a naval expedition should be fitted out for the capture of New Orleans.

Captain David G. Farragut was detailed for the command of this expedition, with the title of Flag-officer, and an efficient mortar flotilla was fitted out under Com. David D. Porter, and attached to the force. Besides the mortar vessels, there were in the flotilla seven steamers to manage the former in the swift current of the Mississippi, and to aid them with their fire in case of necessity.

Farragut sailed on the 20th of January, 1862, with the following orders from the Secretary of the Navy :

"There will be attached to your squadron a fleet of bomb-vessels, and armed steamers enough to manage them, all under command of Com. D. D. Porter, who will be directed to report to you. As fast as these vessels are got ready they will be sent to Key West to await the arrival of all, and the commanding officers will be permitted to organize and practice with them at that point.

"When these formidable mortars arrive, and you are completely ready, you will collect such vessels as can be spared from the blockade and proceed up the Mississippi River and reduce the defences which

guard the approaches to New Orleans, when you will appear off that city and take possession of it under the guns of your squadron, and hoist the American flag therein, keeping possession until troops can be sent to you.

"If the Mississippi expedition from Cairo shall not have descended the river, you will take advantage of the panic to push a strong force up the river to take all their defences in the rear."

Farragut, as soon as possible, proceeded to his station, and assumed command of the West Gulf Blockading Squadron.

While the foregoing plans were developing at the North, the Confederates had not remained inactive. Acquainted, almost from its incipency, with the object of the expedition, they had exerted themselves to the utmost in strengthening the river defenses at Forts Jackson and St. Philip; which included obstructions on the river itself, besides the preparation of what might well be considered a formidable naval force.

Of the latter, the ram "Manassas," was improved and commissioned, while the "Louisiana," iron-clad, of sixteen heavy guns, was rapidly nearing completion. Two other powerful iron-clads, intended to clear the southern coast of blockaders, were under

construction at New Orleans, while further inland, at Yazoo City, the iron-clad ram "Arkansas" was almost ready for service. Several other iron-clad vessels were, at the same time, building at various points on the tributaries.

time of Nelson. Not only had the North failed to avail itself of its great resources for the construction of powerful armor-clad vessels in sufficient numbers to strike at once a heavy blow, but up to the departure of this expedition, a commencement

ADMIRAL DAVID G. FARRAGUT.

A comparison of the work done by the North and the South, up to the advance on New Orleans, is largely in favor of the latter; for not one among all the vessels sent to Farragut possessed any power of resistance, save what had been shown from the

only had been made, by the construction of the "Mouitor," one small iron-clad, and the new "Ironsides." The subsequent encounter of the former vessel with the "Merimac" seemed to show for the first time the great utility of such craft. The action

of the Federal Government in this matter seems inexcusable.

By the middle of March, the following ships, assigned to Farragut's command, had assembled at Key West, the rendezvous:

"Hartford," 25 guns, Com. Richard Wainwright; "Brooklyn," 24 guns, Capt. T. T. Craven; "Richmond," 26 guns, Com. James Alden; "Mississippi," 12 guns, Com. Melancton Smith; "Pensacola," 24 guns, Capt. H. W. Morris; "Cayuga," 6 guns, Lieut. Com. N. B. Harrison; "Oneida," 9 guns, Com. S. P. Lee; "Varuna," 10 guns, Com. Charles S. Boggs; "Katahdin," 4 guns, Lieut. Com. George H. Preble; "Kineo," 4 guns, Lieut. Com. George M. Ransom; "Wissahickon," 4 guns, Lieut. Com. A. N. Smith; "Winona," 4 guns, Lieut. Com. E. T. Nichols; "Itasca," 4 guns, Lieut. Com. C. H. B. Caldwell; "Pinola," 4 guns, Lieut. Com. Pierce Crosby; "Kennebec," 4 guns, Lieut. Com. John H. Russell; "Iroquois," 9 guns, Com. John De Camp; "Sciota," 4 guns, Lieut. Com. Edward Donaldson. Total guns, 177.

Also the following steamers belonging to the mortar flotilla: "Harriet Lane," "Owasco," "Clifton," "Westfield," "Miami," "Jackson;" besides the mortar schooners, which will be named hereafter.

The frigate "Colorado," of fifty guns, is not enumerated, for though present, both Flag-officer Farragut and Capt. Bailey, his second in command, concluded that it was impossible to lighten her sufficiently to cross the bar at Southwest Pass.

Towed by the "Harriet Lane," "Owasco," "Westfield," and "Clifton," all the mortar schooners crossed the bar at Pass à l'Outre on March 18th, and were ordered by Farragut to proceed *via* the junction to the Southwest Pass.

At this time the only vessels that had crossed the bar at the Southwest Pass, after an unsuccessful attempt with the "Brooklyn" at Pass à l'Outre, were the "Hartford" and the "Brooklyn." The Navy Department had been mistaken in sending vessels of such draught as the "Colorado," "Pensacola," and "Mississippi," for though the two latter ships were finally with great difficulty worked over, the time lost amounted to at least twelve days, with a corresponding delay of the fleet.

Farragut's first act upon reaching the Mississippi was to despatch his Chief of Staff, Capt. Henry H. Bell, with the gunboats "Kennebec" and "Wissahickon" up the river on a reconnaissance. After returning from the neighborhood of the forts, Capt. Bell reported that "the obstructions seemed formidable. Eight hulks were moored in line across the river, with heavy chains extending from one to the other.

Rafts of logs were also used, and the passage between the forts was thus entirely closed."

Forts Jackson and St. Philip had been much strengthened since the expedition was started. Situated in a most commanding position, at a turn in the river, the former on the west bank and the latter on the east, they commanded the stream above and below; Fort St. Philip being particularly well placed to rake the lower approach.

The works themselves were of masonry. Fort Jackson was of pentagonal form, with bastions, its river front being about one hundred yards from the levee, above which its casemates just appeared. The armaments consisted of a total of seventy-five guns, distributed as follows: Two ten-inch columbiads, one six-inch rifle, and thirty-three thirty-two pounders on the main parapet; two ten-inch columbiads and one nine-inch mortar in the second bastion; one columbiad and two eight-inch mortars in the third bastion; eight thirty-two pounders in the northwest casemate, six thirty-two pounders in the northeast casemate, and ten short guns and two brass field-pieces in the bastion casemates. The water battery of this fort, having the command of the lower approach, was a powerful work, mounting seven guns, as follows: One ten and one nine-inch columbiad, two heavy rifle guns and three thirty-two pounders.

Fort Jackson was altogether in a good condition; its citadel, in the centre of the works, contained large amounts of war stores and provisions, while the bomb-proofs had been made more secure by sand bags piled upon them to a depth of some six feet, and all vulnerable parts protected in like manner.

The guns of Fort St. Philip were all in barbette, and numbered a total of fifty-three pieces of ordnance, as follows: Forty-three guns, chiefly thirty-two pounders, one thirteen-inch mortar, one six-inch rifle, four ten-inch sea-coast mortars, one ten-inch siege mortar, one eight-inch siege mortar, and three pieces of light artillery.

Each of the forts was garrisoned by some seven hundred men, and both, with their adjuncts, were under command of Brigadier General Johnson K. Duncan, whose gallantry and ability were conspicuous.

Less current and fewer eddies existed close under the west bank, near Fort Jackson; consequently the best passage up river was in that channel. The Confederates had obstructed this way by means of a heavy raft of logs, which closed the only part of the river not blockaded by the hulks and their chain connections, anchored across, below the forts, almost from bank

to bank. The raft was fitted to act as a gate, opening or closing at the pleasure of the defenders.

Besides the land defenses, a fleet of war vessels, of more or less power, had been organized by the Confederates, from such material as they could procure; heavy tugs and merchant vessels were converted with some success, until a fleet of eighteen vessels, including the ram "Manassas," and the iron-clad "Louisiana," was gathered under the command of Com. John K. Mitchell, of the Confederate Navy.

This fleet was composed of two divisions, one belonging to the regularly organized Navy and the other forming what was called the River Defense, under the immediate command of a merchant captain named Stephenson.

Of the regular Navy were the following: The iron-clad "Louisiana," sixteen heavy guns, crew two hundred men, a powerful vessel, with armor sufficient to turn the projectiles of any gun in the Union fleet. Upon the roof of the casemate was a gallery for sharpshooters, running around the entire space. The machinery, consisting of twin screw engines and central paddles, was unfinished, and her inactivity at the time of the fight was due to that fact. The "Louisiana" was commanded by Com. Charles F. McIntosh, formerly of the U. S. Navy.

The "McRae," commanded by Lieut. Thomas B. Huger, was a sea-going steamer, mounting six thirty-two pounders and one nine-inch shell gun.

The steamer "Jackson," Lieut. F. B. Renshaw, commanding, mounted two thirty-two pounders.

The ram "Manassas," Lieut. A. F. Warley commanding, mounted one thirty-two pounder in bow.

The foregoing, with two launches armed with one howitzer each, constituted the regular Navy command.

Included in this division there were also the following sea-steamers converted into State gun-boats belonging to Louisiana. These vessels were lightly protected with pine and cotton barricades over the machinery and boilers.

The "General Quitman," commanded by Capt. Grant, mounting two thirty-two pounders; The "Governor Moore," Commander Beverly Kennon, mounting two thirty-two pounder rifled guns. According to Commander Mitchell the above, "being converted vessels, were too slightly built for war purposes."

Attached to his command were the following unarmed steamers: The "Phoenix," "W. Burton," and the "Landis."

Subject to his orders, but chartered by the Army, were the small tugs "Mosher," "Belle Algerine," "Star," and "Music."

The second division, the River Defense, commanded as before stated, consisted of the following converted tow-boats: The "Warrior," "Stonewall Jackson," "Resolute," "General Lovell," "Defiance," and the "R. I. Breckenridge."

These vessels mounted from one to two thirty-two pounder pivots each, some of the guns being rifled. By means of iron casing their bows, they had been fitted for use as rams.

Little assistance to the fleet resulted from the employment of these boats, on account of the insubordination of their division commander.

As a whole, the Confederate fleet mounted thirty-nine guns, all, with the exception of two, being thirty-two pounders, some nine of which were rifled.

From the foregoing enumeration it will be seen that strongly-built works, mounting one hundred and twenty-eight guns, assisted by a partially armored fleet carrying thirty-nine guns, opposed the passage of Farragut's wooden vessels carrying one hundred and seventy-seven guns.

Much assistance was expected by the Confederates from numerous fire-rafts that were placed at Commander Mitchell's disposal for the purpose of lighting the passage, and confusing the order of the Union fleet.

Assuming, upon the general concession of military men, that one gun in a fort was equal to about three afloat, and considering the disadvantage of a contrary three-and-a-half knot current to the Federal vessels (with the additional channel obstructions of fire-rafts and chains), the odds were greatly in favor of the Confederate defenses. This was thoroughly realized by the Confederates, who were rather impatient than otherwise for Farragut's advance, believing him certain to meet with disaster. Like vigilant foes, however, they fully improved the time afforded by the delay of the fleet at the bar, and materially increased the strength of their position in the interim preceding the attack.

With this understanding of the defense, we will return to the attacking force.

The position selected for the first and third divisions of the mortar fleet, during the bombardment, was on the west bank of the river, at a point thoroughly screened from the forts by a thick growth of wood. The mast-heads of the schooners rose above the trees, and afforded a capital outlook from which to direct the fire, but being ingeniously covered with brush, they were rendered indistinguishable to the Confederate gunners.

The mortar vessels were organized as follows:

First division, Lieut. Com. Watson Smith,

consisted of the following vessels: "Norfolk Packet," Lieut. Smith; "O. H. Lee," Act. Mast. Godfrey; "Para," Act. Mast. Furber; "C. P. Williams," Act. Mast. Langthorne; "Arletta," Act. Mast. Smith; "Bacon," Act. Mast. Rogers; "Sophronia," Act. Mast. Bartholomew.

Second division, under Lieut. W. W. Queen: "T. A. Ward," Lieut. Queen; "M. J. Carlton," Act. Mast. Jack; "Matthew Vassar," Act. Mast. Savage; "George Mangham," Act. Mast. Collins; "Orvetta," Act. Mast. Blanchard; "Sidney C. Jones," Act. Mast. Graham; "Adolph Hugel," Act. Mast. Van Buskirk.

Third division.—Lieut. K. R. Breese: "John Griffiths," Act. Mast. Henry Brown; "Sarah Bruen," Act. Mast. Christian; "Racer," Act. Mast. Phinney; "Sea Foam," Act. Mast. Williams; "Henry James," Act. Mast. Pennington; "\* Dan Smith," Act. Mast. George W. Brown.

The leading vessels of the first division were moored at a distance of 2,850 yards from Fort Jackson, and 3,680 yards from Fort St. Philip, the others occupying positions close under the bank and below the first—this same order being preserved by the third division. The second division was placed at the opposite bank of the river, with its head 3,680 yards from Fort Jackson.

The bombardment commenced on the morning of April 16th, each vessel firing at the rate of one shell every ten minutes.

Forts Jackson and St. Philip returned the mortar fire immediately, though not at once effectually, owing to the secure position of the vessels behind the natural rampart afforded by the bank. The Confederate fire becoming better upon obtaining the range, Lieut. Com. Guest with the "Octorara," was sent to the head of the line to open fire with his eleven-inch gun. This position was occupied for an hour and fifty minutes, and only abandoned for more ammunition.

The second division of mortar-boats, on the east bank, did excellent work during this day, but being exposed, suffered much from the fire of the forts. The position was retained until the cessation of the evening's fire at sunset, when the division was removed to the west bank with the others, under cover.

About 5 p. m. of the first day, fire was seen to break out in Fort Jackson, and the garrison soon left the guns to fight the flames. Some in the Federal fleet were inclined to believe the fire to be from a raft, but this was disproved by Com. Porter, who pulled up the river in a boat and ascertained

that the fort itself was burning, a fact at once reported to the flag-officer.

The heavy work exhausted the men at the mortars by nightfall, but the evidences of accurate practice, as shown in the condition of the fort, increased their activity until shells were thrown at the rate of one in five minutes from each vessel, or, in all, two hundred and forty shells an hour. To admit of rest, the fire was limited to one shell each half hour during the night. In the light of subsequent events this first day's fire was shown to have been the most effective of any during the bombardment, and had the fleet been ready to move at once, the passage could have been effected without serious difficulty.

The bombardment was opened afresh on the following day, and continued without intermission until the final attack of the fleet on April 24th.

The effects of this fire are best described by Colonel Edward Higgins (the commander at Fort Jackson), dated April 4, 1872.

"Your mortar-boats were placed in position on the afternoon of the 17th of April, 1862, and opened fire at once upon Fort Jackson, where my headquarters were established. The practice was excellent from the commencement of the fire to the end, and continued, without intermission, until the morning of the 24th of April, when the fleet passed at about four o'clock.

Nearly every shell of the many thousand fired at the fort lodged inside of the works.

On the first night of the attack, the citadel and all buildings in rear of the fort were fired by bursting shell, and also the sand-bag walls that had been thrown around the magazine doors.

The fire, as you are aware, raged with great fury, and no effort of ours could subdue it. At this time, and nearly all this night, Fort Jackson was helpless; its magazines were inaccessible, and we could have offered no resistance to a passing fleet.

The next morning a terrible scene of destruction presented itself. The wood-work of the citadel being all destroyed, and the crumbling walls being knocked about the fort by the bursting shells, made matters still worse for the garrison. The work of destruction from now until the morning of the 24th, when the fleet passed, was incessant.

I was obliged to confine the men most rigidly to the casemates, or we should have lost the best part of the garrison. A shell, striking the parapet over one of the magazines, the wall of which was seven feet thick, penetrated five feet and failed to burst. If that shell had exploded, your work would have ended.

Another burst near the magazine door, opening the earth and burying the sentinel and another man five feet in the same grave.

The parapet and interior of the fort were completely honey-combed, and the large number of sand bags with which we were supplied, alone saved us from being blown to pieces a hundred times, our magazine doors being much exposed.

On the morning of the 24th, when the fleet passed, the terrible precision with which your formidable vessels hailed down their tons of bursting shell upon the devoted fort made it impossible for us to obtain either rapidity or accuracy of fire, and thus rendered the passage comparatively easy.

There was not very considerable damage done to

\* The names of the vessels were those under which they were known in the merchant service, and were unchanged after purchase by the Government.

our batteries, but few of the guns being dismounted by your fire; everything else in and around the fort was destroyed."

A deserter from the forts presented himself at the Union position on the third day, and excited much incredulity by the statements he made concerning the condition of affairs at Fort Jackson. He represented the garrison as in a desperate and demoralized condition from the effects of the bombs, hundreds of which had struck the works, crushing the bomb-proofs, cutting the levees by which the fort was flooded, and firing the citadel.

Farragut, to whom the deserter was taken to relate his story, was prevented from taking advantage of the state of affairs as represented, by the supposition that the obstructions in the channel were as yet insurmountable, and time was required for a further examination.

Lieut. Crosby with the "Pinola," and Lieut. Caldwell with the "Itasca," were detailed on April 20th for a night expedition to break the chain which was supposed to extend from shore to shore below the forts.

U. S. FLAG-SHIP "HARTFORD."

The charge of this expedition was given to Captain Bell, Chief of Staff. The Confederates, however, detected the manœuvre, and the fire of Fort Jackson was concentrated upon the gun-boats, but with little or no effect, on account of the tremendous fire from the mortar flotilla. The cables were parted, and a passage-way on the left bank of the river opened.

For nearly six days and nights the mortars continued their fire—sending in about 2,800 shells every twenty-four hours, or a total of nearly 16,800. At the end of this time the men were giving out, ammunition was exhausted, one schooner—the "Carlton"—sunk, and the others severely racked by the repeated concussion upon their decks.

By the 23d instant, Farragut concluded that the condition of affairs warranted an attempt to pass the forts. A council of the commanding officers decided upon an advance to be made on the early morning of the 24th.

Meantime the iron-clad "Louisiana" had

been brought to the forts, and an effort was made by the fort Commander, General Duncan, to have her take up a position below the works, from which her heavy guns would reach the fleet. The following communication from General Duncan to Commander Mitchell was written on April 22d:

"It is of vital importance that the present fire of the enemy should be withdrawn from us, which you alone can do. This can be done in the manner suggested this morning, under the cover of our guns, while your work on the boat can be carried on in safety and security.

Our position is a critical one, dependent entirely on the powers of endurance of our casemates, many of which have been completely shattered, and are crumbling away by repeated shocks; and, therefore, I respectfully, but earnestly, again urge my suggestion of this morning on your notice. Our magazines are also in danger."

General Duncan's suggestion was unheeded, however, and the really formidable obstruction to the Union fleet remained inactive at the river's bank during the subsequent action.

Various other efforts were made to dislodge the mortar flotilla, and a body of riflemen were sent against them as sharpshooters, but all without success.

Having previously issued detailed orders to the commanders of vessels, concerning their preparation for the approaching operations, such as slinging chains over vital part of the hulls, sending down light spars, painting hulls mud color, tricing up whiskers, etc., Farragut issued the following general order:

"UNITED STATES FLAG-SHIP, 'HARTFORD,' }  
MISSISSIPPI RIVER, April 20, 1862. }

"The Flag-officer, having heard all the opinions expressed by the different commanders, is of the opinion that whatever is to be done will have to be done quickly, or we shall be again reduced to a blockading squadron, without the means of carrying on the bombardment, as we have nearly expended all the shells and fuses, and material for making cartridges. He has always entertained the same opinions which are expressed by Com. Porter; that is, there are three modes of attack, and the question is, which is the one to be adopted?

"His own opinion is, that a combination of two should be made, viz.: the forts should be run, and, when a force is once above the forts, to protect the troops, they should be landed at quarantine from the gulf side by bringing them through the bayou, and then our forces should move up the river, mutually aiding each other as it can be done to advantage.

"When, in the opinion of the Flag-officer, the propitious time has arrived, the signal will be made to weigh and advance to the conflict. If, in his opinion, at the time of arriving at the respective positions of the different divisions of the fleet, we have the advantage, he will make the signal for close action, No. 8, and abide the result, conquer or to be conquered, drop anchor or keep under way, as in his opinion is best.

"Unless the signal above mentioned is made, it will be understood that the first order of sailing will be formed after leaving Fort St. Philip, and we will proceed up the river in accordance with the original opinion expressed.

"The programme of the order of sailing accompanies this general order, and the commanders will hold themselves in readiness for the service as indicated.

"Very respectfully, your obedient servant,  
D. G. FARRAGUT,

"Flag officer West Gulf Blockading Squadron."

The original and best plan of Farragut was that the heavier vessels of the squadron should lead the attack, as they would more easily overcome any obstruction to be met afloat. According to this plan he was to lead in the "Hartford," being followed immediately by the "Brooklyn," "Richmond," "Pensacola," and "Mississippi." The senior commanders interposed the objection to this that wisdom would not permit the Commander-in-chief to receive the greatest shock of the battle; and he was finally induced, very reluctantly, to consent to an arrangement whereby the fleet would be separated into three divisions, with his immediate position in the centre of the line. Thus formed the vessels were in the following order :

0 Cayuga,	0 Hartford,	0 Sciota,
0 Pensacola,	0 Brooklyn,	0 Iroquois,
0 Mississippi,	0 Richmond,	0 Kennebec,
0 Onetida,		0 Pinola,
0 Varuna,		0 Iasca,
0 Katabadin,		0 Winona.
0 Kineo,		
0 Wissahickon,		

} <i>First Division.</i> CAPT. BAILEY.	} <i>Centre Division.</i> FLAG-OFFICER FARRAGUT.	} <i>Third Division.</i> CAPT. H. H. BELL.
---	--	---

Besides this arrangement of the fleet, the mortar-steamers were directed to move forward and be ready to engage the water-battery of Fort Jackson, while the former were passing the forts. The Confederates placed much dependence upon this battery on account of its heavy armament and wide range down the river.

According to signal, on the morning of April 24th, at two o'clock, the Federal fleet commenced to get under way. The Confederates, ever alert, detected the movement, probably from the noise of capstans and cables.

Before following the fleet in its movements, a word in relation to the advantages and disadvantages of each side will not be amiss. One fact was strongly in favor of the fleet, the division of the Confederate defenses into three branches, viz.: the land forces, the regular naval forces, and the river defense—thus preventing concert of action. The odds were against Farragut in all other respects.

The impressions of the French Admiral, and Captain Preedy, of the British Navy,—obtained during a visit to the forts before capture—that it would be an impossibility for the fleet to pass the defenses, did not tend to augment hopes of capture; but the washing away of the obstructions and rafts by the strong current restored confidence, and the advance was made with ardor.

It was half-past two o'clock before the fleet was fully under way. The strong current impeded their progress to such an extent that it lacked but a quarter of three o'clock before the leading vessel, the "Cay-

COMMANDER (NOW REAR-ADMIRAL) CHARLES F. BOGGS,  
OF THE "VARUNA."

uga," was under fire. This commenced from both forts simultaneously.

As the fleet advanced, the five mortar-steamers opened fire from their position, two hundred yards from the water-battery of Fort Jackson, quelling its fire by pouring in canister, shrapnel, and grape, while the mortars threw in their bombs with great fury.

Captain Bailey's division, led by the "Cayuga," passed the line of obstructions in close order, but from this point the vessels were somewhat damaged by the heavy fire of St. Philip before it was possible for them to reply. Captain Bailey kept on steadily in the "Cayuga" and was the

PORTER'S MORTAR FLOTILLA IN THE FOREGROUND (GUESSED WITH TREES) BOMBARDING FORT JACKSON.

(FROM A SKETCH BY REAR-ADMIRAL WALKER, U. S. NAVY.)

gauntlet safely, pouring in a destructive fire of grape and canister as his guns could be brought to bear.

Above the forts the enemy's gun-boats were congregated, and several of them made a dash at the "Cayuga" at once, but were driven off, the "Oneida" and "Varuna" coming to her assistance, and, by their rapid and heavy fire, dispersing the opposing vessels. The coolness and discipline of the Union vessels here showed to great advantage, while this work was more congenial than that of battling with forts.

The leading division continued on up the river, engaging everything that was met, most of the enemy's vessels being disabled by the time the centre division had passed the forts, and the action decided in favor of the Federal fleet.

Colonel Higgins, of Fort Jackson, admitted this when he saw the large ships of the Flag-officer's division pass, exclaiming: "Better go to cover, boys; our cake is all dough! the old Navy has won!"

The "Varuna," Com. Boggs, of the first division, being a fast vessel, had out-stripped all her consorts, and chased the enemy alone until she found herself surrounded by them. Supposing her to be one of their own vessels, in the darkness, the Confederates did not attack the "Varuna" until Com. Boggs apprised them of his identity by a rapid fire from both sides. Three of the enemy were driven ashore in flames, and one large steamer with troops on board drifted ashore with an exploded boiler from this encounter. At daylight the "Varuna" suffered a double attack from the "Governor Moore" and the "Stonewall Jackson."

The former, a powerful vessel, fitted as a ram, was commanded by Lieut. Beverly Kennon, formerly of the U. S. Navy. This vessel ranged up on the quarter of the "Varuna" and raked her along the port gangway with her bow-gun, killing some five or six men; also ramming her. Engaging this enemy, the "Varuna" was exposed to a blow from the ram "Stonewall Jackson," which penetrated her starboard side below water. A second blow was planted in the same place, but the enemy was exposed to a destructive fire of grape and canister from the "Varuna's" eight-inch guns, and finally hauled off, disabled and on fire. But the "Varuna" had received her death wound, was filling rapidly, and to save life her gallant commander headed her for shoal water where she soon sank; the officers and crew being rescued by the "Oneida" and "Pensacola."

Both the attacking vessels in this spirited engagement were fired by the crews, and abandoned.

The conflict of vessels above the forts

was mainly between the small vessels of both sides, and great skill and gallantry were exhibited on either side.

Bailey's division may be said to have swept the way. The gunners of Fort St. Philip were driven to shelter by the heavy batteries of the "Pensacola" and "Mississippi," and the difficulties of the rear ships diminished.

Most of the injuries inflicted upon the fleet were from St. Philip, which had not been exposed to the bombardment as had Fort Jackson.

The Flag-officer, in the centre division, came abreast the forts as Bailey's division reached the turn in the river above. The "Hartford" and "Brooklyn" kept the line, but the "Richmond" had fallen out, and passed up on the west or right bank. Before this time the Fort Jackson garrison had been nearly all driven from their guns by the fire of the mortar-steamers at the water-battery, and the bombs from the schooners, while the river had been illuminated by two fire-rafts, and the brightness as of day revealed everything distinctly.

The difficulty of keeping a line of seventeen vessels of various degrees of speed in close order, against a three-and-a-half knot current in an irregular channel, can be readily appreciated, and it is not singular that some of Farragut's fleet "broke line" under the trying circumstances of the hour. The "Iroquois," under Com. De Camp, a very gallant officer, diverged from the line, and being very swift, passed ahead of the vessels of her division. Above Fort Jackson, from which she did not receive a single shot, though passing its levee within fifty yards, the "Iroquois" was attacked by a ram and the gun-boat "McRea," both of which were driven off, and the commander of the latter (Lieut. Huger), mortally wounded.

The "Iroquois" suffered much loss and was considerably cut up in her actions with the gun-boats and Fort St. Philip.

As Farragut engaged Fort St. Philip at close quarters, the Confederate gunners were again driven to shelter by the fire of his heavy ships, but an attack of another kind was now made upon the "Hartford," his flag-ship. The Confederate tug "Mosher," commanded by a brave fellow named Sherman, pushed a burning raft alongside the Union vessel, which vainly tried to avoid the contact by porting her helm. This brought her upon a shoal, and to a standstill. The fire-raft was shoved against the port side, while the flames threatened the entire destruction of the ship. But there was no confusion, the starboard battery continued to engage Fort St. Philip, while the firemen fought the blaze that had caught upon the side and rigging. The

"Hartford" succeeded in backing off the shoal, the raft was turned adrift, the flames extinguished, and the advance taken up as before. The situation had been one of great peril, but Farragut was the great commander throughout. Walking the poop coolly, he allowed the fire to be fought by Commander Wainwright and his men. The fire was a sharp one; and, at times, rushing through the ports would drive the men back from the guns. Seeing this, Farragut called out, "Don't flinch from that fire, boys; there's a hotter fire than that for those who don't do their duty! Give that rascally little tug a shot, and don't let her get off with a whole coat!"

The tug did escape from the "Hartford," though by Confederate accounts she was destroyed during the fight.

The loss to the "Hartford" in the passage

Much of this engagement, it must be remembered, was fought in darkness, except for the light emitted by the flashes of the guns through the smoke-clouded air, and the ships groped their way by these uncertain guides.

Passing the forts the "Brooklyn" was attacked by a large steamer at a distance of not more than fifty or sixty yards. A single broadside from the sloop's heavy battery, drove her out of action in flames.

The "Brooklyn" received but seventeen hits in the hull, during the heavy fire to which she was subjected, but these did much execution, nine men being killed and twenty-six wounded.

The fleet's success was virtually decided when the large ships had passed the forts, and the head of the third division under Captain Bell found but comparatively slight

CAPTAIN BAILEY'S DIVISION MEETING THE ENEMY'S FLOTILLA ABOVE THE FORTS.

of the forts was three killed and ten wounded, with thirty-two shot in hull and rigging.

The "Hartford" was followed as closely as possible by the "Brooklyn," Captain Thomas T. Craven; the smoke from rafts and guns rendered this very difficult, but the sweeping fire of the "Hartford" was supplemented by hers, and she passed the forts in safety, to be attacked, however, immediately after, by the little ram, "Manassas," the most troublesome vessel in the Confederate service, not excepting the "Louisiana"—as she behaved in the action.

Commanded by Lieutenant Warley, a gallant young officer, formerly of the U. S. Navy, this craft made directly for the "Brooklyn's" starboard-side, but inflicted only slight damage. A second attack gave the same result, for the chain protection to the machinery saved the "Brooklyn," and the ram glanced off into the darkness.

resistance to the passage of his leading vessel, the "Sciota."

Farragut's first intention, to place the heavy ships in the van, would probably have resulted in the immediate crushing of the enemy, and the rear of his line would have followed a *beaten* path.

With the exception of the "Itasca," Lieutenant Caldwell; the "Winona," Lieutenant Nichols; and the "Kennebec," Lieutenant Russell, the fleet succeeded in passing the forts.

The "Itasca" was much cut up, and having a shot through her boiler, was compelled to drop down the river, out of action, after which she was run ashore to prevent sinking. Fourteen shot and shell had passed through her hull, but the list of casualties was small.

The "Kennebec" and "Winona," being at the end of the line, had been left below

the forts at daylight, and were there exposed to the fire of both works, with small ability to reply. Being slow vessels, with a rapid current against them, they were long exposed to the deliberate practice of the enemy and were obliged to haul out of action below. The demoralization of the enemy was evident, however, from their escape.

No grander or more beautiful sight could have been realized than the scenes of that night. From silence, disturbed now and then only by the slow fire of the mortars,—the phantom-like movements of the vessels giving no sound—an increased roar of heavy guns began, while the mortars burst forth into rapid bombardment, as the fleet drew near the enemy's works. Vessel after vessel added her guns to those already at work, until the very earth seemed to shake

LIEUT. (NOW COMMODORE) W. W. QUEEN.  
(COMMANDING A DIVISION OF MORTAR FLOTILLA.)

from their reverberations. A burning raft adding its lurid glare to the scene, and the fiery tracks of the mortar-shells as they passed through the darkness aloft, and sometimes burst in mid-air, gave the impression that heaven itself had joined in the general strife. The succeeding silence was almost as sudden. From the weighing of the anchors, one hour and ten minutes saw the vessels by the forts, and Farragut on his way to New Orleans, the prize staked upon the fierce game of war just ended.

As the fleet was approaching quarantine, some distance above the forts, the "Manassas," the most active and troublesome of the Confederate fleet, was seen, in the early daylight, coming up river in chase. The Flag-officer directed Commander Smith to leave the line with the "Mississippi," and run the ram down.

The "Mississippi" turned instantly and started for the enemy at full speed. The "Manassas" had evidently practiced her parts before, for, shifting her helm quickly when but a short distance from the big vessel's bow, she dodged the blow, but in so doing ran ashore, where she was deserted by her crew.

Commander Smith wished to preserve the "Manassas," but was obliged to recall the boats sent to secure her, on account of a burning wreck approaching him. The ram was therefore set on fire, and riddled with shot, after which she drifted away from the bank, and finally blew up below the forts.

This ended the irregular fighting with the Confederate vessels; ten of them had been sunk or destroyed, while the "Varuna," with her two adversaries, lay at the bottom of the river near the bank, evidence of the gallantry of Boggs.

After the fleet had passed the forts, there remained no necessity for the presence of the mortar-flotilla steamers off the water-battery. They accordingly dropped down the river to the position of the mortar-schooners, and the signal made the latter to cease firing.

The situation of the vessels left below the forts seemed far from secure. The ironclad, "Louisiana," was still at her moorings, uninjured, and three other vessels of war could be seen moving from one side of the river to the other. Their character could not be ascertained, but presuming they were gun-boats, with the assistance of their huge consort they were more than a match for the Union vessels if properly handled.

Commander Porter took immediate steps to meet contingencies. The failure of the "Itasca," "Kennebec" and "Winona" to pass the batteries had added the two latter to his force (the "Itasca" being disabled), which now amounted to seven effective gun-boats; these he at once prepared for emergencies. His plan, in case of attack, was to place as many as possible of the vessels alongside the "Louisiana," have each one make fast to her, let go two anchors, and then "fight it out on that line."

No attack was made, however, and the iron-clad lost an opportunity to strike a final blow, which she could have inflicted even with her machinery in a defective condition.

Meanwhile Farragut had passed on up the river, leaving one or two gun-boats to guard the lazaretto. The right-of-way was disputed at Jackson's old battle ground of January 8, 1815, by the Chalmette batteries.

These works—on both sides of the river—mounted twenty heavy guns, and were prepared to receive the approaching vessels, coming up in two columns at their best speed.

The vessels that had passed the forts

below, gave short account of these batteries, though the work was very sharp while it lasted, especially on account of the time during which the slow ships were held under a raking fire.

From this point resistance ceased, and about noon on the 25th of April, the fleet anchored off New Orleans, which the retreat of General Lovell left defenseless and in the hands of the civil authorities.

Lieut. Com. John Guest was sent at noon of the 25th to Fort Jackson under a flag of truce, to call upon the Confederate commander, in view of the uselessness of further bloodshed, to surrender the forts and the remnants of the Confederate Navy at the place, as Farragut had passed up the river with little loss, and was probably then in New Orleans.

General Duncan replied very civilly, but declined to surrender before hearing from the city. Immediately upon the receipt of this reply by Commander Porter, a very rapid mortar-fire was opened upon Fort Jackson.

The effect was such as to cause a mutiny among the garrison, who refused to longer undergo the probability of useless slaughter, and many deserted from the works and retreated up river out of range. The remainder refused to fight the guns, and reasoned that as they had unflinchingly borne the terrible six days' bombardment, and had exposed themselves to the night ordeal of the fire of the passing fleet, it was time the fort should be surrendered without further loss of life.

The bombardment was continued during the afternoon until the shells were exhausted, and on the following day (the 26th) the schooners were got under way and sent to Pilotstown to replenish their ammunition. Six were ordered thereafter to cross the bar at Southwest Pass and proceed to the rear of Fort Jackson, holding themselves in readiness for any service.

At midnight of the 28th, General Duncan sent an officer on board the "Harriet Lane" to inform Commander Porter of his willingness to capitulate.

On the following day Commander Porter with nine gun-boats, proceeded up river to Fort Jackson, under a flag of truce, and upon his arrival a boat was sent for the commanding officer of the river defenses, and such other officers as he might desire to have accompany him. These officers were received on board with all the respect due to brave men, and they bore themselves accordingly, though there must have been a mortification in surrendering to what was, in many respects, an inferior force. At the time of the capitulation, however, the Federal officers knew nothing of the internal troubles which had immediately

induced the surrender—the mutiny and desertion of the men, and the final strokes of the fleet above. In any case, whether Farragut had succeeded or failed in his operations above, it was important to obtain possession of the forts as early as possible, and to that end terms of capitulation had been already prepared, and these were accepted by General Duncan and Lieut. Col. Higgins.

As the terms were being signed, Porter found, to his surprise, that the capitulation of the defenses was not to include those afloat, General Duncan asserting that he had no authority whatever over the naval branch. The commander of the regular

COMMANDER (NOW ADMIRAL) DAVID D. PORTER.

naval forces (Commander Mitchell) had, in fact, set the military at defiance. Porter waived the point, however, being determined upon the course to pursue when possession of the forts was secured.

All connected with the capitulation were seated at the table on board the "Harriet Lane," with the articles before them. Porter had signed them, as had Commander Renshaw, of the "Westfield." Lieut. Com. Wainwright, of the "Harriet Lane," was about to follow with his signature, when one of his officers requested him urgently to come on deck. He returned at once with the report that the "Louisiana" was drifting down river on fire, coming toward the Union

vessels which were anchored about thirty yards apart. Being broadside to the current the iron-clad would not have room to pass.

"This is sharp practice," Porter remarked to the Confederate officers, "but if you can stand the explosion when it comes, we can. We will go on, and finish the capitulation." He then gave Lieutenant Wainwright orders to pass the word to each of the other vessels to veer to the end of their chains, and to use steam in sheering clear of the burning wreck if necessary, but not to leave the anchorage. The pen was then handed to General Duncan and to Colonel Higgins, the boldness of whose signatures gave no evidence of the proximity of a possibly fatal explosion.

COMMANDER JOHN K. MITCHELL.

(COMMANDER OF THE CONFEDERATE NAVAL FORCES IN THE MISSISSIPPI.)

The signatures being duly attached, all awaited quietly the result, which was not long delayed, the explosion taking place with a shock that fairly unseated the expectant officers, and threw the "Harriet Lane" well over to port. The capitulation was regularly finished, despite the interruption.

The "Louisiana" had fortunately exploded before reaching the line of vessels, and injured nothing but Fort St. Philip, at which one man was killed.

The action of the Confederate naval officers in destroying the "Louisiana" was severely censured by those of the army. The latter assured the Federal officers that they felt in no way responsible, as the vessel was entirely under Commander Mitchell's control.

The Federal commander was much disappointed in the loss of the "Louisiana," as he had calculated upon her usefulness against her former owners in operations further up the river.

Within ten minutes after the departure of the Confederate officers, the colors of the forts were hauled down, and both works delivered over to the officers appointed to receive them. The enemy's flag was still shown on the river, however, for Commander Mitchell, after setting fire to the "Louisiana," transferred his crew to a river steamer, and made for the opposite bank, a mile or so above the forts.

As soon as General Duncan had left the "Harriet Lane," Commander Porter, to whom Mitchell's movements had been reported, ordered Lieutenant Wainwright to get under way and beat to quarters. Steering directly for the vessel carrying Mitchell's flag, the "Harriet Lane" sent a shot at the flag-pole, but the hint was taken and the colors hauled down at once. Lieutenant Wainwright was sent aboard the steamer to take possession. He was met by Commander Mitchell, and requested to extend the same terms as had been granted the officers and men of the forts. Mitchell was given to understand that no terms would be extended him or his officers, that they would be held close prisoners to answer for a violation of a flag of truce, and that all would be sent to the North.

In a communication made to Commander Porter, Mitchell at once removed the responsibility for the act from all but three or four officers. The prisoners were sent up river to Flag-officer Farragut for his disposition, but though afterward sent to the North, and held in confinement for some time, nothing was done to the guilty actors, and the matter finally dropped.

After all the defenses were in Union hands Commander Porter dispatched a steamer to the bar, and brought up a vessel of General Butler's expedition, having on board General Phelps with a number of infantry, to whom the forts were turned over.

The total loss in the fleet during these engagements was 35 killed, and 128 wounded. The chief sufferers were the "Pensacola," 37; "Brooklyn," 35; and the "Iroquois," 28.

The rising sun, the morning after the fight, shone on smiling faces, even among the wounded. Farragut received the congratulations of his officers, as he had conducted the great fight, with imperturbability. He wasted no time in vain regrets over the saddening features of his victory, but making the signal "Push on to New Orleans," seemed to forget the imperishable fame he had won, while in thought he was following up his great victory to the end.

The two following letters were issued by

the Hon. Gideon Welles on receiving the announcement of the important victory at New Orleans, and he expressed his feelings and those of the Union people in terms not only felicitous, but worthy to be engraved in letters of gold. This victory was the first great blow the enemy had received; it was the step towards dividing the slave territory and separating the two parts by a great river, on the bosom of which the Navy could advance with its gun-boats, and with their heavy guns bring the people along the banks of the Mississippi to a sense of their obligations to the Government. It was the wedge that had been driven into the vitals of the rebellion that would finally tear it asunder, and it was a blow that had been dealt by the Navy alone. In fact, it was a blow that shortened the war one-half, and which rung through Europe in unmistakable language, giving the world to understand that we were determined to hold the legitimate property of the Government in defiance of English threats or French intrigues, and that the Navy, even with its paucity of ships and guns, would again assert its power, energy and devotion to the flag which had always characterized it since we first became a nation.

The praise bestowed on the officers and sailors of the fleet by the Secretary of the Navy was nothing more than their due, and the votes of thanks which were sent from the halls of Congress would have been more acceptable if that body had not hesitated for so many years to do justice to the fleet by voting them the prize-money they were legally entitled to, and which they had won by a valor never surpassed—those to whom this would have been a boon died before the money was appropriated, and even Farragut did not live to receive all that was due him.

“NAVY DEPARTMENT, }  
May 10, 1862. }

“SIR—Captain Bailey, your second in command, has brought to the department the official despatches from your squadron, with the trophies forwarded to the national capital.

“Our Navy, fruitful with victories, presents no more signal achievements than this, nor is there an exploit surpassing it recorded in the annals of naval warfare. In passing, and eventually overcoming Forts Jackson and St. Philip, the batteries above and below New Orleans, destroying the barriers of chains, steam-rains, fire-rafts, iron-clad vessels, and other obstructions, capturing from the Confederate forces the great southern metropolis, and obtaining possession and control of the Lower Mississippi, yourself, your officers, and our brave sailors and marines, whose courage and daring bear historic renown, have won a nation's gratitude and applause. I congratulate you and your command on your great success in having contributed so largely towards destroying the unity of the rebellion, and in restoring again to the protection of the national government and the national flag the important city of the Mississippi valley, and so large a portion of its immediate dependencies.

“Your example and its successful results, though attended with some sacrifice of life and loss of ships, inculcate the fact that the first duty of a commander in war is to take great risks for the accomplishment of great ends.

“One and all, officers and men, composing your command, deserve well of their country.

“I am, respectfully, your obedient servant,

“Signed) “GIDEON WELLES.

“Flag-officer D. G. FARRAGUT,  
“Commanding Western Gulf Blockading  
“Squadron, New Orleans.”

“NAVY DEPARTMENT, }  
May 10, 1862. }

“SIR—Your dispatch of April 30, inclosing the articles of capitulation of Forts Jackson and St. Philip, which surrendered on the 28th, after a bombardment of one hundred and forty-four consecutive hours by the mortar flotilla, has been received. I have also to acknowledge the receipt of the flags taken in the two forts on that occasion, including the original one hoisted on Fort St. Philip when the Confederate forces declared the State of Louisiana to have seceded from the Union, which have been sent forward to the Department.

“The important part which you have borne in the organization of the mortar flotilla, and the movement on New Orleans, had identified your name with one of the most brilliant naval achievements on record; and to your able assistance with the flotilla is Flag-officer Farragut much indebted for the successful results he has accomplished. To yourself and the officers and seamen of the mortar flotilla the Department extends its congratulations.

“I am, respectfully,

“GIDEON WELLES.

“Commander DAVID D. PORTER,  
“Commanding U. S. Mortar Flotilla, etc., etc.”

## CHAPTER XIX.

### BATTLE OF THE FORTS AND CAPTURE OF NEW ORLEANS.

INTERESTING REPORTS OF FLAG-OFFICER FARRAGUT; CAPTAINS BAILEY, BELL, MORRIS, CRAVEN; COMMANDERS WAINWRIGHT, LEE, SMITH, BOGGS, DE CAMP, ALDEN, NICHOLS, CALDWELL, PORTER, MITCHELL, AND OTHERS. OFFICIAL LETTERS OF GIDEON WELLES, MAYOR MONROE, AND THE CITY COUNCIL OF NEW ORLEANS, ETC.

IT is desirable in *some* respects to make this a book of reference, especially in regard to official letters, which seldom or ever are seen by the public, the several reports of Admiral Farragut, also those of his officers, contain details of the battle at the forts, and of the capture of New Orleans, which can best be told by those who were participators in those stirring scenes, and they are appended to the general account of the battle. In the course of a few years these letters will become inaccessible, except from the files of the Navy Department, and they should be treasured as the ground-work of the history of the most important naval battle of modern times,—we do not think any excuse is needed for inserting them here.

#### COMMENCEMENT AND PROGRESS OF THE BOMBARDMENT OF FORT JACKSON.

UNITED STATES FLAG-SHIP "HARTFORD," }  
MISSISSIPPI RIVER, April 2, 1862. }

SIR—We commenced the bombardment of Fort Jackson on the 16th, which was the earliest day possible after the arrival of coal. On the first day the citadel was set on fire, and burnt until two o'clock the next morning. On the 17th we made but little apparent impression on the fort.

On the 18th we dismounted one of their heavy Columbiads and otherwise appeared to damage them, and drove the men from the parapet guns, so that they only appeared occasionally when the gun-boats took part in the bombardment to draw the fire from the bomb vessels. On the 19th a

deserter came to us from the fort, and gave the information that I have stated above, and much other information in relation to the armament of the forts and their general condition.

The wind was blowing from the north-west, and chilly, the current running with great strength, so that the ships, when under way, could scarcely stem it, so that I shall await a change of wind and a consequent less violent current before I attack the forts, as I find great difficulty in avoiding collisions among the vessels. Two of the gun-boats, "Katahdin" and "Sciota," have been seriously damaged by getting across-hawse of the ships and running into each other. We lose a great many anchors and cables, and those articles are very much wanted in the squadron. The "Hartford" is almost the only ship that has not lost both.

On the first day's fire of the enemy they put a shot through one of the mortar vessels and killed one man but did not destroy her efficiency. The second day they sunk one with a rifle shot, but hurt no one materially. They have sent down five fire-rafts; none produced any effect on the fleet except the last, which only caused the collision of the "Sciota" and "Kineo," both of which vessels dragged across the bows of the "Mississippi," and carried away the mainmast of the first, and damaged them both very much otherwise; the raft was turned clear of all the vessels of the fleet, but as the wind and strong current were peculiarly favorable, it gave us more trouble than on any former occasion.

I sent up Commander Bell last evening to destroy the chain and raft across the river, but the current was so strong that he could accomplish but little, in consequence of one of his gun-boats getting on shore, and she was only saved by great exertion, as the enemy was firing on them all the time.

Commander Porter, however, kept up such a tremendous fire on them from the mortars that the enemy's shot did the gun-boats no injury, and the cable was separated and their connection broken sufficiently to pass through on the left bank of the river. The petard operator failed to fire his petards, owing to the breaking of his wires, which prevented the full destruction of the chain and the vessels; but great allowance is to be made for the violence of the current, which exceeds anything we have had to contend with since our arrival in the river.

In conclusion, I regret to say that the fleet is in want of all the essentials to carry on our work—shells, fuses (15" and 20") serge and yarn, to make cartridge-bags, grape and canister shot—for all of which I made large requisitions, and the articles may be on their way out.

The medical department is miserably supplied for the care of the wounded. General Butler has offered to share with us, in fact, everything he has, which will supply many of our wants; but justice to myself requires me to say that I required all these supplies some time before I left Hampton Roads, and others immediately on my arrival at Key West or Ship Island, and I suppose accidental causes have stopped them on their way out here.\*

My coal arrived just in time.

All of which is respectfully submitted by your obedient servant,

D. G. FARRAGUT, *Flag-officer,*  
*Western Gulf Blockading Squadron.*  
 Hon. GIDEON WELLES,  
*Secretary of the Navy, Washington, D. C.*

#### ATTACK ON FORTS JACKSON AND ST. PHILIP.

UNITED STATES FLAG-SHIP "HARTFORD,"  
 AT ANCHOR OFF NEW ORLEANS,  
 April 25, 1862. }

SIR—I have the honor to inform the department that on the 24th instant, at about half-past 3 A. M., I attacked Fort St. Philip and Fort Jackson with my little fleet, while Commander Porter most gallantly bombarded them, and, besides, took them in the flank with his steamers, aided by the

"Portsmouth." Such a fire I imagine, the world has rarely seen, but, thank God, we got past the forts with a loss of only twenty-four killed and eighty-six wounded; but as I have not heard what became of the three gun-boats, "Kennebec," "Itasca," and "Winona," I fear they were lost in passing, and the "Varuna" was run into by two of the Confederate steamers, and finally sunk: I took (and burnt) eleven steam gun-boats, and two hundred troops or upwards. I then pushed up for the city of New Orleans, leaving two gun-boats to aid General Butler in landing at the quarantine, and sent him a communication by Commander Boggs, requesting him to come up at once. I came up to within six or seven miles of the city, when two forts opened on us, but we silenced them in fifteen or twenty minutes, although it was warm work while it lasted. I have not yet heard of the killed and wounded. We only lost one man and none wounded, although Captain Bailey, in the "Cayuga," with Lieut. Com. Harrison, and this ship, stood the first brunt of the action, before the other vessels could get up. We drove them from their guns, and passed up to the city in fine style, and I now send this notice of our having taken possession of the city at meridian or a few minutes P. M.

But I must say I never witnessed such vandalism in my life as the destruction of property; all the shipping, steamboats, etc., were set on fire and consumed. The new iron-clad ram, just finished, but without her machinery, went floating by us. While I am finishing this report, Captain Bailey has been sent to demand the surrender of the city to me in the name of the United States.

I shall now send down with this letter Commander Smith, in the "Mississippi," to look after General Butler, and a ram, which it appears we left behind at Fort Jackson, as it might be more than a match for the two gun-boats I left behind.

In conclusion, I hope I have done all I proposed to do, which was, to take the city of New Orleans; and I will now, in conjunction with the Army, General Butler, reduce the forts, and take care of the outlet from the west, and purpose immediately to ascend to meet Flag-officer Foote.

The conduct of the officers and men has been such as to command my highest admiration, and shall hereafter be a subject of more special commendation.

I am, very respectfully, your obedient servant,

D. G. FARRAGUT, *Flag-officer,*  
*Western Gulf Blockading Squadron.*  
 Hon. GIDEON WELLES,  
*Secretary of the Navy, Washington, D. C.*

\* The ordnance and hospital stores were shipped on the United States steamer "Kensington," which was prevented by bad weather, breaking of machinery, and other causes, from reaching her destination as early as designed. She arrived, however, in season.

ANNOUNCEMENT OF THE CAPTURE OF FORTS  
JACKSON AND ST. PHILIP AND SURRENDER  
OF NEW ORLEANS.

UNITED STATES FLAG-SHIP "HARTFORD," }  
AT ANCHOR OFF NEW ORLEANS, }  
April 29, 1862. }

SIR—I am happy to announce to you that our flag waves over both Forts Jackson and St. Philip, and at New Orleans over the custom-house. I am taking every means to secure the occupation by General Butler of all the forts along the coast. Berwick's Bay and Fort Pike have been abandoned; in fact, there is a general stampede, and I shall endeavor to follow it up. \* \*

I am bringing up the troops as fast as possible. We have destroyed all the forts above the city, four in number; which are understood to be all the impediments between this and Memphis.

I am, very respectfully, your obedient servant,

D. G. FARRAGUT, *Flag-officer,*  
*Western Gulf Blockading Squadron.*

Hon. GIDEON WELLES,  
*Secretary of the Navy, Washington, D. C.*

FLAG-OFFICER FARRAGUT'S DETAILED REPORT  
OF THE BATTLES OF THE MISSISSIPPI.

UNITED STATES FLAG-SHIP "HARTFORD," }  
AT ANCHOR OFF NEW ORLEANS, }  
May 6, 1862. }

SIR—I have the honor herewith to forward my report, in detail, of the battle of New Orleans. On the 23d of March I made all my arrangements for the attack on, and passage of, Forts Jackson and St. Philip.

Every vessel was as well prepared as the ingenuity of her commander and officers could suggest, both for the preservation of life and of the vessel, and, perhaps, there is not on record such a display of ingenuity as has been evinced in this little squadron. The first was by the engineer of the "Richmond," Mr. Moore, by suggesting that the sheet cables be stopped up and down on the sides in the line of the engines, which was immediately adopted by all the vessels. Then each commander made his own arrangements for stopping the shot from penetrating the boilers and machinery that might come in forward or abaft, by hammocks, coal, bags of ashes, bags of sand, clothes bags, and, in fact, every device imaginable. The bulwarks were lined with hammocks by some, by splinter nettings made with ropes by others. Some rubbed their vessels over with mud to make their ships less visible, and some whitewashed their decks, to make things more visible by night during the fight, all of which you will find mentioned in the reports of the commanders. In the afternoon I visited

each ship, in order to know positively that each commander understood my orders for the attack, and see that all was in readiness. I had looked to their efficiency before. Every one appeared to understand their orders well, and looked forward to the conflict with firmness, but with anxiety, as it was to be in the night, or at 2 o'clock A. M.

I had previously sent Capt. Bell, with the petard man, with Lieut. Com. Crosby, in the "Pinola," and Lieut. Com. Caldwell, in the "Itasca," to break the chain which crossed the river, and was supported by eight hulks, which were strongly moored. This duty was not thoroughly performed, in consequence of the failure to ignite the petards with the galvanic battery and the great strength of the current. Still, it was a success, and under the circumstances, a highly meritorious one.

The vessel boarded by Lieut. Com. Caldwell appears to have had her chains so secured that they could be cast loose, which was done by that officer, and thereby making an opening sufficiently large for the ships to pass through. It was all done under a heavy fire and at a great hazard to the vessel, for the particulars of which I refer you to Captain Bell's report (marked A). Upon the night preceding the attack, however, I despatched Lieut. Com. Caldwell to make an examination, and to see that the passage was still clear, and to make me a signal to that effect, which he did at an early hour. The enemy commenced sending down fire-rafts and lighting their fires on the shore opposite the chain about the same time, which drew their fire on Lieut. Com. Caldwell, but without injury. At about five minutes to two o'clock A. M., April 24, signal was made to get under way (two ordinary red lights, so as not to attract the attention of the enemy), but owing to the great difficulty in purchasing their anchors, the "Pensacola" and some of the other vessels were not under way until half-past three. We then advanced in two columns, Captain Bailey leading the right in the gun-boat "Cayuga," Lieut. Com. Harrison, he having been assigned to the first division of gun-boats, which was to attack Fort St. Philip in conjunction with the second division of ships, and the "Hartford," the left; Fleet Captain Bell leading the second division of gun-boats in the "Sciota;" Lieut. Com. Donaldson to assist the first division of ships to attack Fort Jackson, as will be shown by the general order and diagram sent herewith. The enemy's lights, while they discovered us to them, were, at the same time, guides to us. We soon passed the barrier chains, the right column taking Fort St. Philip, and the left Fort Jackson. The fire became general, the smoke dense, and we

had nothing to aim at but the flash of their guns; it was very difficult to distinguish friends from foes. Captain Porter had, by arrangement, moved up to a certain point on the Fort Jackson side with his gun-boats, and I had assigned the same post to Captain Swartwout, in the "Portsmouth," to engage the water batteries to the southward and eastward of Fort Jackson, while his mortar-vessels poured a terrific fire of shells into it. I discovered a fire-raft coming down upon us, and in attempting to avoid it ran the ship on shore, and the ram "Manassas," which I had not seen, lay on the opposite of it, and pushed it down upon us. Our ship was soon on fire half-way up to her tops, but we backed off, and through the good organization of our fire department, and the great exertions of Captain Wainwright and his first lieutenant, officers and crew, the fire was extinguished. In the meantime our battery was never silent, but poured in its missiles of death into Fort St. Philip, opposite to which he had got by this time, and it was silenced, with the exception of a gun now and then. By this time the enemy's gun-boats, some thirteen in number, besides two iron-clad rams, the "Manassas" and "Louisiana," had become more visible. We took them in hand, and, in the course of time destroyed eleven of them. We were now fairly past the forts and the victory was ours, but still here and there a gun-boat making resistance. Two of them had attacked the "Varuna," which vessel, by her greater speed, was much in advance of us; they ran into her and caused her to sink, but not before she had destroyed her adversaries, and their wrecks now lie side by side, a monument to the gallantry of Captain Boggs, his officers and crew. It was a kind of guerrilla warfare; they were fighting in all directions. Captains Bailey and Bell, who were in command of the first and second divisions of gun-boats, were as active in rendering assistance in every direction as lay in their power. Just as the scene appeared to be closing, the ram "Manassas" was seen coming up under full speed to attack us. I directed Captain Smith, in the "Mississippi," to turn and run her down; the order was instantly obeyed by the "Mississippi" turning and going at her at full speed. Just as we expected to see the ram annihilated, when within fifty yards of each other, she put her helm hard a-port, dodged the "Mississippi," and ran ashore. The "Mississippi" poured two broadsides into her, and sent her drifting down the river a total wreck. This closed our morning's fight.

The department will perceive that after the organization and arrangements had been made, and we had fairly entered into the fight, the density of the smoke from guns

and fire-rafts, the scenes passing on board our own ship and around us (for it was as if the artillery of heaven were playing upon the earth), that it was impossible for the Flag-officer to see how each vessel was conducting itself, and can only judge by the final results and their special reports, which are herewith enclosed; but I feel that I can say with truth that it has rarely been the lot of a commander to be supported by officers of more indomitable courage or higher professional merit.

Captain Bailey, who had preceded me up the quarantine station, had captured the Chalmette regiment, Colonel Szymanski; and not knowing what to do with them, as every moment was a great loss to me, I paroled both officers and men, and took away all their arms, munitions of war and public property, and ordered them to remain where they were until the next day. I sent some of the gun-boats to precede me up the river, to cut the telegraph wires in different places.

It now became me to look around for my little fleet, and to my regret I found that three were missing—the "Itasca," "Winona," and "Kennebec." Various were the speculations as to their fate, whether they had been sunk on the passage or had put back. I therefore determined immediately to send Captain Boggs, whose vessel was now sunk, through the quarantine bayou, around to Commander Porter, telling him of our safe arrival, and to demand the surrender of the forts, and to endeavor to get some tidings of the missing vessels. I also sent a despatch by him to General Butler, informing him that the way was clear for him to land his forces through the quarantine bayou, in accordance with previous arrangements, and that I should leave gun-boats there to protect him against the enemy, who I now perceived had three or four gun-boats left at the forts—the "Louisiana," an iron-clad battery of 16 guns; the "McCrea," very similar in appearance to one of our gunboats, and armed very much in the same way; the "Defiance," and a river steamer transport.

We then proceeded up to New Orleans, leaving the "Wissabicon" and "Kineo" to protect the landing of the General's troops. Owing to the slowness of some of the vessels, and our want of knowledge of the river, we did not reach the English Turn until about 10:30 A. M. on the 25th; but all the morning I had seen abundant evidence of the panic which had seized the people in New Orleans. Cotton-loaded ships on fire came floating down, and working implements of every kind, such as are used in ship-yards. The destruction of property was awful. We soon descried the new earth-work forts on the old lines on both shores.

We now formed and advanced in the same order, two lines, each line taking its respective work. Captain Bailey was still far in advance, not having noticed my signal for close order, which was to enable the slow vessels to come up. They opened on him a galling fire, which caused us to run up to his rescue; this gave them the advantage of a raking fire on us for upwards of a mile, with some twenty guns, while we had but two 9-inch guns on our fore-castle to reply to them. It was not long, however, before we were enabled to bear away and give the forts a broadside of shell, shrapnel and grape, the "Pensacola" at the same time passing up and giving a tremendous broadside of the same kind to the starboard fort; and by the time we could reload, the "Brooklyn," Captain Craven, passed handsomely between us and the battery and delivered her broadside and shut us out. By this time the other vessels had gotten up, and ranged in one after another, delivering their broadsides in spiteful revenge for the ill-treatment of the little "Cayuga." The forts were silenced, and those who could run were running in every direction. We now passed up to the city and anchored immediately in front of it, and I sent Captain Bailey on shore to demand the surrender of it from the authorities, to which the Mayor replied that the city was under martial law, and that he had no authority. General Lovell, who was present, stated that he should deliver up nothing, but in order to free the city from embarrassment he would restore the city authorities, and retire with his troops, which he did. The correspondence with the city authorities and myself is herewith annexed. I then seized all the steamboats and sent them down to quarantine for General Butler's forces. Among the number of these boats is the famous "Tennessee," which our blockaders have been so long watching, but which, you will perceive, never got out.

The levee of New Orleans was one scene of desolation. Ships, steamers, cotton, coal, etc., were all in one common blaze, and our ingenuity was much taxed to avoid the floating conflagration.

I neglected to mention my having good information respecting the iron-clad rams which they were building. I sent Captain Lee up to seize the principal one, the "Mississippi," which was to be the terror of these seas, and no doubt would have been to a great extent; but she came floating by us all in flames, and passed down the river. Another was sunk immediately in front of the custom house; others were building in Algiers, just begun.

I next went above the city eight miles, to Carrolton, where I learned there were two other forts, but the panic had gone before

me. I found the guns spiked, and the gun-carriages in flames. The first work, on the right reaches from the Mississippi nearly over to Pontchartrain, and has 29 guns; the one on the left had six guns, from which Commander Lee took some fifty barrels of powder, and completed the destruction of the gun-carriages, etc. A mile higher up there were two other earthworks, but not yet armed.

We discovered here, fastened to the right bank of the river, one of the most herculean labors I have ever seen—a raft and chain to extend across the river to prevent Foote's gun-boats from descending. It is formed by placing three immense logs of not less than three or four feet in diameter and some thirty feet long; to the centre one a two-inch chain is attached, running lengthwise the raft, and the three logs and chain are then frapped together by chains from one-half to one inch, three or four layers, and there are 96 of these lengths composing the raft; it is at least three-quarters of a mile long.

On the evening of the 29th Captain Bailey arrived from below, with the gratifying intelligence that the forts had surrendered to Commander Porter, and had delivered up all public property, and were being paroled, and that the Navy had been made to surrender unconditionally, as they had conducted themselves with bad faith, burning and sinking their vessels while a flag of truce was flying, and the forts negotiating for their surrender, and the "Louisiana," their great iron-clad battery, blown up almost alongside of the vessel where they were negotiating; hence their officers were not paroled, but sent home to be treated according to the judgment of the Government.

General Butler came up the same day, and arrangements were made for bringing up his troops.

I sent on shore and hoisted the American flag on the custom-house, and hauled down the Louisiana State flag from the city hall, as the mayor had avowed that there was no man in New Orleans who dared to haul it down; and my own convictions are that if such an individual could have been found he would have been assassinated.

Thus, sir, I have endeavored to give you an account of my attack upon New Orleans from our first movement to the surrender of the city to General Butler, whose troops are now in full occupation, protected, however, by the "Pensacola," "Portsmouth," and one gunboat, while I have sent a force of seven vessels, under command of Captain Craven, up the river, to keep up the panic as far as possible. The large ships, I fear, will not be able to go higher than Baton Rouge, while I have sent the smaller vessels, under Commander Lee, as high as

Vicksburg, in the rear of Jackson, to cut off their supplies from the west.

I trust, therefore, that it will be found by the government that I have carried out my instructions to the letter and to the best of my abilities, so far as this city is concerned, which is respectfully submitted.

I am, sir, very respectfully, your obedient servant,  
D. G. FARRAGUT, *Flag-officer,*  
*Western Gulf Blockading Squadron.*  
HON. GIDEON WELLES,  
*Secretary of the Navy, Washington, D. C.*

FLEET-SURGEON J. W. FOLTZ.

CORRESPONDENCE RELATING TO THE SURRENDER OF NEW ORLEANS.

No. 1.

UNITED STATES FLAG-SHIP "HARTFORD," }  
AT ANCHOR OFF NEW ORLEANS, }  
April 26, 1862. }

SIR: Upon my arrival before your city I had the honor to send to your honor, Captain Bailey, United States navy, second in command of the expedition, to demand of you the surrender of New Orleans to me, as the representative of the government of the United States. Captain Bailey reported to me the result of an interview with yourself and the military authorities. It must oc-

cur to your honor that it is not within the province of a naval officer to assume the duties of a military commandant. I came here to reduce New Orleans to obedience to the laws of, and to vindicate the offended majesty of the United States. The rights of persons and property shall be secure. I therefore demand of you, as its representative, the unqualified surrender of the city, and that the emblem of sovereignty of the United States be hoisted over the city hall, mint, and custom-house by meridian this day, and that all flags and other emblems of sovereignty other than those of the United States shall be removed from all the public buildings by that hour. I particularly request that you shall exercise your authority to quell disturbances, restore order, and call upon all the good people of New Orleans to return at once to their vocations; and I particularly demand that no person shall be molested in person or property for professing sentiments of loyalty to their government. I shall speedily and severely punish any person or persons who shall commit such outrages as were witnessed yesterday, armed men firing upon helpless women and children for giving expression to their pleasure at witnessing the old flag.

I am, very respectfully, your obedient servant,

D. G. FARRAGUT, *Flag-officer,*  
*Western Gulf Blockading Squadron.*  
HIS EXCELLENCY THE MAYOR of the City of  
*New Orleans*

No. 2.

UNITED STATES FLAG-SHIP "HARTFORD," }  
AT ANCHOR OFF THE CITY OF NEW OR- }  
LEANS, April 26, 1862. }

Your honor will please give directions that no flag but that of the United States will be permitted to fly in the presence of this fleet so long as it has the power to prevent it; and as all displays of that kind may be the cause of bloodshed, I have to request that you will give this communication as general a circulation as possible.

I have the honor to be, very respectfully, your obedient servant,

D. G. FARRAGUT, *Flag-officer,*  
*Western Gulf Blockading Squadron.*  
HIS HONOR THE MAYOR of *New Orleans.*

*General Order.*

UNITED STATES FLAG-SHIP "HARTFORD," }  
OFF THE CITY OF NEW ORLEANS, }  
April 26, 1862. }

Eleven o'clock this morning is the hour appointed for all the officers and crews of the fleet to return thanks to Almighty God for His great goodness and mercy in permitting

us to pass through the events of the last two days with so little loss of life and blood

At that hour the church pennant will be hoisted on every vessel of the fleet, and their crews assembled will, in humiliation and prayer, make their acknowledgments therefor to the Great Dispenser of all human events.

D. G. FARRAGUT, *Flag-officer,*  
*Western Gulf Blockading Squadron.*

MAYORALTY OF NEW ORLEANS, }  
City Hall, April 26, 1862. }

SIR: In pursuance of the resolution which he thought proper to take, out of regard for the lives of the women and children who still crowd this great metropolis, General Lovell has evacuated it with his troops, and restored back to me the administration of its government and the custody of its honor.

I have, in concert with the city fathers, considered the demand you made of me on yesterday of an unconditional surrender of the city, coupled with a requisition to hoist up the flag of the United States on the public edifices, and to haul down that which still floated to the breeze from the dome of this hall; and it becomes my duty to transmit to you the answer which the universal sentiment of my constituency, no less than the promptings of my own heart, dictate to me on this sad and solemn occasion.

The city is without means of defence, and utterly destitute of the force and material that might enable it to resist the overpowering armament displayed in sight of it.

I am no military man, and possess no authority beyond that of executing the municipal laws of the city of New Orleans. It would be presumptuous in me to attempt to lead an army to the field, if I had one at my command, and I know still less how to surrender an undefended place, held as this is at the mercy of your gunners and mouths of your mortars. To surrender such a place were an idle and unmeaning ceremony. The city is yours by the power of brutal force, and not by any choice or consent of its inhabitants. It is for you to determine what shall be the fate that awaits her.

As to the hoisting of any flag than the flag of our adoption and allegiance, let me say to you, sir, that the man lives not in our midst whose hand and heart would not be palsied at the mere thought of such an act, nor could I find in my entire constituency so wretched and desperate a renegade as would dare to profane with his hand the sacred emblem of our aspirations.

Sir, you have manifested sentiments which would become one engaged in a better cause than that to which you have devoted your sword. I doubt not but that they spring from a noble, though deluded

nature, and I know how to appreciate the emotions which inspire them: You will have a gallant people to administer during your occupation of this city; a people sensitive of all that can in the least affect its dignity and self-respect. Pray, sir, do not allow them to be insulted by the interference of such as have rendered themselves odious and contemptible by the dastardly desertion of the mighty struggle in which we are engaged, nor of such as might remind them too painfully that they are the conquered and you the conquerors. Peace and order may be preserved without a resort to measures which could not fail to wound their susceptibilities and fire up their passions.

The obligations which I shall assume in their name shall be religiously complied with. You may trust their honor, though you might not count on their submission to unmerited wrong.

In conclusion, I beg you to understand that the people of New Orleans, while unable at this moment to prevent you from occupying this city, do not transfer their allegiance from the government of their choice to one which they have deliberately repudiated, and that they yield simply that obedience which the conqueror is enabled to extort from the conquered.

Since writing the above, which is an answer to your verbal communication of yesterday, I have received a written communication, to which I shall reply before 12 o'clock m., if possible to prepare an answer in that time. Respectfully,

JOHN T. MONROE, Mayor.  
Flag-officer D. G. FARRAGUT,  
*United States Flag-Ship "Hartford."*

CITY HALL, April 25, 1862.

*Honorable Common Council:*

GENTLEMEN: At half-past one o'clock to-day I was waited upon by Captain Bailey, second in command of the Federal fleet now lying in front of the city, bearing a demand from Flag officer Farragut for the unconditional surrender of the city of New Orleans and hoisting of the United States flag on the custom-house, post-office, and mint. He also demanded that the Louisiana flag should be hauled down from the city hall. I replied that General Lovell was in command here, and that I was without authority to act in military matters. General Lovell was then sent for, and to him, after stating that his mission was to the mayor and council, Captain Bailey addressed his demands.

General Lovell refused to surrender the city or his forces, or any portion of them but accompanied his refusal with the statement that he should evacuate the city, withdraw

his troops, and then leave the civil authorities to act as they might deem proper.

It is proper here to state that, in reply to the demand to haul down the flag from the city hall, I returned an unqualified refusal.

I am now in momentary expectation of receiving a second peremptory demand for the surrender of the city. I solicit your advice in the emergency. My own opinion is, that, as a civil magistrate, possessed of no military power, I am incompetent to perform a military act such as the surrender of the city to a hostile force; that it would be proper to say, in reply to a demand of that character, that we are without military protection; that the troops have withdrawn from the city; that we are consequently incapable of making any resistance, and therefore we can offer no obstruction to the occupation of the place by the enemy; that the custom-house, post-office, and mint are the property of the Confederate Government, and that we have no control over them; and that all acts involving a transfer of authority be performed by the invading forces themselves; that we yield to physical force alone, and that we maintain our allegiance to the Government of the Confederate States. Beyond this a due respect for our dignity, our rights, and the flag of our country does not, I think, permit us to go.

Respectfully,

JOHN T. MONROE, *Mayor*.

The above message, which want of time prevented me from having copied, I enclose for information.

Respectfully,

JOHN T. MONROE, *Mayor*.

Per MARION N. BAKER, *Secretary*.

MAYORALTY OF NEW ORLEANS, }  
CITY HALL, April 26, 1862. }

COMMON COUNCIL OF THE CITY OF NEW ORLEANS—NO. 6002.

The common council of the city of New Orleans, having been advised by the military authorities that the city is indefensible, declare that no resistance will be made to the forces of the United States.

*Resolved*, That the sentiments expressed in the message of his honor the Mayor of the common council are in perfect accordance with the sentiments entertained by these councils and by the entire population of this metropolis, and that the Mayor be respectfully requested to act in the spirit manifested by the message.

S. P. DE LABARRE,

*Pres. pro tem of Board of Aldermen*.

J. MAGIONI,

*Pres. of Board of Assistant Aldermen*.

Approved, April 26, 1862.

*Secretary to Mayor*.

UNITED STATES FLAG-SHIP "HARTFORD," }  
AT ANCHOR OFF THE CITY OF NEW }  
ORLEANS, April 28, 1862. }

SIR—Your communication of the 26th instant has been received, together with that of the city councils.

I deeply regret to see, both by their contents and the continued display of the flag of Louisiana on the court-house, a determination on the part of the city authorities not to haul it down. Moreover, when my officers and men were sent on shore to communicate with the authorities and to hoist the United States flag on the custom-house, with the strictest orders not to use their arms unless assailed, they were insulted in the grossest manner, and the flag which had been hoisted by my orders on the mint was pulled down and dragged through the streets. All of which go to show that the fire of this fleet may be drawn upon the city at any moment, and in such an event the levee would, in all probability, be cut by the shells, and an amount of distress ensue to the innocent population which I have heretofore endeavored to assure you that I desired by all means to avoid. The election is therefore with you; but it becomes my duty to notify you to remove the women and children from the city within forty-eight hours, if I have rightly understood your determination.

Very respectfully, your obedient servant,

D. G. FARRAGUT, *Flag-officer*,

*Western Gulf Blockading Squadron*.

His Honor the MAYOR AND CITY COUNCIL  
of the City of New Orleans.

MAYORALTY OF NEW ORLEANS, }  
CITY HALL, April 28, 1862. }

*To the Common Council:*

GENTLEMEN—I herewith transmit to you a communication from Flag-officer Farragut, commanding the United States fleet now lying in front of the city. I have informed the officer bearing the communication that I would lay it before you, and return such answer as the city authorities might think proper to be made.

In the meantime permit me to suggest that Flag-officer Farragut appears to have misunderstood the position of the city of New Orleans. He had been distinctly informed that at this moment the city has no power to impede the exercise of such acts of forcible authority as the commander of the United States naval forces may choose to exercise, and that therefore no resistance would be offered to the occupation of the city by the United States forces.

If it is deemed necessary to remove the flag now floating from this building, or to raise United States flags on others the

power which threatened the destruction of our city is certainly capable of performing those acts. New Orleans is not now a military post; there is no military commander within its limits; it is like an unoccupied fortress, of which an assailant may at any moment take possession. But I do not believe that the constituency represented by you or by me embraces one loyal citizen who would be willing to incur the odium of tearing down the symbol representing the State authority to which New Orleans owes her municipal existence. I am deeply sensible of the distress which would be brought upon our community by a consummation of the inhuman threat of the United States commander; but I cannot conceive that those who so recently declared themselves to be animated by a Christian spirit, and by a regard for the rights of private property, would venture to incur for themselves and the government they represent the universal execration of the civilized world by attempting to achieve, through a wanton destruction of life and property, that which they can accomplish without bloodshed, and without a resort to those hostile measures which the law of nations condemns and execrates, when employed upon the defenceless women and children of an unresisting city.

Respectfully,

JOHN T. MONROE, *Mayor*.

MAYORALTY OF NEW ORLEANS, }  
City Hall, April 28, 1862. }

SIR—Your communication of this morning is the first intimation I ever had that it was by “*your strict orders*” that the United States flag was attempted to be hoisted upon certain of our public edifices by officers sent on shore to communicate with the authorities. The officers who approached me in your name disclosed no such orders, and intimated no such designs on your part; nor could I have for a moment entertained the remotest suspicion that they could have been invested with powers to enter on such an errand while the negotiations for a surrender between you and the city authorities were still pending. The interference of any force under your command, as long as these negotiations were not brought to a close, could not be viewed by me otherwise than as a flagrant violation of those courtesies, if not of the absolute rights, which prevail between belligerents under such circumstances. My views and my sentiments in reference to such conduct remain unchanged.

You now renew the demands made in your last communication, and you insist on their being complied with, unconditionally, under a threat of bombardment within

forty-eight hours; and you notify me to remove the women and children from the city, that they may be protected from your shells.

Sir, you cannot but know that there is no possible exit from this city for a population which still exceeds in number 140,000, and you must therefore be aware of the utter inanity of such a notification. Our women and children cannot escape from your shells, if it be your pleasure to murder them on a question of mere etiquette. But if they could, there are but few among them who would consent to desert their families and their homes, and the graves of their relatives, in so awful a moment. They will bravely stand the sight of your shells rolling over the bones of those who were once dear to them, and would deem that they died not ingloriously by the side of the tombs erected by their piety to the memory of departed relatives.

You are not satisfied with the peaceable possession of an undefended city, opposing no resistance to your guns, because of its bearing its doom with something of manliness and dignity, and you wish to humble and disgrace us by the performance of an act against which our nature rebels. This satisfaction you cannot expect to obtain at our hands.

We will stand your bombardment, unarmed and undefended as we are. The civilized world will consign to indelible infamy the heart that will conceive the deed and the hand that will dare to consummate it.

Respectfully,

JOHN T. MONROE, *Mayor*.

MR. FARRAGUT,

*Flag-officer of the United States fleet  
in front of the City of New Orleans.*

UNITED STATES FLAG-SHIP “HARTFORD.” }  
AT ANCHOR OFF THE CITY OF NEW OR- }  
LEANS, April 28, 1862. }

SIR—Hereafter, when I desire to communicate with the authorities, I will hoist a square flag with a diagonal red cross, when, if your honor will send your secretary, or any other person, to receive my communication to the shore opposite to the ship bearing that flag, a boat will be sent with an officer to deliver the document.

When the city authorities desire to communicate with me, by the messenger holding his handkerchief by two corners opposite the ship, a boat will be sent for him or his communication.

As my duties call me away from before the city for a short time, I request that you will send your reply to any other vessel that may be present.

Very respectfully, your obedient servant,

D. G. FARRAGUT, *Flag-officer,*

*Western Gulf Blockading Squadron.*

HIS HONOR THE MAYOR of New Orleans.

UNITED STATES FLAG-SHIP "HARTFORD," }  
 AT ANCHOR OFF THE CITY OF NEW OR- }  
 LEANS, April 29, 1862. }

SIR—The forts St. Philip and Jackson having surrendered, and all the military defences of the city being captured or abandoned, you are required, as the sole representative of any supposed authority in the city, to haul down and suppress every ensign and symbol of government, whether State or Confederate, except that of the United States. I am now about to raise the flag of the United States upon the custom-house, and you will see that it is respected with all the civil power of the city.

I have the honor to be, very respectfully,  
 your obedient servant,

D. G. FARRAGUT, *Flag-officer,*  
*Western Gulf Blockading Squadron.*

HIS HONOR THE MAYOR of the City of New Orleans.

UNITED STATES FLAG-SHIP "HARTFORD," }  
 AT ANCHOR OFF THE CITY OF NEW OR- }  
 LEANS, April 30, 1862. }

GENTLEMEN—I informed you, in my communication of the 28th of April, that your determination, as I understood it, was not to haul down the flag of Louisiana on the city hall, and that my officers and men were treated with insult and rudeness when they landed, even with a flag of truce, and to communicate with the authorities, etc., and if such was to be the determined course of the people, the fire of the vessel might at any moment be drawn upon the city. This you have thought proper to construe into a determination on my part to murder your women and children, and made your letter so offensive that it will terminate our intercourse; and so soon as General Butler arrives with his forces, I shall turn over the charge of the city to him and assume my naval duties.

D. G. FARRAGUT, *Flag-officer,*  
*Western Gulf Blockading Squadron.*

HIS HONOR THE MAYOR AND CITY COUNCIL  
 of New Orleans.

REPORTS OF CAPTAIN T. BAILEY, SECOND IN  
 COMMAND.

UNITED STATES GUN-BOAT "CAYUGA," }  
 AT SEA, May 7, 1862. }

SIR—Having found it impossible to get the "Colorado" over the bars of the Mississippi, I sent a large portion of her guns and crew, filling up deficiencies of both in the different vessels, and, with my aid, Act. Midshipman Higginson, steward, and boat's crew, followed up myself, hoisting, by authority of the flag-officer, my red, distinguishing flag as second in command,

first on the "Oneida," Commander Lee, and afterwards on the "Cayuga."

That brave, resolute, and indefatigable officer, Commander D. D. Porter, was at work with his mortar fleet, throwing shells at and into Fort Jackson, while General Butler, with a division of his army, in transports, was waiting a favorable moment to land. After the mortar-fleet had been playing upon the forts for six days and nights (without perceptibly diminishing their fire), and one or two changes of programme, Flag-officer Farragut formed the ships into two columns, "line ahead;" the column of the red, under my orders, being formed on the right, and consisting of the "Cayuga," Lieut. Com. Harrison, bearing flag, and leading the "Pensacola," Capt. Morris; the "Mississippi," Com. M. Smith; "Oneida," Com. S. P. Lee; "Varuna," Com. C. S. Boggs; "Katahdin," Lieut. Com. Preble; "Kineo," Lieut. Com. Ransom; and the "Wissahickon," Lieut. Com. A. N. Smith. The column of the blue was formed on the left, heading up the river, and consisted of the flag-ship "Hartford," Com. R. Wainwright and bearing the flag of the Commander-in-chief, Farragut; the "Brooklyn," Capt. T. T. Craven; the "Richmond," Com. Alden; the "Sciota," bearing the divisional flag of Fleet-Capt. H. H. Bell; followed by the "Iroquois," "Itasca," "Winona," and "Kennebec."

At 2 A. M. on the morning of the 24th, the signal "to advance" was thrown out from the flag-ship. The "Cayuga" immediately weighed anchor and led on the column. We were discovered at the boom, and, a little beyond, both forts opened their fire. When close up with St. Philip we opened with grape and canister, still steering on. After passing this line of fire, we encountered the "Montgomery flotilla," consisting of eighteen gun-boats, including the ram "Manassas" and iron battery "Louisiana," of twenty guns.

This was a moment of anxiety, as no supporting ship was in sight. By skillful steering, however, we avoided their attempts to butt and board, and had succeeded in forcing the surrender of three, when the "Varuna," Capt. Boggs, and "Oneida," Capt. Lee, were discovered near at hand. The gallant exploits of these ships will be made known by their commanders. At early dawn discovered a Confederate camp on the right bank of the river. Ordering Lieut. Com. N. B. Harrison to anchor close alongside, I hailed and ordered the colonel to pile up his arms on the river bank and come on board. This proved to be the Chalmette regiment, commanded by Colonel Szymanski. The regimental flags, tents, and camp equipage were captured.

On the morning of the 25th, still leading, and considerably ahead of the line, the Chalmette batteries, situated three miles below the city, opened a cross fire on the "Cayuga." To this we responded with our two guns. At the end of twenty minutes the flag-ship ranged up ahead and silenced the enemy's guns.

From this point no other obstacles were encountered, except burning steamers, cotton ships, fire-rafts, and the like. Immediately after anchoring in front of the city I was ordered on shore by the flag-officer to demand the surrender of the city, and that the flag should be hoisted on the post-office, custom-house, and mint. What passed at this interview will be better stated in the flag-officer's report.

On the 26th I went with the flag-officer some seven miles above the city, where we found the defences abandoned, the guns spiked, and gun carriages burning. These defences were erected to prevent the downward passage of Captain Foote. On the 27th a large boom, situated above these defences, was destroyed by Captain S. Philip Lee. On the 28th General Butler landed above Fort St. Philip, under the guns of the "Mississippi" and "Kineo." This landing of the army above, together with the passage of the fleet, appears to have put the finishing touch to the demoralization of their garrisons (300 having mutinied in Fort Jackson). Both forts surrendered to Commander Porter, who was near at hand with the vessels of his flotilla.

As I left the river General Butler had garrisoned Forts Jackson and St. Philip, and his transports, with troops, were on their way to occupy New Orleans.

I cannot too strongly express my admiration of the cool and able management of all the vessels of my line by their respective captains. After we passed the forts it was a contest between iron hearts in wooden vessels and iron-clads with iron beaks, and the "iron hearts" won.

On the 29th the "Cayuga," Lieut.-Com. Harrison, was selected to bring me home a bearer of despatches to the government.

I have the honor to be, very respectfully,  
your obedient servant,

THEODORUS BAILEY,  
*Captain.*

Hon. GIDEON WELLES,  
*Secretary of the Navy.*

UNITED STATES GUN-BOAT, "CAYUGA," }  
OFF NEW ORLEANS, April 25, 1862. }

FLAG-OFFICER—Your boldly-conceived and splendidly-executed plan of battle having resulted in complete success, leaves me time to make up the report of my division.

You will find in Lieut.-Com. Harrison's report an accurate outline of the noble part taken by the "Cayuga," under his command, and bearing my divisional flag. We led off at 2 A. M., in accordance with your signal, and steered directly up stream, edging a little to starboard, in order to give room for your division.

I was followed by the "Pensacola" in fine style, the remainder of my division following in regular and compact order. We were scarcely above the boom when we were discovered, and Jackson and St. Philip opened upon us. We could bring no gun to bear, but steered directly on. We were struck from stem to stern. At length we were close up with St. Philip, when we opened with grape and canister. Scarcely were we above the line of fire when we found ourselves attacked by the Confederate fleet of gun-boats. This was *hot* but more congenial work. Two large steamers now attempted to board, one on our starboard bow, the other astern; a third on our starboard beam. The 11-inch Dahlgren being trained on this fellow, we fired at a range of thirty yards. The effect was very destructive; he immediately steered in shore, ran aground and burnt himself up.

The Parrott gun on the fore-castle drove off one on the bow, while we prepared to repel boarders, so close was our remaining enemy. About this time Boggs and Lee came dashing in, and made a finish of the Confederate boats—eleven in all.

In the gray of the morning discovered a camp with Confederate flags flying; opened with canister, and at 5 A. M. received the sword and flag of Colonel Szymanski and his command of five companies, arms and camp equipage. While engaged at this point, observed the "Varuna" in conflict with a number of gun-boats. She had been butted by one of them and sunk; but, with his forward guns still above water, her commander was bravely maintaining the fight, driving off his enemies and saving his crew. Informing Captain Lee, of the "Oneida," who had also been engaged with the enemy, of the "Varuna's" situation, he instantly steamed up and made a finish of the Confederate boats. The remainder of the fleet now came up. The "Mississippi" had been detained below with the "Manassas" and another iron-clad. After this everything passed under your observation.

The pleasant duty now remains of speaking of the "Cayuga" and her brave officers and crew. From first to last, Lieut. Com. N. B. Harrison displayed a masterly ability in steering his vessel past the forts under a hurricane of shot and shell, and afterwards in maneuvering and fighting her among the gun-boats. I cannot say too

much for him. He was gallantly sustained by Lieutenant George H. Perkins and Acting Master Thomas H. Morton. These officers have my unbounded admiration

I must, in conclusion, express the pleasure which I experienced in witnessing the seamanlike manner in which all the ships were handled. The reports of the divisional captains will inform you of the particular part borne by each ship.

Respectfully, your obedient servant,

T. BAILEY,

*Captain Commanding Division of the Red.*

Flag-officer D. G. FARRAGUT.

*Commander-in-Chief, etc., New Orleans.*

REPORT OF FLEET-CAPTAIN H. H. BELL.

UNITED STATES FLAG-SHIP "HARTFORD," }  
OFF THE CITY OF NEW ORLEANS, }  
April 26, 1862. }

SIR—On the night of the 23d instant, I went on board of the United States gun-boat "Sciota," Lieutenant-Commanding E. Donaldson, the leading vessel of the second division of gun-boats, which you did me the honor to assign to my command for the ascent of the river. At 4 A. M. of the 24th instant, the "Sciota," accompanied by the division, followed in the wake of the "Richmond," for passing Forts Jackson and St. Philip.

Having run safely through the batteries of the forts and rebel steamers, Captain Donaldson set fire to and burned two steamboats (one loaded with gun-carriages, the other with rosin and combustible materials). He also sent a boat's crew to take possession of an armed steamer which surrendered to him, to bring her up the river; but finding her hard and fast ashore, and under the guns of the fort, the boat returned without her. This delayed the movements of the "Sciota," and brought her within half a mile of the ram "Manassas," whence I witnessed the decided manner in which the noble old steamship "Mississippi," Commander Melancton Smith, met that pigmy monster. The "Mississippi" made at her, but the "Manassas" sheered off to avoid the collision, and landed on the shore, when her crew escaped over her roof into the swamp. The "Mississippi" pelted her meanwhile with her heavy guns. After a while she slipped off the bank, and was last seen by some of the officers floating down the stream, passing the "Mississippi" without smoke-stack. I counted nine of the enemy's steamers of all kinds destroyed; all but two being well armed on the bow and stern.

Upon the assembling of the fleet at quarantine, I observed, for the first time, that

the gun-boats "Itasca," Lieutenant-Commanding C. H. B. Caldwell; "Winona," Lieutenant-Commanding Ed. T. Nichols, and "Kennebec," Lieutenant-Commanding John Russell, belonging to the second gun-boat division, were missing. As they were the three rearmost vessels of the fleet, it was apprehended that the fire of the forts and of the enemy's steamers had been concentrated upon them after the passage of the larger vessels, which had attracted and divided the fire of the enemy while they were in sight. I am happy to report none killed and only two slightly wounded in this brilliant dash of the fleet.

The "Sciota," next preceded the fleet up to English Turn, and was the fourth vessel ahead in the attack on and capture of the forts at the city of New Orleans, on the 25th, and the third in passing up in front of the city. She has shared in all the active operations of the fleet to this date.

The immediate object of this expedition having been gained, I hauled down my pennant at one P. M. to-day, to resume my duties as fleet-captain on board the "Hartford," having no further casualties to report.

Throughout the trying scenes of this dashing exhibition, which is second to none on record, Captain Donaldson, his officers and crew, were conspicuous for their coolness, intrepidity and good conduct. Her guns were well and skillfully handled by their crews, under the direction and careful instruction of Lieutenant H. A. Adams; Midshipman Woodward gallantly working the rifle on the top-gallant fore-castle, and Act.-Master Foster the 11-inch pivot gun. Act.-Master McFarland was always at the *con*, and acquitted himself zealously and handsomely in the discharge of that duty.

I am, very respectfully, your obedient servant,

H. H. BELL,

*Captain of the Fleet,*

*Western Gulf Blockading Squadron.*

Flag-officer D. G. FARRAGUT,

*Western Gulf Blockading Squadron,  
off the City of New Orleans.*

REPORT OF COMMANDER RICHARD WAIN-  
WRIGHT, UNITED STATES FLAG-SHIP  
"HARTFORD."

UNITED STATES FLAG-SHIP "HARTFORD," }  
OFF CITY OF NEW ORLEANS, }  
April 30, 1862. }

SIR—I have the honor to submit the following report of the part taken by this ship in the actions of the mornings of April 24th and 25th instant, off Forts Jackson and St.

Philip, and below the city of New Orleans.

At 3:30 A. M., on the morning of the 24th, got under way, and at 3:55 the "Hartford" opened fire from bow guns, engaging Fort Jackson, and receiving a galling fire from both forts. At 4.15 grounded on shoal near Fort St. Philip in the endeavor to clear a fire raft, which was propelled by a ram on our port quarter, setting fire to the ship, the flames bursting through the ports and running up the rigging, endangering the ship as much from fire, if not more, than from the guns of the enemy. Went to "fire quarters," extinguished flames, and backed off—a heavy fire being kept up by both forts upon us all the time, and we continuing to fire in return upon them until out of

and men behave with such courage and coolness, I consider it a credit to the ship to say that it is impossible for me to individualize.

On April 26th, at 3.25 p. m., proceeded up the river to attack some batteries; at 5 went to quarters, and at 5.35 discovered two batteries, both of which, however, had been evacuated, and gun-carriages set on fire. Sent a boat to battery on left bank and spiked twenty-nine guns.

Respectfully yours,

R. WAINWRIGHT,

*Commander United States Ship "Hartford."*

Flag-officer FARRAGUT,  
*Commanding Western Gulf Blockading Squadron.*

REPORT OF CAPTAIN HENRY W. MORRIS, UNITED STATES STEAM-SLOOP "PENSACOLA."

UNITED STATES SLOOP "PENSACOLA,"  
AT ANCHOR OFF NEW ORLEANS,  
April 28, 1862. }

SIR—I have the honor to report the following incidents and occurrences of the conflict of the 24th and 25th of April in passing Forts Jackson and St. Philip and their adjacent batteries; also the engagement with the rebel gun-boats and the "ram," which were stationed above those forts; also, the action with the batteries located a few miles below this city, and which latter took place on the 25th instant.

Your order to me was that this ship should, after passing the barricade below the forts, proceed to the attack of Fort St. Philip, in order to divert its fire from your division, so that you should not be exposed to the fire of both of these forts at the same time. On our arrival at the opening of the barricade the enemy opened his fire on us. We proceeded slowly through it, firing only our bow guns, until we reached a position where our broadside guns could be used; we then continued slowly on, frequently stopping and returning his fire, and sustaining that of the rebel gun-boats at the same time, until we had reached a point above that fort where its fire could no longer reach us. The ram, after having struck the "Varuna" gun-boat, and forced her to run on shore to prevent sinking, advanced to attack this ship, coming down on us right ahead. She was perceived by Lieutenant F. A. Roe just in time to avoid her by sheering the ship, and she passed close on our starboard side, receiving, as she went by, a broadside from us. The gun-boats of the enemy now fled up the river, and some of them were run on shore and set fire to by their own crews. We were under the fire of the enemy about two hours. We then steamed up the river to render assistance to the "Varuna." We sent our boats to her to assist in

COMMANDER RICHARD WAINWRIGHT, OF THE "HARTFORD."

range. Passed and fired into several Confederate steamers on our way up the river.

On the 25th instant, steaming up the river, cleared ship for action at 9:30 A. M., at 11:30 discovered two batteries, one on each bank of the river, which commenced firing. We then opened fire with bow guns, and shortly were in position to use both batteries, and at first fire of the port battery drove the enemy on the right bank from his guns. After passing were fired on by riflemen, but without injury. The ship was much riddled, having received 32 shots, some of them of a serious nature. There were also two guns disabled by the enemy's fire.

I herewith enclose the reports of the heads of the different departments. We have to mourn the loss of three of our brave crew, and also had ten wounded. The guns were well worked and served, and when officers

taking off her officers and crew, and have seven of the former and about sixty of the latter now on board.

The conduct of the officers and crew of this ship was in every respect praiseworthy, evincing coolness and courage of the highest order. The fire of the guns was kept up with all the rapidity which the circumstances of the action demanded, to insure injury to the enemy without the wasting of ammunition. The amount of damage inflicted by us on him cannot be ascertained, but I believe that it must have been very considerable. It is impossible in a night attack to do justice to each officer's merits by specifying his particular conduct in the battle, but the result of the conflict is the best evidence of the great good behaviour of them all.

I must speak of the coolness and ability displayed by Lieutenant F. A. Roe, the executive officer of this ship. His station being on the bridge next to me enabled me to witness it. My eyesight is quite defective, especially at night, and I am compelled to rely on that of others. I was, therefore, obliged to give to Lieutenant Roe the duty of directing the ship's course through the opening of the barricade, as well as the ascending of the river during the whole action. The judgment and skill shown by him in the performance of this duty cannot be surpassed. We had no pilot on board, and he performed that duty with the most remarkable ability and success. I recommend and most strongly urge upon the Navy Department the propriety and justice of promoting him to the rank of commander, as a reward for the highly important services which he has rendered in this battle. In my opinion he has fairly earned it and ought to receive it.

In the action of the 25th instant with the batteries just below the city the ship received but little injury in her hull or rigging, and none of the officers or crew were killed or wounded, I enclose herewith a report of the surgeon of the killed and wounded; also, one of the injury sustained by the ship in hull and rigging.

I am, very respectfully,

HENRY W. MORRIS, *Captain.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron.*

REPORT OF CAPTAIN T. T. CRAVEN, UNITED  
STEAM-SLOOP "BROOKLYN."

UNITED STATES STEAM-SLOOP "BROOKLYN," }  
MISSISSIPPI RIVER, OFF NEW ORLEANS, }  
April 26, 1862.

SIR—Herewith I have the honor to enclose reports from the executive officer, surgeon, gunner, carpenter and boatswain,

relative to the occurrences, casualties, expenditure of ammunition, and damages on board this ship on the mornings of the 24th and 25th instant.

It becomes my duty to add that, on the morning of the 24th, soon after the action between our fleet and the forts, St. Philip and Jackson, commenced, in consequence of the darkness of the night and the blinding smoke, I lost sight of your ship, and when following in the line of what I supposed to be your fire, I suddenly found the "Brooklyn" running over one of the hulks and rafts which sustained the chain barricade of the river. For a few moments I was entangled and fell athwart the stream, our bow grazing the shore on the left bank of the river. While in this situation I received a pretty severe fire from Fort St. Philip. Immediately after extricating my ship from the rafts, her head was turned up stream, and a few minutes thereafter she was feebly butted by the celebrated ram "Manassas." She came butting into our starboard gangway, first firing from her trap-door, when within about ten feet of the ship, directly toward our smoke-stack, her shot entering about five feet above the water-line and lodging in the sand-bags which protected our steam-drum. I had discovered this queer looking gentleman, while forcing my way over the barricade, lying close into the bank, and when he made his appearance the second time I was so close to him that he had not an opportunity to get up his full speed, and his efforts to damage me were completely frustrated, our chain armor proving a perfect protection to our sides. He soon slid off and disappeared in the darkness. A few moments thereafter, being all the time under a raking fire from Fort Jackson, I was attacked by a large Confederate steamer. Our port broadside, at the short distance of only fifty or sixty yards, completely finished him, setting him on fire almost instantaneously.

Still groping my way in the dark, or under the black cloud of smoke from the fire-raft. I suddenly found myself abreast of St. Philip, and so close that the leadsmen in the starboard chains gave the soundings, "thirteen feet, sir." As we could bring all our guns to bear, for a few brief moments we poured in grape and canister, and I had the satisfaction of completely silencing that work before I left it—my men in the tops witnessing, in the flashes of their bursting shrapnels, the enemy running like sheep for more comfortable quarters.

After passing the forts we engaged several of the enemy's gun-boats; and being at short range—generally from sixty to a hundred yards—the effects of our broadsides must have been terrific. This ship was under fire about one hour and a half.

We lost eight men killed, and had twenty-six wounded, and our damages from the enemy's shot and shell are severe. I should not have been so particular, sir, in recording so many of the incidents of the morning of the 24th, had I not been out of my proper station; but justice to my officers and crew demand that I should show that the "Brooklyn" was neither idle nor useless on that never-to-be-forgotten occasion.

In conclusion, I must here beg leave to add that my officers and crew, all, without a single exception, behaved in a most heroic manner; indeed, I was surprised to witness their perfect coolness and self-possession, as they stood at their guns while the rebels were hailing shot and shell upon us for nearly half an hour before I gave the order to "open fire." I have to congratulate myself on being so ably assisted by my executive officer, Lieutenant R. B. Lowry. He was everywhere, inspiring both officers and crew with his own zeal and gallantry in the performance of their duty. Lieutenant James O'Kane, who had charge of the 1st division, was severely wounded soon after we commenced the action; but not until he had himself primed, sighted and fired two guns, and from loss of blood fallen to the deck, would he consent to be carried below. Lieutenant James Forney, commanding the marines, had two guns assigned him, and, with his men, fought most gallantly.

I was early deprived of the services of my signal officer and aid, Acting Midshipman John Anderson, by a shot, which cut him and the signal quartermaster, Barney Sands, nearly in two. Young Anderson was a most promising and gallant young gentleman, and had, only a few days previously, volunteered from another vessel, which had been detailed for other duty, to join this ship; he was knocked overboard and killed instantly. Immediately afterward, my young clerk, Mr. J. G. Swift, (who had been meanwhile taking notes,) asked me to let him act as my aid; and the prompt, self-possessed manner in which he performed his duty in conveying my orders elicited my highest admiration.

The conduct of Quartermaster James Buck, stationed at the wheel, merits particular mention. Early in the fight he received a severe and painful contusion by a heavy splinter; but for seven hours afterwards he stood bravely at his post and performed his duty, refusing to go below until positively ordered to do so; and on the morning of the 25th, without my knowledge, he again stole to his station and steered the ship from early daylight until 1.30 P. M., over eight hours. I beg particularly that you will bring this man's conduct to the especial notice of the Navy Department.

On the morning of the 25th of April, as the fleet was proceeding up the river, at about

a quarter-past 11 o'clock, two batteries were discovered, one on our starboard bow, and the other almost directly ahead. Signal was made from your ship to prepare for action. At this time the flag-ship was the leading vessel, the "Brooklyn" was the second in the line, and the "Iroquois" third; the others were astern, and somewhat scattered. A few minutes after your signal the "Cayuga" passed the "Brooklyn," and so close as to compel me to hail and request her commander not to force me out of my station. She pushed on, and even passed the flag-ship.

About noon, being then one and a quarter miles distant from them, the batteries opened a raking fire upon us. The fire of starboard battery was immediately responded to by this ship, then about half a cable's length astern of the "Hartford," and twenty-one shots from our 80-pounder rifled gun were rapidly, and with remarkable precision, thrown into it, only two of these shots failing to take effect. A few minutes afterward the "Brooklyn," then steaming at the rate of ten knots, by the sudden sheering off and slowing down of the "Hartford," for the purpose of engaging the enemy, necessarily sheered in shore, which brought her up within one hundred and fifty or two hundred yards of the port-hand battery, and so as to obstruct the fire of the "Hartford." The "Brooklyn" then opened fire with grape and canister, stopped her engines, and, lying within less than one hundred yards of the river bank, delivered two other broadsides, which completely drove the enemy pell-mell from their guns and from the field.

In conclusion, sir, permit me to congratulate you upon this most brilliant success. The attack by our squadron upon two strong and garrisoned forts, steaming within grape and canister range, and partially silencing them, and the pursuit and destruction of almost their entire fleet of gun-boats, have not been surpassed, if equaled, by any navy in the world. Under the providence of Almighty God we have achieved a most glorious victory.

Very respectfully, your obedient servant,  
THOS. T. CRAVEN, *Captain.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron.*

REPORT OF COMMANDER S. PHILLIPS LEE,  
COMMANDING UNITED STATES STEAM-SLOOP "ONEIDA."

UNITED STATES STEAM-SLOOP "ONEIDA," )  
NEW ORLEANS, April 26, 1862. {

I report the part born by the "Oneida" during the actions on the morning of the 24th, between 3 and 6 A. M., with Fort Jack-

son and Fort St. Philip and the Confederate gun-boats, and in the battle of New Orleans, at noon on the 25th.

#### ACTION WITH FORTS JACKSON AND ST. PHILIP.

The "Oneida" was, under your order, the fourth in line in the leading division, which was instructed by you to pass on the Fort St. Philip side and not to fire the port battery. Hence the port 32s were shifted to, and our pivot guns trained on the starboard side.

The enemy's fire was very heavy, and began from both forts as soon as we got within long range of their guns, which was on opening the point a mile and a half below Fort Jackson.

I found it necessary, until past the forts, to pilot and to direct all operations from the fore-castle after nearing the opening in the barrier, where the "Mississippi" (our next ahead) seemed at a stand as if aground, on the Fort St. Philip side, when she commenced firing her port battery.

This obstruction to our passage was removed, as, caught by the current on the starboard bow, the "Mississippi" shot over to and rather down on the Fort Jackson side. Then the "Varuna" (our next astern) appeared on our port side and showed black smoke. The "Oneida" was steered in for the Fort St. Philip side, passed up quickly in the strong eddy, and close under the guns of that fort, (so that the sparks from its immense battery seemed to reach us,) fired rapidly bolts from two rifled guns, (we had no shell for them,) grape and canister from the forward 32s, and shrapnel from the two 11-inch pivot guns, whilst passing this long line of works. (It was, perhaps, the burning of the sulphur in our 11-inch shrapnel which occasioned the officers in Fort St. Philip to inquire after the surrender, if our shells were not filled with Greek fire.)

The terrific fire from the heavy batteries of Fort St. Philip passed over us, their guns seeming to be too much elevated for our close position.

#### ACTION WITH THE GUN-BOATS.

When just above the forts we encountered the gun-boats and transports of the enemy. The former, it seems from the subsequent reports of our prisoners, were tied to trees along the steep bank above Fort St. Philip; thence passing over to the Fort Jackson side, these gun-boats came down to meet us. It was very thick from darkness and smoke. We had now got on the Fort Jackson side. A flash revealed the ram "Manassas," gliding down our port side below our guns, and passing too close and swiftly aided by steam and the current, to enable us to bring our heavy guns to bear on her. Next came a gun-boat quite near, and passing from the Fort Jackson to Fort St. Philip

side, across our bow. Ran into it with a full head of steam, and cut it down with a loud crash on its starboard quarter. Clear of our guns in a moment, it drifted down stream in the darkness. We now slowed down, and afterwards used the steam as necessary to get or keep position in fighting the gunboats, firing right and left into them as we could ascertain (from other indications than black smoke, on account of the "Varuna") that we were not firing into one of our own steamers; forbore to fire into those steamers that appeared to be river transports, and ceased firing into others when they made no return.

In this manner we fired into and passed several Confederate boats on the right bank, leaving it for those who came after to pick up the prizes. A black gun-boat with two masts—a converted sea steamer—ran ahead after a brief contest. At or near daybreak we found the "Cayuga" on our port side. After consultation with Captain Bailey, we concluded to wait for the fleet to come up and form in order. Captain Bailey afterwards hailed that the "Varuna" might be ahead. Looked for her but could not make her out, and received reports from the first lieutenant and the officer on the fore-castle that she was not in sight. We had steamed a mile or more ahead of the "Cayuga," saw her general signal No. 80, but as there was nothing in sight of us needing assistance, supposed the signal to refer to some vessel astern of the "Cayuga." Moving ahead, reconnoitering, came up with what in the gray of the morning appeared to be a fort, but which, on nearer approach, proved to be a Confederate camp on the right bank, with a large Confederate flag flying over it. Fired into it, but no reply was made, no one was seen moving, and the camp seemed deserted. Passed on, leaving the trophy flag flying, and soon received a report that the "Varuna" was ahead, and that the enemy was trying to board her. Went ahead with all speed to her assistance. Approaching rapidly, saw the "Varuna" ashore on the left bank of the river, where she had been driven by two rebel gun-boats. At 5.30 A. M., fired on one of them, the black gun-boat, our previous acquaintance, with the fore-castle rifle gun. He had hoisted his jib (his wheel-ropes being gone) and was trying to escape up river, but both rebel gun-boats, finding they could not get away, ran on shore—the black one, which proved to be the "Governor Moore," Commander Kennon, on the left bank, above the "Varuna," and the ———, (name yet unknown,) on the right bank, opposite the "Varuna," with her head up stream. After we had driven them ashore their crews deserted, but not before setting fire to their vessels.

With our boats captured Commander Kennon, (formerly of our navy,) one first lieutenant of artillery, one chief engineer, and fourteen of the crew of the "Governor Moore"; also, a rebel signal-book and some official papers, showing that the rebel gun-boats were ordered to ram our vessels and to distinguish themselves by showing lights, which they must soon have found prudent to haul down. Seeing that the "Varuna" was sinking, sent our boats and went to her assistance. Brought on board "Oneida" the first lieutenant, two acting masters, two mates, and forty petty officers and seamen of the "Varuna," and sent ten others, seven of whom were wounded, to the "Pensacola."

The "Varuna" had been rammed and badly stove by both of these rebel gun-boats, which had kept with or after her up river, and she was filling, with her magazine flooded, when the "Oneida" drove off her assailants, prevented her officers and crew from being captured, and was received by them with loud and hearty cheers.

The "Cayuga," (Captain Bailey's flag,) also cheered the "Oneida" heartily for opportunely coming to his support that morning.

#### BATTLE OF NEW ORLEANS.

In the action of the 25th, the "Oneida," being next to the "Pensacola," shared in the actual engagement with Fort Chalmette, on the famous old battle-ground. The entire action lasted but 10 minutes.

The enclosed report of the surgeon shows the extent of our loss to be but three persons slightly wounded in these three actions.

Fort Jackson sent a heavy shell through our port side and coal bunker, (which was full of coal) the shell falling, and fortunately without exploding, on our berth-deck.

The gun-boats gave us one glancing shot on the starboard bow and a quantity of grape, mostly on the starboard side.

The officers and men of my command displayed courage, coolness and skill.

I have the honor to be, sir, very respectfully yours,

S. PHILLIPS LEE, *Commanding.*

Flag-officer D. G. FARRAGUT, U. S. N.,  
*Commanding Western Blockading Squadron.*

REPORT OF COMMANDER SAMUEL SWARTWOUT,  
UNITED STATES SLOOP-OF-WAR  
"PORTSMOUTH."

UNITED STATES SLOOP-OF-WAR "PORTS-  
MOUTH," OFF PILOT TOWN, MISSISSIPPI  
RIVER, April 28, 1862. }

SIR—In compliance with your orders, I got under way at 3.30 A. M. on the 24th instant, and proceeded toward Fort Jackson,

in tow of the steamer "Jackson," for the purpose of enfilading that fort, to draw their fire from your squadron whilst passing by. Upon arriving at the position designated by you in your directions to Lieutenant Johnson, I ordered the ship to be anchored, and had a spring run out, to breast her broadside to. I had scarcely accomplished this when a very brisk and galling fire, with shell and solid shot, was opened upon the ship from a masked water battery only a few hundred yards distant, and so completely concealed from our view that we could only judge of its location by the flashes from the Confederate guns. We returned their fire with as much precision as we could under the circumstances, but with what effect I have been unable to ascertain. After firing one round from my port battery and four rounds from my Parrot gun, the spring was shot away, and the ship swung around, so that I was unable to bring any of my guns to bear upon Fort Jackson or the water battery. By this time the rebels had got their range, and were dropping their shell and shot with great rapidity all around and close to the ship, many of them cutting away the rigging just above our heads. A 68-pounder solid shot was thrown on board, falling upon the spar deck, just under the top-gallant fore-castle, tearing away the plank about ten feet, splitting one of the beams, and in its passage striking John Hancock, seaman, in the left leg, shattering it so much as to render amputation necessary. He has since died of his wound. Finding that the ship was a target for the enemy's batteries, without being able to bring my guns to bear, and, as the squadron had passed the forts, the object of my visit was accomplished, I reluctantly gave the order to slip the cable, and was soon drifted out of range of the rebel guns by the wind and tide. I cannot speak in too high praise of the bravery, coolness, and subordination of the officers and crew upon this trying occasion.

Commander Porter called to see me on the afternoon of the 24th instant, and, upon consultation, we decided that the most judicious course would be for all the vessels, with the exception of a few of his most powerful steamers, to drop down to this anchorage, under my protection, so that in case any of the rams and fire-rafts should escape his steamers this ship could arrest their progress here.

Having received the glorious tidings today that Forts Jackson and Philip have surrendered to Commander Porter, I have concluded to proceed up the river again, in order to recover, if possible, the cable and anchor which I slipped on the 24th instant, and also to render all the assistance in my power. I have just received intelligence from Ship island that Lieutenant-Command-

ing Abner Read, of the steamer "New London," is in a critical situation, as there are five rebel steamers preparing to attack him. I will therefore order one of our gun-boats to proceed with all dispatch to his assistance.

Very respectfully, your obedient servant,  
S. SWARTWOUT, *Commander.*

Flag-officer D. G. FARRAGUT,

*Commanding United States Naval Forces,  
Western Gulf of Mexico.*

COMMANDER (NOW REAR-ADMIRAL) MELANCTON SMITH,  
OF THE "MISSISSIPPI."

UNITED STATES STEAMER "MISSISSIPPI," }  
MISSISSIPPI RIVER, April 26, 1862. }

SIR—I have to report that the injuries sustained by this ship in the engagements of the 24th and 25th instant, with Forts Jackson and St. Philip, the rebel gun-boats, the ram "Manassas," and the batteries below the city of New Orleans, are not of a very serious nature.

Ten shots were received, eight of which passed entirely through the ship. The ram "Manassas" likewise inflicted an extensive wound on the port quarters, below the water line. All these injuries can be temporarily remedied, with the exception of the latter, and the severe damage done to the outer shaft-bearing and mizzen-mast. I regret exceedingly that my disabled machin-

ery, and a burning steamer that was drifting down upon us, did not allow me to take the "Manassas" in tow after her surrender, thereby preserving her intact for our own use, as the engines were still in operation when my boats, with an engineer and crew, boarded her. At this time it became necessary to recall my boats, when I directed her to be set on fire, and then so riddled her with shot that she was dislodged from the bank and drifted below the forts, when she blew up and sank.

I respectfully refer you to the accompanying report of Surgeon R. F. Maccoun for the casualties that occurred among the crew, and to the enclosed statements of the carpenter and gunner of the damages done to the vessels and the expenditure of ammunition.

I have much pleasure in mentioning the efficient service rendered by Executive Officer Geo. Dewey, who kept the vessel in her station during the engagement, a task exceedingly difficult from the darkness and thick smoke that enveloped us from the fire of our vessel and the burning gun-boats.

I would also refer, in terms of praise, to the conduct of all the officers and men under my command. As I consider that all the vessels under fire did their utmost to subdue the enemy and destroy his defences, I deem it unnecessary to enter into any further detail of the exploits performed by the "Mississippi," as we all must share alike in the honor of your victory.

Very respectfully, your obedient servant,

MELANCTON SMITH,

*Commander United States Navy.*

Flag-officer D. G. FARRAGUT,

*Commanding Western Division Gulf  
Blockading Squadron.*

REPORT OF COMMANDER CHARLES S. BOGGS,  
UNITED STATES STEAMER "VARUNA."

UNITED STATES STEAM GUN-BOAT "CAY- }  
UGA," AT SEA, May 8, 1862. }

SIR—I have the honor to enclose herewith a duplicate of the report of Commander Boggs, late of the "Varuna," and attached to my division of the attacking force. This gallant officer came up to my support when I had more of the enemy's steamers attacking me than I could well attend to. I afterwards saw him in conflict with three of the enemy's steamers, and directed Commander Lee, of the "Oneida," to go to his support, which he did in the most dashing manner.

Commander Boggs's description of the loss of his vessel I believe to be accurate. I saw him bravely fighting, his guns level with the water, as his vessel gradually sank

underneath, leaving her bow resting on the shore and above water.

I have the honor to be your obedient servant,

T. BAILEY, *Captain.*

Hon. GIDEON WELLES,

*Secretary of the Navy, Washington.*

UNITED STATES GUN-BOAT "CAYUGA," }  
May 5, 1862. }

SIR—I have the honor to enclose a copy (with slight verbal alteration) of the very hasty report drawn up at the last moment and sent to the flag-officer. My absence on special duty immediately after the action, and the necessity of forwarding it immediately, before the sailing of this vessel, must be my excuse for not forwarding it through you, my immediate commander, who so gallantly led the van of the division to which the "Varuna" was attached.

Very respectfully,

CHARLES S. BOGGS,

*Commander United States Navy.*

Captain T. BAILEY,

*Commanding First Division of Gun-boats.*

UNITED STATES STEAMER "BROOKLYN," }  
OFF NEW ORLEANS, April 29, 1862. }

SIR—I have the honor to report that, after passing the batteries with the steamer "Varuna," under my command, on the morning of the 24th, finding my vessel amid a nest of rebel steamers, I started ahead, delivering her fire, both starboard and port, at every one that she passed. The first on her starboard beam that received her fire appeared to be crowded with troops. Her boiler was exploded, and she drifted to the shore. In like manner three other vessels, one of them a gun-boat, were driven ashore in flames, and afterwards blew up.

At 6 A. M. the "Varuna" was attacked by the "Morgan," iron-clad about the bow, commanded by Beverly Kennon, an ex-naval officer. This vessel raked us along the port gangway, killing four and wounding nine of the crew, butting the "Varuna" on the quarter and again on the starboard side. I managed to get three eight-inch shells into her abaft her armor, as also several shots from the after rifled gun, when she dropped out of action partially disabled.

While still engaged with her, another rebel steamer, iron-clad, with a prow under water, struck us in the port gangway, doing considerable damage. Our shot glanced from her bow. She backed off for another blow, and struck again in the same place, crushing in the side; but by going ahead fast, the concussion drew her bow around, and I was able, with the port guns, to give her, while close alongside, five eight-inch shells abaft her armor. This settled her,

and drove her ashore in flames. Finding the "Varuna" sinking, I ran her into the bank, let go the anchor, and tied up to the trees.

During all this time the guns were actively at work crippling the "Morgan," which was making feeble efforts to get up steam. The fire was kept up until the water was over the gun-trucks, when I turned my attention to getting the wounded and crew out of the vessel. The "Oneida," Captain Lee, seeing the condition of the "Varuna," had rushed to her assistance, but I waived her on, and the "Morgan" surrendered to her, the vessel in flames. I have since learned that over fifty of her crew were killed and wounded, and she was set on fire by her commander, who burned his wounded with his vessel.

I cannot award too much praise to the officers and crew of the "Varuna" for the noble manner in which they supported me and their coolness under such exciting circumstances, particularly when extinguishing fire, having been set on fire twice during the action by shells.

In fifteen minutes from the time the "Varuna" was struck she was on the bottom, with only her top-gallant fore-castle out of water. The officers and crew lost everything they possessed, no one thinking of leaving his station until driven thence by the water. I trust the attention of the department will be called to their loss, and compensation made to those who have lost their all.

The crew were taken off by the different vessels of the fleet as fast as they arrived, and are now distributed through the squadron. The wounded have been sent to the "Pensacola."

I would particularly commend to the notice of the department Oscar Peck, second class boy, and powder boy of the after rifle, whose coolness and intrepidity attracted the attention of all hands. A fit reward for such services would be an appointment at the naval school.

The marines, although new recruits, more than maintained the reputation of that corps. Their galling fire cleared the "Morgan's" rifled gun, and prevented a repetition of her murderous fire. Four of the marines were wounded, one I fear mortally.

So soon as the crew were saved I reported to you in person, and within an hour left in the only remaining boat belonging to the "Varuna," with your despatches for General Butler, returning with him yesterday afternoon. Very respectfully,

CHARLES S. BOGGS,

*Commander United States Navy.*

Flag-officer D. G. FARRAGUT.

*Commanding Western Gulf Blockading Squadron.*

REPORT OF COMMANDER JOHN DE CAMP,  
UNITED STATES STEAMER "IROQUOIS."

UNITED STATES STEAMER "IROQUOIS," }  
OFF NEW ORLEANS, May 3, 1862. }

SIR—I beg to submit the following report respecting our engagement with Forts Jackson and St. Philip, and a fleet of Confederate steamers and rams in this river, April 24th and 25th.

The "Iroquois," being on picket duty during the night of the 24th, and being about one mile in advance of the squadron, we observed the signal for action made on board the flagship at about 3 A. M. Soon after, the ship of the first division having passed ahead, we fell into our place, astern of the "Sciota," and stood towards the forts. At 4 A. M. we were hotly engaged with the forts, and shortly after a ram and the Confederate gun-boat "McCrea" came upon our quarter and astern of us and poured into the "Iroquois" a most destructive fire of grape-shot and langrage, part of which was copper slugs; a great many of them were found on our decks after the action. We succeeded in getting one 11-inch shell into the "McCrea," and one stand of canister, which drove her away from us. We suffered severely from the raking cross-fire of Fort St. Philip, but Fort Jackson inflicted no injury, although we passed within fifty yards of its guns.

Passing the forts, we were beset by five or six Confederate steamers. We gave each a broadside of shell as we passed, and the most of them were entirely destroyed. Four miles above the forts we captured the enemy's gun-boat "No. 3," armed with one 24-pound brass howitzer, and well supplied with small arms, fixed ammunition, sails, etc. At this point we also captured about forty soldiers, including Lieutenant Henderson, of the Confederate army. These men were paroled and landed at New Orleans. Some of them were so badly wounded that I sent them to the hospital without parole; they will not trouble us again very soon, I think. Anchoring, by order, at 9 P. M., we were again under way at daylight on the 25th, and, in company with the squadron, stood up the river. At Chalmette we encountered two Confederate batteries, but their attempt to annoy us scarcely deserves the name of a battle. Some people on shore fired a few musket shots at us, but our marines soon dispersed them, and thus ended the battle of New Orleans.

The greatest praise I can bestow upon the officers of the "Iroquois" is to say that they all did their duty, and each one of them always expressed his determination to conquer. The crew and marines behaved with spirit and gallantry, which we may always expect in well drilled Americans.

Our loss in killed and wounded, I am sorry to say, is large. One master's mate and five seamen and two marines are killed, and twenty-four wounded. Mr. George W. Cole, master's mate, was killed by a cannon shot, and he died bravely, shouting to the men not to mind him, but go on with their guns.

The "Iroquois" is badly injured in her hull, but her masts and spars are sound, except the bowsprit and jibboom. These are hit with large shot; all our boats are smashed, and most of them are not worth repairs.

I am, most respectfully, your obedient servant,

JOHN DE CAMP,

*Commander United States Navy.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron, New Orleans, La.*

REPORT OF COMMANDER JAMES ALDEN,  
UNITED STATES STEAMER "RICHMOND."

UNITED STATES STEAMER "RICHMOND," }  
OFF NEW ORLEANS, April 27, 1862. }

SIR—In accordance with your instructions, I herewith enclose copies of the boat-swain's and carpenter's reports of the damage done to this vessel by the enemy's shot during the engagement of Forts Jackson and St. Philip on the morning of the 24th instant. The list of casualties I have already forwarded to you; it is very small, there being but two killed and four wounded. Much injury to the men, I am sure, was saved by a carefully prepared "splinter netting." At one point between the guns the netting was forced out to its utmost tension; indeed, large pieces of plank were thus prevented from sweeping the deck, and perhaps destroying the men at the guns. I would therefore recommend that in our future operations, these simple "painsavers" or "life-preservers" be adopted in the other ships of the fleet.

I must beg leave to call your attention to another simple and very effective expedient which was resorted to on board this vessel to obtain *light*—an element so essential in a night attack on board ship. The *deck* and *gun-carriages* were *whitewashed* fore and aft, and it was truly wonderful to note the difference; where before all was darkness, now side-tackle, falls, handspikes, ammunition, and indeed everything of the kind about our decks, was plainly visible by the contrast. The idea being so novel, and, at the same time, effective, I trust it will receive, through you, the notice it deserves, so that when others are driven to the *dire necessity of a night attack* they may have all the advantages the discovery insures.

We had much difficulty in groping our way through that "fiery channel," our ship being so slow, and the enemy was met in the "worst form for our profession," but the hand of a kind Providence gave us the victory. No men could behave better throughout that terrible ordeal than the crew of this vessel did. My thanks for support are due to them and the officers generally. I am especially indebted to Mr. Terry, our second lieutenant, for his ready and intelligent aid in the management of the ship during the action; but to Mr. Cummings, our first lieutenant, are mainly due, as far as this ship is concerned, the handsome results of that morning. By his cool and intrepid conduct the batteries were made to do their whole duty, and not a gun was pointed nor a shot sent without its mark. My thanks are due to Mr. Bogart, my clerk, who took the place of Mr. John B. Bradley, master's mate, who was shot down at my side while gallantly performing his duty as my aid.

I am, sir, respectfully, etc.,

JAMES ALDEN, *Commander.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron.*

REPORT OF LIEUTENANT-COMMANDING EDWARD T. NICHOLS, UNITED STATES GUN-BOAT "WINONA."

UNITED STATES GUN-BOAT "WINONA," }  
NEW ORLEANS, April 30, 1862. }

SIR—I beg leave respectfully to present the following report of the operations of this vessel in the engagement with Forts Jackson and St. Philip on the morning of the 24th inst.

After getting under way, I took my station as soon as possible in the line, astern of the "Itasca," and followed her red light, but suddenly found myself involved in a mass of logs and drift stuff, held by the chain and moorings of the hulks. Whilst trying to back clear the "Itasca" backed and fouled me on the starboard bow. After a delay of from twenty minutes to half an hour, I proceeded on my way, though I felt pretty sure that the bulk of the fleet had passed. Day was breaking fast, and my vessel was brought out in bold relief against the bright sky, presenting a fair mark for the gunners of the fort. Fort Jackson fired at me as I approached, and the first gun killed one man and wounded another; the third or fourth gun killed or wounded every man at the rifle gun except one. Judging that the burning raft was on the Fort Jackson side, I steered to pass it on the port hand, and did not discover my error until the whole lower battery of Fort St. Philip opened on me at less than point blank range. Steering off with starboard helm, I shot across to

the Fort Jackson side, but, owing to the obscurity caused by the smoke, got so close to the shore that I had no room to turn head up stream, and was forced to head down. At this time both forts were firing nearly their entire batteries at me. It would have been madness to attempt turning again in such a fire; three of my men were killed, four severely wounded, and one slightly so, the vessel hulled several times, and the deck wet fore and aft from the spray of falling shot.

It was with reluctance that I gave the order to head down stream and run out of the fire, first ordering the officers and crew to lie down on deck. I cannot, sir, speak too highly of the conduct of all on board. My orders were obeyed with alacrity, and (considering the suddenness of the fire opened on us, from Fort St. Philip, and the naturally depressing effect produced by the fatality of the first few shots,) with but little confusion. Mr. Walker, the first lieutenant, was very active and vigilant, and gave his personal attention in every part of the vessel—he was slightly wounded in the ear. Permit me, sir, to call your attention to the conduct of acting-master's mate William F. Hunt, in charge of the rifle gun—it was admirable. He assisted in working his gun, as his crew was weakened, and remained at it after none were left, until ordered from the fore-castle by me. Four of my wounded men are in the hospital at Pilot Town; the dead I buried on the left bank of the river, a short distance below our late anchorage.

Since the 24th I have been acting under the orders of Commander Porter, and on the 28th I had the satisfaction of receiving the surrender of Fort St. Philip and hoisting in its proper place once more the flag of our country. I was unfortunate, sir, in not passing the forts, but, I trust, not censurable.

I am, sir, very respectfully, etc.,

EDWARD T. NICHOLS,

*Lieutenant-Commanding.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Blockading Squadron, New Orleans.*

REPORT OF LIEUTENANT-COMMANDING GEO. H. PREBLE, UNITED STATES GUN-BOAT "KATAHDIN."

UNITED STATES GUN-BOAT "KATAHDIN," }  
AT ANCHOR OFF NEW ORLEANS, }  
April 30, 1862. }

SIR—It gives me pleasure to report that, in the passage of the forts on the morning of the 24th, and the engagement with the defences of New Orleans on the 25th, as well as on previous occasions when on advanced guard duty, and exposed to the de-

liberate fire from the rifled cannon of the enemy, the officers and crew of this vessel have shown a bravery and cool determination worthy of all praise. While exposed to the iron hail rained over us from both forts, and the simultaneous fire of the enemy's gun-boats on the 24th, not a man flinched from his gun or hesitated in the cool performance of his duty. Where all performed so well it is, perhaps, invidious to particularize. I may mention, however, as coming under my immediate notice, the deliberate way in which the First Lieutenant, Mr. Green, gave his general superintendence to the serving and supplying the guns, and the other duties assigned him, and the cool, collected manner in which Acting Master W. H. Polleys coned the ship between the forts and throughout, giving his orders to the helm as promptly, decidedly, and coolly as when piloting the vessel to a usual anchorage. Acting Master George Harris, in charge of the pivot gun, and Acting Master's mate, J. H. Hartshorn, in charge of the Parrott rifle gun, did their best to annoy the enemy.

At the most critical moment of the passage, and when exposed to the fire of both forts, the fire of our pivot gun was embarrassed and delayed by the shells jamming in the gun, their sabots being too large to fit the bore. As many as five shells were passed up before one could be found to fit the gun. Two became so jammed that the shells were torn from the sabots before they could be extracted, and the sabot of one had to be blown out and the gun reloaded. Mr. Harris, the master in charge of the pivot-gun, attributes this serious fault, first, to the swelling of the light wood of the too nicely fitted sabot in the damp climate of this Gulf; and, second, to the shells being packed in bags instead of boxes, which allowed of the sabots getting bruised, even with the most careful handling.

The station assigned this vessel, close under the stern of the "Varuna," I maintained until the dense canopy of smoke from the cannonade, aided by the night, hid everything from our view. I ordered full speed, however, to maintain my station; and seeing, by the flash from her broadside, that we were passing the "Mississippi," I gave orders to cease firing for a time until we had passed her, when I became engaged with the enemy's gun-boats. Above the forts we passed along the broadside and within fifty yards of the iron-plated battery "Louisiana," lying at anchor. To our surprise she did not fire at us, though she could have blown us out of water. After passing her, I directed to keep the vessel off, and give her a shot from the 11-inch pivot and Parrott, which was done, and, as I have since learned from one on board of

her, with good effect, tearing a hole the size of the shell through and through the iron plating of her bow.

Until beyond the fire of the forts, acting-assistant paymaster Ladd attended in the wardroom to give his assistance to the surgeon, but later volunteered his services in boats, and brought off to the ship refugees from the burning gun-boats and the shore; he assisted, also, in disarming that portion of the Chalmette regiment which surrendered, and was encamped opposite the quarantine.

I am happy to have no casualties to report, and that the surgeon, though ready, had no opportunity to testify his skill on board. Several of the men had their clothing torn by shot or fragments of shell, but not a man was even scratched. At the request of Captain Bailey, Dr. Robinson went on board the "Cayuga" after the action, where he rendered efficient service to her wounded. The vessel, also, escaped without serious injury. One shell passed through the smokestack and steam escape-pipe and burst, making a dozen small holes from the inside outward, and another has cut about four to six inches into the foremast, while the same, or another, cut the foresail and some of the running rigging about the foremast, which is all the damage sustained. I attribute our escaping with so little injury to our being near the head of the line, to the rapid manner in which we passed the forts, and to our passing so close under the forts that all their shot went over our heads. I believe, also, that for a time the fire of Fort St. Philip was silenced. The two shots we received, however, were from that fort.

On the arrival of the fleet at New Orleans, seeing the schooner "John Gilpin" lying at the levee on the Algiers side, loaded with cotton and surrounded by burning vessels and sunken docks, and fearing she might be fired, I boarded her and hoisted the American flag at her masthead, and brought her captain, Archibald Forsaith, (whom you afterwards released on parole.) on board as a hostage for her safety and future delivery, not deeming it prudent or safe to put a small prize crew in possession. Captain Forsaith claimed that his vessel was British property, and that his papers were in the English consulate, but acknowledged that she was intended to run the blockade. In passing down the river since, I have noticed that a portion, if not all, of her deck load of cotton, and perhaps her remaining cargo, has been removed. Captain F. stated to me that she had 265 bales of cotton on board.

In conclusion, flag-officer, allow me to congratulate you upon the success which

has attended this "running of the forts," beyond a doubt the most brilliant and daring achievement of the war.

Very respectfully, your obedient servant,

GEO. HENRY PREBLE,  
*Lieutenant-Commanding.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron.*

REPORT OF LIEUTENANT-COMMANDING C. H. B. CALDWELL, UNITED STATES GUN-BOAT "ITASCA."

UNITED STATES STEAM GUN-BOAT "ITASCA," }  
PILOT TOWN, MISSISSIPPI RIVER, }  
April 24, 1862. }

SIR—Agreeably to your instructions, I proceeded up the river, in the boat furnished from the "Hartford," to make a final reconnoissance of the schoon-

LIEUTENANT-COMMANDING (AFTERWARDS COMMODORE)  
CHAS. H. B. CALDWELL, OF THE "ITASCA."

ers on the west bank of the river, and a careful examination as to the chains that were originally stretched from them to the schooners on the starboard side, one of which we ran on shore on the night of the 20th. I succeeded in reaching them after a long, fatiguing pull against the current, without opposition or discovery, although we were directly in range between the forts and a fire lighted on the opposite shore to illuminate the reach across the river, and I could distinctly hear the voices of the rebels at Fort Jackson as they were busily engaged in some outside work. I found two of the three schooners on shore, and the outside one riding head to the current, with a number of chains hanging from her bow. I passed ahead, leaving her fifty yards on the port hand, and dropped over a deep-sea lead, veering to twelve fathoms of line. We then lay on our oars, and drifted down the stream, without feeling any obstructions. We found all the booms attached to the inshore schooners and a number of rafts in shore

of them, aground; the outside schooner was entirely clear. Returning, I stopped alongside of the east bank, and dropped the lead over, with fifteen fathoms of line, floating by within twenty yards of her.

Having satisfied myself fully, by these and other observations, that no obstructions whatever existed, and that the chains we slipped on the night of the 20th had disarranged and almost destroyed the whole apparatus for preventing our passage up the river, and that the condition of things was precisely as I had previously reported, and that the whole fleet could safely pass, I made with confidence and inexpressible satisfaction, on my return, our preconcerted signal that the channel was clear and everything propitious for the advance of the fleet.

I regret to be obliged to state that my progress afterwards with the fleet was attended with serious misfortune and disappointment. On arriving abreast of Fort Jackson a storm of iron hail fell over and around us from both forts, which was continued without intermission while we were under their guns. A number of shots took effect, several passing through us. One, a 42-pound shot, passed through the port side, a coal-bunker full of coal, iron-plate bulkhead, and entered the boiler, making a large hole, and breaking the dry-pipe therein; from this hole the steam rushed in a dense cloud, filling the fire and engine room, and driving every one from below, and almost suffocating those on the quarter-deck.

The loss of our motive power having destroyed our efficiency and left us almost helpless, I ordered every man to throw himself flat on the deck, the helm put hard a-starboard, and, turning, floated down the river. When out of range of the forts, I ordered the pumps manned fore and aft, and our deck was soon several inches deep with water, which was pouring also out of every scupper. Supposing the ship to be in a sinking condition, I ran her on shore below the mortar fleet, where I remained until I satisfied myself that the leak was not as bad as I had at first supposed, and then hauled off and anchored.

I am happy to state that but three men were injured during the engagement—two firemen, scalded by the steam, and the captain of the hold, wounded in the head by a splinter. I have received fourteen hits, as follows: three shot holes through the vessel below the deck, the plank-shear badly shattered, and four slight hits on the port side; one through the vessel below decks, and one through the bulwarks on the starboard side; one through the cut-water, grazing the bowsprit; one cutting away a davit span and shivering the jury mainmast (the main gaff), and one 8-inch shell exploded over the quarter-deck, driving a large piece through the port signal locker and bulwarks. One shot took out of the port side a piece of plank three feet long, shivered five feet of the next plank, crushed all of the timbers in its passage, and split one knee; another shot hole in the starboard side is nearly as bad.

Allow me, flag-officer, respectfully and sincerely, to congratulate you upon the glorious passage of the fleet, and to express to you the heartfelt sorrow and disappointment I felt that my disabled condition prevented my being a participant in its complete success; and to assure you it was owing to circumstances that Providence alone could control.

Very respectfully, your obedient servant,

C. H. B. CALDWELL,  
*Lieutenant-Commanding.*

Flag-officer DAVID G. FARRAGUT,  
*Commander-in-Chief of Western Gulf Blockading Squadron*

REPORT OF LIEUTENANT-COMMANDING N. B. HARRISON, UNITED STATES GUN-BOAT "CAYUGA."

UNITED STATES GUN-BOAT, "CAYUGA," MISSISSIPPI RIVER, }  
 April 24, 1862. }

SIR—The following extract from the log will present to you, in the briefest form, the part borne by this ship in the conflict of this morning with Forts Jackson and St. Philip, and the rebel gun-boats:

"At 2 A. M., in obedience to the flag-officer's signal, weighed anchor, and led the advance column toward the barrier, and stood up stream close to Fort St. Philip. At 3.45 both forts opened their fire. At 3.50 opened on Fort St. Philip with grape and canister. At 4 passed the line of fire of Fort St. Philip, and encountered some eleven gun-boats, no supporting ships in sight. At 4.25 one steamer surrendered, and two more were driven on shore. At this moment discovered the 'Varuna' and 'Oneida' dash gallantly into the fight. At 5 anchored in front of Camp Lovell, and received the submission of Colonel Szymanski and his command."

We were struck forty-two times. Both masts are so badly hurt as to be unfit for further service. Our 11-inch Dahlgren carriage struck, but still fit for duty; the smokestack perforated, but not materially injured; all other damages have been repaired. I regret to add that six of our crew have been wounded, but so far the surgeon has made but one amputation.

It is needless for me to inform you, who had us under your eye, that all did their duty fearlessly and well; but I must commend to your special notice my executive officer, Lieutenant George R. Perkins. The remarkable coolness and precision of this young officer, while aiding me in steering the vessel through the barrier and past the forts, under their long and heavy fire, must have attracted your attention. Of volunteer Acting-master Thomas H. Morton I must speak in terms of high praise. He fought the Parrott gun, and his daring example had a most happy effect on the crew.

I am indebted to Assistant Surgeon Edward S. Bogert, not only for his rapid and skillful attention to the wounded, but for his general officer-like bearing. My clerk, Mr. Charles M. Burns, Jr., was of material assistance in communicating my orders. Our engines, although generally unreliable, were, on this occasion, worked successfully by Second-assistant George W. Rogers and his assistants. In conclusion, I must mention with praise the conduct of the following men: Charles Florence, captain of 11-inch gun; William Young, captain of Parrott gun; William Parker, at the wheel; Edward Wright, at the lead.

April 25.—I continue this report through the battles of to-day. At 11 A. M., being at that moment some half a mile in advance of the flag-ship, the batteries on either hand opened on us at short range. Being pivoted to port, I edged off with the port helm and responded with our 11-inch and Parrott, slowly but with great precision of aim. This unequal contest lasted just fifteen minutes, when the flag-ship ranged up in splendid style, diverting their fire and silencing the battery on the right bank.

We were again repeatedly hulled, and much cut up in spars and rigging, and the iron stock of the port anchor cut away. I lost no men; this I attribute to an order which I gave for the men to lie down flat during the time we could bring no gun to bear. To speak again of the constancy and devotion of my brave officers and crew would be to repeat an old story. Respectfully,

N. B. HARRISON,  
 Lieutenant-Commanding.

Capt. T. BAILEY,  
 Commanding the Leading Division of Gun-boats, off New Orleans, Louisiana.

REPORT OF LIEUTENANT PIERCE CROSBY, COMMANDING UNITED STATES GUN-BOAT "PINOLA."

UNITED STATES STEAM GUN-BOAT "PINOLA," }  
 OFF NEW ORLEANS, April 26, 1862, }

SIR—I have the honor to report that, in obedience to your signal on the morning of the 24th instant, after having passed your orders to the "Pensacola" and other vessels of the squadron, I took my position at 3.30 A. M. in line of battle next after the "Iroquois," thinking the vessel which was to have preceded me had taken her's in advance, which I could not ascertain at that time, and followed on in line, passing so close to one of the enemy's hulks which had been used to hold the chain-rafts, that one starboard quarter-boat was crushed against her sides; continued on our course, and as soon as Fort Jackson bore ahead of us, about four hundred yards distant, commenced firing with the 11-inch Dahlgren pivot and Parrott rifles at the flashes of the enemy's guns, that being the only guide by which to distinguish their position, which the fort answered promptly and rapidly, but, owing to our proximity, their shot passed over, with the exception of two, one of which killed Thomas Kelly, captain of the forecastle, slightly wounding Acting-master J. G. Lloyd, the other cutting away the launch's after-davit. I then ran over within one hundred and fifty yards of Fort St. Philip, from which we received a terrific volley of shot, canister, grape, and musketry, nearly all of which passed over us. The fire-rafts, which were burning very brightly, exposed us to the full view of the enemy, and enabled them to fire at us with great precision, while we were only able to answer their forty guns with the twenty-pound rifles, the 11-inch pivot being engaged with Fort Jackson. Of those shot that struck us from Fort St. Philip, one entered our starboard quarter, cut away part of the wheel, and severely wounded William Acworth, quartermaster, who returned to his station as soon as his wounds were dressed. Acting-master's mate William H. Thompson, promptly took the wheel at the time of the disaster. The second entered the hull at the water-line on the starboard side, eight inches forward of the boilers, passed through the coal bunker, and lodged in the pump-well and cut the sounding-well in two. The third cut away the top of the steam escape pipe. The fourth cut away the starboard chain cable from the anchor, passed through the bow and yeomans' storeroom, and lodged in the port side, starting off the outside planking. The fifth struck the topgallant forecastle and carried away part of the rail. The sixth passed through the plankshear, abreast of the 11-inch pivot gun. The seventh struck a barricade of hammocks forward of the forehatch. The eighth cut away one of the dead-eyes of the starboard fore rigging. The ninth cut a bucket from the hands of Acting-master William P. Gibbs, in charge of the pivot-gun. The Tenth knocked the rammer from the hands of Harrington, loader, who soon, with the assistance of the gun's crew, made a temporary one, the spare rammer having been lost overboard at the commencement of the action. The eleventh passed entirely through the hull, immediately over the magazine, demolishing completely in its course the dispensary and its contents. The twelfth passed through the starboard and lodged in the port side of the berth-deck. These two last mentioned shot killed John Nolta and Robert H. Johnson, landsmen, and dangerously wounded Thomas Jones, wardroom steward; Thomas Ford, landsman; Henry Stokely, wardroom cook, and Thomas L. Smith, coalheaver, slightly; also, Thomas Foster, captain of the hold, who received dangerous and painful wounds from splinters while zealously performing his duty, completely disabling the powder division, there being but one man left to pass ammunition, with the exception of Acting-master's mate C. V.

Rummell, in charge of his division, who immediately gave his personal assistance, although he had been knocked down a few moments previous by splinters; and James A. Bashford, was slightly wounded by splinters. A number of other missiles grazed our sides, doing, however, but slight damage. Immediately following the disaster on the berth-deck, it was reported to be on fire, whereupon the Gunner's-mate, S. B. Frisbee, instantly closed the magazine, he remaining inside. All traces of fire having been quickly extinguished by the fireman, re-enforcements to the powder division were quickly supplied, and the guns continued their fire.

After passing the forts, and out of range of their heavy cross fire, we came suddenly in view of our squadron, which had been hidden from us by the dense smoke, and noticed at the same time a steamer on the starboard hand, which at first sight I supposed to be the "Iroquois," but as day dawned and we approached nearer I soon discovered my mistake and gave her a shot from the 11-inch and Parrott rifles, both of which took effect in her hull near the water-line. At this moment the iron ram "Manassas" was seen following close astern of us, and being in range of our howitzers we opened fire on her with them, aiming at her smokestack. The "Mississippi" being near, now turned upon her and soon succeeded in driving her ashore and destroying her. In obedience to signal, I then ran up and anchored with the squadron off Quarantine Landing and sent ashore to destroy the telegraph wire, which I afterwards learned was on the opposite bank. At 9 A. M. got under way and steamed up the river, in obedience to order, in company with the "Sciota." At 3 P. M. sent the dead on shore and buried them; then continued on our course in company with the squadron and anchored at ——. At 3.30 we got under way and steamed up the river in company with the squadron. At 4 P. M. we opened fire with the squadron on the batteries below New Orleans, and as soon as the batteries were silenced we proceeded with the squadron up to the city, and, in obedience to orders, ran up the river to look after the iron floating-battery, which I discovered off the upper part of the city, in flames, floating down with the current. Returned to the flag-ship and received orders to destroy the batteries below the city; ran down in company with the "Oneida," Captain S. P. Lee commanding, and by his directions I destroyed the battery on the port hand while he took charge of that on the opposite side. Found a large supply of ammunition, together with twelve 32 and 24-pound guns, also a 10-inch mortar, all of which we spiked, burned the carriages, threw the shot into the river, and destroyed everything belonging to the fort. After accomplishing this work, set fire to and burned a schooner loaded with combustible material lying alongside the battery, and then returned to the anchorage off New Orleans at 9.30, thus ending our operations of the 24th and 25th of April.

Our total loss was three killed and eight wounded. It gives me great pleasure and gratification to be able to bear testimony to the zeal and intrepid conduct of the officers and crew of this vessel, during the desperate conflict and terrific fire through which they passed on the morning of the 24th instant. Amid that storm of iron hail perfect order reigned; officers and men did their duty faithfully, and nobly sustained the well-earned reputation of the Navy and our glorious old flag, for which they fought so manfully.

The conduct of Thomas Gehegan, boatswain's mate and captain of the 11-inch gun, is worthy of mention, as well for the brave example he set his crew as by the faithful manner with which he served his gun, bringing up his own ammunition as soon as the men composing the powder division had been nearly all killed or wounded.

Acting-pavmaster C. Stewart Warren acted as

signal officer. William H. Byrn, captain's clerk, attended to passing my orders.

Dr. L. M. Lyon, assistant surgeon, displayed great zeal and promptness in his attentions to the wounded during the heat of the battle.

Senior-assistant engineer John Johnson, with his junior assistants, managed his department with skill and ability.

To A. P. Cook, first lieutenant and executive officer, I was greatly indebted for his able assistance. Throughout the entire action he was ready and prompt in the performance of his duties, displaying a coolness and gallantry which won the admiration of all.

With my earnest congratulations upon the brilliant success which has crowned your efforts and attended the forces under your command, I remain, very respectfully, your obedient servant,

PIERCE CROSBY,  
*Lieutenant-Commanding.*

Flag-Officer D. G. FARRAGUT, U. S. Navy,  
*Commanding United States Western Gulf Squadron, Gulf of Mexico.*

REPORT OF LIEUTENANT-COMMANDING GEORGE  
M. RANSOM, UNITED STATES GUN-BOAT  
"KINEO."

UNITED STATES GUN-BOAT "KINEO," MISSISSIPPI RIVER, ABOVE THE FORTS,  
April 25, 1862. }

SIR—I have the honor to report that, on arriving close under the guns of Fort St. Philip, on the morning of the 24th instant, the firing was commenced from this vessel, and kept up briskly and effectively until we had passed entirely beyond the range of the enemy's guns from either forts or gun-boats.

Soon after the signal of the flag-ship to discontinue action, I was hailed by Commander Smith of the "Mississippi," who invited me to accompany him in the pursuit of the ram. It turned immediately on the shore and was abandoned, its people escaping under a brisk fire of musketry from both vessels. I made preparations for taking it in tow by a hawser, when, the "Mississippi" coming between the "Kineo" and the ram, Commander Smith hailed, and informing me that two vessels under a point below had struck, requested me to take possession of them. I was met there by the rebel gun-boat "McRea," which opened a sharp fire, backed by two other gun-boats, all within range of the guns of either fort. The "Kineo" returned the fire of the "McRae," but was obliged to *put her head up stream*. Having had the slide of the pivot carriage shattered by a shot from Fort St. Philip, the gun was temporarily disabled; and not being able, with her head up stream, to bring anything to bear effectually, I was obliged, very reluctantly, to withdraw.

I have the pleasure to state, sir, that the conduct of officers and men of this vessel throughout the action was specially, admirable for its steadiness, without an exception. I enclose herewith a report of Assistant-surgeon A. S. Oberly, of killed and wounded.

I have the honor to be, &c.,  
GEORGE M. RANSOM,  
*Lieutenant-Commanding*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron.*

REPORT OF LIEUTENANT-COMMANDING A. N. SMITH  
UNITED STATES GUN-BOAT "WISSAHICKON."

UNITED STATES GUN-BOAT "WISSAHICKON,"  
OFF QUARANTINE STATION, MISSISSIPPI RIVER,  
April 26, 1862. }

SIR—I have to report that at 2 A. M. on the 24th instant, in obedience to general signal, got under

way and proceeded up the river, keeping our position in the prescribed order of sailing till a detention, by running on shore and the dense smoke of the battle, already some time commenced, rendered it impossible to keep it longer. Using our battery vigorously and to the best advantage possible, we succeeded in passing the forts and water batteries under a storm of shot, shell and volleys of musketry, without loss of life or serious damage to the gun-boat, which can only be attributed to the lowness of the vessel on the water.

At daylight, above the forts, we were unavoidably crowded on the west bank of the river, the ram "Manassas" being a short distance astern and heading for us, but unable to make much progress against the current. Before it reached us, we had fortunately gotten off, and witnessed, with great satisfaction, shortly after, its destruction by the United States steamer "Mississippi."

I have to report but two of the crew slightly wounded; four round shot through the hull of the vessel, and one through the mainmast. Officers and men performed their duty nobly, and with admirable coolness. In this feeble tribute to their worth and services I desire to include Third-assistant-engineer G. M. White, a volunteer from the United States steamer "Colorado."

Very respectfully, your obedient servant,

A. N. SMITH.

*Lieutenant-Commanding.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron.*

REPORT OF LIEUTENANT-COMMANDING JOHN H. RUSSELL, UNITED STATES GUN-BOAT "KENNEBEC."

UNITED STATES GUN-BOAT "KENNEBEC," }  
MISSISSIPPI RIVER, April 29, 1862. }

SIR—On the morning of the 24th instant, during the engagement, this vessel became entangled with the rafts, and struck one of the schooners (which afterwards sunk), at the same time parting the chain. I then made several attempts, in the midst of a heavy fire, to pass the batteries; but, it being daylight, and the squadron having passed above the forts, I deemed it prudent to withdraw, and reported to the senior officer, Commander Porter, who attached me temporarily to his fleet, and placed me on picket duty.

Yesterday morning, by order of Commander Porter, I proceeded up the river, in company with the United States steamers "Harriet Lane" and "Westfield," and gun-boat "Winona," to witness the surrender of the forts, after which, by order of Commander Porter, I received on board this vessel the prisoners from Fort Jackson—29 officers and 90 men.

Very respectfully, your obedient servant

JOHN H. RUSSELL,

*Lieutenant-Commanding.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron*

PAPERS RELATING TO THE SURRENDER OF FORTS JACKSON AND ST. PHILIP.

No. 69.]

UNITED STATES FLAG-SHIP "HARTFORD, OFF }  
THE CITY OF NEW ORLEANS, }  
May 1, 1862. }

SIR—I have the honor to forward herewith to the department all the papers relating to the surrender of Forts Jackson and St. Philip to the forces under my command.

I am, very respectfully, your obedient servant,

D. G. FARRAGUT,

*Flag-officer, Western Gulf Blockading Squadron.*

Hon. GIDEON WELLES,  
*Secretary of the Navy, Washington, D. C.*

UNITED STATES STEAMER "HARRIET LANE," }  
April 29, 1862. }

SIR—The morning after the ships passed the forts I sent a demand to Colonel Higgins for a surrender of the forts, which was declined. On the 27th I sent Lieutenant-Colonel Higgins a communication, herewith enclosed, asking again for the surrender. His answer is enclosed.

On the 28th I received a communication from him, stating that he would surrender the forts, and I came up and took possession, drew up articles of capitulation, and hoisted the American flag over the forts. These men have defended these forts with a bravery worthy of a better cause. I treated them with all the consideration that circumstances would admit of.

The three steamers remaining were under the command of Commander J. K. Mitchell. The officer of the fort acknowledged no connection with them, and wished in no way to be considered responsible for their acts. While I had a flag of truce up they were employed in towing the iron floating battery of sixteen guns (a most formidable affair) to a place above the forts, and, while drawing up the articles of recapitulation in the cabin of the "Harriet Lane," it was reported to me that they had set fire to the battery and turned it adrift upon us. I asked the general if it had powder on board, or guns loaded. He replied that he would not undertake to say what the navy officers would do. He seemed to have a great contempt for them. I told him "we could stand the fire and blow up if he could," and went on with the conference, after directing the officers to look out for their ships. While drifting down on us, the guns, getting heated, exploded with a terrific noise, throwing the shot about the river. A few moments after the battery exploded with a terrific noise throwing fragments all over the river, and wounding one of their own men in Fort St. Philip, and immediately disappeared under water. Had she blown up near the vessels, she would have destroyed the whole of them.

When I had finished taking possession of the forts, I got under way in the "Harriet Lane," and started for the steamers, one of which was still flying the Confederate flag. I fired a shot over her, and they surrendered. There were on board of them a number of naval officers and two companies of marine artillery. I made them surrender unconditionally, and, for trying to blow us up while under a flag of truce, I conveyed them to close confinement as prisoners of war, and think they should be sent to the North, and kept in close confinement there until the war is over, or they should be tried for their infamous conduct. I have a great deal to do here, and will send you all papers when I am able to arrange them.

I turned over the forces to General Phelps. Fort Jackson is a perfect ruin. I am told that over 1,800 shells fell in and burst over the centre of the fort. The practice was beautiful. The next fort we go at we will settle sooner, as this has been hard to get at. The naval officers sank one gun-boat while the capitulation was going on, but I have one of the other steamers at work, and hope soon to have the other. I find that we are to be the hewers of wood and drawers of water; but as the soldiers have nothing here in the shape of motive power, we will do all we can.

I should have demanded an unconditional surrender, but with such a force in your rear it was desirable to get possession of these forts as soon as possible. The officers turned over everything in good order, except the walls and buildings, which are terribly shattered by the mortars.

Very respectfully,

D. D. PORTER,

*Commanding Flotilla.*

Flag-officer D. G. FARRAGUT.

HEADQUARTERS FORTS JACKSON AND ST. }  
 PHILIP, April 27, 1862. }

SIR—Your letter of the 26th instant, demanding the surrender of these forts, has been received. In reply thereto, I have to state that no official information has been received by me from our own authorities that New Orleans has been surrendered to the forces of Flag-officer Farragut, and until such information is received no proposition for a surrender can be for a moment entertained here.

Respectfully, your obedient servant,  
 EDWARD HIGGINS,  
*Lieutenant-Colonel-Commanding.*

Commodore DAVID D. PORTER,  
*United States Navy, Commanding Mortar Fleet.*

UNITED STATES STEAMER "HARRIET LANE," }  
 MISSISSIPPI RIVER, April 27, 1862. }

SIR—When I last demanded the surrender of Forts Jackson and St. Philip, I had no positive assurance of the success of our vessels in passing safely the batteries on the river; since then I have received communications from Flag-officer Farragut, who is now in possession of New Orleans. Our troops are, or will be, in possession of the prominent points on the river, and a sufficient force has been posted on the outside of the bayous to cut off all communication and prevent supplies.

No man could consider it dishonorable to surrender under these circumstances, especially when no advantage can arise by longer holding out, and by yielding gracefully he can save the further effusion of blood.

You have defended the forts gallantly, and no more can be asked of you. I feel authorized to offer you terms sufficiently honorable to relieve you from any feeling of humiliation.

The officers will be permitted to retire on parole with their side arms, not to serve again until regularly exchanged. All private property will be respected, only the arms and munitions of war will be surrendered to the United States government, and the vessels lying at or near the forts. No damage must be done to the defences. The soldiers will also be paroled and be permitted to return to their homes, giving up their arms. I am aware that you can hold out some little time longer, and am also aware of your exact condition as reported to us by a deserter, which convinces me that you will only be inflicting on yourself and those under your command unnecessary discomforts without any good results arising from so doing.

Your port has long been closed to the world, by which serious injury has been experienced by many loyal citizens. I trust that you will not lend yourself to the further injury of their interests, when it can only entail calamity and bloodshed without any possible hope of success or relief to your forts. Your surrender is a mere question of time, which you know is not of any extent, and I therefore urge you to meet my present proposition. By doing so you can put an end to a state of affairs which will only inflict injury upon all those under you, who have strong claims upon your consideration.

I remain, very respectfully,  
 Your obedient servant,  
 D. D. PORTER,  
*Commanding Mortar Fleet.*

Colonel EDWARD HIGGINS,  
*Commanding Confederate forces in Forts Jackson and St. Philip.*

UNITED STATES STEAMER "HARRIET LANE," }  
 MISSISSIPPI RIVER, April 30, 1862. }

SIR—I enclose herewith the capitulation of Forts Jackson and St. Philip, which surrendered to the

mortar flotilla on the 28th day of April, 1862. I also enclose in a box (forwarded on this occasion) all the flags taken in the two forts, with the original flag hoisted on Fort St. Philip when the State of Louisiana seceded. Fort Jackson is a perfect wreck; everything in the shape of a building in and about it was burned up by the mortar shells, and over 1,800 shells fell in the work proper, to say nothing of those which burst over and around. I devoted but little attention to Fort St. Philip, knowing that when Jackson fell, Fort St. Philip would follow.

The mortar flotilla is still fresh and ready for service. Truly, the backbone of the rebellion is broken.

On the 26th of the month I sent six of the mortar schooners to the back of Fort Jackson, to look up the bayous and prevent supplies getting in. Three of them drifted over to Fort Livingston, and when they anchored the fort hung out a white flag and surrendered. The "Kittatinny," which had been blockading these for some time, sent a boat in advance of the mortar vessels, and reaching the shore first, deprived them of the pleasure of hoisting our flag over what had surrendered to the mortar flotilla. Still, the fort is ours, and we are satisfied. I am happy to state that officers and crew are all well and full of spirits.

I have the honor to remain,  
 Your obedient servant,  
 DAVID D. PORTER.

Hon. GIDEON WELLES.

UNITED STATES STEAMER "HARRIET LANE," }  
 FORTS JACKSON AND ST. PHILIP, MISSIS- }  
 SIPPI RIVER, April 28, 1862. }

By articles of capitulation entered into this twenty-eighth day of April, one thousand eight hundred and sixty-two, between David D. Porter, commander United States Navy, commanding the United States mortar flotilla, of the one part, and Brigadier-General J. K. Duncan, commanding the coast defences, and Lieutenant-Colonel Higgins, commanding Forts Jackson and St. Philip, of the other part, it is mutually agreed:

1st. That Brigadier-General Duncan and Lieutenant-Colonel Higgins shall surrender to the mortar flotilla Forts Jackson and St. Philip, the arms, munitions of war, and all the appurtenances hereto belonging, together with all public property that may be under their charge.

2d. It is agreed by Commander David D. Porter, commanding the mortar flotilla, that Brigadier-General Duncan and Lieutenant-Colonel Higgins, together with the officers under their command, shall be permitted to retain their side arms, and that all private property shall be respected; furthermore, that they shall give their parole of honor not to serve in arms against the government of the United States until they are regularly exchanged.

3d. It is furthermore agreed by Commander David D. Porter, commanding the mortar flotilla, on the part of the United States Government, that the non-commissioned officers, privates, and musicians shall be permitted to retire on parole, their commanding and other officers becoming responsible for them; and that they shall deliver up their arms and accoutrements in their present condition, provided that no expenses of the transportation of the men shall be defrayed by the government of the United States.

4th. On the signing of these articles by the contracting parties, the forts shall be formally taken possession of by the United States naval forces composing the mortar flotilla; the Confederate flag shall be lowered, and the flag of the United States hoisted on the flagstaves of Forts Jackson and St. Philip.

In agreement of the above, we, the undersigned, do hereunto set our hands and seals.

DAVID D. PORTER,  
*Commanding Mortar Flotilla.*

W. B. RENSRAW,

DISPOSITION OF PRISONERS CAPTURED.

No. 70.]

UNITED STATES FLAG-SHIP "HARTFORD," AT }  
ANCHOR OFF THE CITY OF NEW ORLEANS, }  
May 1, 1862. }

SIR—I have to inform the department that in consequence of my not having any suitable place to put the crews of the rebel gun-boats captured by this fleet, I have released them on parole. But having been informed by Commander Porter and others

that the conduct of the officers has been such as to deprive them of any claim for indulgence on our part—they having sunk two of the vessels while under a flag of truce—I have determined to send them to the North as prisoners of war, to be dealt with as the department may think proper. They will be sent in the "Rhode Island."

I am, very respectfully,  
Your obedient servant,

D. G. FARRAGUT,

Flag-officer, Western Gulf Blockading Squadron.

HON. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

PAYMASTER GEO. F. CUTTER (NOW PAY DIRECTOR), U. S. N.

#### COMMANDER PORTER'S DETAILED REPORT.

UNITED STATES STEAMER "HARRIET LANE,"  
FORTS JACKSON AND ST. PHILIP, }  
April 30, 1862. }

SIR—I have the honor to lay before you a report of the proceedings of the mortar flotilla under my command since the day the vessels entered the Mississippi River.

On the 18th of March, all the mortar fleet crossed "Pass à l'Outre" bar, towed by the "Harriet Lane," "Owasco," "Westfield," and "Clifton," the two latter having arrived that morning. I was ordered by Flag-officer Farragut to proceed to Southwest Pass, which I accordingly did; there we awaited orders, being at any moment ready to go to work on the forts.

As yet only the "Brooklyn" and "Hartford" had crossed the bar, a short time after the "Richmond" passed over, and the "Mississippi" and the "Pensacola" came from Ship Island to try their hand at getting through; there was not at the time a great depth of water, and their pilots were not at all skillful or acquainted with the bar. I volunteered my services with the steamers belonging to the mortar flotilla, and, after eight days' laborious work, succeeded in getting the ships through and anchored them at Pilot Town. I do not hesitate to say, but for the exertions of Commander Renshaw, Lieutenant-Commanding Baldwin, and Lieutenant-Commanding Wainwright, that the two latter ships would never have got inside: the "Miami" Lieuten-

ant-Commanding Harrell, also rendered assistance, but as his vessel was an unmanageable one, he could do no more than act as a steam anchor to heave the ships ahead by.

Too much praise cannot be awarded to the commanders of the "Westfield" and "Clifton" (Renshaw and Baldwin), for the exertions they displayed on this occasion; they knew that the success of the expedition depended on getting these ships over, and they never once faltered in their duty, working against adverse circumstances, and impeded by a fog of eight days' duration, which obscured a vessel at the distance of fifty yards; the "Harriet Lane" also did all she could with her small power, and in the end the united power of these vessels succeeded in getting over the bar the heaviest vessels that ever entered the Mississippi River.

When the ships were all ready to move up, I directed Mr. Gerdes (assistant in the Coast Survey) to proceed in the "Sachem" and make a minute survey from Wiley's Jump up to the forts. He detached Mr. Oltmanns and Mr. Harris, the first an assistant in the Coast Survey, the latter sent out by the superintendent (Mr. Archibald Campbell) of the northwestern boundary, to perform what might be required of him; the work was performed by boats; Lieutenant-Commanding Guest, in the "Owasco," being detailed by me for the purpose of protecting them. These two gentlemen, Messrs. Harris and Oltmanns, performed their duty most admirably: in three days they had surveyed and triangulated over seven miles of the river, their observations taking in Forts Jackson and St. Philip; much of this time they were under fire from shot and shell at a distance of 2,600 yards, and were exposed to concealed riflemen in the bushes. On one occasion Mr. Oltmanns was fired upon from the bushes while surveying in one of the "Owasco's" boats, one of the balls striking an oar, but the boat's crew drove the enemy off with their rifles, and Mr. Oltmanns proceeded with his work, establishing the positions the mortar vessels were to occupy with great coolness and precision. I deem it due to these gentlemen to mention their names honorably, as a tribute to the Coast Survey—the utility of which is not properly appreciated—and as a mark of high satisfaction with them for their invaluable services.

The survey being completed, and marked positions being assigned to the vessels where their distance from the fort could be known to a yard, I brought up three of the schooners to try their range and durability at a distance of three thousand yards. I found the range satisfactory, and had no reason to doubt the durability of the mortar beds and foundation. I received but little encouragement from any one about the success of the mortars, it having been confidently predicted that "the bottoms of the schooners would drop out at the tenth fire." I had no doubts myself about the matter, having perfect confidence in the schooners. Lieutenant-Commanding John Guest guarded the Coast Survey party while they were employed, returning the enemy's fire whenever he thought he could do so with effect.

On the 16th, Flag-officer Farragut moved up the fleet, and I was told to commence operations as soon as I was ready. The schooners sailed up partly or were towed by the steamers, and on the morning of the 18th, they had all reached their positions ready to open fire. Previous to taking their places I had directed the masts to be dressed off with bushes, to make them invisible to the enemy and intermingle with the thick forest of trees and matted vines behind which they were placed; this arrangement proved to be an admirable one, for never once during the bombardment was one of the vessels seen from the forts, though their approximate position was known. As the bushes were blown away during the bombardment they were renewed, and the masts and ropes kept covered from

view. The place I selected for the mortar vessels was under the lee of a thick wood closely interwoven with vines, and presenting in the direction of Forts Jackson and St. Philip an impenetrable mass for three hundred yards, through which shot could scarcely pass. From our mast-heads the forts could be plainly seen, though observers there could not see us in return. The head vessel of the first division, Lieutenant-Commanding Watson Smith, was placed at this point, 2,850 yards from Fort Jackson, 3,680 from St. Philip; the vessels were then dropped in a line close to each other, their positions having been marked by the Coast Survey party, and Messrs. Oltmanns and Harris superintending personally that each one was acquainted with proper distance. Next to Lieutenant-Commanding Smith's division of seven vessels ("Norfolk Packet," Lieutenant-Commanding Watson Smith; "Oliver H. Lee," Acting-Master Washington Godfrey; "Para," Acting-Master Edward G. Furber; "C. P. Williams," Acting-Master Amos R. Langthorne; "Arletta," Acting-Master Thomas E. Smith; "William Bacon," Acting-Master William P. Rogers; "Sophronia," Acting-Master Lyman Bartholomew) was placed the six vessels of the third division, under Lieutenant-Commanding K. R. Breese ("John Griffith," Acting-Master Henry Brown; "Sarah Bruen," Acting-Master Abraham Christian; "Racer," Acting-Master Alvin Phinney; "Sea Foam," Acting-Master Henry E. Williams; "Henry James," Acting-Master Lewis W. Pennington; "Dan Smith," Acting-Master George W. Brown), and one vessel, the "Orvetta," Acting-Master Blanchard, all lying in line close together.

All the vessels mentioned were anchored and secured to spring their broadsides, as occasion might require. In the meantime, Lieutenant-Commanding John Guest was sent ahead in the "Owasco" to clear the bushes of riflemen which had been found to lurk there, and cover the vessels from the fire of the forts, when it should open; the "Westfield," "Clifton," and "Miami" being engaged in towing the vessels to their posts.

I placed six vessels of the second division, under command of Lieutenant W. W. Queen, on the northeast shore of the river, the headmost one 3,680 yards from Fort Jackson, to which the division was directed to turn its attention. The following vessels composed this division:

"T. A. Ward," W. W. Queen, commanding second division.

"M. J. Carlton," Charles E. Jack, acting-master.

"Matthew Vasser," Hugh H. Savage, acting-master.

"George Mangham," John Collins, acting master.

"Orvetta," Francis E. Blanchard, acting master.

"Sydney C. Jones," J. D. Graham, acting-master.

When the divisions were all placed, signal was made to "commence action," and they opened in order, each one firing every ten minutes. The moment the mortars opened, Forts Jackson and St. Philip responded with all their guns that could bear, but for some time did not appear to get the right range; the hulls of the vessels on the northeast shore, being covered with reeds and willows, deceived them somewhat, though their shot and shell went over. The fire of the enemy was rapid, and, as the shell and shot began to grow rather hot, I sent to the flag-officer, asking that some of the gun-boats should be sent to draw their fire. For one hour and fifty minutes Lieutenant-Commanding Guest had, at the head of the mortar fleet, borne the fire of the forts uninjured, and only left there to get a supply of ammunition. After I went on board his vessel and ordered him to retire, the mortar vessels having been re-enforced by the gun-boats sent up by the flag-officer, by midday the fire on the vessels on the northeast shore (Lieutenant-Commanding Queen's division) became so rapid, and the shot and shell fell so close, that I went on

board to remove them. One large 120-pound shell had passed through the cabin and damaged the magazine of Lieutenant-Commanding Queen's vessel, the "T. A. Ward," coming out near the water-line, her rigging was cut, and shot flying over her fast. The "George Mangham," Acting-Master John Collins, had received a 10-inch shot near her water-line, so I moved them both (contrary to the wishes of the officers) two hundred yards further astern, throwing the enemy out of his range, which he did not discover for two or three hours. At five o'clock in the evening the fort was discovered to be in flames, and the firing from the enemy ceased. We afterwards learned that the citadel had been fired by our bombshells, and all the clothing of the troops and commissary stores had been burnt up, while great distress was experienced by the enemy, owing to the heat and danger to the magazine. Had I known the extent of the fire, I should have proceeded all night with the bombardment; but the crew had had nothing to eat or drink since daylight. I knew not how much the mortar beds and vessels might have suffered. Night firing was uncertain, as the wind had set in fresh, and not knowing how long a bombardment I might have to go through with, I deemed it best to be prudent. A little after sunset I ordered the firing to cease, and made the only mistake that occurred during the bombardment. The fire in the fort blazed up again at night, but I thought it one of the fire-rafts they lighted up every night at the fort.

The first and third divisions, under Lieutenants-Commanding Smith and Breese, acquitted themselves manfully that day, and though the shot and shell fell thick about them, behaved like veterans. We fired on this day over 1,400 shells, many of which were lost in the air, owing to bad fuses. No accident of any kind occurred from careless firing, and after a careful examination the vessels and mortar-beds were found to be uninjured. On that night, at two o'clock, I ordered Lieutenant-Commanding Queen to drop out of the line of fire, and I placed him on the south shore in a safer and closer position, though not one where he could work to such good advantage, the fort being plainly visible from his late position, and the effect of the shells could be more plainly noted. On the south shore, the pointing of the mortars could only be done from sights fixed to the mastheads, and many curious expedients were resorted to to obtain correct firing, expedients very creditable to the intelligence of the commanders of the vessels. We heard afterwards that our first day's firing had been more accurate than that of any other day, though it was all good.

On the morning of the 19th, we opened fire on the enemy again, when he tried his best to dislodge us from behind our forest protection, without effect; our fire was kept up as rapidly as the men could carefully and properly load, the enemy returning it with what heavy guns he could bring to bear on us, most of his shot going over us amongst the shipping and gun-boats, which were on guard and employed drawing the fire away from us. About nine o'clock on the second morning the schooner "Maria J. Carleton," Charles Jack, master, was sunk by a rifle-shell passing down through her deck, magazine, and bottom. I happened to be alongside at the time and had nearly all her stores saved, also the arms. As she went down, the mortar was fired at the enemy for the last time, and that was the last of the "Carleton." We hauled her on to the bank when we found that she was sinking, and were thus enabled to save many of her stores; but she finally slipped off the bank into deeper water, and nothing was left visible but her upper rail. Two men were wounded in the "Carleton." Acting-Master Charles Jack came out in this vessel from New York; he lost his mainmast in a gale off Cape Hatteras, but persevered until he arrived at Key West, and sailed with the flotilla to Ship Island

He went through another gale, but got into port safe. He was almost always up with the rest in working up the river under sail with his one mast; and when his vessel sunk he volunteered his services on board the vessel of Lieutenant-Commanding Queen, to whose division he belonged. On the second day the firing from the forts was rather severe on the masts and rigging of the first division. I wanted to remove them a little further down, but was prevented from doing so at the request of Lieutenant-Commanding Smith, who seemed determined not to withdraw until something was sunk. He had one man killed in the "Arletta," Acting-Master Smith, by a ten-inch shot striking between the stop of the mortar bed and the mortar, which disabled it for a time only; it was repaired in two or three hours, the men meanwhile under fire, without any occupation to keep up their interest. One or two men were wounded this day. We had another conflagration in the fort, the shells having set fire to some quarters put up for officers on the northwest angle of the works; they were all consumed. The firing seemed to be good this day, though some said the shells went over, and others said they fell short. The proof of accuracy was that the batteries were silenced every time the shells were concentrated on any one point. The fuses being so bad, I gave up the plan of timing them, and put in *full-length fuses*, to burst after they had entered the ground. In some respects this was disadvantageous, but we lost but few by bursting before time in the air. The ground being wet and soft, the shells descended 18 or 20 feet into the ground, exploding after some time, lifted the earth up, and let it fall back into its place again, not doing a great deal of harm, but demoralizing the men, who knew not what the consequences might be. The effect, I am told, was like that of an earthquake. When the shells hit the ramparts they did their work effectually, knocking off large pieces of the parapet and shattering the casemates. On the third and fourth day the ammunition on board began to grow short, and the steamers had to be sent down to bring it up, the boats of the squadron also assisting all they could, in the strong current, to supply the vessels. The steamers lay close to the mortar vessels while the shot and shell were flying all about; but strange to say, not a vessel was struck, though I expected to see some of them injured. The employment of them in that way could not be avoided. Everything was conducted with the greatest coolness, and the officers and men sat down to their meals as if nothing was going on—shells bursting in the air and falling alongside, and shot and rifle-shell crashing through the woods and tearing up trees by the roots. On the fifth day, the fire from the forts on the head of the first division was very rapid and troublesome. One hundred and twenty-five shots fell close to the vessels in one hour and thirty minutes, without, however, doing them any damage beyond hitting the "Para," the headmost vessel, and cutting up the rigging and masts. The fire of the enemy had been attracted to the mastheads of one of the large ships which had been moved up, and which they could see over the woods. I deemed it prudent to move three of them two or three lengths, much to the annoyance of the officers, who seemed indisposed to yield an inch. Still, my duty was to look out for the vessels and not have them destroyed. The "Norfolk Packet" got a piece of a shell through her decks, and had her rigging and crossrees cut away, and one man wounded. For three days and nights the officers and men had but little repose and but few comfortable meals, so I divided the division into three watches of four hours each, firing from one division about 168 times a watch, or altogether, during 24 hours, 1,500 shells. This I found rested the crews and produced more accurate firing. Overcome with fatigue, I had seen the commanders and

crews lying fast asleep on deck, with a mortar on board the vessel next to them, thundering away and shaking everything around them like an earthquake. The windows were broken at the Balise, thirty miles distant. It would be an interminable undertaking, sir, if I were to attempt to give a minute account of all the hard work performed in the flotilla, or mention separately all the meritorious acts and patient endurance of the commanders and crews of the mortar vessels. *All* stuck to their duty like men and Americans; and though some may have exhibited more ingenuity and intelligence than others, yet the performance of all commanded my highest admiration. I cannot say too much in favor of the three commanders of divisions, Lieutenants Watson Smith, W. W. Queen, and K. R. Breese. I can only say I would like always to have them at my side in times of danger and difficulty. They were untiring in their devotion to their duties, directing their officers, who could not be supposed to know as much about their duties as they did. I left the entire control of these divisions to themselves, trusting implicitly that they would faithfully carry out the orders which I had given them previous to the bombardment, and knowing that no powder or shell would be thrown away if they could help it. The end justified my confidence in them. During a bombardment of six days they were constantly exposed to a sharp fire from heavy guns. If they sustained no serious damage to their vessels it was no fault of the enemy, who tried his best to destroy them, and who, after I had withdrawn the vessels of Lieutenant-Commanding Queen from a very exposed position, reported that he had sunk them.

After bombarding the fort for three days, I began to despair of taking it, and, indeed, began to lose my confidence in mortars, but a deserter presented himself from Fort Jackson, and gave me such an account of the havoc made by our mortar practice that I had many doubts at first of his truth; he represented hundreds of shells falling into the fort, casemates broken in, citadel and out-buildings burnt, men demoralized and dispirited, magazine endangered, and the levee cut; we went to work with renewed vigor, and never flagged to the last.

On the night of the 20th, an expedition was fitted out, under Commander Bell, for the purpose of breaking the chain; it was composed of the gun-boats "Pinola" and "Itasca"; it was arranged that *all* the mortars should play upon the fort while the operation was going on, which they did as fast as they could safely load and fire, nine shells being in the air frequently at one time. The vessels were discovered, and the forts opened fire on them at a distance of three and eight hundred yards. Lieutenant Crosby informed me that but for the rapid and accurate fire of the mortars the gun-boats would have been destroyed. The mortars silenced the batteries effectually, and Colonel Higgins ordered the men into the casemates, where they were in no way loath to go. These facts have been obtained from prisoners. The "Itasca," Lieutenant Caldwell, slipped the chain of one vessel, and was swept ashore by the current, when the "Pinola," Lieutenant-Commanding Crosby, got her off, both remaining in that position over thirty minutes, though seen by the enemy and seldom fired at.

On the 23d, I urged Flag-officer Farragut to commence the attack with the ships at night, as I feared the mortars would not hold out, the men were almost overcome with fatigue, and our supply ships laid a good way off. The enemy had brought over two heavy rifle guns to bear on the head of our line, and I was aware that he was daily adding to his defenses and strengthening his naval forces with ironclad batteries. The 23d was appointed, but the attack did not come off. I had fortunately dismounted with a shell, on that day, the heaviest rifle gun they had on St. Philin, breaking it in two

and it annoyed us no more. I did not know it at the time, but thought the ammunition had given out. On the 23d, the order was given to move at 2 o'clock, in the order which the flag officer will mention in his report. The steamers belonging to the mortar flotilla were assigned the duty of enfilading a heavy water battery of six guns and the barbette of guns which commanded the approach to the forts; and the mortars having obtained good range during the day, were to try and drive the men from the guns by their rapid fire, and bursting shell over the parapets. The flotilla steamers, composed of the "Harriet Lane," Lieutenant-Commanding Wainwright, leading; "Westfield," Commander Renshaw; "Owasco," Lieutenant-Commanding Guest; "Clifton," Lieutenant-Commanding Baldwin, and "Miami," Lieutenant-Commanding Harrell, moved up (when the flag-officer lifted his anchor), 70 fathoms apart, and took position under the batteries; the leading vessel 500 yards off, the others closing up as the fire commenced. Then, as soon as the "Hartford," "Brooklyn" and "Richmond" passed, they opened with shrapnel on the forts, having received the fire ten or fifteen minutes before replying to it. As the fire was high, and they were close in shore, nearer the forts than the enemy supposed, they occupied, as it turned out, a safer position than the vessels further out, there being only one killed and one wounded on board the "Harriet Lane," while the other steamers remained untouched. The commanders of all the vessels on this occasion did their duty, coolly kept their vessels close up, fired rapidly and accurately, and the signal was not made to retire until the last vessel of our gallant squadron passed through the flames, which seemed to be literally eating them up; every man, spar or rope was plainly seen amid the light, and every movement of the ships noted; that last vessel, the gallant "Iroquois," would provokingly linger and slow her engines opposite the forts to give the rebels a taste of her formidable battery. When she also disappeared in the smoke, our signal was hung out to retire, our duty having been accomplished, and the fort turning its entire attention to our little force. It could not, however, do us much harm, as the rain of mortar shells almost completely silenced them; never in my life did I witness such a scene, and never did rebels get such a castigation. Colonel Higgins ordered the men from the batteries into the casemates to avoid the mortar shells, which fell with particular effect on that night, while grapeshot and shrapnel from the ships gave them but few opportunities to fire from their casemates. The ships had gone by, the backbone of the rebellion was broken, the mortars ceased their fire, and nothing was heard for a time but the booming of guns as our fleet went flying up the river, scattering the enemy's gun-boats and sinking them as they passed. We all sat down to rest and speculate on the chances of seeing our old friends and brother officers again.

I was very hopeful myself, for I knew that the enemy had been too much demoralized during the last week by mortar practice to be able to stand against the fire of our ships. I gave the ships, when they started, forty-five minutes to pass the forts: they were only seventy from the time they lifted their anchors. I lost the services of a well armed and useful vessel, the "Jackson," for the attack on the batteries. Her commander, Lieutenant-Commanding Woodworth, during the affair was appointed to tow the "Portsmouth" ahead of the mortar steamers, but was carried down the stream. He persisted, however, in taking her into her berth after the battle was over and the steamers had retired, and anchored her, I believe, within nine hundred yards of the fort. His reception and that of the "Portsmouth" was a warm one, for the east batteries opened fire upon them; and, after escaping miraculously, the "Portsmouth," with some shots in

her hull and rigging, and one or two killed and wounded, coolly drifted out from under the guns and took her old position. Had the rebels not been overcome with despair she would have fared badly.

Immediately on the passage of the ships I sent Lieutenant-Commanding Guest up with a flag of truce, demanding the surrender of the forts. The flag of truce was fired on, but apologized for afterwards. The answer was, "The demand is inadmissible." Giving the men that day to rest, I prepared to fill up the vessels with ammunition and commence the bombardment again. Having in the meantime heard from Flag-officer Farragut that he had safely passed the batteries, I determined to make another attempt on these deluded people in the forts to make them surrender, and save the fur-

CAPTAIN J. L. BROOME (NOW LIEUT. COL.), MARINE CORPS.

ther effusion of blood. Flag-officer Farragut had unknowingly left a troublesome force in his rear, consisting of four steamers and a powerful steam battery of four thousand tons and sixteen guns, all protected by the forts. I did not know in what condition the battery was, only we had learned that she had come down the night before, ready prepared to wipe out our whole fleet. If the enemy counted so surely on destroying our whole fleet with her, it behooved me to be prudent, and not let the mortar vessels be sacrificed like the vessels at Norfolk. I commenced, then, a bombardment on the ironclad battery, supposing it lay close under Fort Jackson, and also set the vessels to work throwing shells into Fort Jackson again, to let them know that we were still taking care of them; but there was no response: the fight had all been taken out of them.

I sent the mortar vessels below to refit and prepare for sea, as also to prevent them from being driven from their position in case the iron battery came out to attack them. I felt sure that the steamers alone could manage the battery. Six of the schooners I ordered to proceed immediately to the rear of Fort Jackson and blockade all the bayous, so that the garrison could not escape or obtain supplies. I sent the "Miami" and "Sachem" to the rear of Fort St. Philip, to assist in landing troops. These vessels all appeared at their destination at the same time, and, when morning broke, the enemy found himself hemmed in on all sides. It was a military necessity that we should have the forts. Our squadron was cut off from coal, provisions, and ammunition; our soldiers had but little chance to get to New Orleans through shallow bayous; the enemy in the city would hesitate to surrender while the forts held out; communication was cut off between them, and neither party knew what the other was willing to do. So I demanded a surrender again, through Lieutenant-Commanding Guest, offering to let them retain their side-arms and engage not to serve against the United States during the rebellion until regularly exchanged, provided they would honorably deliver up, *undamaged*, the forts, guns, muskets, provisions, and all munitions of war, the vessels under the guns of the fort, and all other public property. The answer was civil, and hopes were held out that, after being instructed by the authorities of New Orleans, they would surrender. In the meantime their men became dissatisfied at being so surrounded; they had no hope of longer holding out with any chance of success, and gave signs of insubordination. On the 28th, a flag of truce came on board the "Harriet Lane," proposing to surrender Jackson and St. Philip on the terms proposed, and I immediately proceeded to the forts, with the steamers "Westfield," "Winona," and "Kennebec" in company, and sent a boat for General Duncan and Lieutenant-Colonel Higgins, and such persons as they might see fit to bring with them. These persons came on board, and, proceeding to the cabin of the "Harriet Lane," the capitulation was drawn up and signed, the original of which I have had the honor of forwarding to the department by Captain Bailey, no opportunity occurring to send it through Flag-officer Farragut, without loss of time. The officers late commanding the forts informed me that the vessels would not be included in the capitulation, as they (the military) had nothing to do with the naval officers, and were in no way responsible for their acts. There was evidently a want of unanimity between the different branches of the rebel service. I afterwards found out that great ill feeling existed, the naval commander having failed, in the opinion of the military, to co-operate with the forts; the true state of the case being that they were both sadly beaten, and each laid the blame on the other. While engaged in the capitulation, an officer came below and informed me that the iron floating battery (the "Louisiana") had been set on fire by two steamers which had been lying alongside of her. This was a magnificent iron steam floating battery of four thousand tons and mounting sixteen heavy guns, and perfectly shot-proof. She had been brought down from New Orleans the day before, and on it the hopes of their salvation seemed to depend, as will appear by the following letter from General Duncan, taken in the fort:

FORT JACKSON, LOUISIANA, }  
 April 22, 1862. }

CAPTAIN—Your note of this date relative to the steamer "Louisiana," the forwardness of her preparations for attack, the disposition to be made of her, etc., has been received.

It is of vital importance that the present fire of the enemy should be withdrawn from us which you

alone can do. This can be done in the manner suggested this morning, under the cover of our guns, while your work on the boat can still be carried on in safety and security. Our position is a critical one, dependent entirely on the powers of endurance of our casemates, many of which have been completely shattered, and are crumbling away by repeated shocks, and therefore I respectfully, but earnestly, again urge my suggestions of this morning upon your notice. Our magazines are also in danger.

Very respectfully, your obedient servant,

J. K. DUNCAN,

*Brigadier-General.*

Captain J. K. MITCHELL,  
*Commanding Naval Forces, Lower Mississippi River.*

I was in hopes of saving this vessel as a prize, for she would have been so materially useful to us in all future operations on the coast, her batteries and strength being sufficient to silence any fort here, aided by the other vessels. Seeing her lying so quiet, with colors down and the two steamers under our guns, I never dreamed for a moment that they had not surrendered. The forts and ourselves had flags of truce flying, and I could not make any movement without violating the honor of the United States and interrupting the capitulation which was being drawn up. The burning of the vessels was done so quietly that no one suspected it until the battery was in a blaze. I merely remarked to the commanders of the forts that the act was in no way creditable to the rebel commander. The reply was, "We are not responsible for the acts of these naval officers." We proceeded with the conference, and while so engaged an officer came to inform me that the ironclad battery was all in flames and drifting down on us, having burnt the ropes that had fastened her to the bank. I inquired of the late commanders of the forts if they knew if the guns were loaded, or if she had much powder on board. The answer was, "I presume so, but we know nothing about the naval matters here." At this moment the guns, being heated, commenced going off, with a probability of throwing shot and shell amidst friend and foe. I did not deign to notice it further than to say to the military officers, "If you don't mind the effects of the explosion which is soon to come, we can stand it." If the ever memorable Commander Mitchell calculated to make a stampede in the United States vessels by his infamous act, he was mistaken; none of them moved or intended to move, and the conference was carried on as calmly as if nothing else was going on, though proper precautions were taken to keep them clear of the burning battery. A good Providence, which directs the most unimportant events, sent the battery off towards Fort St. Philip, and as it got abreast of that formidable fort it blew up with a force which scattered the fragments in all directions, killing one of their own men in Fort St. Philip, and when the smoke cleared off it was nowhere to be seen, having sunk immediately in the deep water of the Mississippi. The explosion was terrific, and was seen and heard for many miles up and down the river. Had it occurred near the vessels it would have destroyed every one of them. This, no doubt, was the object of the arch-traitor who was the instigator of the act. He failed to co-operate, like a man, with his military confederates, who looked to the means he had at his disposal to save them from destruction, and who scorned alike his want of courage in not assisting them, as well as the unheard of and perfidious act which might, in a measure, have reflected on them.

How different was the course of the military commanders, who, though engaged in so bad a cause, behaved honorably to the end. Every article in the fort was delivered un damaged. Nothing

was destroyed, either before the capitulation or while the capitulation was going on, or afterwards. The most scrupulous regard was paid to their promises. They defended their works like men, and had they been fighting for the flag under which they were born instead of against it, it would have been honor enough for any man to have said he had fought by their side.

After the capitulation was signed, I sent Commander W. B. Renshaw to Fort Jackson, and Lieutenant-Commanding Ed. Nichols to Fort St. Philip to receive the surrender of the forts. The rebel flag was hauled down and the stars and stripes once more floated over the property of the United States. The sun never shone on a more contented and happy looking set of faces than those of the prisoners in and about the forts. Many of them had not seen their families for months, and a large portion had been pressed into a service distasteful to them, subject to the rigor of a discipline severe beyond measure. They were frequently exposed to punishments, for slight causes, which the human frame could scarcely endure, and the men who underwent some of the tortures mentioned on a list of punishments I have in my possession, must have been unable afterwards to do any duty for months to come. Instead of the downcast countenances of conquered people, they emerged from the fort (going home on their parole) like a parcel of happy school-boys in holiday times, and no doubt they felt like them also.

When the flags had been exchanged, I devoted my attention to Commander Mitchell, who was lying a half mile above us with three steamers, one of which he had scuttled. Approaching him in the "Harriet Lane," I directed Lieutenant-Commanding Wainwright to fire a gun over him, when he lowered his flag. I then sent Lieutenant-Commanding Wainwright on board to take possession and receive the unconditional surrender of the party, consisting of fourteen naval officers and seven engineers, temporarily appointed; the crew of the ironclad battery consisted of three hundred men and two companies of marine artillery, nearly all from civil life, and serving much against their will, so they said. Commander Mitchell and the other naval officers were transferred to the "Westfield" as prisoners of war, and as soon as time would allow, the marines and sailors were sent in one of the captured vessels to Flag-officer Farragut, at New Orleans. The captured military officers were sent up to New Orleans on their parole, and thus ended the day on which the great Mississippi rejoiced once more in having its portals opened to the commerce of the world. From the appearance and talk of the soldiers, we might soon hope to see the people united again under the folds of the flag of the Union. While the capitulation was going on I sent the steamer "Clifton" down to bring up troops, and when General Phelps came up I turned the forts, guns, and munitions of war over to his keeping. My next step was to visit Forts Jackson and St. Philip. Never in my life did I witness such a scene of desolation and wreck as the former presented. It was plowed up by the thirteen-inch mortars, the bombs had set fire to and burnt out all the buildings in and around the forts; casemates were crushed and were crumbling in, and the only thing that saved them were the sandbags that had been sent from New Orleans during the bombardment, and when they began to feel the effects of the mortars. When the communication was cut off between them and the city, this resource of sandbags could avail them no longer. It was useless for them to hold out; a day's bombardment would have finished them; they had no means of repairing damages; the levee had been cut by the thirteen-inch bombs in over a hundred places; and the water had entered the casemates, making it very uncomfortable, if not impossible to live there any

longer. It was the only place the men had to fly to out of reach of the bombs. The drawbridge over the moat had been broken all to pieces, and all the causeways leading from the fort were cut and blown up with bombshells, so that it must have been impossible to walk there or carry on any operations with any degree of safety. The magazine seems to have been much endangered, explosions having taken place at the door itself, all the cotton bags and protections having been blown away from before the magazine door. Eleven guns were dismounted during the bombardment, some of which were remounted again and used upon us. The walls were cracked and broken in many places, and we could scarcely step without treading into a hole made by a bomb-shell; the accuracy of the fire is, perhaps, the best ever seen in mortar practice; it seems to have entirely demoralized the men and astonished the officers. A water battery, containing six very heavy guns, and which annoyed us at times very much, was filled with the marks of the bombs, no less than 170 having fallen into it, smashing in the magazine, and driving the people out of it. On the night of the passage of the ships this battery was completely silenced, so many bombs fell into it and burst over it. It had one gun in it, the largest I have ever seen, made at the Tredegar works. I would not pretend to say how many bombs fell in the ditches around the works, but soldiers in the forts say about three thousand; many burst over the works, scattering the pieces of shell all around. The enemy admit but fourteen killed and thirty-nine wounded by the bombardment, which is likely the case, as we found but fourteen fresh graves, and the men mostly staid in the casemates, which were three inches deep with water and very uncomfortable. Many remarkable escapes and incidents were related to us as having happened during the bombardment. Colonel Higgins stated an instance where a man was buried deep in the earth by a bomb striking him between the shoulders, and directly afterwards another bomb exploded in the same place, and threw the corpse high in the air. All the boats and scows around the ditches and near the landing were sunk by bombs; and when we took possession the only way they had to get in and out of the fort to the landing was by one small boat to ferry them across. All the lumber, shingles, and bricks used in building or repairs were scattered about in confusion and burnt up, and every amount of discomfort that men could bear seemed to have been showered upon those poor deluded wretches.

I was so much struck with the deserted appearance of what was once a most beautiful spot, that I ordered Mr. Gerdes and his assistants on the Coast Survey to make me an accurate plan of all the works, denoting every bomb that fell, and (as near as possible) the injury the fort had sustained, every distance being accurately measured by tape-line and compass, and the comparative size of fractures noted. The work has been executed with great zeal and accuracy, though it will only give a faint idea of the bombs that fell about the fort; many are lost sight of in the water which has been let in by the cut levees; many burst over the fort; but enough have been marked to indicate the wonderful precision of fire and the endurance of the forts. Had the ground been hard instead of being soft mud, the first day's bombardment would have blown Fort Jackson into atoms; as it is, it is very much injured, and will require thorough repair before it can be made habitable.

Fort St. Philip received very little damage from our bombs, having fired at it with only one mortar, and that for the purpose of silencing a heavy rifled gun which annoyed us very much; we were fortunate enough to strike it in the middle, and break it in two, and had not much more annoyance from that fort; two guns were capsized by a bomb at

one time, but without injuring them; they were soon replaced; some trifling damage was done to the works, though nothing to affect the efficiency of the batteries; it was from Fort St. Philip that our ships suffered most, the men and officers there, having had, comparatively, an easy time of it. I felt sure that St. Philip would surrender the moment Jackson hauled down the secession flag, and consequently directed all the attention of the mortar schooners to the latter fort. The final result justified me in coming to this conclusion.

I trust that you will excuse me, sir, for dwelling so minutely on matters relating to this important victory, though I have endeavored to make my report as short as possible.

Every little incident in this ever to be remembered drama will be interesting to the true lovers of our Union, who will rejoice over the fact that the great river which is the main artery of our country is once more in our possession, and that we may soon hope to see the stars and stripes floating over every hut and hamlet along its banks. It only remains for me, sir, to do justice to the officers who have been under my command during this arduous and sometimes unpleasant service. Commander Renshaw, Lieutenant-Commanding Guest, Lieutenant-Commanding Wainwright, Lieutenant-Commanding Harrell, Lieutenant-Commanding Baldwin, Lieutenant-Commanding Woodworth, are the officers commanding steamers connected with the flotilla. Their duties were various and arduous—towing, supplying, and getting under the guns of the fort when opportunities offered, or they were permitted to expose their vessels. In the attack on the water batteries Lieutenant-Commanding Wainwright commanded the "Harriet Lane" (as I noticed) coolly and bravely; and his officers and crew did their duty, all the vessels lying quietly under the heavy fire for fifteen minutes, until it was time to open their batteries, which they did with effect, until the time came to retire. Commander Renshaw made his rifle gun tell with effect, keeping his vessel in close order. Lieutenant-Commanding Guest, with his zealous crew, who had fired over 200 shell at the forts at different times, kept his shell flying as fast as usual, bursting (as I witnessed) with good effect in the midst of the batteries. Lieutenant-Commanding Baldwin, whom I have always found ready for any duty, no matter how arduous or thankless, was in no way behind any one; his heavy battery of nine-inch and thirty-two-pounders rattled through the outer works of the fort, helping to keep Jackson quiet while our heavy ships were forcing their way through logs chained together, fire-rafts, rams, to say nothing of the enemy's gun-boats, iron batteries, and forts built to dispute the passage of any fleet which might be sent against them. The steamer "Jackson," Lieutenant-Commanding Woodworth, towed the "Portsmouth" gallantly into fire, though his position was more gallantly than wisely taken; he was fortunate that his vessel and the "Portsmouth" were not cut to pieces. I have been so struck with the energy and zeal of Lieutenants-Commanding Woodworth and Baldwin, that I hope the Navy Department will reward them by re-appointing them as permanent officers in the service (if they will accept it), for while the Navy is composed of such men it will never be defeated in equal contests. Lieutenant-Commanding Harrell, of the "Miami," has had under his command a most wretched and unmanageable vessel, and has not had an opportunity to do himself full justice; he was always ready to do any service required of him, and on the night of the attack, with the rest, worked his battery with effect. As soon as the forts had been passed, on account of his light draught, I sent him to co-operate with General Butler in landing troops outside, which duty he performed to my entire satisfaction.

If the efforts of the mortar flotilla have not met your expectations in reducing the forts in a shorter time, it must be remembered that great difficulties existed, first in the soil, which allowed the bombs to sink at least twenty feet, by measurement, before exploding, the difficulty of seeing the fort, as it is not much above the surrounding bushes, and the endurance of the casemates, which were deeply covered with earth, and better constructed than supposed; but I am firmly of opinion that the moral effect of this bombardment will go far towards clearing all forts of rebels, and I draw attention to the case of Fort Livingston, which held out a flag of truce the moment three mortar vessels appeared before it. Flag-officer Farragut has ordered me to repair to Ship Island to await the arrival of the larger vessels, but not to commence any operations until he arrives.

I herewith enclose the reports of the commanders of steamers in relation to the conduct of those under their command.

I have the honor to remain,

Very respectfully,

Your obedient servant,

DAVID D. PORTER,  
*Commanding Flotilla.*

Hon. GIDEON WELLES,  
*Secretary of the Navy.*

REPORT OF COMMANDER W. B. RENSHAW, UNITED STATES STEAMER "WESTFIELD."

UNITED STATES STEAMER "WESTFIELD," }  
MISSISSIPPI RIVER, May 5, 1862. }

SIR—Agreeably to your order, I have the honor to submit the following report of the operations of the United States steamer "Westfield," under my command, since her arrival in the Mississippi River.

Upon our reaching Pass à l'Outre, on the morning of the 18th of March, I had the honor of reporting my arrival to you in person, and by your order at once proceeded to tow the mortar schooners inside the bar. From that date until the 13th day of April, we were constantly engaged towing and assisting in getting the United States ships "Mississippi" and "Pensacola" over the bar at Southwest Pass.

On the 13th, while engaged covering the Coast Survey party, who were triangulating the river, you joined us with the "Harriet Lane" and other vessels of the squadron, and ordered me to start ahead and endeavor to reach with our rifle-shot two of the rebel gun-boats that were below the point watching our motions. Two discharges of the rifle caused them to retire and join some six or eight of their squadron lying under the guns at Fort Jackson. We continued our advance, and soon brought the whole squadron within range of our 100-pounder rifle, when we again opened fire, and so successfully that (as I have since learned from prisoners) we broke the shaft of the gun-boat "Defiance," and otherwise so much crippled her that she was subsequently sunk by her crew. The forts having opened upon us, our signal of recall was made, and we returned to our station.

On the morning of the 17th, our boats, together with those of the mortar flotilla, extinguished the fire, and towed on shore a large fire-raft; and on the night of the 17th, we ran alongside to windward of another large fire-raft. We threw water from our force-pumps upon it, and materially assisted in subduing the flames.

On the afternoon of the 18th, after assisting in towing the mortar schooners to their positions, I was directed by you to proceed up the river and drive off a steamer that menaced the head of our line of mortar vessels. The steamer fled upon our

approach, but having reached a position that brought the forts in easy range of our rifle, we fired deliberately ten shots with that gun, many of which, I have reason to believe, took effect upon Fort St. Philip, the enemy at the same time throwing their rifle and 10 inch shot and shell thickly around us.

At 3.30 A. M., on the morning of the 21st, we discovered another large fire-raft, which we ran alongside of and assisted in extinguishing. From the 19th to the 24th instant, we were engaged with the rest of the flotilla steamers in supplying the mortar schooners with ammunition.

On the morning of the 24th, we got under way, in company with the flotilla steamers, led by yourself in the "Harriet Lane," together with all the vessels of the squadron, for the attack on Forts Jackson and St. Philip. At 3.45 we opened fire with all our guns upon Fort Jackson at an estimated distance of 600 yards, and remained in this position until your signal was made to cease firing and retire from action.

I am happy to inform you that during this heavy cannonade this ship was not injured or a man hurt on board, owing to the fire of the enemy, from the face of the fort we engaged, having passed over us.

It also affords me the highest gratification to express my unqualified approbation and high appreciation of the bravery and zealous attention to duty of the officers and crew of the ship, whether engaged in our unremitting duties or when under fire of the enemy's guns.

During our operations against the forts we have expended thirty-five rifle-shot and shell, eleven 9-inch shell, and seventeen 8-inch shell. Here let me state, sir, that upon the several occasions this ship has been under the fire of the forts, I have been constrained from using my very efficient rifled gun as frequently as I could have desired, in consequence of there being no more projectiles (than those we had on board) upon the station. I will also state that it was in accordance with your wishes that I was thus careful of the few shot and shell we had.

Permit me, in conclusion, to call your attention to the fact, in explanation of the seemingly small amount of ammunition we have expended, that upon all the occasions this ship has been engaged (save the action of the 24th ultimo) it was advantageous to fight her "head on," which prevented the use of all the guns except the rifle.

Respectfully submitted,

W. B. RENSHAW,

*Commander United States Navy.*

Commander D. D. PORTER,

*Commanding Mortar Flotilla, Mississippi River.*

REPORT OF LIEUTENANT-COMMANDING A. D. HARRELL, UNITED STATES STEAMER "MIAMI."

UNITED STATES STEAMER "MIAMI," }  
MISSISSIPPI RIVER, April 24, 1862. }

SIR—I have the honor to report that, in obedience to your order, I weighed anchor at half-past two o'clock on the morning of the 24th instant, and took my assigned position in the line. At the proper time opened and continued fire upon Fort Jackson until ordered to discontinue.

I have pleasure in adding that officers and men did their whole duty, and although shot and shell passed over and fell thickly around us, we sustained no injury.

Very respectfully,

Your obedient servant,

A. D. HARRELL,

*Lieutenant-Commanding.*

Commander D. D. PORTER,

*Commanding Mortar Flotilla, Mississippi River.*

UNITED STATES STEAMER "MIAMI," }  
MISSISSIPPI RIVER, May 3, 1862. }

SIR—I have the honor to report that, in obedience to your order of the 24th ultimo, which I received immediately after the action of that morning, I received General Butler and staff on board, and proceeded to Pilot Town for the boats which I was ordered to procure.

After obtaining them, I immediately started to Isle au Breton Bay, and there received on board one regiment of troops, which I landed at Quarantine Station, above and in the rear of Fort St. Philip. I continued conveying and landing troops until the forts surrendered. I then proceeded and landed seven hundred and fifty troops at New Orleans on the first instant.

Very respectfully,

Your obedient servant,

A. D. HARRELL,

*Lieutenant-Commanding.*

Commander D. D. PORTER.

*Commanding Mortar Flotilla, Mississippi River.*

REPORT OF LIEUTENANT J. M. WAINWRIGHT, COMMANDING UNITED STATES STEAMER "HARRIET LANE."

UNITED STATES STEAMER "HARRIET LANE," }  
MISSISSIPPI RIVER, April 25, 1862. }

SIR—In obedience to your order, I beg leave to submit the following report of the part taken by this vessel in the action on the morning of the 24th instant, between the United States naval forces and the batteries of Forts Jackson and St. Philip.

At 1.30 A. M., all hands were called, in anticipation of the signal from the flag-ship to prepare to get under way, which was made at two A. M. Every preparation for a move being completed, we impatiently waited the moment when our turn would come.

In the meantime the vessels of the fleet were getting under way, and forming in their respective lines, the starboard under Captain Bailey, in the gun-boat "Cayuga," leading. At 3.28 A. M., the fleet being all under way, and steaming up the river, signal was made to the steamers of the mortar flotilla to weigh anchor, and we stood up towards the forts, our duty being to take an enflading position below the water battery of Fort Jackson.

At 3.45 A. M., the forts opened on the leading ships, and immediately thereafter the mortar vessels commenced, and at 3.50, were raining a rapid and continuous fire on the enemy such as has rarely before been witnessed.

The crew were now called to quarters, and we steamed rapidly up the river to take our appointed position. Shortly after we passed the head of the line of mortar vessels, we found ourselves under the fire of the enemy, which was very hot, but most fortunately, too high. It was not till 4.20 A. M., that our guns could be brought to bear, when we opened on them with shell and shrapnel.

At 4.30 A. M., a shot carried away one of the stanchions and a portion of the railing of the bridge between the wheel-houses, the fragments of which killed one man, and seriously wounded another stationed at the 9-inch gun on the quarterdeck.

We retained our position within five hundred yards of Fort Jackson, firing as rapidly as possible, till 4.50 A. M., when the last vessel was seen to pass between the forts. The signal was then made to retire from action, and we stood down the river to our former anchorage, followed by the steamers of the mortar flotilla. At 4.55 A. M., four rockets were sent up, as a signal to the mortar vessels to cease firing, and shortly after we came to an anchor astern of them.

It gives me great pleasure to say that one and all

the officers and crew of this vessel did their duty like men, and displayed commendable coolness under a heavy fire, which they were obliged to endure for some minutes before it could be returned. My especial thanks are due to the executive officer, Lieutenant Edward Lea, who had the general superintendence of the battery; Acting-Masters Willis F. Munroe and Charles H. Hamilton, commanding the gun divisions, and Acting-Master J. A. Hannum, in charge of the powder division, which was well and rapidly served; also to Acting-Master George W. Sumner, an *élève* of the Naval Academy attached to the "Horace Beales," who volunteered for service, and gave me his valuable assistance in superintending the cutting of shrapnel, etc.

In conclusion, you must permit me to render the humble tribute of my admiration to the coolness, ability, and untiring zeal you have displayed during the arduous and perilous duty so gallantly performed for the last six days by the mortar flotilla. Such an example could not fail to inspire the confidence of those under your command in the glorious success which has attended their exertions, and which the result has proved to be so well founded.

I herewith enclose the report of the medical officer of the casualties which occurred on board this vessel.

I am, very respectfully,

Your most obedient servant,

J. M. WAINWRIGHT,

*Lieutenant-Commanding.*

Commander DAVID D. PORTER,  
*Commanding Mortar Flotilla.*

REPORT OF LIEUTENANT-COMMANDING JOHN  
GUEST, UNITED STATES GUN-BOAT "OWASCO."

UNITED STATES STEAM GUN-BOAT "OWASCO," }  
MISSISSIPPI RIVER, April 28, 1862. }

SIR—In obedience to your instructions I submit this report:

At meridian on the 12th of April, the "Owasco" being at the head of the passes, by your order I got under way to protect the steamer "Sachem," having on board the Coast Survey party, under Mr. F. H. Gerdes, while making a reconnoissance of the river. On reaching our advanced squadron of gun-boats, Commander S. P. Lee, senior officer, I reported to him that I was about to pass ahead for the purpose above indicated.

Captain Lee said the enemy were in large force, and that he would follow with all the gun-boats. As it was too late, when the "Sachem" got up to us, to work, we deferred proceeding till morning. In the meantime I advised you, sir, of the state of affairs, and next morning, shortly after I commenced work, I had the satisfaction to see you pass me with all the steamers of the mortar flotilla, which doubtless prevented much annoyance from the enemy.

Clearing the bushes with canister from our howitzers, the surveyors, Messrs. Oltmanns and Bowie, landed in one of our boats and prosecuted their work without molestation.

On the 14th, we resumed the work, and carried the triangulation well up to the forts on the right bank of the river, supported by the "Westfield," Commander Renshaw. The surveyors were landed at the point desired, in the "Owasco's" gig, under charge of Master's Mate Thomas D. Babb. As the boat shoved off I observed three of the rebel steamers within gunshot, and fearing they might fire upon our boat, I opened upon them. After firing four shells from the 11-inch gun and three from the rifled gun, the steamers moved up to the forts. At this moment some riflemen in the bushes fired at the gig-boat, without hurting any one, although an oar was struck. Mr. Babb, with perfect composure, returned the fire from his boat. The surveying party, with equal coolness, put up their signals and

took three angles, one hundred yards from the spot where they were fired at.

On the 15th, as the work had not been carried sufficiently high up on the left bank of the river, by your order I took the party up that side, followed by the "Miami" as a support.

After the surveyors had finished, finding myself within easy range of the forts, just before leaving I fired an 11-inch shell into Fort Jackson, to try their range. They fired twice in return, one of the shots passing over us and falling a quarter of a mile astern, the other just ahead of us.

Too much praise cannot be awarded Messrs. Oltmanns and Bowie for the intrepid and skillful manner in which they performed this service.

On the 16th, the "Owasco" accompanied you in your experimental trial with three of the mortar schooners in trying the ranges on the forts from the left bank of the river. This day the enemy fired about twenty shots, but without effect.

On the 17th, our boats, in charge of Mr. Babb, were employed in towing fire ships clear of the fleet.

On the 18th, at 6 A. M., we got under way, and soon received orders from you to proceed ahead of the bomb schooners, on the right bank, to clear the bushes of riflemen near the designated position of the mortar schooners. In obedience thereto, we steamed close along the bank of the river until we arrived at a smoke pipe of a sunken steamer, when the forts, at five minutes past nine, fired two shots at us, which I immediately returned from my 11-inch gun. This was followed by sharp firing from both forts.

Being within easy range of Fort Jackson, I directed my fire upon it and continued the action; twenty minutes after that the first mortar schooner opened, and after that at intervals, as fast as they could be got into position.

At 10 o'clock, I was glad to see the "Iroquois," Captain De Camp, come to my support, and after her the gun-boats, one by one. The fire of the forts was dispersed among them, and was not so severe around us, although still quite sharp.

Previous to the appearance of the "Iroquois," in the thickest of the firing, all on board the "Owasco" were much gratified at a visit from you, sir, when you came to tell us that you had asked that the gun-boats of the fleet might be sent to our support.

We maintained our position for two hours and three-quarters, until we had expended our last shell, when we retired from action by your order, having fired one hundred 11-inch shells and thirty-seven shells from our rifled gun.

We went down immediately to the ordnance ship "Sportsman"; filled up with ammunition; found there were no cartridges made; but my men cheerfully worked all night, cutting out and sewing up cylinders, and by next morning (the 19th) we were ready for action again.

Coming up with the bomb fleet, and hearing you were on board the flag-ship, steamed up to our old position, and opened fire again on Fort Jackson. Fired fifty-five 11-inch shells, and twelve from the rifled gun.

The firing from the forts was very sharp. At this time I had another welcome visit from you, and retired, at your order, as it was thought 11-inch ammunition was running short, and it was desirable to keep it for closer distance.

By your permission I crossed the river to look for an anchor I had slipped the night before; but not finding it, I returned to my old position, near the smoke pipe of the sunken steamer, and finding the three leading mortar schooners in great danger of being sunk by the enemy's fire, I delivered ten 11-inch shells to Fort Jackson, and then sought you to inform you of the fact. Having received orders to withdraw them for a time, I returned and delivered your order to Lieutenant-Commanding Watson Smith, who executed it.

On the 20th, 21st, 22d, and 23d, we were engaged in supplying the mortar schooners with ammunition—very often under fire.

On the 24th, at 3.15 A. M., in the general attack, the "Owasco" took her position—the third in your line, by order—and followed your motions.

Opened with shrapnel at 4 A. M., and continued a deliberate fire until 4.45, taking care not to fire in the direction of our ships which were passing the forts.

At 4.45, observed your signal "Retire from action," which we did.

Very respectfully, your obedient servant,

JOHN GUEST,  
*Lieutenant-Commanding.*

Flag-officer D. G. FARAGUT,  
*Commanding Flotilla.*

REPORT OF ACTING LIEUTENANT-COMMANDING C. H. BALDWIN, UNITED STATES STEAMER "CLIFTON."

UNITED STATES STEAMER, "CLIFTON," }  
NEW ORLEANS, May 1, 1862. }

SIR—I have the honor to report that, since my arrival at Pass à l'Outre, on the 18th of March, I have been employed, with little intermission, as follows: Towing the mortar vessels attached to the flotilla to the Southwest Pass, and for the succeeding two weeks was constantly engaged in assisting the larger vessels belonging to the flag-officer's squadron, viz: the "Pensacola," and "Mississippi," over the bar on which they had grounded, and in aiding the gun-boats attached to same squadron when aground in the river.

After this we were employed in making reconnoissances of Forts Jackson and St. Philip, and in protecting the officers of the Coast Survey service while they were engaged in obtaining their distances, and in driving back the enemy's gun-boats, which occasionally made their appearance outside the chain.

On the 17th of April, we were assisting in towing mortar schooners into their positions, and, during the six days of the bombardment by these vessels, we were unremittingly employed in supplying them with powder and shell and in guard duty—our nights being passed in looking after the fire-rafts which the enemy sent down against the fleet, and in towing them ashore. In this duty, I believe I may say, we were quite successful.

These various duties during the six days of the bombardment carried our vessels pretty constantly under the fire of the enemy. We have, however, been so fortunate as to escape any injury from their shot.

On the morning of the 24th, in obedience to your order, we got under way, taking our appointed station in the line of steamers under your personal command, and proceeded to within short range of the guns of Fort Jackson, and opened fire on the enemy from our two forward nine-inch guns, aided at times by our nine-inch after-pivot gun and 32-pounder forward broadside gun, using five-second shell and shrapnel. This we continued until the flag-officer's squadron had passed both forts, when, in obedience to your signal, we drifted out of range. I am happy to state that we escaped without injury.

The duties now entailed upon us were to keep a strict lookout upon the gun-boats and floating battery of the enemy, which were lying close under the guns of Fort Jackson. Until the morning of the 28th, when Forts Jackson and St. Philip having surrendered to you, we were dispatched some sixteen miles down the river to bring up a portion of the force under General Butler's command, then lying there. On the afternoon of that day this was accomplished, and we arrived in sight of the

forts just as our own flags were hoisted in place of the rebel ensigns.

I towed up a large transport ship with 1,300 troops on board, under Brigadier-General Phelps, and taking five companies of them on board the "Clifton," landed them at both forts—they receiving their possession of them from the naval officers of your squadron, then in charge of the work.

I also, under your order, placed crews aboard the two rebel steamers, then in your possession, and transferred some 250 prisoners taken from the rebel gun-boats and floating battery to the officer in charge at Fort St. Philip.

We have just arrived here, having towed a transport up the river with a large number of General Butler's troops on board, intended to garrison the city of New Orleans, now held by our squadron.

Permit me here respectfully to state that officers and crew, whether employed in the harassing duties which so constantly devolved upon us of towing and getting large vessels over the bar, or while engaged with the enemy, have behaved so uniformly well that I hesitate to particularize any one individual. During the time above referred to, neither the ship, engines, nor boilers have been for a moment out of order in any respect.

I have the honor to be, sir,

Respectfully, your obedient servant,

C. H. BALDWIN,  
*Acting Lieutenant-Commanding.*

Commander D. D. PORTER,  
*Commanding Flotilla.*

REPORT OF LIEUTENANT-COMMANDING WATSON SMITH, FIRST DIVISION MORTAR FLOTILLA.

UNITED STATES MORTAR SCHOONER "NOR- }  
FOLK PACKET," MISSISSIPPI RIVER, }  
May 3, 1862. }

SIR—On the 18th ultimo, in obedience to your order, the first division of the flotilla moved up the right bank of the river to the flag indicated by you as distant from Fort Jackson 2,950 yards, and from Fort St. Philip 4,260 yards; the head vessel securing at that point with an anchor a little off shore, and light lines from the port bow and quarter to trees. The other vessels of the division, extending in close order to the distance of 3,620 yards from Fort Jackson, were secured in the same manner.

At 10 A. M., commenced firing upon Fort Jackson, discharging each mortar at intervals of ten minutes. The forts responded, their shot and shell falling around the vessels, and one, a 68-pound shot, killing a man on board the "Arletta," and lodging under the mortar, but not disabling it. At 6.30 P. M., ceased firing, by signal from "Harriet Lane."

April 19, at 7.30 A. M., the "Harriet Lane" made signal to commence firing. Discharged each mortar, at intervals of twenty minutes, upon Fort Jackson, until 8.45 A. M., when the interval was shortened to ten minutes. A shell bursting near the main masthead disabled one man who was aloft, destroyed a halliard block, and cut two main shrouds. At 4 P. M., ceased firing, the bombardment being continued by the divisions in watches.

On the 20th, 21st, 22d, and 23d, the firing was continued by the divisions in watches, excepting during the watch from 8 to midnight of the 20th, when the whole flotilla fired rapidly, while an expedition from the squadron cut the barrier chain near the forts.

No further injuries were sustained by persons in the first division, and but little damage to hulls, rigging, or spars, besides the occasional cutting by fragments of shells.

From the 21st, the firing from Fort St. Philip

was at times annoying, and by your direction two vessels at the head of the line directed their fire upon it. On the 23d, the enemy did not reply.

April 24, at 3.30 A. M., the firing commencing between the forts and the squadron passing up the river, the whole flotilla commenced firing rapidly upon Fort Jackson. At 4.45 A. M., the squadron, with few exceptions, had passed the forts. Ceased firing by signal from "Harriet Lane." During this one hour and fifteen minutes this vessel fired twenty-eight shells, being at the rate of one in two and two-thirds minutes. The other vessels fired as rapidly. After the bombardment, on examining the vessels, all were found in condition to continue the fire or perform other service.

The heaviest charges used were twenty-three pounds, to reach Fort St. Philip, distant 4,710 yards, against a fresh wind.

Slight damage was done to the light bulwarks by the shock from the mortars but the mortar supports and the hulls below the plank sheer were unaffected.

On the same afternoon, six of the mortar vessels were sent to sea upon blockading service, and three of them, the "Arletta," "C. P. Williams," and "O. H. Lee," belonged to this division. Their quick departure and continued absence prevents my giving you the aggregate number of shells fired by the first division during the bombardment. The four remaining vessels fired 1,512 shells, using 30,994 pounds of powder.

It was not always possible to mark and register the course of each shell, because of our not having a distinct view of the enemy and the mingling of so many shells as they converged in the direction of the forts. The accompanying reports of the acting-masters commanding the mortar vessels are in a comprehensive form furnished by them, and are as full as accuracy will permit.

The following is from the surgeon's report :

Killed : James Laver, ordinary seaman, on board the "Arletta," native of Isle of Jersey ; struck by an eight-inch solid shot on April 18.

Slightly wounded, disabled : Michael Brady, carpenter's mate of this vessel, aged 32, native of New York ; struck by a fragment of a shell on April 19.

Although the enemy's fire was so well directed at times as to threaten the destruction of the vessels, the duties at quarters were performed, and the intervals of rest between watches enjoyed, with commendable coolness and composure throughout the division.

Respectfully yours,

WATSON SMITH,

*Lieutenant Commanding First Division.*

Commander D. D. PORTER,  
*Commanding U. S. Mortar Flotilla,  
Mississippi River.*

REPORT OF LIEUTENANT-COMMANDING WALTER  
W. QUEEN, SECOND DIVISION MORTAR FLOTILLA.

UNITED STATES SCHOONER "T. A. WARD," }  
MISSISSIPPI RIVER, May 3, 1862. }

SIR—I beg leave to submit to you the following report of the second division of the mortar flotilla:

On the morning of the 18th of April, 1862, my vessel was towed into position by the United States steamer "Miami" at 8.30 A. M. I anchored 3,900 yards below Fort Jackson, on the eastern bank of the river. The schooners of my division anchored astern of me in the following order, viz: "Matthew Vassar," "George Mangham," "Adolph Hugel," "Maria J. Carlton," and "Sydney C. Jones," the "Orvetta" having previously taken a position on the western bank of the river, and thus being separated from the division.

rapidly. At 8.45, we commenced firing on Fort Jackson, the shot from the fort falling in every direction around us, one of which struck so close to our quarter as to throw down some barrels of powder in the magazine by the concussion, but doing no damage. Shortly afterwards, another struck us, cutting away the forward shroud of port main rigging, passing through the wardroom, bulkhead pantry, stateroom, deck, storeroom, and extra magazine, escaping through the starboard quarter six inches above water line, doing considerable damage. I at once directed Mr. Hatch to drop the vessel down some 300 yards, which he did, followed by the three vessels lying immediately astern of me. I then went to the "Sydney C. Jones." After taking their new positions the vessels which had dropped astern recommenced firing. While lying in her former position, the "Mangham" received a shot in her port bow, which passed through her galley and lodged in the mortar bed, doing no further injury.

The vessels were now actively engaged in throwing shells into the forts, and as no intervening object obstructed our sight, we could see the effect of our shells as each one lodged in or near the forts. We continued firing all day, not even ceasing for the men to eat their meals. About 5.30 P. M., we could see heavy smoke rising from a building outside the fort, caused by the bursting of a shell, and soon after the fort was seen to be on fire in three separate places, which soon formed into one mass of flames, since discovered to have been the citadel. At 6 P. M., we ceased firing, in obedience to signal from the "Harriet Lane." At this time, we could distinguish men upon the ramparts trying to extinguish the flames.

At 9 o'clock, I received an order from you to drop down 800 yards and be in readiness to move across the river early in the morning, as you thought it likely the enemy would move his guns down the river and open on us in the morning. This we did, and nothing more of any importance occurred during the night. It is strange to say that, although the shot came around us in immense numbers, yet not one man was even wounded during the first day's engagement.

On the morning of the 19th instant, we were taken in tow by the "Clifton," and took our position in line with the rest of the flotilla, on the west bank of the river, and at 8.30 A. M., were all engaged in throwing shells into the fort. The "Hartford" moved up and anchored off her beam, but finding she was drawing the enemy's fire on the flotilla (as they fell short of her), she moved down again. The shot and shells from the forts fell thick around us, but did not do us any injury, with one exception, viz: about 10 o'clock A. M., the "Maria J. Carlton," of this division, was struck by a shot which passed through her magazine floor and out at her bottom. She immediately began to sink, and the crew, with the assistance of others, soon got most of the moveables out of her. The mortar and shells they left, as they could not remove them.

We ceased firing at 12 M., and from this time continued firing by watches, each division taking a watch. Nothing particularly important occurred during the next day, until 10.35 P. M., when the gun-boats "Pinola" and "Itasca" went up the river to cut the chain. As soon as they started, the mortar flotilla commenced firing very rapidly, and continued until 12.35 A. M., when the gun-boats returned. We continued, as usual, firing by watches until the morning of the 24th of April, when we commenced at 2.30 A. M. to fire as rapidly as possible, while the steamers passed up the river to attack the forts. We did not cease until signaled to do so by you at 5.30 A. M.

Both officers and men behaved gallantly ; and where everyone did his duty so well, it is almost impossible to award praise to any single individual.

the bombardment, the men suffered some inconvenience in getting cooked the rations that were served out to them, and their sleep was also much interrupted; but I am glad to say that not a murmur of dissatisfaction was to be heard among them. I may also mention that Acting-Master J. Duncan Graham, my executive officer, was in command of the United States schooner "Sydney C. Jones" during the whole of the bombardment, and acted to my entire satisfaction. The conduct of William Hatch and John Richards, masters' mates, during the bombardment, has also met my warmest approval—the former having sighted the mortar every time it was fired during the action; the latter having charge of the powder division, and making himself generally useful about the vessel. The only wounded in this division were two of the crew of the "Carlton," one severely, the other slightly.

Very respectfully your obedient servant,

W. W. QUEEN,

*Lieut.-Com'd'g, in Command of  
2d Div. Mortar Flotilla.*

Commander D. D. PORTER,  
*Commanding Mortar Flotilla.*

REPORT OF LIEUTENANT-COMMANDING K. RANDOLPH BREESE, THIRD DIVISION MORTAR FLOTILLA.

U. S. BARKANTINE, "HORACE BEALES," }  
MISSISSIPPI RIVER, April 30, 1862. }

SIR—I have the honor to submit the following report of the part taken by the third division mortar flotilla, under my command, in the bombardment of Fort Jackson. At 9.30 A. M., of the 18th instant, the "John Griffiths," (on board of which vessel I hoisted my divisional flag,) "Racer," and "Sarah Bruen," were taken in tow by the "Clifton," and towed into position assigned, astern of the first division, on the right bank of the river, at the following distances from the centre of Fort Jackson: "John Griffiths," 3,900 yards; "Racer," 3,940 yards, and the "Sarah Bruen," 3,980 yards. About 10 A. M., the "John Griffiths" opened fire from her mortar, and was soon followed by the "Racer" and "Sarah Bruen." At 2 P. M., the rear vessels of the first division having been advanced, the "Henry James," "Dan Smith," and "Sea Foam" came up under sail and took their positions ahead of the "Griffiths," at the following distances from the fort: "Henry James," 3,630 yards; the "Dan Smith," 3,730 yards; and the "Sea Foam," 3,850 yards. At about 2.15 P. M., they opened fire from their mortars. A constant fire was kept up by each vessel from the time of taking position until 6.37 P. M., when signal to "cease firing" was made. During the day the "John Griffiths" threw 69 shells; the "Racer," 50; the "Sarah Bruen," 61; the "Henry James," 24; the "Dan Smith," 31; and the "Sea Foam," 43.

Second day.—At 6.25 A. M., April 19, recommenced fire upon Fort Jackson from the whole division, which was kept up, each vessel firing at intervals of about ten minutes, until 8 P. M., when ceased firing. During the day, the "Griffiths" threw 92 shells; the "Racer," 88; the "Sarah Bruen," 88; the "James," 97; the "Dan Smith," 92; and the "Sea Foam," 88.

Third day.—At 4 A. M., April 20, opened fire upon the fort from the division, each vessel firing at intervals of about ten minutes. At 8 A. M., ceased firing, and at 10.13 A. M., reopened from the whole division as before. From 4 P. M. to 10.10 P. M., each vessel firing at intervals of twenty minutes. From 10.10 P. M. to 3.03 A. M., (21st,) as rapidly as possible, supporting the gun-boats cutting the chain. From 3.03 A. M. to 4 A. M., at intervals of fifteen minutes. During the day, ending at 4 A. M., the "Griffiths" threw 119 shells; the "Racer," 117; the "Sarah

Bruen," 117; the "Henry James," 113; the "Dan Smith," 119; the "Sea Foam," 111.

Fourth day.—At noon the division again commenced fire, each vessel firing at intervals of about ten minutes, ceasing at 4 P. M. At 8 P. M. reopened as before, keeping up the fire until midnight. During this day the "Griffiths" threw 50 shells; the "Racer," 50; the "Sarah Bruen," 56; the "Henry James," 55; the "Dan Smith," 55; the "Sea Foam," 47.

Fifth day.—At 8 A. M., April 22, each vessel of the division commenced fire, firing at intervals of about ten minutes. Ceased fire at noon; reopened at 6 P. M. and fired until 8 P. M., firing as before. During the day the "Griffiths" threw 56 shells; the "Racer," 46; the "Sarah Bruen," 49; the "Henry James," 40; the "Dan Smith," 67; and the "Sea Foam," 52.

Sixth day.—At 4 A. M., April 23, the division reopened fire, each vessel firing at intervals of about ten minutes, ceasing at 8 A. M. At 4 P. M., again opened fire from each vessel of the division at intervals of about twelve minutes, keeping it up until 6 P. M. During the day the "Griffiths" threw 38 shells; the "Racer," 28; the "Sarah Bruen," 36; the "Henry James," 34; the "Dan Smith," 63; the "Sea Foam," 51.

Seventh day.—At midnight, April 24, the division opened fire, each vessel firing at intervals of ten minutes. At 3.40 A. M., the guns of the fort having opened on the fleet passing up the river, the division commenced firing as rapidly as possible, ceasing at 4.52 A. M., by signal, the fleet having passed the fort. At 5.30 A. M., opened fire upon the enemy's steamers near the fort; ceased at 5.48 A. M. At 3.55 P. M., commenced again upon the fort; ceasing at 5.04 P. M. At 5.20 P. M., the division got under way and dropped down the river. During the day the "Griffiths" threw 54 shells; the "Racer," 81; the "Sarah Bruen," 67; the "Henry James," 52; the "Dan Smith," 66; and "Sea Foam," 60. The "Horace Beales," with ordnance stores, temporarily under the command of Acting-Master George W. Sumner, executive officer, was towed up to within 600 yards of the rear of the mortar vessels, and discharged her ordnance stores, as was required, with great promptness. During the bombardment she received many of the articles saved from the "Maria J. Carlton," and a ten-inch gun carriage and ammunition from the "Jackson." She also received the sick and wounded of the flotilla and several of the wounded of the squadron. Ten of the men of the "Beales," with Acting-Master Sumner, served on board the "Harriet Lane" during the engagement with the forts. The enemy's shot and fragments of shell, at times, flew about the division in all directions. Several pieces of the latter, of the size of an egg, and many smaller pieces, were picked up on board of the different vessels, but, through God's mercy, not a person was struck, nor have I a casualty of any kind to report during the whole bombardment. The "Sarah Bruen" has a hole through her foremast, which I am at a loss to account for, unless a fragment of the enemy's shell, which struck the face of the mortar at the edge of the bore, as it was about to be fired, fell into the mortar, and, being discharged, went through the mast. A little rigging cut here and there is all the damage I have to report done by the enemy.

The general effect of firing the mortars upon the vessels was to knock out the round houses forward and the light pine board bulwarks in the line of fire. The "John Griffiths" leaked more than usual during the bombardment, but has since tightened up; she has always been considered a weak vessel. The "Racer's" deck, on port side abreast of fore hatch, started from the carlines giving way, they not having been (originally) properly strengthened. The mortars show no kind of injury. The mortar carriages worked remarkably well. The only damage being (in some instances) the loss

of the feather to the eccentric axle, and the breaking of the screws that confine the socket to eccentric. These very slight injuries did not hinder the working of the mortar in the least. The screws were promptly replaced, a number of spare ones having been made. The turn-table on some of the vessels was found to have recoiled in the line of fire from an inch to an inch and a half; it was easily pressed into position and kept so by breeching. Twenty-two and a half pounds of powder were fired from the "Griffiths" at the rebel iron-clad gun-boat with no visible strain in vessel or carriage beyond that already experienced. The mortars were served equally well by the mortar crew and gun's crew, watch and watch, during the bombardment. Not a mistake or an accident occurred in loading the mortars or in filling and fuzing the shell, evincing the care and pains taken by the officers of the division in training their crews, as well as the attention, in time of action, by the latter to their duties. Notwithstanding the loss of sleep and regular meals and cooked food, the officers and men were ever ready to volunteer for any expedition or service against the enemy. And I must remark upon the cheerfulness and alacrity with which, when much exhausted, they manned their boats to keep up a proper supply of powder and shell. The acting-masters commanding the different vessels of the division gave the direction of fire from the main-mast head (from which place only was Fort Jackson to be seen) regulating the charges used as required. They kept their posts while engaged with scarce any relief, subject not only to the shock of their own mortars, but also from the one in the rear.

The conduct of the officers and the men during the bombardment is worthy of all praise. The different missiles of the enemy, flying about the division in all directions, did not distract them in the least in the discharge of their duties, nor, I may say, from their well-earned rest at the close of their watch.

Accompanying me to the "John Griffiths" from the "Horace Beales" was Assistant-Surgeon Edes, Mr. Bacon, (my clerk,) and my boat's crew. Dr. Edes had every preparation made for the care of wounded men, he remaining on board the "Griffiths" during the bombardment, ready to give his services wherever needed. Mr. Bacon acted as signal officer, and was engaged in taking notes.

I visited each vessel of the division frequently, night and day, while in action, finding the same good order in each. The minute directions given by you were strictly carried out.

I have only to add that, as the vessels and mortars are now fitted, the preparations for action and the service of the mortars made beforehand were ample, and did not require to be altered in the least during the bombardment, nor has any suggestion from the seven days' actual service been made in the way of improvement, except as a precaution, the breeching around the turn-table.

Very respectfully, your obedient servant,

K. R. BREESE,

*Lieutenant-Commanding Third Division Mortar Flotilla.*

Commander DAVID D. PORTER,  
*Commanding Mortar Flotilla.*

REPORT RELATIVE TO PRISONERS IN THE CONFEDERATE NAVAL SERVICE CAPTURED AFTER THE SURRENDER OF THE FORTS.

UNITED STATES STEAMER "HARRIET LANE," }  
FORTS JACKSON AND ST. PHILIP, May 2, 1862. }

SIR—Enclosed is a list of prisoners of war captured by me, after the capitulation of the forts, on board of the steamers "Burton," "Landes," and "Defiance," the latter of which was sunk by order of John K. Mitchell, late commander in the United States Navy. By order of Flag-officer Farragut I

send them home in the "Rhode Island," subject to the order of the department, on account of their infamous and perfidious conduct in setting fire to and blowing up the floating battery "Louisiana" and sending her adrift upon the vessels of ours that were at anchor, while they had a flag of truce flying and were engaged in drawing up the capitulation of the fort, the vessels under the command of J. K. Mitchell, with the exception of one, having no colors up at the time. These prisoners have forfeited all claim to any consideration, having committed an infamous act, unknown in any transaction of this kind. Had the "Louisiana" blown up in the midst of our vessels she would have destroyed every one of them. As it was, good fortune directed her towards Fort St. Philip, where she exploded with great force, scattering fragments all over the work, killing one of their own men in the fort, and landing a large beam close to the tent of Commander McIntosh, who was lying with one arm blown off and another broken, his knee-cap shot away and a leg broken. The surgeon in attendance pronounced it the most perfidious act he had ever heard of. The explosion was seen and heard for many miles, and it was supposed that the forts were blown up.

Enclosed is a letter from J. K. Mitchell stating that the persons mentioned therein had nothing to do with the transaction. I shall, however, carry out the orders of the flag-officer, and send them home in the "Rhode Island," subject to the consideration of the department.

I have the honor to remain, very respectfully,

DAVID D. PORTER,  
*Commanding Flotilla.*

Hon. GIDEON WELLES,  
*Secretary of the Navy.*

LIST OF CONFEDERATE OFFICERS :

Captain J. K. Mitchell, 1st-Lieutenant J. N. Wilkinson, 2d-Lieutenant W. H. Ward, 3d-Lieutenant W. C. Whittle, jr., Lieutenant A. F. Warley, Surgeon John D. Grafton, Lieutenant F. M. Harris, ex-naval officers of the United States; Purser L. E. Brooks, Gunner Wilson, Boatswain Jones, Carpenter Cherry, Captain's Clerk George Taylor, Captain's Clerk W. Clark, Chief Engineer W. Youngblood, 2d Assistant Engineer James Harris, 2d Assistant Engineer M. Parsons, 3d Assistant Engineer Theo. Hart, 3d Assistant Engineer James Elliott, 3d Assistant Engineer James Waters.

Engineers from the "Manassas"—Menzis, 3d assistant engineer; Weaver, 2d assistant engineer; Culver, 2d assistant engineer; Newman, 3d assistant engineer.

UNITED STATES STEAMER "CLIFTON," }  
NEAR FORT ST. PHILIP, May 2, 1862. }

SIR—The following officers of the Confederate States navy now held on board this vessel as prisoners of war, had no voice in the council which determined upon the destruction of the Confederate States steamer "Louisiana," on the 28th ultimo, viz: Surgeon James D. Grafton, Assistant Paymaster L. E. Brooks, Captain's Clerk George Taylor, Captain's Clerk William Clark, 1st Engineer W. Youngblood, 2d Assistant Engineer James Harris, 2d Assistant Engineer M. Parsons, 3d Assistant Engineer Theo. Hart, 3d Assistant Engineer James Elliott, 3d Assistant Engineer James Waters, 2d Assistant Engineer Orvel Culver, 2d Assistant Engineer George W. Weaver, 3d Assistant Engineer T. A. Menzis, 3d Assistant Engineer William Newman, Engineer Henry Fagin, Engineer J. H. Toombs, Engineer J. H. Dent, Gunner James Wilson, Boatswain Samuel Jones, Carpenter Virginius Cherry, Paymaster's Steward D. Porter.

I make the above statement in consequence of having learned informally that all such officers

would be paroled on a representation of the fact to you.

I have the honor to be, very respectfully, your obedient servant,

JOHN K. MITCHELL, *Commander,*  
*Late in command of the U States Naval Forces near Fort Jackson.*

Com. DAVID D. PORTER,  
*Commanding United States Naval Forces near Fort St. Philip.*

SPECIAL REPORT OF COMMANDER PORTER, COMMENDING THE CONDUCT OF THE OFFICERS OF THE MORTAR FLOTILLA.

UNITED STATES STEAMER "HARRIET LANE," }  
SOUTHWEST PASS, May 3, 1862. }

SIR—In my general report to the department, I made honorable mention of the officers commanding vessels and divisions in this flotilla, but I think there is something more due to these officers than a general notice, in which manner most every officer comes in for a share of approval, without its being specified what particular qualities entitle them to it.

To the commanders of divisions of mortar flotilla, the country is mainly indebted to the fall of Forts Jackson and St. Philip, for the latter is consequent on that of the former. I cannot express to you in sufficient terms the zeal and ability displayed by Lieutenants-Commanding Watson Smith, W. W. Queen, and K. R. Breese. They have been indefatigable in drilling their men, infusing a proper spirit into them, and carrying out my orders during the bombardment, which lasted without intermission for six days and nights. They gave themselves but little rest. I could draw no distinction between them. Neither flagged for a moment in their duty, and though they lost but few men in killed and wounded, they have been exposed to as hot a fire as the enemy were capable of showering upon them. They are the kind of men to lead our ships into battle, and I hope that the department will take such notice of their conduct as this great occasion merits.

To Commander Renshaw, Lieutenants-Commanding Guest, Baldwin, Wainwright, and Woodworth, my thanks are particularly due for the zeal they manifested on all occasions to serve, no matter in what capacity, and the condition of their vessel for service. If I have not detailed in my general report the various acts of these officers, it is not because I did not appreciate them, but because it would lengthen my report, already voluminous, intending to do them full justice on this occasion. Lieutenant-Commanding Harrell has not had the opportunity to give the same evidence of ability, though I have ever found him ready to carry out my wishes, as he says his vessel is unmanageable. He has, however, done good service, and is a zealous officer.

I have to remain, very respectfully,  
Your obedient servant,

DAVID D. PORTER,  
*Commanding Flotilla.*

Hon. GIDEON WELLES,  
*Secretary of the Navy.*

LETTER OF COMMANDER D. D. PORTER, ENCLOSING PAROLES OF OFFICERS TAKEN AT FORTS JACKSON AND ST. PHILIP.

UNITED STATES STEAMER "HARRIET LANE," }  
SHIP ISLAND, May 15, 1862. }

SIR—I have the honor to enclose the paroles of the officers captured in Fort Jackson, with the list of men remaining at the time of the surrender. The list of officers and men in Fort St. Philip must have been sent to the flag-officer, together with the list

of persons captured by the "Harriet Lane" in the steamers "Burton," "Landes," and "Defiance," under late Commander J. K. Mitchell, consisting of two hundred and fifty of the crew of the iron steam battery "Louisiana," and the Crescent artillery, composed of over a hundred officers and men. The number of men in the two forts during the bombardment was eleven hundred, but about two hundred left before the flag of truce was sent down. The rolls of the fort were handed in to the officers taking charge, but our troops taking possession a short time after everything was thrown into disorder, and it was not possible to obtain them.

Very respectfully, your obedient servant,

DAVID D. PORTER,  
*Commanding Flotilla.*

Hon. GIDEON WELLES,  
*Secretary of the Navy.*

[Parole omitted.]

CONGRATULATORY LETTER OF THE SECRETARY OF THE NAVY.

NAVY DEPARTMENT, May 10, 1862.

SIR—Your dispatch of April 30, enclosing the articles of capitulation of Forts Jackson and St. Philip, which surrendered on the 28th ultimo, after a bombardment of 144 consecutive hours by the mortar flotilla, has been received. I have also to acknowledge the receipt of the flags taken in the two forts on that occasion, including the original one hoisted on Fort St. Philip when the rebel forces declared the State of Louisiana to have seceded from the Union, which have been sent forward to the Department.

The important part which you have borne in the organization of the mortar flotilla, and the movement on New Orleans, has identified your name with one of the most brilliant naval achievements on record, and to your able assistance with the flotilla is Flag-officer Farragut much indebted for the successful results he has accomplished.

To yourself and the officers and seamen of the mortar flotilla, the department extends its congratulations.

I am, respectfully, &c.,

GIDEON WELLES,  
Commander DAVID D. PORTER,  
*Commanding United States Mortar Flotilla, Gulf of Mexico.*

COAST SURVEY REPORTS.

TREASURY DEPARTMENT, May 22, 1862.

SIR—At the instance of the Superintendent of the Coast Survey, I have the honor to transmit herewith a copy of the journal of Assistant F. H. Gerdes, United States Coast Survey, showing the services rendered to the fleet under command of Flag-officer Farragut, United States Navy, and to the mortar fleet under command of Captain D. D. Porter, United States Navy.

I am, very respectfully,

S. P. CHASE,  
*Secretary of the Treasury.*

Hon. GIDEON WELLES,  
*Secretary of the Navy.*

EXTRACTS FROM A REPORT OF ASSISTANT F. H. GERDES, COMMANDING SURVEYING STEAMER "SACHEM," TO PROFESSOR A. D. BACHE, SUPERINTENDENT OF THE COAST SURVEY.

April 13.—At daylight of the 13th of April, I again got under way and took the lead, the gun-boats of the flotilla and the naval vessels in the vicinity following the "Sachem."

The following disposition was made of my party;

1. Sub-Assistant J. G. Oltmanns and Mr. T. C. Bowie repaired on board the "Owasco," and used during the day a boat and armed crew from that vessel; they ascended the river on the west bank.

2. Myself and Assistant Jos. Harris, after leaving the "Sachem" off the Salt Works at anchor, took our own boat, with an armed crew, and ascended the river on the east bank.

3. Sub-Assistant R. E. Halter went with another of our boats and an armed crew to the Salt Works, to occupy with a theodolite the top of the chimney of the old engine building, which had been trigonometrically determined by the Coast Survey.

We succeeded in the operations, and came within three miles of the fort before night set in. The last lines of this day were observed on Fort St. Philip flagstaff.

On our return on board the "Sachem," we mapped the work and brought it up as far as we had progressed during the day.

April 14.—On the 14th of April, at sunrise, I consulted with Captain Porter, and we concluded to continue the work and to ascend the river until the positions of the hulks, which support the chain across the Mississippi could be properly determined.

A large portion of the fleet went up to the conspicuous point (which I have named Porter's Point), just two miles below Fort Jackson, and engaged the enemy to draw their attention from our boats. This, however, was only partially effected; they had probably found out the day previous that engineering operations were in progress, and now undertook to stop them. When Mr. Oltmanns passed Porter's Point, he was fired on with eight or nine rifled shot, but fortunately the whole damage consisted in breaking the blade of an oar. The fire was promptly returned, and the operations were continued. The observations were successfully continued during this day, and the mapping was completed during the evening and part of the night.

April 15.—In the morning, Captain Porter came on board, and we consulted as to the continuance. I sent Mr. Oltmanns and Mr. Bowie again up the river in the "Owasco." They ascended within one mile and a half of the lower fort, and were quite successful in getting intersections on the hulks and on the two flagstaffs of the fortifications.

They found that during the previous night all the signals which we had put up during the day before had been removed; besides, it was ascertained that a number of men were hidden in the bushes. There was hardly anywhere on the shore a footing to be got, and we had to resort to all kinds of observations, instruments and positions, some stations consisting of flags in overhanging branches, and the angles were measured below the same with a sextant, in a boat; others were chimney-tops of deserted houses, on which we mounted small theodolites, having to work our way through the roof. A few only were on *terra firma*.

April 17.—I saw and consulted with Captain Porter and the flag-officer. To the latter, I gave a copy of the map and a memorandum of distances, for which he expressed much gratification. He spoke with the highest regard of the Coast Survey, and said many kind things of the intrepidity, determination, system and dispatch of the party under my charge, and considered our services of great value to the fleet.

Captain Porter desired me to furnish him with points along the shore every 100 or 150 metres apart, on both banks of the river, for the purpose of placing the mortar vessels at given distances from the forts. This was accomplished to-day, Mr. Oltmanns and Mr. Bowie taking the west side, and Mr. Harris the east side of the river. Meantime, three more copies of the map and memorandum were finished on board and distributed to the fleet.

Several of the enemy's gun-boats came out, and both our boats were fired at repeatedly.

April 18.—Before daylight on the 18th of April, Mr. Oltmanns went on board the "Harriet Lane," and Mr. Harris on some other gun-boat, both with directions to assist in placing the mortar vessels exactly in such positions as were marked out by Captain Porter the day before, and which had been determined by the same gentlemen. Tow after tow, consisting of one of the former ferry-boats, "Westfield" and "Clifton," each with three or four mortar boats, came up, and the latter were in a short time stationed at given distances from the forts. As soon as all were in position the enemy commenced firing, and from our side the bombardment fairly commenced.

Mr. Oltmanns and Mr. Harris both carried out my instructions to the letter, and placed the mortars in the exact spot as designated by Captain Porter, at accurately known distances. They were during the whole day under fire. General Butler made his appearance in the river with 7,000 men, which he offered to the flag-officer.

April 19.—Early in the morning, I had a conference with the commander, who desired me again to send two officers to the flotilla for the purpose of moving some of the mortars to other places, and furnish them with the distances and bearings. This was done accordingly. One of the vessels on which Mr. Harris was engaged was struck by a round shot, and another vessel where Mr. Oltmanns was in a boat alongside was sunk while he was speaking with the captain. During the day, we furnished also two more charts for the fleet. In the evening, Captain Porter sent me word again to dispatch early next morning two officers for giving data. You see they kept us pretty busy.

April 20.—Early in the morning, Messrs. Oltmanns and Halter made the rounds of the mortar vessels at the request of the commander of the flotilla, and changed the position of a few, giving them again bearings and distances.

I went on board the "Harriet Lane" in the forenoon, but did not see Captain Porter, who was in his gig among the fleet. The mortar firing during the day was kept up vigorously, and I presume that 1,500 shots were sent towards the forts.

In the evening, an officer from the "Pensacola" came on board to get some information about the depth of the river in the immediate locality of the forts, and Mr. Oltmanns and myself gave him all the details that had come under our observation.

April 22.—At daylight, Captain Porter sent me a note requesting me to drop down to the Jump, and to wait for a boat which had been sent on an expedition in the rear of Fort Jackson, and to bring her up the river directly on her arrival in the Mississippi. I went down with the steamer and anchored off the upper point of the Jump, and took the opportunity to reconnoitre that passage more specially. At sundown, I sent Mr. Halter to the commander of the flotilla to report that we did not see anything of his boat, but that I would wait during the night. I received a letter from him in return, stating his fears that the boat's crew would be lost, and begging me to go in search of them, as he had his hands full of the attack that in all probability was to come off during the night. This, of course, was resolved on, and to-morrow, by sunrise, a boat will be sent for the purpose.

April 23.—At daylight, I dispatched Mr. Oltmanns, the first mate, and a crew of six men, all doubly armed and well provisioned with food and water, in the second cutter in search of the missing boat expedition, directing him to leave written notices at the mouth of the multifarious bayous, naming the route to be pursued, to hoist in his boat the American ensign, and to do anything in his power to find out the crew which must have lost their way in the labyrinth of marsh streams. Mr. Harris returned

from the fleet and brought me a message from Capt. Porter to come up and run alongside. I fired two 32-pounders as a signal for Mr. Oltmanns to return, and set also a blue signal at the fore. Calling on the flag-officer, he said he had no vessel to spare from the engagement, and would consider it a favor if I would carry some of his wounded men in the "Sachem" to the hospital at the mouth of the Southwest Pass. He further added that, as he was preparing a severe night attack with the fleet, it would seem too hard to carry those poor crippled fellows with him in the fight.

Of course I at once consented very cheerfully, and repeated that, whenever he could make use of me, I would be at his service. Meanwhile, Mr. Oltmanns had not returned from his search for the boat expedition, but I had to let him shift for himself, knowing that he would bring up somewhere safely.

At four in the afternoon, the wounded men were sent on board, two of whom had suffered amputation, and all of them in a dangerous state. At a quarter to 5, I was steaming down, having made the poor men as comfortable as I could. Mr. Harris brought the hospital physician on board, who took charge of the patients, and we sent them in our double-bunked boat on shore.

April 24.—The gun-boat "Miami" anchored alongside the "Sachem," bringing me a verbal request from Captain Porter to accompany General Butler's expedition to the rear of Fort St. Philip. I had previously sent Mr. Harris up to the fleet to see the commander and report the derangement of our engine. At 5 P. M., General Butler arrived in the "Saxon" and called on me in person, bringing me a letter at the same time from Captain Porter. I arranged with him to meet him as soon as my repairs had been made at Isle au Breton, and to send an officer with him in the "Saxon" to pilot his vessel through Pass à l'Outre. Mr. Oltmanns also came back from his boat expedition in the rear of Fort Jackson, having been within one mile and a half of the fort.

April 26.—In the morning, Captain Boggs, of the "Varuna" steam gun-boat, came on board to go with me to General Butler's ship; he had lost his vessel during the passage of the fleet past the forts on the 24th, being run into from two different quarters by iron-clad steamers of the enemy. This was a most brilliant exploit. His ship sunk with her colors flying, but not before she had crippled, burned and sunk six of the opposing steamers.

In the afternoon, I got under way, the machinery working well forward. We dropped anchor alongside the "Harriet Lane," and I had a conference with the commander. He sent his and other engineers to examine the "Sachem's" machinery, when all appeared right.

April 27.—We got under way after sunrise and stood off Pass à l'Outre, and brought over the bar 15 feet. At noon, we arrived off Sable Island, where we found General Butler in the steam transport "Mississippi." I called on him and had a long conversation respecting the coast. At 2 o'clock, he came on board the "Sachem" and I took him to the rear of Fort Jackson; from thence he took a boat up to the Quarantine, using one of the smaller bayous for his passage. I dispatched Mr. Harris at once to stake out a four-foot line along the coast, as the general intends to make an experiment with his rifled guns on the forts from here. We also ascertained the distance by bearings on Forts St. Philip and Jackson. Mr. Halter reported again to me, and was sent out at 8 o'clock in the evening to stake out the boat channel to the Quarantine with lamps, so that troops might be conveyed there during the night. He returned at 2 o'clock, having successfully performed the task. Four hundred men were sent in safety during the night, and the garrison at the camp of the Quarantine now consists of one full regiment. In the morning, the captain

of the gun-boat "Miami," which was aground close by the "Sachem," sent on board requesting assistance. I ran ahead of him, sent him a nine-inch hawser, and got him afloat by 8 o'clock in the morning. In the afternoon, I sent Messrs. Oltmanns and Harris to Fort Bayou to put up a signal—Mr. Halter having found out in the morning that both signals at this place and at Raccoon Point were lost. While the boat was away, at 2.30 P. M., both secession flags at Forts Jackson and St. Philip were hauled down. The most intense excitement followed. I saw the "Harriet Lane" and three other steamers, with a flag of truce on the fore, steaming up to the forts, and directly afterwards saw a large steamer of the enemy enveloped in flames. This proved to be the new iron-clad battery "Louisiana;" she burned entirely down. At about quarter before 3, her magazine exploded with a crash and shock the like of which I never witnessed. The cloud of smoke rose to an estimated height of at least six hundred feet, and pieces of the wreck could be seen flying in the air very distinctly. At 3 o'clock, the "Harriet Lane" came up, and, after the firing of one gun, I had the inexpressible delight of seeing the stars and stripes waving once more over Forts Jackson and St. Philip. I fired a salute directly, and gave the information to other vessels near. I sent a recall for my party, there being no further use to prosecute the work here, and Captain Porter had expressed a desire that I should join him at the forts as soon as they were ours. In the evening, General Williams came in the "Miami," and when I communicated the news, the cheering, "Yankee Doodle" and "Hail Columbia" it seemed would never end. At 11 o'clock P. M., we got under way and steamed towards Pass à l'Outre.

April 29.—We crossed the bar at 6 A. M. with fifteen feet, half-tide, running the north side of the "middle ground" again as before. We passed the forts early in the afternoon. At 4 o'clock, I took the commander of the flotilla over to Fort Jackson, my officers having also arrived in a separate boat. We inspected closely for a couple of hours the damage done by the mortars, and I cannot understand to this minute how the garrison could have possibly lived so long in the enclosures. The destruction goes beyond all description; the ground is torn by the shells as if a thousand antediluvian hogs had rooted it up; the holes are from three to eight feet deep, and are very close together, sometimes within a couple of feet; all that was wood in the fort is completely consumed by fire; the brick-work is knocked down; the arches stove; guns are dismounted; gun carriages broken, and the whole presents a dreadful scene of destruction.

April 30.—Early in the morning I received a communication from the commander requesting me to await here his return from New Orleans, where he goes to-day in the "Harriet Lane."

I also hear that a gun-boat is going north, and I conclude therefore this report, to send by the same.

Allow me to add a few words to express the high gratification which the gallant and able deportment of my officers has given, not only to myself, but, I have reason to believe, to everybody in the fleet, and to the general of the land forces. I hope you will say that we have done our duty.

Very respectfully, your obedient servant,

F. H. GERDES,  
Assistant United States Coast Survey.

REPORT OF JOSEPH HARRIS, UNITED STATES  
COAST SURVEY, OF SOME OF THE INCIDENTS  
THAT CAME UNDER HIS NOTICE AND OF  
HIS OBSERVATIONS AT THE FORTS, ETC.

SOUTHWEST PASS, MISSISSIPPI }  
RIVER, May 4, 1862. }

SIR—While engaged in the survey of the injuries received by Fort Jackson during the bombardment

and the passage of the fleet, several incidents came under my notice, which, at your request, I have now the honor to submit to you in writing.

While waiting for the boat to take us off, on the last day on which we were engaged on the survey, Mr. Oltmanns and I fell into conversation with some men who had been in the fort as part of the garrison. One of them, who said he was a New Yorker, particularly informed us—a reliable, intelligent man, from the moderation of his statements—and I think his information well worthy of note.

I shall merely record his statements, as the conversation on our part, which drew forth information on the points where we especially desired, is not necessary to the understanding of them, and this communication is likely to be very long without the introduction of any irrelevant matter.

General J. K. Duncan had command of both forts, and Colonel Higgins, who some years ago was an officer of the United States navy, had the immediate command of Fort Jackson. Colonel Higgins has the credit of being a most brave and vigilant officer.

For forty-eight hours my informant thought Colonel Higgins had not left the ramparts, and never seemed in the least disconcerted when the bombs were falling thickest around him.

A large proportion of the forces inside the fort were northern men; and there were also many foreigners. The party that seized the fort early in 1861, was a company of German Yagers, and there were a number of Irish also. In all there were some 600 or 700 men in the fort at the time of the bombardment. The northern men were mostly sent down at an early stage of the proceedings, and I imagine most of them volunteered, hoping in that way to avoid suspicion, and perhaps not have to fight against the government after all.

(Colonel Higgins had no expectation of being attacked; that is, he thought no fleet could be brought against him sufficiently strong to risk an attack.)

There was a company of sharpshooters attached to the forces, under the command of Captain Mullen. They numbered about two hundred, and were largely recruited from the "riffraff" of New Orleans. They scouted so far down as eight or nine miles below the forts, and brought nightly reports to Fort Jackson, traveling by the bayous or passes on the southwest side of the river. The main body, however, lay in the edge of the woods below Fort Jackson, about a mile and a half from it. From here they fired on the boat that pulled up under that shore on the 14th. The grape and canister shot that the "Owaseo" threw into the bushes made their berth uncomfortable, and they broke up their camp, came into the fort all wet and dragged, having thrown many of their arms away, and swore that they would go to New Orleans; and they went.

My informant voluntarily gave the credit of reducing the fort to the "bomb fleet." The fort was so much shaken by this firing that it was feared the casemates would come down about their ears. The loss of life by the bombs was not great, as they could see them coming plainly and get out of the way; but the effect of their fall and explosion no skill could avert.

About one shell in twenty failed to explode, even those that fell in the water going off as well as the others. It is well worth noting that the bombs that fell in the ditch close to the walls of the fort, and exploded there, shook the fort much more severely than any of those that buried themselves in the solid ground.

The firing was most destructive the first day, and the vessels lying on the northeast side of the river, which were in plain view of the forts, made much the most effective shots. The bomb vessels lying on the other side of the river were at all times

totally invisible, the best glasses failing to distinguish their bush tops from the trees around them.

During the bombardment the only guns that were much used were the rifled guns, of which there were three, and the four 10-inch columbiads and Dahlgren 8-inch guns, eight in number. The mortars (in the fort) fired occasionally. One of the rifled guns, mounted on the fort proper before the bombardment, was sent two days before the fire opened to Island No. 10.

One of the rifles in the water battery was originally one of the barbette guns, a 32-pounder. It was sent to New Orleans to be rifled, and a week after the second one was sent; but the first, on trial, proving a failure, the second was not changed.

The large columbiad in the water battery was made somewhere in Secessia, but exactly where my informant did not know.

The fort was in perfect order when the bombardment commenced, it having always been very strictly policed, and the dirt, which now disfigures everything, is the accumulation of a few days.

The water did not enter the fort until the levee had been broken with bombs, and during the summer of 1861, when the Mississippi was even higher, the parade ground was entirely dry. There was very little sickness in the fort, the water probably not having stood long enough to create miasma.

The discipline in the fort was very strict; but what seemed to be felt more than the strictness was the bringing in of very young and entirely inexperienced officers, who were placed in command of others much their superiors in knowledge.

Suspected men were closely watched, and the punishment for improper talk among them was to tie a rope around the offenders and let them float in the stinking ditch.

The impression we derived from this part of the conversation, however, was that the fort was very well governed, and that the man who was speaking had not often come under the displeasure of the authorities, for he was not eloquent on the subject of his wrongs.

The chain, as first stretched across the river, was quite a formidable obstacle. The chain was brought from Pensacola, and was a very heavy one. It was supported by heavy logs, 30 feet long, only a few feet apart, to the under side of each of which the chain was pinned near the up stream end. The chain was kept from sagging down too far by seven heavy anchors, from which small chains ran to the main chain.

These anchors were buoyed with can-buoys taken from Pilot Town. In a few months a raft formed on the upper side of this chain which reached up to the forts, and its weight swept away the whole obstruction, and went to sea, carrying the buoys with it.

It was then replaced by the lighter chain, buoyed by hulks there, three weeks ago. Two of the large can-buoys were placed in the magazine in the water battery. The night that Flag-officer Farragut's fleet passed up, Colonel Higgins was so sure of destroying it that he allowed the first vessel to come up with the fort before opening fire, fearing that they would be driven back prematurely and escape him. When they succeeded in passing, he remarked: "Our cake is all dough; we may as well give it up."

During this engagement a Captain Jones, from the back country, had charge of those casemate guns which were firing hot shot. He depressed the muzzles of his guns very considerably, fearing to fire too high, and being desirous of working his guns vigorously had them run out with a jerk, the consequence of which was that the balls rolled harmlessly into the moat, and the guns blazed away powder and hay-wads at a most destructive rate.

This continued until some of the officers on the ramparts, observing how much his shot fell short

told him of it. He then commenced operations on one *particular vessel*, which he kept at until some one informed him that he was devoting himself to one of their own chain hulks.

The enemy's gun-boats did not come up to the expectations that were formed of them. The "Louisiana" especially, was very much relied on, but her crew of 200 men were drunk at the time that they should have done their duty best. I could not find out anything about her from this man, as he had never been aboard of her, and did not believe the exaggerated stories that were told here about her.

The small loss of life in the fort is due, to a great extent, to the fact that the men have been carefully kept below, only the guns' crew being allowed out of shelter. The "New Yorker" was a powder-passer for the battery in which the rifled gun and the large columbiads of the main fort were, and, therefore, had a good opportunity of seeing what went on, they being in pretty constant use.

One bomb broke into the officers' mess-room while they were at dinner, and rolled on the floor; as it lay between them and the door they could not escape, but all gathered in a corner and remained there in terrible suspense until it became evident that the fuse had gone out, and they were safe.

On the first night of the firing, when the citadel and outhouses were all in flames, the magazine was in very great danger for some time, and a profuse supply of wet blankets was all that saved it; there was great consternation that night, but afterwards the garrison got used to it, and were very cool. A bomb broke into the secret passage cut in the fort. One of the soldiers went into it some distance when he was discovered by General Duncan and ordered out. The passage was then filled up and a guard placed over the entrance to keep every one away from it. This was told me by Major Santelle, commandant of the fort.

Fort Jackson mounted 33 32-pounders on main parapet, 2 columbiads on main parapet, 1 rifle gun on main parapet, 2 columbiads in 2d bastion, 1 9-inch mortar in 2d bastion, 1 columbiad in 3d bastion, 2 8-inch mortars in 3d bastion, 8 32-pounders in northwest casemates, 6 32-pounder guns in northeast casemates, 10 short guns in bastion casemates, 2 brass field pieces, 2 rifled guns in water battery, 1 10-inch columbiad in water battery, 1 9-inch columbiad in water battery, 3 32-pounder guns on outer curtain—75 guns in all.

I am not positive about the calibre of the guns. Those that I called 32-pounders had a calibre of 6.4 inches, and I am not quite positive that there are 10 short 32-pounder guns in the bastion casemates, though such is my recollection. Of these guns four were dismounted, but I could not see that the gun proper was injured in any case; of the gun

carriages eleven were struck, several of them being entirely destroyed; and of the traverses no less than thirty were injured. A large proportion of the last injured were on the western side of the outer curtain (where only these guns were mounted), twenty out of thirty-nine being more or less injured.

The ramparts of the fort proper were very severely damaged on every side; but particularly on the two northern ones; there has been great patching with sand bags needed; several of the entrances from the parade ground under the ramparts are masses of ruins, some of them being one-third choked up with debris.

The casemates are cracked from end to end; one of the bastion casemates has the roof broken through in three places; another in one place, and its walls are so badly cracked that daylight shines through very plainly, the cracks being about four inches wide.

The entrances to the casemates are nearly all damaged, the roofs cracked and masses of brick thrown down or loosened. All the buildings were destroyed by fire or bomb-shells, the two western bastions and the citadel being completely burned out. The walls of the citadel are cracked in many places very badly.

Eighty-six shot and splinters of shell struck its faces. The amount of damage here reported would hardly be credited by any one who had taken a casual survey of the premises, and I myself should have considered it exaggerated if I had read it after passing through hastily the first time. After careful examination, however, the impression left on my mind is of a place far gone on the road to ruin, which will stand but little more before it will come down about its defenders' ears. Everything about the fort appears to have started from its place, some hardly perceptible, others so much that it would be hard to find where the proper place is.

I do not profess an acquaintance with such matters, but it looks to me as if the whole structure would have to be demolished and rebuilt, if the government ever intend to fortify the site again.

I have thus, sir, hastily thrown together the more important part of the information I was able to collect; had my time been more extended I might have been able to gather more of the incidents of the siege; and had I supposed it desirable to reduce it to writing I might have obtained a fuller account from those I did question; but my conversation was merely to gratify my own curiosity and pass away an unoccupied hour. Hoping that you may find this communication of some value, I remain,

Very respectfully, your obedient servant,

JOSEPH HARRIS.

F. H. GERDES, Esq.,  
Assistant United States Coast Survey.

## CHAPTER XX.

### A BRAVE OFFICER'S MORTIFICATION.—HISTORY SET RIGHT.

**A**DMIRAL FARRAGUT says in a communication made in April, 1869: "Historians are not always correct; for my own part, I maintain the conviction that whatever errors may be made by the hands of historians and others, posterity will always give justice to whom justice is due."

This is true, and in no case has it been more clearly demonstrated than in that of Admiral Farragut himself, who reaped the highest honors that could be won in the Navy, without a dissenting voice; and who, as time passes, will only gather more laurels to surround his monument and be handed down to posterity as the most famous Admiral of the American Navy.

Farragut received so many honors himself that he could well afford to spare to those who served under him, any that may have been withheld from them by accidental omission or otherwise. He leaves it to posterity to do justice where justice has not been awarded, and therefore we give a piece of history not generally known, and which should be published in authentic form.

There was no braver officer in Farragut's fleet than Captain Theodorus Bailey, who led the first division at the passage of Forts Jackson and St. Philip. Bailey had that dashing courage which ought to delight the eye of any commander-in-chief, and no man was ever more pleased with the conduct of a subordinate than was Farragut with Bailey all through the several battles, even up to the levee of New Orleans. There, again, Bailey showed the great courage he possessed by volunteering to face a howling mob, and carry Farragut's demands to the mayor of the city for its unconditional surrender. This was more than brave conduct, it was sublime, for he and his companion, Lieutenant Perkins, had to force their way, unarmed and unguarded, through a fierce

crowd that might at any moment tear them to pieces.

Farragut had been so much pleased with Bailey's coolness and daring during the rapid and successful events that had taken place within a few days, that he determined to make him the bearer of dispatches to the seat of government, and when the reports were all ready Bailey embarked in the "Cayuga," (the vessel he had so gallantly led through heavy fire and smoke), and started on his way down the Mississippi bound for Washington City. Stopping to communicate with the fleet at Forts Jackson and St. Philip, he received the rebel flags that had flown over those works and took them on with him as trophies.

Farragut had written his report of the affairs at the forts in full at New Orleans, and this Bailey aimed to deliver as soon as possible.

He went on his way home perfectly posted, as he supposed, in all that had occurred, and ready to give the Department a clear outline of the battles before the Secretary could have time to wade through the mass of reports that were sent on together.

On Bailey's arrival at the Navy Department he was received with great enthusiasm by the Secretary of the Navy and every officer and man connected with the service, all of whom listened with bated breath to his vivid recital of scenes fraught with danger and romance, until nothing more was left to tell.

While he was stating the history of events, Senator James W. Grimes (the eminent statesman, and friend of the Navy), entered the Secretary's room, and listened with the others. When Bailey had finished, the Senator said "Come with me, and some one bring the trophies," pointing to the Confederate flags. "The account of this great battle must be told on the floor of the Senate."

and they started for the Senate Chamber, the Secretary of the Navy being left to overhaul the despatches.

On the arrival of Senator Grimes with Captain Bailey, on the floor of the Senate, the latter was received by Senators with the wildest enthusiasm. Members of the House rushed into the Senate Chamber as soon as they heard the news, and the floor was packed. Bailey was the hero of the hour, and was congratulated by all who could get near him. He told the story of the capture of the forts and city in his own simple way, and it carried conviction to every listener.

occurred it is impossible to conceive, and it can only be surmised that Farragut, in the excitement and hurry of the moment, sent the first order of battle to the Secretary of the Navy, instead of the one which was last issued to the fleet.

Secretary Welles and those about him at once detected the difference between Farragut's report and Bailey's recital of the passage of the fleet, and the impression was left on the minds of all, that Bailey was disposed to obtain more credit than was due him. They could not have known him well, for he was truthful as he was brave,

CAPTAIN THEODORUS BAILEY (AFTERWARDS REAR-ADMIRAL).

Congress is an impulsive body, and some of the members of the House of Representatives went back to the House to prepare a resolution giving Farragut and Bailey a vote of thanks on the spot, while the Senate, in the enthusiasm of the moment, was about to do the same thing. An hour or more had passed away while the Senators were listening to Bailey's account, during which time Secretary Welles was employed in reading Farragut's report. It was not a long one, but did not clearly mention the fact that Bailey had led the fleet, or at least show it on the plan. Why the omission

and although naturally somewhat exalted at the important position he filled at the passage of the forts, nevertheless he related it all in the simplest and most unpretending language.

Secretary Welles, on reading Farragut's report, lost no time in writing a note to Senator Grimes, and sending it off with all dispatch. It read, "Don't take any steps resulting from Captain Bailey's account of the passage of the fleet by the forts. There is a discrepancy between his report of the affair and that of Flag-officer Farragut, which must be inquired into."

Senator Grimes had just taken the floor, and was eulogizing the brilliant victory that had been reported, when Secretary Welles' note was put into his hand. He was taken all aback on reading it, and after finishing its perusal, he held up his hand. "Stop," he said, "we are going too fast," and he handed the note around the Senate. Senators, after reading it, returned to their seats and took up some matter quite foreign to the one before them, and the proposed resolutions were so completely killed that nothing on earth could have resurrected them; no one in that Senate seemed to take the least interest in the New Orleans matter, and Bailey sat on a reserved seat in the rear of the Chamber, wondering what it all meant.

In ten minutes more he would have been the recipient of a vote of thanks in connection with the flag-officer—the highest honor he could have hoped for—and he likely would have been made the next Rear-Admiral on the list.

Senator Grimes, in the kindness of his heart, went to him and showed him Mr. Welles' letter, and told him that he had better go to the Department at once and set the matter right, that it was useless to remain in the Senate, that nothing more would be done, and Bailey went out crushed to the earth with mortification. How he ever got to his lodgings he never knew; he was a proud man, and his heart almost broke at the idea that he was suspected of making a false report.

The truth came to the Department a month or two afterwards, but Bailey only benefitted by it so far that his story was believed.

Farragut received a vote of thanks, but Bailey was left out except on the general vote which included all the officers and men.

This event was not generally known in the service; or, if known, not fully understood, and it was not until 1869, seven years after the action, that the whole matter was rectified.

Then the correspondence which took place between Farragut and Bailey became part of the records of the Navy Department, and as it is due to both those officers that this correspondence should be fully known, and as it is a part of the history of the war, it should appear in this narrative. The reader will see at a glance that Captain Bailey was a clear-headed writer as he was a clear-headed fighter, and places himself clear on the record. Why he should have remained silent so many years under an injustice he should have corrected at once, no one can tell, but likely it arose from a disappointment which led him to believe there was no disposition on the part of the Secretary to do him justice. It was not until he was im-

portuned by his friends to have the matter set right, that he consented to draw Admiral Farragut's attention to the subject.

Farragut himself had most likely forgotten all about his report, and as Bailey had failed to notice the discrepancy therein just after the affair occurred, he regarded it as out of place to open up a discussion at so late a date, and when his first report had become a matter of history. As soon, however, as convinced by Bailey of his mistake, Farragut rectified it, and placed the (then) Rear-Admiral's request on the records of the Navy. This every officer is justified in claiming when he has performed a gallant act without recognition.

It is not only due to history that this should be done, but also to the family and friends of those who served so faithfully through the war of the rebellion. Bailey's misfortune in this mistake was that the error stood recorded so long without correction. He should have had it rectified at once, for his position in the Navy was materially affected by it.

#### HISTORY SET RIGHT.

The following correspondence is reproduced from the files of the Navy Department. We publish it in justice both to the truth of history and to the reputation of those gallant officers whom it most concerns.

REAR-ADMIRAL BAILEY TO ADMIRAL FARRAGUT.

WASHINGTON, D. C., April 1, 1869.

MY DEAR ADMIRAL—I feel compelled to call your attention to an oversight of which I spoke to you some time since, and which has afforded me and other officers the keenest annoyance, by historical statements growing out of the omission to make the desired correction.

You recollect that when the "Colorado," under my command, was found (after lightening her) to draw too much water to be got over the bar into the Mississippi River, I applied to you for the command of a division of gun-boats, and coveted the honor of leading, under your orders, the attack on New Orleans and its defences. Having been assigned by you to the command of a division of your fleet, with your concurrence, and at the request of Commander S. P. Lee, I hoisted my divisional flag on board the steam sloop-of-war "Oneida," commanded by him. On the 20th of April, 1862, you issued a General Order, with a programme directing the fleet to pass the forts and ascend the river in two columns abreast. You, in your flag-ship, the "Hartford," at the head of one column, and I at the head of the other. About this time Commander Lee expressed a regret that he had invited me to lead my division in his vessel, the "Oneida," alleging as a reason that I would get the credit for what might be achieved by his vessel. Lieutenant-Commanding Harrison immediately begged me to hoist my divisional flag on board of his little gun-boat the "Cayuga," and give him a chance to lead the division, which, on going on board of your flag-ship and stating the facts, you kindly consented to my doing; and on giving the gallant Harrison the opportunity he sought, the "Oneida," Commander Lee, was assigned a position further astern. After the

chain and booms, constituting the enemy's obstructions, were cut by Captain Bell and Lieutenant Caldwell, it became apparent that if the fleet went up in two columns abreast, according to your written order and programme of the 20th of April, the parallel columns of vessels would likely get foul of the obstructions on either side, and the whole fleet be thrown into confusion under the fire of the enemy's forts, especially as you had determined to make a night attack (two o'clock in the morning). Therefore, with your proverbial foresight and sagacity, you ordered me to get my division of eight vessels under way as soon as the dusk of the evening should obscure the movement from the enemy, and anchor them, line ahead, near the east bank, and gave me a further verbal order, directing me that when the signal should be made (two red lights) from the "Hartford," to lead up with my division and to receive but not answer the fire of Fort Jackson (which I was directed to leave for you to take care of when you should come up, as you expressed it, "I will take care of Fort Jackson"). I was then to open on Fort St. Philip and pass it; but you directed that in case at any time you should come up in the "Hartford," we should leave room for you on the port or west side. I accordingly passed up at the head of my division (in the "Cayuga" receiving but not returning the fire of Fort Jackson. After passing the obstructions I ordered the helm put a-port and led close to the levee, and under the guns of Fort St. Philip, thinking that the guns of that fort would be trained and sighted for mid-river, and that they would consequently overshoot me (which they did, their shot and shell riddling our masts, spars, sails and rigging, with comparatively little damage to the hulls). At this time something occurred to the "Pensacola's" machinery, which caused a detention of the vessels of my division astern of her. Losing sight of them, we in the "Cayuga," alone encountered the rebel iron-clads "Louisiana" and "Manassas" and their flotilla of gun-boats, and maintained unaided a conflict with them, until Boggs in the "Varuna" came up, and after delivering a broadside, which came into the "Cayuga" as well as into the enemy in conflict with us, he passed up the river out of sight. The "Oneida," Commander Lee, came up soon after and fired into a steamer that had already surrendered to the "Cayuga" (being her third prize). I then ordered Lee to go to the assistance of Boggs of the "Varuna," then engaged with two of the enemy's steamers up the river, which had been drawn off from their attack on us of the "Cayuga," to follow and head off Boggs in the "Varuna." After seeing our ("Cayuga's") third prize in flames, we steamed up the river and captured the Chalmette regiment, encamped on the west bank of the river opposite the quarantine hospital. This rebel regiment of infantry I had the honor to hand over to you for your severe contest with the forts and fire-ships below.

To give a history of all the incidents of the battle within my observation or the part of which each vessel of my division took, would make this communication too long.

The great object of this letter is to call your attention to the fact that in the hurry of making up your dispatches after the battle, you sent home the written order of the 20th of April, which has been published and has passed into history, instead of your verbal order of the 23d, which was the one in accordance with which the fleet passed up the river, and the battle was fought.

This error has resulted in an inextricable historical muddle, as the history of the battle has been written on the basis of the published programme of April 20th, never carried out; the formation and position of the attacking force being therefore en-

tirely misunderstood by the historians. One (Rev. Mr. Boynton's) history not even mentioning me, although it did those of officers commanding vessels under me. My name was merely inserted (as commanding a division) at the instance of a friend, who discovered the omission too late to make a further correction. The resolution of the United States Senate of June 6, 1862, and accompanying documents, of which two thousand were printed, perpetuates the error of our passing the forts in two columns abreast. Mr. Greeley in his "American Conflict," and other authors, are led into the same misstatements. "Lossing's Pictorial History" erroneously describes the "Cayuga" as retiring from the fight on account of her damages, whereas she was continually in action notwithstanding she was much cut up with forty-two shot holes. The "Varuna," which had passed us while heavily engaged, went up the river and drew off three of the "Cayuga's" assailants. The fight of the "Varuna" with two of which is treated as the great event of the battle, while the leading up and heavy single-hand fighting of the "Cayuga" (Harrison's gun-boat), her taking the surrender of three enemy's steamers, the Chalmette regiment of infantry, and cutting the telegraphic communication between the forts and New Orleans, and other circumstances are not mentioned. Now, as I do not wish to be compelled, even in justice to myself, or the officers of my division, to go into the mode of correcting history by pamphleteering or newspaper articles, now so common, I must ask of you to correct this error, which I know you will not hesitate to do, seeing how much annoyance it is giving your friends and followers; or, if you still have any delicacy in doing this as you appeared to have when I spoke to you before, in consequence of a regulation of the Department that you seemed to consider in the way, may I ask if you see any impropriety in my requesting a Board of Inquiry, in order to get the facts on record, since the truth of history, my duty to my officers, and to my family, requires that I should see it done while I am here to do it.

I have the honor to be, respectfully, your obedient servant,

THEODORUS BAILEY,

*Rear-Admiral U. S. Navy.*

To Admiral D. G. FARRAGUT, *U. S. Navy.*

ADMIRAL FARRAGUT'S REPLY.

NEW YORK, April 3, 1869.

MY DEAR ADMIRAL—I have received your letter of the 1st, and am really at a loss to understand how you, or even historians can take the views you express in relation to the part in the memorable fight in the Mississippi in 1862.

I have just re-read my report of May 6th, and your two reports following, and cannot conceive how you could be more prominently mentioned to the Department.

In the former, you are reported as "leading the right column in the gun-boat "Cayuga," as having "preceded me up to the quarantine station," and as having "captured the Chalmette regiment," and every possible credit is given you for the manner in which you conducted your line, and preceding us to attack the Chalmette forts.

As to historians, I can, of course, do nothing. I have read but one account to which you allude (Dr. Boynton's), and that in reference to Mobile Bay, in which several mistakes occur, going to prove that historians are not always correct.

I do not see how it is possible for me to give you greater credit for your services than is embodied in that report where your name is always prominent; but if you think that full credit has not been done you, which I confess, I regret to learn, you

have, of course, a perfect right to make your appeal to the Department; for my own part, I always maintain the conviction that whatever errors may be made in the records of historians and others, posterity will always give justice to whom justice is due.

Very truly, yours,

D. G. FARRAGUT, *Admiral*.

Rear-Admiral T. BAILEY, *U. S. Navy*.

P. S.—By referring to pages 334 and 335-337, of Draper's history, you will find that he gives you all the credit claimed by your own report, as well as that given you by mine.

D. G. F.

#### RESPONSE OF REAR-ADMIRAL BAILEY.

WASHINGTON, D. C., April 27, 1869.

MY DEAR ADMIRAL—I have received and carefully read your letter of the 3rd, in reply to mine of the 1st instant, and admit all you say about prominently mentioning my name to the Department. But your remark: "As to historians, I can do nothing." This is so; but the difficulty is, that the historians derived their erroneous account of the battle from your report of the 6th of May, 1862, and from the diagram which you sent to the Department, as the true order of sailing into the battle with the forts. Those who have written on the subject are not to be blamed for using the official reports of the occurrences; but in seeking for the correction of that report, I hope to prevent similar error and confusion in the future. I do so with the greatest reluctance, as a duty to the officers under my immediate command, and to myself, and I appeal to your sense of justice whether I could do less.

You state, "I have just re-read my (your) report of May 6th, and your (my) two reports following, and cannot conceive how you could be more prominently mentioned to the Department." In the former, you are reported as leading the right column in the gun-boat "Cayuga," and as having preceded me to the quarantine station.

How could there have been a "right" and left column practically, when I led my division to the attack and passage of the forts an hour before you lifted anchors in the "Hartford," and your center division? What I did was done by your orders and inspiration, and to you the world has given the credit of the attack and its success, as fully as it gave to Lord Nelson the credit of the battle of the Nile; but did it detract from his glory that the report of the battle described how it was fought, and the exact position of his own vessel, and those of his subordinates?

This matter has been the subject of much discussion among officers then commanding vessels in my division; all say that no vessel of your center division came up abreast of, or lapped their vessels. Practically, the effect of your verbal order was, to divide the fleet into four divisions, viz:

1st. The mortar fleet, Commander Porter.

2d. The first division of the gun-boats, under my command, to which was added the two sloops-of-war, "Pensacola" and "Mississippi," of which the gun-boat "Cayuga" (with my division flag) was the leading vessel.

3d. The center division, with your flag on the "Hartford," and

4th. The rear division, bearing the flag of Captain H. H. Bell.

The first, center, and rear divisions went up to the attack in single file, or line ahead. I went up at the head of my division at 2 P. M., or as soon thereafter as it took the "Pensacola" (the next vessel astern of the "Cayuga"), to purchase her anchors—supposed to be about twenty minutes. You followed without lapping the sternmost vessel of my

division, and the division of gun-boats commanded by Captain Bell followed in the wake of your division. The fact practically was that the first division, the mortar fleet, covered the advance, the second was the vanguard, the third the main body of the fleet, and the fourth the rear, and that the advance being made up a river and line ahead, the diagram does not give any idea of the action other than to produce confusion and error. How could it be otherwise when no vessel of the third division lapped any one of the second?

I enclose a copy of this (to us) unfortunate diagram, as attached to your report of the battle, which you will notice places the "Cayuga" (my flag gun-boat) third in line of my division, whereas, according to your own statement (of two columns abreast), that gun-boat should have been recorded as first in line, leading. I would ask of your friendship and your fairness whether this diagram gives the faintest idea of the action, and whether if the names of the vessels were altered, it would not apply equally well or better to many other battles.

As an evidence how far the "Cayuga" was ahead of the rest of the fleet the first news received at the North is announced in the *New York Times* of Sunday, April 27, 1862, thus: "An important report from the rebels.—One of our gun-boats above Fort Jackson and San Philip. Washington, Saturday April 26th. The *Richmond Examiner* of the 25th, announces that one of our gun-boats passed Fort San Philip, sixty miles below New Orleans on the 24th. The report was telegraphed to Norfolk, and brought to Fortress Monroe under a flag of truce, and received from there to-day by the Navy Department."

The next rebel telegram announced the arrival of the fleet before the city. The "Cayuga" in the interval had captured the Chalmette regiment, five miles above the forts, and cut the telegraphic communication, so that the fleet were not again reported until they arrived opposite the city.

Now, my dear admiral, you have entirely misconceived the object of my addressing you. It is not to complain that you have not mentioned prominently in your dispatch, but it is because in your report of the battle, dated May 6th, and the accompanying diagram, you do not give the circumstances of the fight as they occurred, but those which would apply to your former plan which was abandoned. From that report, the reader would infer that the fleet went to the attack of the forts in two columns abreast, when it was done in single column (line ahead)—that the "Hartford" was the leading vessel, when in reality it was ninth in line astern of the "Cayuga," in a single line or line ahead, and there was no left or right of line, but single file.

That you should for a moment leave so erroneous a report or record uncorrected, is a matter of surprise to your officers, and that you should not have made the correction as soon as your attention was called to it is still more embarrassing to us.

They know that under your orders, I led the vanguard of your fleet, not as represented on the diagram you have filed, but in an entirely different order, and received forty-two certificates in the way of rebel shots striking my vessel, in corroboration of what is known to every one of our gallant companions in that engagement.

I have delayed my reply, both because I have been occupied, and since have heard you were ill, which I deeply regretted, and because I wished to be certain that I said nothing in haste that would be annoying to you, or improper in me to say, and I hope you will now see the matter as I and others do, and make the correction so necessary to justice in your report dated May 6, 1862, and substitute a diagram of the actual positions your vessels and officers occupied in the line of attack in

BATTLE OF NEW ORLEANS.

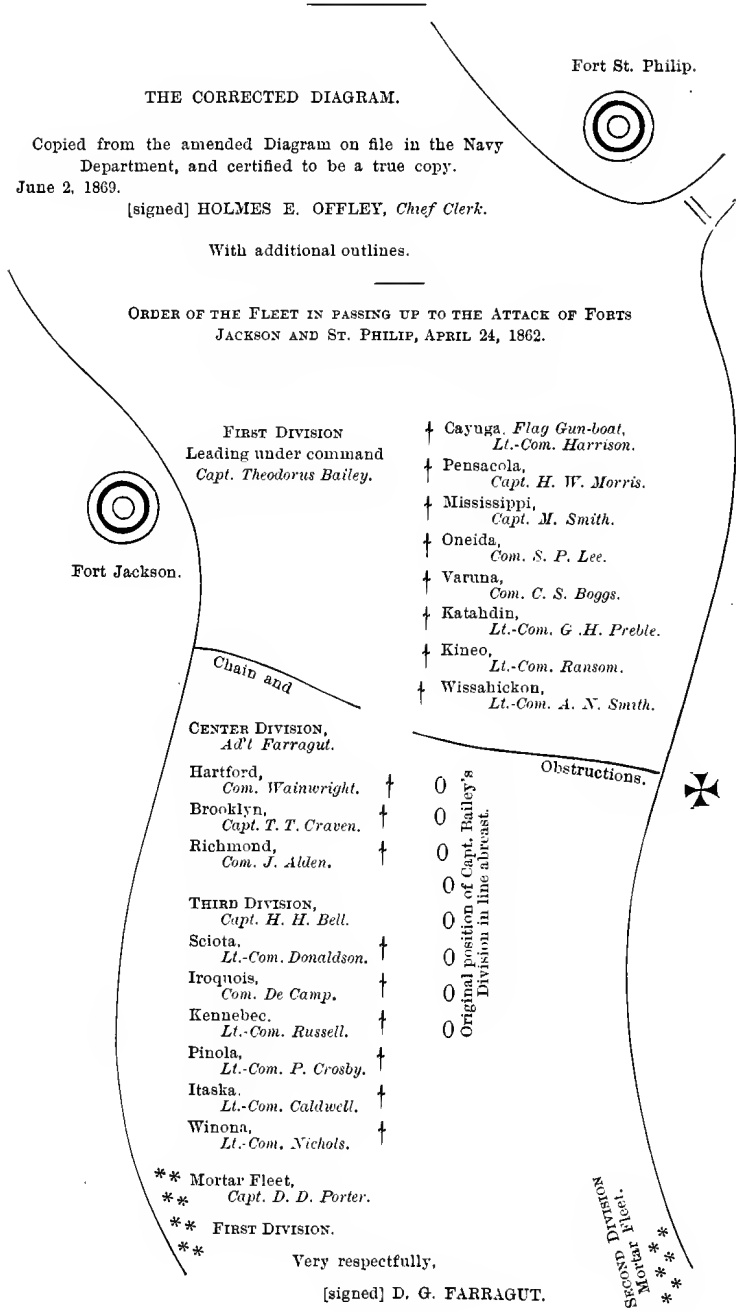

THE CORRECTED DIAGRAM.

Copied from the amended Diagram on file in the Navy Department, and certified to be a true copy.

CORRECTION BY ADMIRAL FARRAGUT.

NEW YORK, May 19, 1869.

MY DEAR ADMIRAL—I have received your two letters, the first one of which was not given to me until to-day, as my physician has advised a total suspension of business until I should become fully convalescent, which I am happy to say, is now the case. It affords me pleasure to make the correction you desire, in the diagram of the Mississippi battle, as I now fully comprehend what you wish in this matter. In fact, I cannot understand how this sketch of the first proposed order of battle—wherein you are placed *third* instead of at the head of the column—should have been attached to the report in lieu of the one which was afterwards adopted.

By referring to this report, you will observe that the diagram accompanies a general order, issued four days before the action, as a preparatory plan of attack, which was subsequently changed. But, still, I cannot understand why, even in this sketch, you should not have been placed at the head of the starboard column.

This diagram, as you are aware, was the original plan, to be changed, as a matter of course, as circumstances might justify, and the vessels were placed according to the rank of the officers respectively commanding them; but should not have been made part of the report of the final action, as, on reflection, I decided that when the chains were parted the plan of "line ahead" should be adopted, as the best calculated for the preservation of the vessels and for avoiding all chances of fouling. Therefore, when the time arrived, and the signal given, the order of sailing was changed to line of battle, the verbal instructions to which you allude carried out, and you led at the head of your division, and it has always afforded me the greatest pleasure to say that you performed your duties most fearlessly and gallantly.

For this reason I was, at the outset, a little surprised that you should have apparently complained of my report, but my examination of the printed diagram has fully satisfied me of the justice of your appeal.

I shall, therefore, forward to the Department a correct sketch of the final attack as we passed up the river.

I am, very truly, your friend and obedient servant,

D. G. FARRAGUT,  
*Admiral U. S. N.*

Rear-Admiral T. BAILEY, *Washington.*

LETTERS TO THE SECRETARY OF THE NAVY.

NEW YORK, May 24, 1869.

SIR—My attention having been called by Rear-Admiral Bailey to an incorrect sketch which accompanied my report of May 6, 1862, upon the passage of Forts Jackson and St. Philip, I have the honor to forward herewith a corrected diagram, showing the position of the vessels at the time they passed through the obstructions after the chains had been separated. This will demonstrate that Rear-Admiral (then Captain) Bailey led the fleet in the "Cayuga," up to the attack on the forts, as had been previously ordered, he taking St. Philip with his division, while I reserved Jackson for the remainder of the squadron under my command.

The skeleton lines show how the vessels moved up from their original position of two lines into the line ahead.

This correction has not been made before, because I was not aware of the existence of the mistake—the diagram being evidently a clerical error—and in opposition to the text, in which I distinctly state that Rear-Admiral Bailey not only led, but performed his duty with great gallantry, to which I call the attention of the Department.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Hon. A. E. BORIE,  
*Secretary of the Navy, Washington.*

WASHINGTON, D. C. May 25, 1869.

Hon. A. E. BORIE, *Secretary of the Navy.*

SIR—I have the honor to enclose herewith, original and certified copies of a correspondence which I have had with Admiral D. G. Farragut, relating to the battle below New Orleans, and to request that the letters marked from A to E, be placed on the files of the Navy Department, as furnishing a correction of that officer's report, with an accompanying diagram heretofore made to the Department.

The object of my addressing Admiral Farragut is now gained by the admission on his part of the correctness of my statements, that the fleet under his command went up the Mississippi River to attack and pass Forts Jackson and St. Philip, in order of battle, "line ahead," or single file; that I led the fleet into the battle at the head of, and in command of the vanguard division; and that the "Hartford," flag-ship, with Admiral Farragut on board, followed my division, he being thus ninth in line, and at the head of the rest of the fleet in the order represented by the list of vessels which I hereto annex. After this frank admission by my distinguished commander, I have only the regret remaining, that the error into which he was led was not discovered and corrected at an earlier date, thereby possibly affecting my position in the service.

I have the honor to be, respectfully, your obedient servant,

THEODORUS BAILEY,  
*Rear-Admiral, U. S. Navy.*

## VESSELS AND OFFICERS ENGAGED IN THE CAPTURE OF NEW ORLEANS.

FLAG-OFFICER DAVID G. FARRAGUT, COMMANDER-IN-CHIEF.

CAPTAIN T. BAILEY, COMMANDING FIRST DIVISION.

CAPTAIN H. H. BELL, COMMANDING SECOND DIVISION.

COMMANDER DAVID D. PORTER, COMMANDING MORTAR FLOTILLA.

### STEAMER "BROOKLYN."

Captain, Thomas T. Craven; Lieutenants, R. B. Lowry and James O'Kane; Acting-Masters, George Dewhurst, W. C. Gibbs, J. C. Spofford and Lyman Wells; Midshipmen, John R. Bartlett and H. T. Grafton; Surgeon, Samuel Jackson; Assistant Surgeon, J. S. Knight; Paymaster, C. W. Abbott; First-Lieutenant, James Forney, U. S. M. C.; First-Assistant Engineer, Benj. E. Chassaing; Second-Assistant Engineers, James Atkins and A. V. Fraser, Jr.; Third-Assistant Engineers, C. F. Mayer, B. D. Clemens, J. L. Bright and Jos. Morgan; Acting-Masters' Mates, R. Beardsley, H. Bartlett, James Buck and H. C. Leslie; Boatswain, J. A. Selmer; Gunner, William Yates; Carpenter, W. D. Toy; Sailmaker, J. Stevens.

### STEAMER "CAYUGA."

Lieutenant-Commanding, N. B. Harrison; Lieutenant, George H. Perkins; Acting-Masters, John Hanson and E. D. Percy; Assistant Surgeon, Edw. S. Bogert; Acting-Assistant Paymaster, G. W. Whiffin; Second-Assistant Engineer, J. M. Harris; Third-Assistant Engineers, J. W. Sydney, J. C. Chaffee and Ralph Aston; Acting-Masters' Mate, W. W. Patten.

### STEAMER "CLIFTON."

Acting-Lieutenant, C. H. Baldwin; Acting-Masters, E. A. Howell, Robert Rhodes and P. S. Weeks; Midshipmen, H. T. French and H. B. Rumsey; Acting-Assistant Surgeon, D. D. T. Nestell; Acting-Assistant Paymaster, J. H. Carels; Acting-Second-Assistant Engineer, James A. Fox; Acting-Third Assistant Engineer, Samuel Vallum; Acting-Masters' Mate, Charles Albert, L. Cannon, David Harvey and W. W. Wells.

### STEAMER "HARTFORD" (FLAG-SHIP).

Commander, Richard Wainwright; Lieutenants, J. S. Thornton, Albert Kautz, J. C. Watson and D. S. Murphy; Acting-Master, T. L. Petersen; Acting-Ensign, E. J. Allen; Midshipmen, H. B. Tyson, J. H. Read, E. C. Hazeltine and H. J. Blake; Fleet Surgeon, J. M. Foltz; Assistant Surgeon, Joseph Hugg; Paymaster, George Plunkett; Captain of Marines, J. L. Broome; Chief Engineer, J. B. Kimball; Second-Assistant Engineers, E. B. Latch, W. W. Hopper and F. A. Wilson; Third-Assistant

Engineers, Isaac De Graff, C. M. Burchard, A. K. Fulton, H. H. Pilkington and W. H. Gamble; Acting-Master's Mates, H. H. Judson, C. H. Loundsberry, T. Mason and J. M. Smalley; Boatswain, James Walker; Gunner, John Duncan; Carpenter, J. H. Conley; Sailmaker, J. A. Holbrook.

### STEAMER "HARRIET LANE."

Commander, J. M. Wainwright; Lieutenant, Edward Lea; Acting-Masters, J. A. Hannum, C. H. Hamilton and W. F. Monroe; Assistant Surgeon, T. N. Penrose; Assistant Paymaster, J. J. Richardson; Second-Assistant Engineers, W. H. Plunkett and C. H. Stone; Third-Assistant Engineers, J. E. Cooper, R. N. Ellis and A. T. E. Mullen; Acting-Masters' Mate, C. M. Davis.

### STEAMER "IROQUOIS."

Commander, John De Camp; Lieutenants, D. B. Harmony and Fred. V. McNair, Acting-Ensign, C. F. Willard; Midshipman, John McFarland; Surgeon, Benj. Vreeland; Paymaster, R. H. Clark; First-Assistant Engineers, John H. Long and B. C. Bampton; Second-Assistant Engineers, E. S. Boynton and F. K. Haime; Third-Assistant Engineer, J. H. Hunt; Gunner, J. L. Staples; Carpenter, John A. Dixon.

### STEAMER "ITASCA."

Lieutenant-Commanding, C. H. B. Caldwell; Acting-Masters, Edward Jones, Amos Johnson and S. Nickerson; Assistant Surgeon, Heber Smith; Assistant Paymaster, A. J. Pritchard; Second-Assistant Engineer, J. H. Morrison; Third-Assistant Engineers, T. M. Jones, John Borthwick and E. A. Magee; Acting-Masters' Mates, N. Alexander and W. E. Bridges.

### STEAMER "JOHN P. JACKSON."

Acting-Lieutenant-Commanding, S. E. Woodworth; Acting-Masters, M. B. Crowell, J. F. Dearborn, Wm. Hedger and James Scannell; Acting-Assistant Surgeon, T. S. Yard; Acting-Second-Assistant Engineer, J. B. Morgan; Acting-Third-Assistant Engineers, James Barnes, J. D. Caldwell and Samuel Strade; Acting-Masters' Mates, W. H. Howard, W. J. B. Lawrence and J. Murphy.

## STEAMER "KENNEBEC."

Lieutenant-Commanding, John H. Russell; Lieutenant, F. B. Blake; Acting-Masters, Wm. Brooks and H. C. Wade; Assistant-Surgeon, C. H. Perry; Acting-Assistant Paymaster, C. L. Burnett; Second-Assistant Engineer, H. W. Fitch; Third-Assistant Engineers, B. G. Gowing, E. E. Roberts and L. W. Robinson; Acting-Masters' Mates, J. D. Ellis, J. W. Merriman, J. W. Page and H. E. Tinkham.

## STEAMER "KINEO."

Lieutenant-Commanding, Geo. M. Ransom; Acting-Masters, Oliver Colbourn and John Whitmore; Assistant Surgeon, O. S. Oberly; Second-Assistant Engineer, S. W. Cragg; Third-Assistant Engineers, C. F. Hollingsworth, C. J. McConnell and James Manghlin; Acting-Masters' Mates, John Bartol, W. H. Davis, G. A. Faunce and W. S. Keen.

## STEAMER "KATAHDIN."

Commander, George H. Preble; Lieutenant, Nathaniel Green; Acting-Masters, George Harris and W. H. Pollup; Assistant Surgeon, S. Robinson; Second-Assistant Engineer, T. M. Dukehart; Third-Assistant Engineers, Wm. J. Reid, W. W. Heaton and John McIntyre; Acting-Masters' Mates, A. Hartshorn, Geo. Leonard, J. W. Thode and A. Whiting.

## STEAMER "MISSISSIPPI."

Commander, Melancton Smith; Lieutenants, Thos. McK. Buchanan and George Dewey; Acting-Masters, C. T. Chase, F. E. Ellis, F. T. King and George Munday; Midshipmen, Albert S. Barker and E. T. Woodward; Surgeon, R. T. Maccoun; Assistant Surgeon, J. W. Shively; Paymaster, T. M. Taylor; Chief Engineer, E. Lawton; Captain of Marines, P. H. W. Fontane; First-Assistant Engineer, Wm. H. Hunt; Second-Assistant Engineer, J. Cox Hull; Third-Assistant Engineer, F. G. McKean; Acting-Masters' Mates, R. C. Bostwick, H. B. Francis and M. Porter; Boatswain, Jos. Lewis; Gunner, Wm. Cope; Carpenter, John Green.

## STEAMER "MIAMI."

Lieutenant-Commanding, A. D. Harrell; Acting-Masters, John Lear, M. Rodgers and W. N. Wells; Assistant Surgeon, Wm. B. Mann; Chief Engineer, J. F. Lambdin; Acting-Assistant Paymaster, W. H. Sells; Second-Assistant Engineer, L. W. Simmonds; Third-Assistant Engineers, H. D. Heiser, C. C. Davis and Guy Sampson; Acting-Masters' Mates, Robert Roundtree and R. E. Stevens.

## STEAMER "ONEIDA."

Commander, S. P. Lee; Lieutenant, S. F. Brown; Acting-Masters, Thomas Edwards, Pierre Giraud and Elijah Ross; Midshipmen, G. W. Wood and F. J. Naile; Surgeon, John Y. Taylor; Paymaster, C. W. Hassler; Chief Engineer, F. C. Dade; Second-Assistant Engineers, H. McMurtrie and R. H. Fitch; Third-Assistant Engineers, W. D. McIlvaine, A. S. Brower, G. W. Stivers and R. M. Hodgson; Acting-Masters' Mates, Edw. Bird and Daniel Clark; Boatswain, James Herold; Gunner, Wm. Parker.

## STEAMER "OWASCO."

Lieutenant-Commanding, John Guest; Lieutenant, Chester Hatfield; Acting-Masters, T. D. Dabb and D. P. Heath; Assistant Surgeon, W. M.

Leavitt; Acting-Assistant Paymaster, Richard Beardsley; Second-Assistant Engineer, W. K. Purse; Third-Assistant Engineers, J. A. Scott, C. H. Greenleaf and D. B. Egbert; Acting-Masters' Mates, W. M. Tomlinson and John Utter.

## STEAMER "PENSACOLA."

Captain, Henry W. Morris; Lieutenants, F. A. Roe, Jas. Stillwell and C. E. McKay; Acting-Masters, Edw. Herrick, G. C. Shultze and E. C. Weeks; Acting-Ensign, A. H. Reynolds; Surgeon, J. W. Taylor; Assistant-Surgeon, W. B. Dick; Paymaster, G. L. Davis; Chief Engineer, S. D. Hibbert; Second-Assistant Engineers, S. L. P. Ayres and C. H. Ball; Third-Assistant Engineers, J. L. Vanclain, G. W. Magee, J. T. Hawkins, F. G. Smith, Jr., and J. C. Huntly; First-Lieutenant of Marines, J. C. Harris; Acting-Masters' Mates, Chas. Gainsford, Jos. Kent, L. Richards and G. A. Storm; Boatswain, N. Goodrich; Gunner, D. A. Roe; Carpenter, J. E. Cox; Sailmaker, Charles Lawrence.

## SLOOP-OF-WAR "PORTSMOUTH."

Commander, Samuel Swartwout; Lieutenant, F. O. Davenport; Acting-Masters, W. G. Mitchell, E. A. Terrill and A. A. Ward; Midshipman, Walter Abbott; Surgeon, J. S. Dungan; Assistant Surgeon, H. M. Wells; Assistant Paymaster, Casper Schenck; First-Lieutenant of Marines, Wm. H. Hale; Gunner, T. S. Cassidy; Carpenter, John Shannon; Sailmaker, N. J. Hayden; Acting-Masters' Mate, S. S. Beck.

## STEAMER "PINOLA."

Lieutenant-Commanding, Pierce Crosby; Lieutenant, A. P. Cooke; Acting-Masters, W. P. Gibbs and J. G. Lloyd; Assistant Surgeon, L. M. Lyon; Acting-Assistant Paymaster, C. S. Warren; First-Assistant Engineer, John Johnson; Third-Assistant Engineers, P. A. Sasse, Wm. F. Law and J. Everding; Acting-Masters' Mates, C. V. Rummell and W. E. White.

## STEAMER "RICHMOND."

Commander, James Alden; Lieutenants, A. B. Cummings and Edward Terry; Acting-Volunteer-Lieutenant, T. F. Wade; Acting-Masters, C. J. Gibbs and F. S. Hill; Acting-Ensign, H. F. Moffatt; Surgeon, A. A. Henderson; Assistant Surgeon, J. D. Murphy; Paymaster, George F. Cutter; Captain of Marines, Alan Ramsey; Chief Engineer, J. W. Moore; First-Assistant Engineer, Eben Hoyt; Second-Assistant Engineer, J. L. Butler; Third-Assistant Engineers, A. W. Morley, G. W. W. Dove, R. B. Plotts and C. E. Emery; Acting-Master's Mate, J. R. Howell; Boatswain, J. L. Choate; Gunner, James Thayer; Carpenter, H. L. Dixon; Sailmaker, H. T. Stocker.

## STEAMER "SCIOTA."

Lieutenant Commanding, Edw. Donaldson; Acting-Masters, G. P. Foster and A. McFarland; Assistant Surgeon, G. H. E. Baumgarten; Second-Assistant Engineer, C. E. De Valin; Third-Assistant Engineers, H. M. Quig, A. H. Price and Edward Curtis; Acting-Masters' Mates, John Staples and G. O. Taylor.

## STEAMER "SACHEM."

Acting-Masters, L. G. Crane and Robert Tarr; Acting-Assistant Surgeon, G. H. Van Deusen; Acting-Third-Assistant Engineer, P. P. Staat; Acting-Masters' Mate, W. L. Pavy.

## STEAMER "VARUNA."

Commander, Chas. S. Boggs; Lieutenant, C. H. Swasey; Acting-Masters, J. D. Childs and Ezra Leonard; Acting-Masters' Mates, S. H. Bevins and H. D. Foster; Gunner, T. H. Fortune.

## STEAMER "WINONA."

Commander, Edward T. Nichols; Lieutenant, John G. Walker; Acting-Masters, Chas. Hallett and Felix McCurley; Acting-Ensign, Wm. F. Hunt; Assistant Surgeon, A. Mathewson; Paymaster, H. M. Denniston; Second-Assistant Engineers, John Purdy, Jr., and Joseph Watters; Third-Assistant Engineers, Edward Gay and R. L. Wamaling; Acting-Masters' Mates, F. H. Beers and H. T. Burdett.

## STEAMER "WESTFIELD."

Commander, Wm. B. Renshaw; Acting-Masters, W. L. Babcock, F. C. Miller, L. D. Smalley and Gustav Vasallo; Midshipman, C. W. Zimmerman; Acting-Assistant Surgeon, E. H. Allis; Acting-Assistant Paymaster, C. C. Walden; Acting-Second-Assistant Engineer, Wm. R. Green; Acting-Third-Assistant Engineers, G. S. Baker, Chas. W. Smith and John Van Hogan; Acting-Masters' Mate, J. P. Arnett.

## STEAMER "WISSAHICKON."

Lieutenant Commanding, A. N. Smith.

## MORTAR FLOTILLA.

*First Division.*

LIEUTENANT WATSON SMITH, Commanding Division.

Schooner "Norfolk Packet."—Lieutenant Watson Smith.  
Schooner "Oliver H. Lee."—Acting-Master Wash. Godfrey.

Schooner "Para."—Acting-Master Edward G. Furber.  
Schooner "C. P. Williams."—Acting-Master A. R. Langthorne.  
Schooner "Arletta."—Acting-Master Thomas E. Smith.  
Schooner "William Bacon."—Acting-Master Wm. R. Rogers.  
Schooner "Sophronia."—Acting-Master Lyman Bartholomew.

*Second Division.*

LIEUTENANT W. W. QUEEN, Commanding Division.

Schooner "T. A. Ward."—Lieutenant W. W. Queen.  
Schooner "M. T. Carlton."—Acting-Master Chas. E. Jack.  
Schooner "Matthew Vassar."—Acting-Master Hugh H. Savage.  
Schooner "George Mangham."—Acting-Master John Collins.  
Schooner "Orvetta."—Acting-Master Francis E. Blanchard.  
Schooner "Sydney C. Jones."—Acting-Master J. D. Graham.  
Schooner "Adolph Hugel."—Acting-Master J. Van Buskirk.

*Third Division.*

LIEUTENANT K. R. BREESE, Commanding Division.

Barkentine "Horace Beals."—Lieutenant K. R. Breese.  
Schooner "John Griffith."—Acting-Master Henry Brown.  
Schooner "Sarah Bruen."—Acting-Master Abraham Christian.  
Schooner "Racer."—Acting-Master Alvin Phinney.  
Brig "Sea Foam."—Acting-Master Henry E. Williams.  
Schooner "Henry James."—Acting-Master L. W. Pennington.  
Schooner "Dan Smith."—Acting-Master George W. Brown.

LIST OF OFFICERS ATTACHED TO THE MORTAR FLOTILLA AND WEST GULF SQUADRON, THE NAMES OF WHOSE VESSELS DO NOT APPEAR IN THE NAVY REGISTER.

## CHAPTER XXI.

CAPTURE OF NEW ORLEANS.—FIRST ATTACK ON VICKSBURG BY FARRAGUT'S FLEET AND MORTAR FLOTILLA.—JUNCTION OF FLAG-OFFICERS FARRAGUT AND DAVIS ABOVE VICKSBURG.—RAM "ARKANSAS."

FARRAGUT APPROACHES NEW ORLEANS.—DEFENCES OF NEW ORLEANS.—TWO BRAVE MEN (CAPT. BAILEY AND LIEUT. PERKINS) FACE A MOB.—THE ARMY UNDER GENERAL BUTLER PLACED IN POSSESSION OF NEW ORLEANS.—FARRAGUT'S SHIPS PUSH UP THE MISSISSIPPI AND PASS VICKSBURG.—SHELLING THE BATTERIES.—FARRAGUT AND DAVIS JOIN HANDS.—THE RAM "ARKANSAS" MAKES HER APPEARANCE.—A VIGOROUS PURSUIT.—ENGAGEMENT BETWEEN THE "ARKANSAS" AND "CARONDELET."—THE "CARONDELET" DRIFTS ASHORE.—THE "ARKANSAS" SLIPS BY THE FLEET, TO VICKSBURG.—THE ATTACK ON VICKSBURG ABANDONED.—FLAG-OFFICER DAVIS RELIEVED.—REPORTS OF FLAG-OFFICER FARRAGUT, CAPTAIN CRAVEN, COMMANDERS ALDEN, WAINWRIGHT, PALMER, DE CAMP, PORTER, AND FLEET SURGEON FOLTZ, LIEUT.-COMMANDERS BALDWIN, PREBLE, RUSSELL, LEE, DONALDSON, NICHOLS, CROSBY, WOODWORTH AND LOWRY.—COMMODORE W. D. PORTER'S REPORT OF ENGAGEMENT AT PORT HUDSON.—REPORT OF COMMANDER RILEY.

WHEN Farragut passed the Chalmette batteries, and the vessel approached New Orleans, the city levee presented a scene of desolation. Ships, cotton, steamers and coal, were in a blaze and it looked as if the whole city was on fire.

It required all the ingenuity of the commanding officers to avoid coming in contact with the floating conflagration, and when the ships dropped anchor before the conquered city, thousands of people crowded the shore, shouting and bidding defiance to the victorious invaders.

There was no insulting epithet these maniacs did not heap upon the heads of those on board the ships; it was as if bedlam had broken loose and all its inmates were assembled on the levee at New Orleans.

Farragut at once ordered the seizure of a large ram which was intended to be a very formidable vessel, but was still unfinished. Before the officer who had been sent to take possession could reach the ram she came floating down the river enveloped in flames. Another was sunk right opposite the Custom House. Others, which were just begun

at Algiers, on the opposite side of the river from New Orleans, were burning.

Truly, the Queen city of the South was doing her share in building rams to annihilate our Navy and Commerce, but where were our rams that should have been built by the North which boasted of its great skill and resources? These should have been ready to sally out within three months after the war began, to drive the "Louisiana," "Manassas," "Mississippi," "Tennessee," "Arkansas," "Albemarle," and others, back to their holes or crush them like so many egg shells. Our formidable vessels were not even begun—the little "Monitor" even was due to the energy and public spirit of a private citizen, John Ericson, who furnished his vessel just in time to save the honor of the nation.

The nondescript, wooden Navy, with scarcely a rifled gun, was called upon to attack these monster iron-clad rams sheltered by forts and floating obstructions and protected by torpedoes and fire-rafts; and was expected in all cases to win, notwithstanding the difficulties to be encountered.

The American people do not know, and

probably never will appreciate, the value of the capture of New Orleans. Had the city been left three months longer, to perfect its defences and finish its works of offence, our wooden fleet would have been driven North and the entire Southern coast would have been sealed against us. The blockade would have been raised, and the independence of the South recognized by the powers of Europe. All this was prevented by the Navy without the assistance of the Army—that same Navy which is to-day a mere shadow owing to the neglect of Congress to foster and uphold it.

What were the intentions of the Confederates at New Orleans can be easily understood by reading Flag-officer Farragut's report. When he went up the river to Baton Rouge, he found the banks bristling with cannon, including many of the guns the government had so ignominiously deserted at Norfolk. These were intended to bar the way against any invading squadron approaching New Orleans from the North; but the panic had spread even to that point, and all the guns were spiked and their carriages destroyed.

One work eight miles above New Orleans, reached from the Mississippi nearly across to Lake Ponchartrain, and was partly mounted with twenty-six heavy guns, intended to bid defiance to our Navy and Army. A mile above this were two other works waiting only for more of the Norfolk guns, or for some of the heavy Brooke rifles which the Tredegar works in Richmond were turning out by wholesale.

Still further up the river the Confederates had constructed one of the most herculean works of the kind ever beheld. It was an immense raft of logs bolted and chained together with much ingenuity; and was intended to be thrown across the Mississippi on the approach of the Federal iron-clads should they descend the river so far.

Had New Orleans not been attacked from the sea at the time it was the Confederates would have laughed at our old "turtles," and would have had rams and iron-clads enough to have easily crushed them. They would not have needed the great raft to keep out the Federal gun-boats. Nay, more, these great iron-clads would have made their way up the river and our towns on the Mississippi and its tributaries would have been at their mercy. All this disgrace and mortification was saved the country by the energy, zeal, and bravery of the Navy, in wooden ships armed with smooth-bore guns. St. Vincent, the Nile, Trafalgar, were all great victories, but they were no more important to England than was Farragut's achievement to the United States.

One of Farragut's first acts on reaching New Orleans was to send Captain Bailey

on shore, accompanied by Lieutenant George H. Perkins, to demand from the mayor the surrender of the city. These two officers went on their perilous service without an escort and passed right through the crowd of maniacs who were making all sorts of threats from the levee at any one who should dare come on shore from the ships. At this time the whole city was in an uproar, such as was perhaps never before seen in this country. All the vagabonds of the town, thieves, raggickers, abandoned women, the inhabitants of the slums, all were abroad, their faces distorted by passion, the riffraff, hobnobbing with the well-to-do, and all animated by a common hatred of the detested Yankees.

LIEUTENANT (NOW CAPTAIN) GEORGE H. PERKINS.  
(FROM A PORTRAIT TAKEN 1884.)

It looked as if law and order could never be re-established. The steamers that had been left unburned were lying at the levee, with crowds of maniacs rushing over their decks, the men smashing in the rice tierces, the women scraping up all that could be gathered. Such portions as could not be carried off were thrown into the river—"the damned Yankees shan't have it!" they cried. There was no way of testifying their rage to which the mob did not resort.

All at once a boat was seen pulling for the shore with two officers sitting in the stern-sheets. These officers landed, faced the crowd, and walked as steadily as if they had a thousand men at their backs.

"I want to see the mayor," said Captain Bailey, "show me where he lives"; and now the crowd woke again from the brief silence that had fallen upon it. Again they

roared and shouted, "Down with the Yankees!" "shoot them!" "hang them to a lamp post!" and they crowded around the two officers who walked fearlessly on. In a few moments the officers were lost sight of in the crowd, and no one in the squadron knew what might be their fate, but Bailey and Perkins walked coolly on in defiance of the rabble until their determined courage won respect even from that howling mob.

The guns of the "Hartford" were loaded with grape and canister, and as Bailey and Perkins were shut in by the crowd, the men stood to their guns ready for the first sign from the tops, that harm had come to the officers, to open the battery on the mob.

However, no harm came to those two brave men. It would seem that, in an American mob, there is always some little spark of chivalry, especially where men show pluck. So it was in this case; the two officers reached the mayor's house, and were shown into the presence of the mayor, Mr. Monroe, a cool, brave gentleman, to be sure, but one ruled by the rabble, which has always had undue influence in New Orleans.

"We have come," said Captain Bailey to the mayor, "to demand the surrender of New Orleans, and that the State flag be hauled down from the public buildings, and that only the United States flag be hoisted there."

"You have the power in your own hands," replied the mayor, "and can do as you please, but I doubt if there is a man in New Orleans who would haul down that flag without being assassinated on the spot."

The officers having performed their mission, took their leave. The crowd had received some intimation of their demand, and on their appearance again howled, if possible, louder than before, but Bailey and Perkins waved them aside, and strode back to the levee. It was a brave action, and should not be forgotten by those who have lived to read the events of the civil war.

Soon after the return of Captain Bailey and Lieutenant Perkins, Captain Charles H. Bell landed with a guard of marines and two boat howitzers loaded with grape and canister. The same howling mob met Captain Bell at the levee, but gave way before the marines, who marched steadily towards the State House. Arriving there the marines were drawn up in line, with the howitzers pointed at the mob, ready to mow them down if it became necessary to do so. Bell ascended to the roof of the building, down came the Confederate flag and up went the stars and stripes. The crowd was hushed into silence, they realized that the howitzers would decimate their ranks if the order was given to fire, and that was something they did not fancy.

At the Custom House the same scene was enacted while cheer after cheer came from the ships, the signal that the majesty of the law had been upheld and the integrity of the Union vindicated.

A few days afterwards the steamers of the mortar flotilla towed the transports containing Major-General Butler's army to New Orleans, and under the guns of Farragut's squadron the troops landed, and order was re-established in the city.

Then Flag-officer Farragut pushed on towards Vicksburg, whose heights had been heavily fortified. The flag-officer did not feel justified in attacking the stronghold without the mortar flotilla, which he "deemed indispensable to shell out the heights," but the mortars were then at Pensacola and it took them some twenty days to reach the scene of action.

Sixteen mortars being then placed in position they proceeded to shell the batteries on the hills, with such good effect that Farragut's ships passed Vicksburg with very little loss. But the soldiers in the hill forts refused to stay shelled out, and when the mortars stopped playing on them they would come back from the fields and again open fire. It was not here as at Fort Jackson, where the besieged were cooped up in casemates with bricks and mortar all around, where a shell in falling would displace huge masses of masonry, dealing death and destruction to the garrison. The fortifications of Vicksburg were scattered over the hills in groups, the guns fifty yards apart, and concealed from view. The heavy shells would whistle over the ships, throwing up the water in spouts and occasionally crashing through the vessels' timbers; to let the invaders know how well Vicksburg was fortified, and what improvements had taken place in this respect within a month.

The whole power of the Confederacy had been set to work to save this Gibraltar of the Mississippi, the railroads poured in troops and guns without stint, enabling it to bid defiance to Farragut's ships and the mortar flotilla.

There was an area of twenty-eight square miles within which the Federals might throw all the shot and shells they pleased. The Confederates did not mind it much, even when the shots fell in the city. This was their last ditch, so far as the Mississippi was concerned, and here they were determined to make a final stand.

Farragut could only obey his orders and effect a junction with Flag-officer Davis above the city, and they pummelled away to their hearts' content with shells and mortars for many days, with little effect.

Our combined fleet lay there and gazed in wonder at the new forts that were con-

stantly springing up on the hill tops, two hundred and fifty feet above the river, and a mile and a half back from the shore, while water batteries seemed to grow on every salient point. It was evident enough that Vicksburg could only be taken after a long siege by the combined operations of a large military and naval force.

Flag-officers Farragut and Davis here learned that a large ram was building at Yazoo City, but they did not believe the Confederates had sufficient resources to build a powerful vessel in such an out-of-the-way place, so they let their vessels' steam go down to save coal, which was very hard to get at Vicksburg, and contented themselves with sending the "Carondelet" and "Taylor" up the Yazoo River in company with the Ellet ram, "Queen of the West."

On their way up the Yazoo River, and six miles above its mouth, the two gun-boats met the iron-clad ram "Arkansas" advancing boldly to attack them. She was commanded by Lieutenant Brown, late of the U. S. Navy, whose name will go down in history as one who performed a most gallant and desperate undertaking.

The iron plating of the "Arkansas" rendered her impervious to the shot and shells of our fleet, her formidable iron prow could pierce any ship's side, and she had a formidable battery of rifled guns.

The two gun-boats and the "Queen of the West," turned to retreat down the river firing upon the "Arkansas" as they did so. The Confederate ram pursued the three vessels, keeping up a vigorous fire with her bow guns, and had greatly the advantage, being thoroughly protected from their shot, and having a much heavier battery.

This running fight went on for an hour until the "Arkansas" came up with the "Carondelet," the slowest of the three vessels, and tried to run her down. The "Carondelet" avoided her prow, and as the "Arkansas" came abreast, exchanged broadsides with the enemy. The "Arkansas" then passed ahead, and the "Carondelet" opened on her with the bow guns, the shot from which seemed to glance harmlessly from her stern.

At this moment, the "Carondelet's" wheel ropes were shot away for the third time, and she sheered into the shore, while two shot holes were observed in the "Arkansas," and her crew were seen pumping and bailing.

The "Carondelet" was much damaged in hull and machinery, and had thirteen shot holes in her hull, steam gauge, three escape pipes and two water pipes cut away. Nineteen beams and thirty timbers were cut away, three boats destroyed, deck pumps shot away and many other injuries. Thirty

men were killed, wounded and missing. All through the fight, the "Taylor," Lieut.-Com. Gwinn, gallantly sustained Commander Walke in the "Carondelet."

There can be no comparison drawn between the "Arkansas" and her antagonists, for with but one gun she would have been superior to all the "Carondelet" class of gun-boats put together and would have been more than a match for the "Benton;" yet, notwithstanding her inferiority, the "Carondelet" hung on to the last, inflicting all the damage on the ram that she possibly could until her wheel ropes were shot away and she drifted ashore.

It was the object of the commanding officer of the "Arkansas" to reach Vicksburg undiscovered, and she would have done so but for the three vessels she encountered in the Yazoo. When the "Carondelet" parted her wheel ropes the "Arkansas" never stopped, but made the best of her way in pursuit of the "Taylor" and "Queen of the West," both of which were carrying on all steam to notify the squadron that the "Arkansas" was coming.

The sound of the guns was heard in the fleet but it was taken as an indication of some conflict with "bushwhackers." The ram "General Bragg," was the only vessel that had steam up and her captain unfortunately waited for orders instead of slipping her chain and attacking the "Arkansas," when she came up with the fleet. Had the "Bragg" done this she would doubtless have disabled the "Arkansas" by ramming her as the latter vessel was already damaged in her motive power.

Flag-officer Farragut says: "We were all lying with low fires—none of us had steam up or could get it up in time to pursue her (the 'Arkansas') but she took the broadsides of the whole fleet. It was a bold thing, and she was only saved by our feeling of security. She was very much injured, and was only able to drift down at the lowest speed and with the current she got down to the forts at Vicksburg before any of us had steam up."

The "Arkansas" was undoubtedly much damaged by the fire of the fleet; her smoke-stack was riddled, and although she was built to be invulnerable, several eleven-inch shots penetrated her, cutting her up inside and killing and wounding twenty of her crew. Among the killed was the first pilot, and among the wounded were the commanding officer, Lieutenant Isaac N. Brown, and another pilot.

The vessels of the fleet suffered from the "Arkansas" as she passed down, each of the wooden ships receiving one or two shots. Commander William D. Porter, of the gun-boat "Essex," volunteered to go down with his vessel and destroy the ram, but his gal-

lant attempt was unsuccessful, and the "Essex" was much cut up by the batteries.

The morning after this affair, Farragut got under way with his ships and proceeded down the river to protect the mortars and transports below, each vessel firing into the "Arkansas" as they passed her under the guns of Vicksburg. The morning was misty and the forts were firing into the ships, so that the "Arkansas" was not materially damaged.

Flag-officers Farragut and Davis, finding it a loss of time to attempt the reduction of Vicksburg without the co-operation of a large Army, determined to abandon the idea for the present and return to their stations—Davis up river and Farragut to New Orleans, where he could inaugurate fresh expeditions against the enemy. So Vicksburg was left alone in her glory to strengthen her fortifications and for a time bid defiance to the Federal Government.

The original plan of sending an Army of ten thousand men to take possession of Vicksburg, under cover of Farragut's squadron, was never carried out. Three thousand troops only (under command of General Williams) were landed opposite Vicksburg, but, as they attempted nothing important, their presence was perfectly useless. The ten thousand men who should have been sent to Vicksburg were retained by General Butler at New Orleans. Had this Army been pushed up the river directly after the fall of New Orleans, Vicksburg would have fallen into the hands of the Federal forces. This failure to act promptly cost the Government many lives and millions of money.

Flag-officer Davis at first determined to occupy the Yazoo River, and from thence carry on operations against the enemy, but he found that nothing could be done in the Yazoo at low water, and besides, the enemy had constructed formidable barricades, well defended by heavy batteries, at Haines' Bluff, some miles above the mouth of the river; and with these he had not sufficient force to contend.

His line of operations was entirely too extended for the force he had in hand, and all his vessels needed repairs. Flag-officer Davis, therefore, returned to Cairo, where, in October, 1862, he was relieved from the command of the Mississippi Squadron by Acting-Rear-Admiral David D. Porter.

The following reports will give a pretty full account of what was done in the first naval attack on Vicksburg.

FLAG-OFFICER FARRAGUT REPORTS THE NECESSITY OF 12,000 TO 15,000 ARMY FORCES TO CO-OPERATE IN THE TAKING OF VICKSBURG.

FLAG-SHIP "HARTFORD," }  
ABOVE VICKSBURG, June 23, 1862. }

SIR—I passed up the river this morning, but to no purpose; the enemy leave their guns for the mo-

ment, but return to them as soon as we have passed, and rake us. Our loss, as far as ascertained, is not very great. Commander Porter shelled them two days to get his ranges, and all his vessels entered into the attack with great spirit, and did excellent service. The fire of the ships was tremendous. The "Brooklyn," "Kennebec," and "Katahdin" did not get past the batteries. I do not know why.

I am satisfied it is not possible for us to take Vicksburg without an army force of 12,000 or 15,000 men. General Van Dorn's division is here, and lies safely behind the hills. The water is too low for me to go over twelve or fifteen miles above Vicksburg.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Commanding Western Gulf Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

FLAG-OFFICER FARRAGUT'S REPORT OF THE ACTION OF JUNE 23, 1862, AT VICKSBURG.

UNITED STATES FLAG-SHIP "HARTFORD," }  
ABOVE VICKSBURG, MISSISSIPPI, }  
July 2, 1862. }

SIR—In obedience to the orders of the department and the command of the President, I proceeded back to Vicksburg with the "Brooklyn," "Richmond," and "Hartford," with the determination to carry out my instructions to the best of my ability.

My difficulties and expenses in getting coal and provisions up the river have been very great, and it has only been accomplished by great exertions on the part of Captain H. W. Morris, aided by the Army. Captain D. D. Porter's mortar flotilla, which was deemed indispensable to shell out the heights, had also to be towed up. All this caused great delay, but by the steady exertions of that officer, and the assistance of all in whose power it was to help, we succeeded in getting up sixteen mortar vessels, and arrangements were soon made to bombard the forts on the heights of Vicksburg. Owing, however, to some imperfection in the fuzes (which Captain Porter will explain), he was two days getting his ranges. On the evening of the 27th, he reported to me that he was ready, and I issued my general order (a copy of which is hereto appended) for the attack on the 28th, at 4 A. M.

At 2 A. M., on the 28th June, the signal was made to weigh, and we proceeded up to the attack in the order of steaming prescribed in the diagram accompanying the general order. At 4 o'clock precisely, the mortars opened fire, and at almost the same moment the enemy fired his first gun, which was returned by the leading vessels—"Iroquois," Commander J. S. Palmer; "Oneida," Commander S. P. Lee; and "Richmond," Commander James Alden. The other vessels—"Wissahickon," Commander John DeCamp; "Sciota," Lieutenant-Commanding Edward Donaldson; (this ship, Commander R. Wainwright; "Winona," Lieutenant-Commanding E. T. Nichols; and "Pinola," Lieutenant-Commanding Pierce Crosby—next came up, and poured in their fires successively. At almost the same instant, Commander D. D. Porter came up on our starboard quarter with the "Octorora," "Westfield," "Clifton," "Jackson," "Harriet Lane," and "Owasco," and opened in fine style upon the enemy. The "Hartford" fired slowly and deliberately and with fine effect—far surpassing my expectations in reaching the summit batteries. The rebels were soon silenced by the combined efforts of the fleet and of the flotilla, and at times did not reply at all for several minutes, and then again at times replied with but a single gun.

I passed up at the lowest speed (we had but eight pounds of steam), and even stopped once, in

order that the "Brooklyn" and sternmost vessels might close up.

The "Hartford" received but very little injury from the batteries in or below the town, but several raking shots from the battery above the town did us considerable damage; they were 50-pounder rifle and 8-inch solid shot. The first passed through the shell-room in the starboard forward passage, and lodged in the hold, but did no other harm. The 8-inch struck the break of the poop and passed through the cabin, but hurt no one; the rigging was much cut, and the port main-topsail yard was cut in two.

If the ships had kept in close order, in all probability they would have suffered less, as the fire of the whole fleet would have kept the enemy from his guns a longer space of time, and, when at his guns, his fire would have been more distracted.

When we reached the upper battery we soon silenced it, and it was reported to me that its flag was struck. We therefore gave three cheers; but when we had passed about three-quarters of a mile above they reopened fire with two heavy guns. I was unable to reply to this raking fire, being out of range. Although their shots were well directed, they either had too much or too little elevation, and only cut our rigging to pieces, without injuring any oneseriously, which was strange, as the "Iroquois," "Winona," and "Pinola" were on our quarter.

At 6 A. M., meeting with Lieutenant-Colonel Ellet, of the ram fleet, who offered to forward my communications to Flag-officer Davis and General Halleck, at Memphis, I anchored the fleet and went to breakfast, while I prepared my hasty dispatch (No. 120) and telegram for the department. I also sent across the peninsula to see what was the cause of Captain Craven and the vessels astern of him in the line not passing up. I also desired a list of the casualties, which appears by their letters to have been "none." The casualties in the fleet, as far as heard from, in the passing vessels, were seven killed and thirty wounded. Commander Porter reports eight killed and ten or twelve wounded; but that was not his official report, probably, but referred more particularly to the two steamers, "Clifton" and "Jackson," each of which had an accidental shot—the "Jackson" in the wheel-house, killing the helmsman, and the "Clifton" a shot through her boiler, killing (by scalding) the men in her magazine, six in number, and one man was drowned by jumping overboard. I herewith forward the report of Acting Lieutenant-Commanding C. H. Baldwin, of the "Clifton."

The department will perceive from this (my) report, that the forts can be passed, and we have done it, and can do it again as often as may be required of us. It will not, however, be an easy matter for us to do more than silence the batteries for a time, as long as the enemy has a large force behind the hills to prevent our landing and holding the place.

General Williams has with him about three thousand men, and, on the occasion of our attack and passing, placed a battery of artillery nearly opposite the upper forts, for the purpose of distracting the raking fire from us while running up; but the fort, having a plunging fire upon them, dismounted one of the guns, and killed a man and a horse.

It gives me great pleasure to say that General Williams, Colonel Ellet, and the army officers of this division generally, have uniformly shown a great anxiety to do everything in their power to assist us; but their force is too small to attack the town, or for any other purpose than a momentary assault to spike guns, should such an opportunity offer.

It gives me great pleasure also to report that the officers and men of the ships which accompanied me up the river behaved with the same ability and steadiness on this occasion as in passing Forts Jackson and St. Philip. No one behaved better than

Commander J. S. Palmer, of the "Iroquois," who was not with me on the former occasion. It pains me much to limit my praise, but I cannot speak of those who did not come up. It was their duty to have followed me, with or without signal, particularly as it was too early and too smoky to distinguish signals. I enclose their explanations herewith.

As to Commander R. Wainwright and the officers and crew of this ship, I cannot speak too highly of their steadiness and coolness, and the energy with which they performed their duties. This ship was conducted as coolly and quietly as at an ordinary drill at general quarters. There was no confusion of any kind throughout the whole action, and, as far as I could observe the other vessels, the same feeling actuated all the officers and crews engaged.

The captain of the fleet, Commander H. H. Bell, was on the poop by my side, and, not being able, as I before stated, to do much in the management of the fleet, owing to the darkness and the smoke, gave his attention to looking up the batteries and pointing them out to the officers in charge of the guns, and assisting them with his judgment on all occasions.

My secretary, Mr. E. C. Gabaudan, noted the time of passing events, and acted as my aid when required, which duty he performed with coolness and steadiness.

I must not fail to mention the coolness of our pilot, John J. Lane, who, although this was the first time he had ever been under fire, did not for a moment quit his post, but steadily guided the ship in her course. He is not a professional pilot, as they can only be obtained by force in New Orleans.

All of which is respectfully submitted by your obedient servant,

D. G. FARRAGUT,  
Flag-officer Commanding Western Gulf Blockading Squadron.

HON. GIDEON WELLES,  
Secretary of the Navy, Washington, D. C.

OFFICIAL LIST OF KILLED AND WOUNDED IN THE  
AFFAIR OF JUNE 28, AT VICKSBURG.

FLAG-SHIP "HARTFORD," ABOVE }  
VICKSBURG, MISSISSIPPI, June 28, 1862. }  
SIR—I have the honor to report the following list of killed and wounded in that portion of the fleet which passed above Vicksburg in the engagement of this morning, viz:

KILLED—15.

Flag-ship "Hartford."—Edward E. Jennings, seaman, from Massachusetts.

"Richmond."—George Allstrum, ordinary seaman; Thomas Flarity, seaman.

"Oneida."—Stephen H. Randall, seaman.

"Pinola."—William H. Thomas, quarter-gunner; Thomas Graham, landsman.

"Sciota."—Augustine Ellsworth, ordinary seaman.

Mortar flotilla.—6 scalded, 1 killed, 1 drowned.

WOUNDED—30.

Flag-ship "Hartford."—Charles Allen, seaman, slightly; Alexander Capron, landsman, slightly; Lawrence Fay, boy, slightly; Patrick Roach, coal-heaver, head; Philip Roberts, seaman, severely; Sylvester Becket, landsman, slightly; Alfred Stone, landsman, slightly; John H. Knowles, quarter-master, slightly; John Hardgan, landsman, slightly; Joseph ———, ordinary seaman, slightly; Nathan Salter, ordinary seaman, contusion; Captain John L. Broome, marine corps, contusion; Flag-officer D. G. Farragut, slight contusion.

"Richmond."—Howard F. Moffat, master's mate, amputated arm; James Noonan, ordinary seaman, contusion; Thomas Nolan, marine, contusion; George W. Harris, marine, contusion; James Reddy,

seaman, severely; James Mohegan, landsman, severely; George Millard, seaman, severely; William Nicholas, landsman, slightly; Charles Howard, ordinary seaman, severely.

"Oneida."—Richard M. Hodgson, assistant engineer, severely; William Cowell, seaman, severely; Henry Clark, boatswain's mate, slightly.

"Pinola."—John Brown, ordinary seaman, severely; William H. Shucks, landsman, slightly.

"Sciota."—Edward Hathaway, seaman, amputated arm; William Orne, landsman, slightly; Clarence Miller, ship steward, severely.

Returns have not yet been received from Captain Porter's mortar flotilla, and that portion of the fleet below Vicksburg.

I am, very respectfully, your obedient servant,  
J. M. FOLTZ,  
*Fleet Surgeon.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron.*

#### GENERAL ORDERS.

UNITED STATES FLAG-SHIP, "HARTFORD," }  
BELOW VICKSBURG, June 25, 1862. }

The mortar boats and gun-boats of the mortar flotilla having been placed by Commander D. D. Porter, according to his judgment, to the best advantage to act upon the batteries on the heights and the fort below the hospital: at 4 A. M., to-morrow they will open fire upon the same and on the city of Vicksburg.

At the display of the signal for the ships and gun-boats to weigh, they will form in a double line of sailing, the "Richmond," Commander James Alden commanding, leading; the ships "Hartford," Commander R. Wainwright commanding, next; "Brooklyn," Captain T. T. Craven, third. The gun-boats will form another line, so as to fire between the ships, in the following order: "Iroquois," Commander James S. Palmer, and "Oneida," Commander S. Phillips Lee commanding, ahead, but on the port bow of the "Richmond," so as to fire into the forts at the upper end of the town, without interfering with the fire of the "Richmond;" next in order, the "Wissahickon," Commander Jno. DeCamp, and the "Sciota," Lieutenant-Commanding Ed. Donaldson, in the line with the "Iroquois" and "Oneida," but on the port bow of the flag-ship, so as to fire between the "Richmond" and flag-ship; next the "Winona," Lieutenant-Commanding Ed. T. Nichols, and "Pinola," Lieutenant-Commanding Pierce Crosby, on the port bow of the "Brooklyn."

The "Hartford" will, as often as occasion offers, fire her bow guns on the forts at the upper end of the town; but the broadside batteries of all the ships will be particularly directed to the guns in the forts below and on the heights. The free use of the shrapnel is considered the best projectile, but care must be taken in cutting the fuzes, so as always to be sure that they burst short of their destination. When close enough give them grape. The enclosed diagram will show the position of the respective vessels in the order of attack.—[For diagram see original.]

When the vessels reach the bend in the river, the "Wissahickon," "Sciota," "Winona," and "Pinola," will continue on; but, should the enemy continue the action, the ships and "Iroquois" and "Oneida" will stop their engines and drop down the river again, keeping up their fire until directed otherwise.

D. G. FARRAGUT,  
*Flag-officer Commanding Western Gulf Blockading Squadron.*

The "Kennebec," Lieutenant-Commanding Jno. Russell, will take position in the rear of, and in a

line with, the "Pinola," so as to fire astern of the "Brooklyn."

D. G. FARRAGUT,  
*Flag-officer.*

UNITED STATES STEAMER "CLIFTON," }  
TWO MILES BELOW VICKSBURG, June 28, 1862. }  
SIR—I have the honor to report that this morning, at 3.45 A. M., in obedience to orders, we got under way and proceeded in our station just astern of the "Westfield," in the line headed by your own ship, to engage the batteries on the heights around Vicksburg. When within range, we opened our fire on the upper batteries on the hill from our rifled gun, and forward 9-inch and forward 32-pounder, using 15-second shells. On receiving your orders, we directed our fire at the battery known as the "water battery," advancing to within about 1,200 yards, where we kept our station, using shrapnel from the 9-inch guns. At times, as opportunity offered, we used

ACTING LIEUT. (NOW REAR ADMIRAL) CHARLES H. BALDWIN.

our after 9-inch guns. This we continued for some half to three-quarters of an hour, with, I think, good effect, until we were hailed by the "Jackson," asking our assistance to tow them out of fire, that ship being temporarily disabled.

While in the act of taking her line, we received a shot under the guard, just forward of the wheel, which, going through the ship's side, made its way into the end of the starboard boiler, and, partially coming out on the other side, caused such a rush of steam as to blow off at once the cover to the forward hatch, filling the forward berth deck (under which is the forward magazine) with steam, and killing instantly Thomas Collins, gunner's mate; Robert Sargent, ship's cook; Wm. Morris, captain's cook; John Burke, ordinary seaman; John B. Carter, landsman, and Peter Hall, landsman, of the forward powder division; and severely scalding George B. Derwent (colored), wardroom steward, who died a few hours afterwards of the effects of his injuries,

and John Hudson, master at arms, who is doing well, his wounds, though severe, not being thought dangerous. But one man from this division escaped, he being at the head of the ladder at the time. Some eight men from the forward pivot gun jumped overboard to escape the steam. With the aid of the "Jackson's" boats we were fortunate enough to recover all these, except John Connor, second-class fireman, who was drowned.

This shot, which proved to be a fifty-pound rifled shot, prevented any further movement of our wheels for the time. We, however, continued our fire from the forward and after thirty-twos, and after nine-inch guns, until you noticed our mishap, and came alongside to tow us out of action. At this period the signal to retire was given.

I have great satisfaction in stating that officers and crew generally behaved well. Mr. Weld, acting-master's mate, in charge of the nine-inch and rifled Parrott gun forward, is entitled to credit for the admirable manner in which those guns were served, and his coolness and self-possession at the time of the accident.

On examination of the injured boiler by the chief engineer of this ship, it is his opinion that the repairs to it will require at least ten days to complete and will need the aid of a shop and experienced workmen. In the meantime, the ship is ready for such service as she may be called upon to perform, which will not entail a greater speed than six knots an hour. This rate, I think we shall be able to maintain.

I have the honor to be, respectfully, your obedient servant,

CHAS. H. BALDWIN,

*Acting Lieutenant-Commanding.*

Commander D. D. PORTER,

*Commanding Bomb Flotilla.*

UNITED STATES STEAM-SLOOP "BROOKLYN," }  
BELOW VICKSBURG, June 30, 1862. }

SIR—In compliance with your order of yesterday's date, to make my official report of my attack on Vicksburg, on the 28th instant, and to give my reason for not following the flag-ship up the river, etc., I submit the following:

At 3.15 A. M., June 28, got under way, took position in the prescribed line of battle, and followed the flag-ship; at 4.05 A. M., the enemy opened fire upon the advanced vessels. When this ship arrived abreast of the lower batteries the steamers of the mortar flotilla, which seemed to be without any form of order, obstructed our passage in such a manner as to oblige us to stop our engines, and thus delayed our progress. At 4.45 A. M., as the 80-pounder rifle was the only gun bearing upon the hill, and able to reach, we opened with that vigorously, keeping well inside their line of fire. At 5.15, the gun-boats, and a few minutes after, the bomb vessels of the mortar flotilla, having ceased firing, all the batteries which had previously been partially silenced, immediately renewed the action, hailing a cross fire on this ship and the two gun-boats. At this time the smoke cleared away ahead of us, and, to my surprise, I could see nothing of the flag or other ships in the line. Whilst we were hotly engaged, trying with our two rifles to silence their most annoying battery, fire was opened upon us by a battery of five pieces of flying artillery, from a position about two-thirds of the way down the hill, and in front of the southernmost battery. Being within easy range, we opened our starboard broadside with shells and shrapnel, and drove them from their position. Finding myself entirely unsupported, except by the "Kennebec" and "Katahdin," which two vessels gallantly performed their part in the engagement, and knowing that it was impossible to reduce a single one of those hill-top batteries at 7.25 A. M. after sustaining their fire

for two hours and forty minutes, I discontinued the action, and at 8.25 A. M., came to anchor about two and a half miles below Vicksburg.

My reason for not following the flag-ship up the river, that is, *above* and *beyond* the fire of the forts, is simply because, in your general order of the 25th instant, you say "Should the action be continued by the enemy, the ships and the 'Iroquois' and 'Oneida' will stop their engines and drop down the river again;" and, on the evening of the 27th, twice (when in the cabin and on the quarter-deck of your flag-ship) I asked you if it was your wish or desire for me to leave any batteries behind me that had not been silenced, you answered "No, sir; not on any account."

It affords me great pleasure to bear witness to the excellent deportment of my officers and men; a more cool, or a braver set of men, was never on board of any vessel.

We were hulled but twice, one shot taking effect below water, on our starboard bow; and we received some damage to our rigging. We have no casualties on board. We expended, in the action, 28 nine-inch shells, 41 nine-inch shrapnel, 62 Hotchkiss eighty-pound rifle shells, 3 Dahlgren eighty-pound rifle shells, 14 Parrott thirty-pound rifle shells.

Very respectfully, your obedient servant,  
THOS. T. CRAVEN,

*Captain.*

Flag-officer D. G. FARRAGUT,

*Commanding Western Gulf Blockading Squadron,  
United States Ship "Hartford," above Vicksburg.*

UNITED STATES GUN-BOAT "KATAHDIN," }  
BELOW VICKSBURG, MISSISSIPPI RIVER, }  
June 29, 1862. }

SIR—Agreeably to your order of this date, I have to report that I received no orders "to follow the flag-ship up the river," nor any written order whatever, and was entirely ignorant of your plan of attack.

Agreeably to your verbal instructions, which were "to take the rear of the line, and to follow the 'Kennebec,' and fire at anything and everything I saw fit, or could see," I got this vessel under way at 3.30, yesterday morning, took position as the rearmost vessel, and followed the "Kennebec" to attack the batteries at Vicksburg. After the squadron, with the exception of the "Brooklyn," "Kennebec," and "Katahdin," had passed the batteries, the mortar flotilla ceased firing, and the enemy opened their batteries anew. We continued under their fire until 8 A. M., when we dropped down, in company with the "Brooklyn" and "Kennebec" and at 8.20 came to anchor out of range. I have no casualties to report, and the vessel was not hit, though the enemy's shot flew around and over us. The officers and men behaved with their usual cool and determined bravery under fire. We expended in the action eleven shells from the eleven-inch pivot gun, and thirteen from the Parrott rifle on the forecastle. Every shot was deliberately aimed at one or the other of the batteries. In consequence of the position assigned us, and the number of vessels engaged, it was impossible to fire rapidly without firing into or over, and endangering other vessels of the squadron and the steamers and schooners of the mortar flotilla. The vessel had to be manoeuvred to fire every shot. We were three hours under the fire of the batteries.

Very respectfully, your obedient servant,

GEO. H. PREBLE,

*Lieutenant-Commanding.*

Flag-officer D. G. FARRAGUT,

*Commanding Western Gulf Blockading Squadron,  
United States Flag-ship "Hartford," above  
Vicksburg.*

UNITED STATES GUN-BOAT, "KENNEBEC," }  
BELOW VICKSBURG, MISSISSIPPI, }  
June 29, 1862. }

SIR—In obedience to your order of the 29th, I have the honor to make my report of the attack on Vicksburg and my reason for not following you up the river; also the casualties that have occurred on board this vessel.

My position was in the rear of the "Pinola" and on the port quarter of the "Brooklyn," which I held. On the batteries opening fire, I found, from the position of the steamers under the command of Commander Porter, that I could not bring my guns to bear on the batteries without serious injury to them. Immediately on their dropping astern I opened fire on the bluff battery, which had not yet been silenced. When the dense smoke which previously obscured the vessels had passed away, I found that you, with the rest of the fleet, with the exception of the "Brooklyn," "Katahdin," and this vessel, had passed up, and that the mortar vessels had discontinued their fire. Placed in this position, I again referred to your orders, which were: "But if the action should be continued, the ships and the "Iroquois" and the "Oneida" will stop their engines and drop down the river again, keeping up their fire until directed otherwise." Retaining my position astern of the "Brooklyn," I continued firing upon the batteries until my supply of ammunition was so reduced that I deemed it advisable to desist. The hospital and other batteries, which had been silenced for a while, had at this time opened again. The battery on the bluff was firing with vigor, and was assisted by some artillery in the woods. With shot and shell falling around us, I am happy to report no casualties or injury to this vessel. The officers and men performed their duty with the greatest alacrity and coolness. I cannot refrain from mentioning my executive officer, Lieutenant F. B. Blake, who personally attended to the firing of every gun. The following is the expenditure of ammunition, viz: 14 eleven-inch shells, 10m. fuze; 2 eleven-inch shells, 15m. fuze; 16 Parrott shells, percussion; 5 Parrott shells, time fuze, 5m.; 5 Parrott shells, time fuze, 10m.

Very respectfully your obedient servant,

JOHN H. RUSSELL,

*Lieutenant-Commanding.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron.*

UNITED STATES STEAM-SLOOP "ONEIDA," }  
ABOVE VICKSBURG, JUNE 28, 1862. }

SIR—I have the honor to report the part borne by the "Oneida" in the engagement with the rebel batteries at Vicksburg this morning.

At 2.10 A.M., the flag-ship made private signal to the fleet to get under way. Stopped coaling, cast off from the coal bark, called all hands and got under way, lashed the hammocks along the starboard side to hold splinters, beat to quarters and cleared ship for action, and stood up the river, the "Iroquois" in line ahead, the "Richmond" astern of us, and the rest of the fleet following. At 3.55, the enemy opened fire on us from his numerous batteries below, over, and above the town. At 4.15, opened on the enemy's batteries in succession, firing for fifteen minutes or more at the flash or smoke of the batteries below and over the town, viz.: the marine hospital battery and the batteries on the ridge over that hospital, it being too dark to see distinctly the batteries on the shady side of the hills.

As it grew light, orders were given to fire as soon as the smoke cleared off, and with good aim. We used shells 5m. fuzes, shrapnel and grape, according to distance, steaming so as to keep between the "Iroquois" and "Richmond," and going ahead when the enemy got our range well.

Having reached the bend in the river (the "Iro-

quois" ahead and the "Richmond" astern of us), and none of our starboard guns now bearing on the batteries, pivoted guns and lashed hammocks on the port side, and prepared for enfilading the batteries above the town, when the flag-ship came up in the proposed line of fire. At 6.30 the "Oneida," anchored near the "Hartford."

This ship was struck four times. One 6-inch rifle shell came through the starboard after-pivot port, killing S. H. Randall, seaman, at the after-pivot gun; severely wounding Richard Hodgson, third assistant engineer, at the engine bell, and passing through the combings of the engine-room hatch, picked up three loaded muskets (each lying flat on the deck, on the port side of that hatch), and burst in the bulwarks, over the first cutter, which was lowered to near the water's edge, drove the muskets through the open port there, and severely wounded William Cowell, seaman, who was in the boat sounding, and slightly wounding Henry Clark, chief boatswain's mate. One 8-inch solid shot struck on our starboard quarter, near the copper, and cut the mizzen mast half in two between decks. One 32-pounder shot passed through the rail. A second 8-inch solid shot carried away, amidships, the keel of the launch which was partly lowered, and, entering on the starboard side, struck the steam drum, and, glancing, fell into the fire-room.

We expended 19 eleven-inch shells, 5m. fuzes; 16 eleven-inch shrapnel; 3 eleven-inch grape, from the two pivot guns; 12 six-inch shells; 6 32-pounder grape, from the two thirty-twos; and 28 thirty-pounder bolts, from two rifle guns—most of these from the fore-castle pivot-gun.

The officers and men did their duty well. The enemy's fire was heavy. I enclose the surgeon's report. We have no carpenter.

Respectfully yours, S. PHILLIPS LEE,  
*Commander.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron.*

UNITED STATES STEAMER "RICHMOND," }  
ABOVE VICKSBURG, MISSISSIPPI, JUNE, 28, 1862. }

SIR—In accordance with your instructions, I have the honor to enclose herewith the surgeon's report of the casualties on board this vessel during the engagement with the batteries at Vicksburg this morning. I also send, for your information, the reports of the carpenter and boatswain, showing the injury done to the "Richmond" by the enemy's shot.

Where all behaved so well I find it impossible to designate any particular individual, either among the officers or men, as meriting especial notice for gallantry and good conduct during the spirited fight which lasted nearly an hour, and was, for the most part, at short range. Still, I feel that I should be doing great injustice to the officer to whom the careful training and consequent steadiness of the crew is due, if I were to fail to give him the credit he has so fairly won; I refer to Lieutenant Cummings, the executive officer of this ship, and I trust that a grateful country will soon reward him in some way for his untiring zeal and devotion to his profession and her cause.

With great respect, I am, sir, your obedient servant,  
JAMES ALDEN,  
*Commander.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron.*

UNITED STATES FLAG-SHIP "HARTFORD," }  
ABOVE VICKSBURG, JUNE 29, 1862. }

SIR—I have the honor to report the part taken by this ship in the battle of yesterday, in passing the forts at Vicksburg.

We were under way before daylight, and reached the scene of action as day was breaking, when the enemy opened fire upon us from his scattered batteries on shore. We returned it as they came in range, going at slow speed, our guns being worked with admirable coolness and deliberation, which was absolutely requisite, as we labored under the great disadvantage of not knowing the situation of the batteries, which were only discovered by the flash and the smoke of their guns; some, also, were on high bluffs, rendering it difficult to elevate our guns to reach them.

We were under fire about one hour and a half, receiving it on the broadside, and being raked ahead and astern. The enemy fired with great precision, and, although we silenced some of their batteries, they returned to them when we had passed and our guns would no longer bear, and recommenced firing. We stopped opposite one of the lower batteries more effectually to silence it. It would have been easy to have passed by the batteries under full steam and speed, with much less risk from the enemy's fire; but then our object would not have been gained in driving them away from their guns.

We are much cut up, both in hull and rigging, which the enclosed reports of boatswain and carpenter will show. The rigging was soon temporarily secured, under the direction of our indefatigable boatswain, James Walker. The enemy used—as was shown by our finding them on board after the action—80-pounder rifle, 32-pounders and 8-inch shot; also, rifle and musket balls—one of our men being wounded by the latter while working a howitzer in the top.

The executive officer, James S. Thornton, deserves much credit for his excellent distribution of the crew, at the gun and other divisions, and his efficient distribution of them during the action. The commanding officers of divisions also deserve mention—doing their duty with spirit and ability. They were: Lieutenant Albert Kautz, first division; Master John C. Watson, second division; Acting-Master Daniel C. Murphy, third division; Acting-Master Ezra L. Goodwin, powder division.

The marine guard, under charge of Captain John L. Broome, had charge of two broadside guns, and fought them well, thus sustaining the reputation of that distinguished corps. In making this report it gives me an opportunity to supply an omission inadvertently made in my last report of the battle of the 24th and 25th of April; it is in speaking of the medical department, which, under its head, Fleet Surgeon Foltz, was administered admirably, both in this and the former battles. The engineer department, under Chief Engineer James B. Kimball, won much praise for his prompt and efficient working, both in passing the forts and batteries at New Orleans and also in this fight; a failure promptly to obey the bells or the giving out of the engines might have led to much disaster. Acting-Midshipman Herbert B. Tyson, doing the duty of acting-master, besides carrying on those duties with credit, also had charge of a broadside gun manned by his division. In fact, all—officers and men—were a credit to the ship and to the country for which they have so gallantly fought.

We have much to be thankful for, in only having to mourn the loss of one man—Edward E. Jennings, seaman—and having a few only slightly wounded, under such a heavy fire. I enclose the fleet surgeon's report. Very respectfully, your obedient servant,

R. WAINWRIGHT,

*Commander United States Navy.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron.*

FLAG-SHIP "HARTFORD," }  
ABOVE VICKSBURG, June 28, 1862. }

of killed and wounded on board this ship during the engagement with the batteries at Vicksburg, viz:

*Killed.*—Edward E. Jennings, seaman.

*Wounded.*—Charles Allen, seaman, head; Alex'r Capron, landsman, head; Lawrence Fay, boy; Patrick Roach, coal-heaver; Sylvester Becket, Alfred Stone and John Hardigan, landsmen; Jno. H. Knowles, quartermaster and Nathan J. Salter, ordinary seaman; all slightly. Philip Roberts, seaman, severely; Joseph Guido, ordinary seaman, thigh; Flag-officer D. G. Farragut and Jno. L. Broome, captain of marines, slight contusions.

I am, very respectfully, your obedient servant,

J. M. FOLTZ,

*Fleet Surgeon.*

Commander RICHARD WAINWRIGHT,  
*Commanding United States Flag-ship "Hartford."*

UNITED STATES GUN-BOAT "SCIOTA," }  
ABOVE VICKSBURG, June 28, 1862. }

SIR—I have to report that, in passing the batteries this A. M., Aug. Ellsworth, ordinary seaman, was killed; E. W. Hathaway, seaman, lost his left arm above the elbow; Wm. Orme, landsman, was slightly wounded; and Clarence Miller, landsman, slightly wounded in the head. The vessel was struck on the starboard quarter, demolishing the quarter-boat and driving in the spirketing. Another shot came through the starboard bulwarks, under the top-gallant forecastle, shattering and carrying away one of the knees and round houses; another shot went through the centre of the foremast, half way up.

Herewith, I beg leave to enclose the surgeon's report of the casualties.

I am, respectfully, your obedient servant,

EDW'D DONALDSON,

*Lieutenant-Commanding.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron.*

UNITED STATES GUN-BOAT "WINONA," }  
ABOVE VICKSBURG, June 28, 1862. }

SIR—I am happy to be able to report no casualties to life or limb in the action of this morning with the batteries in or about the city of Vicksburg. Two small shots, either grape or small field-piece, passed through our forward starboard bulwark, cutting away one stanchion and slightly splitting the spirketing. The damage is easily repaired. The vessels of the fleet, while passing the city, were first exposed to a heavy plunging fire from the batteries on the top of the bluffs, cross-fires from batteries (five in number, I think), in various places, then to raking fires above and below; and, while passing the last battery at the upper end of the city, to heavy fire of musketry from concealed marksmen, and, lastly, to the raking fire of heavy guns for nearly two miles above the last battery.

When I came abreast of the upper battery it was entirely clear of men, having been cleared by the guns of the flag-ship; but, as soon as I passed, they returned and opened a very spiteful fire upon the flag-ship, "Iroquois," "Pinola," and this ship, until beyond range. Taking all things into consideration, it seems miraculous that no more damage was sustained by the fleet.

From the experience of this morning I am satisfied that ships can clear batteries when placed on a level with them, or nearly so, though the men return to them as soon as the ships' guns cease to bear; but as to batteries placed on hills and bluffs, ships are almost useless against them.

I conclude, sir, by commending to your notice the good conduct of all on board. Where all were alike conspicuous it would be unjust to particu-

larize.

gangway during the whole action, and assisted in conning the ship. Mr. Sanborn is not a regular river pilot, but a raftsman, partly pressed into the service, and I think a good Union man. Some notice from you, sir, I think would be appreciated by him, and others like him in the fleet.

Herewith I transmit the return of ammunition expended in the engagement of this morning.

I am, sir, very respectfully, your obedient servant,

ED. T. NICHOLS,

*Lieutenant-Commanding.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron.*

UNITED STATES STEAMER "IROQUOIS," }  
ABOVE VICKSBURG, June 30, 1862. }

SIR—Agreeably to your order, I submit the following report:

At two in the morning of the 28th, the signal being made from the flag-ship, I got under way and steamed slowly up (the programme being that the "Iroquois" was to lead the attack upon Vicksburg), and was up close into the lower battery before we were discovered, when they opened fire, which was immediately returned. We so fought our way up, running close into the town, having a raking fire from the fort above and a plunging fire from the batteries on the hill, together with broadsides from the cannon planted in the streets, and, what is most strange, through all this heavy concentrated fire, with the exception of cutting away both our mainstays, and some other immaterial damage to the rigging, we escaped without injury. One shell burst on board of us, scattering its fragments around, and yet no casualty occurred.

We remained off the upper battery until joined by the flag-ship, when, following your motions, we anchored out of range. My men and officers behaved with the same coolness which I learn so distinguished them in the attack on the forts below New Orleans.

I have the honor to be, sir, very respectfully, your obedient servant,

J. S. PALMER,

*Commander.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron.*

UNITED STATES GUN-BOAT "WISSAHICKON," }  
OFF THE YAZOO RIVER, June 29, 1862. }

SIR—I have the honor to submit the following report of our engagement with the rebel batteries on the heights of Vicksburg. Yesterday morning, at about two o'clock, observing the signal from the flag-ship for the fleet to weigh anchor and proceed to the attack, as arranged by general order, we were soon under way and steaming slowly up the river. By four o'clock we were in our station, astern of the "Iroquois," and on the port quarter of the "Richmond," the "Oneida" ahead and close to us, the remainder of the vessels of the squadron not in sight.

At 4.15, the batteries opened a heavy fire upon us, which we immediately returned with our Parrott rifle and eleven-inch gun. Arriving opposite the city, and within four hundred yards of the lower batteries, our two 24-pounder howitzers, charged with shrapnel, were brought into operation, and did good service in clearing the batteries of their crews. The action continued for one hour, during which the "Wissahickon" received four shots. Our port main rigging was shot away, and an eight-inch shell struck the vessel at the water line, entering the berth-deck, where it killed one man and wounded all the men stationed to pass shot and powder on that deck. Our loss in the battle, though not heavy, is still severe. Master's Mate Charles M. Bird, received a compound fracture of the left arm; ward-room cook killed, and five of the crew

wounded. A severe attack of fever had confined me to bed for several days previous to the action, and I could do but little during its continuance except to encourage, by my presence on deck, the crew to do their duty faithfully.

To Lieutenant E. E. Potter, the executive officer, belongs the credit of our success, and it affords me pleasure to inform you that the officers and crew of the "Wissahickon" did their duty faithfully, and to my entire satisfaction.

After passing the batteries, I proceeded, according to my orders, to the mouth of the Yazoo River, but the gun-boats named in your order, which were to join me, not having come up, I deemed it imprudent to attempt the ascent of the river alone. I shall, therefore, await your further orders.

I am, most respectfully, your obedient servant,

JOHN DECAMP,

*Commanding.*

Flag-officer D. G. FARRAGUT, U. S. N.  
*Commanding Western Gulf Squadron, near Vicksburg, Miss.*

FLAG-OFFICER FARRAGUT'S REPORT OF AFFAIRS  
ABOVE VICKSBURG, JULY 6, 1862.

UNITED STATES FLAG-SHIP, "HARTFORD," }  
ABOVE VICKSBURG, July 6, 1862. }

SIR—I have to inform you that we are still at this place, bombarding it by the mortars from both sides of the peninsula. Flag-officer Davis has four mortars, and Commander Porter sixteen. Commander Porter has hard work to keep them from attacking him with riflemen; thus far, however, he has always got the best of them, and forced them to retreat. He reported yesterday that he had found five dead bodies in the swamp near him, and large quantities of shoes, knapsacks, muskets, etc., showing that he had driven them precipitately from the woods.

I received a telegram yesterday from General Halleck, a copy of it is herewith enclosed, by which it appears that he will not be able to co-operate with us for some weeks yet.

Flag-officer Davis received a letter from General Grant at the same time, at Memphis, stating that it was reported that Richmond was taken. Should this be true, no doubt but what Vicksburg will soon fall, but it must be by troops coming down in the rear. The city is sacrificed by the soldiers; it has been abandoned by the inhabitants. The ditch across the peninsula will soon be deep enough for the water to run through, unless the river should fall very fast. We are now in hopes of a little rise, a foot or so will accomplish the object.

I have the gun-boats looking to the bluffs below, and giving convoy to our supply vessels.

I hear nothing of the "Cayuga" or "Kearsage."

I hope the department will not supersede Commander Bell in the command of the "Brooklyn," for you may depend upon it the Navy has not a braver man or better officer. \* \* \* \* \*

I hear by a deserter to General Williams that General Breckinridge is in command at Vicksburg, and they are seizing every one for the army.

Very respectfully, your obdt serv't.

D. G. FARRAGUT,

*Flag-officer.*

Hon. GIDEON WELLES,  
*Secretary of Navy, Washington.*

UNITED STATES MILITARY TELEGRAPH, }  
MEMPHIS, July 3, 1862. }

The scattered and weakened condition of my forces renders it impossible for me, at the present, to detach any troops to co-operate with you on Vicksburg. Probably I shall be able to do so as soon as I can get my troops more concentrated;

this may delay the clearing of the river, but its accomplishment will be certain in a few weeks.

Allow me to congratulate you on your great success.

H. W. HALLECK,  
Major General.

Flag-officer FARRAGUT,  
Commanding United States flotilla in the Mississippi.

COMMANDER D. D. PORTER'S REPORT OF THE  
OPERATIONS OF THE MORTAR FLEET AT  
VICKSBURG.

UNITED STATES FLAG-SHIP "HARTFORD," }  
ABOVE VICKSBURG, MISSISSIPPI, }  
July 7, 1862. }

SIR—I herewith forward the report of Commander D. D. Porter of his operations since the receipt of his orders to join me at Vicksburg up to date, and it gives me great pleasure to say that nothing could exceed that officer's perseverance in getting to the scene of his labors, or the steadiness with which his officers and men have carried on his work of demolition and annoyance to the enemy, while I deeply regret the chance shots which caused the death of his brave men. But, as I stated in my last communication, Commander Porter's service has been hard upon his officers and crew, though they have performed it well, willingly and unflinchingly.

We hope soon to have the pleasure of recording the combined attack by Army and Navy, for which we all so ardently long.

Very respectfully, your obedient servant,  
D. G. FARRAGUT,  
Commanding Western Gulf Blockading Squadron.  
Hon. GIDEON WELLES,  
Secretary of the Navy.

UNITED STATES STEAMER "OCTORORA," }  
VICKSBURG, July 3, 1862. }

SIR—Agreeably to the orders received from you I sailed from Pensacola on the 3d of June, and on the 9th had all the mortar vessels in New Orleans. On the 13th, sixteen vessels, in tow of the steamers, had left for Vicksburg, on half rations, the officers and men being desirous to arrive at the scene of action in good time. On the 20th, we were before Vicksburg, ready for service, having met with no delay or accidents on the passage. On one occasion the flotilla was attacked with field-pieces at Ellis Bluffs, but the rebels were handsomely repulsed by the "Owasco" and "Jackson," Lieutenants Commanding Guest and Woodworth. The mortar schooners "George Mangham" and "Arletta," Acting-Masters John Collins and Thomas E. Smith, and the "Horace Beales" and "Sarah Bruin," Lieutenant-Commanding Breese and Acting-Master A. Christian, were also attacked at different times, but they whipped off the rebels, and pursued their voyage in peace. The latter schooner had two men seriously hurt, having each lost an arm by a 12-pound shot. Lieutenant-Commanding Breese gives his officers full credit for behaving handsomely under a troublesome fire from field-pieces and concealed riflemen.

On the 21st, with a mortar schooner alongside, I proceeded up toward the city of Vicksburg, to obtain ranges and draw the fire of the enemy's forts, about which we had no information. The rebels allowed us to get within good range, when they opened on us with all their batteries, without, however, doing any harm, and enabled us to get the desired information. I gave them four bombs, to let them see they were in range, and some 100-pound rifle shots, and returned to the anchorage, after satisfying myself about the proper position

On June 26, I was employed all night getting the mortars in position. Nine on the right-hand side going up, under command of Lieutenant-Commanding Smith, and eight on the left side, under command of Lieutenant-Commanding Queen. Lieutenant-Commanding Breese was left at New Orleans to bring up the last vessels. He was detained, also, getting the "Sea Foam" afloat, which vessel had grounded badly on a sand-bar, where she will most likely remain for the rest of the season. The position selected here for the mortars was a beautiful one on the starboard side of the river, at 2,500 yards from the main battery, and 2,200 from the water battery. The vessels on the port side about 700 yards, further off, were rather exposed to the enemy's fire, but were so covered up with bushes that it was not easy to see them at that distance, much less to fire accurately at them.

When the mortars were all in position they opened their fire deliberately for the purpose mainly of getting ranges, which they succeeded in doing after a few fires. The enemy opened on them from all their batteries in range, but, though they fired all around and over them, none were struck. A kind Providence seems to look out for this little fleet. They soon silenced the batteries, and were enabled to pursue their experiments unmolested.

On June 27, the mortars opened again on the forts at 5.45 A. M., firing rapidly. The rebels attempted to respond, but were driven away from their guns, after we had fired a little less than an hour. The steamers were also employed, throwing in an effective fire with their rifle-guns. The practice was kept up during the day with good effect, many of the bomb shells going into the forts or bursting over them. Only one vessel, the "C. P. Williams," was struck on this day, a 7-inch shell lodging in her bow and sticking there, showing that the enemy's powder was bad. At sunset we ceased firing, and at 8 o'clock opened again with all the mortars, on the town, doing much damage. At 8.30, I sent the "Owasco," Lieutenant-Commanding Guest, up abreast of the town to throw some incendiary shells, which proved to be failures, as they did not explode.

June 28, at 3 o'clock A. M., the squadron made a move to pass the batteries, and the flotilla steamers got under way to take their position, which was to enfilade the water batteries as the ships passed. The headmost vessels of the squadron passed along a little before time, unsupported, and our vessels could not get near enough to them to be of any service. Five of the above mentioned vessels went gallantly on, despite the fire of the batteries, throwing in their grape and canister, favored much by the heavy atmosphere and early morning light. At 4 o'clock, the flag-ship came along, with two gun-boats. By that time the mortar steamers had got nearly into position, and moved up toward the batteries, throwing in a quick fire. Nearly all the mortars had commenced as the "Richmond" passed, and the shells were falling very well and rapidly, the "Hartford" and gun-boats opening their batteries with grape, canister and shrapnel. The air seemed to be filled with projectiles. The lower batteries were silenced for the time, though I saw that the rebels would manage to get a shot or so at the ships after they had passed along. The batteries out of range of the mortars were very severe, and I am sorry to say that some ships lost, in killed and wounded, as many as they did at Forts Jackson and St. Philip. I regret that the mortars were not able to reach these batteries.

About the time the "Hartford" passed, the "Octorora's" wheel-ropes got jammed below, and there was a fair prospect of drifting out of action, or into some of the vessels astern. As I went drifting by the "Miami," I hailed her commander, and ordered him up within six hundred yards of the

the "Westfield" and "Clifton" to go ahead of me until I could relieve myself from my unpleasant position. The "Owasco," Lieutenant-Commanding Guest, and "Harriet Lane," Lieutenant-Commanding Wainwright, had been ordered to act at discretion, and throw on their fire to the best advantage, which they did effectually. The river being narrow, and the current very strong, it was impossible to manoeuvre so many vessels to advantage, and leave room for the squadron of ships to pass.

I had cleared my wheel-ropes, and succeeded in getting again to my place ahead, and was in fine position (with all the steamers firing very rapidly and effectually) to cover the "Brooklyn," "Katahdin," and "Kennebec" as they came along, presuming that they were going to follow the "Hartford." That vessel was now two miles ahead, and appeared to be under a heavy fire from a battery of six guns at the upper end of the city, out of mortar range. The "Brooklyn" came up a little ahead of the mortar vessels and opened fire, as did the gun-boats astern of her, but did not pass through.

Not a shot had, up to this time, struck one of the mortar steamers; when, finding it necessary to slow the engines, to get out of the line of the "Brooklyn's" fire, the vessel became stationary, and a fair target for what guns the enemy were able to fire. The "Jackson," Lieutenant-Commanding Woodworth, was struck badly with rifle shells, one of which exploded in her wheel-house, disabling the man at the wheel by cutting off his leg, and knocking her steering apparatus to pieces which disabled her. The other struck the pillar block support, almost cutting it in two. This steamer being disabled, the "Clifton," Lieutenant-Commanding Baldwin, went to her assistance (by signal), and, while in the act of taking her in tow, a 7-inch shot passed in on the "Clifton's" port bow, going through her boiler. By this catastrophe, six of the men in and about the magazine were scalded to death, and others were scalded severely. The steam drove eight or ten men overboard, one of whom was drowned. The "Jackson," Lieutenant-Commanding Woodworth, now became the helping ship, and picked up out of the water the "Clifton's" men, that steamer being completely disabled. The "Westfield," on approaching to assist her, was struck on the frame of her engine by a heavy rifle shot, which, fortunately, did not go through, having struck butt-end foremost, and consequently caused but short delay. In the meantime, the "Octorora" dropped out of fire, took the "Clifton" in tow, and removed her to a place of safety. The "Jackson" drifted out clear. No further necessity existing for the flotilla steamers remaining under fire (the "Brooklyn" and those astern of her having slowed their engines, and proceeding no further), the signal was made to retire under cover of the woods, having been sixty-five minutes under fire. Although the steamers disabled were in a strong current, and narrow, crowded river, they were handled and taken out of action without confusion of any kind, beyond that occasioned by the escaping steam on board the "Clifton." Such a calamity is always appalling to those unused to the effects of such a terrible enemy on board their own vessel. The conduct of the officers and men on board the "Clifton" was creditable in the highest degree, and I regret to say that those scalded to death were some of the leading men of the vessel.

No further casualties occurred of any consequence. The "Jackson" and "Clifton" are temporarily repaired, the latter working under one boiler. All the steamers took good positions, and their commanders did their duty properly. It is to be regretted that a combined attack of Army and Navy had not been made, by which something more substantial might have been accomplished. Such an attack, I think, would have resulted in the capture of the city. Ships and mortar vessels can keep

full possession of the river, and places near the water's edge, but they cannot crawl up hills three hundred feet high, and it is that part of Vicksburg which must be taken by the Army. If it was intended merely to pass the batteries at Vicksburg, and make a junction with the fleet of Flag-officer Davis, the Navy did it most gallantly and fearlessly.

It was as handsome a thing as had been done during the war; for the batteries to be passed extended full three miles, with a three-knot current, against ships that could not make eight knots under the most favorable circumstances. Again, sir, I have to mention favorably the divisional officers, and the acting-masters commanding mortar vessels. Anchored at all times in a position selected by myself, more with regard to the object to be accomplished than to any one's comfort or safety; knowing that they will have to stay there without a chance of getting away till I think proper to remove them (no matter how thick the shot and shells may fly), there has always existed a rivalry as to who shall have the post of honor (the leading vessel), almost certain to be struck, if not destroyed.

They know no weariness, and they really seem to take a delight in mortar firing, which is painful even to those accustomed to it. It requires more than ordinary zeal to stand the ordeal. Though I may have at times been exacting and fault-finding with them for not conforming with the rules of the service (which requires the education of a life-time to learn), yet I cannot withhold my applause when I see these men working with such earnest and untiring devotion to their duties while under fire.

The officers and crew of the "Octorora" behaved like veterans; and I am much indebted to that excellent officer, Lieutenant George Brown, for the drill of the crew, and the perfect arrangements made for going into action. On the day the squadron passed up, the mortars were engaged in divisions in firing on the enemy and keeping his guns quiet, and so on up to the 1st of July.

Two or three deserters came in, one of them asserting a marvelous story that the ships and mortars had killed and wounded seven hundred persons. No doubt some were killed, but very likely fewer than stated, and only in and about the forts. Only two schooners were struck. One, the "C. P. Williams," Acting-Master Amos R. Langthorne, in the bow; the other, the "Orvetta," Acting-Master Blanchard, through the foremast. Nobody has been hurt, so far, in the mortar vessels.

On the first of July, our pickets (which were thrown out about a hundred yards) were surprised by a large body of rebels close to them, evidently intending to surprise the mortar schooners. They immediately came in to report, the enemy firing on them as they retreated. In a moment all the guns of the mortar vessels and flotilla steamers opened on the woods with grape, shrapnel, canister, shells, and round shot (the mortars throwing in bombs with small charges), and we knew if an enemy was there he could not face a fire like ours, from fifty guns, spread out along the levee for about a mile. After the woods were well shelled, the pickets went in and captured three rebel soldiers, who were helplessly stuck in the mud, from which they had much difficulty in extricating themselves, and cried out lustily that they had surrendered. They were brought in, with their arms and accoutrements. These men state that two regiments, one from Tennessee, the other from Mississippi, were put under arms, and made to believe that they were going to attack some United States troops. Finding the head of our schooners guarded, the rebels attempted to pass through the middle of the wood and enfilade us, but got helplessly stuck in the middle of the swamp, or the thick mud which exists here. While in this condition, our guns commenced shelling the woods, and the two regiments were panic stricken.

They threw away their knapsacks, cartridge boxes, and everything that would impede their progress. In going over the ground afterwards, our men found evidences of a general stampede throughout the woods; amongst other things they picked up from the mud the heavy boots of a general officer, with silver spurs on. There was evidence in the marks that the enemy had been completely "bogged," or sunk in the mud, and our prisoners informed us that, had we gone into the woods at that moment with two hundred men, we could have captured the two regiments, as they were for a time perfectly helpless, having thrown away many of their arms, etc. It was on this marsh I depended for safety when I placed the schooners in position; for, without such a natural defence, we should have been at the mercy of the concealed riflemen.

Not wishing to have any mishaps, I landed five howitzers, threw up works, posted fifty marines as pickets, and had a large bell slung up in the woods with lines leading to it from different points, so that the pickets might give immediate alarm. After which the mortar flotilla went to their repose with great confidence. We have held the position we first took. We have advanced, indeed, 300 yards with the mortars. We are within 2,100 yards of the enemy's batteries, and in short distance of an Army (which they say consists) of thirty thousand men—a very doubtful estimate, as it will not amount to a half or a third of that number. From what I can learn from pretty reliable sources, the regiments are small, and do not average 500 men each. I do not think there are 6,000 men in this town and the surrounding country, and many of them are sick.

I respectfully submit a list of the killed and wounded on board the steamers "Clifton" and "J. P. Jackson." On the "Clifton" there were eight killed and one wounded; Thomas Collins, gunner's mate; Robert Sargeant, ship's cook; John Burke, ordinary seaman; William Morris, captain's cook; John B. Carlton, landsman, and George B. Derwent (colored), wardroom steward, killed; and John Hudson, master-at-arms, severely wounded; John Connor, 2d-class fireman, was drowned. On the "Jackson" Alexander Greenwall, seaman, was severely, if not mortally, wounded.

On the 2d of July the enemy made another attack on our pickets and drove them in, wounding two of them, and succeeded in getting so close as to fire on our decks; but they soon met with the fire of five field-pieces which I had placed near the edge of the woods, and which must have inflicted severe punishment. Five dead bodies have since been found and evidences of some wounded, from the muskets and other arms thrown away, I suppose, in the retreat. Since then we have fortified ourselves so that they cannot annoy us without getting the worst of it. They have shelled our position, fired hot shot and rifled shot in abundance; and though they have made some holes in the mortar vessels, we have held our own, and shell them out whenever we open on them with mortars.

Very respectfully, your obedient servant,

DAVID D. PORTER,

*Commanding Mortar Flotilla.*

Flag-officer D. G. FARRAGUT,

*Commanding Western Gulf Squadron.*

REPORTS OF LIEUTENANT-COMMANDING CROSBY, OF THE "PINOLA," AND LIEUTENANT-COMMANDING WOODWORTH, OF THE "J. P. JACKSON," OF THE ATTACK ON VICKSBURG, JUNE 28, 1862.

UNITED STATES FLAG-SHIP "HARTFORD," }  
ABOVE VICKSBURG, July 8, 1862. }

SIR—I have the honor to forward the report of Lieutenant-Commanding P. Crosby, of the attack on Vicksburg, June 28, 1862; also the report of

commanding the gun-boat "J. P. Jackson," of the same affair.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

*Flag-officer, Commanding Western Gulf Blockading Squadron.*

Hon. GIDEON WELLES,

*Secretary of the Navy, Washington, D. C.*

UNITED STATES GUN-BOAT "PINOLA," }  
ABOVE VICKSBURG, June 30, 1862. }

SIR—I have the honor to report that I took my position in line of battle on the 28th instant at 3.10 A. M., in obedience to signals, and stood up the river in company with the squadron. At 4 A. M., opened fire on the enemy's batteries, which we continued until 6.10 A. M., when we had passed Vicksburg and were beyond the range of our stern guns (24-pound howitzers), but within range of the enemy's heavy rifled guns for some twenty minutes after we had ceased firing. At 6.40 A. M., anchored above Vicksburg; fired from the 11-inch gun 20 shells, 3 grape and 1 shrapnel; from the Parrott rifle 29 shells, from the howitzers 13 shells, and 20 shrapnel—total 86. Owing to the smoke and remarkably scattered position of the enemy's guns, we labored under great disadvantage in

LIEUT.-COMMANDING (NOW REAR-ADMIRAL) PIERCE CROSBY.

aiming, which hindered us from firing more rapidly. The fire from the enemy upon us was very severe, owing in a great measure, I think, to our being the last vessel that passed their batteries. But, I am thankful to say, only a few shots struck us, one of which, a heavy shot, struck John Brown, ordinary seaman, at the 11-inch gun, seriously wounding him; another, a 50 pound rifle shot, cut away the timber-head of the starboard after port: struck the howitzer and carriage, slightly defacing the former and slightly injuring the latter; it also struck the cabin hatch, destroyed the barometer and thermometer, and landed in the port water-ways; and, I regret to say, it killed William H. Thomas, quarter-gunner and captain of the gun, while sighting the piece, and mortally wounded Thomas Graham, landsman, who died in a few minutes after; it also slightly wounded William H. Shucks, landsman. Daniel Coleran, landsman, was wounded by a musket ball, volleys of which were fired at us from hills and bushes. We received some four or five large grape shot in the hull just below the water-ways. I am happy to say that neither the vessel nor guns were disabled. The howitzer continued firing after the accident, under the direction of Acting Master's Mate William H.

Thompson, who, by his brave example, restored confidence to his crew, and did great service in the action.

I have again the pleasant duty of bearing testimony to the gallant conduct of the officers and crew of this vessel, and the spirit and zeal exhibited in the performance of their duties on this occasion. John R. Tennant, quartermaster, gave the soundings with as much coolness as though he had been making an ordinary survey. Mr. John McHugh, our pilot, behaved in a remarkably cool and self-possessed manner, and gave me great assistance. Great credit is due Lieutenant A. P. Cooke for the efficient manner in which the guns were worked, and for the good training of the ship's company. Accompanying this report I send Assistant-Surgeon L. M. Lyon's report of casualties.

I am, sir, very respectfully, your obedient servant,

PIERCE CROSBY,

*Lieutenant-Commanding.*

Flag-officer D. G. FARRAGUT,  
U. S. N., Commanding Western Division of United States Blockading Squadron.

UNITED STATES STEAMER "J. P. JACKSON," }  
OFF VICKSBURG, July 30, 1862. }

SIR—I have the honor to report the following casualties on board the United States steamer "J. P. Jackson" during the engagement on the morning of the 28th ultimo, before Vicksburg. In endeavoring to obtain the position assigned me, by your order, in front of the lower "water battery," my vessel was struck by a 7-inch rifle projectile, which, entering on the starboard side of the forward bulkhead, passed obliquely through the forward wheel-house, destroying the wheel, and passed out through the hurricane deck, taking off the right foot of one of the steersmen, and wounding the left foot.

The vessel was for awhile rendered unmanageable, but, by the aid of a jury tiller, we were enabled to steer down the river out of the action, when the signal to retire was made. We received another 7-inch rifle projectile in our starboard wheel, cutting away one-half of the bridge piece supporting the other end of the shaft immediately under the pillar block. We were struck slightly by two grape, or other shot, doing no damage. We fired from our guns during the engagement 117 shot, shells, grape and shrapnel. I take pleasure in stating that the gallant conduct of my men and officers during the action met with my highest commendations.

Enclosed I send you the report of Surgeon Thomas Yard, containing list of wounded.

I have the honor to be, very respectfully, your obedient servant,

SELIM E. WOODWORTH,

*Lieutenant-Commanding, United States Navy.*  
Commander D. D. PORTER,  
*Commanding Mortar Flotilla.*

ENGAGEMENT WITH THE RAM "ARKANSAS,"  
JULY 15, 1862.

UNITED STATES FLAG-SHIP "HARTFORD," }  
BELOW VICKSBURG, July 17, 1862. }

SIR—It is with deep mortification that I announce to the department that, notwithstanding my prediction to the contrary, the iron-clad ram "Arkansas" has at length made her appearance and taken us all by surprise. We had heard that she was up at Liverpool, in the Yazoo River, and Lieutenant-Colonel Ellet informed me that the river was too narrow for our gun-boats to turn, and was also shallow in places, but suggested that Flag-officer Davis might send up some of his iron-clad boats, which draw only six or seven feet of water.

When this was proposed to Flag-officer Davis he consented immediately, and General Williams of-

fered to send up a few sharpshooters. The next morning they went off at daylight, and by six in the morning we heard firing up the river, but supposed it to be the gun-boats firing at the flying artillery, said to be lining the river. In a short time, however, the gun-boats appeared, and the ram in pursuit. Although we were lying with low fires, none of us had steam, or could we get it up in time to pursue her; but she took the broadside of the whole fleet. It was a bold thing, and she was only saved by our feeling of security. She was very much injured, and was only able to drift or go at the slowest speed—say, one knot, and with the current she got down to the forts of Vicksburg before any of us had steam up.

I had a consultation with Flag-officer Davis, and we thought it best to take the evening, when he dropped down to take the fire of the upper battery, and my squadron passed down with the determination of destroying the ram, if possible; but, by delays of getting into position, etc., it was so dark by the time we reached the town that nothing could be seen except the flashes of the guns, so that, to my great mortification, I was obliged to go down and anchor, with the rest of my fleet, to protect the transports, mortar boats, etc.

The ram is now repairing damages—for we put many holes through her—though we do not know the extent of damage done to her. Be assured, sir, however, that I shall leave no stone unturned to destroy her. I regret to report that the loss from this vessel was one officer and two men killed, and five wounded. The total loss in the fleet was five killed and sixteen wounded. I enclose herewith the fleet surgeon's report of casualties.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

*Flag-officer, Commanding Western Gulf Blockading Squadron.*

HON. GIDEON WELLES,

*Secretary of the Navy, Washington, D. C.*

FLAG-SHIP "HARTFORD," }  
BELOW VICKSBURG, July 16, 1862. }

SIR—I respectfully report the following list of killed and wounded in the fleet during the engagements on the 15th instant, viz:

FLAG-SHIP "HARTFORD."

Killed.—George H. Loundsberry, master's mate; Charles Jackson, officers' cook, and John Cameron, seaman, by cannon shot.

Wounded.—Captain John L. Broome, marine corps, and Thomas Hoffman, paymaster's steward, severe contusions; John D. Barnes, fireman, and Michael Martin, landsman, contusions; George Royer, marine, and Henry Downs, boy, slightly.

"WISSAHICKON."

Killed.—John Garrett, ordinary seaman, by a cannon shot.

Wounded.—Edward York, fireman, and Daniel Hayes, ordinary seaman, and Joseph Ranahan, landsman, severely; James Revell, ordinary seaman, slightly.

"WINONA."

Killed.—John H. Harway, landsman, by a shell. Wounded.—John Jones, captain afterguard, severely; William Malley, landsman, slightly.

"SCIOTA."

Wounded.—James H. Mathist, landsman, and Peter Lasher, ordinary seaman, severely.

"RICHMOND."

Wounded.—William Somes and William Nelson, seamen, slightly.

Total—5 killed; 16 wounded.

I am, very respectfully, your obedient servant,

J. M. FOLTZ,

*Fleet Surgeon.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Division Gulf Blockading Squadron.*

UNITED STATES STEAM-SLOOP "ONEIDA," }  
BELOW VICKSBURG, July 16, 1862. }

SIR—I make the following report of the action with the batteries and with the rebel iron-clad ram "Arkansas," last evening, in passing Vicksburg.

At 6.40 P. M., flag-ship made general signal 1,218; got under way, steaming as necessary, whilst the fleet was formed according to the plan for the morning of the 28th ultimo. Renshaw's mortars were now firing at the batteries. At 6.55, the army mortars commenced firing; at 7, the "Benton" opened fire on the new upper battery; at 7.20, passed two of the army gun-boats—now holding their fire to allow us to pass—our fleet having formed and closed up; at 7.30, we opened fire on the new upper battery; fired, in passing, at the upper batteries and rifle-pits with our battery and small arms, whilst under like fire from the rebels.

We passed near the left (east) bank, stopped the engine, and drifted by the town; saw the wharf boat; fired bolts from two rifled guns and solid shot from the two 11-inch pivot guns at the "Arkansas," which lying under the bank, exposed her position by firing. Stopped firing at 7.50, having expended the following projectiles: 6 shells, 11-inch, 5m. fuze; 9 grape, 11-inch; 2 solid shot, 11-inch (at the ram); 10 shells, 32-pounders, 5m. fuze; 1 stand 32-pounder grape; 2 solid 32-pounder shot; 16 bolts and 1 shell from the 30-pounder Dahlgren rifle gun. No casualties occurred on board. The officers and men on the sick list who were able to go to their guns did so. Anchored with the fleet.

Respectfully yours,

S. PHILLIPS LEE,  
Commander.

Flag-officer D. G. FARRAGUT,  
Commanding, etc., etc.

FLAG-SHIP "HARTFORD," }  
BELOW VICKSBURG, July 22, 1862. }

SIR—I herewith enclose the reports of these vessels, the "Iroquois," "Richmond," "Sciota," and "Winona," of their passage down the river from above this place, and the encounter with the ram "Arkansas."

I am, sir, respectfully, your obedient servant,  
D. G. FARRAGUT,

Commanding Western Gulf Blockading Squadron.  
Hon. GIDEON WELLES,  
Secretary of the Navy, Washington, D. C.

FLAG SHIP "HARTFORD," }  
BELOW VICKSBURG, July 16, 1862. }

SIR—The following officers and crew of this ship were killed and wounded in the engagement last night, viz:

Killed.—George H. Loundsberry, master's mate, killed by a cannon ball; Charles Jackson, officers' cook, killed by a cannon ball; John Cameron, seaman, killed by a cannon ball.

Wounded.—Thomas Hoffman, paymaster's steward, struck in head and chest with splinters; John D. Barnes, fireman, contusion of shoulder; Michael Martin, landsman, contusion of arm, slightly; George Royer, marine, contusion of arm, slightly; Henry Downs, boy (colored), contusion of arm, slightly; Captain John Broome, marine, contusion of head and shoulder.

Total.—Killed, 3; wounded, 6.

I am, very respectfully, your obedient servant,

J. M. FOLTZ,  
Fleet Surgeon.

Commander R. WAINWRIGHT,  
Commanding United States Steamer "Hartford."

UNITED STATES STEAMER "IROQUOIS," }  
BELOW VICKSBURG, July 17, 1862. }

SIR—At twenty minutes after six in the afternoon of the 15th, signal being made from the flag-ship to

weigh and form the line ahead (the "Iroquois" being ordered to lead), I was immediately under way, and stood down the river toward the newly erected battery, having been preceded about half an hour by Flag-officer Davis and the "Benton," with two other iron-clad gun-boats, whose instructions were to keep in play the upper battery, whilst we passed on to the attack.

At seven we passed the head of their line, and were immediately under fire, which we returned at once; and very soon after the hill battery, in the upper part of the town, commenced its raking fire, the shot and shells flying over us, their guns not being sufficiently depressed. In a short time we were abreast of the town, from which we received volleys of musketry and artillery, which we returned with shrapnel and grape. Now the lower hill batteries commenced their plunging fire and at this critical moment our worn-out engines suddenly stopped, and we drifted for twenty minutes under fire which, as night was now setting in, was ill-directed, and very soon gave me no concern.

As we dropped down, the lower water battery, and what I supposed might be the iron-clad ram, opened upon us. This we returned with solid shot. But with all this fire of heavy shot and shells from the batteries, of musketry and field-pieces with which the town was crowded, with the exception of a 6-pound shell, fired from a field-piece, left sticking in our side between wind and water, we escaped without damage.

By the indefatigable exertions of our chief engineer the engine was set going again, and when below their line of fire, I turned and stood up again for the batteries, thinking the flag-ship was still above. But afterwards, finding that in the darkness she had passed below unobserved by us, I dropped down and anchored beside her.

I have the honor to be, sir, very respectfully,  
your obedient servant,

JAMES S. PALMER,  
Commander.

Flag-officer DAVID G. FARRAGUT,  
Commanding Western Gulf Squadron.

UNITED STATES STEAMER "RICHMOND," }  
NEAR VICKSBURG, July 16, 1862. }

SIR—I have the honor herewith to enclose the surgeon's report of casualties, and also those of the boatswain and carpenter, showing the injury done to this vessel by the enemy's shot during the action of last evening. Every one on board behaved well. A careful lookout was kept for the ram as we passed, but owing to the obscurity of the night we could not make her out.

Respectfully, sir, your obedient servant,

JAMES ALDEN,  
Commander.

Flag-officer D. G. FARRAGUT,  
Commanding Western Gulf Blockading Squadron.

UNITED STATES GUN BOAT "SCIOTA," }  
ABOVE VICKSBURG, July 15, 1862. }

SIR—This morning, about 6.10 o'clock, heavy firing was heard on board this vessel apparently from the direction of the Yazoo River, the cause of which soon manifested itself in the appearance of the gun-boat "Taylor," Lieutenant-Commanding Gwinn, running before, and closely followed by an iron-clad rebel ram—since ascertained to be the "Arkansas"—escaped out of the Yazoo River. This vessel—of a similar construction to the "Louisiana" and "Mississippi" destroyed at New Orleans; that is, with a screw propeller and inclined iron sides, armed with nine guns—seemed, from her movements, to trust entirely to her invulnerability for a safe run to the cover of the Vicksburg batteries. The "Taylor" made a running fight until within our lines, when the vessels opened as their guns bore, the rebel's speed diminishing very visibly. This gun-boat was anchored fourth

in line from up river, without steam, and engines under repairs; but as soon as I heard the firing I ordered fire started and steam to be raised with all dispatch. My eleven-inch gun being loaded with a ten-second shell, which I had endeavored in vain to draw, as the rebel came within my train I fired, striking him fair, but the shell glanced off almost perpendicularly into the air and exploded. At the same time I opened a brisk fire with all my small arms against his ports, which, I am confident, prevented them from manning her port guns till after she had passed us. I observed one man in the act of sponging, tumble out of the port, sponge and all, evidently shot by a rifle ball.

I found my officers and men ready, but such was the suddenness of the appearance and passing of this formidable vessel of the enemy that but little time was afforded for any continued attack upon her with the unwieldy gun carried by this vessel. After passing down stream out of my line of fire, which he did in from four to six minutes, I was unfortunately only a spectator of the final result of this event.

I am, very respectfully, your obedient servant,

R. B. LOWRY,

*Lieutenant-Commanding, U. S. Gun-boat "Sciota."*  
Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron.*

UNITED STATES GUN-BOAT "SCIOTA," }  
BELOW VICKSBURG, July 16, 1862. }

SIR—I have the honor to report that, in obedience to general signal, made yesterday at 7 P. M., I got under way and took position fifth in line and steamed down the river. On nearing the point opposite the city, found an active bombardment kept up from the iron-clad vessels of Flag-officer Davis's fleet, while the rebels were replying with great spirit from all the hill and water batteries, strengthened by large bodies of sharpshooters posted in rifle-pits and in the woods. As we turned the point the bullets began to fly over us very thickly. We opened on the riflemen with small arms, in the hands of our sick and disabled officers and men, who, too feeble to work the heavy guns, still zealously used their little strength to annoy the enemy by a return fire of musketry. Our two 24-pounder howitzers were worked rapidly and efficiently, throwing shrapnel into the enemy's troops, which were seen to burst with good range and effect. I proceeded under this fire and the cross fire of the batteries till beyond range, when I rounded to and anchored at 8.10 P. M.

On passing Vicksburg could see nothing distinctly of the ram, though I received a fire, as from a battery, at or near the level with the water. A shell from this battery passed horizontally through this vessel, tearing the metallic boat, cutting bulwarks on port side, starting wood-ends and bolts on deck, and finally bursting in the starboard spirking, tearing water-ways, covering-board, futtock ends and timbers, and breaking boat davit on starboard side. Several grape and other shots passed through the ship, and one heavy shot struck under port bow—a plunging, grazing shot from the hill forts.

I have to report, and thankfully so, but two casualties—two men wounded, as per surgeon's report. My officers and men behaved well and bravely.

\* \* \* \* \*

Very respectfully, your obedient servant,

R. B. LOWRY,

*Lieutenant-Commanding "Sciota."*  
Flag-officer D. G. FARRAGUT,  
*Commanding Western Gulf Blockading Squadron.*

UNITED STATES GUN-BOAT "WINONA," }  
BELOW VICKSBURG, July 16, 1862. }

SIR—I have the honor to report that this vessel got under way last evening, and passed, in company with the rest of your fleet, from the anchorage above

Vicksburg to that below. All the vessels were subjected to a heavy fire from the numerous batteries, as also to a heavy fire of musketry. We were enabled to fire our 11-inch gun but three times, owing to having received a shot on our port side, which started a heavy leak. Started our deck pumps immediately, but finding the water gaining, ran in and pivoted the 11-inch gun to starboard to raise the leak out of water; water still gaining, pivoted rifle gun to starboard; shifted port howitzer over, and shifted shot and shells to starboard. My orders being to anchor at the old anchorage below Vicksburg, I ran down to the lower end of the island and rounded to, with the intention of anchoring, but finding the leak still gaining fast on the pumps, the water up to the top of the ash-pit doors, and being ignorant of the position and nature of the damage causing the leak, I deemed it the safest plan to run the vessel on shore, which was done at the foot of the island, her bow in eight and stern in eleven feet water. Upon examination, we found that a shot had entered, just above water line, and close to opening of outboard delivery, breaking valve and cast iron valve-chest. I enclose herewith the report of Mr. Purdy, senior engineer in charge. Our other shot struck the spirking in wake of long port, but did not penetrate. One shell burst among the crew of 11-inch gun, killing one man and very slightly wounding two others. The fragments of this shell tore up the deck water-ways, hatch-combings, and gun-carriage, but the injuries are not serious. In the engagement with the iron-clad gun-boat our side was perforated in several places by fragments of a shell which exploded near the vessel, wounding two men.

I cannot speak too highly of the conduct of all on board. I enclose herewith reports of Assistant Surgeon Matthewson, of the casualties of yesterday; also report of ammunition expended.

Very respectfully, your obedient servant,

ED. T. NICHOLS,

*Lieutenant-Commanding.*

Flag-officer D. G. FARRAGUT,  
*Commanding Western Division Gulf Blockading Squadron.*

COMMODORE W. D. PORTER'S REPORT OF RECONNOISSANCE, WITH ACCOUNT OF ENGAGEMENT OF THE "ANGLO-AMERICAN," ON THE 28TH OF AUGUST, AT PORT HUDSON, LA.

UNITED STATES GUN-BOAT "ESSEX," }  
OFF NEW ORLEANS, Sept. 9, 1862. }

SIR—I have the honor to report that, on the 23d ultimo, having remained off the city of Baton Rouge two days after its evacuation by our troops, I proceeded up the river to reconnoitre reported batteries in progress at Port Hudson, Louisiana, and also coal my vessel at Bayou Sara, the only place I could obtain any, save New Orleans. Arriving there, I found the town entirely deserted, and the coal burning. Sending a boat's crew on shore, they were fired at by guerillas from the houses in heavy force. My men drove them out, and burnt the buildings in the lower part of the town to prevent such being used to protect the enemy. These guerillas had a few days previously fired at and wounded several of the crew of the United States gun-boat "Sumter." On the 24th, I was necessitated to send the wooden gun-boat "Anglo-American," which I had fitted out and armed, to New Orleans for coal, and I again dropped down the river and awaited her return off Port Hudson. I could discover no guns at this place, but earthworks were in progress, and whilst destroying these I had the misfortune to burst my heavy 10-inch gun. The "Anglo-American" not arriving, I returned to Bayou Sara, where we were again fired at from buildings left, on which I ordered those remaining to be destroyed.

The "Anglo-American" joined me on the 29th,

and reported three batteries as having opened on her whilst passing Port Hudson. She received seventy-three shots in her *en passant*. I had received information that the rebel gun-boat "Webb" was at Natchez, to which city she had convoyed transports with supplies from Red River. I followed to that city, but found they had sought the protection of the Vicksburg guns. At Natchez, a boat's crew from the "Essex" were sent on shore to procure some ice for my sick, when they were wantonly attacked by over two hundred armed citizens, wounding the officer in command, and killing one and wounding five seamen. I immediately opened fire on the lower town, and set a considerable number of the houses from whence they were firing on us on fire. After bombarding the place for an hour, the mayor unconditionally surrendered the city.

I followed the rebel gun-boat "Webb" to the batteries at Vicksburg, under the guns of which she, with two transports, lay. Heavy ordnance batteries, extending three miles further down the river than during the siege in July, prevented my nearer approach to these boats. Having exchanged some shots, and ascertained that the upper fleet was not in the vicinity of the town, being short of provisions, my battery weakened by the loss of two guns burst, and also short of ammunition, I determined to steam down the river to New Orleans for supplies, and, if possible ascertain the strength of Port Hudson batteries. On the 7th instant, at 4.15, A. M., we were off that place, and, on coming within range, the enemy opened on us a vigorous fire with heavy siege guns. The "Essex" was struck with heavy shot fourteen times. As nearly as I can judge, the enemy had in position from thirty-five to forty guns of 10-inch, 9-inch, and 8-inch calibre, in three batteries commanding the river to the extent of five miles. A 68-pound, 32-pound, and also a 10-inch shot, lodged in the "Essex," but without material damage. We were under fire an hour and three-quarters, during which time the guns were worked well and incessantly, and I have reason to believe the enemy was considerably damaged. Mr. J. Harry Wyatt, acting fourth master, and my secretary, had command of the forward battery, and his conduct met my entire approbation.

A land force will be necessary to complete the destruction of this fort, which, if allowed to again be restored, would seriously interrupt the free navigation of the Lower Mississippi.

Very respectfully, your obedient servant,

W. D. PORTER,  
*Commodore, United States Navy.*

Hon. GIDEON WELLES,  
*Secretary of the Navy, Washington, D. C.*

P. S.—In the various encounters I have had since leaving St. Louis on the last cruise (July 6), the "Essex" has been struck by heavy shot perceptibly one hundred and twenty-eight times—glancing shot have left no record; three have broken the iron, and but one through, and that at a distance of a few feet from the battery delivering it. W. D. P.

UNITED STATES GUN-BOAT "ANGLO-AMERICAN," }  
OFF BAYOU SARA, LOUISIANA, Aug. 29, 1862. }

SIR—In pursuance of your order, I proceeded down stream on the 24th instant, for New Orleans, arriving there on the morning of the 25th. We loaded up with coal, and left that city at 3.15 P. M., on Thursday, the 28th instant. Nothing of importance occurred until I reached Port Hudson. I noticed earthworks had been thrown up on the bluffs as well as the water line, but no guns being in sight, I kept on for about a mile, when another line of earthworks was discovered, as well as indications of rifle-pits. I immediately ordered my rifle 50-pounder to be fired. At this moment the enemy opened on the boat. My rifle gun unfortunately

could not be used, as the cartridge had been made wet by a just passed heavy rain. Our howitzer was useless, as no ammunition could be obtained for it at New Orleans. We were now just abreast of the last mentioned earthworks, the enemy's guns playing on us with great rapidity. I could see two 32-pounder cannons and eighteen field-pieces, 6 and 12-pounders. The fire was so heavy on my frail wooden boat, that had it not been a matter of urgent necessity to reach you, I should have dropped back, as I had no protection for the machinery, and the fire was so heavy that the firemen were driven from their post. I determined, from the importance of the case, to push on and rejoin you, if possible. I am happy to report we succeeded.

The following casualties occurred: Mr. Parker, pilot, severely wounded in the back from a bursting shell, and James Banes, seaman, slightly wounded by splinter over the eye. We received seventy-three shots—fifteen heavy shots, the balance 12-pounder and grape. One 32-pounder struck the upright brace of the walking beam, breaking it in two.

It is with pleasure, I here state the gallant conduct of Mr. H. Glasford, executive officer, and Mr. B. S. Williams, pilot, who never left their post of danger, and, by their energy and coolness, contributed to the saving of the boat. Mr. Miller, chief engineer, Mr. Parker, third master, and Mr. Jacobi, of the "Essex," all did their duty nobly.

I have the honor to be, very respectfully, your obedient servant,

R. K. RILEY,  
*Commanding Gun-boat "Anglo-American."*  
Commodore W. D. PORTER,  
*Commanding Naval Forces below Vicksburg.*

#### DESTRUCTION OF THE RAM "ARKANSAS."

FLAG-SHIP "HARTFORD,"

BATON ROUGE, Aug. 7, 1862. }

SIR—It is one of the happiest moments of my life that I am enabled to inform the department of the destruction of the ram "Arkansas;" not because I held the iron-clad in such terror, but because the community did.

On the 4th instant I sent the "Tennessee" up to Baton Rouge with provisions for Commander Porter and the gun-boats stationed at that place. On the night of the 5th, she returned with the information that the enemy had made a combined attack upon Baton Rouge by the ram and two gun-boats, the "Webb" and "Music," and calling for assistance. At daylight, the "Hartford" was under way for this place, with orders for the other vessels to follow me as fast as ready.

I arrived here to-day at 12 M., in company with the "Brooklyn," "Westfield," "Clifton," "Jackson," and "Sciota." I had sent the "Cayuga" up before me, agreeably to a request of General Butler, in consequence of some of the guerillas firing into some of his transports. On my arrival I was informed by Commodore W. D. Porter that yesterday morning at 2 o'clock the enemy's forces, under General Breckinridge, attacked General Williams, drove in his pickets, etc. General Williams, having had ample warning, we all prepared for him. The fight was continued with great energy on both sides until 10 A. M., by which time the enemy had been driven back two or three miles, but, unfortunately, the gallant General Williams, while cheering on his men, received a Minie ball through his heart.

General Williams had informed Lieutenant-Commanding Ransom the evening before of his plans, and requested him not to fire a gun until he notified him; and when he did so, our gun-boats—the "Kineo" and "Katahdin"—opened with fine effect, throwing their shells directly in the midst

of the enemy, producing great dismay and confusion among them. Lieutenant Ransom had an officer on the State house, which overlooks the adjacent country, and could direct the fire of every shell.

As soon as the enemy was repulsed, Commander Porter, with the gun-boats, went up stream after the ram "Arkansas," which was lying about five miles above, apparently afraid to take her share in the conflict, according to the preconcerted plan. As he came within gunshot he opened on her, and probably soon disabled some of her machinery or steering apparatus for she became unmanageable, continuing, however, to fire her guns at the "Essex."

Commander Porter says he took advantage of her presenting a weak point towards him, and loaded with incendiary shells. After his first discharge of this projectile, a gush of fire came out of her side, and from that moment it was discovered that she was on fire, which he continued his exertions to prevent from being extinguished. They backed her ashore and made a line fast, which soon burnt, and she swung off into the river, where she continued to burn until she blew up with a tremendous explosion, thus ending the career of the last iron-clad ram of the Mississippi. There were many persons on the banks of the river witnessing the fight, in which they anticipated a triumph for Secessia; but on the return of the "Essex" not a soul was to be seen.

I will leave a sufficient force of gun-boats here to support the Army, and will return to-morrow to New Orleans, and depart immediately for Ship Island, with a light heart that I have left no bug-

bear to torment the communities of the Mississippi in my absence.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

*Flag-officer, Commanding Western Gulf Blockading Squadron.*

Hon. GIDEON WELLES,

*Secretary of the Navy, Washington, D. C.*

ON GUN-BOAT "ESSEX,"

OFF BATON ROUGE, August 6, 1862. }

SIR—This morning at 8 o'clock, I steamed up the river, and at 10 o'clock attacked the rebel ram "Arkansas," and blew her up. There is not now a fragment of her left.

Very respectfully, your obedient servant,

W. D. PORTER,

*Commanding Division of Flotilla in Western Waters.*  
Rear-admiral D. G. FARRAGUT.

When New Orleans fell, the towns all along the river were ablaze with defiance, and did all they could to delay Union vessels by firing on them on their way up river; all of which will be better understood by reading the dispatches of the times. Thus ended the first attack on Vicksburg. It failed from the fact that the combined forces of the Army and Navy delayed too long in New Orleans. The opportunity slipped away, and one of the best planned expeditions of the war was not fully carried out.

## CHAPTER XXII.

THE POTOMAC FLOTILLA.—NAVAL OPERATIONS IN THE POTOMAC.—DESTRUCTION OF CONFEDERATE BATTERIES.—CONFEDERATE RAMS.—CONDITION OF THE NAVY, AND LIST OF VESSELS IN DECEMBER, 1862.—LOSSES BY SHIPWRECK, IN BATTLE, ETC., ETC.

ON the Potomac, the flotilla seems to have been actively employed from December, 1861, to May 2d, 1862.

Although no important event occurred on this water highway to Washington, early in the war the Confederates left nothing undone to stop the passage of transports, and even men-of-war, but they were not very successful. Cockpit Point was one of the places made quite strong by the enemy, and for a time it was considered quite a dangerous place to pass.

No persistent attack was made upon it until March, 1862, and as our Army was advancing into Virginia at the same time, the Confederates were now compelled to abandon this troublesome battery and blow up the magazine.

Before retreating, they destroyed all the guns and carriages, munitions of war, stores and provisions, having no means of transportation by which they could be taken away. The guns were of heavy calibre, having been mostly obtained from the Norfolk Navy Yard, where they had been abandoned by our forces early in the war. But for that affair, we would not have encountered so many forts in the South and West, and would have escaped the disgrace of having the public river way to Washington obstructed for so long a time.

An expedition under Lieutenant Wyman penetrated the Rappahannock as far as Fredericksburg after this place had surrendered to the Army, and captured twenty small vessels and a quantity of stores.

Some of his command also penetrated the Severn, Pianketank and North Rivers, and captured some small vessels that had, no doubt, been used in transporting goods and information from the Maryland shore.

The Union vessels were frequently attacked by field-pieces and riflemen, but they

always managed to give a good account of themselves, while they demoralized the enemy by their persistent pursuit of him—but these adventures were not very exciting.

The Potomac may be said to have been opened with the fall of the forts at Cockpit Point, for though the flotilla was maintained, and there were skirmishes with the enemy from time to time, there was nothing to hinder the passage of vessels up and down the river.

About the end of the year 1861, the United States Government began to realize the necessity of building vessels that would be able to contend with the heavy iron-clads which had been constructed by the Confederates.

By May, 1862, the latter had finished the powerful "Merrimac," together with the "Louisiana" and "Arkansas," both equally powerful with the "Merrimac," and had nearly completed the "Mississippi" at New Orleans, the "Albemarle," the "Atlanta," the "Tennessee," at Mobile, and several other iron-clads on the tributaries of the Mississippi.

Up to this time the United States Government had only Ericsson's little "Monitor" to show, but the success of that famous vessel stirred the Navy Department up to building iron-clads able to cope with anything in the way of ships or forts that the Confederates could devise. Previous to the memorable encounter between the "Monitor" and the "Merrimac" the Department had exhibited neither zeal nor intelligence in dealing with this important problem.

The following is a list of vessels of our Navy, published by the Navy Department in December, 1862; an enumeration which is calculated to mislead, for if any one

supposes that the vessels therein described as "iron-clads" bore any comparison to those built by the Confederates, he is mistaken. The Northern States, with all their resources, all their vessels which could have been cut down and made impervious to shot and shells, had not an iron-clad stronger than those hastily built on the Mississippi River. Naval commanders had to take whatever would carry a gun, no matter how frail or vulnerable, and attempt impossible things with, at times, deplorable consequences to themselves, their officers and crews, from bursting steam pipes and boilers, which added new horrors to the ordinary havoc of war.

The work performed by Foote and Davis and their officers and men on the Western rivers, with the so-called "iron-clads," was herculean from the time the first gun-boats got afloat in January, until July 1862. They had captured, or assisted to capture, seven heavy forts armed with one hundred and ninety-eight guns, and manned or supported by over fifty thousand men, besides destroying thirteen or more of the enemy's vessels armed with forty guns and a floating battery of sixteen guns; and all this without the enemy's capturing a single vessel.

In the Navy Department list, the Western "iron-clads" are put down as twenty-six armed vessels, a formidable force on paper, but in this number are included at least fifteen "tin-clads"—small stern wheel merchant steamers, covered with quarter-inch iron to turn musket balls, but easily penetrated by a twelve pound shot or shell.

The list may be interesting as showing the "historical account" of our naval forces in December, 1862, but it conveys no idea of the frail barks in which the officers and men of the Navy had to fight the heaviest kind of earthworks, often perched at a great height above the water where their plunging fire could perforate the vessels' decks and boilers, or even pass down through their bottoms.

## CHAPTER XXIII.

REMARKS ON LETTING THE MISSISSIPPI RIVER BELOW VICKSBURG FALL INTO THE HANDS OF THE CONFEDERATES AGAIN.—DESTRUCTION OF THE RAM "ARKANSAS."—CAPTURE OF GALVESTON BY A PORTION OF FARRAGUT'S SQUADRON.—RECAPTURE OF GALVESTON BY THE CONFEDERATES.—DESTRUCTION OF THE "WESTFIELD."—COMMANDER RENSHAW AND A PORTION OF HIS CREW BLOWN UP.—THE STEAMER "HARRIET LANE" CAPTURED BY THE CONFEDERATES.—THE BLOCKADE ABANDONED.—APPEARANCE OF THE "ALABAMA."—SINKING OF THE "HATTERAS" BY THE "ALABAMA."—HARDSHIPS ENDURED BY OFFICERS AND CREW OF THE "HATTERAS"—ATTEMPT TO PASS PORT HUDSON BY FARRAGUT'S SQUADRON AND LOSS OF THE FRIGATE "MISSISSIPPI."—CASUALTIES.—THE EFFECT OF THE RETURN OF FARRAGUT'S FLEET BEFORE VICKSBURG.—CAPTURE OF BATON ROUGE, LA.—EFFECT OF THE DESTRUCTION OF THE RAM "ARKANSAS."—CONFEDERATES ATTACK BATON ROUGE AND ARE REPULSED.—HONOR TO WHOM HONOR IS DUE.—ATTACK ON DONALDSONVILLE.—FIGHT WITH THE CONFEDERATE IRON-CLAD "COTTON."—CAPTURE OF THE "A. B. SEGER."—ASCENDING THE LOUISIANA BAYOUS.—MISCELLANEOUS ENGAGEMENTS OF THE GUN-BOATS.—DEATH OF COMMANDER BUCHANAN.—VESSELS AND OFFICERS OF THE WEST GULF SQUADRON, JANUARY 1, 1863.

UP to the time of the escape of the ram "Arkansas," a general idea has been given of the performances of Farragut's fleet.

After leaving Rear-Admiral Davis and running the Vicksburg batteries, he proceeded down the river to New Orleans with the "Hartford," "Richmond," "Brooklyn," "Pinola" and "Kennebec." The old mortar fleet, which under Commander Porter had done such good service at Forts Jackson and St. Philip, and at Vicksburg, had been divided up and withdrawn from the upper Mississippi, and the river from Baton Rouge to Vicksburg was now virtually left to the Confederates, who deliberately went to work and lined the banks with guns, making, besides Vicksburg, another Gibraltar at Port Hudson, which caused much trouble to the Union commanders before they were able to retake it.

The Mississippi had been so easily opened, all the way from New Orleans to Vicksburg, that it ought never to have been closed again, even if it required the whole power of the Federal government to keep it open. The importance of this river to the Confederates was too great for them not to strain every nerve to keep possession of its banks; but the reader will naturally wonder that the Federal government should have allowed such important positions to fall back into their hands.

It is certain that great ignorance or indifference was shown with regard to the importance of Vicksburg and the part it was to play in the war, and this ignorance or indifference, or whatever it may be called, cost the United States many millions of dollars to remedy.

The several historians of the war have managed to glide by this subject with only a passing notice, but it is worthy of careful investigation.

The great importance of the Mississippi to both parties had been manifest from the beginning, but its importance was much greater to the Confederates than to the Federals. It washed the shores of ten different states, northern and southern, and received the waters of fifty or sixty navigable rivers. It was the great connecting link between the two sections, and was in fact the backbone of the rebellion. We had provided the Confederates with guns enough at Norfolk to fortify it in all its length, and they had not failed to make the most of all their means of defence.

The possession of the great river was equally sought by both parties; for it was evident from the first that whichever side obtained control of it and its tributaries would possess an immense advantage.

If the Confederates lost it they would be cut off from their great source of supplies and be compelled to obtain everything from

Europe through blockade runners. This consideration alone would have been sufficient to account for all the blood and treasure which was expended in its defence, and the strength of the fortifications upon its banks show that the importance of the Mississippi had been well estimated by the Confederate generals at the very beginning of the war.

All of the strongholds to the north of Vicksburg had fallen into the hands of the Federals as early as the spring of 1862, and they were now brought face to face with the great Gibraltar of the West, which still barred the way down the river, although all that portion below it had been opened after the capture of New Orleans. But it now seems that we were about to give up all the advantages we had gained, and allow the Confederates to obtain fresh strength by again yielding to them the most important part of the river, after we had so firmly secured it.

While the river was held by our gun-boats, the Confederates were prevented from obtaining cattle and supplies from Texas. A report of Lieut.-Commanding Ransom, U.S.N., shows that at one blow he captured 1500 head of cattle which the Confederates were trying to pass across the river, and succeeded in getting them down to New Orleans, where they became the property of the Federal Army.

Had the original plan been carried out (to push on to Vicksburg after the fall of New Orleans, and hold it with ten thousand men) the Mississippi would never again have been closed against us. We sent a few soldiers up to Vicksburg, it is true, but scarcely enough to form a corporal's guard, and instead of landing at Vicksburg they took the opposite bank of the river and commenced digging a ditch, but soon they all became sick and returned to Baton Rouge.

The building of the forts at Port Hudson had so far emboldened the Confederates that they refitted the "Arkansas" and sent her down to Baton Rouge to co-operate with their Army against that port; but both the ram and the Army came to grief.

The fire of the Union gun-boats "Keneo" and "Katahdin" repulsed the Confederates

when they attacked our Army with a superior force, and the ram "Arkansas" was engaged by the "Essex," Captain W. D. Porter, accompanied by the "Cayuga" and "Sumter." She was soon set on fire and totally destroyed—whether from the shells of the "Essex" or by the Confederates to escape capture is not known. The Confederates claim that one of her engines was disabled, and that she was destroyed by them; but, be that as it may, her destruction was due to the presence of the "Essex" and her two consorts.

It was a great relief to Farragut and his officers to get rid of the ram "Arkansas," as she had been a regular *bête noir* to them, and no one could sleep comfortably while she was about. Farragut could now go to the Gulf and arrange for blockading the coast off Galveston.

The mortar flotilla steamers were, in October 1862, placed under the command of

Commander W. B. Renshaw. These vessels were the "Harriet Lane," Commander Wainwright, "Owasco," Commander Guest, "Clifton," Lieut.-Commander Richard L. Law and the schooner "Henry Janes." The mortar vessels which had been left at New Orleans were afterwards employed at the siege

DESTRUCTION OF THE RAM "ARKANSAS" BY THE U. S. GUN-BOAT "ESSEX,"  
COMMANDER WM. D. PORTER.  
(FROM A SKETCH BY REAR-ADMIRAL WALKER.)

of Port Hudson with good effect.

On October 6th, Commander Renshaw reported to Rear-Admiral Farragut that with the above named vessels he had captured the city of Galveston after a feeble resistance, and now held it ready for a garrison. This was an important capture as it closed up effectually one of the favorite resorts of blockade runners. It was at once garrisoned by the Army, and Renshaw's vessels took positions in the several entrances of the harbor to prevent the exit or entrance of the enemy.

We did not hold this place long. On January 1st, 1863, General Magruder attacked our vessels with three steamers, fitted with cotton-bale defences, and manned by sharpshooters. At 11.30 A. M., these steamers were discovered coming down the bay towards our fleet. The "Harriet Lane" was above the city and she was first attacked. At 4 A. M., two of the ene-

my's steamers ran alongside of her and swept her decks with a fire from hundreds of rifles. Commander Wainwright was killed while gallantly leading his men; Lieutenant-Commander Lea, the Executive, fell mortally wounded, the next officer was severely wounded and half the people on deck shot down. It was a case of complete slaughter, and in ten minutes the "Harriet Lane" was in the enemy's possession. The other Union vessels opened their batteries but were not able to do much execution while the enemy's steamers were alongside the "Harriet Lane."

At the same time that he attacked the

would be allowed to take any one vessel, put his people on board of her, and leave the harbor. This proposition was indignantly rejected by the Union commander, who seeing that his steamer was immovable, resolved to destroy her and transfer his crew to the Army steamer "Saxon," at the same time giving orders to Lieutenant-Commander Richard L. Law to go outside of the harbor with all the vessels that could move.

In the meantime the Confederates had posted their steamers and batteries for a renewed attack. Commander Renshaw got all his men into the boats and sent them

CAPTURE OF THE U. S. STEAMER "HARRIET LANE" BY THE CONFEDERATES, UNDER GEN'L MAGRUDER, IN GALVESTON HARBOR ON THE NIGHT OF JANUARY 1st, 1863.

Union fleet, General Magruder filled the streets of Galveston with a superior force of troops, captured all our soldiers and stationed heavy batteries of artillery at prominent points to prevent our other vessels (which were mostly aground at low tide) from escaping.

It was a well conceived plan and carried out with great gallantry.

The "Westfield" was at this moment hard and fast aground, and could not be moved. The Confederates seeing her helpless condition sent a flag of truce to Commander Renshaw, to inform him that if he would surrender his command he

off, remaining with his own boat and a few officers to set the "Westfield" on fire. This they did, but the flames spread so rapidly that they reached the magazine just as Renshaw entered his boat, and he, with Lieutenant Zimmerman, Chief Engineer Green, and a dozen men, were blown up.

A flag of truce had been flying during the negotiations but it was soon hauled down on our side and our remaining vessels succeeded in leaving the harbor, after some of them had made a gallant resistance.

Lieutenant-Commander Law, (now senior officer), seeing that he had only one vessel, (the "Owasco"), that was in any condition

to meet the "Harriet Lane" in case she was refitted by the enemy, decided to *abandon the blockade*, and return to New Orleans! This he did, and reported to Admiral Farragut the sad disaster.

The "Harriet Lane" and two coal vessels were left in the hands of the Confederates, and they naturally exulted a great deal over their victory. They had good reason to do so for the force opposed to them was greatly superior, and many officers consider the retreat from before the harbor a disgraceful affair. Had the gallant Renshaw lived, it would have been different.

In January, 1863, another disaster befell Farragut's fleet. As soon as he heard of the capture of Galveston, he sent Captain Bell with the "Brooklyn" and six gun-boats to retake the place. They had not all arrived on the 11th of January, 1863, when in the evening of that day a sail, which afterwards proved to be the Confederate steamer "Alabama," appeared in the offing and Captain Bell sent the "Hatteras" in pursuit of her. On approaching the stranger, Captain Blake of the "Hatteras" hailed her and asked for her name. The reply was, "Her majesty's steamer 'Vixen.'" The Union commander then said that he would send a boat, and one was immediately lowered and shoved off from the ship's side. At this moment the stranger opened his broadside upon the "Hatteras" from a distance of only one hundred yards with terrible effect. The "Hatteras," though taken by surprise, returned the fire with spirit, and both vessels steamed ahead leaving the boat behind. The action was a short one and ended disastrously for the Federal vessel, as her inferior guns were no match for the armament of the "Alabama," (six rifles in broadside and two pivot guns), and the "Hatteras" soon went to the bottom; her crew was picked up by the enemy, and the latter steamed away.

The appearance of the "Alabama" on the coast created much excitement. No doubt she came with the intention of capturing the small blockading force on the Southern coast, where no very large vessels were maintained.

As soon as the flashes of the guns were seen from the "Brooklyn" she got underway and steamed in that direction, but did not discover anything until the next morning when the masts of the "Hatteras" were seen above the water with the pennant gaily flying. She had gone down in nine fathoms of water, twenty miles south of Galveston light.

This action offers a good moral, "never send a boy on a man's errand." Had Commodore Bell sent two gun-boats instead of one, the "No. 290" or "Alabama," would probably have fallen into our hands, and

her wild career would have ended then and there. As it was she gained great prestige abroad by sinking a United States vessel of war, for people never stopped to inquire whether the conquered vessel had one gun or twenty.

"When put on shore the condition of officers and men was pitiable, no one saved an article of extra clothing, and many had not sufficient to protect their bodies from the inclemency of the weather—landed on an *unfriendly* shore in a state of abject destitution that should have commanded the sympathy of even avowed enemies. The officers and men of the "Hatteras" were made to feel keenly the unkind criticisms of those who professed no unkind feeling towards the United States or its people."

From January, 1863, Farragut was employed in conjunction with General Banks

COMMANDER WILLIAM D. PORTER,  
(AFTERWARDS COMMODORE U. S. NAVY.)

in forcing his way into the interior of Louisiana, and bringing all of the country that could be secured under subjection. This was a difficult task, for the Confederates opposed our forces at every step, with a courage and determination very difficult to overcome. The lives of some valuable officers were sacrificed, among them that of Lieutenant-Commander Thomas McKean Buchanan, who had been, while living, the leading spirit of the fleet.

In the enterprises which were undertaken to possess the enemy's inlets and harbors some reverses were met with and some small vessels lost. These were mostly sailing vessels which were captured pretty

much as the "Harriet Lane" had been, by river steamers protected by cotton-bales and manned by large numbers of sharpshooters.

The fact of our government using sailing vessels for blockade duty was simply absurd. Only steamers make a blockade effective, and they should have speed enough to escape from a superior foe or capture an inferior one.

On the 14th of March, 1863, it was decided by Rear-Admiral Farragut and General Banks that the former should move with his fleet past Port Hudson, which was at that time well fortified with nineteen heavy guns bearing on the water approaches. General Banks was to make a diversion with his Army against the forts, and what was left of the mortar flotilla was to open on the batteries prior to and during the passage of the fleet.

Farragut seldom undertook to make a passage by a fort unless he had the mortar boats stationed where they could back him, notwithstanding would-be historians have stated that he did not desire their services. On every occasion he spoke of them in the highest terms, and the statements which have been made in a "Life of Farragut," written after his death, and in an article on the subject by a *quasi*-statesman, which pretend to give his opinions, are fabrications and unworthy of any one who undertakes to write history.

It would be difficult to find out why General Banks allowed these formidable works to be built within striking distance of his Army, and at a place which effectually blocked the way against our forces and secured the Red River to the Confederates as a great highway for their supplies. They had for the time being completely turned the tables on us, and although it was their last stand in this part of the country, it was a stubborn one and a great expenditure of force was necessary to overcome it.

When General Banks reported his Army ready to move on the enemy's works, and the mortar boats were in position, Farragut made his final preparations and at about 11 P. M. got underway with the following vessels: "Hartford," "Mississippi," "Richmond," "Genesee," "Kineo" and "Albatross." Each of the larger vessels, except the "Mississippi," had a gun-boat lashed to her port quarter.

The "Hartford" attended by the "Albatross" led the attack, and was well fought and skillfully handled by her commander Captain James S. Palmer, who passed close to the enemy's works and delivered an effective fire. The Confederates were at first taken by surprise, but soon rushed to their guns and opened a rapid fire upon the fleet, which was passing within

one hundred yards of the muzzles of their guns.

The "Richmond," Captain James Alden, came next to the "Hartford," with the "Genesee" as her consort. These vessels were admirably handled, but their commanders and pilots were greatly bothered by the smoke from the "Hartford's" guns which hung over the river obscuring their view of the enemy's works and the other vessels in line. It required great vigilance to prevent getting out of line or running ashore, but the "Richmond" had reached the turn of the river in safety and was about passing the last battery when a plunging shot carried away the safety valves of her boilers and allowed so much steam to escape into her fire-room, that the pressure was reduced to nine pounds. The "Richmond" being thus deprived of her motive force, it was found that the "Genesee" was not able to drag both vessels up against the strong current then running, and under these circumstances there was nothing left to do but to drop down the stream again and anchor below the forts.

The "Monongahela" and "Kineo" came next in line, and these vessels also met with bad luck. The firing from the "Hartford" and "Richmond" had by this time so filled the air with smoke that it was found impossible to distinguish objects near by, and the pilots were completely at sea. At 11.30, the "Monongahela" grounded on the west shore and the "Kineo," not touching, broke away from her, and ranging ahead a short distance grounded also. The enemy soon got the range of these vessels and disabled their principal guns. A heavy shot carried away the supports of the bridge on which Commander McKinstry was standing and precipitated him to the deck, by which he was seriously injured and incapacitated for further duty. The command of the "Monongahela" then devolved upon Lieut.-Commander N. W. Thomas, the executive officer, who with great coolness and judgment backed the vessel off and continued on his way up the river. As he was nearing the bend, however, the engines suddenly ceased to move, owing to a hot crank-pin, and the ship being unmanageable, she drifted down and was obliged to anchor below the batteries.

The steamship "Mississippi," Captain Melancton Smith, followed up in the wake of the "Monongahela," firing whenever her guns could be brought to bear. At 11.30, she had reached the turn which seemed to give our vessels so much trouble, and Captain Smith was congratulating himself on the prospect of soon catching up with the flag-officer, when his ship grounded and heeled over three streaks to port. The engine was instantly reversed and the port

guns run in in order to bring her on an even keel, while the fire from her starboard battery was reopened upon the forts. The engines were backed with all the steam that could be put upon them and the backing was continued for thirty minutes but without avail: it was now seen that it would be impossible to get the ship afloat. Captain Smith gave the order to spike the port battery and throw the guns overboard, but it was not done, for the enemy's fire was becoming so rapid and severe that the Captain deemed it judicious to abandon the ship at once in order to save the lives of his men. While preparations were being made to destroy the ship, the sick and wounded were lowered into the boats and conveyed ashore, while the men at the starboard battery continued to fight in splendid style, firing at every flash of the enemy's guns. The small arms were thrown overboard, and all possible damage was done to the engines and everything else that might prove of use to the enemy. The ship was first set on fire in the foreward storeroom, but three shots came through below the water line and the water rushed in and put out the flames. She was then set fire to in four places aft, between decks, and when the flames were well underway so as to make her destruction certain, Captain Smith and his first-lieutenant left the ship, (all the officers and crew having been landed).

The "Mississippi" was soon in a blaze, fore-and-aft, and as she was now relieved of a great deal of weight, (by the removal of her crew and the destruction of her upper works) she floated off the bank, and drifted down the river much to the danger of the Union vessels below; but she passed without doing them any injury and at 5.30, blew up and went to the bottom. The detonation was heard for miles around, and exceedingly rejoiced the hearts of the Confederates along the river banks.

Thus ended the career of this old ship, which had been dear to many a naval officer and sailor. Many pleasant memories clustered about her, and no ship ever performed more faithful service, or came to a more glorious end. Her commander, officers and men lost no credit by the manner in which they performed their duty on this occasion; on the contrary everyone who knows anything about the matter is aware that every possible exertion was made to get the ship afloat, and that when she was finally abandoned it was done in a cool and orderly manner. It is in such trying moments that men show of what metal they are made, and in this instance the metal was of the very best.

Farragut in the "Hartford," with the "Albatross" alongside, reached the mouth of Red River, and Port Hudson was as completely cut off from supplies as if fifty gun-

boats had been there. But this affair was a great triumph to the enemy and equally depressing to the Federals for the time being. It was soon seen however that the object aimed at had been gained—the works at Port Hudson were cut off from supplies and the fate of the garrison sealed.

Farragut was much disappointed at the loss of the "Mississippi" and the failure of the other vessels to get up, but he bore it with his usual equanimity and looked upon it as the fortune of war.

He was satisfied that his commanders had all done their duty and was well aware of the fact that the "Hartford" had fewer difficulties to contend with than the vessels in her rear. Her pilot could see everything ahead, while those astern were blinded by the smoke of her guns.

The list of killed and wounded is as follows:

"Hartford," 2 killed, 6 wounded; "Richmond," 3 killed, 12 wounded; "Mississippi," 64 missing, of which 25 were believed to have been killed; "Monongahela," 6 killed, 21 wounded:—Total 114 killed, wounded and missing, nearly as heavy a loss as was sustained by the whole fleet at the passage of Forts Jackson and St. Philip.

Rear-Admiral Farragut steamed on up to the mouth of the Red River which he closely blockaded, and remained there until relieved by Rear-Admiral Porter in the "Benton" on May 2d, 1863, when he returned overland to his fleet below Port Hudson.

The effect of the return of Farragut's squadron from before Vicksburg was bad for the people living along the river. The population of the towns that had abstained from hostile acts, and in fact had assumed a very humble attitude, now became quite defiant—the mayors of the little municipalities putting on the airs of autocrats, their importance being doubtless stimulated by the fact that Farragut and his officers did not seem disposed to molest them or even question their loyalty to the United States.

When the news of Farragut's victory was carried up the river by escaping steamers, there was a panic all through the region, and for the moment every one seemed disposed to submit to the Federal authority. Many persons were in their hearts glad to see the Union flag once more triumphant, and looked forward with pleasure at the idea that the old order of things would soon be restored. But when the mayor of Vicksburg at first mildly then defiantly treated Farragut's demand for the surrender of the city, and the other towns learned of the unsuccessful attempt of the fleet to obtain possession of Vicksburg, either by persuasion or force, their ardor in the Confederate cause was suddenly stimulated. Each little hamlet determined to share in

the glory that enveloped Vicksburg and not only to forswear allegiance to the United States but fire upon the Union flag whenever it appeared in their neighborhood.

This may have been heroic, but it was far from wise, as the Confederates had at that period few troops along the river and no guns except field-pieces, which although they might annoy would hardly arrest the progress of vessels of war. Baton Rouge, Natchez, and in fact every town along the river, seemed to have entered into a league against the Federal vessels, putting it out of the power of the Union officers to exercise that forbearance they desired to show both from motives of policy and humanity.

It was desirable to satisfy the people living along the Mississippi, that the mission of the Navy was simply to restore the authority of the Federal government, not to destroy property or do harm to non-combatants; but this course, instead of con-

vessels, well knowing that they could inflict no serious damage on their hulls although they might kill or wound some of their crews. Such acts were bound to lead to retaliation, and create a bitter feeling on the Federal side. Military and naval men do not stop long to think when a battery is opened upon them and the shot are falling in their midst. They naturally fire back without much considering whom they may hurt. This is one of the results of war. It is not intended to excuse the retaliatory measures of the Federal officers but merely to give their reasons.

Baton Rouge was one of those defiant towns, notwithstanding its proximity to New Orleans and the large Federal Army stationed at the latter place. When summoned to surrender by Captain Palmer of the "Iroquois," the mayor replied that "Baton Rouge will not be voluntarily surrendered to any power on earth!" Upon

BATON ROUGE, THE CAPITAL OF LOUISIANA, CAPTURED BY CAPTAIN PALMER OF THE "IROQUOIS," AND AFTERWARDS OCCUPIED BY GENERAL WILLIAMS.

ciliating the populace, only inflamed their dislike to the "invaders," as they were pleased to call the Union forces. The mild propositions of the naval commander were considered as proof of the weakness of the Federal government, and finally the military, which had but little to lose in the way of property, became so harassing that retaliation had to be resorted to in self-defence and the innocent often suffered in consequence.

Never in the course of any war was there so great a desire on the part of the Navy to abstain from harsh measures, and if the Confederate troops had confined themselves to firing upon naval vessels at places away from towns, our officers would have been satisfied to try consequences with them on their own terms. Such, however, was not the case, the Confederate artillery generally selected points in the immediate vicinity of towns and sometimes in the towns themselves to fire upon the passing

receiving this reply Captain Palmer informed the mayor that he would stand no nonsense and forthwith landed his men, hoisted the Union flag, and took possession of the public property. Fortunately this capture was accomplished without bloodshed, although that might easily have followed owing to the contumacy of the municipal authorities.

In this case the rights and property of all citizens were respected, and only the property claimed by the Confederate government was taken possession of. These were easy terms for people who had sturdily defied the Federal authority and refused to listen to any terms.

Natchez offered fewer impediments to the Union commander. The mayor was a sensible man, compared with the one at Baton Rouge, and on receiving a communication from Captain Palmer to the effect that the city must surrender, he replied: "Coming as a conquerer, you will need not

the interposition of the city authorities to possess the place. An unfortified city, an entirely defenceless people, have no alternative but to yield to an irresistible force, or uselessly to imperil innocent blood. Formalities are absurd in the face of such reality. So far as the authorities are concerned there will be no opposition to your possession of the city. They cannot however guarantee that your flag shall be unmolested in the sight of an excited people," etc., etc. As if the people who for a lifetime had existed under the protection of that flag were now unable to endure the sight of it.

The mayors of these little cities used high sounding words, which seemed rather ridiculous coming from people who had neither guns nor soldiers. It would have been more to their credit to have accepted the situation without trying to delude the more ignorant part of the population with the idea that the Union fleet sought the destruction of their lives and property. The course taken by these municipal authorities led to very bad results and its evil influence was felt by the inhabitants all along the river.

The same summons was given at Vicksburg, where the mayor in the first instance bade defiance to the Army and Navy under Butler and Farragut. The result of the negotiations with the authorities of Vicksburg is best told in the account of the attack by Farragut's squadron, where, owing to the long drawn out negotiations, all the energies of the Confederates had time to concentrate on the defences of the city, which in a month was rendered impregnable against a purely naval attack.

Grand Gulf, at that moment a place of no importance, following in the footsteps of its illustrious neighbor Vicksburg, set to work to erect batteries and opened fire on the gun-boats. In consequence of this, Captain Palmer, in the "Iroquois," with the other vessels under his command, dropped down the river and shelled the town, the first instance of such a proceeding on the part of our Navy. The little town was set on fire and destroyed. This was considered a great outrage by the Confederates, and was taken advantage of to inflame the minds of the people against the Union forces.

From this time forth the Confederate artillery began to assemble at commanding positions along the river banks, and the once peaceful scene was marred by burning plantations, from whence the enemy attacked the gun-boats. There was no longer a hope of peace for the inhabitants of the river region.

It was a great relief to Admiral Farragut to know that the ram "Arkansas"

was disposed of, and that thus terminated the existence of one of the most troublesome vessels the Confederates had built. She was at that time the last Confederate ram on the Mississippi River. At the moment of her destruction there was considerable excitement along the river on hearing of her approach towards Baton Rouge, where General Williams was in command of the Federal military forces, and expecting an attack from the Confederate troops under General Breckenridge, to be supported by the ram "Arkansas" and the gun-boats "Webb" and "Music."

The Union vessels that were on the spot to meet the enemy and co-operate with the Army, were the "Katahdin," Lieut.-Commander Roe, and the "Kineo," Lieut.-Commander Ransom. The report that the enemy were approaching Baton Rouge for the purpose of attacking that place, was not an idle one, for on the morning of the 5th of April, at one o'clock, General Breckenridge attacked General Williams' position with great vigor. The Union troops withstood the attack bravely, while the "Kineo" and "Katahdin" poured in a heavy fire on the enemy's lines. This battle was kept up fiercely until one o'clock, A. M., and the enemy would no doubt have succeeded but for the accurate firing of the gun-boats, which threw their shells right into the midst of the Confederate lines, causing great dismay.

Lieut.-Commander Ransom, commanding the "Kineo," had an officer stationed on the State-house, who directed the firing by signal so successfully that the enemy was obliged to retreat.

Unfortunately the gallant General Williams fell in this engagement, and the Government lost the services of a most valuable officer.

The ram "Arkansas" and her consorts did not appear upon the scene of battle, or it might have been still more hotly contested, or even ended disastrously for the Federal cause, for if the attention of the gun-boats could have been diverted by the Confederate vessels, the Army would not have received that aid which contributed so much toward the repulse of the enemy; and there is no knowing how deplorable a defeat the Federal forces would have met with or what the consequences might have been.

Soon after this affair was ended the smoke of a steamer (supposed to be the "Arkansas") was seen coming down the river with rapidity, to act apparently in concert with the land forces. She stopped about a mile above the bend of the river, moving up and down as if uncertain how to act. Later, she was passed by her two consorts, the "Webb" and "Music."

The "Essex," Commander Porter, accompanied by the "Cayuga" and "Sum-

ter," then moved up towards the bend to meet the Confederate squadron, which was apparently afraid to take its share in the conflict according to the preconcerted plan; a general signal was made for the "Katahdin" and "Kineo" to follow the other vessels.

As the "Essex" came within gunshot of the "Arkansas," Commander Porter opened fire on her, and in a short time the ram appeared to be disabled, though she still continued her fire on the "Essex." Some incendiary shells were now fired from the latter; directly after, there was seen a gush of flame from the "Arkansas'" side, and she was soon enveloped in fire. Her crew attempted to make her fast to the bank with a hawser, and then escaped to the shore, the "Essex" still keeping up her fire to prevent the flames from being extinguished. The lines which had held the "Arkansas" to the bank soon burned away, and the Confederate ram swung off into the river, where she blew up with a terrible explosion, and went to the bottom. Thus ended the career of one of the most formidable rams the Confederates had ever built.

Up to the time the "Essex" attacked the "Arkansas," the machinery of the latter was in perfect order, and she went into action, no doubt, certain of vanquishing her clumsy foe, which could not do much more than stem the current of the river. But the "Arkansas" was driven ashore and destroyed after a short engagement.

An attempt was made to take from Commander W. D. Porter, his officers and crew, the credit of destroying this vessel, because some of her crew that were picked up, stated that one of the engines was out of order, and that the captain tied up to the shore to keep his vessel from drifting down the river, and that the Confederates set fire to her themselves. This is a very unlikely story. It is not credible that a vessel, which had run the gauntlet of the two fleets, under Farragut and Davis, at Vicksburg, inflicting great injury upon them and receiving no vital injury in return, would avoid a conflict with the "Essex" (a vessel of weaker hull and very much less speed), unless she had been first so crippled by the "Essex's" guns that her commander saw no hope of success. Certain it is that the commander of the "Essex" did not hesitate to attack a Confederate ram that had defied the whole Union fleet, and she sunk while under his fire.

The two Confederate gun-boats escaped up the river when they witnessed the fate of their powerful companion which was to have driven all the Union naval forces from before Baton Rouge.

There is no doubt but what the enemy depended on the ram "Arkansas" and her

two consorts for his success at Baton Rouge, as General Williams depended upon the Union gun-boats for success over any force that could be brought against him. It shows what important factors in war the so-called gun-boats were (on either side). They could move about with their heavy guns, take positions which the enemy could not outflank and pour in a destructive fire, directed by the best drilled gunners in the world, dealing death and destruction on any enemy that might venture to face them.

The result of this battle was a complete victory for the Union forces by land and by water, and there would have been cause for great rejoicing on the Federal side but for the untimely fate of the gallant General Williams, who fell with a Minie-ball through his heart while cheering on his men, who chased the Confederates three or four miles away from the scene of battle and then returned to their entrenchments.

When Admiral Farragut, who was at New Orleans, heard of the attack on Baton Rouge, he proceeded to that point without delay with the "Hartford," and on learning of the happy result, and the destruction of the Confederate ram, he was delighted; for although the admiral, on the whole, "did not attach much importance to Confederate rams," he had seen enough of the performances of the "Arkansas" to know, that if properly managed, she was the most formidable vessel on the Mississippi River, and that there would be no security against her while she floated.

To render everything secure at Baton Rouge, Farragut left a sufficient force there to guard against all contingencies, and returned to New Orleans, satisfied that for the present he would hear no more of Confederate rams. He was not aware at the time, that the enemy had been so well satisfied with the performances of the "Arkansas" that they had commenced to build at Yazoo City two more rams, more powerful than any they had yet planned.

Great credit was due the officers and men of the little flotilla, which co-operated so handsomely with General Williams in defeating General Breckenridge, particularly to Lieutenant Roe of the "Katahdin" and Lieutenant Ransom of the "Kineo," who threw the enemy's ranks into confusion by the remarkable accuracy of their fire.

The commander of the "Arkansas," on this occasion, was Lieutenant H. K. Stevens of the Confederate Navy, her former fearless commander, Lieutenant Brown, having been taken sick at Vicksburg. The events that took place on board the ram, except through vague reports, have never come to light.

Notwithstanding the want of success of the Confederates in their attacks on the approaches or outposts to New Orleans, they still kept up a guerilla warfare on the vessels moving up and down the river—a mode of warfare of no avail whatever, and calculated only to bring distress upon the small towns where these roving bands held their headquarters.

For a long time this practice of firing on armed and unarmed vessels had been practiced with impunity, and Farragut determined to repress it if possible. He had sent messengers several times to the town of Donaldsonville, to inform the authorities that, unless steps were taken to stop this useless and inhuman practice, the town would be held responsible.

When passing up the river to the support of Baton Rouge, he anchored the "Hartford" two miles above Donaldsonville and heard them firing on vessels ascending the river (the transport, "Sallie Robinson" and the steamer "Brooklyn"), in the latter case, the enemy getting more than they bargained for and being driven to cover. The next night they fired upon the transport "St. Charles."

Farragut, in consequence of these wanton and useless attacks, notified the authorities to send their women and children out of the town as he intended to destroy it on his way down the river, and he fulfilled his threat to a certain extent. He burned the hotels and wharf buildings, also all buildings belonging to one Phillippe Landry, who was said to be a captain of the guerilla band. Landry attacked the firing party but the sailors gave chase to him and he fled. Some twenty negroes were taken from this place and a number of cattle and sheep for the use of the squadron.

Thus Farragut, while inflicting necessary punishment, endeavored to make it fall as lightly as possible on the innocent, and only those suffered who invited it by setting at defiance their conquerors, who were disposed to extend the greatest liberality to all those residing within reach of the Federal guns—all that was required of them being to abstain from hostile proceedings against Federal vessels.

This punishment of towns may smack somewhat of barbarity, and should not, in fact, be practiced but for very grave offenses, as an indiscriminate burning inflicts severe punishment upon innocent people. But in this instance the punishment fell on the guilty ones, who took advantage of the security the town gave them to commit their hostile acts against Federal vessels, supposing that the Federal authorities would respect the towns where these acts were committed.

They did so until forbearance ceased to be a virtue.

One of the most gallant officers under the command of Rear-Admiral Farragut, was Lieutenant-Commander Thomas McKean Buchanan, commanding the steamer "Calhoun." He had been employed on Lake Pontchartrain, where he performed good service, and on October 25th, he proceeded to Southwest Pass, expecting to be met by the gun-boats "Estrella" and "St. Mary's," and intending to co-operate with General Weitzel in the waters of Atchafalaya. He had on board the 21st Indiana regiment. With a great deal of difficulty he succeeded in getting the "Estrella," "St. Mary's," "Kinsman" and "Calhoun" into Atchafalaya Bay, from the channels of which the enemy had removed all the stakes and buoys. Entering the Atchafalaya River the little flotilla met the Confederate iron-clad "Cotton," which after a sharp engagement made her escape up the river. (The guns of this vessel were in iron casemates and she was very fast.) That same night, Lieutenant-Commander Buchanan captured the steamer "A. B. Seger," belonging to the Confederate Navy.

Notwithstanding the shoals and low tides, Buchanan brought up the "St. Mary's" and anchored her off Brashear city, showing the enemy that there was no point the Union gun-boats would not reach when commanded by an energetic officer. No one who had not tried it could estimate the difficulties of ascending these Louisiana bayous and rivers. It was on these occasions (where men held their lives in their hands), that the most daring deeds of the war were performed.

It cannot be said that these expeditions were always of advantage to the Union cause, for a great deal of energy was often wasted, and frequently valuable lives were lost. But at Army headquarters these operations were called for under the pretext that they were important strategic movements, and our naval officers were too glad of the opportunity to face danger and aid the cause, to interpose any objections to them.

Buchanan's expedition having forced its way through the narrow and shallow channels with great difficulty, reached Brashear City only to find that a large force of the enemy had crossed over and was making its way up to Franklin. They were immediately followed by the flotilla up the Atchafalaya River, through Bayou Teche to a point five miles above Pattersonville, and three from the mouth of the Teche—where the enemy was found posted in force. The gun-boats opened fire, and the enemy retreated to a point two miles further up the river, where they had obstructed

the approaches with piles, and where they were also supported by the gun-boat "Cotton," which vessel was posted above a bridge.

The "Calhoun's" Parrott gun became disabled almost at the first fire, and Lieutenant-Commander Cooke was sent ahead with the other two vessels to open the way. The second shot from the Confederate gun-boat struck the "Estrella" in her port bow, killing two soldiers and wounding another, and also carrying away the vessel's wheel-ropes, which caused her to run into the bank. The "Diana," having her gun mounted on an iron carriage, got it disarranged and had to stop, while the "Kinsman" (Acting-Master George Wiggins) pushed on right up to the batteries (which contained eleven field-pieces), and to within 1,000 yards of the iron-clad "Cotton," as close as he could get.

This courageous attack seemed to demoralize the enemy on shore, for they retreated immediately with their field-pieces. The "Kinsman" then opened her guns on the "Cotton," and kept up the unequal contest until relieved by the "Calhoun," which vessel backed up to the bridge and brought her guns to bear upon the enemy. After enduring a hot fire for about twenty minutes, the "Cotton" escaped up the river.

While the "Kinsman" was under fire of the enemy's guns she received fifty-four shot through her hull and upper works, and three through the flag, which still waved. One round shot passed through the magazine and shell-room, demolishing shell-boxes but doing no other damage. One man was killed and five wounded—among the latter being the pilot, who died next day.

By the time the "Cotton" withdrew, the "Estrella" and "Diana" succeeded in getting up, and Buchanan landed his men and tried to remove the obstructions and haul the "Diana" over the shoals to pursue the enemy, but without effect. Not deeming it prudent to lie in the Teche all night (where the enemy could surround him and open fire from concealed places), he dropped down to Brashear City to repair damages and bury the dead.

The Confederate gun-boat "Cotton" was no trifling enemy; she was heavily armed and gallantly fought, and besides the fifty-four shot she put in the "Kinsman" she put eight into the "Calhoun," three into the "Diana," and three into the "Estrella." Fortunately their machinery was not touched.

The enemy had exhibited a great deal of intelligence in blocking the river. The obstructions consisted of the steamer "Flycatcher," thrown across the river and sunk, backed by a schooner, with heavy oak logs thrown in between and around the two ves-

sels in such quantities that it was found impossible to remove them without the aid of a stronger land force than Buchanan had at his command; for the men of the expedition could not have worked under such a fire as the enemy would have brought to bear upon them from the rifles and field artillery, to say nothing of the guns of the iron-clad which were still intact.

The Confederate force was under the command of General Monson, and numbered from three to four thousand men. They were badly cut up, and finally moved their camp to Centreville, three miles above the obstructions, keeping only their cavalry and artillery below.

All that day the gun-boats were busy repairing damages. Buchanan, no way disheartened at the superiority of the enemy's force, started up the river, on the 5th, with the "Estrella," leaving the other vessels to continue their repairs. The enemy was driven off as before, but the vessel did not fare so well as formerly, a shot from the indomitable "Cotton" disabled the Parrott gun, killing two men instantly, and finding that he could do no more, Lieutenant-Commander Buchanan withdrew down the river.

The encounter with this heavy work, and the greatly superior force defending it, showed the character of this brave officer who had forced a well-equipped and well-posted enemy from a strong position, and only ceased his exertions when the Confederates had reached a defence from which it was impossible to dislodge them without the assistance of a large body of troops.

Buchanan was ably seconded by his officers and men, and although he was unsuccessful in forcing the barricades and capturing the Confederate gun-boat, yet he compelled her to retreat up the river to a point where she was unable to do any damage.

The next day, the gallant Acting-Master Wiggins, commanding the "Kinsman," started with that vessel and the captured steamer "Seger," in pursuit of two steamers said to be concealed in some of the bayous. The latter were eventually captured in Bayou Cheval, nine miles from Grand Lake. As the vessels were aground and it was impossible to move them, they were set on fire and destroyed. The result of this expedition was the evacuation of the district by the enemy for the time, but before leaving they burned over a hundred railroad cars and destroyed many plantations, which compelled the planters to desert their homes, carrying their negroes off with them. These constant attacks resulted in driving the enemy from that part of the country, and gave our officers a knowledge of the topography and hydro-

graphy of the region, which was of much benefit later in the war.

In the management of these small expeditions our younger officers showed the metal of which they were made, and Lieutenant-Commander Buchanan became particularly conspicuous. This gallant officer lost his life January 14, 1863, being killed by a Minie-ball fired from a rifle-pit. He died regretted by all who knew him, and by none more sincerely than Admiral Farragut.

Buchanan had long been operating in the waters of the Atchafalaya. In October, 1862, he attacked the enemy as before mentioned, in the Teche, drove him from a strongly fortified position and blockaded the Confederate iron-clad above the obstructions near Pattersonville. In January, 1863, he was again on the Teche chasing the Confederate forces and was this time accompanied by a brigade of infantry and cavalry under General Weitzel. The enemy were strongly posted and covered by the Confederate iron-clad "Cotton." Buchanan was advancing on the river, side by side with the troops who were marching along the banks, when they came in sight of the enemy's position.

The "Cotton" at once opened fire while the Federal troops were deployed as skirmishers to pick off the gunners of the Confederate vessel, a task they speedily accomplished. At the same time the enemy's field-pieces were driven back and the only part of his forces remaining were the rifle-

men, who from their pits kept up a galling fire. Buchanan was not the man to let any one get ahead of him, especially the soldiers whom it was his duty to cover with his guns; he pushed on in the "Calhoun" to the attack and was soon in advance of the troops, but he paid with his life the penalty of his gallantry and was shot through the head by a concealed rifleman while standing on deck directing affairs. A number of his men fell, killed or wounded at the same time. Had Buchanan lived five minutes longer he would have had the satisfaction of seeing the enemy fleeing in every direction.

At the same time the gallant Acting-Master Wiggins was severely wounded by a Minie-ball through the shoulder, and Acting-Ensign Foster through the cheek. On board the "Calhoun" on this occasion three were killed and six wounded, and on board the "Kinsman" one was wounded.

Lieutenant-Commander Buchanan was a great loss to the Union cause, but the object for which he had labored many months,—the opening of the Teche—had been accomplished. This would have happened earlier if a sufficient number of troops had been sent to accompany the gun-boats in the first instance, but it seems seldom to have been realized that these expeditions would be comparatively fruitless unless conducted as combined military and naval operations, when they were generally successful.

## WEST GULF SQUADRON, JANUARY 1st, 1863

REAR-ADMIRAL DAVID G. FARRAGUT, COMMANDER-IN-CHIEF.

### STEAMER "HARTFORD," FLAG-SHIP.

Captain, James S. Palmer, commanding; Fleet Captain, Thornton A. Jenkins; Lieutenant-Commander, Lewis A. Kimberly; Lieutenants, J. C. Watson and H. B. Tyson; Fleet Surgeon, J. M. Foltz; Surgeon, W. M. King; Assistant Surgeon, Joseph Hugg; Paymaster, W. T. Meredith; Chief Engineer, J. B. Kimball; Marine Officers: Captain, J. L. Broome; 1st Lieutenant, J. H. Higbee; Ensigns, J. H. Read, J. J. Read, D. D. Wemple and C. D. Jones; Midshipman, H. J. Blake; Assistant Engineers, E. B. Latch, F. A. Wilson, Isaac de Graaf, C. M. Burchard, A. K. Fulton, H. H. Pilkington and J. E. Speights; Boatswain, James Walker; Acting-Gunner, J. L. Staples; Carpenter, O. T. Stimson; Sailmaker, J. A. Holbrook; Acting-Master, T. L. Peterson; Acting-Master's Mates, H. H. Judson and Henry Western, Jr.

### STEAMER "PENSACOLA."

Commodore, Henry W. Morris; Lieutenants, Geo. H. Perkins and C. E. McKay; Surgeon, J. W. Taylor; Assistant Surgeons, W. B. Dick and Chas. Giberson; Paymaster, G. L. Davis; Chief Engineer, D. D. Hibbert; 2d Lieutenant Marines, J. C. Harris; Assistant Engineers, S. L. P. Ayres, C. H. Ball, F. G. Smith, J. L. Vauclain, J. T. Hawkins, J. C. Huntley and E. A. Magee; Boatswain, Nelson Goodrich; Gunner, D. A. Roe; Carpenter, J. E. Cox; Sailmaker, Charles Lawrence; Acting-Masters, G. C. Schulze, F. H. Grove and Edw. Herrick; Acting-

Masters' Mates, G. A. Storm, Joseph Kent and Chas. Gainsford.

### STEAMER "BROOKLYN."

Commodore, H. H. Bell; Lieutenant-Commander, Chester Hatfield; Lieutenant, A. N. Mitchell; Surgeon, Samuel Jackson; Assistant Surgeon, C. J. S. Wells; Paymaster, C. W. Abbot; Chief Engineer, W. B. Brooks; 1st Lieutenant Marines, James Forney; Ensign, M. W. Saunders; Midshipmen, John R. Bartlett and H. T. Grafton; Assistant Engineers, B. E. Chassaing, James Atkins, A. V. Fraser, Jr., C. F. Mayer, Jr., J. L. Bright, James Morgan and J. F. Walton; Boatswain, J. A. Selmer; Gunner, T. H. Fortune; Carpenter, W. T. Toy; Sailmaker, Jacob Stevens; Acting-Masters, T. L. Pickering, J. C. Stafford, Lyman Wells and W. C. Gibbs; Acting-Masters' Mates, E. S. Lowe, H. C. Leslie, Robert Beardsley, H. S. Bolles and James Buck.

### STEAMER "SUSQUEHANNA."

Commodore, R. B. Hitchcock; Lieutenant-Commander, Montgomery Sicard; Lieutenant, Louis Kempff; Surgeon, Joseph Beals; Assistant Surgeon, H. C. Nelson; Chief Engineer, George Sewell; Captain of Marines, P. R. Fendall, Jr.; Ensign, Walter Abbott; Assistant Engineers, J. M. Hobby, James Butterworth, E. R. Arnold, Nelson Ross, R. H. Buel and F. T. H. Ramsden; Boatswain, Charles Miller; Gunner, E. J. Waugh; Carpenter, G. M. Doughty; Sailmaker, J. C. Herbert; Acting-Masters, G. B. Livingstone, A. L. R. Zerega and W. T.

Churchill; Acting-Masters' Mates, F. G. Adams and E. B. Pratt.

STEAMER "ONEIDA."

Captain, Samuel F. Hazard; Lieutenants, W. N. Allen and F. S. Brown; Surgeon, John Y. Taylor; Paymaster, C. W. Hassler; Chief Engineer, F. C. Dade; Assistant Engineers, Horace McMurtrie, J. H. Morrison, R. H. Fitch, W. D. McIlvaine and A. S. Brower; Boatswain, James Herold; Gunner, Wm. Parker; Acting-Masters, F. M. Green, Thos. Edwards and Elijah Ross; Acting-Masters' Mates, Edward Bird and D. H. Clark.

STEAMER "MONONGAHELA."

Captain, James P. McKinstry; Lieutenant-Commander, Jos. Watters; Lieutenant, N. W. Thomas; Surgeon, David Kindleberger; Assistant Paymaster, Forbes Parker; Acting-Ensigns, C. R. Pomeroy, H. W. Grinnell and Robert Barlow; Acting-Masters' Mates, H. B. Rowe, W. S. Arnaud, Frederick Beldon and C. H. Blount; Engineers: Chief, Geo. F. Kutz; Joseph Frilley, N. B. Clark, P. G. Eastwick, Edw. Cheney, G. J. Bissett and P. J. Langer; Boatswain, William Green; Gunner, J. D. Fletcher.

STEAMER "MISSISSIPPI."

Captain, Melancton Smith; Lieutenant, George Dewey; Surgeon, R. T. Maccoun; Assistant Surgeon, J. W. Shively; Paymaster, T. M. Taylor; Chief Engineer, W. H. Rutherford; Captain of Marines, P. H. W. Fontane; Ensigns, A. S. Barker, O. A. Batcheller and E. M. Shepard; Assistant Engineers, G. B. N. Tower, J. Cox Hull, F. G. McKean, S. R. Brooks, J. J. Noble and H. W. Phillips; Boatswain, Joseph Lewis; Gunner, Wm. Cope; Carpenter, John Green; Acting-Masters, F. T. King, George Munday, C. F. Chase, B. L. Kelly and F. E. Ellis; Acting-Masters' Mate, H. B. Francis.

STEAMER "COLORADO."

Captain, John R. Goldsborough; Lieutenant-Commander, Edw. W. Henry; Lieutenant, H. W. Miller; Assistant Surgeons, T. H. Whitney and Matthew Chalmers; Paymasters, J. O. Bradford and W. H. H. Williams; Chaplain, D. X. Junkin; Marine officers: Captain, George R. Graham; 1st Lieutenant, S. C. Adams; Acting-Masters, Thomas Hanrahan and C. G. Folsom; Ensign, G. K. Haswell; Acting-Ensigns, Henry Arey and J. J. Butler; Acting-Masters' Mates, J. S. Russ, A. O. Child, C. H. Littlefield, W. G. Perry and J. L. Vennard; Engineers: Chief, Richard M. Bartleman; Acting-Assistants, C. W. Pennington, G. L. Perkins, C. G. Stevens, T. J. Lavery, A. E. McConnell, Robert Wallace and H. B. Green; Boatswain, A. W. Pomeroy; Gunner, Robert H. Cross; Carpenter, John A. Dixon; Sailmaker, William Maull.

SLOOP-OF-WAR "PORTSMOUTH."

Commander, Samuel Swartwout; Surgeon, J. S. Dungan; Assistant Surgeon, G. Baumgarten; Assistant Paymaster, Caspar Schenck; 1st Lieutenant of Marines, Wm. H. Hale; Boatswain, John Ross; Gunner, T. S. Cassidy; Carpenter, John Shannon; Sailmaker, H. T. Hayden; Acting-Masters, Gilbert Redmond, W. G. Mitchell and E. A. Terrell; Acting Masters' Mates, T. P. Jones and T. B. Gannon.

FRIGATE "POTOMAC"—STORESHIP.

Commander, Alex. Gibson; Lieutenant, A. V. Reed; Surgeon, J. D. Miller; Assistant Surgeon, N. H. Adams and G. R. Brush; 1st Lieutenant of Marines, Geo. W. Collier; Boatswain, C. A. Bragdon; Gunner, Wm. H. French; Carpenter, J. C. Hoffman; Acting-Masters, W. H. Wood and G. D. Upham; Acting-Masters' Mates, S. H. Johnson and Wm. Baker; Acting-Assistant-Paymaster, W. W. Bassett.

STEAMER "RICHMOND."

Commander, James Alden; Lieut.-Commander, A. B. Cummings; Lieutenant, Edward Terry; Sur-

geon, A. A. Henderson; Assistant Surgeon, J. D. Murphy; Paymaster, Edwin Stewart; Chief Engineer, John W. Moore; Captain of Marines, Alan Ramsay; Ensign, Benj. F. Haskin; Assistant Engineers, Eben Hoyt, Jr., A. W. Morley, G. W. W. Dove, R. B. Plotts, C. E. Emery, John D. Ford and Robert Weir; Boatswain, Isaac T. Choate; Gunner, James Thayer; Carpenter, H. L. Dixon; Sailmaker, H. T. Stocker; Acting-Volunteer-Lieutenant, Fredk. S. Hill; Acting-Master, Chas. Gibbs; Acting-Ensign, R. P. Swan; Acting-Masters' Mates, W. R. Cox, J. R. Howell and T. S. Russell.

STEAMER "R. R. CUYLER."

Commander, Geo. F. Emmons; Lieutenant, James O'Kane; Acting-Masters, P. C. Gibbs and J. F. Alcorn; Acting-Ensigns, W. Collins, C. C. Gill and J. O. Morse; Acting-Assistant-Surgeon, Henry Shaw; Acting-Assistant-Paymaster, Emory Wright; Acting-Masters' Mates, N. M. Dyer and N. R. Davis; Acting-Engineers Henry Waite, W. D. Adair, Wm. Morris, T. D. Hulse and T. W. Bolman.

STEAMER "WESTFIELD."

Commander, W. B. Renshaw; Lieutenant, C. W. Zimmerman; Acting-Masters, F. C. Miller, L. D. Smalley and J. H. Warren; Acting-Masters' Mates, J. P. Arnett and J. B. Johnson; Acting-Assistant-Surgeon, E. H. Allis; Acting-Assistant-Paymaster, C. C. Walden; Acting-Engineers, Wm. R. Greene, G. S. Baker and C. W. Smith.

STEAMER "HARRIET LANE."

Commander, J. M. Wainwright; Lieutenant-Commander, Edward Lea; Paymaster, J. J. Richardson; Assistant Surgeon T. N. Penrose.

IRON-CLAD STEAMER "ESSEX."

Commander, C. H. B. Caldwell; Assistant Surgeon, Wm. F. Terry; Acting-Vol. Lieutenant, H. A. Glassford; Acting-Masters, J. C. Parker and M. B. Snyder; Acting-Masters' Mate, J. H. Mammen; Acting-Gunner, R. M. Long; Acting-Assistant-Paymaster, C. W. Slamm; Acting-Engineers, J. K. Heap and W. H. Manning.

STEAMER "MONTGOMERY."

Commander, Charles Hunter; Acting-Masters, Geo. H. Pendleton and C. G. Arthur; Acting-Ensigns, Robert Wiley and W. O. Punam; Acting-Masters' Mates, H. M. Mather, C. H. Walker and Henry Hamre; Acting-Assistant-Surgeon, D. F. Lincoln; Acting-Assistant-Paymaster, Joseph Watson; Acting-Engineers, G. H. Wade, James Pollard, John Mulholland, F. W. H. Whitaker and John McEwan.

STEAMER "KANAWHA."

Commander, John C. Febiger; Assistant Surgeon, J. H. Tinkham; Assistant Engineers, Edward Farmer, F. S. Barlow, Hiram Parker and W. S. Cherry; Acting-Master, T. C. Dunn; Acting-Masters' Mates, E. L. Hubbell, R. P. Boss and R. B. Smith; Acting-Assistant-Paymaster, L. L. Penniman.

STEAMER "NEW LONDON."

Lieutenant-Commander, Abner Read; Lieutenant, Benj. F. Day; Acting-Master, W. D. Roath; Acting-Master's Mate, Peter Faunce; Acting-Assistant-Surgeon, L. H. Kindall; Acting-Assistant-Paymaster, F. H. Thompson; Acting-Engineers, H. P. Powers, D. M. Howell, John Brooks and Henry Farmer.

GUN-BOAT "KINEO."

Lieutenant-Commander, George M. Ransom; Lieutenant, Frederick Rodgers; Assistant Surgeon, A. S. Oberly; Assistant Engineers, S. W. Cragg, James Maughlin, C. F. Hollingsworth and C. J. McConnell; Acting-Masters, Oliver Colburn and L. A. Brown; Acting-Masters' Mates, W. S. Keen, John Bartol, Jr., W. H. Davis and G. A. Faunce; Acting-Assistant-Paymaster, S. P. N. Warner.

## GUN-BOAT "PEMBINA."

Lieutenant-Commander, Wm. G. Temple; Lieutenant, Roderick Prentiss; Assistant Surgeon, A. W. H. Hawkins; Assistant Paymaster, H. L. Wait; Assistant Engineers, Jefferson Young, John Van Vovenberg, Absalom Kirby and J. F. Bingham; Acting-Masters, Wm. Rogers and J. A. Jackaway; Acting-Ensigns, Wm. Sydden and B. M. Chester; Acting-Masters' Mate, H. C. Cochrane.

## SLOOP-OF-WAR "VINCENNES."

Lieutenant-Commander, John Madigan, Jr.; Assistant Surgeon, D. M. Skinner; Second-Lieutenant Marines, N. L. Nokes; Acting-Boatswain, John Smith; Acting-Gunner, Wm. Wilson; Acting-Carpenter, A. O. Goodsoe; Acting-Sailmaker, Nicholas Lynch; Acting-Masters, W. H. Churchill, J. T. Seaver, J. R. Hamilton and O. B. Warren; Acting-Assistant Paymaster, J. J. A. Kissam.

## STEAMER "HATTERAS."

Lieutenant-Commander, Homer C. Blake; Assistant Surgeon, E. S. Matthews; Acting-Masters, H. O. Porter, Enoch Brooks and G. D. Hoffman; Acting-Masters' Mates, J. W. Hazlitt, A. H. Berry and T. G. McGrath; Acting-Assistant Paymaster, F. A. Conkling; Acting-Engineers, A. M. Covert, J. C. Cree, Jacob Colp and B. C. Bourne.

## GUN-BOAT "SCIOTA."

Lieutenant-Commander, Reigart B. Lowry; Lieutenant F. O. Davenport; Assistant Surgeon, J. H. Clark; Assistant Engineers, C. E. De Valin, H. M. Quig, A. H. Price and Edw. Curtis; Acting-Master, A. McFarlane; Acting-Ensigns, J. H. Field and S. S. Beck; Acting-Master's Mate, S. H. Bemis; Acting-Assistant Paymaster, C. H. Lockwood.

## GUN-BOAT "CAYUGA."

Lieutenant-Commander, D. A. McDermot; Assistant Surgeon, Edw. Bogart; Assistant Engineers, J. M. Harris, W. W. Sydney, J. C. Chaffee and Ralph Aston; Acting-Masters, E. D. Percy and John Hanson; Acting-Masters' Mates, James Gillin, W. W. Patten, F. P. Stevens, and R. O. Lanfere; Acting-Assistant Paymaster, J. W. Whifen.

## STEAMER "CLIFTON."

Lieutenant-Commander Richard L. Law; Midshipman, H. T. French; Acting-Masters, Robert Rhodes and B. S. Weeks; Acting-Ensign, W. W. Weld; Acting-Masters' Mate, Loring Cannon; Acting-Assistant Surgeon, D. D. T. Nestell; Acting-Assistant Paymaster, J. S. Carels; Acting-Engineers, James A. Fox, S. S. Vollum, F. J. Bradley and G. W. Spies.

## GUN-BOAT "AROSTOOK."

Lieutenant-Commander, Samuel R. Franklin; Lieutenant, T. S. Spencer; Assistant Surgeon, C. J. Cleborne; Assistant Engineers, W. J. Buehler, George R. Holt, James Entwistle and Samuel Gragg; Acting-Masters, Eben Hoyt and W. A. Maine; Acting-Masters' Mates, Louis R. Hammersly, C. F. Palmer, Edw. Culbert and J. C. Henry; Acting-Assistant Paymaster, W. L. Pynchon.

## GUN-BOAT "KATAHDIN."

Lieutenant-Commander, Francis A. Roe; Lieutenant, Nathaniel Green; Assistant Surgeon, Somerset Robinson; Assistant Engineers, T. M. Dukehart, W. J. Reid, W. W. Heaton and John McIntyre; Acting-Ensigns, J. H. Hartshorn and J. G. Green; Acting-Masters' Mates, Geo. Leonard, John Leeds and Frank Kemble; Acting-Assistant Paymaster, H. LeRoy Jones.

## GUN-BOAT "ALBATROSS."

Lieutenant-Commander, John E. Hart; 2d Assistant Engineer, C. H. Ball; Acting-Masters, T. B. Dubois and C. S. Washburne; Acting-Ensign, J. H. Harris; Acting-Masters' Mate, Wm. Harcourt; Acting-Assistant Surgeon, W. J. Burge; Acting Assistant Paymaster, G. R. Martin, Acting Engineers, J. W. Smyth, L. J. M. Boyd and C. H. Slack.

## STEAMER "POCAHONTAS."

Lieutenant-Commander, W. M. Gamble; Lieutenant, J. F. McGlensey; Assistant Surgeon, A. C. Rhoades; Assistant Engineers, Caleb E. Lee, W. F. Fort and G. C. Julian; Acting-Masters, Edw. Baker and Thomas Symmes; Acting-Masters' Mates, J. M. Braisted, O. S. Willey and Caleb Fellowes; Acting-Assistant Paymaster, Theo. Kitchen; Acting-Engineer, John Jordan.

## GUN-BOAT "KENNEBECK."

Lieutenant-Commander, John H. Russell; Assistant Surgeon, Chas. H. Perry; Assistant Engineers, Henry W. Fitch, B. C. Gowing, E. E. Roberts and L. W. Robinson; Acting-Masters, H. C. Wade and Wm. Brooks; Acting-Masters' Mates, J. W. Merryman, H. E. Tinkham and J. D. Ellis; Acting-Assistant Paymaster, C. L. Burnett.

## GUN-BOAT "ITASCA."

Lieutenant-Commander, R. F. R. Lewis; Assistant Surgeon, Heber Smith; Assistant Paymaster, A. J. Pritchard; Assistant Engineers, T. Jones and John Borthwick; Acting-Masters, Edmund Jones and Sylvanus Nickerson; Acting-Masters' Mates, J. B. Crane, W. E. Bridges, George Spencer and Henry Miron; Acting-Engineers, David Frazier, H. C. Henshaw and M. Gerry.

## STEAMER "TENNESSEE."

Lieutenant-Commander, P. C. Johnson; Assistant Surgeon, H. M. Wells; Acting-Masters, J. D. Childs, Ezra Leonard, G. E. Nelson and S. V. Bennis; Acting-Masters' Mates, M. W. McEntee, A. P. Sampson and Oscar Peck; Acting-Gunner, Nathaniel Hobbs; Acting-Assistant Paymaster, B. F. D. Fitch; Acting-Engineers, J. E. Schultz, G. L. Harris, Samuel Robinson, E. C. Mayloy and Thomas Fitzgerald.

## GUN-BOAT "OWASCO."

Lieutenant-Commander, Henry Wilson; Assistant Surgeon, W. W. Leavitt; Assistant Engineers, W. K. Purse, J. A. Scott, C. H. Greenleaf and D. M. Egbert; Acting-Masters, S. A. Swimmerton and T. D. Babb; Acting-Masters' Mates, John Ulter and J. G. Arbona; Acting-Assistant Paymaster, Richard Beardsley.

## GUN-BOAT "WINONA."

Lieutenant-Commander, Aaron W. Weaver; Lieutenant, W. S. Schley; Assistant Surgeon, Arthur Mathewson; Assistant Engineers, E. S. Boynton, Edward Gay and R. L. Wamaling; Acting-Master, Charles Hallet; Acting-Ensign, F. H. Beers; Acting-Master's Mates, H. D. Burdett and Alfred Staigg; Acting-Assistant Paymaster, S. F. Train; Acting-Assistant Engineer, J. W. Milestead.

## GUN-BOAT "PINOLA."

Lieutenant-Commander, James Stillwell; Lieutenant, G. Watson Sumner; Assistant Surgeon, L. M. Lyon; Assistant Engineers, John Johnson, B. B. Clemens, W. F. Law, John Everding and W. F. Pratt; Acting-Masters, W. P. Gibbs and J. G. Loyd; Acting-Masters' Mates, W. H. Thompson, C. V. Rummell and J. G. Rosling; Acting-Assistant Paymaster, C. Stewart Warren.

## STEAMER "J. P. JACKSON."

Lieutenant-Commander, Henry A. Adams; Acting-Masters, M. B. Crowell, J. F. Dearborn and Wm. Hedger; Acting-Masters' Mates, Wm. H. Howard, Jeremiah Murphy and W. J. B. Laurence; Acting-Assistant Surgeon, T. S. Yard; Assistant Paymaster, H. Melville Hanna; Acting-Engineers, J. B. Morgan and J. D. Caldwell.

## STEAMER "CALHOUN."

Lieutenant-Commander, T. McK. Buchanan; Acting-Master, M. Jordan; Acting-Ensign, H. D. Foster; Acting-Master's Mates, R. C. Bostwick and J. L. Blauvelt; Acting-Assistant Surgeon, Ira C. Whitehead; Acting-Assistant Paymaster, W. M. Watmough; Acting-Engineers, W. D. Brown, R. W. Mars, G. W. Baird and P. H. Fales.

## STEAMER "ESTRELLA."

Lieutenant-Commander, A. P. Cooke; Acting-Master's Mate, L. Richards; Acting-Assistant Surgeon, B. F. Wilson; Acting-Engineer, Robert Stott.

## STORE-SHIP "RELIEF."

Acting-Volunteer-Lieutenant, B. D. Manton; Acting-Master, N. S. Morgan; Acting-Master's Mates, Wm. Jenney and M. J. Nicholson; Acting-Assistant Surgeon, Celso Pierucci; Acting-Assistant Paymaster, E. K. Gibson.

## STEAMER "KINSMAN."

Acting-Volunteer-Lieutenant, Geo. Wiggins; Acting-Master, A. S. Wiggins.

## STEAMER "KENSINGTON."

Acting-Volunteer-Lieutenant, Fred. Crocker; Acting-Volunteer-Lieutenant, N. W. Hammond; Acting-Masters, Geo. Taylor, C. M. Tinker and C. W. Wilson; Acting-Masters' Mates, Robert Finney and F. A. Leach; Acting-Assistant Surgeon, John E. Cobb; Acting-Assistant Paymaster, John F. Tarbell; Acting-Engineers, Alex. Auchinbeck, T. W. O. Conner, W. S. Harden, S. B. Runnels, A. B. Besse and J. C. Mockabee.

## BARK "ARTHUR."

Acting-Volunteer Lieutenant, Thomas F. Wade; Acting-Masters, W. O. Lunt and Albert Cook; Acting-Masters' Mates, Wm. Barker, J. C. Constant and C. S. Bellows; Acting-Assistant Surgeon, O. D. Root; Acting-Assistant Paymaster, M. B. Osborn.

## SCHOONER "RACHEL SEAMAN."

Acting-Volunteer-Lieutenant, Quincy A. Hooper; Acting-Ensign, Edwin Janorin; Acting-Master's Mate, Wm. H. Metz.

## SCHOONER "HENRY JANES."

Acting-Volunteer-Lieutenant, Lewis W. Pennington.

## SCHOONER "ORVETTA." (BOMB.)

Acting-Master, F. E. Blanchard; Acting-Master's Mates, E. O. Adams and W. H. Monroe.

## BRIG "BOHIO."

Acting-Masters, Geo. W. Browne and W. M. Stannard; Acting-Masters' Mates, James Sheppard and S. C. Heath; Acting-Assistant Paymaster, J. M. Skillman.

## SCHOONER "JOHN GRIFFITHS." (BOMB.)

Acting-Master, Henry Brown; Acting-Master's Mates, Asa Hawes and John McAllister.

## SCHOONER "CHARLOTTE."

Acting-Master, E. D. Bruner.

## SCHOONER "SARAH BRUEN." (BOMB.)

Acting-Master, A. Christian; Acting-Master's Mates, Sylvester Rowland, B. G. Cahoon and J. M. Chadwick.

## SCHOONER "MARIA A. WOOD."

Acting-Master, Samuel C. Cruse; Acting-Master's Mates, F. C. Way and Charles Fort.

## SHIP "MORNING LIGHT."

Acting-Masters, John Dillingham, H. W. Washburn, W. W. Fowler and L. H. Partridge; Acting-Masters' Mates, Geo. H. Rice and J. L. Chambers; Acting-Assistant Surgeon, John W. Shrifly; Assistant Paymaster, W. S. Blunt.

## BARK "W. G. ANDERSON."

Acting-Masters, N. D'Oyly and Wm. Bailey; Acting-Masters' Mates, Roswell Davis and R. H. Carey; Acting-Assistant Surgeon, Winthrop Butler; Acting-Assistant Paymaster, Louis L. Scovel.

## STEAMER "DIANA."

Acting-Master, Ezra S. Goodwin; Acting-Master's Mate, John D. Trott.

## BARK "HORACE BEALES."

Acting-Master, D. P. Heath; Assistant Surgeon, R. T. Edes; Acting-Ensign, J. F. Perkins; Acting-Master's Mates, James West and Eugene Biondi.

## STORE-SHIP "NIGHTINGALE."

Acting-Masters, D. B. Horne and Edwin E. Drake; Acting-Masters' Mates, Thomas Stevens and Alonzo Gowdy; Acting-Assistant Surgeon, Arthur Ricketson; Acting-Assistant Paymaster, H. D. Kimberly.

## COAL-SHIP "PAMPERO."

Acting-Master, Charles Huggins; Acting-Master's Mate, Charles Bostwick; Acting-Assistant Surgeon, J. H. Langsley; Acting-Assistant Paymaster, A. A. Pancoast.

## STEAMER "SACHEM."

Acting-Master, Amos Johnson; Acting-Ensign, A. H. Reynolds; Acting-Master's Mates, G. C. Dolliver and L. C. Grainger; Acting-Engineers, John Fraser, J. R. Wall and G. C. M. Wolfe.

## SCHOONER "KITTATINNY."

Acting-Masters, G. W. Lamson and A. H. Atkinson; Acting-Masters' Mate, J. G. Crocker; Acting-Assistant Paymaster, E. C. Bowman.

## BARK "KUHN."

Acting-Masters, R. G. Lee, J. T. Harden and W. F. Hunt; Acting-Masters' Mate, Wm. Edgar; Acting-Assistant Paymaster, J. B. Hazelton.

## STORE-SHIP "FEARNOT."

Acting-Masters, Daniel S. Murphy and T. W. Williams; Acting-Masters' Mates, Fred. Furbish and G. H. Benson; Acting-Assistant Paymaster, Augustus Eisenwein.

## SLOOP-OF-WAR "PREBLE."

Acting-Master, Wm. F. Shankland; Acting-Ensigns, B. B. Knowlton, L. B. King and J. S. Clark; Assistant Surgeon, J. S. Knight; Acting-Master's Mate, F. P. Parks; Acting-Assistant Paymaster, W. J. Hoodless; Boatswain, John Bates; Acting-Gunner, J. A. Cummins; Carpenter, J. McFarlane; Sailmaker, G. W. Giet.

## YACHT "CORYPHEUS."

Acting-Master, A. T. Spear.

## SCHOONER "OLIVER H. LEE." (BOMB.)

Acting-Master, Washington Godfrey; Acting-Master's Mates, A. T. Parsons, J. A. Chadwick and T. G. Hall.

## SCHOONER "SAM HOUSTON."

Acting-Master, Geo. W. Ward; Acting-Ensign, J. J. Kane.

## BRIG "SEA FOAM."

Acting-Ensign, Thomas H. Baker; Acting-Master's Mates, D. F. O'Brien and Joseph Moss.

## CHAPTER XXIV.

### SECOND ATTACK ON VICKSBURG, ETC.

REAR-ADMIRAL PORTER TAKES COMMAND OF THE MISSISSIPPI SQUADRON.—GUERRILLA WARFARE.—GENERAL GRANT'S PLANS.—THE ARMY AND NAVY CO-OPERATE.—EXPEDITION UP THE YAZOO.—THE "CAIRO" SUNK BY TORPEDOES.—DIFFICULTIES SURMOUNTED BY THE ARMY.—OPERATIONS OF EARL VAN DORN AND FORREST.—REPULSE OF GENERAL SHERMAN NEAR CHICKASAW BAYOU.—ATTACK ON HAINES' BLUFF BY THE UNITED STATES STEAMER "BENTON," ETC., AND DEATH OF LIEUT.-COM. GWINN.—ARRIVAL OF GENERAL McCLELLAND TO RELIEVE SHERMAN.—EXPEDITION TO ARKANSAS POST.—LAST ACT OF THE NAVY IN THE YAZOO.—VESSELS THAT TOOK PART IN THE YAZOO EXPEDITION.

**R**EAR-ADMIRAL PORTER took command of the Mississippi Squadron in October, 1862.

Rear-Admiral Davis had ordered all the vessels except the "Benton" and the "Carondelet" up to Cairo for repairs, for what with being rammed and shaken up by constant firing of the guns, they required a thorough overhauling.

There being at this moment no actual operations in progress, Rear-Admiral Porter devoted his attention to putting the vessels in thorough order, changing their batteries to Dahlgren guns, and adding a number of small stern-wheel vessels, covered with light iron (called "tin-clads"), to the squadron.

Up to this time the gun-boats had, strictly speaking, been under the control of the Army, but now all this was changed, and the Mississippi Squadron, like all the other naval forces, was brought directly under the supervision of the Secretary of the Navy. The Commander-in-Chief of the squadron had no longer to receive orders from General Halleck or Army headquarters, but was left to manage his command to the best of his ability, and to co-operate with the Army whenever he could do so. This was a much better arrangement, as it allowed the naval commander-in-chief to exercise his judgment, instead of being handicapped, as Foote and Davis were.

It may be remembered when Donelson

fell, and Foote suggested to Halleck the importance of pushing on with the gun-boats to Nashville, General Halleck forbade his doing so. The new arrangement left the commander of the squadron at liberty to undertake any expedition he thought proper, and he was not in the least hampered by any instructions from the Navy Department regarding his movements; so that when the Army was operating in the interior of Tennessee, which seemed at that time the great battle-ground, the Navy could take advantage of the opportunity and make raids on the enemy along the Mississippi and its tributaries, keeping down guerillas, and enabling army transports to go and come without hindrance.

In October, 1862, the guerillas were exceedingly troublesome all along the rivers, firing at every unarmed steamer which passed. Large quantities of goods were shipped from St. Louis to points along the river professedly Union, which ultimately reached the Confederates. All this was stopped, and the guerillas, when captured, were summarily dealt with, and the houses where they were harbored laid in ashes. No commerce was allowed on the Mississippi except with Memphis, and the river looked almost as deserted as in the early days of its discovery, its silence being seldom disturbed except by gun-boats and army transports, and the sharp report of the howitzers as they sent the shrapnel shells into the dense woods or over the high banks

where it might be supposed guerillas were lying in wait to fire on the transports.

This was slow work compared to the active warfare the iron-clads had been engaged in under Foote and Davis, but they were merely getting ready for the hard work before them and will be heard from ere long again.

Before Admiral Porter left Washington he was informed by the President that General McClernand had been ordered to raise an Army at Springfield, Ill., to prosecute the siege of Vicksburg. The President expressed the hope that the rear-admiral would co-operate heartily with General McClernand in the operations to be carried on. But as Vicksburg never would have been taken if it had depended on General McClernand's raising an Army sufficient for the purpose, the admiral, immediately on his arrival at Cairo, sent a message to General Grant, at Holly Springs, Miss., informing him of McClernand's intention, that he, Porter, had assumed command of the Mississippi Squadron, and was ready to co-operate with the Army on every occasion where the services of the Navy could be useful.

A few days afterwards General Grant arrived at Cairo and proposed an expedition against Vicksburg, and asking the rear-admiral if he could furnish a sufficient force of gun-boats to accompany it. Grant's plan was to embark Sherman from Memphis, where he then was, with thirty thousand soldiers, to be joined at Helena, Arkansas, by ten thousand more. Grant himself would march from Holly Springs with some sixty thousand men upon Granada. General Pemberton would naturally march from Vicksburg to stop Grant at Granada until reinforcements could be thrown into Vicksburg from the south, and while Pemberton was thus absent with the greater part of his Army Sherman and Porter could get possession of the defences of Vicksburg.

General Grant having been informed that the gun-boats would be ready to move at short notice, and having sent orders to Sherman to put his troops aboard the transports as soon as the gun-boats arrived in Memphis, returned immediately to Holly Springs to carry out his part of the programme.

This interview between Grant and Porter lasted just half an hour, and thus was started the expedition against Vicksburg, which, after a long and arduous siege and a great expenditure of men and money, resulted in the capture of the strongest point of defence occupied by the enemy during the war.

The expedition from Memphis got away early in December, 1862, Commander Walke, in the "Carondelet," being sent

ahead with the "Cairo," "Baron DeKalb," and "Pittsburg," (iron-clads,) and the "Signal" and "Marmora" ("tin-clads"), to clear the Yazoo River of torpedoes and cover the landing of Sherman's Army when it should arrive. This arduous and perilous service was well performed. On the 11th of December, Commander Walke dispatched the two "tin-clads" on a reconnoissance up the Yazoo. They ascended some twenty miles, when they were apprized of the presence of torpedoes by a great number of small boats along the channel of the river and an explosion near the "Signal." Another torpedo was exploded from the "Marmora" by firing into it with a musket as it appeared just below the surface. The commanding

LIEUT.-COMMANDER T. O. SELFRIDGE,  
(NOW CAPTAIN U. S. NAVY.)

officers of these two vessels reported that with the assistance of two iron-clads to keep down the sharpshooters, they could clear the river of torpedoes, but not otherwise, as there were rifle-pits all along the left bank of the Yazoo, and the enemy were supplied with light artillery. At Lieutenant-Commander Selfridge's request he was sent on this duty in the "Cairo," with the "Pittsburg," Lieut.-Commanding Hoel, and the ram "Queen of the West," Colonel Charles Ellet, Jr., commanding. These officers were cautioned to be particularly careful and run no risks.

On the 13th of December the vessels proceeded on the duty assigned them under a shower of bullets from the rifle-pits, which was only checked by the gun-boats dropping

close into the left bank and enfilading the rifle-pits with shrapnel. This cleared the enemy out, and the boats from the vessels were enabled to drag for the infernal machines and haul them to the shore, where they were destroyed by firing volleys of musketry into them.

After this work had been prosecuted for some time Lieut.-Comr. Selfridge proceeded ahead in the "Cairo" to cover the "Marmora," which was thought to be sorely beset by the enemy's sharpshooters. The "Cairo" encountered a floating torpedo. Two explosions in quick succession occurred, which seemed almost to lift the vessel out of the water. Everything was done to keep the "Cairo" afloat, but without avail, and she sank in twelve minutes after the explosion, in six fathoms of water, with nothing but the tops of her chimneys showing above the surface. All the crew were saved. No fault was imputed to the commanding officer of the "Cairo." It was an accident liable to occur to any gallant officer whose zeal carries him to the post of danger, and who is loath to let others do what he thinks he ought to do himself.

This was a bad day's work for a beginning, but the admiral looked upon it simply as an accident of war, and Selfridge was immediately given command of the "Conestoga." The loss of the "Cairo" was the more regretted as she had lately been made "shot proof," by covering her weakest points with railroad iron. It appeared on examination of the river banks that the torpedo wires were connected with galvanic batteries, and that the enemy was prepared with a system of torpedo defence that would require the utmost caution in ascending the Yazoo and seizing a point at which to land an Army.

Rear-Admiral Porter arrived in the Yazoo a day or two after the loss of the "Cairo," and the whole squadron was set to work to clear the river of torpedoes. The gun-boats ascended to within range of the forts on Haines' Bluff and brought on an engagement with the enemy's batteries, during which the boats of the squadron pushed ahead, and succeeded in destroying numbers of torpedoes.

General Sherman moved his transports to a point on the river called Chickasaw Bayou

without the loss of a man from torpedoes or sharpshooters, his landing being covered in every direction by the gun-boats.

Sherman first made a feint on Haines' Bluff as if to attack the works and then landed at Chickasaw Bayou. Owing to the late heavy rains he found the roads to Vicksburg heights almost impassable, and when he attempted to advance with his Army he was headed off by innumerable bayous, which had to be bridged or corduroy roads built around them. It was killing work.

Even at this time Vicksburg had been fortified at every point, and its only approaches by land led through dense swamps or over boggy open ground, where heavy guns were placed, so as to mow down an advancing Army. A general has seldom had so difficult a task assigned him, and there was little chance of Sherman's succeeding unless Pemberton had drawn off nearly all his forces to oppose Grant's advance on Granada, thus leaving Vicksburg without

a garrison; for even a small force could hold the place against a vastly superior attacking one.

There was only one point where the Confederates had possibly left a loophole open for an enemy to get in; if they neglected that point it would be because they never supposed any one would attempt to penetrate

swamps where men had to wade up to their middle in mud and water, and the passage of artillery was almost an impossibility.

At the time of which we are writing the rain had fallen in such torrents that the low lands in the vicinity of Vicksburg were submerged, the water extending nearly to the base of the frowning hills covered with earthworks and rifle-pits, against which an Army would have made little impression. There was, then, no other course but to attack the enemy's works by the road leading from Chickasaw Bayou and attempt to reach the landing at the foot of the high hills overlooking river and plain, where nature had placed obstacles nearly as formidable as the enemy's guns at other places.

Sherman gained that point and established himself under the high hills it was necessary to assault before he could see the inside of Vicksburg; but what was encountered in reaching that point no one but the brave

U. S. IRON-CLAD "CAIRO" SUNK BY A TORPEDO.  
(FROM A SKETCH BY REAR-ADMIRAL WALKER.)

officers and men of that Army will ever know. An Army of thirty thousand men can accomplish a great deal when well directed but it cannot convert swamps into dry land.

But the enemy had not neglected the swamps around Chickasaw Bayou or the approaches to Vicksburg on that side. On the contrary they seemed to have exercised their ingenuity to make that route impassable. Acres of wood had been felled, the trees overlapping one another and forming a *chevaux de frise* which extended through the swamp for several miles.

The difficulties seem great enough in the description, but this falls far short of the reality. However Sherman and his Army overcame everything and at last reached *terra firma*.

In the meanwhile the Navy was doing what it could to help the Army, but its work was necessarily confined to the water, shelling the edges of the woods all around the peninsula where Sherman and his Army were struggling, and keeping the enemy from bringing their artillery to bear.

Sherman was of course aware of the perilous character of his undertaking, and the probability of his being driven back, but he had one strong motive to induce him to extra exertions and that was his loyalty to General Grant. The latter had run considerable risk in leaving his base at Holly Springs to draw Pemberton from Vicksburg. Time was precious and Sherman had to act with promptness, and he felt that it was due to his chief that he should leave nothing untried that would help Grant to carry out his plans. Those plans were well conceived but the best calculations in the world were liable to be upset in the face of such elements as prevailed at Chickasaw Bayou, when Sherman found himself in the swamp beneath the heights of Vicksburg.

Grant had left Holly Springs with a large Army at the time he had appointed, merely with the design of drawing Pemberton from Vicksburg and thus helping Sherman in his attack on that place. This was all Grant proposed to do, although it was suggested that in case Pemberton retreated before him, Grant would follow him up.

Grant moved towards Granada and everything looked well, but the Confederate general, Earl Van Dorn, dashed into Holly Springs twenty-eight miles in the rear of the Union Army, capturing the garrison and all their stores. At the same time General Forrest pushed his cavalry into West Tennessee, cutting the railroad to Columbus at several points between that place and Jackson. This completely cut Grant off from his only line of communication with the North and also from his several commands. Due precautions had been taken to prevent

this mishap by leaving a strong force behind at Holly Springs, but the commanding officer was not on the alert and his capture was a complete surprise. In this raid of the Confederates a million dollars' worth of stores were destroyed.

Under the circumstances it was impossible for Grant to continue his march on Granada, which Pemberton perceiving, the latter returned to Vicksburg in time to assist in Sherman's repulse.

Had Grant been satisfied that he could subsist his Army in the enemy's country, he would have doubtless pushed on to Vicksburg at all hazards and the place would have fallen at that time, but such was not to be. "There's a divinity that shapes our ends, rough hew them as we may." Had Vicksburg been taken at that moment, one of the best opportunities of displaying the strength and resources of the North would have been lost.

Sherman made all his arrangements to attack the enemy's works on the 29th of December, 1862, and the assault took place early on that day. One division succeeded in occupying the batteries on the heights and hoped shortly to reach those commanding the city of Vicksburg, but the division that was to follow the advance was behind time and the opportunity was lost. A portion of Pemberton's Army had returned from Granada, just in time to overwhelm and drive back the small force that had gained the hills. The latter were outnumbered four to one and were driven back. The enemy did not follow, being satisfied with driving our troops from the heights and there was nothing left for Sherman to do but to get his Army safely back to the transports.

Throughout these operations the Navy did everything that could be done to ensure the success of General Sherman's movement. As the soldiers pushed their way through the swamps the "Benton" and two other iron-clads with the "Marmora" and ram "Queen of the West," moved up to within easy range of Haines' Bluff. The "Benton" opened on the Confederate batteries and also shelled the road leading to Vicksburg to prevent the enemy from sending reinforcements to Vicksburg and also to make them believe that Haines' Bluff was the intended point of attack.

Boats were sent towards the forts to drag for torpedoes with the intention if the latter could be removed to advance the gun-boats to close quarters. When the small boats approached the enemy's works a rapid fire was opened on them, but they did not retire until it was supposed that the torpedoes were removed and the way was clear. Then the "Benton" advanced to the point where the boats had ceased work, some twelve

hundred yards from the fort, or as near as the boats could operate against such a fire.

At this point the Yazoo River was very narrow and only one iron-clad could pass up at a time. There was no room for two vessels to fight abreast, consequently the "Benton" had to bear the brunt of the battle, which lasted two hours. During this time the "Benton" received many heavy blows from the enemy's shot and shells, while her consorts had to lie idle, for if they threw shells over the "Benton" they might endanger those on board. Although the "Benton" was much cut up her efficiency was not impaired. She was hit on her bow casemates, which were "shot-proof," thirty times without damage, but plunging shots passed through her decks. Lieut.-Commanding Gwinn, stood on the upper deck,

officer and man in the squadron. The gun-boats withdrew from before Haines' Bluff for it appeared evident that Vicksburg could not be taken from that direction.

General Sherman came to the same conclusion with regard to attacking it from the Chickasaw Bayou. He met with no loss in withdrawing his troops to the transports, but in the assault he lost in killed, wounded, and missing, seventeen hundred men, a large number considering the short time his Army was actually engaged. The soldiers had to work their way back to the Yazoo through heavy rains, and the hardships they encountered in the march can hardly be realized by those who did not share them. That evening the sun came out again as if to let the soldiers dry themselves and all the signs promised fair weather.

Rear-Admiral Porter being still hopeful, proposed to run the iron-clads at night close up under the forts and attack at close quarters with grape and canister, while a division of the Army disembarked and assaulted Haines' Bluff in the rear. General Sherman approved the plan and General Steele and his division were assigned to co-operate with the Navy on the following night, but the good weather indications proved a delusion and a snare, and on the afternoon of the day when the attack was to have been made on Haines' Bluff, a fog set in that shut out all objects at a distance of fifty feet, and this continued until the next day.

The proposed expedition could do nothing on such a foggy night. At noon the following day it began to rain again heavier than ever and the land almost disappeared from sight. There was no longer any chance for a successful attack on Haines' Bluff and nothing was left but for the Army and Navy to retire from the scene where they had been so unsuccessful.

General Sherman, on visiting the rear-admiral on board his flag-ship, opposed further operations and at once proposed that Vicksburg should be given up for the present, and as his troops were somewhat demoralized he must go with them to attack Arkansas Post and secure a success which would impart new confidence to them. He desired the admiral to go along with the gun-boats, and this being agreed to, preparations were made to start next day on the new expedition.

The following morning General Sherman learned that Major-General McClelland had arrived at the mouth of the Yazoo to take command of Sherman's Army. This was a surprise to every one, for although it was known that McClelland had received orders to proceed to Illinois and raise troops for the purpose of undertaking the siege of Vicksburg, yet it never was supposed

LIEUT.-COMMANDER WILLIAM GWINN, U. S. NAVY.

during the whole action, as he was of opinion that a pilot-house or casemate was no place for the commander of a ship of war in battle. This idea cost him his life, for he was struck with a fifty-pound rifle shell which tore away the muscles of his right arm and breast. His executive officer, Acting Lieutenant George P. Lord, was severely wounded, and ten of the crew were killed and wounded.

It was impossible for gun-boats alone to capture the works at Haines' Bluff, as but one vessel at a time could operate against them. Their reduction required a combined Army and Navy attack. The Confederates proved themselves good artillerymen but had two of their guns dismounted by the "Benton's" fire. The gallant commander of the "Benton" notwithstanding his dreadful wounds, lingered two days and died in the admiral's cabin deeply regretted by every

that he would take command of forty thousand men of Grant's Army, without even paying the latter, his superior officer, the compliment of informing him of his intention. However, General McClelland came with such orders from Washington that Sherman unhesitatingly agreed to turn over the command to him.

As Admiral Porter did not come under Army rule and knew exactly the terms on which General McClelland had received his orders, he declined to have anything to do with the proposed expedition to Arkansas Post, unless General Sherman should go in command of the troops. To this McClelland agreed, only stipulating that he should accompany the expedition. So the matter was arranged, and the expedition started.

The last act of the Navy in the Yazoo was one to be remembered by the Confederates who, finding that our troops were re-embarked and ready to depart, determined to pounce on the rear transports and give them a parting remembrance.

Two regiments made an attack with field-pieces which were hauled along the road made by Sherman's soldiers, but unfortunately for the enemy they mistook the "Lexington," "Marmora," "Queen of the West" and "Monarch"—the two latter Colonel Ellet's rams—for transports. Before the Confederates could fire a second round, these vessels opened on them with shrapnel,

grape and canister, cutting them up and sending them flying in all directions without the loss of a man on our side.

In the meantime the transports steamed down the river in good order leaving nothing behind that could be of any use to the enemy.

The following named vessels took part in the Yazoo expedition: "Black Hawk," (flagship) Lieutenant-Commander K. R. Breese, "Benton," Lieutenant-Commander Wm. Gwinn, "Baron DeKalb," Lieutenant-Commander Jno. G. Walker, "Carondelet," Commander Henry Walke, "Louisville," Lieutenant-Commander E. K. Owen, "Cincinnati," Lieutenant-Commanding G. M. Bache, "Lexington," Lieutenant-Commander James W. Shirk, "Signal," Acting-Volunteer-Lieutenant John Scott, "Romeo," Acting-Ensign R. B. Smith, "Juliet," Acting-Volunteer-Lieutenant Edward Shaw, "Forest Rose," Acting-Master Geo. W. Brown, "Rattler," Lieutenant-Commander Watson Smith, "Marmora," Acting-Volunteer-Lieutenant Robert Getty, "Monarch," (ram) "Queen of the West," (ram) Colonel Chas. Ellet, Jr.

The second attack on Vicksburg terminated quite as unsatisfactorily as the first, and every one came to the conclusion that Vicksburg could only be conquered by a long and troublesome siege which would severely test the endurance of both parties.

## CHAPTER XXV.

### CAPTURE OF FORT HINDMAN OR ARKANSAS POST.

ARRIVAL OF THE EXPEDITION.—THE ARMY IN THE REAR OF ARKANSAS POST.—PLAN OF THE FORT.—THE GUN-BOATS IN POSITION.—THE FORT OPENS FIRE.—THE GUNS OF THE FORT SILENCED BY THE GUN-BOATS.—SAD HAVOC.—THE “RATTLER’S” HOT RECEPTION.—THE BATTLE RENEWED AT DAYLIGHT.—THE GUNS OF THE FORT AGAIN SILENCED.—SHERMAN STORMS THE FORT IN THE REAR.—THE ARMY MEETS WITH AN UNEXPECTED RECEPTION.—THE FORT SURRENDERS.—THE HONOR OF THE DEFENDERS OF THE FORT DIMMED.—HARROWING SCENES.—TERRIBLE LOSS OF LIFE.—MCCLEARNAND ON HAND.—EXPEDITION UP THE WHITE RIVER.—ST. CHARLES DESERTED.—MUNITIONS OF WAR CAPTURED.—GRANT ASSUMES COMMAND OF ALL THE FORCES.

**T**HE expedition against Arkansas Post arrived at a point four miles below the enemy’s works, January 10th, 1863.

The Army landed without delay at 10 A. M., and proceeded on their march to get in the rear of the enemy’s works; but they had bad roads on which to travel and thick undergrowth to make their way through. Fifteen miles had to be marched over before the back of Arkansas Post could be reached, and the major part of the night was occupied in achieving their purpose. There were some extensive rifle-pits and works thrown up from which to operate with field pieces. These, as the Army started on their march, were manned and prepared to contest the advance, but the flag-ship “Black Hawk,” Lieutenant-Commander Breese, and the “Rattler,” Lieutenant-Commander Watson Smith, closed up on the enemy’s works and drove them into the woods, so that the Army had no impediment in its way.

General McClelland had accompanied the expedition, it was supposed merely as a spectator, but about 3 o’clock, he rode up to the bank near which the gun-boats laid and informed Admiral Porter that Sherman was in position in the rear of the work, and waiting for the gun-boats to begin the attack on the fort. This could not very well be the case, but the gun-boats “Louisville,” Lieutenant-Commander Owen, the “De

Kalb,” Lieutenant-Commander Walker, and the “Cincinnati,” Lieutenant-Commanding George Bache, were ordered to go up within 400 yards, while the smaller vessels were to follow and use their howitzers as circumstances would admit.

Arkansas Post was a large, well constructed fort built with the best engineering skill. It mounted thirteen guns: two ten-inch Columbiads, one nine-inch Dahlgren, and ten rifled guns of various calibres. The Columbiads were mounted in casemates covered in with four layers of heavy railroad iron, neatly fitted together to offer a smooth surface, and slanting iron roof to make the shot glance off. These were simply after the plan of the iron-clads afloat and were formidable structures.

The nine-inch gun was mounted in an embrasure protected by sand-bags, as were the ten rifled guns. All the guns except one bore down the river and on the vessels coming abreast of the forts. The fort itself was built close to the river; the front not being more than twenty yards from the bank.

There was nothing known to the military art that had been neglected in constructing these works, and to look at them one would suppose they could defy a naval force three times as strong as that now about to be brought against them.

As was afterwards learned, the Confederates supposed the gun-boats would attack

the works from a distance of 1200 yards, and range buoys had been placed at that distance by which to regulate the enemy's fire, and they had been practicing at that distance on targets so that the gunners would become expert. But all these calculations were upset by the "DeKalb" leading, and the "Cincinnati" and "Louisville" close behind her, running up and taking position close to the fort where the current was slack

LIEUT.-COMMANDER JOHN G. WALKER (NOW CAPTAIN)  
U. S. NAVY.

and the vessels could maintain their places without any difficulty; while the other vessels could take such positions in the river as best suited and throw in shrapnel from their small shell guns.

The fort opened on the iron-clads as soon as they reached the range buoys—made some good shots, and then lost their range, during which time the gun-boats were within 150 yards of them and firing accurately and steadily through their iron casemates, and committing sad havoc in the rear amongst the soldiers. It was evident from the first that this fort was doomed to fall, under the fire of the gun-boats. The superiority of their fire over that of the guns in the fort was such that the latter were silenced in the space of an hour, and the gun-boats ceased firing. As darkness was coming on and the smoke hung densely over the river, the gun-boats dropped down and tied up to the bank.

Just before the gun-boats dropped down the tin-clad "Rattler" was ordered to run past the fort and try to reach a point seven miles up the river, and cut off the enemy's troops in case they should attempt to es-

cape by that way, the only road open to retreat by.

Lieutenant-Commander Smith performed this duty handsomely as far as he could, but after passing the fort he became entangled in some piles the enemy had driven down, and which were just a wash, the enemy opened on him while in this condition, and raked him very effectually fore and aft, knocking his cabins to pieces and doing a good deal of damage to his hull, but as the iron-clads opened their batteries again the firing from the forts ceased, and the "Rattler" drifted back out of the enemy's range.

In this attack, all the gun-boats were beautifully handled and not much injured; the success of the afternoon gave good promise for the morrow. The "Lexington," Lieutenant-Commander Shirk, held a position 400 yards below the forts, and although pretty well cut up had no casualties.

General McClelland's report that General Sherman had arrived in the rear of the works with his troops, might have led to ill results, for the enemy might have escaped that night with all his forces across the ferry; but fortunately General Churchill, the Confederate commander-in-chief, was

PLAN OF FORT HINDMAN OR ARKANSAS POST.

five miles away from the fort, waiting to anticipate Sherman and attack him at a disadvantage, and knew not how roughly the forts were being handled by the gun-boats; and Colonel Dunnington, the commander of the fort, (who had formerly been a lieutenant in the U. S. Navy) being a brave man and having a brave set of naval officers with him, did not consider himself as worsted by a great deal.

For many hours the garrison worked with great zeal to repair damages, and the heavy

strokes of their hammers on the iron covering could be heard all through the night.

At daylight, the enemy seemed prepared for action again, and this time General Sherman having sent a messenger to inform the admiral that he was in position and was gradually encircling the Confederate Army, the gun-boats were ordered to take position again not further than 50 yards from the fort and begin to fire as soon as they pleased.

The battle commenced and soon became very hot; when the tin-clads "Glide," Lieutenant-Commanding Woodworth, and "Rattler," Lieutenant-Commander Smith, and the ram "Monarch," Colonel Ellet, were ordered by the admiral to force their way through the obstructions above the forts, reach the ferry and cut off the enemy's retreat.

In a short time all the guns in the works were silenced and the flag-ship "Black Hawk" was run to the bank alongside the fort to board it with her crew; at the same

APPEARANCE OF IX-INCH GUN SILENCED BY THE  
"CINCINNATI."

time a messenger was sent to General Sherman informing him of the condition of affairs, and that if he would send a storming party from the rear, the Navy would board from the water side.

While waiting for Sherman's troops the "Black Hawk" laid alongside the fort, her high upper works on a level with the embrasures, while three boat-guns on wheels, on the upper deck, completely commanded the inside of the works, which presented a dreadful scene of killed and wounded. A large number of artillery horses had been kept in the fort for some reason, and the shells and shrapnel had made sad havoc with the dead and dying men, mixed up with the killed and wounded animals. It was a scene ever to be remembered.

In the meantime, while waiting for Sherman's assaulting party, all firing had ceased on both sides and the victorious sailors were quietly looking on at the dreadful havoc that had been made inside the works, not anticipating that the enemy would make any more resistance. Their

colors had been shot away and had not been hoisted again.

At one time the admiral determined to assault without waiting for the Army, but courtesy to the general required that the Navy should wait until the Army assaulting party should appear, which they did in a few minutes, then there was a simultaneous movement from all parts of the fort by the Confederates (who had been concealed behind or underneath the buildings that had been knocked down), and with muskets in their hands they rushed to the rear parapet and crouched down behind the works.

It was not known what this movement signified, the boat-guns on the flag-ship's upper deck (the flag-ship was a large river steamer unaltered), could have cut them to pieces, but there had been so much slaughter, the admiral would not fire on them, thinking they would throw down their arms as soon as Sherman's men got within twenty yards of them; but not so, for when our troops got within thirty or forty yards the Confederates rose together and poured in a withering volley from about 450 muskets, and nearly every bullet told.

Our soldiers staggered at this unexpected reception, stopped, and then retreated, while at the same moment there appeared a white handkerchief or white cloth held up by every one of the Confederate shooters.

The officers and men from the "Black Hawk" boarded the fort as the enemy fired their volley, when the latter all laid down their arms and surrendered; the commander and officers handing their swords to the admiral.

It was an embarrassing moment when the Federal troops were moving to the assault, and the enemy were waiting to receive them with bullets. The Navy could not fire without hitting the Federal troops, and the whole thing was so sudden and unexpected that the guns were not fired from the "Black Hawk."

It seems that the garrison of the fort belonged to the Confederate Navy and determined to surrender only to the U. S. Navy; yet they wanted to have a last blow at the soldiers, which they did; but it dimmed the honor they had won in so gallantly defending the fort; for there could be nothing gained by this act, their capture was too certain. They could not run away from the forts, for Sherman's army surrounded the entire Confederate force on the outside, including General Churchill and 6,000 troops, and the ferry was blockaded by the light gun-boats above—but these were some of the things the Confederates did which might properly have prevented them from receiving any quarter.

Besides the 6,000 men that surrendered to General Sherman, there were 500 left alive in the forts, and it was curious in looking over the list of prisoners to see added to the names, "Seaman," "Ordinary Seaman," "Coal-heaver," "Fireman," etc. These men were part of the crew and officers of the Confederate ram "Ponchartrain," built at Little Rock, Ark., and the guns in the fort had been intended to form the battery of that vessel, which was destroyed by the enemy on hearing of the capture of Fort Hindman (Arkansas Post).

General McClernand assumed all the direction of affairs on the surrender of the fort and the Confederate troops, and wrote the report of this affair, in which he gave fair credit to the Navy; but he actually

at Little Rock, which could have caused the Federal Navy in the West a great deal of trouble, was ensured.

In the battle, everything went on so smoothly, there were no mistakes made, and the officers and seamen gained confidence in the gun-boats which they lacked before. But these had been much strengthened and improved since the battles of Forts Donelson and Henry, and had entire new guns on them instead of the inferior batteries they started out with; moreover, the officers had learned that the way to fight these batteries was at close quarters.

Lieutenant-Commanders Walker, Owen, Bache, Shirk, Watson, Smith, Woodworth, Breese, and the commander of the "Monarch" were all handsomely mentioned by

CASEMATE NO. 1 DESTROYED BY THE U. S. GUN-BOAT "BARON DE KALB."

CASEMATE NO. 2 DESTROYED BY THE U. S. GUN-BOAT "LOUISVILLE."

APPEARANCE OF CASEMATES BEFORE THE ATTACK (COVERED WITH RAILROAD IRON).

REAR VIEW OF CASEMATE NO. 2.

had nothing to do with the management of the Army, and was down four miles below the forts during all the operations. Sherman was virtually the military commander. But from this time the Army was under McClernand's command, and after the prisoners were received and sent off in transports and the forts and guns demolished as far as could be done by the Army, the fleet and transports retraced their steps towards Vicksburg, and landed at Milliken's Bend or Young's Point about seven miles above Vicksburg.

The fight at Fort Hindman was one of the prettiest little affairs of the war, not so little either, for a very important post fell into our hands with 6,500 prisoners, and the destruction of a powerful ram

the admiral in his report to the Navy Department.

This battle gave general satisfaction to the public. It was unexpected and few knew where Fort Hindman was situated.

Directly after the capture of Fort Hindman, Lieutenant-Commander Walker in the "De Kalb," and Lieutenant-Commander George Bache in the "Cincinnati," were sent up the White River to capture the forts erected there by the Confederates, and General Gorman, U. S. A., accompanied the expedition with troops in the transports.

On the arrival of the expedition at St. Charles, the fort under construction was evacuated and the guns carried off in the steamer "Blue Wing," but these were re-

captured at Duvall's Bluff, shipped in cars ready to be transported to Little Rock, the Confederates deserting the place. The railroad depot was destroyed by fire, all the rolling stock burned, and all the munitions of war placed on board the transports.

This was the last expedition necessary to send up the White River for some time. It remained open during the war excepting on several occasions when guerillas infested its banks. The Arkansas River also remained open; its difficult navigation offered no inducement for any one to seek adventures in its treacherous waters.

To show how carelessly the history of the war of the Rebellion has been written as regards the Navy, the following quotation from a military historian is inserted here:

"McClermand immediately acquiesced in Sherman's proposition and moved his force up the Arkansas, the fleet under Porter accompanying. A naval bombardment lasting several days occurred, and on the 11th the troops assaulted the works, when the Post surrendered after a fight of three hours, in which the squadron bore a conspicuous part. McClermand [Sherman it should be] lost about 1,000 men in killed, wounded and missing. The guns of the fort were silenced by the fleet, and Admiral Porter received the sword of its commander.

General Grant did not approve of this movement on Arkansas Post when he first heard of it, as he thought it improper to divert the army from the original design to capture Vicksburg. He supposed the idea

originated with General McClermand; but when he knew all the circumstances connected with the movement, and that the Army left Vicksburg because no longer able to operate owing to the floods, and that the troops wanted a success after their late discouraging defeat, he became reconciled to the attack on Arkansas Post, though it was a side movement and could in no way contribute to the final overthrow of Vicksburg.

Certain it is, the success at Arkansas Post had a most exhilarating effect on the troops, and they were a different set of men when they arrived at Milliken's Bend than they were when they left the Yazoo River.

After the troops were settled in their tents opposite Vicksburg, it became apparent that there could be no harmonious cooperation while McClermand remained in command of all the military forces. His peculiarities unfitted him for such a command, and these peculiarities became so offensive to Generals Sherman and McPherson, and to Admiral Porter, that they urged General Grant to take command himself as the only chance for the success of the enterprise, and in consequence, the latter hastened to Milliken's Bend or Young's Point and assumed the command of all the forces, which he was entitled to do, being military commander of the department.

## MISSISSIPPI SQUADRON, JANUARY 1, 1863.

(Excepting some of the vessels engaged at Vicksburg.)

ACTING REAR-ADMIRAL DAVID D. PORTER, COMMANDER-IN-CHIEF.

### RECEIVING-SHIP "CLARA DOLSON." (CAIRO.)

Lieutenant-Commander, Thomas Pattison, Acting-Assistant Surgeon, Emile Gavarret; Paymaster, Edward May; Acting-Master, John C. Bunner; Acting-Ensigns, E. C. Van Pelt and D. W. Tainter; Acting-Master's Mates, H. G. Masters and John D. Holmes; Acting-Engineer, Geo. W. Fulton; Acting-Carpenter, G. W. Armstrong.

### STEAMER "EASTPORT."

Lieutenant-Commander, S. L. Phelps; Assistant Surgeon, Adrian Hudson; Acting-Assistant Paymaster, W. H. Gilman; Acting-Master, J. L. Avery; Acting-Ensign, R. M. Williams; Acting-Master's Mates, J. W. Litherbury and E. A. Decamp; Engineers: Acting-Chief, Henry Hartwig; Acting-Assistants, T. F. Ackerman, James Vanzant, G. W. Heisel and G. W. Aiken; Acting-Gunner, Reuben Applegate; Acting-Carpenter, James Kirkland.

### STEAMER "LEXINGTON."

Lieutenant-Commander, James W. Shirk; Acting-Volunteer-Lieutenant, Martin Dunn; Acting-Assistant Surgeon, L. M. Reese; Assistant Paymaster, Geo. A. Lyon; Acting-Master, James Fitzpatrick; Acting-Ensigns, Sylvester Pool and James Marshall; Acting-Master's Mates, J. G. Magler, W. E. Anderson, F. O. Blake and S. S. Willett; Engineers: Acting-Chief, Wm. H. Meredith; Acting-Assistants, Michael Kelly, J. H. Hilliard, Wm. Bishop and Job

### IRON-CLAD STEAMER "BARON-DE-KALB."

Lieutenant-Commander, John G. Walker; Acting-Volunteer-Lieutenant, J. V. Johnston; Acting-Assistant Surgeon, John Wise; Acting-Assistant Paymaster, Wm. A. Mann; Acting-Masters, Chas. Kendrick and R. H. Medill; Acting-Ensign, Charles Hunter; Acting-Masters' Mates, H. H. Gorringer, E. D. Breed, F. E. Davis and J. M. Meacham; Engineers: Acting-Chief, Thomas Hebron; Acting-Assistants, J. L. Smith, J. S. Wilcoxon and Geo. Britton.

### STEAMER "CONESTOGA."

Lieutenant-Commander, Thomas O. Selfridge; Assistant-Surgeon, J. Otis Burt; Acting-Assistant Paymaster, E. D. Ellsley; Acting-Master, George Hentig; Acting-Ensigns, Benj. Sebastian, James Kearney, Charles Pease and John Swaney; Acting-Master's Mates, S. J. Dewight, Henry Haskins, Thomas Devine and J. C. Petterson; Engineers: Acting-Chief, Thomas Cook, Alex. McGee, Michael Norton, James O'Neil and Andrew Lusk; Acting-Gunner, Gilbert Morton; Acting-Carpenter, J. J. Hays.

### STEAMER "FAIRPLAY."

Lieutenant-Commander, Le Roy Fitch; Acting-Assistant Surgeon, S. D. Bolton; Acting-Master, Geo. J. Groves; Acting-Ensigns, J. C. Coyle and Thad. Conant; Acting-Master's Mates, W. C. Coulson, John Reville and Isaac Summons; Acting-Engineers, Robert Mahatha, G. S. Collins, Chas. Egster

## STEAMER "TAYLOR."

Lieutenant, James M. Prichett; Acting-Assistant Surgeon, G. W. Ballentine; Acting-Assistant Paymaster, C. A. Gardiner; Acting-Master, W. H. Minor; Acting-Ensigns, Eliphalet Loring, C. T. Stanton, J. F. Holmes and S. E. Brown; Acting-Master's Mates, Charles Ackley, H. S. Wetmore and Ira Athearn; Engineers: Acting-Chief, James Fleming; Acting Assistants, J. R. Ramsey, Wm. Furch and E. M. Bumpus; Acting-Carpenter, A. B. Chapman.

## STEAMER "ROBB."

Acting-Volunteer-Lieutenant, Jason Goudy; Acting-Ensigns, Rob't Wilkinson, W. Stoneall and E. C. Roe; Acting-Master's Mates, Lloyd Thomas and E. F. Rowe; Acting-Engineers, Benj. Emerson and John Miller.

## STEAMER "ST. CLAIR."

Acting-Volunteer-Lieutenant, J. S. Hurd; Acting-Assistant Surgeon, D. D. Winslow; Acting-Master, G. W. Fontly; Acting-Ensign, Jos. Watson; Acting-Master's Mates, H. A. Proctor, Jos. Hurd and E. C. Williams; Acting-Engineers, Wm. McLain, Edward Lozier and C. C. Hamilton.

## STEAMER "BRILLIANT."

Acting-Volunteer-Lieutenant, Chas. G. Perkins; Acting Assistant Surgeon, W. W. Howard; Acting-Assistant Paymaster, Horace Talcott; Acting-Ensigns, J. B. Dales, George Munday and G. D. Little; Acting-Master's Mate, J. J. Perkins; Acting-Engineers, W. A. Willey, Samuel Ecoff and James Cutter.

## RAM "LITTLE REBEL."

Acting-Volunteer-Lieutenant, Thomas B. Gregory; Acting-Ensign, N. T. Rennell; Acting-Master's Mate, J. S. Flint; Acting-Engineers, A. E. Giles, A. M. Smith and Robert Russell.

## STEAMER "GREAT WESTERN."

Acting-Volunteer-Lieutenant, Wm. F. Hamilton; Acting-Assistant Paymaster, J. S. Harvey; Acting Master, J. C. Little; Acting-Ensign, Richard Ellis; Acting-Master's Mates, L. F. Knapp and Richard Mitchell; Acting-Chief Engineer, Chas. Christopher; Engineers, Jos. Goodwin, B. A. Farmer and G. S. Baker; Acting-Gunner, Robert Sherman; Acting-Carpenter, Jos. Morton.

## STEAMER "JUDGE TORRENCE."

Acting-Volunteer-Lieutenant, J. F. Richardson; Acting-Ensign, Jeremiah Irwin; Acting-Master's Mate, James Ross; Acting-Chief Engineer, P. R. Hartwig; Engineers, J. Stough, J. C. Barr and W. Y. Sedman.

## STEAMER "NEW ERA."

Acting-Master, F. W. Flammer; Acting-Assistant Paymaster, Wm. B. Purdy; Acting-Ensigns, Wm. C. Hanford and Geo. L. Smith; Acting-Master's Mates, G. E. Cheever, W. C. Renner, W. B. Shillits and Wm. Wharry; Acting-Engineers, Israel Marsh, John Darragh and Richard Fenger; Acting-Gunner, Louis Fredericks.

## RECEIVING SHIP "NEW NATIONAL."

Acting-Masters, Alex. M. Grant and O. H. Pratt; Acting-Ensign, John Hill; Acting-Master's Mate, Wm. C. Herron; Acting-Engineers, W. H. Price, James Wilkins and C. C. Rensford.

## STORESHIP "SOVEREIGN."

Acting-Master, Thomas Baldwin; Acting-Assistant Paymaster, Geo. L. Meade; Acting-Ensign, A. M. Rowland; Acting-Master's Mates, C. H. Gulick, T. J. Sheets and G. V. Meade; Acting-Engineers, T. W. Blair, A. L. Mann, Patrick Scanlon and Benj. Canda.

## MEDICAL STAFF.

Fleet Surgeon, Ninian Pinkney; Acting-Assistant Surgeons, G. H. Bixby and Geo. Hopkins.

## STEAMER "GENERAL PILLOW."

Acting-Ensign, Joseph Moyer; Acting-Master's Mates, J. H. Rives and E. M. Woods; Acting-Engineers, Peter Wagner and Jos. J. Wagner.

## INSPECTION SHIP "ABRAHAM."

Acting-Ensign Wm. Wagner; 1st Assistant-Engineer, E. Hozier,

## STEAM-TUG "PANSY."

Acting-Ensign, Amos Bolander; Acting-Master's Mate, Anthony McCarthy; Acting-Engineers, John Gilliss and A. F. Gardiner.

## STEAM-TUG "FERN."

Acting-Ensign Alpheus Semms; Acting-Master's Mate, John M. Kelly; Acting-Engineer, John Reed.

## STEAM-TUG "MISTLETOE."

Acting-Ensign, W. H. H. Ford; Acting-Master's Mate, Hamilton Bateman; Acting-Engineers, W. F. Sandford and Silas Hasky.

## STEAM-TUG "SAMSON."

## CHAPTER XXVI.

### SIEGE OF VICKSBURG.

LOSS OF THE "QUEEN OF THE WEST," AFTER RUNNING THE VICKSBURG BATTERIES AND DESTROYING A GREAT DEAL OF THE ENEMY'S PROPERTY.—RUNNING OF THE BATTERIES BY THE IRON-CLAD "INDIANOLA."—COMBAT BETWEEN THE "INDIANOLA" AND CONFEDERATE FLOTILLA, CONSISTING OF THE "WEBB," "QUEEN OF THE WEST" AND TWO ARMED TRANSPORTS.—CAPTURE OF THE "INDIANOLA" BY THE CONFEDERATES.—AN ACCOUNT WRITTEN BY HER COMMANDING OFFICER LIEUT.-COMMANDER GEORGE BROWN.—ATTEMPT TO CUT A CANAL TO LAKE PROVIDENCE.—YAZOO PASS EXPEDITION BY GUNBOATS AND TRANSPORTS.—ENGAGEMENT WITH FORT PEMBERTON ON THE TALLAHATCHIE RIVER, ETC.

THE siege of Vicksburg may be said to have commenced January 26th, 1862, on which day the Army was landed at Young's Point, seven miles above Vicksburg, and at Miliken's Bend, two or three miles above Young's Point.

This was rather a desperate movement, but there was no other alternative. When Sherman first came down with the gunboats in company, he did not start out with the idea that he was to undertake a siege, but that Vicksburg was to be taken by an unexpected attack. Time was an important factor in this expedition, and that could not be lost by delaying for the purpose of collecting siege tools, etc. Therefore, when the Union Army landed above Vicksburg, it was deficient in all the many appliances for undertaking a siege. They had but four siege guns, and three were supplied by the Navy.

Their position opposite Vicksburg was such a poor one that a sudden rise of water would have drowned them out; and, worst of all, they had a leader in whom not an officer of the expedition could put any confidence. McClernand had come to supersede Sherman in the Yazoo River just after the troops had fallen back to the transports, and he had accompanied the Army to Arkansas Post, but with the express understanding with Admiral Porter that he would not interfere with General Sherman. This

he refrained from doing until the enemy was beaten, and at that moment he assumed command and made all the reports himself.

There were splendid generals in that Army, all men of the highest military acquirements, such as Sherman, McPherson, Steele and Smith, who now saw placed at their head an officer who had not only no qualifications for managing an Army of such a size, but had not the necessary knowledge to be the leader of anything more than a division under another general. These and many other considerations induced General Grant to take the command of the Army at Vicksburg himself. He had become convinced that the siege would be a long one, and made his preparations accordingly. He arrived in person at Young's Point on the 29th of January, 1863, and assumed command of the Army on the 30th. McClernand at once protested against this arrangement, but in vain, and thereafter was simply a divisional commander.

At this time the naval force at Vicksburg consisted of the following vessels: "Benton," "Cincinnati," "De Kalb," "Louisville," "Mound City," "Carondelet," "Pittsburg," and "Chillicothe," iron-clads; "Rattler," "Glide," "Linden," "Signal," "Romeo," "Juliet," "Forest Rose," and "Marmora," light-draughts; the "Taylor" and "Black Hawk," wooden armed steamers; "Queen of the West," "Monarch,"

"Switzerland," and "Lioness," rams; During the following month the "Lafayette" and "Indianola," iron-clads, joined the fleet. The carpenter shops, machine shops, provision boats, ordnance department, hospital, etc., (all on large steamers) were ordered to the mouth of the Yazoo; also ten of the mortar boats which had been used by Foote and Davis at Island No. 10 and Fort Pillow.

Besides these, there were a number of "tin-clads" with light batteries stationed all along the river from Cairo to Vicksburg, each vessel having its beat.

In this manner the Army transports were conveyed from one station to another, and the gun-boats performed this duty so efficiently that during the whole siege of seven months, the transportation of troops and stores was not interrupted. The guerillas along the bank were so handled by these small vessels, and so summarily dealt with, that they soon withdrew to other parts.

General Grant soon saw that Vicksburg could not be taken by the Army sitting down and looking at it from Young's Point. The wide and swift running Mississippi was between them. No force could land in front of the city with its long line of heavy batteries on the hills and at the water front, with 42,000 men in garrison under a very clever general (Pemberton), and Gen. J. E. Johnston with 40,000 more troops at Jackson (the capital of Mississippi), within easy distance of the besieged—if those may be so called who had ten times as much freedom and a hundred times more dry land to travel about on, than the besiegers.

There was no use attempting to attack the place on either flank. The attempt had been made by Sherman at Chickasaw Bayou without effect, and since then that point had been made doubly secure against invasion. The Federal Army could not cross the river below the town, for there were no transports on that side of the batteries, and it was then thought impossible to pass them.

General Banks at one time received orders to march up to Vicksburg and assist Grant, and so envelop the city, but for some reason this movement was delayed from time to time, and the latter had to depend upon his own resources.

Vicksburg and Port Hudson were both receiving large supplies *via* the Red River, and the first step necessary to be taken was to send a vessel (or vessels) to establish a blockade. This, it was thought, would hasten the evacuation of Port Hudson, and thus leave Banks at liberty to ascend the Mississippi in steamers.

On the 3d of February, 1863, the ram, "Queen of the West," Colonel Charles R.

Ellet, was selected to perform the perilous duty of running the batteries and carrying out Admiral Porter's orders. Ellet was a gallant young fellow, full of dash and enterprise, and was delighted with this opportunity to distinguish himself; and, although his vessel was a very frail one for such an enterprise, he did not hesitate to accept the risk when this duty was proposed to him.

The admiral depended a great deal on the darkness of the night to shield the vessel during the passage, and gave his orders accordingly. The "Queen of the West" started on her mission after midnight, but owing to the bad position of the wheel for manœuvring, Ellet stopped on his way to shift it to a point from which he thought he could manœuvre his vessel better, and lost so much time by the operation that the advantages of the darkness were lost. It was nearly daylight when he reached the first

ELLET'S STERN WHEEL "RAM."

battery, which he passed at full speed. The alarm gun was fired from the fort and in an instant the gunners of the lower batteries were at their posts, and when the "Queen" arrived abreast of the city battery after battery opened upon her. As it was supposed that Colonel Ellet would pass during the night-time, he had been ordered to ram a large steamer (the "Vicksburg") lying at the levee, and also to throw lighted tow balls on board of her to set her on fire. This could have been easily done at night, but it was almost certain destruction to attempt it in the day-time, but the gallant young fellow determined to carry out his orders at all hazards, rammèd the vessel as directed and endeavored to set her on fire, but by this time the enemy's shot were rattling about him, and the current carrying him past the steamer, he was obliged to speed on.

This being the first vessel to run their batteries the Confederate gunners were

nervous and did not at first get the proper range and many a screaming rifle shell went over Ellet's head, and passed harmlessly by. The steamer at the levee burst into flames but they were afterwards extinguished by the Confederates.

The "Queen of the West" had been well packed with cotton-bales to make her shot proof, but it did not make her shell proof, for at the moment she struck the "Vicksburg" and became stationary a shell from the enemy exploded in a cotton bale and in a moment the vessel was all ablaze. The flames spread rapidly and the dense smoke suffocated the engineers in the engine-room—so all attempts to ram the Vicksburg again were given up and the "Queen" turned her head down stream. Every one was set to work to extinguish the fire, which was done by cutting away the barricades and throwing the cotton overboard. The enemy of course were not idle but continued to pour their shot and shells into the Missis-

"THE QUEEN OF THE WEST."

(FROM A DRAWING BY REAR-ADMIRAL WALKER, MAY 15, 1862.)

sippi River without stint. The "Queen" was struck twelve times, twice just above the water line.

Ellet reached Red River and committed great havoc along the shore. He had been ordered to sink or destroy all steamers he might capture, and to blockade the river so closely that no provisions could get to Port Hudson or Vicksburg. Almost immediately on his arrival he captured and burned three large steamers loaded with army stores for Port Hudson. Five army officers were also captured.

Ellet then proceeded ten miles up the Red River where the enemy were known to have had a number of fine steamers engaged as army transports—but they all fled on hearing that a Federal gun-boat was approaching. Ellet got out of coal and took advantage of this panic to run up to Warrenton just below Vicksburg, to obtain a fresh supply and report progress.

He was again sent off to burn, sink and destroy or capture, and did good execution. He captured two steamers loaded with army stores for Port Hudson, and destroyed a wagon train returning from Shreveport: then the "Queen of the West" started up Red River but a treacherous pilot grounded her under the guns of a fort; the enemy opened upon her with four 32 pounders, every shot from which, struck her and killed or wounded many of the crew. At length a shot cut the steam pipe and the scalding steam amidst the wounded and dying made a never-to-be-forgotten scene. Every one who was able to do so jumped overboard to escape being scalded, and Ellet with what was left of his crew floated down the river on cotton-bales until he fell in with one of his prizes, the "New Era," when all got on board and made their escape up to the Federal landing below Vicksburg.

The Confederates soon repaired the "Queen of the West," manned her with a good crew of sharpshooters, and sent her in company with the "Webb," (another powerful ram) in pursuit of the "New Era."

The "Queen of the West" had been so successful it was determined (to make matters doubly sure) to send down an iron-clad, and the "Indianola," with a bow battery of two 11-inch guns, was prepared to pass the batteries at night. She was commanded by Lieutenant-Commander George Brown, an officer whose gallantry and prudence had been well established. She carried a coal-barge on each side of her with orders to cut them adrift if she should meet the "Webb," and every precaution was taken to prevent her being captured in case she got into an action.

She passed the batteries in safety, but a few days after her departure two of her crew appeared and stated that she had fallen in with the rams "Queen of the West" and "Webb," in company; that she had been rammed six times and being in a sinking condition had surrendered. This was a great disappointment to the admiral and General Grant, but she was blown up next night by a Yankee ruse, and the Confederates did not benefit by her capture.

In justice to Lieutenant-Commander Brown, his account of this affair is inserted. It will show the kind of fighting that took place on the Mississippi, and the desperate character of the foe the Federals had to contend with.

WASHINGTON, D. C., May 28, 1863.

SIR—At this my earliest opportunity, I respectfully submit to the department a report of the operations of the U. S. steamer "Indianola," while below Vicksburg, Mississippi; also the par-

ticulars of the engagement with the rebel armed rams "Queen of the West" and "William H. Webb," and armed cotton-clad steamers "Dr. Batey" and "Grand Era," in which the "Indianola" was sunk and her officers and crew made prisoners.

In obedience to an order from Acting-Rear-Admiral Porter, commanding Mississippi squadron, I passed the batteries at Vicksburg and Warrenton on the night of the 13th of February last, having in tow two barges containing about 7,000 bushels of coal each, without being once struck, although eighteen shots were fired, all of which passed over us.

I kept on down the river, but owing to dense fogs made but slow progress until the morning of the 16th, when, about ten miles below Natchez, I met the steamboat "Era No. 5," having on board Colonel Ellet, of the ram fleet, and a portion of the officers and crew of the steamer "Queen of the West." I then learned for the first time of the loss of that boat, and after consulting with Colonel Ellet, I concluded to continue on down as far as the mouth of the Red River. On the afternoon of the same day I got under way, the "Era No. 5," leading. On nearing Ellis's Cliffs the "Era" made the pre-arranged signal of danger ahead, soon after which I made out the rebel steamer "Webb."

Before I got within range of the "Webb" she had turned and was standing down stream with great speed. I fired two shots from the 11-inch guns but both fell short of her. She soon ran out

I kept the bunkers of the "Indianola" full of coal, and would have sunk what remained in the barges; but knowing that if another boat was sent below Vicksburg, I would be expected to supply her with coal, I concluded to hold on to the barges as long as possible.

In consequence of having the barges alongside we could make but slow progress against the current, the result of which was, that I did not reach Grand Gulf until the morning of the 24th, at which point and at others above we were fired on by parties on shore.

As I knew that it would be as much as I could do to get by the Warrenton batteries before daylight the next morning, I returned the fire of but one party.

At about 9.30 P. M. on the 24th, the night being very dark, four boats were discovered in chase of us. I immediately cleared for action, and as soon as all preparations had been completed I turned and stood down the river to meet them. At this time the leading vessel was about three miles below, the others following in close order. As we neared them I made them out to be the rams "Queen of the West" and "William H. Webb," and two other steamers, cotton-clad and filled with men.

The "Queen of the West" was the first to strike us, which she did after passing through the coal barge lashed to our port side, doing us no serious damage.

Next came the "Webb" I stood for her at full speed; both vessels came together bows on, with a tremendous crash, which knocked nearly every one down on board both vessels, doing no damage to us, while the "Webb's" bow was cut in at least eight feet, extending from about two feet above the water line to the keelson.

At this time the engagement became general and at very close quarters.

I devoted but little attention to the cotton-clad steamers, although they kept up a heavy fire with field-pieces and small arms as I knew that everything depended on my disabling the ram. The third blow crushed the starboard barge, leaving parts hanging by the lashings, which were speedily cut. The crew of the "Indianola," not numbering enough men to man both batteries, I kept the forward guns manned all the time, and fired them whenever I could get a shot at the rams. The night being very dark, our aim was very uncertain, and our fire proved less effective than I thought it at the time. The peep-holes in the pilot-house were so small that it would have been a difficult matter to have worked the vessel from that place in daylight, so that during the whole engagement the pilots were unable to aid me by their knowledge of the river as they were unable to see anything. Consequently they could do no more than obey such orders as they received from me in regard to working the engines and the helm. No misunderstanding occurred in the performance of that duty, and I was enabled to receive the first five blows from the rams forward of the wheels, and at such angles that they did no more damage than to start the plating where they struck.

The sixth blow we received was from the "Webb," which crushed the starboard wheel, disabled the starboard rudder and started a number of leaks abaft the shaft. Being unable to work the starboard engine, placed us in an almost powerless condition; but I continued the fight until after we received the seventh blow, which was given us by the "Webb."

She struck us fair in the stern and started the timbers and starboard rudder-box so that the water poured in in large volumes. At this time I knew that the "Indianola" could be of no more service to us, and my desire was to render her useless to the enemy, which I did by keeping her in deep water, until there was two and a half feet of

THE IRON CLAD "INDIANOLA."

of sight, and in consequence of a thick fog setting in I could not continue the chase but was obliged to anchor.

I reached the mouth of the Red River on the 17th of February, from which time until the 21st of the same month I maintained a strict blockade at that point.

I could procure no Red River pilots and therefore did not enter that river. The "Era No 5," being unarmed, and having several prisoners on board, Colonel Ellet decided to go up the river and communicate with the squadron, and sailed at noon on the 18th of the same month for that purpose.

On learning that the "Queen of the West" had been repaired by the rebels, and was nearly ready for service, also that the "William H. Webb" and four cotton-clads, with boarding parties on board, were fitting out to attack the "Indianola," I left the Red River for the purpose of getting cotton to fill up the space between the casemate and wheel-houses so as to be better able to repel the boarding parties.

By the afternoon of the 22d of the same month, I had procured as much cotton as I required, and concluded to keep on up the river, thinking that I would certainly meet another boat the morning following, but I was disappointed.

I then concluded to communicate with the squadron as soon as possible, thinking that Colonel Ellet had not reached the squadron, or that Admiral Porter would expect me to return when I found that no other boat was sent below.

water over the floor, and the leaks were increasing rapidly as she settled, so as to bring the opening made by the "Webb" under water.

Knowing that if either of the rams struck us again in the stern, which they then had excellent opportunities of doing on account of our disabled condition, we would sink so suddenly that few if any lives would be saved, I succeeded in running her bows on shore by starting the screw engines. As further resistance could only result in a great loss of life on our part, without a corresponding result on the part of the enemy, I surrendered the "Indianola," a partially sunken vessel, fast filling with water, to a force of four vessels, mounting ten guns and manned by over one thousand men.

The engagement lasted one hour and twenty-seven minutes. I lost but one killed, one wounded and seven missing, while the enemy lost two officers and thirty-three men killed and many wounded.

Before the enemy could make any preparations for endeavoring to save the "Indianola," her stern was under water. Both rams were so very much crippled that I doubt whether they would have tried to ram again had not their last blow proved so fatal to us.

Both signal books were thrown into the river by me a few minutes before the surrender.

In conclusion, I would state that the 9-inch guns of the "Indianola" were thrown overboard, and the 11-inch guns damaged by being loaded with heavy charges and solid shot, placed muzzle to muzzle and fired by a slow match, so that they were rendered useless.

This was done in consequence of the sham monitor, sent from above, having grounded about two miles above the wreck of the "Indianola."

I have the honor to be, etc.,

GEORGE BROWN,

*Lieut.-Commander U. S. Navy.*

Hon. GIDEON WELLES.

*Secretary of the Navy.*

Other means had now to be invented to get into the rear of the enemy or down the river in order to stop his supplies.

The importance of this late move cannot be estimated. The communications between Texas and Vicksburg had been cut off, and the capture of so many steamers loaded with army stores for Port Hudson had sealed the fate of that place; they could not hold out, and Bank's Army would soon be free to march upon Vicksburg by the left shore of the river.

At this time Vicksburg mounted seventy-five heavy guns, and possessed a number of heavy rifled field-pieces, which, being able to move about, were quite as annoying to vessels running the blockade.

The guns at Vicksburg were so scattered about and so cunningly concealed that it was almost impossible to detect them. A clever plan was adopted by a naval photographer to bring all the guns to light. A large photograph of the city was taken, and that again enlarged, when by means of magnifying glasses, every gun was revealed. They were situated in many queer places; some inside the railroad depot, one in an engine house, others screened by carts tipped up. etc. etc.: but from

that time forth the Federal mortars and rifled guns sent their missiles to the right place.

Eight mortars on rafts were kept playing on the town and enemy's works day and night, and three heavy rifled guns that could reach any part of Vicksburg, were placed on scows to protect the mortars.

Vicksburg was by nature the strongest point on the river, but art had rendered it almost impregnable. It was very certain even in the early part of February, that this was to be a long and tiresome siege, and so General Grant viewed it.

A naval contingent could not do more than give protection to the Army, which was very important; but as to the vessels alone possessing the power to knock down these inaccessible forts, it was not to be thought of. If batteries should be placed on the right bank of the river, they would soon be driven out by the plunging shot and shells from the enemy.

The military engineers in Vicksburg had employed many expedients to render the Federal fire ineffectual. For a distance of six miles all their heavy guns were scattered except at two points where water batteries were placed to concentrate their fire upon passing vessels. One of these batteries mounted thirteen guns and the other eleven.

The fire of the Navy upon Vicksburg might in time have destroyed the city and its fine public buildings, but that would have brought the Army no nearer the desired object: the possession of this stronghold and the opening of the Mississippi.

When General Williams ascended the river in company with Farragut, with 3,000 men, he announced that this force was not sufficient to hold Vicksburg, even if he could capture it. In which opinion he was right. He set his troops to work to cut a canal across the isthmus, hoping to direct the waters of the Mississippi into this cut and make the river take a new direction, by which the city would have been left out in the cold; but the plan did not work as it had done in many other cases, and when General Williams departed he left only a dry ditch.

General Grant being anxious to get transports past Vicksburg, determined to try the ditch again, and had dredges brought down to work on it. It was hoped that when the river rose it would cut its way through, but that wished for event did not come to pass until after the fall of Vicksburg. The enemy mounted heavy guns opposite the mouth of the canal, and prevented any work upon it.

General Grant now hit upon a new expedient—which was to deepen Lake Providence. This Lake communicated with the

Tensas River (a deep stream), and the Tensas emptied into the Washita, and this latter into the Red River—thus forming a beautiful system of inland navigation which if properly opened and intelligently directed would have been of great service to the country bordering on the rivers mentioned. But it was not to be, the engineers were not successful. Several transports were taken in, but there were miles of forest to work through and trees to be cut down. The swift current drove the steamers against the trees and injured them so much that this plan had to be abandoned.

Then some one proposed to cut away the levee at a place called Delta near Helena and open Yazoo Pass. This used to be the main way to Yazoo City and to the Tallahatchie and Yallahusha Rivers, before the Southern railroad was built, and it had been closed up to reclaim some millions of acres of land. It led into the Tallahatchie, and if our Navy could succeed in getting through it, a way would be opened for the Army to get into the rear of Vicksburg.

The levee was cut and the Mississippi being on the rise the water rushed through the opening with great force, sweeping everything before it and cutting a channel 200 yards wide at the mouth. It took several days for the water to reach its level, as it had at first a fall of nine feet.

In the mean time gun-boats were detailed and prepared for the expedition. These vessels were the "Chillicothe," Lieutenant-Commander Foster, the "Baron DeKalb," Lieutenant-Commander Walker, the tin-clad "Rattler," "Lioness" (ram) and two other light draft vessels. All were under the command of Lieutenant-Commander Watson Smith, who had instructions to open the way to the Yazoo River and destroy all of the enemy's means that could not be carried away. General Grant sent an Army contingent along with the gun-boats to assist in forcing the way through the obstructions. This force was commanded by Brigadier-General Ross.

To describe the difficulties which attended this expedition would be impossible and they could only be realized by those who saw them. The pass had been closed for many years and trees had grown up in the middle of the channel which had become dry after the levee was built across its mouth. Great rafts were left in this dry channel as the water ran off and bushes and vines now grew thickly around them and tied them together as with withes. Overhanging trees joined together over the channel—and their branches were so low that steamers could not pass without having their smoke-pipes knocked down and all their boats and upper-works swept away.

The current was running swiftly, for the

vessels entered the cut before the water had reached its level. On the first day, not more than six miles was made, and this was only accomplished by all hands going to work and sawing or cutting away the obstructions.

Colonel Wilson, an Army engineer, who directed all this kind of work, was a thoughtful, energetic man, and he conducted the operations in an intelligent manner, and though the vessels did not make very rapid headway, they did wonderfully well considering the difficulties. They all had to be carefully handled with hawsers around the bends, for the Yazoo Pass, following the example of the mother Mississippi, was as crooked as a ram's horn.

On the second day, the vessels were so torn to pieces that no more harm could be done to them—they had hulls and engines left and that had to suffice. The officers and men performed a great deal of manual

U. S. NAVAL HOSPITAL BOAT "RED ROVER" PASSING  
RANDOLPH NEAR FULTON, TENN.  
(FROM A SKETCH BY REAR-ADMIRAL WALKER.)

labor, but no one found fault, and their jolly songs echoed through the woods as they worked, frightening the birds out of their quiet retreats, where they had rested undisturbed for a quarter of a century.

The men were rewarded after four days' of terrible labor by getting forty miles on their journey through such obstructions as they had never dreamed of. At last they arrived at the Tallahatchie (a clear and swift running river), and the vessels forming in some kind of order, with the gun-boats leading, hastened on. Much time had been lost at Helena in getting the troops on board the transports, and the pass was not entered until the 8th of March, and was passed until the 11th; then, when every one thought the way clear before them, they suddenly came upon a formidable fort, with a large steamer sunk in the middle of the channel to obstruct the passage of the Federal fleet. Here was a surprise to all parties. The Confederates did not

expect to see iron-clads in these waters, nor the Federals to find forts where the contrabands had reported the way clear before them.

Fortunately the people in the fort had not yet removed the powder from the steamer, and the transports had time to back up the stream and take position behind the woods in a bend, and there make their preparations for attack. The "Chillicothe," Lieutenant-Commander Foster, and the "DeKalb," Lieutenant-Commander Walker, took position, side by side, tied up to the bank with bows down, and began the action with a mortar boat that had accompanied the expedition, in the rear.

At this time, unfortunately, Lieutenant-Commander Watson Smith gave evidence of aberration of mind, and much hampered Foster and Walker by contradictory orders which they felt bound to obey.

The "Chillicothe" was temporarily disabled by having her port shutter closed by a shot from the fort, which returned the fire of the gun-boats as soon as the Confederates got their powder from the steamer; and when they did get to work they kept up a rapid and well directed fire. In obedience to the order of Lieutenant-Commander Smith, the two iron-clads had to withdraw from action, and this was put down as a reconnaissance.

In the afternoon of the same day, the "Chillicothe" went down and attacked the fort at close quarters, but got the worst of it. She proved herself to be a poor vessel for resisting shot. During the afternoon fight she lost four men killed and fifteen wounded.

On the 13th, the two iron-clads again went into action, lying alongside of each other as before. The "Chillicothe" remained in action one hour and thirty-eight minutes, and then had to withdraw for want of ammunition, besides being much cut up by the enemy. The "DeKalb" remained in position and finally silenced the Confederate battery, after losing but three killed and three wounded.

The only way this fort could be taken was by siege guns brought up close to the works; but this was not done. The general commanding the military contingent did not consider himself strong enough to attempt anything of consequence, and after a delay of thirteen days, in which neither side did anything, the Federal forces withdrew.

The Navy did all that was required of it on this occasion, but there was no hearty co-operation on the part of the Army. Fort Pemberton, though well fortified and in a strong position, ought to have been taken. This would have given the Federals command of the Tallahatchie, Yallahusha and

Yazoo Rivers, and of course a clear way to the rear of Vicksburg.

On the 18th of March, Lieutenant-Commander Watson Smith, owing to aberration of mind, gave up the command of the Naval force to Lieutenant-Commander Foster, who after trying all that could be thought of, followed the Army which had been ordered to retire from before Fort Pemberton.

A great deal of cotton was taken by this expedition, but the result was a failure in the main object. The enemy burned two large steamers loaded with cotton, or they were set on fire by the shells of the gun-boats.

The Confederates had a narrow escape here, and had it not been for the delay in embarking the troops at Helena the Federals would have been successful. As soon as the Confederates discovered the object of this movement (which they did as soon as the levee was cut at Delta) they went to work and built the two formidable forts, Pemberton and Greenwood on the Tallahatchie and Yallahusha, and blocked the way effectually.

General Pemberton showed a great deal of ability in his defense of Vicksburg, all through, and won the respect of his opponents by his zeal and fidelity to his cause, to say nothing of his spirit of endurance. But in nothing did he show more energy than in watching the Federal tactics, and guarding against all attempts made to turn his flanks, especially by way of the streams which would have commanded the approaches to Vicksburg if held by an enemy.

Pemberton took care that these passes should never be left unguarded in the future. These attempts to turn his flanks sharpened his wits and set them to work in other directions to make Vicksburg stronger than ever.

The vessels which composed the expedition through Yazoo Pass, worked their way back by the route they had entered. The zeal they exhibited in getting in had all left them, their vessels were much injured and their labors seemed interminable. It was a happy day to all when they found themselves on the wide Mississippi, which seemed to the explorers like an ocean in comparison with the small and tortuous streams over which they had been fighting their way.

The shot and shell of the enemy were nothing compared to the manual labor of soldiers and sailors in removing obstructions which to many seemed insurmountable. Yet all alike were these difficulties to be overcome in getting into Vicksburg, and this was only one in a number of cases where the energy and courage of our Army and Navy were taxed to the utmost.

In reading over some of the Western

papers of those days one would suppose that the two branches of the service were sitting down quietly before Vicksburg, watching the daily performances of the besieged without making any efforts to get inside the city, while, in fact, from the general down, there was but one feeling,—a total disregard of personal comfort and a stern determination to capture Vicksburg at any cost.

Disappointment after disappointment was met with a stern philosophy which showed that the word “fail” was not understood

in that Army and Navy. Whenever our soldiers and sailors laid aside their work for a short time to rest, it was the signal for renewed libelous newspaper attacks upon their commanders, but these articles were read by our men with the same feeling of contempt which has been felt in later times by those who have wasted life and health in saving the unity of this great country for millions yet unborn, whom, it is hoped, will feel more grateful than their forefathers.

## CHAPTER XXVII.

### EXPEDITION THROUGH STEELE'S BAYOU AND DEER CREEK.

THE NAVAL EXPEDITION THROUGH THE WOODS.—SCENES AND INCIDENTS.—THROUGH BLACK AND STEELE'S BAYOU.—A HAZARDOUS JOURNEY.—DESTRUCTION OF COTTON AND OTHER PROPERTY BY THE CONFEDERATES.—A SKIRMISH WITH TREE CUTTERS.—SHERMAN MARCHING TO THE RELIEF OF THE GUN-BOATS.—DREADFUL WORK OF THE SHARP-SHOOTERS.—THE CONFEDERATES ATTEMPT TO CAPTURE THE FLEET.—SHERMAN ARRIVES.—REPULSE OF THE CONFEDERATES.—RETREAT OF THE ARMY AND NAVY.—REPAIRING DAMAGES.—GOOD EFFECT OF THE EXPEDITION.—LOSS TO THE CONFEDERATES.—GRAND GULF FORTIFIED.—A COUNCIL OF WAR.—GRANT'S DECISION.—THE RAMS RUN THE BATTERIES.—THE "LANCASTER" SUNK.—THE "SWITZERLAND" JOINS FARRAGUT.—BRAVE VOLUNTEERS, ETC., ETC.

**A**BOUT the time of the Yazoo Pass expedition, Lieutenant McLeod Murphy, U. S. N., discovered a pass through the woods some ten miles above the mouth of the Yazoo, by which it was thought the gun-boats could reach the valley of Deer Creek, and, perhaps get into the Yazoo River by the Sunflower and Yallabusha, thereby reaching the rear of Vicksburg. The water in the Mississippi had risen remarkably, so much so that land usually dry for miles in the interior, now had seventeen feet of water over it. The question was, could the gun-boats get through the woods and thick underbrush which abounded in that locality. The route was examined by General Grant and Admiral Porter, and being found apparently practicable for the purpose intended, it was determined between the Army and Naval leaders that an attempt should be made to get to the rear of Vicksburg in this way.

So important was this route considered that Admiral Porter determined to go himself in charge of the naval part of the expedition, while General Sherman was to lead an army contingent of 8,000 or 10,000 men. A man who knew all about the country, and who gave his opinion that this was a favorable opportunity to get into the desired position in rear of the beleagured city, was employed to accompany the expedi-

tion as pilot; and at the start everything promised well.

On the 14th of March, Admiral Porter started with the following vessels: "Cincinnati," Lieutenant-Commanding Bache; "Louisville," Lieutenant-Commander Owens; "Carondelet," Lieutenant-Commanding Murphy; "Mound City," Lieutenant-Commanding Byron Wilson; "Pittsburgh," Lieutenant-Commanding Hoel; two mortar floats and four tugs.

When the fleet came to the pass into which it was to turn, after having ascended the Yazoo, the entrance could scarcely be made out, so dense was the growth of the overhanging bushes and trees, but these the men cut away with cutlasses and axes, and a pass wide enough for three vessels abreast, showed itself, lined out by heavy trees, and through this the gun-boats followed one another in line, their leadsmen singing out in melodious song, "quarter less three." There was no more channel here than elsewhere, as the water overflowed every place alike, but there was a long, straight pass opening through the forest, about 170 feet wide, which was, no doubt, a road cut through the woods for hauling cotton to some landing.

It was a novel scene. Thousands of crows flew from their perches, and broke the silence of the forest with their discordant notes, no doubt wondering what

could have caused those great "mud-turtles" to invade their hitherto inaccessible abode, where for centuries they had reared their young and digested their plunder without interruption.

On went the gun-boats, officers and sailors alike, delighted with the romantic scenery, which baffled description; every heart was cheered with the hope that the long sought for road to Vicksburg had been found, and that the great prize would soon be in their hands. Now and then, a stray tree as much as three feet in diameter would be found standing in the middle of the channel as if to dispute the way. The vessels might have passed on either side, but the desire to try the strength of these outlying sentinels proved so great that the flagship "Cincinnati" would run into them with her strong, broad bow, and topple them over, a feat rendered possible by the softening action of the water upon the earth about their roots. The vessels in the rear were told to haul them out of the way. This was good practice, and came into play before the expedition had proceeded many miles. It was all fair sailing at first, but became rough work in the end.

After some ten miles of easy progress through the woods, the fleet arrived at Black Bayou, a place about four miles long, leading into Deer Creek—and here the plain sailing ended. The gun-boats, being too wide to pass between the trees, had to go to work and knock them down, and pull them up by the roots. The line of vessels was broken, and each went to work to make her way through the tangle as best she could. Saws and axes now came into use, and every means was resorted to for clearing the way. The narrow tugs and the mortar floats had no difficulty in getting along, but the wider iron-clads were, for a time, brought to a stand. The open roadway had vanished, and the pilot confessed his ignorance of this locality. There was plenty of water, and the stentorian voice of the leadsmen was still heard singing out "quarter less three!"

There is nothing that will daunt the American sailor but a lee shore and no sea room. There was plenty of sea room here, but no room to pass between the tangle. The obstruction was passed, after working twenty-four hours consecutively, and that four miles overcome, leaving a good road for those coming after, but a number of trees were moved away, Titans of the forest that had reigned there for a century or more.

Sherman had arrived at Black Bayou with part of his force, another part had started to march over from a point twenty miles above the Yazoo River, on the Mississippi, following a ridge of land not in-

undated. The part of the Army embarked had been transported in small stern-wheel steamers, which being very narrow, succeeded in passing between the trees with only the loss of a few smoke-stacks. From Black Bayou, the gun-boats turned again into Steele's Bayou, a channel just one foot wider than the vessels, and here came the tug of war, such as no vessels ever encountered before. The keel of the skiff was the largest thing that had ever floated in waters now bearing vessels of 600 tons burthen. These had to break through bridges spanning this muddy ditch, pass through the smoke and fire of burning cotton-bales (which the enemy set in a blaze as soon as the fleet was discovered), and work on, at the rate of half a mile an hour, through lithe willows growing in the middle of the stream, which at intervals was choked up with rafts that had been there for years. The pilot proved to be a fraud, he had never seen the place before.

This bayou was bordered on both sides with overhanging trees, whose Briarean arms would cling around the passing vessels and sweep away boats and smoke-stacks, while the limbs of decayed trees would fall upon the decks, smashing skylights to pieces, and injuring the people.

It was dreadful to witness the infatuation of the Confederate Government agents, who, riding about on horseback, were setting fire to the cotton far and near. They must have imagined the expedition sent to gather cotton—a purpose never thought of.

Houses were often consumed with the cotton piles, and everything betokened a Moscow affair. It was the cotton of the Confederate government, and they were allowed to burn it. It was the Confederate sinews of war they were destroying; they were burning up their cash with which they had expected to carry on the struggle.

The leaders of the expedition soon saw they were discovered; the move was certainly known in Vicksburg, and the whole Confederacy would be at work to defeat this measure, as they had at Fort Pemberton. The expedition hurried on to get into the Rolling Fork, and thence into the Sunflower, whence it could reach the Yazoo above Haines' Bluff. It seemed insane to proceed, there were so many dreadful obstacles in the way, yet no one apparently minded them. The work was hard on the sailors, nevertheless they only made a lark of it.

Vicksburg was never so aroused as on hearing of the raid right into the heart of her preserves. The expedition had struck that city's store-house: here were the flesh-pots that would make any people glad; cattle, corn, "hog and hominy" enough to subsist a great Army.

The government agents assembled in

numbers, they seemed to spring from the earth: the cattle, pigs and poultry were all driven to the woods. Corn ricks were set on fire that the Federals might not have a grain. The latter were not thinking of the flesh-pots, they were too intent upon getting to the rear of Vicksburg, too intent upon clearing out the obstructions in the muddy Bayou to think of "hog and hominy."

In the first twenty-four hours of this work, the fleet made four miles! At dark it tied up for the night that the hard worked men might rest, but there was no rest for any one there. At ten o'clock that night, lights were flitting about in the woods, and the sounds of wood chopping fell upon the ears of the watchers in the fleet, and the falling of trees satisfied them that the enemy was on the alert, cutting down trees across their path to pen in the gun-boats.

Armed landing parties were made up from each vessel, and put ashore; a tug, with a boat howitzer mounted on board, was sent up the bayou, and found two trees, two and a half feet in diameter each, cut down and lying across the stream, completely obstructing it. The tug fired after the tree cutters, and the landing party of 300 men, under Lieutenant McLeod Murphy, worked all night with axes and tackles to remove the fallen timber. The fleet moved on at night, the banks being lighted by lanterns. They were determined not to be detained by tree cutters. The tug went ahead for twelve miles, firing her gun wherever a white man and an axe could be heard of.

Twenty-five trees had been commenced upon by the cutters, but the latter were driven off by the howitzer. It was found that a large gang of negroes had been pressed into service by the Confederate agents who, with pistols at their heads, compelled them to cut the trees; but when the shrapnel from the howitzer began to rattle through the woods, government agents, woodcutters and all, left in a panic.

Slowly as the naval vessels moved, they made greater progress than the troops, and got ahead of them some twenty miles; the troops met difficulties they were not prepared for, and the fleet moved on in advance. After four days of the greatest labor one can imagine, the fleet arrived at or near the entrance to the Rolling Fork, where it was supposed all difficulties would be at an end. Here, for a distance of 600 yards, a bed of willows blocked the way. The flag-ship "Cincinnati," ran into it under a full head of steam, and there she stuck; the willow wythes caught in the rough iron of her overhang, and held her as if in a vise. All the arts of seamanship could not displace this obstacle, it would

After working a whole day and night with saws, chisels and cutlasses, the men stopped for a breathing spell, during which a steamer landed at the bank, four miles off on the Rolling Fork. Another soon came higher up, and both landed artillery, which, in two hours, opened a cross fire on the fleet with about twenty shells a minute, driving the men on the banks to seek the shelter of the iron-clads. The mortars were brought to bear on the enemy, and for a time, checked the fire. Spy-glasses, used from the top of an Indian mound—disclosed the fact that the enemy were landing a large force of infantry—the guns of the iron-clads were so far below the banks of the bayou that they were not a particle of use, the vessels themselves were so jammed up against the bank on either side that there was danger of their crews being kept prisoners on board by sharpshooters. Sherman's troops were not in sight and it became necessary to send back a messenger to the general urging him to hurry up to the assistance of the gun-boats, which were very helpless at one time.

The united efforts of the steamers astern of the "Cincinnati" pulled her out of the willows, but not without great trouble, the people on deck and on the banks being exposed to the artillery which kept up a sharp fire.

There was but one thing to be done under the circumstances, and that was to fall back and meet the Army, which the admiral received assurances was moving on as fast as possible. As soon as Sherman received the dispatch announcing the condition of the gun-boats, he started off his troops, though it was night, and made his way along the tortuous route by the light of pine knots. He got into swamps and cane-brakes, and made but slow progress. This did not prove to any one the fair road to Vicksburg. The soldiers were as severely tried as the sailors.

As night came on, the gun-boats were ordered to unship their rudders, and drop down with the current; and, the water now running rapidly into the bayou, owing to the cut at Delta—which was overflowing the whole country—the vessels bumped along at double the rate they had ascended, bounding from tree to tree, and bringing down the dead branches on the decks, to the destruction of everything around—boats were smashed, and more or less injury done to everything.

As the gun-boats departed, the enemy appeared upon the Indian mound, and owing to the tortuous windings of the stream, kept the fleet under fire without the latter being able to fire more than an occasional gun until nightfall, when it was found necessary

the howitzers were put ashore in preparation for emergencies

In the night the patrolling parties captured two of the enemy's officers and some men, who stated that two batteries had been landed, and three thousand sharpshooters, and that they were quite satisfied they would capture the gun-boats in twenty-four hours. They were not aware that an army was with the fleet; they took this for a raid of gun-boats only, and, as one of them remarked, "a crazy one at that."

At daylight the fleet started down stream again, stern foremost, hoping to meet the army by noon, but at 8 A. M., they were surrounded by sharpshooters, who kept up such a fire that it was almost impossible for any one to show himself on deck. The riflemen on board, lying behind defences, kept up a brisk fire whenever they saw a curl of smoke. The howitzers were kept at work from behind the deck-houses, and the mortars, which were fired with small charges, landed their shells in amongst the enemy, and kept them at a distance. Now and then a mortar shell, landing at the foot of a tree behind which was a sharpshooter, would overthrow the tree as it exploded—making trees unsafe as a protection. Still, the sharpshooters increased in numbers, when, suddenly, the fleet had to come to a stand. Eight or ten large trees, some three feet in diameter, had been felled right across their track, from either side of the bayou, thus completely blocking the way, and the loud cheers of the Confederates as they rang through the woods showed they thought their prey entrapped.

The officers and men of the fleet, undaunted by this state of things, went to work to surmount the difficulty and remove the trees. Five hundred armed men were put on shore, and took to the trees to meet the enemy's sharpshooters, while howitzers and mortars kept up a rapid fire which was more than the enemy cared to face.

The working party from the vessels commenced operations below the banks, out of reach of the enemy's fire, and by using hawsers, tackles, and that powerful adjunct, steam, in six hours the trees were all removed, and the fleet went on its way down rejoicing.

Sherman had heard the firing, and had pushed on to get to the aid of the gun-boats. In the meantime, the enemy had landed more infantry—there were about four thousand in all. Pemberton, at Vicksburg, was well posted in all that was going on, and was determined to leave nothing undone to capture the venturesome fleet.

Again the fleet came to a stand-still, but this time only two large trees had been felled. The crews of the vessels commenced

the work of removal, when a large body of Confederate troops were seen advancing directly through the woods upon the steamers. While the sharpshooters in redoubled numbers opened fire on the fleet from behind trees not more than fifty yards distant.

The working parties were called on board to defend the vessels, but before they could get to their arms, there was a rattle of musketry in the woods, a cheering of the crews, and a rapid retreat by the Confederates. They had fallen in with the head of Sherman's column, which was a great surprise to them, and after one or two volleys, they broke and fled back to their steamers. Sherman arrived just in the nick of time. Whether the gun-boats could have held their own under the circumstances is impossible to say. They were well prepared for a brave fight, and from behind the banks they could have mown down the enemy as they rushed on, but it was better as it was, and they were not subjected to the trial.

The broadside guns of the vessels had been given their greatest elevation, and loaded with grape and cannister. The iron sides of the vessels had all been well greased, and nothing was left for assailants to hold on by. Fourteen hundred good men, with breech-loaders and howitzers, were ready to repel boarders, but there is no knowing what a desperate set of men under good leaders might have accomplished, with such a prize in view as the best vessels of the Mississippi squadron. No set of people were ever so glad to see the soldiers as the men of that fleet were to see Sherman and his Army; and, as the gallant general rode up to the gun-boats, he was received with the warmest cheers he ever had in his life.

That was the end of the Steele's Bayou expedition; the impossibility of going on again in the face of all the difficulties was conceded by all parties, and it was decided to get the fleet out of that ditch before the enemy blocked up the entrance in the rear and left it in the mud.

The impracticability of the campaign had been fully demonstrated. So much time had been consumed by the numerous obstacles the Army and Navy had to contend with that the enemy had the opportunity to produce the means of checkmating the expedition.

The point where the gun-boats would have to leave Steele's Bayou to get into the Rolling Fork was so blocked up that it would take many days to remove the obstacles, and the Confederates could throw in such a force as would prevent their opponents from working at it.

The enemy had clear, open rivers to work in; and, in two days, could transport any

number of troops and guns they desired. The country would not answer for a base of operations, so the Union forces returned to the woods and deep water, having gained a great deal of experience, and the knowledge that Vicksburg could not be taken in that direction.

This expedition greatly alarmed the Vicksburg people: the Army and Navy had thereby found the way right into the store-house from which the besieged had been fed, and upon which they depended in the future.

This greatly changed their system of defence; guns were removed from prominent points along the Mississippi, while the rivers Tallahatchie, Sunflower and Yazoo were strongly fortified, and were guarded against any attack in the future. Every precaution was likewise taken to protect the flanks of the city, but the soldiers and sailors revelled in all the good things which abounded in this district, and thinking there was vastly more food there than the Confederates could possibly want, the gun-boats and transports carried off an astonishing amount of loot, which reconciled them in a measure for their disappointment in not fully succeeding in their attempt to reach the rear of Vicksburg.

The Navy carried away over a hundred thousand dollars' worth of cotton, marked "C. S. A.," which the Confederates had collected for the use of their government, only waiting for the opportunity to carry it to the sea-board. Over three hundred thousand dollars' worth of cotton was destroyed by fire, by command of Confederate agents, who determined that it should not fall into the hands of the Federals. This was all a great loss to the enemy, but unimportant in comparison with what the combined forces had hoped to attain.

When it was decided that no more could be done on this expedition, the Army returned to their transports, and the Navy led the way out of the woods, the men at the leads singing out "quarter less three," in cheery tones, as if everything had gone on smoothly with them, and the gun-boats had not been almost smashed to pieces while rebounding from tree to tree in Steele's Bayou.

On the 26th of March, the fleet arrived at its old anchorage on the Yazoo. All the machinists, carpenters, boatbuilders, etc., from the shops afloat were set to work to repair damages, and in a week, with the finishing touch of a new coat of paint, they looked as good as new.

This expedition, though in a measure unsuccessful, still had a good effect on the Army and Navy. While the men were kept so employed on what were really very exciting expeditions, they had no time to become disheartened by only looking at

the frowning hills of Vicksburg, which they, as well as the officers, could see were not to be taken in front. It inured both services to hard work which would the better enable them to overcome like obstacles in the future; the constant employment hardened their bodies, while it benefited their minds, and kept them in good spirits. They gained a thorough knowledge of the difficulties they had to encounter, and all this prepared them to battle with others of the same kind.

These persistent attempts of the Army and Navy to overcome all the obstacles in the way of getting into Vicksburg, kept the enemy continually on the alert, and obliged them to be moving through a country filled with all kinds of obstacles, and made them doubtful where the blow would fall. On this account, Pemberton had to reduce his Army in the city, and keep a larger portion of it at points remote from the real objective point at which the Union general aimed.

The Confederate soldiers were worn out and dispirited by the numerous marches and countermarches they were obliged to make. They were compelled to live upon the country when they went to expel the invaders, and this soon exhausted the stores in the invaded district on which the people in Vicksburg depended when the hardest time should come. Besides the Confederates were raiders even among their own people. The Union soldiers did pay a little respect to private property, but the former paid no such compliment to anything that could add to their comfort, or fill their commissariat; and, on the whole, the Federal invaders were more acceptable to the people on the estates than were the Confederates.

In this invasion, the Army and Navy both inflicted serious losses on the owners of slaves, and large numbers of the latter went off either in the transports or on the gun-boats. The negroes stated that they had been employed in working on the fortifications at Vicksburg, Haines' Bluff, etc., and the fact that they had been employed to cut down the trees on Steele's Bayou, thereby to hem in the gun-boats, was a good reason for taking them away. The last and best reason was that the undeniable right of freedom was theirs, and it was the duty of every Christian officer and man to help them escape from the most miserable slavery that ever existed in any part of the world.

General Grant, though disappointed in the result of this last expedition, was not discouraged. He saw that this was the last attempt that could be made in this direction, and turned his attention to other ways, believing, with the Duke of Marlborough, that though all trials might fail, there was

always one way left to get into a fortified city.

So evident was it to the Confederates that in both the Yazoo Pass and the Steele's Bayou expedition they had left the northern flank of Vicksburg unprotected, that they removed the depot at once. Not only that, though there was no apparent necessity for it, they went to work to strengthen their left flank also, as far down the river as Grand Gulf, thinking, perhaps, that the gun-boats might pass the batteries at Vicksburg, pass up the Black River, and gain the rear of the besieged city by arriving at Jackson, the capital of Mississippi—a thing much more easily done than getting through Steele's Bayou.

Whether they were influenced by these ideas or not, they proceeded at once to fortify Grand Gulf in such a manner that no vessel could pass up Black River, and with hope that the forts would be strong enough to prevent vessels of war from passing up and down the Mississippi itself. While the Confederates were considering these matters, Admiral Farragut arrived in the "Hartford," just below Warrenton, in pursuit of coal and provisions. This was after his passage of the Port Hudson batteries. From him Grant obtained information of affairs at the latter place, and the little probability there was of General Banks making the Confederates evacuate it.

On hearing this, General Grant thought of sending an army corps to co-operate with Banks, get possession of the works at Port Hudson, and then bring all Banks' forces to operate against Vicksburg. But this idea did not exist long, the general coming to this opinion through the fact that the water had overflowed everything about the upper part of Vicksburg, and dry land could only be found on the heights. There was no foot-hold for an army, and Grant thought a better chance of turning Vicksburg might be found below, between Warrenton and Grand Gulf.

Having consulted with Admiral Porter regarding the possibility of passing the batteries at Vicksburg with a sufficient force—a point on which his mind was made easy—he called a council of war, at which all the divisional commanders, except Sherman and McClernand, were present.

The plan proposed to the council was to send the gun-boats below Vicksburg with a sufficient number of transports, well packed with cotton—to protect their boilers and machinery—to march the Army over to Carthage, and thence transport it to the Vicksburg side, as circumstances warranted.

This proposition was respectfully but strongly opposed by all the generals present. Sherman sent his objections—which

were good ones—in writing; and McClernand, to whom Grant had spoken on the subject, wrote a letter, and proposed the plan of going below, as originating with himself, which was a habit this general had when anything of importance was about to be undertaken.

This plan of Grant's seemed to those around him to be full of danger, and they left no eloquence untried to persuade him not to undertake a move threatening so much peril to his Army. They urged that to move his Army below Vicksburg was to cut himself off from his base of supplies at the North, to cut his own communications, and do exactly what his enemies most desired him to do: to place himself in a position, where, if defeated, the defeat would be overwhelming. The inundated state of the country was pointed out to him, and the difficulty of moving an Army and supplies over such roads as there were. Some of the most accomplished soldiers in his Army, men who had won their way to fame, urged him, with all the power of eloquence, not to undertake the rash movement. Grant listened to them respectfully, and when the last had spoken, he said: "I am sorry to differ with you all, but my mind is made up; the Army will move to-morrow at ten o'clock."

When Grant was asked how he would get the transports past the batteries, he replied: "That is the Admiral's affair. Where the 'Queen of the West' and 'Switzerland' can go in broad daylight, the transports can pass at night."

A few days before this council, Admiral Farragut, who had come up from Red River, as before mentioned, requested Colonel Alfred Ellet to let him have two of the Ram fleet (to run the batteries at night) for the purpose of returning with him to the blockade of the Red River—saying he would make it all right with Admiral Porter, etc. To this Colonel Ellet at once agreed. Accordingly the rams "Lancaster" and "Switzerland" were prepared to run the batteries, the former commanded by Lieutenant-Colonel John A. Ellet, the latter by Charles Rivers Ellet. These Ellets were all brave fellows, and were full of the spirit of adventure. Instead of going past the batteries with comparative ease at night, they chose a time near daylight, and by the time they got abreast of the city all the batteries opened on them. The "Lancaster's" boilers were exploded by a shell, and being a frail vessel, she went to pieces and sunk immediately. The "Switzerland" had her boilers perforated by a plunging shot, and received a number of hits, but otherwise the damage done to her was not material, and she joined Farragut, and afterward performed good service down river.

If such frail boats as these could pass in open daylight, there was no reason why transports could not pass at night, under the lee of the iron-clads. A number of transports were prepared by packing them well with cotton-bales. Their crews in most cases declining to serve, their places were filled by volunteers from the Army. The pilots, as a rule, determined to stay by their vessels, and put them through, if possible. It was a hazardous task, but the

pilots, a brave set of officers, got used to it after a while, and running the batteries came to be considered by them as not much more dangerous than racing with another steamer, with the captain sitting on the safety-valve. This seemed to be the spirit which animated soldier volunteers who were, in many cases, sailors.

With these preparations the expedition was ready to move at the appointed time—the night of April 16th.

## CHAPTER XXVIII.

### PASSAGE OF THE FLEET BY VICKSBURG AND CAPTURE OF GRAND GULF. —CAPTURE OF ALEXANDRIA, ETC.

PLANS FOR RUNNING THE BATTERIES.—THE FLEET UNDERWAY.—THE BATTERIES OPEN FIRE.—THE TRANSPORT "HENRY CLAY" SUNK.—A GRAND SCENE.—THE BATTERIES RUN.—THE FLEET ANCHORS BELOW THE CITY.—MCCLEARNAND CONFRONTED WITH "QUAKER GUNS."—GRANT PUSHES ON TO GRAND GULF.—THE "PRICE" IN FRONT OF THE BATTERIES.—INSUBORDINATION OF MCCLEARNAND.—GRAND GULF DESCRIBED.—THE GUN-BOATS COMMENCE THE ATTACK.—THE FIGHT FIERCELY CONTESTED.—THE "BENTON'S" WHEEL DISABLED.—DAMAGES TO THE VESSELS.—THE GUN-BOATS TIE UP AT HARD TIMES.—BURYING THE DEAD.—THE ATTACK RENEWED.—THE CONFEDERATES STAND TO THEIR GUNS.—SO-CALLED "HISTORY."—GRANT'S BRIGHTEST CHAPTER.—ATTACK ON HAINES' BLUFF.—CAPTAIN WATKINS CAPTURES SHARPSHOOTERS.—GRAND GULF CAPTURED.—PORTER CONFERS WITH FARRAGUT.—UP THE RED RIVER.—FORT DERUSSY PARTIALLY DESTROYED.—CAPTURE OF ALEXANDRIA.—GENERAL BANKS TAKES POSSESSION.—UP THE BLACK RIVER.—HARRISONBURG SHELLED.—OPERATIONS OF THE MISSISSIPPI SQUADRON SUMMARIZED.

THE Army had already moved on the 15th of April, 1863, and that night was selected for the naval vessels to pass the batteries of Vicksburg.

Orders had been given that the coal in the furnaces should be well ignited, so as to show no smoke, that low steam should be carried, that not a wheel was to turn except to keep the vessel's bow down river, and to drift past the enemy's works fifty yards apart.

Most of the vessels had a coal barge lashed to them on the side away from the enemy, and the wooden gun-boat "General Price," was lashed to the off side of the iron-clad "Lafayette."

When all was ready the signal was made to get under way and the squadron started in the following order: "Benton" (flag-ship) Lieutenant-Commander James A. Greer; "Lafayette," Commander Henry Walke; "General Price," Lieutenant-Commander Selim Woodworth; "Louisville," Lieutenant-Commander E. K. Owen; "Mound City," Lieutenant-Commander Byron Wilson; "Pittsburg," Volunteer-Lieutenant Hoel; "Carondelet," Lieuten-

ant-Commander J. McL. Murphy, and "Tuscumbia," Lieutenant-Commander J. W. Shirk. The tug "Ivy" was lashed to the "Benton," three army transports were in the rear and the "Tuscumbia" was at the end of the line to take care of them.

The "Benton," passed the first battery without receiving a shot, but as she came up with the second, the railroad station on the right bank of the river was set on fire, and tar barrels were lighted all along the Vicksburg shore, illuminating the river and showing every object as plainly as if it was daylight. Then the enemy opened his batteries all along the line, and the sharpshooters in rifle-pits along the levee commenced operations at the same instant. The fire was returned with spirit by the vessels as they drifted on, and the sound of falling buildings as the shells burst within them attested the efficiency of the gun-boats' fire.

The vessels had drifted perhaps a mile when a shell exploded in the cotton barricades of the transport "Henry Clay," and almost immediately the vessel was in a blaze; another shell soon after bursting in her hull, the transport went to pieces and

sank. The "Forest Queen," another transport, was also disabled by the enemy, but she was taken in tow by the "Tuscumbia" and conveyed safely through.

The scene while the fleet was passing the batteries was grand in the extreme, but the danger to the vessels was more apparent than real. Their weak points on the sides were mostly protected by heavy logs which prevented many shot and shells going through the iron. Some rents were made but the vessels stood the ordeal bravely and received no damage calculated to impair their efficiency.

Texas would be cut off and they would have to depend on what they could receive from Richmond.

General Steele had been sent up to the Steele's Bayou region to destroy all the provisions in that quarter, and Pemberton knew that if Grant's Army once got below Vicksburg it would eat up everything in the way of food between Warrenton and Bruensburg.

Although the squadron was under fire from the time of passing the first battery until the last vessel got by, a period of two hours and thirty minutes, the vessels were

THE MISSISSIPPI SQUADRON, UNDER ADMIRAL PORTER, PASSING THE BATTERIES AT VICKSBURG  
ON THE NIGHT OF APRIL 15, 1863.

The management of the vessels on this occasion was virtually in the hands of the pilots, who handled them beautifully and kept them in line at the distance apart ordered.

The enemy's shot was not well aimed; owing to the rapid fire of shells, shrapnel, grape and canister from the gun-boats, the sharpshooters were glad to lay low, and the men at the great guns gave up in disgust when they saw the fleet drift on apparently unscathed.

They must have known that Vicksburg was doomed, for if the fleet got safely below the batteries their supplies of provisions from

struck in their hulls but sixty-eight times by shot and shells, and only fifteen men were wounded. At 2.30 A. M., all the vessels were safely anchored at Carthage, ten miles below Vicksburg, where was encamped the advanced division of the Army under General McClernand.

The plantation at this place was owned by an ultra Confederate who exulted over the expected loss of all the gun-boats when he heard that they were to attempt the passage of the batteries, but when at two o'clock he saw them one after another heave in sight their night numbers up and signaling to the flag-ship, "all's well," he went off in despair,

got drunk, set fire to his house and all the negro cabins, and departed to parts unknown. The negroes had already joined the Union Army, having no attachment to their brutal master, who had become so debased that he scarcely bore resemblance to a man.

When the day broke after the arrival of the squadron at Carthage, some four hundred men, the advance guard of McClernand's division, were found behind intrenchments hastily thrown up with a log on a pair of cart-wheels, to represent a field piece, while less than a thousand yards in front of them was a formidable looking set of earth-works with four large guns in position; and Generals McClernand and Osterhaus were momentarily expecting an attack.

LIEUT.-COMMANDER (NOW CAPTAIN) JAMES A. GREER,  
COMMANDING FLAG-SHIP "BENTON."

The enemy's works appeared to be full of men, and as the Union troops had been under arms all night, the arrival of the gun-boats was a great relief to them. The "Tuscumbia" was sent down to shell the enemy out, but the latter scampered off as soon as they saw the gun-boat coming. The Confederates had been playing a "bluff game" with McClernand, and held him in check until part of their force could get away with some light field-pieces. The frowning guns on the parapet proved on examination to be nothing but logs—such are the devices in war!

The advance of General Grant's Army moved but slowly on its way to Carthage. The roads were in wretched condition, and the artillery and wagons were continu-

ally stalled. The soldiers had therefore to "corduroy" the roads so that those coming after could get along faster, but it was terrible marching at the best.

From the little damage that had been inflicted on the gun-boats, General Grant felt satisfied he could send transports by the batteries of Vicksburg, and shortly afterwards six of these, on a dark night, passed down in charge of their pilots—a daring set of men who never shrunk from any dangerous service,—only one steamer was sunk by the enemy's shot.

A sufficient number of gun boats had been left at the mouth of the Yazoo River to take care of the upper Mississippi, and to look out for two formidable rams that were building at Yazoo City, forty miles from the mouth of the river.

Sherman remained with his division at Young's Point, ready to make another attack from the Yazoo if opportunity offered, and also to protect the supplies at Milliken's Bend from General Sterling Price, who with a large Confederate force was encamped some thirty miles away on the west bank of the Mississippi.

The Mississippi Marine Brigade, consisting of two thousand men, under Brigadier-General Alfred Ellet, in six or seven large steamers, was left there. These flying troops were attached to the Navy. Every precaution had been taken to prevent a surprise from the Confederates, or any attempt on their part to fortify the river banks again in the absence of the Army.

General McClernand had been ordered by Grant to push forward with his division, and with the help of the Navy, to seize upon Grand Gulf. Had it not been for the great overflow at that time, the Union Army might have landed on the east side of the river, but Vicksburg was now almost surrounded by water, which obliterated all roads except those on the high lands, which could only be reached by going further down the Mississippi. Hence it was that after a careful examination of the left bank of the river, Grant decided to push on to Grand Gulf, a long and tedious march.

General McClernand had been given the advance to satisfy his ambition, but he was not equal to the occasion, and this desire of General Grant to show McClernand that he was anxious to give him an opportunity for distinction, might have hazarded the success of the campaign. Had McClernand pushed on at once with the Navy to back him Grand Gulf and its batteries would have easily fallen into Federal hands; Big Black River, which led up to the rear of Jackson, would have been kept open by the gun-boats; and the main Army instead of having to land at Bruinsburg, eight or ten miles below Grand Gulf, could have disembarked

at the latter point and marched to the rear of Vicksburg by favorable roads. Instead of carrying out his instructions, McClelland advanced only to Perkins' Landing, where he pitched his tents (although he had been directed to leave these behind on account of the difficulties of transportation), and called upon General McPherson for rations, of which he had failed to provide himself a sufficient supply. Perkins' Landing seemed to have such a fascination for McClelland that he remained there until Grant ordered him to move on.

Admiral Porter proceeded in the wooden gun-boat "General Price" to reconnoitre Grand Gulf, and ascertained that large numbers of troops were engaged in constructing extensive fortifications. Some guns were already mounted and others lying on the ground.

The "Price" had but two guns and with these Lieutenant-Commanding Woodworth was ordered to proceed within twelve hundred yards of the upper battery, and open fire. The shells exploded in the battery, and the workers sought the shelter of the hills. The "Price" kept up a fire for over an hour, the Confederates firing only two shots from a Whitworth field-piece; for, as was afterwards ascertained, they had at that time received no ammunition for the great guns.

The Admiral having satisfied himself that the works could be easily carried by assault under cover of the fire of the gun-boats, hastened back to Perkins' Landing, and stated the case to General McClelland, urging the co-operation of two thousand soldiers to enable him to occupy Grand Gulf, but no heed was given to the application; for McClelland, wrapped in his dignity, scorned all advice.

Failing in that direction, the Admiral wrote to General Sherman, detailing the state of affairs and begged him to induce General Grant to come to the front and take charge in person, before the favorable opportunity should pass away.

Grant was then at Milliken's Bend, forty miles distant. It took Sherman twenty hours to get the dispatch to him, and twenty-four hours more for Grant to reach Perkins' Landing, where he assumed command of the advance in spite of McClelland's objections, which were manifested in such an insubordinate way that most commanding generals would have at once relieved him from duty.

Three or four days had passed since the reconnoissance of Grand Gulf by the Admiral and time was lost which could never be regained. The Confederates concluded from the reconnoissance that measures were on foot to attack Grand Gulf, and they worked incessantly to strengthen the

defences. Men and munitions of war were poured in from Vicksburg, and the enemy were prepared to make a strong resistance to the gun-boats or to any assault from the land forces.

Grand Gulf was by nature as strong as Vicksburg, the Confederates in their pride called it "the Little Gibraltar." The principal work called Bald Head, was on a bold bluff promontory at a bend in the river commanding a view for miles up and down the Mississippi. The current of the river, which ran here five miles an hour with innumerable eddies, had cut away the shore until beneath the fort was a perpendicular wall more than eighty feet in height, while in the rear hills rising three hundred and fifty feet above the river were dotted with field works to protect the flanks of Bald Head, which fort mounted four heavy guns, Brooke rifles and 8-inch Columbiads. In front of this the river formed a large circular bay or gulf from which the place took its name. Black River emptied into the gulf and the approach to it was commanded by two 8-inch Columbiads.

The lower forts were half a mile below Bald Head, and were connected with the latter by intrenchments by which troops could pass under cover from one fort to another. The lower batteries mounted nine heavy guns situated on the brow of a hill eight hundred yards from the river and one hundred and fifty feet above it. The guns were mostly long 32-pounders and 8-inch. There were some smaller batteries in which were rifled field pieces. All these batteries were more formidable from the fact that they were in very elevated positions, giving them a plunging fire, while it was difficult to elevate the guns afloat so that their shot would reach the enemy.

After Grant had got his Army in motion part of McClelland's division was embarked on transports, the rest of the troops being obliged to march to Hard Times, twenty-two miles from Perkins' Landing.

Five barges and a steamer were sunk by the batteries at Vicksburg when the last six transports ran the blockade, which made transportation by water for all of the troops out of the question.

When the troops arrived at the point abreast of Bald Head, and the soldiers on the transports were ready to land as soon as the batteries should be silenced, Admiral Porter got under way with the squadron and commenced the attack at 8 A. M., on the 29th of April, 1863.

The "Pittsburg," "Louisville," "Mound City," and "Carondelet" attacked the lower batteries, while the "Benton," "Tuscumbia," and "Lafayette" attacked Bald Head battery, the two former as close as they could get, and the "Lafayette" lying

in an eddy four hundred yards above the fort where she could enfilade it.

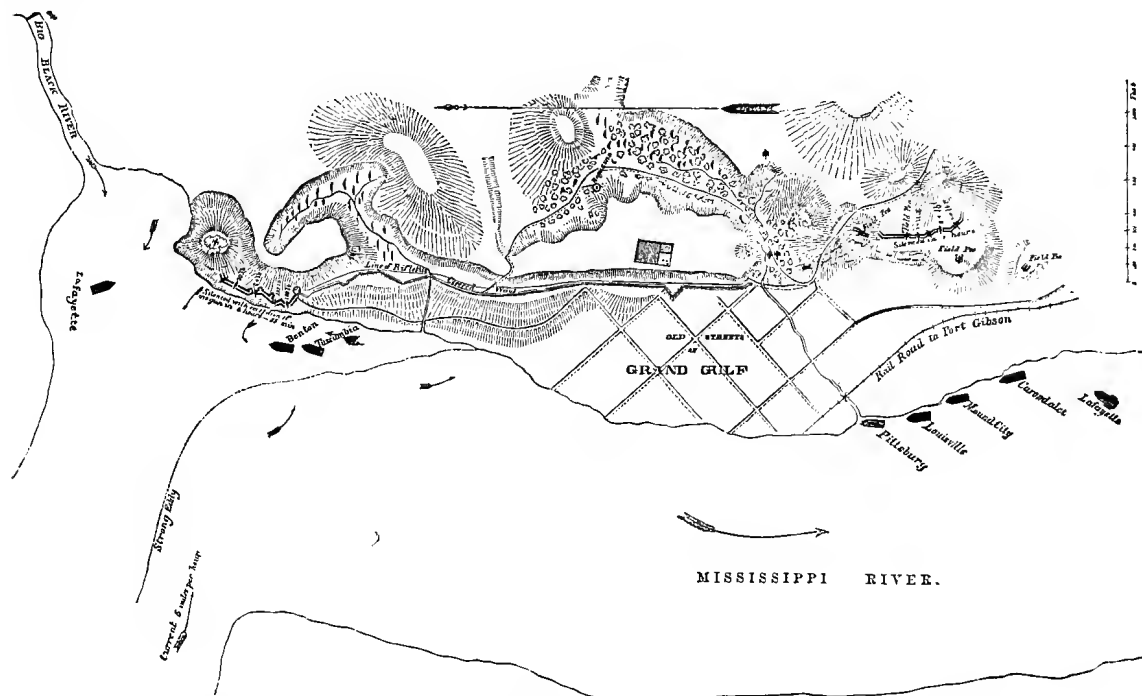

As the vessels approached the works the enemy opened fire and in ten minutes the battle was raging all along the line. The fight was severely contested, and it was not until three hours after the first gun was fired, that the enemy deserted his guns at the lower batteries, and then only after the "Lafayette" had been ordered from her first position to reinforce the gun-boats below.

In the meantime the flag-ship "Benton," and the "Tuscumbia" were doing their best to silence the upper battery, getting close under the guns and endeavoring to knock

minutes—the "Pittsburg" lost six killed and had twelve wounded.

After all the vessels concentrated their fire on Bald Head, there was less resistance, although the Confederates still stood to their guns. When the battle had lasted more than five hours, General Grant, who from a tug up the river, was looking on, made signal to the Admiral that he wished to communicate, and the "Benton" joined him two miles above the forts. The Confederates had now ceased firing, but the gun-boats maintained their position around Bald Head, occasionally firing a shell to keep the enemy out of the works.

When General Grant went on board the

BATTERIES AT "GRAND GULF" CAPTURED BY THE U. S. MISSISSIPPI SQUADRON, MAY 3, 1863.

off their muzzles, when they were run out to fire. The current was so strong, however, that it was impossible to keep the two vessels in position and they sheered about very much. In one of these sheers, a shot entered the "Benton's" pilot house, disabled the wheel and cut Pilot Williams' foot nearly off. Though the brave pilot never left his post it was impossible to manage the vessel and she was accordingly run into the bank to repair damages.

The gun-boats at the lower batteries had been signalled to double up on Bald Head, the "Lafayette" to resume her old position, and the "Pittsburg," Volunteer-Lieutenant Hoel, arrived opportunely to take the "Benton's" place. During the time the latter vessel was out of action—twenty-five

flag-ship, he decided that it would be too hazardous to attempt to land troops, as it did not appear that the guns in the enemy's works were dismantled and the gunners would therefore jump to their batteries again, open on the unprotected transports and destroy many of the troops. For the same reason the general concluded not to send the transports past the batteries with the soldiers on board but to march the latter around by land. In this he was quite right, as afterwards appeared.

As there was no longer any object in keeping the gun-boats under the batteries, all but the "Lafayette" were recalled, and the latter was left in her old position to keep the enemy from reoccupying the works and repairing damages. This duty Com-

mander Walke effectually performed, firing a shell every five minutes into the works until darkness set in.

The engagement was fought under great disadvantages; the current around the promontory of Bald Head ran with great rapidity, and it was as much as the gun-boats could do to stem it. Clumsy vessels at best, the iron-clads would frequently be turned completely round, presenting their weak points to the enemy, of which the expert Confederate gunners were not slow to take advantage, and seldom missed their mark so close were the vessels to the forts. The light armor plates of most of the vessels offered but an imperfect resistance to the heavy missiles of the enemy, and, in consequence, the list of killed and wounded in the squadron was large.

The "Tuscumbia," on which vessel great reliance was placed to resist heavy shot, proved herself the weakest vessel in the squadron, although Lieutenant-Commander Shirk stood up to his work manfully. In the beginning of the engagement, a rifle shell struck the outer edge of the shutter of the midship port—she fought three 11-inch guns in the bow—opened the port and entered the casemate, killing six men and wounding several others.

Another shell jammed the shutters of the same port so tightly, that the gun could not be used for the remainder of the action. A shell from the lower battery entered the stern port, disabling every man at the 9-inch gun, and yet this vessel was supposed to be shot proof! Some of the armor on the forward casemate fell overboard from repeated blows, and all of it was started from its seat.

The "Tuscumbia" was struck eighty-one times by shot and shells, and was completely riddled; one engine was disabled, six men killed and twenty-four wounded, some of them mortally.

The flag-ship "Benton," although the strongest of the gun-boats, was badly cut up. A shell passed through her armor on the starboard quarter and exploded in a stateroom, setting fire to the vessel.

The "Benton" was struck forty-seven times in the casemates, and seventy times in all by heavy shot, the three-quarter inch iron was perforated twelve times, the two and-a-half inch, four times. A hundred pound shot passed through the pilot-house, smashing the wheel and severely wounding the pilot, nine men were killed and nineteen wounded.

The "Lafayette," Commander Walke, proved herself an excellent fighting vessel. She was struck by cannon shot forty-five times, but only five shots did any serious damage. She had only one officer wounded.

The "Pittsburg," Volunteer-Lieutenant-Commanding Hoel, was struck in the hull thirty-five times, and had six killed and thirteen wounded.

The other vessels, although considerably cut up, were not materially damaged, and all reported "ready for service" half an hour after the action, when the gun-boats tied up to the bank at Hard Times.

Then came the melancholy duty of burying the dead, who were followed mournfully to their graves by their messmates and friends.

Three hours afterwards the squadron got underway and again attacked the batteries, while the transports all passed in safety below Hard Times. Some of the Confederate gunners fired at the gun-boats but did no damage. During the whole engagement the Confederates stood to their guns manfully, and certainly pointed them to some purpose. Colonel Wade, the commanding officer at Bald Head, was killed; his chief-of-staff also, and eleven men were reported killed by the Confederates, although more graves than that were counted. The enemy had many wounded, but the number was not mentioned in the returns.

Rear-Admiral Porter, in his report, speaks in the highest terms of Commander Walke, Lieutenant-Commanding Murphy, Lieutenant-Commanders Shirk and Owen, Lieutenants-Commanding Hoel and Wilson, some of whom had already distinguished themselves on the upper Mississippi.

The remarks on this battle of Grand Gulf by military historians show how reluctant they are to give the Navy credit. The following quotation from a well known writer, is an instance in point. Speaking of Grand Gulf he says :

"The vessels were handled with skill and boldness, but the rebel batteries were too elevated for Porter to accomplish anything. He was not able to dismount a solitary piece and it would have been madness to attempt a landing under unsilenced guns like these. No serious injury was sustained by any of the fleet. [!] The Admiral withdrew after the utter futility of his effort had been amply demonstrated. The enemy also suspended fire."

Such are the statements that have for years passed for "history," one "historian" repeating another only changing a little the language of his predecessor to make it pass for his own. The above quotation reads like an excuse for the Army not landing, although no excuse was needed. It was General Grant's opinion that it would be wiser to land the Army lower down, in which opinion the naval commanding officer concurred. Grant had too few men with him to run the risk of losing any of them, and there was no particular advantage to be gained by landing immediately at Grand Gulf, as was afterwards proven.

The military historian whom we have

quoted has not stated the case truthfully, but his statements are in keeping with those of many other writers who seem to fear that by giving credit to the Navy, they may detract from that which is due the other arm of the service. An intelligent reader will readily understand that a campaign such as is here described must have been a failure without the assistance of the Navy. In default of credit from the "military historians," the officers and men of the Navy must rely on the reports of their own chiefs to do them justice.

The night following the attack on Grand Gulf information was obtained from a negro, that there was a good landing at Bruensburg, six miles below Grand Gulf, and that from Bruensburg an excellent road led to Port Gibson, twelve miles in the interior. In consequence of this information the gun-boats and transports were next morning crowded with troops, and steamed down the river. About noon, Grant disembarked thirty-two thousand men with four days' rations, and without transportation determined to live upon the enemy, as he was satisfied the supply of provisions in the district was ample to meet all his requirements.

Here Grant started on that remarkable march against an enemy who outnumbered his forces two to one; he outgeneraled the Confederates, fought battle after battle and finally reached the rear of Vicksburg, shutting General Pemberton inside the fortifications and causing General Joseph E. Johnston to evacuate Jackson and retreat.

Grant's conduct of this campaign forms the brightest chapter in his military record and can only be appreciated by those who know the difficulties with which he had to contend, and particularly the nature of the country through which he had to march his Army.

General Grant had made arrangements for Sherman's division to make a feint up Yazoo River the same day the gun-boats attacked Grand Gulf. Accordingly, on that day Sherman moved up the Yazoo in transports preceded by "the gun-boats," as the military historian puts it. Most of these gun-boats were what were called "workshops," *i. e.*, the machine vessel, carpenter shop, store vessel, powder vessel and hospital vessel. These were simply river steamers painted black. The naval forces were led by Lieutenant-Commander K. R. Breese in the "Black Hawk" and comprised the "Baron DeKalb," Lieutenant-Commander John G. Walker, "Choctaw," Lieutenant-Commander F. M. Ramsay, "Taylor," Lieutenant-Commander Prichett, "Signal," "Romeo," "Linden" and "Petrel" with three 13-inch mortars.

The naval demonstration was really a fine one, calculated to impress the Confederates, who had seen so many nondescripts pass Vicksburg that they hardly knew a gun-boat from a transport.

While Pemberton was making his preparations to meet Grant's Army on Big Black River, he received a dispatch informing him that Haines' Bluff was the real point of attack and that a large Army supported by numerous gun-boats was moving against that place. It was desirable that the Confederates should be encouraged in the belief that Haines' Bluff was the real point of attack, and the "DeKalb," "Choctaw" and "Taylor," approaching as near as they could get, opened a heavy fire on the works while Sherman disembarked his troops.

There was but one narrow road which led along the levee, and this was wide enough for but four men to march abreast. As Sherman advanced along this road towards Haines' Bluff the three gun-boats maintained their incessant fire and confirmed the Confederates in their belief that this was really the point of attack, although the condition of the country ought to have assured them that no Army would be likely to attack a place so strongly fortified, under the circumstances.

The fire of the gun-boats was kept up as long as possible, and videttes and skirmishers were thrown out by the Army on the road leading to the Bluff; upon this road the enemy opened with heavy guns and apparently could have swept away any force approaching from that direction. At dark, General Sherman re-embarked his men, having accomplished the object of his movement, which was simply to deceive the Confederates.

Notwithstanding the movement was but a feint, the three gun-boats, "Choctaw," "DeKalb," and "Taylor," together with the "Black Hawk," kept up a hot fire for three hours as well as they could—wedged in a stream which was here not over forty yards wide; as, since the demonstration was considered of such importance by General Sherman, it was necessary to do everything that would make the attack appear a real one. The morning after these transactions, it was discovered that new works had been thrown up by the Confederates during the night, that the old ones had been extended, and several additional heavy guns had been placed in position.

This feint against Haines' Bluff continued for several days, and Pemberton was obliged, in answer to solicitations, to send re-inforcements, thus weakening his Army below. Ox teams were observed hauling heavy guns to mount at Haines' Bluff, to check the advance of the Federal forces,

showing that the enemy was exerting all his energy to strengthen the threatened position.

During this movement, the "DeKalb," while temporarily dropping out of action was attacked by sharpshooters from some buildings on the eastern bank. Lieutenant-Commander Walker immediately ran the vessel into the bank and landed twenty-five men under command of Acting-Master C. S. Kendrick, who dislodged the enemy and chased them into the swamp, killing one officer and three privates, and taking a lieutenant of the Third Louisiana Infantry prisoner. This officer was captured in a hand-to-hand fight by Mr. Kendrick, who knocked him down with a pistol. In two days firing, the "DeKalb" expended two hundred rounds of shot and shells, did not suffer materially in her hull, and had only one casualty.

The "Choctaw," Lieutenant-Commander Ramsay, had an opportunity of showing her fighting qualities. She was a sister ship to the "Lafayette," and had lately joined the squadron. She was struck forty-seven times in her hull, and had thirteen shots through her smoke-stack. The turret was struck six times. A ten-inch shot penetrated the crown, and a six-inch rifle shot buried itself in the iron plating. Two shots struck below the water line on the starboard side forward of the turret. With the exception that the good order of the vessel was rather marred, no great injury was done, and, fortunately, no one was killed.

The "Taylor," being a wooden vessel, could only take an occasional part in the bombardment. She was struck below the water line with a rifle shot, and made to leak so badly that she had to withdraw from action to repair damages.

At one time the fire of the gun-boats was so effective that the enemy's fire almost ceased, and but for a raft which blocked the further advance of the vessels, the latter would have endeavored to get close enough to use grape and canister, which might have made quite a difference in the state of affairs. As it was, everything turned out to General Sherman's satisfaction, and returning to Young's Point, he started with his division to join General Grant, crossing the river at Grand Gulf and overtaking the main body of the Army in time to be present during the important events which laid Vicksburg at the mercy of the Federal Army.

After General Grant and his troops landed at Bruinsburg, Admiral Porter returned the same night to Grand Gulf with the intention of trying to get possession of the enemy's works. As seven o'clock, on the following morning, the "Lafayette" was sent up to draw the fire of the forts. As she approached, the magazine in the

lower battery blew up, throwing a vast cloud of dust into the air. Several other magazines in the smaller forts followed, and the Confederate troops evacuated all the works.

The fort at Bald Head, on Point of Rocks, was left intact, and a tiny Confederate flag was left sticking in a flower-pot to show that the enemy did not surrender.

There is no other instance during the war of a fort holding out so determinedly as this one at Bald Head. The destruction wrought inside the work was marvellous—one would suppose that no living thing could have continued there under such a fire. The military historian whom we have quoted was wrong, for every gun in the fort was rendered useless by the shot and shells from the gun-boats; only one gun could be fired and that could not be trained, owing to the destruction of its carriage.

Some of the guns in the lower batteries were still intact, and these opened on the fleet. In the evening, the guns were all dismounted by the sailors and laid along the levee, where they could be shipped to Cairo.

The following is a copy of a report made by T. M. Farrell, U. S. N., May, 1863 :

"These batteries mounted one 100-pounder, two 64-pounders, two 7-inch rifles, one 30-pounder Parrott, two 30-pounder Parrotts in battery, two 20-pounder Parrotts in main magazine, three 10-pounder Parrotts on the hills.

"Batteries engaged by the gun-boats for five hours and thirty-five minutes, the lower battery silenced in three hours, the upper battery silenced with the exception of one gun. The "Lafayette" laid opposite this battery and kept the people from working until dark, when it was partially repaired. The defences were all earthworks.

"In addition to the above, four or five small field-pieces were used by the rebels and shifted about from place to place."

Admiral Farragut was still at the mouth of Red River in the flag-ship "Hartford," where he had remained ever since he had made the passage by Port Hudson, and Admiral Porter having left Lieutenant-Commander Owen in charge at Grand Gulf with the "Louisville" and "Tusculumbia," proceeded down the river to meet Farragut and relieve him of the command of that part of the river.

On the 3d of May, 1863, Admiral Porter reached the mouth of Red River and after conferring with Admiral Farragut, proceeded up that stream with the "Benton," "Lafayette," "Pittsburg," "General Price," tug "Ivy" and ram "Switzerland." Meeting two of Admiral Farragut's vessels, the "Arizona" and the "Estella," they were turned back and accompanied Admiral Porter's squadron which arrived next morning at Fort DeRussy.

This work was a casemated battery built in the most substantial manner and plated after the style of the rams with railroad

iron. On the rumored approach of the gun-boats the Confederates hastily dismounted and carried off all the guns except one 64-pounder.

There were at Fort DeRussy, three casemates intended for two guns each, and a flanking battery at right angles to the casemates calculated to mount seven guns more. There was also a large square earth-work eight hundred yards inland not yet ready for guns.

These works would have been very formidable had they been finished, and it was as well they were not completed and manned. They were a monument of the energy and determination of the enemy, which seemed to be without limit.

After partially destroying the works at Fort DeRussy, the squadron proceeded up to Alexandria which place submitted without a dissenting voice, many of the inhabitants professing themselves Unionists. The day after the arrival of the gun-boats Major-General Banks marched into Alexandria and the town was turned over to him by the Navy. The following day the squadron returned down the Red River with the exception of the "Lafayette," "Estella" and "Arizona," and the ram "Switzerland" which were left to co-operate with General Banks in case he should require the assistance of the Navy.

While in Red River, Lieutenant-Commanding Woodworth was sent up Black River, a branch of the former stream, to make a reconnaissance with the "General Price," "Pittsburg," "Estella," and "Ari-

zona." These vessels ascended as far as Harrisonburg which was found to be strongly fortified. The works were shelled for some time with little apparent effect and after destroying a large amount of Confederate Army stores, amounting to three hundred thousand dollars in value, the gun-boats returned to Red River, and the "Benton" and consorts proceeded to Grand Gulf to co-operate with General Grant in any of his plans where the Navy could be useful.

Thus within ten days the flag-ship and her consorts, after dismantling the fortifications at Grand Gulf, had ascended Red River, had destroyed the works at Fort DeRussy, broken up an immense raft intended to obstruct Red River, captured Alexandria, destroyed a large amount of the enemy's stores on Black River, and returned to Grand Gulf, where it was found that General Grant had moved his Army towards Vicksburg.

The whole squadron then ascended the river to a point two miles below Vicksburg, and the admiral again hoisted his flag on board the "Black Hawk," at Young's Point, ready to communicate with General Grant the moment his Army should arrive in the rear of the besieged city.

In less than a month, the Mississippi squadron had passed through a sharp and exciting campaign, had failed in nothing it had undertaken, and had given the Army the assistance necessary to enable it to reach a position which ensured the fall of Vicksburg.

## CHAPTER XXIX.

### SIEGE OF VICKSBURG—CONTINUED.

THE ARMY MARCHES FROM BRUENSBURG TOWARDS VICKSBURG.—DESTRUCTION OF THE LAST WORKS BUILT BY THE CONFEDERATES ON THE MISSISSIPPI.—ADMIRAL PORTER OPENS COMMUNICATION WITH GENERAL GRANT IN THE REAR OF VICKSBURG, AND OCCUPIES HAINES' BLUFF.—MIDNIGHT ATTACK ON VICKSBURG BY THE ARMY AND NAVY.—ATTACK ON YAZOO CITY BY THE GUN-BOATS AND DESTRUCTION OF THREE IRON-CLAD RAMS.—ATTACK ON THE VICKSBURG WORKS, MAY 22, BY THE ARMY AND NAVY.—LOSS OF THE "CINCINNATI" BEFORE VICKSBURG.—HER GUNS TRANSFERRED TO THE REAR OF THE CITY.—DESTRUCTION OF NINE CONFEDERATE STEAMERS UP THE YAZOO, BY LIEUTENANT-COMMANDER WALKER.—ATTACK ON VICKSBURG, JUNE 19, BY THE ARMY AND NAVY.—ALL THE ENEMY'S GUNS SILENCED.—GENERAL PRICE'S ARMY REPULSED BY GENERAL MOWER AND THE MARINE BRIGADE.—ENERGY SHOWN BY THE CONFEDERATES IN VICKSBURG.—SHORT SUMMARY OF THE WORK ACCOMPLISHED BEFORE VICKSBURG BY THE NAVY.—SURRENDER OF VICKSBURG, JULY 4, 1863.—MEETING OF THE OFFICERS OF THE ARMY AND NAVY ON BOARD THE FLAG-SHIP "BLACK HAWK."—LETTERS FROM GENERAL SHERMAN TO ADMIRAL PORTER.—GENEROUS TERMS GRANTED THE BESIEGED AFTER THE CAPTURE OF VICKSBURG.—TRUE HISTORY.—HARMONY IN ARMY AND NAVY CO-OPERATION.—LAST WORDS OF GRANT.—DETAILED REPORT OF REAR-ADMIRAL PORTER.—CONGRATULATORY LETTER OF SECRETARY WELLES.

AS THE Army had marched from Bruensburg, and was well on the way to Vicksburg, Admiral Porter changed his station from Grand Gulf to the flag-ship "Black Hawk" at the mouth of the Yazoo River, ready to co-operate with the Army the moment it should make its appearance in the rear of Vicksburg.

Two iron-clads were left at the mouth of the Red River, blocking it up closely, which sealed the fate of Port Hudson. No more supplies would get to the Confederates from that quarter.

One iron-clad was left at Carthage, three at Warrenton, (where the enemy aimed at building heavy works), and two or three in the Yazoo.

Notwithstanding the Confederates were so hardly pressed, they still clung to the idea that they would beat the Federal Army back from its hard-won positions, and they were not even willing that the gun-boats should have the satisfaction of going to the landing opposite Warrenton to obtain provisions and

coal. They proceeded to erect a heavy work there that would command the river both ways, and particularly the opposite landing.

The enemy had labored hard on these works, night and day, in hopes of having them ready by the time the vessels of the fleet returned. It was intended to mount eight 10-inch guns and some 100-pound rifles. The work was built of cotton-bales covered with logs—the logs to be covered with several layers of railroad iron and the whole to be covered with bags of earth—a fort, in fact, impervious to shot or shells.

Lieutenant-Commanding Wilson, in the "Mound City," appeared below Warrenton about the 12th of May, and seeing these works and no persons about, sent a party on shore to reconnoitre. These mounted the parapets and discovered a number of artillerymen inside the fort, who, to make themselves secure from observation, were crouching under the parapets.

The Federal party emptied their revolvers into the enemy and then, jumping down, hailed the "Mound City" and told those on

board to open fire on the works, which was done. A stray shell found its way into a cotton-bale—in ten minutes this formidable work was in a blaze, and in less than an hour the whole fabric was consumed.

This was the last work built by the Confederates on the Mississippi River. All the appliances of a fort and a quantity of stores were in the houses at Warrenton, which the Confederates set fire to and destroyed. And what houses were left in the town were destroyed by the "Mound City's" men. Warrenton had been a troublesome place and merited its fate.

On the 15th of May, the admiral joined the fleet in the Yazoo, and on the 16th firing was heard in the rear of Vicksburg—a sign that General Grant's Army was not far off, and that he was driving Pemberton into the

LIEUT.-COMMANDING (NOW CAPTAIN) BYRON WILSON, U. S. N.

city. The flag-ship pushed up the river as near as she could get to the combatants, and it was soon discovered by the aid of glasses that General Sherman's division was coming in on the left of Snyder's Bluff, cutting off the enemy at that place from joining the troops in the city.

The "DeKalb," Lieutenant-Commander Walker, the "Choctaw," Lieutenant-Commander Ramsay, the "Linden," "Romeo," and "Forest Rose," all under the command of Lieutenant-Commander Breese, were now sent up the Yazoo to open communication with the Army. In three hours, letters were received by the Admiral from Generals Grant, Sherman and Steele, informing him of their complete success in driving General J. E. Johnston away with his Army of 40,000 men, and forcing Pemberton into

Vicksburg with about the same number of troops.

In the meantime the "DeKalb" pushed on to Haines' Bluff, which had been the great obstacle to our advance in that direction, and which the enemy had commenced evacuating the day before. A part of the garrison had remained behind in hopes of carrying off a quantity of stores, but they were driven away by the "DeKalb" and were cut off by some of Sherman's command who had marched in that direction.

The Confederates had been so completely surprised by the sudden appearance of our gun-boats and Army that they had not time to destroy anything—guns, tents, equipage and all kinds of stores were left in good order and fell into the hands of the Federals.

As soon as the Army appeared, driving the Confederates into Vicksburg, all the gun-boats below the city were ordered up to attack the batteries, which fire was kept up for three hours. At midnight the fire was reopened and directed to all points where it might be possible to harass the enemy's troops, and it was continued all night. The Confederates must have had an uncomfortable time of it, after marching and fighting all day with little hope of rest within their trenches. Shot and shells were whistling about them and every now and then a fire broke out in the city, threatening destruction to their stores and munitions of war.

The Admiral ordered up the army transports with stores and provisions, which the Union forces were glad to get that day before sunset.

The works at Haines' Bluff were found to be very formidable—far too much so to have been taken by our Army; or from the water side; there were eighteen of the heaviest guns (8-inch and 10-inch columblads, and 7½-inch rifles) with ammunition enough to last a long siege, and much of it suited for the guns of the naval vessels. The works and encampment (which consisted of permanent houses), covered many acres of ground, and the fortifications and rifle-pits extended over one mile and a quarter. Wide ditches, chevaux-de-frise, and net works (obstructions that would delight any military engineer,) formed part of their defenses; and these were but a counterpart of miles of the same kind of work, in and around Vicksburg. Most of these works were destroyed as not conducting in any way to the requirements of the Federal Army, and to prevent their being used to check the advance of the gun-boats, in case the enemy by superior force caused the siege to be raised.

As soon as the Confederates had evacuated Haines' Bluff, and all the rafts which blocked the river above had been removed,

Lieutenant-Commander Walker, in the "DeKalb," was sent up the Yazoo River with a sufficient force to destroy all the works at Yazoo City, which had been used in the construction of their rams.

As this naval force approached Yazoo City, the Confederate property was set on fire by Lieutenant Brown, late commander of the "Arkansas," and our men had only to add fuel to the flames which were well under way. Three powerful rams were burned: the "Mobile," a screw steamer ready for her plating; the "Republic," already plated with railroad iron, and a monster steamer on the stocks (310 feet long and 70 beam), intended to be the most powerful vessel of the kind ever built. She was to have had six engines, four side wheels and two propellers, with a speed of sixteen knots.

The Confederates were unfortunate in their rams—they built them only to lose them. But the amount of energy they exhibited in endeavoring to obtain vessels of this class was remarkable, and what they accomplished, in this line, was more astonishing still. Every ram which they built was either destroyed by our Navy, or by themselves to prevent the Navy from capturing them. Naval officers knew how much damage one of these vessels would commit, if she could ever get fairly afloat, and when one was heard of as building at any point, no effort was left untried to reach the place and destroy her.

Yazoo City fared badly for its misfortune in being selected as a site for a Navy Yard. The expedition which had been directed to do its work with all dispatch and return as quickly as possible to headquarters, set fire to everything of a public character. The Navy Yard contained five saw-mills, besides planing-mills, machine shops, carpenter and blacksmith shops, in fact all the appliances for building a Navy. Saw-mills above the city were also destroyed and the Federal forces left nothing that could be used towards building a boat even.

Yazoo never built another ram; the people were quite satisfied to have their houses left standing.

The expedition returned down the river, having fully accomplished all they went for.

They were attacked at Liverpool Landing, at a very sharp bend in the narrow river, by three field-pieces and 200 rifle-men concealed in the bushes; but these were soon made to retreat. The vessels only lost one man killed and eight wounded—but the amount of destruction which they caused can hardly be realized.

The Confederates now lost all hope of being able to build rams or any other vessels on the tributaries of the Mississippi, and though Yazoo City was for some time after

the rendezvous of the cowardly guerillas, yet it no longer formed a source of anxiety to the Union forces.

On the evening of the 21st of May, Admiral Porter received a communication from General Grant to the effect that he intended to make a general attack upon the Confederate works at Vicksburg at 10 A. M. the next day. He had closely invested the enemy's works and was so near that he thought he could get inside. The Admiral was requested to attack on the water side, and shell all the batteries from 9.30 to 10.30 A. M., to annoy the garrison and draw off as many as possible from the trenches.

In the meantime the Admiral with the "Benton," "Tuscumbia," "Carondelet," and "Mound City" opened on the hill batteries and silenced them one after another, and the "Mound City" had the honor of disabling the heaviest gun the enemy had mounted, called "Whistling Dick," a gun that had hitherto defied the best marksmen.

"WHISTLING DICK."

(SKETCHED BY REAR-ADMIRAL WALKER FROM A PHOTOGRAPH BY PAYMASTER BENTON.)

The Confederates did not stand to their guns this day as they had been accustomed to do. They were receiving a heavy fire in the rear as well as in front, and the shriek of the shells from the army field-pieces, as they fell by the hundred in the Confederate works, could be heard down on the water amid the roar of the heavy cannon. The batteries one after another were silenced, as the gunboats, firing bow and broadside guns, moved upon them until they came to the 13-gun battery in front of the city.

This battery was commanded by Colonel Higgins (formerly a lieutenant in the U. S. Navy), who had so gallantly defended Fort Jackson. He felt called upon to show his old naval friends that he would not flinch from his post no matter what force was brought against him. But the water was high (nearly level with the banks), and the gunboats were *above* the enemy's water batteries; the first time they had ever enjoyed this advantage. They had nothing but this one battery to engage their attention, as all the

others had been silenced. This was the hottest fire the gun-boats had yet been under, as Col. Higgins clung to his works with the greatest tenacity and placed a number of shot (fortunately they were not shells) below the water-line. This went on for two hours and a quarter when it was quite time, according to rule, that the enemy should abandon his post, but he still held on.

The "Tuscumbia" was brought up with her 11-inch guns, but Higgins soon made her turret untenable, and she was finally completely disabled and had to drop out of action.

The gun-boats had started down the river with a large amount of ammunition, but they had been under fire a good deal and up to this time had had no opportunity of replenishing their supply. Reports came up from below that the ammunition was running short and would be out in a few minutes. This was provoking. Colonel Higgins' fire had begun to slacken and in half an hour more he would have been silenced; but no; one after another the gun-boats got out of ammunition, and were obliged to drop down, and finally the last one was obliged to retire and Colonel Higgins was left master of the field. It is not likely that he enjoyed the sport however, as he afterwards confessed to losing a great many of his men.

The gun-boats had done what was required of them by General Grant, and more. He asked an hour's attack to annoy the garrison, while his Army assaulted in the rear; they fought the batteries for two hours and a half, more than twice as long as was required, and with what success will be seen from the following letter of General McArthur.

HEADQUARTERS, 6TH DIVISION, 17TH ARMY }  
CORPS, IN FIELD NEAR VICKSBURG, }  
MISS., May 23, 1863. }

ADMIRAL—I received your communication with regard to silencing the two batteries below Vicksburg, and in reply would say that I witnessed with intense interest the firing on that day, it being the finest I have yet seen.

I would have taken advantage of the results thus gained by your vessels, and had given the necessary orders to do so, when I received peremptory orders from Major-General McClelland to move my command around to the right of my position, to support a portion of his troops who had gained a lodgment in the enemy's works.

I arrived, however, too late, and have now been ordered back to my former position and to follow up any advantage your vessels may gain.

I have made a request to have some rifle guns sent me, which I require, and on receipt of which I expect to enfilade "Whistling Dick's" position; at any rate I will try.

I am, your obedient servant,

I. MCARTHUR,

*Brig.-Gen. Com'ding 6th Division, 17th Corps.*

Had Gen. McArthur been let alone, and not been prevented from occupying the

works from which the Navy had driven the Confederates, he would have kept possession of every fort on the ridge of hills which overlooked Vicksburg, and decided the fate of the city.

To show that these attacks of the gun-boats were not child's play, the reports of some of the injuries received by them are herewith mentioned:

"'MOUND CITY,' May 22d, 1863.

"A shot struck and lodged in starboard bow near the stern, and five feet under water. . . . .

"A shot went through the forecabin on port side into the coal bunkers; a shot on starboard side went through the hammock netting and starboard chimney at the lower band, tearing the chimney half off, then through the galley and overboard. A shot in front passed through two heavy thicknesses of boiler iron, the iron of the the pilot-house near the deck, and through the deck, cutting away carlines, and lodged in a mess-chest.

"A shot on starboard side passed through half of the hog-chain stanchion, passed through wheel-house, cutting away iron wheel and brace; then through the steerage, tearing up eight feet of the planks and breaking carlines and woodwork in ward-room. A shell burst close to No. 6 gun, knocking off part of the muzzle. A shot on starboard side struck the iron near the top, cutting half through and bending one of the plates, knocking out a stanchion and starting the bolts on the inside. A shot on starboard side struck the muzzle of No. 7 gun, wrecking the gun, then glanced, went through the hammock netting and fell into the pitman. A shot struck the iron on starboard side, over shell-room, knocking off the plate and driving a piece of it through the iron plating of the casemate. A shot on starboard side cut away an awning stanchion, and passed through cabin skylight tearing up the plank.

"A shot struck front chimney twenty feet from deck. A shot through brace of forward stanchion and skylight. A shot on starboard side struck iron plating between guns Nos. 4 and 5, three feet above the water, and glanced off bending the plates and starting the bolts. A shot on starboard side at shell room two feet below water; a shot struck binacle on port quarter, and glanced knocking hole in the plating of casemate. A shot struck boat davit and bent it, etc."

Half the number of these shots striking a wooden vessel would have destroyed her.

The "Benton" was struck in her hull thirteen times; four times at the water line, etc.

While this was going on, the Army assaulted in the rear of Vicksburg, but did not succeed in getting in. Pemberton had at this time 42,000 men to man his ramparts.

The gun-boats kept up their attack until the 27th when there was a lull for a time.

On the 29th, General W. T. Sherman signalled to the flag-ship, requesting that two gun-boats be sent down to clear out a battery of two guns that prevented him from extending his right flank. It being a rule with the Navy never to refuse a request from the Army, the "Cincinnati" was prepared for the adventure.

Sherman was under the impression that the enemy had moved a battery of eleven

heavy guns from a bluff commanding the Mississippi to the land side, but the guns had only been lowered from their carriages to avoid the naval fire, and Colonel Higgins (who had made out all the signals passing between our Army and Navy), quickly remounted them under cover of the night and screened them with bushes.

Next morning the "Cincinnati," Lieutenant George M. Bache, started down the river to attack the small battery mentioned by Sherman, but as the vessel rounded to and opened her broadside, the battery on the bluff opened on her stern with its heaviest guns.

The first shot from the enemy passed through the magazine and then through the bottom, causing the "Cincinnati" to fill rapidly. Then the starboard tiller was shot away, the enemy firing rapidly and with great accuracy; 8-inch and 10-inch shot went clear through the bulwarks of hay and logs, and plunging shots from the heights went through the deck and did much damage.

The vessel could not return this fire and putting on steam crept along the shore, up river, making against the current not more than three miles an hour.

The "Cincinnati" was soon in a sinking condition, and her gallant commander ran her into the bank and got out a plank to save his crew before the vessel went down. A hawser was taken on shore and made fast to a tree, but, unfortunately, it was not properly secured, and giving way allowed the vessel to slide off into deep water. All this time the enemy continued to pour in a destructive fire. Bache would not haul down his flag, but nailed it to the stump of his flag-pole which had been shot away.

As the vessel was now sinking the order was given for all who could to swim to the shore, which was not far off; the boats had all been shot to pieces and were of no use. There were but three fathoms of water where the "Cincinnati" went down, and her colors and smoke-pipes remained in sight. Fifteen men were drowned in at-

tempting to reach the bank and twenty more were killed or wounded.

This was an unfortunate affair, but the calamity was somewhat deprived of its sting by the cool and courageous conduct of the commander, officers and crew, who withstood the Confederate fire unflinchingly and preferred to sink rather than haul down their colors. The Confederates kept up their fire on the flag, and many of the plunging shot found their way through the vessel's hull.

As soon as General Sherman saw what had happened he sent a company of the 76th Ohio to the relief of our officers and men.

Sherman wrote to the Admiral, deploring the loss of the vessel, but said: "the importance of the object desired to be accomplished fully warranted the attempt. It has

proved successful and will stimulate us to further efforts to break the line which terminates on the Mississippi in such formidable batteries."

In a few days the water in the river fell sufficiently for the guns to be removed from the "Cincinnati." This was done by the Army at night when the enemy could not see what was going on. Some of the guns were mounted in front of Sherman's division, and were under the command of Lieu-

LIEUTENANT GEORGE M. BACHE, NOW COMMANDER U. S. N.

tenant-Commander T. O. Selfridge, with blue-jackets to work them; and this battery finally accomplished what the "Cincinnati" had not time to do; viz., clear out the batteries which threatened Sherman's right flank. These guns were also employed in firing upon such points as Sherman pointed out, where he thought it advantageous to clear a way for the Army in case of another assault.

The "Cincinnati's" 9-inch guns were temporarily mounted in the rear of the city, and worked by a party of blue-jackets under Lieut.-Commander Walker. Both of these batteries did good service during the siege.

The Secretary of the Navy wrote a handsome letter to Lieutenant Bache, concluding as follows:

"Amid an incessant fire of shot and shells, even when the fate of the vessel had been sealed, and destruction both from the elements and the enemy was threatened, the officers and men appear to have stood bravely at their posts, and it is a proud record of the "Cincinnati" that when her last moments came, she went down with her colors nailed to the mast.

"It is with no ordinary pleasure that I express to you and the surviving officers and crew of the "Cincinnati" the department's appreciation of your brave conduct."

There was still work for the Navy to do in the Yazoo, while General Grant was starving the Confederates out in Vicksburg. There was no use in wasting life in assaulting a place with such defences, and the Army continued to make their approaches and mount their batteries until they were within fifty feet of the enemy's works. The surrender was but a matter of time, and a short time at that. Every opening was stopped up, no one inside could get out, nor those outside get in.

The enemy now had to subsist on what provisions they had on hand, which was not much, and unless relieved by a superior force a month more or less would bring about a surrender. It was not likely that the siege would be raised, for if the Federal Army, with all the disadvantages under which it labored, could

manage to dispose of an enemy 80,000 strong in a country where the latter occupied all the strong positions, it could prevent the escape of that portion of them which had been driven into the city.

It is not the province of the writer to give an account of the military operations of the siege of Vicksburg; this book is mostly confined to the naval operations, and he is not sufficiently informed on the subject to do full justice to the movements of the Army. He knows enough, however, to be satisfied that everything was done by the generals of our Army in a masterly manner, and that they had posted themselves so securely around Vicksburg that all the power of the Confederacy could not affect them in any way, and that while our soldiers were fed by a commissariat that had no equal in any part of the world, Pemberton and his troops inside the city were living on short rations. The Con-

federates were now acknowledging one to another that Pemberton (clever as he was) had more than met his match in the leader of the Federal Army, and that the Union soldiers, when well commanded, could meet a larger number of the enemy and defeat them with ease.

There were still a number of steamers on the Yazoo that might in some way be serviceable to the enemy and an expedition under Lieutenant-Commander Walker of the "DeKalb" was sent up that river to capture or destroy them.

The "Forest Rose," "Linden," "Signal" and "Petrel" (vessels whose names have appeared frequently in this history) accompanied the expedition. The "Signal" knocked down her chimney among the trees the first night, and had to return. Walker pushed on with the smaller vessels (leaving the "DeKalb" to follow after) to within

fifteen miles of Fort Pemberton, where the steamers "John Walsh," "Lockwood," "Golden Age" and "Scotland" were found sunk on a bar, completely blocking the way. Failing in his efforts to make a passage through the boats, he set fire to them and they were all destroyed.

The expedition was attacked at this point by

artillery and sharpshooters in force, but they were driven off with loss. Saw-mills were burned, the corn on which an enemy could subsist was destroyed, and at Yazoo City the crews landed and brought away all the bar, round and flat iron intended to be used in the building of their iron-clads.

Armed boats were sent through the Rolling Fork and into bayous which were inaccessible at that moment to the gun-boats. Four other steamers were found hidden away in snug retreats and burned—almost rivalling the mischief done by the "Alabama," who had taught us how to retaliate upon an enemy.

This was a terrible raid and involved a loss to the enemy of more than two millions of dollars. The performance showed how easily the Delta expedition could have obtained possession of the Yazoo River and district as far as the rear of Vicksburg but for the

U. S. GUN-BOAT "CINCINNATI" SUNK BY THE UPPER WATER BATTERY AT VICKSBURG, MAY 27, 1863.

(FROM A PEN-AND-INK SKETCH BY REAR-ADMIRAL WALKER.)

delay at Helena. It also assured the success of the Steele's Bayou expedition, which was undertaken soon after the expedition to Yazoo Pass.

On the 19th of June, Admiral Porter received a notification from General Grant that he intended to open a general bombardment on the city at 4 A. M. and continue it until 10 o'clock. At the appointed time the bombardment commenced all along the army line and was joined on the water side by every gun-boat, the guns on scows and the mortars, until the earth fairly shook with the thundering noise. The gun-boats spread themselves all along in front of the city—cross firing on everything in the shape of a battery—but there was no response whatever—the works were all deserted; even the indefatigable Colonel Higgins, who loved to give his old shipmates a reminder of his gallantry, failed to fire a shot from his spiteful water-battery which had so often defied them.

After the fire was all over on the Union side, the city of Vicksburg was as quiet as the grave—not a soul could be seen. The women had all taken refuge in the shelters built in the hillsides, and every man that could hold a musket or point a bayonet was in the trenches. There they would stay for days and nights, lying in the mud and having what food they could get served out to them there.

The trials and privations which the Confederates suffered at this time can only be described by those who took part in the defence. The day on which they surrendered was a day of jubilee to them, for the Federal commanders served out full rations to everybody, which were eaten with an enjoyment that can only be realized by people who have been on quarter rations for a month.

Every effort was made to bring relief to the Confederates through Louisiana. General Price had been moving about some twelve miles from Young's Point among the swamps and bayous, and it was reported that he intended to seize Young's Point with some ten thousand men and try to provision Vicksburg by the front.

There was only a small force of Federal troops at Young's Point and Milliken's Bend at this time, and Price might have gained a partial success, but nothing substantial.

One attempt was made on Milliken's Bend, and quite a number of the garrison killed, but the gun-boats "Choctaw" and "Lexington" went immediately to the relief of our troops and the Confederates were driven off with loss.

The Marine Brigade under Brigadier-General Alfred Ellet had joined the squadron and reported to Admiral Porter. This

organization consisted of about two thousand men, well equipped and fairly disciplined. General Mower, a very brave officer, had about 8,000 men at Young's Point, and uniting the marine brigade with his troops he marched out to hunt up General Price's army,—found it and scattered it after a short and decisive battle. Price's army now left this district and troubled it no more. This was the last hope of the besieged, if they had ever hoped anything from so forlorn a scheme, and they sat in their trenches waiting for the time when the last ration should be served out.

On the 26th of June, this was the condition of affairs in the city. The gun-boats were by turns throwing shells day and night; the mortars kept up an incessant bombardment, which if it damaged no works demoralized the enemy's troops; a constant fire from the Army and Navy guns in the rear was kept up, day and night, and a 6-inch rifle battery taken from the gun-boats was served with great skill by General McArthur on the left flank. General McPherson had blown up what was called the citadel of the Confederate works, and mounted on the *debris* four 9-inch guns from the squadron, and some rifled 30-pounders.

These guns now commanded a large portion of the enemy's works, and when they opened fire the requiem of Vicksburg was sung by the shrieking shell, as they flew through the air carrying death and destruction all over the city.

On the 4th of July, 1863, that historic day was rendered more memorable by the surrender of Vicksburg to the Federal forces after a desperate but vain resistance, in which the Confederates had won the respect of their conquerors by the bravery and endurance displayed during a siege of seven months.

Southern historians have eulogized them for their faithful adherence to a cause which received its death-blow when they surrendered, but as this history is more particularly connected with the boys in blue than with the boys in gray we must leave the latter to the *future* military historian, who, when the excitements and prejudices of the time have worn away, will no doubt do them justice.

It was from no want of ability on the part of our military leaders that this surrender was not brought about sooner, but owing to the magnitude of the Confederate defences, which were intended to keep at bay any force the Federal Government could bring against them, and calculating that even were the city to be enveloped by troops the Confederacy could always send a sufficient number from the South to raise the siege. No doubt the will and energy were with the

Confederates to do as they thought could be done, but the great oak that has been torn and twisted by the winds for centuries must succumb at last to a tornado: the Confederacy had now received many telling blows, and its strength had begun to fail.

Many could see the end of the rebellion, and no one knew how near it was, better than the Confederates themselves. If doubts still remained with any of them, the fall of Vicksburg, the opening of the Mississippi from the Northern States to the sea, and the complete severance of the three most important States (as regarded supplies from others) would have removed their delusion. But they still fought on, though it was only with the spirit of the game-cock which strikes at random while the life-blood is flowing from its veins.

History has seldom had an opportunity of recording so desperate a defence on one side, with so much ability, courage, perseverance and endurance on the other. The Army of the Tennessee covered itself with honor of which no one can ever deprive it.

Though the Navy performed naturally a less conspicuous part than the Army, yet it did its duty in a manner which not even the most exacting could find fault with. Less zeal on the part of its officers and men would doubtless have extended the siege to some indefinite time.

A short summary of the work done by the Navy during the last forty days of the siege, may not be amiss. It will assure those who served at this critical period in the Navy, that they are not forgotten, and that their names will go down to history, honored as they deserve to be.

The mortar boats were kept at work for forty days, night and day, throwing shells into every part of Vicksburg and its works, some of them even reaching the trenches in the rear of the city. Three heavy guns placed on scows, one 9-inch, one 10-inch, and a 100-pounder rifle were placed in position a mile from the town, and commanded all the important water batteries. They kept up an incessant and accurate fire for fourteen days, while the path of the missiles was filled with destruction.

Five 8-inch, four 9-inch, two 42-pounder rifled guns and four 32-pounder shell guns were landed from the gun-boats at different points during the siege at the request of the officers commanding divisions, or of General Grant, and whenever officers and men could be spared from the fleet they were sent on shore to work the guns. As no dissatisfaction was expressed by the officers in command, it was presumed that the sailors performed their duty well.

The banks of the Mississippi were so watchfully guarded from Vicksburg to Cairo that the Army transports went

through with troops and stores, for a distance of about 450 miles, without molestation. The marine brigade, under Brigadier-General Ellet, was constantly landing along the river to break up guerilla warfare. Without a watchful eye on the Mississippi, on the part of the Navy, the operations of the Army would have been often interrupted. Only one Army steamer was disabled during the siege operations, and six or seven men killed on board of her.

When the whole of our Army was in the rear of Vicksburg, with the exception of a small force at Young's Point under General Mower, and that place was attacked by Major-General Price with 12,000 men, the marine brigade and the gun-boats united with General Mower's force to put the Confederates down, which was effectually done; and General Grant was satisfied that Young's Point would be taken care of by the Navy, while he was engaged in reducing the monster on the east bank of the Mississippi.

When the Army and Navy started out to capture Vicksburg the Mississippi was closed against the Federal forces from Helena to Port Hudson. This latter place fell shortly after the surrender of Vicksburg and the river was thus open to the sea.

There was no longer a doubt that the rebellious states were divided, and that the uninterrupted navigation of the "father of waters" and its tributaries was soon to be restored to the Union. So satisfied were the Confederate leaders that Vicksburg was the key to this great network of water which enriched the vast domain through which it found its way to the sea, that they staked their cause upon its retention. When they failed in this effort they were almost in their last throes, though their vitality enabled them to prolong the struggle (that was impoverishing and ruining their country,) for some time longer.

But there could be no hope of success for the Southern cause, when the great slave power which had controlled so many miles of the banks of the Mississippi no longer existed. The chain which held slavery together was broken, and the commerce of the nation went rejoicing on its way to the great ocean, once more to barter with the people of the outside world.

That 4th of July was a happy day to all those who had joined in the herculean efforts to bring about the desired end. At a certain hour the American flag was to be hoisted on the court-house where the Confederate emblem had so long flaunted in the face of the Union forces. At the moment the flag went up every vessel in the river, gun-boats and transports decked with flags

started from above and below to reach the levee in front of the city, sounding their steam whistles and firing a national salute that seemed like a renewed attack.

The flagship "Black Hawk" had scarcely reached the levee when General Grant and many of his officers rode up, and dismounting, went on board, where they were received with that warmth of feeling and hospitality that delights the heart of a sailor. The leader, who with his Army had achieved the greatest victory of the war, now received the congratulations of the officers of both Army and Navy, and although no one would judge from his manner that anything remarkable had happened yet he must have felt that this was the triumph of his life.

Sherman was one of those whose absence was regretted by all, but he was off with a division of the Army in pursuit of General Johnston, who had been lingering in the vicinity of Jackson in hopes of rendering aid to the besieged. He was too formidable an enemy to be allowed to remain near the prize which had been so hardly won, and Sherman had gone to show him that he must move his headquarters somewhere else.

But even while engaged on so important a duty, Sherman did not forget those of the Navy with whom he had co-operated for so many months, and he wrote a letter to the Admiral in which he expressed his satisfaction at the final result of the siege. This letter is so like the warm-hearted and gallant soldier, that no one can help feeling pleasure when he reads it, and it is here inserted.

HEADQUARTERS EXPEDITIONARY ARMY, }  
BLACK RIVER, July 4, 1863. }

DEAR ADMIRAL—No event in my life could have given me more personal pride or pleasure than to have met you to-day on the wharf at Vicksburg—a Fourth of July so eloquent in events as to need no words or stimulants to elevate its importance.

I can appreciate the intense satisfaction you must feel at lying before the very monster which has defied us with such deep and malignant hate, and seeing your once disunited fleet again a unit, and better still, the chain that made an enclosed sea of a link in the great river broken forever.

In so magnificent a result I stop not to count who did it. It is done and the day of our nation's birth is consecrated and baptized anew in a victory won by the united Navy and Army of our country.

God grant that the harmony and mutual respect that exist between our respective commanders, and shared by all the true men of the joint service, may continue forever, and serve to elevate our national character, threatened with shipwreck.

Thus I muse as I sit in my solitary camp out in the woods, far from the point for which we have jointly striven and so well, and though personal curiosity would tempt me to go and see the frowning batteries and sunken pits that have defied us so long, and sent to their silent graves so many of our early comrades in the enterprise, I feel that other tasks lie before me, and time must not be lost.

Without casting anchor, and despite the heat and the dust, and the drought, I must again into the bowels of the land, to make the conquest of Vicks-

burg fulfill all the conditions it should in the progress of this war.

Whether success attend my efforts or not, I know that Admiral Porter will ever accord to me the exhibition of a pure and unselfish zeal in the service of our country.

It does seem to me that Port Hudson, without facilities for supplies or interior communication, must soon follow the fate of Vicksburg and leave the river free; and to you the task of preventing any more Vicksburgs or Port Hudsons on the bank of the great inland sea.

Though further apart, the Navy and Army will still act in concert, and I assure you I shall never reach the banks of the river or see a gun-boat but I will think of Admiral Porter, Captain Breese, and the many elegant and accomplished gentlemen it has been my good fortune to meet on armed or unarmed decks of the Mississippi Squadron.

Congratulating you and the officers and men of your command at the great result in which you have borne so conspicuous a part,

I remain, your friend and servant,  
W. T. SHERMAN,  
Major-General.

Admiral D. D. PORTER,  
Commanding Fleet.

Army and Navy vied with each other in their efforts to alleviate the discomforts of those who had spent so many months under a merciless fire and suffered all the miseries attending a siege. The commanding General set the example by giving all the provisions, stores and transportation General Pemberton required for the officers and men of his Army, who had been paroled and allowed to return to their homes. The naval officers opened their stores for those officers who had families, and though they did not leave Vicksburg in much style, they were comparatively comfortable after suffering so many evils.

It was curious to see, an hour after the surrender, the soldiers of the two armies fraternizing as if they belonged to the same party; there was not, in fact, much difference between them, only one party had gone off on the wrong track, and, owing to bad leaders, had drifted considerably out of their course. Confederate officers on horseback would join naval officers, who, mounted on the sorry-looking steeds which had been loaned them, were riding about the city, and chat with them as pleasantly as if they were honored guests. Groups of officers in blue and gray mingled together in the most friendly manner.

Officers who visited houses where there were ladies, were received courteously if not warmly, and it was difficult to realize that the people of this battered city had been within a few days doing all they could to harm those with whom they now seemed to be on such pleasant terms. The people of Vicksburg were thoroughly subdued, they had gone through so much misery and endured so many privations that any change was acceptable.

Besides, their conquerors had been generous far beyond their expectations, and had

furnished them the means to depart and meet again their absent friends, with whom they had not communicated for many days.

The regret of being conquered was mitigated by the promised pleasure of seeing their loved homes, and getting away from scenes which continually reminded them of the horrors which they had undergone for so many months. Over 5,000 had died in hospital or been killed in the trenches since the close siege had commenced, and many must have left there with deep regrets for the loss of loved ones, who were buried in the soldier's cemetery without a stone to mark their resting places.

As time moves on and the military and naval history of the war are being chronicled by impartial authors, the facts connected with the most important events are being brought to light.

The war has been mostly written up through the reporters, who accompanied the Armies of the Republic, and although they have described the scenes in a most graphic manner, yet their accounts were given a coloring that detracted from, rather than embellished, the picture.

There was no scene of action during the war where more misrepresentations were made, or where less desire seemed to be manifested by the newspaper correspondents to do justice to both the naval and military movements, than at Vicksburg, and to read the numberless accounts that were transmitted from these to the various newspapers, one would form an altogether erroneous opinion of what took place.

Some of these descriptions of events were written with only a desire to please the public, and they were of a sensational character—pleasant reading over a breakfast table, but far from being history.

Many of the correspondents wrote from hearsay, and were not near the scene of action which they so graphically described, and the people at the North, greedy to drink in the news from distant battlefields, were satisfied to believe the wanton mistakes which were sent abroad without revision, and adopted them as the true version of affairs.

It was not, and is not now, generally understood, that the operations against Vicksburg were a combination of Army and Navy, in which each commander acted on his own responsibility, neither having received any instructions from their several Departments.

The plans for the capture of Vicksburg from the first to the last were arranged by General Grant and Admiral Porter, and carried out to the end with that unanimity of purpose which always leads to success.

General Grant never undertook any movement without consulting the commander of

the Mississippi Squadron, while the latter never did anything without consulting General Grant, and thus a harmony of action prevailed which probably never was obtained in any other military and naval co-operation.

Grant and Porter were of assimilated rank, and neither could give an order to the other; therefore it was only through that high courtesy bred in a purely military school, that so perfect an understanding could be arrived at, or that the wishes of either military or naval commander could be anticipated.

Some naval officers, after the reduction of Vicksburg, were disposed to find fault with General Grant for not being more demonstrative in his remarks concerning the work the Navy had performed; but Grant was never a demonstrative man; he left it to the Commander-in-chief of the Mississippi Squadron to mention the services of his own officers and vessels, and would, no doubt, have thought it peculiar if the naval commander had undertaken to go into an elaborate eulogy on the performances of the Army. But Grant, in his last days, did not forget the great help he received from the naval part of the expedition to capture Vicksburg. In his reminiscences of the war, he says :

"The Navy under Porter was all it could be during the entire campaign. Without its assistance the campaign could not have been successfully made with twice the number of men engaged. It could not have been made at all in the way it was, with any number of men without such assistance. The most perfect harmony reigned between the two arms of the service. There never was a request made, that I am aware of, either of the Flag-officer or any of his subordinates, that was not promptly complied with."

This should afford satisfaction to those naval officers who for a time doubted General Grant's generosity. Words of ordinary praise coming from him were of more import, than words from a man who was too lavish of his commendations. Those last words of Grant's were grains of gold, and will go down in history, never to be erased from the book of fame.

The commander of the Mississippi Squadron was contented with General Grant's reticence in regard to naval movements before Vicksburg. He felt satisfied that he alone could do full justice to the brave officers and men who served under him, as will appear from the following letter written after the surrender of Vicksburg.

[DETAILED REPORT OF ACTING-REAR-ADMIRAL PORTER.]

U. S. MISSISSIPPI SQUADRON, FLAG-SHIP }  
"BLACK HAWK," OFF VICKSBURG, }  
July 13, 1863. }

SIR—I have made reports to the Department of the different actions that have occurred on this river since the investment of Vicksburg; and it now

remains for me to give credit to the different officers who have participated in the events transpiring here.

When I took command of this squadron this river was virtually closed against our steamers from Helena to Vicksburg. It was only necessary to impress the officers and men with the importance of opening communication with New Orleans, and every one, with few exceptions, have embarked in the enterprise with a zeal that is highly creditable to them, and with a determination that the river should be opened if their aid could effect it.

With such officers and the able general who commanded the Army I have not feared for the result, though it has been postponed longer than I thought it would be.

First and foremost, allow me to speak of Captain Pennock, fleet captain and commandant of station at Cairo. To him I am much indebted for the promptness with which he has kept the squadron supplied with all that was required or could be procured.

His duty has been no sinecure, and he has performed it with an ability that could not have been surpassed by any officer of the Navy. He has materially assisted me in the management of the Tennessee and Cumberland squadrons, keeping me promptly informed of all the movements of the enemy, and enabling me to make the proper dispositions to check him, exercising a most discreet judgment in moving the vessels to meet the rebels when there was no time to hear from me.

The war on the banks of the Tennessee and Cumberland has been carried on most actively. There has been incessant skirmishing between the guerrillas and gun-boats, in which the rebels have been defeated in every instance. So constant are these attacks that we cease to think of them as of any importance, though there has been much gallantry displayed on many occasions.

Lieutenant-Commanders Phelps and Fitch have each had command of the Cumberland and Tennessee Rivers, and have shown themselves to be most able officers. I feel no apprehension at any time with regard to movements in that quarter. Had it not been for the activity and energy displayed by Lieutenant-Commander Fitch, Captain Pennock and Lieutenant-Commander Phelps, General Rosecrans would have been left without provisions.

To Captain Walke, Commander Woodworth, Lieutenant-Commanders Breese, Foster, Greer, Shirk, Owen, Wilson, Walker, Bache, Murphy, Selfridge, Pritchett, Ramsay and Acting-Volunteer-Lieutenant Hoel, I feel much indebted for their active and energetic attention to all my orders, and their ready co-operation with the Army corps commanders, at all times, which enabled them to carry out their plans successfully.

The "Benton," Lieutenant-Commander Greer, "Mound City," Lieutenant Byron Wilson, "Tuscumbia," Lieutenant-Commander Shirk, "Carondelet," Acting Lieutenant Murphy, and the "Sterling Price," Commander Woodworth, have been almost constantly under fire of the batteries at Vicksburg since the forty-five days' siege commenced.

The attack of the 22d of May, by the "Benton," "Mound City," "Carondelet" and "Tuscumbia" on all the water batteries, in which *three* were silenced and four guns injured or dismantled, was one of the best contested engagements of the kind during the war.

On the next attack of the same gun-boats, when General Grant opened all his batteries for six hours, the river batteries were *all* silenced and deserted, and the gun boats moved up and down the river without having a shot fired at them, showing the moral effect of the first attack.

The attack of the "Cincinnati" (Lieutenant-Commanding Bache), on the outer water battery

will long be ranked among the most gallant events of this war; and though Lieutenant Bache had the misfortune to have his vessel sunk under him, he well deserves the handsome commendations bestowed upon him by the Department.

To Lieutenant-Commander Ramsey, of the "Choctaw," was assigned the management of three heavy guns placed on scows and anchored in a position to command the town and water batteries. Every gun the enemy could bring to bear on these boats was fired incessantly at them, but without one moment's cessation of fire on the part of our seamen, though the enemy's shots and shells fell like hail among them. This floating battery completely enfiladed the enemy's batteries and rifle-pits in front of General Sherman, and made them untenable.

The mortar-boats were under charge of gunner Eugene Mack, who for thirty days stood at his post, the firing continuing night and day.

He performed his duty well and merits approval. The labor was extremely hard, and every man at the mortars was laid up with sickness, owing to excessive labor. After Mr. Mack was taken ill, Ensign Miller took charge and conducted the firing with marked ability. We know that nothing conduced more to the end of the siege than the mortar firing, which demoralized the rebels, killed and wounded a number of persons, killed the cattle, destroyed property of all kinds, and set the city on fire. On the last two days we were enabled to reach the outer works of the enemy by firing heavy charges of twenty-six pounds of powder; the distance was nearly three miles, and the falling of shells was very annoying to the rebels, to use the words of a rebel officer, "your shells intruded everywhere."

Lieutenant-Commander Breese has been very efficient in relieving me of a vast amount of duty, superintending personally all the requirements made on the Navy, and facilitating the operations of the Army in every way that laid in his power. In every instance where it was at all possible to bring the "Black Hawk" into action against the enemy's batteries, he has not hesitated to do so, though she is not fortified exactly for such a purpose. His long range guns have done most excellent service at different times.

I beg leave to mention the different commanders of the light draughts who have carried out my orders promptly, aided in keeping guerillas from the river, convoyed transports safely, and kept their vessels in good condition for service, viz: Acting-Volunteer-Lieutenant George W. Brown, commanding "Forest Rose"; Acting-Volunteer-Lieutenant C. Dominey, commanding "Signal"; Acting-Volunteer-Lieutenant J. H. Hurd, commanding "Covington"; Ensign Wm. C. Hanford, commanding "Robb"; Acting-Master J. C. Bunner, commanding "New Era"; Acting-Volunteer-Lieutenant John Pierce, commanding "Petrel"; Acting-Volunteer-Lieutenant J. V. Johnstone, commanding "Romeo"; Acting-Master W. E. Fentress, commanding "Rattler"; Acting-Volunteer-Lieutenant T. E. Smith, commanding "Linden"; Acting-Volunteer-Lieutenant E. C. Brennan, commanding "Prairie Bird"; Acting-Volunteer-Lieutenant J. Goudy, commanding "Queen City." There are others who deserve commendation, but these seem to be the most prominent.

The action of the 4th of July, at Helena, wherein the "Taylor" participated so largely, has already been reported to the Department.

There is no doubt left in the minds of any, but that the "Taylor" saved Helena, for, though General Prentiss fought with a skill and daring not excelled in this war, his little force of thirty-five hundred men were fast being overpowered by the enemy with eighteen thousand men, when the "Taylor" took a position and changed the fortunes of the day.

I must not omit to mention Acting-Volunteer-

Lieutenants Hamilton and Richardson of the powder vessels "Great Western" and "Judge Torrence." They were unremitting in their attention to their duties during the siege, supplying without delay every requisition made on them by the Army and Navy, and volunteering for any service.

When the Army called on the Navy for siege guns, I detailed what officers and men I could spare to man and work the batteries.

Lieutenant-Commander Selfridge had command of the naval battery on the right wing in General Sherman's corps. This battery was worked with marked ability, and elicited the warmest praises from the commanding general. One thousand shells were fired into the enemy's works from Lieutenant-Commander Selfridge's guns. His services being required up the river, I relieved him a few days before the surrender, and Lieutenant-Commander Walker supplied his place and conducted the firing with the same ability.

Acting-Master Charles B. Dahlgren was ordered to report to General McPherson for duty, and was assigned the management of the 9-inch guns, which were admirably served.

Acting-Master Reed, of the "Benton," had charge of the batteries at Fort Benton—so named by General Herron in honor of the occasion. General Herron generously acknowledged the services of those I sent him, which communication I enclose with this report.

I have endeavored to do justice to all who were immediately engaged in the struggle for the mastery of the Mississippi. To the Army do we owe immediate thanks for the capture of Vicksburg; but the Army was much facilitated by the Navy, which was ready at all times to co-operate. This has been no small undertaking. The late investment and capture of Vicksburg will be characterized as one of the greatest military achievements ever known. The conception of the siege originated with General Grant, who adopted a course in which great labor was performed, great battles were fought and great risks were run. A single mistake would have involved us in difficulty, but so well were all the plans matured, so well were all the movements timed, and so rapid were the evolutions performed, that not a mistake has occurred from the passage of the fleet by Vicksburg and the passage of the Army across the river, up to the present time. So confident was I of the ability of General Grant to carry out his plans when he explained them to me, that I never hesitated to change my position from above to below Vicksburg. The work was hard, the fighting severe, but the blows struck were incessant.

In forty-five days after our Army was landed, a rebel Army of 40,000 men had been captured, killed and wounded, or scattered to their homes perfectly demoralized, while our loss has been only about 5,000 killed, wounded and prisoners, and the temporary loss of one gun-boat.

The fortifications and defences of the city exceed anything that has been built in modern times, and are doubly unassailable from their immense height above the bed of the river.

The fall of Vicksburg insured the fall of Port Hudson and the opening of the Mississippi River, which, I am happy to say, can be traversed from its source to its mouth, without apparent impediment, the first time during the war.

I take this opportunity to give to Mr. Fendall and Mr. Straus, assistants in the Coast Survey, the full credit they deserve for their indefatigable industry.

Since they have been attached to the Squadron, they have been connected with almost every expedition that has been undertaken; they have kept both Army and Navy supplied with charts, when they could not otherwise be obtained; they were found ready at all times to go anywhere or do any-

thing required of them, whether it was on a gun-boat expedition or in the trenches before Vicksburg, engineering, when the general-commanding asked for volunteers from the Navy.

They have added to our collection of maps many geographical corrections which are valuable, and they have proved to me that no squadron can operate effectively without a good corps of surveyors.

I have the honor to be, very respectfully, your obedient servant,

DAVID D. PORTER,  
*Acting-Rear-Admiral, Commanding Mississippi Squadron.*

HON. GIDEON WELLES,  
*Secretary of the Navy, Washington, D. C.*

CONGRATULATORY LETTER TO REAR-ADMIRAL PORTER ON THE SURRENDER OF VICKSBURG.

NAVY DEPARTMENT, July 13, 1863.

SIR—Your dispatch of the 4th instant announcing the surrender of Vicksburg on the anniversary of the great historic day in our national annals, has been received.

The fall of that place insures a severance of the rebel territory, and must give to the country the speedy uninterrupted navigation of the rivers which water and furnish the ocean outlet to the great central valley of the Union.

For the past year the key to the Mississippi has been Vicksburg, and so satisfied of this was the rebel chief who pioneered the rebellion and first gave the order to open the fires of civil strife, that he staked his cause upon its retention.

By the herculean efforts of the Army under the admirable leadership of General Grant, and the persistent and powerful co-operation of the Navy, commanded by yourself, this great result, under the providence of Almighty God, has been achieved.

A slave empire, divided by this river into equal parts, with liberty in possession of its banks, and freedom upon its waters, cannot exist.

The work of rescuing and setting free this noble artery, whose unrestricted vital current is essential to our nationality, commenced with such ability by the veteran Farragut and the lamented Foote, and continued by Davis, is near its consummation.

You have only to proceed onward and meet that veteran chief whose first act was to dash through the gates by which the rebels assumed to bar the entrance to the Mississippi, whose free communication to and above New Orleans he has ever since proudly maintained.

When the squadrons of the Upper and Lower Mississippi shall combine, and the noble river be again free to a united people, the nation will feel its integrity restored, and the names of the heroic champions who signalized themselves in this invaluable service, will be cherished and honored.

Present and future millions on the shores of those magnificent rivers which patriotism and valor shall have emancipated, will remember with unceasing gratitude, the naval heroes who so well performed their part in these eventful times.

To yourself, your officers, and the brave and gallant sailors who have been so fertile in resources, so persistent and enduring through many months of trial and hardship, and so daring under all circumstances, I tender, in the name of the President, the thanks and congratulations of the whole country, on the fall of Vicksburg.

Very respectfully, etc.,  
GIDEON WELLES,  
*Secretary of the Navy.*  
REAR-ADMIRAL DAVID D. PORTER,  
*Commanding Mississippi Squadron, Vicksburg, Miss.*

## CHAPTER XXX.

NAVAL AND MILITARY EXPEDITION TO YAZOO CITY.—CAPTURE OF THE ENEMY'S WORKS.—THE "BARON-DE-KALB" BLOWN UP BY TORPEDOES.—EXPEDITION UP THE RED, BLACK AND TENSAS RIVERS, UNDER LIEUTENANT-COMMANDER SELFRIDGE.—DESTRUCTION OF ENEMY'S VESSELS AND STORES.—THE MARINE BRIGADE, ITS IMPORTANT SERVICES.—OPERATIONS OF LIEUTENANT-COMMANDER LE ROY FITCH ON THE TENNESSEE RIVER.—ATTACK ON COLORED TROOPS AT MILLIKEN'S BEND.—ATTACK ON HELENA, ARKANSAS, BY GENERAL PRICE.—DEFEAT OF THE ENEMY OWING TO THE FIRE OF THE GUN-BOAT "LEXINGTON."—THE RAID OF GENERAL JOHN MORGAN INTO OHIO AND INDIANA, AND THE CAPTURE OF HIS FORCES OWING TO THE ENERGY OF LIEUTENANT-COMMANDER LE ROY FITCH WITH HIS GUN-BOATS.—GALLANT CONDUCT OF ENGINEER DOUGHTY IN CAPTURING TWO OF THE ENEMY'S STEAMERS.—EULOGY UPON THE PILOTS AND ENGINEERS OF THE MISSISSIPPI SQUADRON.—IMPORTANT SERVICES OF LIEUTENANT-COMMANDER PHELPS IN THE TENNESSEE RIVER.—VESSELS EMPLOYED AT VICKSBURG DURING THE SIEGE, WITH LIST OF OFFICERS.—VESSELS EMPLOYED AT OTHER POINTS ON THE MISSISSIPPI RIVER, 1863-65.

**A**FTER the surrender of Vicksburg, there was still much to be done in the vicinity, particularly in driving off the Confederates, who lingered on the banks of the Yazoo and fired on our small gun-boats as they patrolled that river.

A report reached Vicksburg that General Joseph E. Johnston was fortifying Yazoo City, with the apparent intention of occupying that neighborhood with his Army. For this the region was well adapted, being rich in cattle and grain, "hog and hominy."

It was also reported that a number of large river-steamers that had been employed by the enemy, and had been hiding in the Tallahatchie, were at Yazoo City and employed in supplying Johnston's troops.

A military and naval expedition was therefore arranged to go after these steamers and break up the enemy's resort at Yazoo City.

The "Baron de Kalb," "New National," "Kenwood" and "Signal" composed the naval part of the expedition under Lieutenant-Commander John G. Walker, while General Herron, with five thousand troops in transports, composed the military part.

On approaching Yazoo City the enemy appeared in force, and the "DeKalb," being the heaviest vessel, rushed ahead and

opened her batteries to ascertain the number and position of the enemy's guns. Finding the defences formidable, Walker dropped back and notified General Herron, who at once landed his troops and the Army and Navy made a combined attack. After a sharp conflict the enemy fled, previously setting fire to the four large steamers in their possession, which before the war had been considered the finest passenger vessels on the Mississippi River. General Herron captured the enemy's rear-guard of two hundred and fifty men and pressed on after the retreating foe, taking prisoners every minute.

There were six heavy guns mounted in the enemy's works and one vessel was captured which had formerly been a gun-boat. Unfortunately, while the "De Kalb" was moving slowly along and firing on the enemy she ran foul of a floating torpedo, which exploded, and the vessel sank almost immediately, a second torpedo exploding under her stern as she went down.

The squadron had pushed ahead with too much enthusiasm to bring the enemy to close quarters where grape-shot and canister would tell. It seems that Lieutenant Isaac N. Brown, of the Confederate Navy, had on a former occasion been prevented by the citizens from placing torpedoes in front of

Yazoo City, and it was supposed that it would not be permitted on this occasion for fear of the consequences in the destruction of the property of the inhabitants, should the Union forces get possession of Yazoo City. Lieutenant-Commander Walker therefore felt confident that he could proceed without encountering any of these destructive machines.

The loss of the "DeKalb" was a serious one—four of the armored gun-boats lay at the bottom of the rivers—the "Cincinnati" before Vicksburg, and the "Cairo" and "DeKalb" in the Yazoo, while the "Indianola" was sunk below Vicksburg. But this is the fortune of war—to achieve anything risks must be run, and while a Confederate flag floated in the breeze the officers and men of the Mississippi squadron never stopped to count the cost in pursuit of it.

With the exception of the loss of the "DeKalb," whose officers and men were all saved, the expedition was a complete success. The enemy's rendezvous was broken up, and a large amount of cotton, beef and pork captured, the enemy's forces driven away and many of them captured by General Herron. Yazoo City was never again troubled by the Confederates planting batteries there.

It had been an important place for the Confederates, and but for the constant attention it received from the Navy and the destruction of all the vessels hiding there, they would probably have sent down a force that would have destroyed our iron-clad gun-boats, and perhaps have made a material change in the final result of the campaign.

The Confederate government relied a great deal on the completion of the three iron-clad rams building at Yazoo City, and with their assistance hoped to drive off the Federal squadron from below Vicksburg and thereby cause the siege to be raised—while Haines' Bluff could block the way with its guns and the huge raft which filled up the Yazoo River for half a mile. The Confederates worked on their iron-clads without molestation, and even when General Grant had gained the rear of Vicksburg they relied on General J. E. Johnston's army to protect them while they completed the work on the rams.

If the "Arkansas," which ran the gauntlet of Farragut and Davis' squadrons, was a specimen of the iron-clad that could be built at Yazoo City, the Federals had cause to congratulate themselves that the Yazoo was open by the evacuation of Haines' Bluff, and the last attempt of the Confederates to carry on naval operations in that quarter abandoned.

At the same time that the expedition was sent up the Yazoo another was dispatched

up the Red River, ascending the Black and Tensas Rivers. Lieutenant-Commander Selfridge penetrated to the head of navigation on the latter stream, at Tensas Lake and Bayou Macon, thirty miles above Vicksburg, and within five or six miles of the Mississippi River.

Parties of the enemy's riflemen were in the habit of crossing this narrow strip of land and firing upon transports passing up and down the Mississippi, sometimes killing women and children who happened to be on board. Quite a large force of Confederates were assembled in that quarter, considering themselves secure from the attacks of the gun-boats, the distance by water from Vicksburg being so great: the route being first to the mouth of the Red River, then up the Black and Tensas, both narrow streams, to Tensas Lake and Bayou Macon. The guerillas fancied they could carry on their raids with impunity. So when Selfridge appeared with his little flotilla on the 12th of July, they were taken by surprise. As soon as the gun-boats hove in sight the enemy's transports, of which there were here quite a number, made their escape among the intricate water-ways with which that region abounds, and where for want of pilots they could not be immediately followed.

Selfridge now divided his forces, sending the "Manitou" and "Rattler" up the Little Red River, a small tributary of the Black, and the "Forest Rose" and "Petrel" up the Tensas. The night was dark and rainy and the vessels had to grope their way carefully along, keeping a good lookout ahead. Suddenly the "Manitou" and "Rattler" came upon a very large steamer, the finest of those now remaining afloat, which had been the pride of the Mississippi River before the war. This was the "Louisville," afterwards converted into a war-vessel carrying fifty guns.

Selfridge's other two vessels about the same time captured the steamer "Elmira," loaded with stores for the Confederate army under General Walker, who on hearing of the arrival of the Federal gun-boats embarked his army and disappeared up some of the tortuous channels known only to pilots. Selfridge started in pursuit and soon overtook two of the transports, but the Confederates immediately abandoned the vessels after setting them on fire, and they were totally destroyed.

One steamer loaded with ammunition escaped above the fort at Harrisonburg, a strong work impregnable to wooden gun-boats with light batteries. The expedition could proceed no further in this direction.

Lieutenant-Commander Selfridge fortunately learned of a large amount of ammunition that had been sent up from Natchez,

whence large quantities of provisions, stores and ammunition were often transported. Natchez took no part in the war beyond making money by supplying the Confederate armies.

Selfridge captured at one place fifteen thousand rounds of smooth-bore ammunition, one thousand rounds of Enfield rifle and two hundred and twenty four rounds of fixed ammunition for guns, a rifled thirty-pounder Parrott gun-carriage, fifty-two hogsheads of sugar, ten puncheons of rum, nine barrels of flour and fifty barrels of salt; and General Walker's army being left without a supply of ammunition, he moved his forces into the interior and troubled the Mississippi no more. Thus these constant raids of the gun-boats harassed and weakened the enemy, broke up the steamboat transportation so necessary for their movements, and deprived them of ammunition and provisions, without which they could not fight.

One portion of Admiral Porter's command—the Marine Brigade—is entitled to special mention. When he assumed command of the Mississippi Squadron, the Admiral applied for a force of marines to be carried in suitable vessels accompanying the gun-boats and to be landed at points where parties of guerillas were wont to assemble. The gun-boats alone could not break these parties up, and it was therefore necessary to have trained soldiers at hand to chase and annihilate them.

The Navy Department could not furnish the marines asked for, but the War Department undertook to organize a Marine Brigade, and also to furnish the necessary vessels to carry these soldiers about. The command was given to Brigadier-General Alfred Ellet, and as the members of this family had before proved themselves brave and enterprising men several of them were given appointments in the Marine Brigade.

As soon as this organization was fully equipped General Ellet was ordered by the Commander-in-chief of the Mississippi squadron to proceed to the Tennessee River before reporting at Vicksburg, and help put down the numerous guerilla bands that infested the banks of that stream. These guerillas, although enlisted by the Confederates in the usual way as soldiers, were in fact made up of men too cowardly to join the regular Army and worthless fellows who would rather hang around home, pretending to save the Confederacy, than go where bullets were flying thick and fast on the field of battle. During the whole war bitterness and treachery flourished in Tennessee owing to this guerilla system. In some parts of the State almost every family had one or more of these quasi-soldiers be-

longing to a gang whose occupation was firing on unarmed steamers, and seldom or ever, even when supported by artillery, making a successful stand against the light gun-boats called "tin-clads." Now and then they would receive severe punishment and some of them get killed; occasionally when overtaken they were summarily dealt with.

In April, 1863, Lieutenant-Commander LeRoy Fitch was patrolling the Tennessee River with the gun-boats "Lexington," "Robert," and "Silver Lake." This active officer made matters so uncomfortable for the guerillas that they did not often come within range of his guns. One of his first acts was to take on board his vessels one hundred and fifty soldiers from Fort Hindman, under command of Colonel Craig, and visit the landings infested by guerillas. At Savannah, where Lieutenant-Commander Fitch landed two hundred soldiers and sailors, he burned a mill which was used in making cloth to clothe the guerillas; a quantity of horses, mules, and wagons belonging to the Confederate cavalry were also made prize of war.

The plantations of those persons who were known to have aided and abetted the outrages of the guerillas were destroyed, as an example to others. The war had been carried on by these worthless marauders in such a way that this course was found to be necessary to put a check on operations which had the effect of embittering both parties without in any way benefitting the Confederate cause.

On the bodies of some of the guerillas who were killed in one of the attacks was found an oath of allegiance to the United States Government. A certain class of persons would take the oath of allegiance to the United States one day, to secure protection, and the next would be found firing upon unarmed vessels.

The command of Lieutenant-Commander Fitch was increased as fast as the small stern-wheel merchant-steamers could be altered into gun-boats, the Navy Department having authorized Admiral Porter to purchase as many of these as he deemed requisite to put down the guerillas and protect loyal citizens, and a large number of naval vessels were soon in commission on the western waters. One requisition alone for seven hundred pieces of ordnance will show how this tin-clad service was increased. Many engagements occurred when Lieutenant-Commander Fitch had a sufficient number of vessels to effectually patrol the Tennessee, where by night and day he was indefatigable in trying to put down the marauders. The gun-boats never remained at a bank for fear of a surprise, and when anchored in the stream men were always at the

guns, and at night all lights were kept covered.

Such was the condition of affairs when Brigadier-General Alfred Ellet, with the marine brigade, entered the Tennessee in five steamers, admirably equipped for the accommodation of the men, and united with Lieutenant-Commander Fitch to suppress the guerillas. These combined forces penetrated to the furthest part of the river when the water would permit, and when the river was very low Lieutenant-Commander Fitch was provided with a class of gun-boats drawing only sixteen inches of water, which could almost always make their way to any desired point. The remarkable energy and perseverance of Fitch won the approbation of the Union men in Tennessee, and gained the entire confidence of his Commander-in-chief. His officers were all volunteers, but with his example and training they were quite equal to any in the regular service for the duty in which they were engaged.

The Confederates were much surprised at the advent of the Marine Brigade, who were gun-boat men and soldiers at the same time, and could land fifteen hundred troops with field artillery at a moment's notice to pursue the enemy. In fact, when Fitch and Ellet co-operated, they made short work of the Confederates, who had really been a scourge to both parties in Tennessee.

General Ellet's command included cavalry, with which he made night marches to pounce on the camps of the guerillas and destroy the stores on which these marauders relied for subsistence. The Marine Brigade also co-operated with the Army under General Dodge and afforded material assistance in breaking up the command of the Confederate general, Cox, some eighteen miles above Savannah on the Tennessee.

General Ellet's command was not popular with the Confederate inhabitants, as the former did not trouble themselves much about the "amenities of war." They saw so many "irregularities" committed by the enemy that they retaliated in many instances by destroying the property of disloyal persons, and often returned from an expedition with sufficient stores captured from the enemy to last the command a month.

On the morning of April 25, 1863, the Marine Brigade was attacked at a place called Duck River by a Confederate force of seven hundred men and two field-pieces under Colonel Woodward. It seems the enemy mistook the Marine Brigade vessels for transports and were quite unprepared for the reception they encountered. As soon as possible a landing was effected and the enemy pursued for twelve miles. Major

White, of the 6th Texas Rangers, was found mortally wounded in a house four miles from the field of battle where eight of the Confederates were killed.

The water in the Tennessee River becoming too low for the Marine Brigade steamers to operate, they left the river on the 7th of May, having destroyed great numbers of boats and scows and all the ferry-boats they could find. Tennessee became not only a battle-ground for the contending armies, but her vindictive home-guards brought upon her more misery than can be compensated for by fifty years of prosperity.

On his way down to Vicksburg General Ellet heard of some Confederate troops at a place called Austin and dispatched a cavalry force of two hundred men, commanded by Major Holland, in pursuit, followed by infantry. The cavalry encountered the main body of the Confederates, one thousand strong, with two pieces of artillery. Holland found his retreat cut off, but by getting a good position and dismounting his men he managed to hold his ground until the infantry came up, when the enemy retreated leaving five of their number dead on the field. The Union loss was two killed and nineteen wounded. A wagon train and a quantity of arms were captured, together with three prisoners, and the town of Austin was set on fire and destroyed with a large amount of provisions, thus breaking up a nest of guerillas who were making preparations to commence a system of firing on vessels as they had done on the Tennessee.

While the town was on fire numerous explosions showed where arms and ammunition had been secreted.

On the 29th of May the Marine Brigade reached the Yazoo River, after having performed much valuable service.

After the Brigade left the Tennessee River the guerillas re-commenced their operations, but the commanding officers of the small gun-boats exerted themselves to the utmost to make up for the loss of the landing parties. On the 19th of June Acting-Master W. C. Hanford, commanding the U. S. S. "Little Rebel," heard that a party of guerillas under Colonel Bissell were lying in wait for gun-boats, proposing to give them one round from their battery and then make off. Hanford mounted two howitzers as field-pieces, manned them with sixteen of his best men, and started them in search of the marauders.

On the following morning, June 19th, on hearing the firing of guns the "Robb" and the "Silver Cloud" got underway and ran down to the point where the battery had been placed. Here Hanford found that Bissell had attacked his battery with four hundred men, but as the Confederates advanced, four abreast, the Union guns opened on

them, making large gaps in their ranks and firing so rapidly that they at length turned and fled, having lost about fifty in killed and wounded, while Hanford had but one killed and two wounded.

On this occasion the gun-boats fired with grape and canister at close quarters, and the enemy's column was enfiladed on both sides as it advanced. The Confederates had dismounted from their horses to charge the battery.

In June, 1863, a great sensation was created throughout the country by a thrilling account of an attack made on a body of colored troops stationed at Milliken's Bend, by a portion of the Confederate army under General Price. Milliken's Bend is but two or three miles above Young's Point and was in daily communication with that place.

It was a mooted question whether the blacks enlisted as soldiers would be reliable in battle and they were mostly employed, as at Milliken's Bend, in guarding stores or in other duty, where they could relieve white soldiers sent to the front. As far as appearances went, the colored troops were good soldiers and many enthusiasts declared that they would stand the shock of arms as well as the whites.

At Milliken's Bend was also a portion of a white regiment which was looked upon by those who were not enthusiasts as by far the most reliable part of the garrison.

On the 6th of June, the Admiral, who had general charge of matters in that quarter, hearing that some of the enemy's troops had been seen hovering around Milliken's Bend, sent the "Choctaw," Lieutenant-Commander F. M. Ramsay, up to that place with orders to be ready for an emergency. At 2.15 A. M., on the 7th instant, an Army officer hailed the "Choctaw" and reported that his pickets had been attacked and driven in by the enemy. A few minutes later firing was heard in the main camp. The "Choctaw" immediately opened in direction of the enemy with a hundred-pounder rifle and a nine-inch shell-gun, the Federal troops, with the exception of the 23d Iowa, retreating at the first attack of the enemy.

It was impossible for the "Choctaw" to fire except by signs from those on shore, who pointed out the direction of the enemy; but the practice turned out to be good, and at 8.30 the Confederates retreated much cut up. The "Lexington," Lieutenant-Commanding George M. Bache, reached the scene of action as the enemy were making off and opened on the retreating columns with eight-inch shells.

Had it not been for the presence of a gun-boat, the enemy would have captured everything at Milliken's Bend, for they were in strong force and charged right over the col-

ored troops, who fled to the trenches and thence fired at random. The enemy then swarmed over the parapets and shot right down among the crouching blacks, filling the trenches with killed and wounded. A majority of the slain had bullet-holes in the top of their heads, showing that the brilliant defence made by the black troops was altogether imaginary, the only resistance being made by the white soldiers.

Such statements were often made by sensational correspondents during the war. In the present instance the black troops were given credit for bravery which they did not display and the 23d Iowa regiment and the Navy were completely ignored.

In justice to the colored troops it may be said that their white officers were the first to run away, and that with better leaders the soldiers might have stood their ground.

On the 3d of July, General Ellet, with the Marine Brigade, was ordered to proceed to Goodrich Landing, where some Confederate raiders had attacked a detachment of United States troops there stationed. When the brigade reached Goodrich Landing the troops were found under arms, and the presence of the enemy was indicated by the burning mansions, cotton-gins and negro quarters in the vicinity—one of those acts of wanton destruction for which the class of Confederate soldiers along the river banks were famous. If they could not find an enemy to harass they would often destroy the property of their own people.

The entire Marine Brigade, artillery, infantry and cavalry, was immediately landed and started in pursuit of the Confederate forces; Colonel Wood, who commanded the colored troops at this point, accompanying the brigade. The cavalry overtook the enemy at Bayou Tensas, and detained him until the main body of the Union forces arrived. The enemy had a strong force of cavalry and several pieces of artillery, and endeavored to recross the Bayou and turn the right flank of the brigade. In this movement he met with a severe repulse. The brigade then advanced on the enemy, who rapidly retreated, throwing away all the plunder taken from the houses that had been burned, including a fine piano! These were some of the men enlisted to "protect" the Southern people, who, finding the latter already well treated and cared for by the Union forces, turned their vengeance against the inhabitants of their own section, and overcoming the small garrison at Goodrich Landing destroyed and carried off everything on which they could lay hands.

But this is the kind of war one must expect to be waged by a government without power to maintain the position it has assumed and liable at any moment to collapse. As the cause of rebellion became

more hopeless, the rancor of the guerillas increased, and there were frequent occurrences which curdled the blood in the veins of loyal people. Yet some of the people, while well satisfied to receive protection from the Union forces, would give information to these predatory bands and secrete them when in danger.

General Ellet gave the party at Goodrich Landing a lesson they did not soon forget, and having completely routed the enemy re-embarked his command and returned to the mouth of the Yazoo River.

We have dwelt on these events to show the character of the war as waged by the Confederates in that section of the country, and the energy and enterprise of the officers and men of the Mississippi squadron.

The Army under General Price, or his subordinate, General Holmes, which hung about the swampy region to the west of Vicksburg, found, on the surrender of that place, their occupation gone. All the Federal stores and munitions of war were transferred from Young's Point and Milliken's Bend to Vicksburg, and the Confederates could no longer hope to replenish their stock by raids on these points. General Price therefore determined to change his base and carry on operations elsewhere. He was an active, enterprising officer, and had under his command some twelve or fourteen thousand men who were inured to hardships and capable of long and rapid marches.

In the latter part of June, Admiral Porter received information from deserters that General Price was moving with a large force from Arkansas towards the Mississippi, intending to unite with other troops near Vicksburg to operate along the river. The Admiral immediately made arrangements to meet this force by sending gun-boats to such points as it would be most likely to attack. The "Taylor," Lieutenant-Commander Prichett, "Bragg," Lieutenant-Commanding Bishop, and the "Hastings," were sent to Helena, where Major-General B. M. Prentiss was in command of the U. S. forces.

That officer was rather astonished when the gun-boats arrived and he was informed that he might soon expect an attack. He had expected nothing of the kind and felt sure he could defend his post without the aid of gun-boats, although he was glad to welcome them. The "Bragg" came to anchor off Helena, and the "Taylor" and "Hastings" cruised up and down the river in search of guerillas, Lieutenant-Commander Prichett quite neglecting the instructions he had received—under no circumstances to leave Helena without positive orders from the Admiral.

However, on one of his expeditions, Prichett happened to read his orders over again,

and seeing how positively they were worded, hastened back to Helena, where he learned that General Prentiss was expecting an attack from Price with twelve to fourteen thousand troops, to oppose which the Union commander had about three thousand five hundred men. Prentiss made the best disposition possible of his small force, determined to hold the works as long as he could. This was on the 4th of July, the very day of the surrender of Vicksburg.

Prichett had hardly got into the position he deemed most desirable to render the fire of the gun-boats effective, when the enemy appeared in sight and attacked the centre defences in overwhelming force. These were soon carried, as also a battery on the hills in the rear which commanded Helena and all the other defences.

The enemy then pushed his forces down the slope of the ridge into the gorges, and his sharpshooters under cover commenced driving the artillerists from their guns in the main fort. The Confederates had planted their artillery above and below the turn in the most commanding positions and opened fire on the line of defensive works across the river bottom, about one thousand yards in width, and large bodies of troops were massed near to secure the advantages the capture of the forts on the heights would offer for closing upon the town of Helena.

The "Taylor" at once covered the approach to Helena by what was called the "old farm road;" but discovering the enemy pouring down the hills, after capturing the works in the Federal centre, Lieutenant-Commander Prichett took up a new position where his broadside guns enfiladed the ravines which were filled with Confederates, and bow-guns at the same time played upon the enemy's batteries above, and his stern guns upon those below.

This was a reception General Price had never dreamed of. He had attacked Helena with the expectation of "walking over the course," and his first success in capturing the most commanding position in the defences confirmed him in his idea of an easy victory, but the broadsides of the gun-boat soon put a new face on affairs. The slaughter caused by the "Taylor's" guns was terrible, the shells falling in the thickly massed troops of the enemy and tearing them to pieces. A panic seized the enemy and he was soon in full retreat, pursued by the fire of the gun-boat, until the road was strewn with the killed and wounded.

Those of the Confederates who had gained the inside of the Union works, seeing the slaughter and retreat of their comrades, lost no time in moving to the rear, urged on by the Federal garrison, who, encouraged by the success of the "Taylor,"

added the fire of their batteries to that of the gun-boat.

The victory was complete, and it took little more time than we have occupied in telling the story. The whole affair was one continuous roar of cannon and bursting of shells, the latter thrown with an accuracy the crew of the "Taylor" had acquired by long experience. Three hundred and eighty of the Confederates were left dead on the field near the forts and in the ravines, eleven hundred were wounded and as many more taken prisoners. For several days the Federal cavalry were constantly discovering killed and wounded, and steamboats on the river were hailed by deserters from Price's army, asking to be taken on board. No troops were ever worse beaten or more demoralized.

Although the Union troops had stood manfully against the attack of Price's apparently overwhelming force, the slaughter in the enemy's ranks was due to the judgment shown by Lieutenant-Commander Prichett in taking such an admirable position, where he could use his guns effectively. On two previous occasions—at Belmont and at Pittsburg Landing—the "Taylor" had saved the day to the Union cause, yet we doubt if a vast majority of the American people are aware that such a vessel ever existed, and we deem it only fair to say that the garrison of Helena, although they fought with a courage unsurpassed during the war, owed their victory over an enemy which so greatly outnumbered them entirely to the batteries of the sturdy wooden gun-boat. General Prentiss, like a brave soldier as he was, grows eloquent in his praise of Lieutenant-Commander Prichett and his officers and men for the service they had performed. In his report to the Admiral he says: "I attribute not a little of our success in the late battle to his (Lieutenant-Commander Prichett's) full knowledge of the situation and his skill in adapting the means within his command to the end to be attained. . . . . Permit me to add, sir, that I can conceive of no case wherein promotion would be more worthily bestowed than in that of Lieutenant-Commander Prichett, and it will give me great pleasure to learn that his services have received a proper reward." Prichett never received any "reward" save an eloquent letter from Mr. Secretary Welles, which that gentleman knew so well how to indite, but he had the satisfaction of not having dimmed the lustre of that 4th of July made so glorious by the capture of Vicksburg and the victory of Gettysburg.

On the 9th of August the "Mound City," Lieutenant-Commanding Byron Wilson, while at Lake Providence, gave the enemy a severe lesson. Captain John McNeil,

C. S. A., notorious raider, made a descent on Lake Providence with some seventy men, for the purpose of carrying off some mules, horses and wagons, a number of the latter having congregated there during the occupation of the place by a part of the Federal army.

As McNeil's men entered the town the "Mound City" opened on them with her portbattery and the enemy fled to the woods, leaving seven dead on the field and carrying off many wounded. The enemy never expected to see an ironclad at Lake Providence and never troubled the place again.

It was exceedingly difficult to suppress this system of guerilla warfare, but it was finally put an end to by the Navy when the surrender of Vicksburg relieved a large number of gun-boats from imperative duties which could not be neglected for minor matters.

One of the most remarkable incidents of the civil war was the raid of General John Morgan, one of the daring partisan leaders of the Confederate Army, and the manner in which the raid was averted from Indiana—the point aimed at by the audacious Morgan—by three or four so-called "tin-clads," armed with boat-howitzers.

Hearing that Morgan was moving in force up the left bank of the Ohio River, pursued by the Union forces under General Judah, Lieutenant-Commander Fitch determined, if possible, to cut him off. The water in the river was very low and the five light draft gun-boats which Fitch had with him worked night and day to intercept the raiders, who were seeking for a place to ford the Ohio.

To get the gun-boats over the shoal places it was often necessary to "jump them" by placing two heavy spars, carried for the purpose, forward of the bow at an angle and set taut, a heavy tackle leading from the head of the spars to the deck. Steam was then put on, and as the vessel pushed ahead her bow was raised and she was forced forward eight or ten feet; this operation was repeated until the shoal was passed, and this was the way the officers and men on the Ohio had to work to prevent Morgan from reaching Indiana, whose people were wholly unprepared for a movement which, had it succeeded, must have been most disastrous to the State.

Morgan's object after devastating Indiana was to march into Ohio with the hope of capturing Cincinnati and plundering it. This, to say nothing of the loss to the citizens of their property, would have been an indelible disgrace to the Federal cause.

Morgan pushed his way leisurely along the bank of the Ohio, calculating that he could cross from one side to the other as circumstances might require in order to

elude any pursuing force, although he knew of none in the vicinity that he need fear, and he intended that his followers should enjoy themselves among the flesh-pots of the North, and leave the marks of their trail so wide that the Union people would remember John Morgan's raid for a century to come. Indeed he marched so leisurely and committed so many depredations that the people began to rise and arm themselves in the interior on his left, which induced him to cling to the river bank, little dreaming of the danger threatened him from the gun-boats. General Judah's forces pushing after him, Morgan determined to cross the river, but here he was confronted by Fitch and his "tin-clads," which were spread out for the space of two miles ready to prevent his passage. As the river was fordable in many places, Morgan could easily have crossed with all his forces but for the presence of the gun-boats.

As soon as the Confederate column appeared in sight, they received a volley that staggered them so they gave up the idea of crossing at that point and continued up the river, while the gun-boats kept ahead shelling the enemy whenever they showed themselves. It was a novel sight, a flotilla of gun-boats (very "gallinippers") in pursuit of a land force. It was in every respect a new feature of the war.

When Morgan found himself hemmed in on the left, on the right, and in the rear, he saw that his best course was to push on up the Ohio to a point where the water was too low to float the gun-boats, probably not dreaming that the vessels had been selected for just such an emergency and drew barely sixteen inches. With all he could do, Morgan could find no place to cross, for the gun-boats pressed close to him night and day, firing upon his men whenever they approached the river.

This odd march of the Confederates and the pursuit of the gun-boats continued up the river for five hundred miles. On the morning of the 19th of July, Fitch attacked Morgan's troops just above Buffington Island. The enemy made a desperate resistance with artillery and musketry for over an hour, at the end of which time they broke and fled, leaving behind two pieces of artillery, wagons, horses, arms, etc. A portion of them rallied and moved rapidly up along the river bank; but Fitch followed them so closely that they soon scattered among the hills out of the reach of the shells.

The road along the bank was strewn with plunder left by the Confederates—cloth, boots, shoes, and dainties of every description. Among the articles abandoned were some carriages, one of which was said to have been used by Morgan when weary of

horseback exercise. The gunboats pushed on up river to look after the remnant of Morgan's band, leaving it to General Judah to pick up the stragglers in the rear.

About fifteen miles above the scene of his last conflict, Fitch encountered another portion of Morgan's command who were fording the river. The current was here so swift and the channel so narrow and crooked, that it was sometime before the gun-boat could get within range. At length Fitch opened on the enemy, emptying a number of saddles and driving most of them back to the bank, whence they started off up the river again; a few got across the river and escaped; and twenty horses, whose riders had perhaps been drowned or shot, were left standing on the bank. On went Fitch till no more enemies were to be seen and he was brought to a stand by shoals he could not pass.

This was the end of Morgan's raid, one of the most remarkable events of the civil war, and the very boldness of which almost insured its success. It could not have been intended to benefit the Confederate cause, and must be regarded as an insane military frolic. The rude partisan who had conceived the plan which he carried out with such bravery and zeal, meeting at first with no opposition, seems to have fancied himself master of the situation. He lost his head, and when he took to riding in a carriage his followers began to lose faith in him, which may account for the numerous desertions and for the rapidity with which the raiders fled from the gun-boats.

But for the energy of Lieutenant-Commander Fitch, Morgan's enterprise would doubtless have been disastrous to the people of Indiana and Ohio and disgraceful to the United States Government, which had taken so little pains to guard against such incursions.

Morgan and most of his men were captured, and although he had committed no greater infractions of the laws of war than many others, he and his officers were sent to the Ohio penitentiary. To have shot him as he stood at bay, like a wild boar in the forest, would have been kinder and more in keeping with the romantic nature of his enterprise.

The Secretary of the Navy wrote to Lieutenant-Commander Fitch, eulogizing his conduct in the highest terms. Maj.-Gen. Burnside and Brig.-Gen. Cox also wrote the warmest acknowledgements to Admiral Porter for the part Fitch had taken in the capture of Morgan. Fitch certainly demonstrated the importance of the little "tin-clads," which seemed from their appearance to have been gotten up more for pleasure-boats than for war purposes, where a strong shot was liable to send them to the bottom.

After the loss of the "Cincinnati," on which occasion Lieutenant Bache and his officers and men exhibited so much coolness and bravery, Bache was ordered to Command the "Lexington," sister-ship to the "Taylor," and one of the gun-boats that had braved the storm of battle at Belmont, Shiloh, Fort Henry, Donelson and Arkansas Post.

The Confederates were again assembling in White River, where it was easy for them to get from Little Rock, Arkansas, and escape back again if attacked. Lieutenant-Commanding Bache was ordered up White River to suppress these raiders, whose zeal and persistency seemed without limit. The great Confederate armies of the West appeared to have been divided into small bodies, which could move with greater celerity. The "Lexington," "Cricket" and "Marmora" were the vessels comprising Lieutenant Bache's command.

On the arrival of the expedition at Des Arc, it burned a large warehouse filled with Confederate stores, which the thoughtless enemy had supposed was safe from the attack of gun-boats. On the second morning, on arriving off the mouth of Little Red River, a narrow and tortuous tributary of the White, the "Cricket" was sent up that stream in pursuit of two Confederate steamers, while the "Lexington" went twenty-five miles further up the White to Augusta. At that place Lieutenant-Commanding Bache was informed that the indefatigable General Price was assembling an army at Brownsville, and that two kindred spirits, Generals Kirby Smith and Marmaduke, were with him.

Lieutenant Bache immediately proceeded up the Little Red River and met the "Cricket" returning with her two prizes, after having destroyed a pontoon bridge constructed by General Marmaduke. As the two captured steamers were the only ones relied on for transportation in this river, the schemes of the Confederates were thwarted for the time being, and the fact that gun-boats had penetrated their lines and were destroying their pontoons and stores quite dampened the ardor of the three chiefs.

Although no blood was spilled, this incursion of the little flotilla was equal to a victory over General Price, whom it would have required an army of twenty thousand men to drive back. By these movements of the gun-boats the Confederate transportation on the rivers was broken up—they had not a steamer left in this vicinity except one on the White River.

A little later, Volunteer-Lieutenant J. P. Couthouy, commanding the "Osage," who had been sent to cruise in Red River, receiving information of a Confederate

steamer tied to the bank in his neighborhood, fitted out an expedition of twenty men under command of Chief Engineer Thomas Doughty. The party, after incredible labor, forcing their way through the thick undergrowth and vines, surprised the steamer lying at the bank and captured her. A few moments later Mr. Doughty caught sight of another steamer, which he also captured in a similar manner, and besides her crew found himself in possession of nine Confederate soldiers, commanded by an aide to General ("Dick") Taylor. The aide had been sent up for the "Fulton," a remarkably fine vessel, to transport some troops across Atchafalia Bay. The other steamer was filled with military stores.

There was an impassable shoal across the Red River at that time, and as Chief Engineer Doughty could not take the steamers out of the river he burned them with all their stores, and returned safely to his vessel. These steamers were a great loss to the Confederates in that quarter as their means of transporting troops and supplies by water was greatly impaired, growing smaller by degrees and beautifully less, and confining the raiders within narrower limits than ever.

After the capture of Vicksburg the gun-boats were stationed all along the Mississippi from Cairo to Red River, and on the Ohio, Tennessee and Cumberland Rivers. The gun-boats were in divisions extending between specified points, each under command of an officer in the regular Navy. Strict discipline was maintained and all the spare time was devoted to exercising the men with the great guns and small arms. Most of the officers in the squadron were volunteers, natives of the West, who had never had any naval experience previous to the war, but it was wonderful to see how quickly they accommodated themselves to circumstances and what excellent officers they became. Their energy and zeal was equal to their courage, and many of them made fine records before the war ended. The commanding officers of the divisions were well qualified as instructors as well as leaders, and the exploits of many of the vessels, if properly set forth, would adorn the pages of history.

Some of the boldest and most enterprising officers in the fleet were pilots and engineers, who, leaving the steering-wheel or the engine, and buckling on sword and pistols, would start out on the most hazardous expeditions. These officers would go into action as if it were pastime, the engineers well knowing that a single shot striking the boiler—which in many cases stood unprotected on the deck—would scald every one near it to death, and the pilots feeling that they were special targets for the enemy

to shoot at. To kill a pilot or an engineer at his post of duty would excite as much glee among the Confederates as if they had gained an important victory.

The men who served in the Mississippi squadron as pilots and engineers are to this day ostracized by Confederate sympathizers for their devotion to the cause of their country. The pilots received neither prize-money nor pension, and there are some of them who now suffer from the wounds and exposure to which they were subjected. Comparatively few of them remain to read this tribute to their fidelity to the cause of the Union, but those who still live well know the estimation in which they are held by their Commander-in-chief, who has never failed to press their claims on the gratitude of their country whenever an opportunity occurred.

Lieutenant-Commander S. L. Phelps performed important service in the Tennessee River, his command extending from Fort Henry as far up stream as his vessels could ascend. He chose command of this district to enable him to attend to the reconstruction of the "Eastport," a vessel captured by him in the Tennessee after the fall of Fort Henry. At the time of her capture the Confederates were transforming the vessel into an iron-clad ram. This was the "Eastport," hitherto mentioned in our narrative.

Phelps was very active in harassing the enemy, and gave them no rest. His first act after assuming command on the Tennessee was to proceed from Paducah, Ky., with the "Covington," "Queen City," "Argosy," "Silver Cloud" and "Champion," up the river, destroying everything on the way that could be of any use to the enemy. All boats and scows were destroyed, so that communication from one bank to another was pretty effectually cut off. The "Covington" ascended as far as Eastport, the highest point attainable at that stage of the river, offering protection to Unionists and bringing out of the country those desiring to escape conscription; for at that time the enemy had strong parties going through Tennessee seizing upon all the able-bodied men they could find to recruit the Confederate army. Among these were many who would not willingly have served against the Union. Thus the Confederate government, after dragging Tennessee out of the Union, making it the theatre of war, destroying its resources and reducing its people to penury, gave the final stroke in the shape of conscription. The conscripts were seized and bundled off pretty much as slaves were transported in former days.

This was the "liberty" promised the Southern people by their leaders when they started on their wild crusade against the

Union. Had they succeeded, there would have been such a depotism established in this country as was never dreamed of.

Lieutenant-Commander Phelps determined to try and break up these conscription raids if possible, and as he could not land parties of sufficient force to cope with the enemy, he made an arrangement with Lieutenant-Colonel Breckenridge at Fort Henry to supply a body of cavalry for the purpose.

There was a conscription party at Linden, Tennessee, which had made itself particularly odious, and it was arranged that Colonel Breckenridge should be landed with his men at a certain point, and the gun-boats should be spread along the river, so that the troops could retreat to them in case the enemy was too strong to be resisted.

The gun-boats being placed at night in the positions assigned them, Phelps dropped

LIEUTENANT-COMMANDER S. LEDYARD PHELPS.

down to Decaturville, where he took on board Colonel Breckenridge and fifty mounted men and landed them on the opposite side of the river.

At daybreak Colonel Breckenridge reached Linden, twelve miles from the river-bank, and completely surprised the enemy. The latter made little resistance, and only three of their number were killed. These men were evidently not anxious to fight themselves, but were looking for others to fight in their places.

The small Union force returned to the gun-boats with one lieutenant-colonel, one captain, four lieutenants, and forty privates as prisoners, besides fifty horses and equipments, two transportation wagons, arms, etc. The Court House, which was the rendezvous of the conscriptors, was burned with a quantity of arms and stores. The

Union party lost only a horse killed. This was the end of the conscription business in that quarter.

In the latter part of June, 1863, Lieutenant-Commander Phelps crossed fifteen hundred cavalry under Colonel Conger, of the 10th Missouri Volunteers, over the river. Colonel Conger made a forced march on Florence, Alabama, and captured the place after a sharp engagement. The expedition destroyed an immense amount of property of various kinds, valued at two millions of dollars, among which were three large cotton mills and magazines of corn; they also captured sixty-five prisoners.

Meanwhile one hundred and fifty cavalry had landed at Savannah, under cover of the guns of the "Covington," intending to operate in that neighborhood and keep open communication between Colonel Conger and the gun-boats. The "Forest Rose" and "Robb" covered the landing opposite Hamburg. The force at Savannah had captured some stock and brought it in; but on one occasion, while returning from an expedition, the commanding officer of the party, being pressed by a superior force of the enemy, abandoned his captured stock and barely succeeded in reaching Savannah, where Lieutenant-Commander Phelps found his troops covered by the "Covington."

Colonel Bissel, the Confederate commander, had invested the town, and given one hour for the removal of the women and children before proceeding to the attack. The answer of the two Union commanders to this summons was, "Come and take it."

That night Colonel Conger arrived, and the Confederates raised the siege and departed. The same night the gun-boats crossed Colonel Conger's force safely over the river, during which brisk skirmishing was going on, and a number of Union families were taken away by the gun-boats to escape the vengeance of the Confederate raiders.

Large quantities of hides were carried off by the gun-boats to keep them from falling into the enemy's hands, for the Confederates maintained quite a large body of men in the State, whose business it was to collect such material as would be useful to their army.

Thus the war was carried on in the region

of the Tennessee with much bitterness, the Federal authorities being obliged in self-defence to resort to extreme measures, and to follow a system which they naturally abhorred. It was found that by practicing the amenities of war we only gave encouragement to the bands of guerillas and conscriptors to pursue their work of bloodshed and rapine, so the Union forces gradually became almost as indifferent to suffering as their opponents. Unfortunately, this reacted in many cases on those citizens who claimed to be Unionists and to be willing to acknowledge the government if they could only receive protection.

This protection, however, could not always be given, as we had only a certain number of soldiers in the Western army, which with its extended lines was taxed to its utmost. It was slowly but certainly making its way South, and although its rear was not unprotected, yet it was not always strong enough to follow up the roving bands of irregulars who to avoid conscription had perhaps become conscriptors themselves.

Sympathizers with the Southern cause may affirm that every Southerner had a right to fight for life and liberty, and that all combatants were entitled to be treated alike, but if they could not secure what they wanted by the weight of their numbers or appeals to reason, they should not have attempted to bring on civil war; and those who were fighting to preserve law and order, though themselves justified in pursuing extreme measures to put an end to a struggle which by all the rules of warfare should have terminated when Vicksburg fell; for the Federal government was daily increasing its strength, and the Confederates were fighting from foolish pride or pure vindictiveness to inflict all the injury possible on the North.

Although the strength of our army along the Tennessee and other rivers was not great, it had powerful coadjutors in those little gun-boats which the enemy at first professed to despise, but which they were anxious to avoid when circumstances brought them near together. On many occasions a few gun-boats were of more advantage than a division of soldiers would have been.

## MISSISSIPPI SQUADRON.

## VESSELS EMPLOYED AT VICKSBURG DURING THE SIEGE, WITH LIST OF OFFICERS.

Names of vessels, officers, etc., are obtained from the Navy Register of January, 1863, unless some other date is appended thus (1864), (1865). Officers who received favorable notice in Admiral Porter's official report, dated July 13, 1863 (concerning the fall of Vicksburg and operations on the river), are marked thus \*.

## FLAG-SHIP "BLACK-HAWK" (3D RATE).

\*Lieutenant-Commander, K. R. Breese; Fleet-Surgeon, Ninian Pinkney; Assistant Surgeon, J. C. Bertolette; Acting-Assistant Paymaster, W. H. Sells; Ensigns, W. B. Bridgeman, Merrill Miller, S. H. Hunt and G. M. Brown; Acting Ensigns, G. D. Gove, W. Wardrop, E. W. Clark, R. R. Hubbell and D. P. Rosenmiller; Acting-Master's Mates, F. J. Turner, P. H. Brown, James DeCamp, C. H. Porter and F. D. Campbell; Engineers, G. W. Walker, O. G. Ritchie, A. P. Sutherland and Frandford Shepard.

## IRON-CLAD STEAMER "LOUISVILLE" (4TH RATE).

\*Lieutenant-Commander, E. K. Owen; Acting-Assistant Surgeon, W. D. Hoffman; Acting-Assistant Paymaster, D. L. Ruth; Acting-Ensigns, F. Bates; J. T. Blackford, J. G. Waters and S. M. B. Servos; Acting-Master's Mate, H. D. Coffenberry; Engineers, J. B. Fulton, A. W. Hardy, C. W. Reynolds and C. W. Degelman; Acting-Gunner, Wm. Shields, Acting-Carpenter, D. H. Curry. (Jan., 1864.)

## IRON-CLAD STEAMER "CHOCTAW" (3D RATE).

\*Lieutenant-Commander, F. M. Ramsay; Acting-Assistant Paymaster, Wm. N. Whitehouse; Acting-Master, W. A. Griswold; Acting-Ensigns, E. Beaman, W. C. Bennett, A. S. Palmer and L. R. Hamersly; Acting-Master's Mates, T. Hopkins and H. Marsh; Engineers, N. P. Baldwin, C. E. Arbuthnot, Joseph Blake, S. C. Babbitt and E. H. Austin; Acting-Gunner, Reuben Applegate; Acting-Carpenter, J. A. Stewart.

## IRON-CLAD STEAMER "LAFAYETTE" (4TH RATE).

\*Captain, Henry Walke; Acting-Volunteer-Lieutenant, James Laning; Acting-Assistant Surgeon, Collins D. White; Acting-Assistant Paymaster, James P. Kelly; Acting-Ensigns, J. L. Moran, Elias Smith and W. C. Bennet; Acting-Master's Mates, H. G. Warren, C. H. Slocum, H. C. Marsh, S. O. Lovell, S. R. Winram, W. P. Higbee, Thomas Twitchell and Paul Morgan; Engineers, Robert Tate, A. M. Rowe, E. B. Hill and J. W. Paull; Acting-Gunner, G. W. Price; Acting-Carpenter, C. M. Underwood.

## IRON-CLAD STEAMER "CARONDELBT" (4TH RATE).

\*Lieutenant, J. McLeod Murphy; Acting-Volunteer-Lieutenant, E. E. Brennard; Assistant Surgeon, D. R. Brannan; Acting-Assistant Surgeon, S. B. Harriman; Acting-Assistant Paymaster, F. M. Hawley; Acting Ensigns, W. E. H. Fentress, O. Donaldson, J. C. Gipson, M. F. Benjamin and R. P. Petty; Acting-Master's Mates, J. Bath, and C. W. Miller; Engineers, C. H. Cavin, John Huff and L. Fulton; Acting-Gunner, F. Beaufort.

## IRON-CLAD STEAMER "CHILLICOTHE" (4TH RATE).

Lieutenant-Commander, J. P. Foster; Acting-Assistant Surgeon, J. C. Foster; Acting-Assistant Paymaster, J. H. Hathway; Acting Ensigns, W. J. Power and Walter Muir; Acting-Master's Mates, Henry Baker, H. A. Hannon and Joseph Brown; Engineers, A. W. Hardy, J. G. Briggs, G. L. Kingsley, Charles Trotter and W. B. Fleming; Acting-Carpenter, James C. Hall.

## IRON-CLAD STEAMER "PITTSBURG" (4TH RATE).

Acting-Volunteer-Lieutenants, \*William R. Hoel and J. C. Bentley; Acting-Assistant Surgeon, H. M. Miner; Acting-Assistant Paymaster, C. H. Gould; Acting-Master, Charles Germain; Acting-Ensigns, G. W. Paulding and G. W. Rogers; Acting-Master's

Mates, G. W. Garlick, F. Vincent and James Ovet; Engineers, S. B. Goble, G. H. Atkinson, J. L. Auble, Wm. Mills and W. H. Mitchell; Acting-Gunner, Jos. Simons.

## STEAM GUN-BOAT "TAYLOR" (4TH RATE).

\*Lieutenant, Jas. M. Prichett; Acting-Assistant Surgeon, G. W. Ballentine; Acting-Assistant Paymaster, C. A. Gardner; Acting-Master, Wm. H. Minor; Acting-Ensigns, E. Loring, C. T. Stanton, J. F. Holmes and S. E. Brown; Acting-Master's Mates, Charles Ackley, H. S. Wetmore and Ira Athearn; Engineers, James Fleming, J. R. Ramsey; Wm. Finch and E. M. Bumpus; Acting-Carpenter, A. B. Chapman.

## STEAMER "HASTINGS" (4TH RATE).

Acting-Volunteer Lieutenant, A. R. Langthorne; Acting-Assistant Surgeon, J. M. Flint; Acting-Assistant Paymaster, P. J. Stone; Acting-Master, J. W. Morehead; Acting-Ensigns, W. C. Turner and C. H. Reed; Acting-Master's Mates, E. C. Urner, Frank Seymour and F. M. Clark; Engineers, J. H. Scott, Edwin Senior, Samuel Weaver, A. M. Wasson and G. W. Amsden.

## STEAMER "FOREST ROSE" (4TH RATE).

\*Acting-Master, Geo. M. Brown; Acting-Ensigns, James Kearney and F. F. Smith; Acting-Master's Mates, Jacob Rutherford, J. Robinson, C. W. Johnson and W. B. Anderson; Engineers, Francis Marsh, Edw. H. Goble and J. Lozier.

## IRON-CLAD STEAMER "CINCINNATI" (4TH RATE).

\*Lieutenant, George M. Bache; Acting-Assistant Surgeon, R. R. Hall; Acting-Assistant Paymaster, S. R. Hinsdale; Acting-Masters, J. Pearce and C. Germaine; Acting-Ensigns, A. F. O'Neil, G. L. Coleman and P. R. Starr; Acting-Master's Mates, Henry Booby, Daniel Winget and D. W. Stebbins; Engineers, W. O. McFarland, Simon Shultice, Reuben Storey and F. Hense; Acting-Gunner, J. F. Ribbitt; Acting-Carpenter, G. H. Stevens.

## STEAMER "JULIET" (4TH RATE).

Acting-Volunteer-Lieutenant, Edward Shaw; Acting-Assistant Paymaster, Geo. W. Winans; Acting-Ensigns, W. L. Holcomb, W. C. Turner and M. K. Haines; Acting-Master's Mates, Hugh Kuhl, D. E. Davids and Raymond Wigand; Engineers, P. M. Strickland, Joseph Bolejack and Julius Gale.

## IRON-CLAD STEAMER "INDIANOLA" (4TH RATE).

\*Lieutenant-Commander, George Brown; Acting-Ensigns, J. A. Yates, W. S. Pease and Thomas McElevell; Acting-Assistant Paymaster, Thomas Carstairs; Acting-Master's Mates, P. W. Frost, W. S. Ward, James Williams, Gardner Phipps and L. Kenney; Engineers, Thomas Doughty, David Hawksworth, W. B. Hovey, G. W. Voice, George Wadell and Josephus Blake; Acting-Carpenter, James E. Green.

## STEAM GUN-BOAT "GENERAL BRAGG" (4TH RATE).

Lieutenant, Joshua Bishop; Acting-Assistant Surgeon, W. A. Collins; Acting-Assistant Paymaster, J. H. Jenkins; Acting-Ensigns, T. J. McLaughlin and Edw. F. Phelps; Acting-Master's Mates, Alex. Lee, John Lawson and John Ackley; Engineers, Oliver Titcomb, E. W. Andrews and Joseph Anderson; Acting-Gunner, Lewis Dawson; Acting-Carpenter, L. D. Johnston.

## IRON-CLAD STEAMER "MOUND CITY" (4TH RATE).

\*Lieutenant, Byron Wilson; Acting-Assistant Surgeon, R. Cadwallader; Acting-Assistant Paymaster,

B. J. Donohue; Acting-Ensigns, James Martin, F. T. Coleman, S. B. Coleman and DeWayne Stebbins; Acting-Master's Mate, R. V. Lamport; Engineers, Edw. Merriman, R. M. Gardiner, A. N. Derby, Elihu Stephens and J. N. Hartnett; Gunner, Herman Peters.

STEAMER "GENERAL PRICE" (4TH RATE).

\*Acting-Lieutenant, S. E. Woodworth (1863); Acting-Assistant Surgeon, George Harvey; Acting-Assistant Paymaster, J. W. McLellan; Acting-Ensigns, G. W. Pratt, J. H. Seever and D. P. Boseworth; Acting-Master's Mates, D. McKay and Peter Barclay; Engineers, D. E. Weaver, W. H. Coulter, Alex. Campbell, J. B. Baldwin and R. A. Kyle.

STEAMER "MARMORA" (4TH RATE).

Acting-Volunteer-Lieutenant, Robert Getty; Acting-Assistant Surgeon, Fayette Clapp; Acting-Assistant Paymaster, G. S. Sproston; Acting-Master, Elias Reese; Acting-Ensigns, Edw. Alford, H. H. Walker, Elliot Callender and Edward Morgan; Acting-Master's Mates, J. W. Foster, D. B. Lawrence and D. C. Bond; Engineer, G. W. Smith, W. C. Armstrong and J. S. Armstrong.

STEAMER "CRICKET" (4TH RATE).

Acting-Master, A. R. Langthorne; Acting-Assistant Surgeon, H. A. Bodman; Acting-Assistant Paymaster, S. T. Savage; Acting-Ensign, J. W. Morehead; Acting-Master's Mates, E. C. Hubbell, Wm. Gregg and W. O. Stephenson; Engineers, B. Hand, David Chillas and George Shipley.

STEAMER "ROMEO" (4TH RATE).

\*Acting-Volunteer-Lieutenant, J. V. Johnston; (Admiral's Report, '86) Acting-Assistant Surgeon, J. S. McNeely; Acting-Assistant Paymaster, E. R. Mafat; Acting-Ensigns, J. B. Dwyer, Pat. Murphy, Robert P. Smith and Eugene Zimmerman; Acting-Master's Mates, J. E. Ernest, R. P. Shaw and G. C. Cox; Engineers, J. McCurdy, Joseph Grippen and J. P. Williams.

STEAMER "RATTLER" (4TH RATE).

\*Acting Master, W. E. Fentress; Acting-Assistant Surgeon, W. H. Wilson; Acting-Master, W. E. H. Pentress; Acting-Ensigns, G. S. West, Wm. Ferguson and John Bath; Acting-Master's Mates, H. E. Church, Daniel Welsh and S. H. Strunk; Engineers, James Whitaker, Jefferson Bell and A. J. Bashloe; Acting-Gunner, T. Carpenter.

MAIL-BOAT "NEW NATIONAL" (4TH RATE).

Acting-Masters, Alexander M. Grant and Oscar H. Pratt; Acting-Ensign, J. Hill; Acting-Masters' Mate, W. C. Herron; Engineers, W. H. Price, James Wilkins and E. C. Rensford.

IRON-CLAD STEAMER "BENTON" (4TH RATE).

\*Lieutenant-Commander, James A. Greer; Acting-Master, G. P. Lord; \*Ensign, J. F. Reed; Acting-Ensigns, C. A. Wright, J. M. Walker, W. J. Lees and Frank Reed; Acting-Assistant Paymaster, C. G. Lowndes; Acting-Master's Mates, E. C. Brennan and W. H. Lemassena; Engineers, J. V. Starr, C. W. Fairfowl, R. Hoffman, C. W. Ridgely, Robert Long and Oliver Bragg; Gunner, N. B. Willetts; Carpenter, R. Blackford.

HOSPITAL-SHIP "RED ROVER."

Acting-Master, W. R. Welles; Acting-Assistant Paymaster, A. N. Pearson; Acting-Ensign, Wm. Harris; Acting-Master's Mates, C. King and F. Lowe; Engineers, W. J. Buffington, G. W. Gimbeo, W. O. Logne, Julius Eliter and J. A. Goodloe; Acting-Carpenter, H. Kenney; Acting-Assistant Surgeons, George H. Bixby and George Hopkins (Jan. 1864).

IRON-CLAD STEAMER "TUSCUMBIA."

\*Lieutenant-Commander, James W. Shirk; Assistant Paymaster, George A. Lyon; Acting-Ensigns, Lewis Kenny and E. M. Clark; Engineers, John W. Hartuppe, Perry South and William J. Milligan.

TUG "IVY."

Acting-Ensign, E. C. Boss; Acting-Master's Mate, S. H. Carson; Engineers, A. Miller and E. Callahan.

STEAMER "W. H. BROWN" (4TH RATE).

Acting-Volunteer-Lieutenant, J. A. French; Acting-Ensign, J. B. Hawthorne; Acting-Master's Mates, Jacob Shinn and William Cassidy; Engineers, G. L. Scott and Geo. W. Taylor.

TUG "LAUREL."

Engineers, Acting-Second-Assistant, N. Mierstang, and Acting-Third Assistant O. Rosebush.

TUG "DAHLIA."

Acting-Ensign, Thomas Wright; Acting-Master's Mate, W. H. Strobe; Engineers, B. Nannah and H. Sullivan.

TUG "PANSY."

Acting-Ensign, D. C. Bowers; Acting-Master's Mate, S. Johnson; Acting-Second-Assistant Engineers, J. W. Lindsey and F. H. Majors.

STEAMER "GREAT WESTERN" (POWDER VESSEL.)

\*Acting-Volunteer-Lieutenant, Wm. F. Hamilton; Acting-Assistant Paymaster, Jos. S. Harvey; Acting-Master, J. C. Little; Acting-Ensign, Richard Ellis; Acting-Master's Mates, L. F. Knapp and R. Mitchell; Engineers, Chas. Christopher, Joseph Goodwin, B. A. Farmer and G. S. Baker; Acting-Gunner, Robert Sherman; Acting-Carpenter, Joseph Morton.

STEAMER "JUDGE TORRENCE" (POWDER VESSEL).

\*Acting-Volunteer-Lieutenant J. F. Richardson; Acting-Ensign, Jeremiah Irwin; Acting-Master's Mate, James Ross; Engineers, P. R. Hartwig, J. Stough, John C. Barr and W. Y. Sedman.

MORTAR BOATS.

Commanded by Gunner \*Eugene Mack, afterwards by \*Ensign Miller.

VESSELS EMPLOYED AT OTHER POINTS ON THE RIVER (1863-5).

Steamer "Peosta" (4th rate).—Acting-Volunteer-Lieutenant, T. E. Smith (1864).  
 Steamer "Kenwood" (4th rate).—Acting-Master John Swaney (1864).  
 Steamer "Paw-Paw" (4th rate).—Acting-Master A. F. Thompson (1864).  
 Steamer "Conestoga" (4th rate).—Lieutenant-Commander \*T. O. Selfridge.  
 Steamer "Argosy" (4th rate).—Acting-Ensign J. C. Morong (1864).  
 Steamer "Alexandria" (4th rate).—Acting-Master D. P. Rosenmiller (1864).  
 Steamer "Fairplay" (4th rate).—Lieutenant-Commander Le Roy Fitch (1863); Acting-Master Geo. G. Groves (1864).  
 Steamer "Fawn" (4th rate).—Acting-Master J. R. Grove (1863).  
 Steamer "Silver Cloud" (4th rate).—Acting-Volunteer-Lieutenant A. F. O'Neil (1864).  
 Steamer "Silver Lake" (4th rate).—Acting-Master J. C. Coyle (1864-5).  
 Steamer "Springfield" (4th rate).—Acting-Master Joseph Watson (1864); Acting-Master Edward Morgan (1865).  
 Steamer "Victory" (4th rate).—Ensign Frederick Read (1864-5).  
 Steamer "Champion" (4th rate).—Acting-Master Alfred Phelps (1864).  
 Steamer "Curlew" (4th rate).—Acting-Ensign H. A. B. O'Neil (1864).  
 Steamer "Little Rebel" (4th rate).—Acting-Volunteer-Lieutenant T. B. Gregory; Acting-Ensign J. B. Petts (1865).

- Steamer "Signal".—\*Acting-Volunteer-Lieutenant, C. Dominey (1863); Acting-Ensign W. P. Lee (1864).
- Steamer "Covington".—Acting-Volunteer-Lieutenant.—\* J. S. Hurd (1863); Acting-Volunteer-Lieutenant George P. Lord (1864).
- Steamer "Robb".—\* Ensign W. C. Handford; Acting-Ensign Lloyd Thomas (1864).

- Steamer "Milwaukee".—Building at St. Louis (1864).
- Steamer "Tawah".—Acting-Volunteer-Lieutenant Jason Goudy (1864).
- Steamer "Keywest".—Acting-Volunteer-Lieutenant E. M. King (1864).
- Steamer "Exchange".—While commanding "Covington." See page 18.) \*Acting-Volunteer-Lieutenant J. S. Hurd (1864); Acting-Volunteer-Lieutenant J. C. Gipson (1865).
- Steamer "Gazelle".—Acting-Ensign A. S. Palmer (1865).
- Steamer "Avenger".—Acting-Volunteer-Lieutenant C. A. Wright (1865).
- Steamer "Elfin".
- Steamer "Naiad".—Acting-Master Henry T. Keene (1865).
- Steamer "Nymph".—Acting-Master Patrick Donnelly.
- Steamer "Undine".
- Steamer "Siren".—Acting-Master James Fitzpatrick (1865).
- Steamer "Huntress".—Acting-Master John L. Dennis (1865).
- Steamer "Peri".—Acting-Master T. M. Farrell (1865).
- Store ship "Sovereign".—Acting-Master Thomas Baldwin.
- Steamer "Glide".—Acting-Lieutenant S. E. Woodworth.
- Iron-clad "Eastport".—Lieutenant-Commander S. L. Phelps (1864).
- Steamer "Tennessee".—Lieutenant-Commander E. P. Lull (1865).
- Steamer "Gen. Burnside".—Lieutenant Moreau Forest (1865).
- Steamer "Gen. Thomas".—Acting-Master Gilbert Morton (1865).
- Steamer "General Sherman".—Acting-Master J. W. Morehead (1865).
- Steamer "General Grant".—Acting-Master Joseph Watson (1865).
- Steamer "Volunteer".—Acting-Ensign M. K. Haines (1865).
- Iron-clad "Baron-de-Kalb".—\* Lieutenant-Commander J. G. Walker.

## VESSELS STATIONED AT CAIRO.

- Inspection-ship "Abraham".—Acting-Ensign Wm. Wagner.
- Tug "Sampson".—Acting-Ensign J. D. Buckley.
- Receiving-ship "Clara Dolson".—Lieutenant-Commander Thomas Pattison.
- Receiving-ship "Graupus".—Acting-Master Elijah Sells (1864).

## CHAPTER XXXI.

BOUNDS OF FARRAGUT'S COMMAND UP TO 1863.—OPERATIONS OF FARRAGUT'S VESSELS ON THE COAST OF TEXAS.—GALLANT ATTACK ON CORPUS CHRISTI BY VOLUNTEER-LIEUTENANT KITTREDGE.—GALVESTON, SABINE PASS AND CORPUS CHRISTI FALL INTO THE FEDERAL HANDS.—AN EXPEDITION OF THE ARMY AND NAVY DEFEATED AT SABINE PASS.—FARRAGUT BLOCKADES RED RIVER IN THE "HARTFORD."—CAPTURE OF THE "DIANA" BY THE CONFEDERATES.—LOSS OF THE UNION GUN-BOAT "BARRATARIA."—DESTRUCTION OF THE "QUEEN-OF-THE-WEST" BY LIEUTENANT-COMMANDER A. P. COOKE.—FARRAGUT RELIEVED FROM COMMAND IN THE MISSISSIPPI, MAY 7TH, 1863.—EXPEDITION UP RED RIVER UNDER LIEUTENANT-COMMANDER HART.—FARRAGUT ARRIVES BELOW PORT HUDSON, AND COMMENCES ACTIVE OPERATIONS AGAINST THAT PLACE.—ATTACK ON DONALDSONVILLE BY CONFEDERATE GENERAL GREEN.—HIS RETREAT UNDER THE FIRE OF THE GUN BOAT "PRINCESS ROYAL."—ATTACK OF CONFEDERATE ARTILLERY ON THE GUN-BOAT "NEW LONDON."—GALLANT CONDUCT OF LIEUTENANT-COMMANDER GEO. H. PERKINS.—DEATH OF COMMANDER ABNER REED.—REJOICING OF THE ARMY AND NAVY AT NEW ORLEANS ON HEARING OF THE FALL OF VICKSBURG AND PORT HUDSON.—GENERAL REMARKS.

**W**HILE Flag-officer Farragut was engaged in the operations before Vicksburg, down to the time when he passed the batteries at Port Hudson, many events occurred in the fleet which have not been mentioned heretofore, as it could not have been done without interrupting the narrative of current events.

Farragut's command up to May, 1863, included the Mississippi River as far as Vicksburg, and all its tributaries below; also the coasts of Louisiana, Florida and Texas, extending from Pensacola on the east to the mouth of the Rio Grande, including that network of bays, streams, inlets, bayous, sounds, and island groups which extends from the mouth of the Mississippi as far west as Sabine Pass, and the difficult bars and channels leading to Galveston, Matagorda and Corpus Christi, where none but the smallest vessels could enter, and which afforded safe refuges for blockade-runners during the entire war.

This coast, with its indentations, is over 600 miles in length, and had to be guarded with great care to prevent supplies reaching the Confederates through the numerous gates leading into Louisiana and Texas.

The Federal officers had to exercise great

watchfulness in guarding against the people they had to contend with, for they were a brave, hardy set of men, regardless of danger, and amply supplied with small-arms and field-artillery to withstand any attack that could be made upon them by the combined forces of our Army and Navy.

The blockade of this part of the Southern coast had been indifferently carried on while Farragut was confined to his operations in the Mississippi, for it took every vessel he had to control that part of the river which was under his command; and it was not until after the fall of Port Hudson, when the navigation of the river was once more free, that the smaller vessels could be spared.

All this time the Confederates on the coasts of Louisiana and Texas kept up active operations with their blockade-runners, which had nothing to interfere with them until August, 1862, when Farragut sent down a small force of sailing-vessels and one small steamer (the "Sachem") to try and close some of the Texan ports.

Acting-Volunteer-Lieutenant J. W. Kittredge, with the bark "Arthur," the above-mentioned steamer, and an armed launch, proceeded on this duty. He captured Corpus

Christi and the adjacent waters, from whence so many small craft had been running to Havana.

Lieutenant Kittredge showed not only great cleverness in the performance of this duty but cool courage. He had under his command a small yacht (the "Corypheus") and with the aid of her crew he removed some obstructions which the Confederates had placed in Corpus Christi "dug-out" to protect several small schooners which they had collected at that point. Lieutenant Kittredge ran his vessel through the gut and attacking one of the schooners, she was soon driven ashore and burned. Another one was also set on fire by the enemy. He then ran across the bay to Corpus Christi, with his little flotilla following him, and called upon the authorities to surrender and for the military forces to evacuate the town.

The Confederates set fire to a sloop on his approach and asked for a truce of forty-eight hours. At the end of that time they refused to evacuate the place, and on August 16th opened fire on Kittredge's vessel from a battery planted behind the levee. This was replied to with spirit by the Union vessels, which kept up such an incessant and accurate fire on the enemy, that they were three times driven from their guns on that day. At night-fall the Union forces withdrew out of range. The next day the Confederates set fire to a steamer that had run aground and could not be moved.

On August 20th, Lieutenant Kittredge went to work again on the enemy. He landed a 12-pounder howitzer under command of Master's Mate A. H. Reynolds, placed the schooner "Reindeer," Master's Mate William Barker, in position to cover the landing party, and proceeded to enfilade the enemy's battery and pour shrapnel and canister into his flank.

Master's Mate Reynolds moved up his howitzer to within musket range, and mowed the enemy down, the latter deployed 100 infantry to the right of the land party with the intention of flanking it, but they were soon scattered and driven off by the fire of the "Reindeer" and her consorts. The Confederates then charged the 12-pound howitzer with 250 men, and for a time its capture seemed certain. But Lieutenant Kittredge moved the "Corypheus" and "Sachem" close in shore, and met the enemy with so heavy a fire of canister that they wavered and retreated with considerable loss. The engagement continued all day, the enemy's battery was silenced and the vessels shelled the town.

This was a very gallant affair, conducted entirely by volunteer officers, who, although they had not received a regular naval training, displayed as much ability as if they had.

Not having the force to hold the town, the flotilla laid out in the bay and blockaded it. Unfortunately the gallant Kittredge was surprised and with his boat's crew captured while reconnoitering.

Galveston, Sabine Pass and Corpus Christi fell into the Federal hands a short time afterwards; the former place being captured by Commander Renshaw without the loss of a man. This for a time put a stop to blockade-running on the Texas coast. Its unfortunate recapture, the loss of the "Harriet Lane" and the blowing up of the "Westfield," have been already related, and Galveston once more became a shelter to blockade-runners, which much rejoiced the hearts of our enemies in Texas. Their success at this point fired the hearts of the Texan soldiers and they assembled in large numbers along the coast, making it very dangerous to attempt any landing operations without the assistance of the army, which it seems was not prepared for such a purpose.

Several unimportant affairs occurred along the coast, but nothing of a very satisfactory nature.

Maj.-Gen. Banks, who had relieved General Butler at New Orleans, wishing to commemorate his appointment by a signal victory over the enemy, proposed a combined expedition against Sabine Pass, which had been retaken and fortified by the enemy. The defences on shore, it was supposed, consisted only of two 32-pounders, while on the water the Confederates had two steamboats converted into rams.

The Army organization consisted of 4,000 men under General Franklin; and Commodore H. H. Bell, who commanded the naval force at New Orleans in the absence of the Flag-officer, detailed Volunteer-Lieutenant Frederick Crocker to command the naval part of the expedition, consisting of the steamer "Clifton," the steamer "Sachem," Volunteer-Lieutenant Amos Johnson; steamer "Arizona," Acting-Master H. Tibbetts, and steamer "Granite City," Acting-Master C. W. Lamson. This force was considered quite sufficient for the purpose intended.

It was concerted with General Franklin that the gun-boats should make the first attack alone, led by Lieutenant Crocker, assisted by 180 sharpshooters divided amongst the vessels, and after driving the enemy from his defences and destroying or driving off the rams, the transports were to advance and land the troops. In all, these vessels carried twenty-seven guns, which one would suppose was enough to dispose of the few guns the enemy had mounted.

The attack, which was to have been a surprise at early dawn, was not made until

3 P. M. on the 8th of September, 1863, twenty-eight hours after the expedition had appeared off the Sabine.

A reconnoissance had been made in the morning by Generals Franklin and Weitzel and Lieutenant Crocker, when they decided on a plan of attack. Commodore Bell had sent two good pilots down in the "Granite City." At 3 P. M. the transports were over the bar, the "Granite City" leading them in, for the purpose of covering the landing of the troops.

The "Clifton," "Sachem" and "Arizona" engaged a battery of seven guns. A shot struck the boiler of the "Sachem" and she was soon enveloped in steam. The "Clifton" ran directly under the fort and for twenty minutes fired rapidly grape, canister and shell, receiving a heavy fire in return. She soon afterwards got on shore, and not being able to back off, hauled down her colors—as did also the "Sachem."

The "Arizona" stood down the channel and took her station ahead of the transports. She got ashore also; several of the transports were aground and the "Granite City" went to the support of the "Arizona," which it was necessary to do, for a Confederate steamer (probably one of the rams) was coming down the river. This steamer, whatever she was, got the "Clifton" and "Sachem" afloat and towed them up the river.

The "Arizona," "Granite City" and transports got over the bar and made the best of their way to South West Pass, the army having made no attempt to land. The "Granite City" and "Arizona" do not appear to have received any injuries, but they made no attempt to rescue the two steamers that had surrendered.

This was rather a melancholy expedition and badly managed. It resulted in the loss of some twenty men killed and many wounded on board the "Clifton" and "Sachem," and was somewhat injurious to the prestige of the Navy. It did not, however, reflect any discredit upon the officers of the "Clifton" or "Sachem," as both of these vessels were gallantly fought.

This affair, with some minor matters, ended the operations of the West Gulf blockading squadron on the coast up to September, 1863. The latter year had not been as successful as the one previous, yet the squadron did a great deal of hard work and its officers were engaged in scenes where they gained reputation, and the Union flag was in no ways dimmed.

After Farragut had passed Port Hudson with the "Hartford" and "Arizona," he was quite isolated from the rest of his squadron, but was finally re-enforced by the gun-boat "Estrella," which worked its way up through the Atchafalaya into the Red

River and joined the other vessels at its mouth, at the same time running the risk of being mistaken for a Confederate ram and getting a broadside from her consorts.

Farragut might have run past Port Hudson with his vessels in the night without firing a gun or receiving a shot, but he was doing more good where he was. Port Hudson was completely cut off from supplies *via* Red River, and the two gun-boats could patrol it perfectly fifty or more miles up, and prevent any supplies from being sent overland to the side of the river opposite Port Hudson.

It was now simply a case of starving out the garrison, for there seemed no prospect of the place being taken by the Army, for as late as May 8th, 1863, General Banks marched a large portion of his army to Alexandria, La., at the very time he should have been closely besieging Port Hudson. For what purpose he marched no one could ever discern, for the gun-boats under Admiral Porter had arrived there before him, taken possession of and destroyed the defences along the river, and opened it so thoroughly that there was no danger of its being closed against the Federal vessels.

While Farragut was away up the Mississippi, after the passage of Port Hudson, Commodore Morris was left in charge at New Orleans with directions to co-operate with the military commander at that place, and perform all the duties which would have devolved upon the Flag-officer had he been present in person.

Some of the expeditions fitted out by Commodore Morris, and later by Commodore Bell, properly belong to this history, as showing the numerous duties performed by the Navy, and also that, notwithstanding Farragut was not at New Orleans himself to conduct matters, his orders were carried out, and there was the heartiest co-operation between the Army and Navy.

On the 28th of March the "Diana," Acting-Master Thos. L. Peterson, was sent into Grand Lake on a reconnoissance, with Lieutenant Allen, U. S. A., of General Weitzel's staff, and two companies of infantry on board. She was ordered to proceed down the Atchafalaya River as far as the mouth of the Teche and return by the lake.

Disobeying this order, Acting-Master Peterson attempted to return to Berwick Bay by the way of Atchafalaya. After passing the mouth of the Teche he was attacked from shore by field-pieces and sharpshooters. The men fought well, and the action lasted two hours and three-quarters. The captain of the "Diana" was killed early in the action, and his executive officer, Acting-Master's Mate Thomas G. Hall, was mortally wounded; also Master's Mate Geo. C.

Dolliver and Engineer Jas. McNally, leaving only one officer (Master's Mate Charles P. Weston), who carried on the fight and behaved most admirably. The tiller-ropes were shot away and the engine disabled so that the "Diana" became unmanageable and drifted ashore, when it was impossible to longer defend her.

As soon as the firing was heard at the bay, the "Calhoun," Acting-Master M. Jordan, was sent into the lake to ascertain the cause of it. She arrived at the mouth of the Atchafalaya, where she grounded and remained until midnight.

Several of the crew of the "Diana" had escaped, and they informed the commanding officer of the "Calhoun" that the "Diana" had been captured near Petersonville. Acting-Master Jordan threw overboard part of his ballast, his coal, provisions, and even ammunition, and finally reached the bay at 2 A. M.; but the "Diana" was a prize to the enemy.

Another of the United States vessels was lost a short time after, the "Barrataria," Acting-Ensign Jas. T. Perkins, at the mouth of the Amite River, on Lake Mariposa. She was on a reconnaissance with some army officers in Lake Mariposa, intending to examine the mouth of the Amite River. The pilot stated that there was always five feet of water there, but the vessel struck on a sunken snag and stuck fast. Everything possible was being done to relieve the vessel and get her off, when they were attacked by a force of concealed riflemen and a brisk engagement took place, in which the "Barrataria" used her guns and also musketry with good effect.

There were on board the "Barrataria" Colonel Clarke, Captain Gordon, Lieutenant Ellis, and ten privates of the 6th Michigan Volunteers: the latter did good service with their rifles. The engagement lasted over half an hour, when the enemy ceased firing.

Efforts were still made to get the "Barrataria" off, but without avail. The bow gun was spiked and thrown overboard and the water blown out of the boilers; the "Barrataria" still stuck fast.

Fearing that the vessel might fall into the hands of the enemy, Acting Ensign Perkins got his crew and passengers into boats, and after spiking all the guns, shoved off under a fire of musketry from the concealed enemy. Mr. Gregory, Acting-Master's Mate, who was left behind to set fire to the vessel, then ignited the inflammable matter and shoved off in a small boat. The vessel was soon in flames and shortly afterwards blew up. After being assured of the vessel's destruction, the party made the best of its way back and arrived at South Pass in safety.

In the case of the "Diana" there were

six killed and three wounded; in the case of the "Barrataria" there was only one wounded. Affairs of this kind were very provoking and harassing to a Commander-in-chief, but the officers seem to have performed their duty faithfully. Some of them died at their posts—there could be no fault found with them.

The navigation through all these lakes, bayous and so-called rivers was full of snags and shoal places, and was of the most perplexing kind. Most of the officers in the above-mentioned vessels were volunteers, full of zeal and courage and anxious not to have it said of them that the case would have been better managed if a regular line-officer had been present. Acting-Ensign Perkins may have lacked a little in judgment in pushing ahead, but when it came to the point about letting his vessel fall into the enemy's hands, there was nothing wanting, and he abandoned his command in open boats at the risk of the lives of his crew, conscious that the enemy could derive no benefit from anything left behind.

A short time afterwards an expedition was fitted out in Berwick Bay under Lieutenant-Commander A. P. Cooke, who, with the "Estrella" and other vessels, engaged the "Queen-of-the-West" (formerly captured from Colonel C. R. Ellet), and after a fight of twenty minutes destroyed her. He also, a short time after, destroyed two other steamers, the "Diana" and "Hart."

Farragut was relieved by Acting-Rear-Admiral Porter at the mouth of the Red River, May 7th, 1863, and crossing overland, joined his squadron below Port Hudson. He might have run by the batteries at night, but the old "Hartford" he thought had been subjected to enough of that kind of work, and it was scarcely worth while to expose her officers and crew to any more such trials, especially as it was expected that Port Hudson would soon be evacuated by the enemy. So Captain Palmer remained with the "Hartford" at the mouth of Red River until after the fall of Port Hudson, it having been left discretionary with him to pass the batteries or not.

Before Farragut's departure overland he had sent an expedition up the Red River to co-operate with General Banks, who was expected at Alexandria with a large military force (he being under the impression that there were military stores at this point and that it was heavily fortified on the water side, or would be in a short time).

There were also some other military movements under consideration to disconcert General Kirby Smith (Confederate), who had gone to Alexandria, so it was said, to provide troops with which to reinforce General Dick Taylor. Neither of these generals had any idea of operating below

Alexandria, which was their natural base ; for the gun-boats might get up that far very easily, but would find it a difficult matter to proceed further, as was proved in the end.

The expedition sent by Farragut was composed of the wooden gun-boats "Albatross," "Estrella," Lieutenant-Commander A. P. Cooke, and "Arizona," Volunteer-Lieutenant-Commanding D. P. Upton, all under Lieutenant-Commander John E. Hart. It arrived off Fort de Russy on May 3d, and found the enemy in the act of abandoning the works and removing their guns. Two steamers were engaged in this duty, and two others were moored to the bank alongside the earthworks, with their bows down stream. Lieutenant-Commander Hart at once attacked them with

LIEUTENANT COMMANDER (NOW CAPTAIN) AUGUSTUS P. COOKE, U. S. N.

his broadside guns and a regular battle commenced, the Confederate steamers returning the fire promptly, and it was kept up on both sides until a dense smoke enveloped the river.

Lieutenant-Commander Hart states that the enemy had the most guns and fired shot and shell with great rapidity, and certainly with accuracy. The "Albatross" went into action alone, but the enemy had too many guns for her and she was considerably cut up, and finally obliged to retire, having got aground on the very spot where the "Queen-of-the-West" had been disabled and captured. Hart claims that the other two vessels did not assist him ; but the probability is that the pilots did not think

there was room for three vessels to get into action at one time, as this was the worst point on the river to manage a vessel in—the current ran rapidly and the eddies were very annoying to the best pilots ; besides, that class of vessel was not at all suited for this work.

The "Albatross" lost two killed, one being the pilot, Mr. J. B. Hamilton, and four wounded—a small number, considering that her commander reported such a severe engagement.

The Confederate steamers carried off the guns, but left a large raft across the river to obstruct the passage. The Confederate commanders had already heard of the arrival at the mouth of the river of a large force of iron-clads, and of the advance of Bank's Army, and their object now was to get the guns to Shreveport. All idea of fortifying Alexandria was abandoned and two or three days afterwards the place surrendered to Rear-Admiral Porter without any resistance.

On Farragut's arrival below Port Hudson he again commenced operations against that place, in conjunction with General Banks, who, as he reported, had the forts closely invested.

Farragut furnished a breaching-battery of four 9-inch guns, under Lieutenant Terry, and the army mounted four 24-pounders. These guns were kept firing day and night to harass the enemy, and also when the Confederates opened fire upon the Federal troops. The mortar schooners also kept up a continuous fire upon the interior of the works, to distress the enemy as much as possible.

It was expected that Port Hudson would hold out as long as Vicksburg did, for the officers of the fort declared that they would never surrender as long as that stronghold remained to them.

In the meantime the enemy were assembling quite a large force from Texas, under a very clever leader (General Green). Demonstrations had been made by this party against Donaldsonville, but they were driven off by the fire of the gun-boats, and finally settled down in Brashear City to await the arrival of their main body of troops from Texas. The object of this raid was no doubt to raise the siege of Port Hudson, or draw off enough of General Banks' troops to enable the garrison to evacuate that place.

As soon as Admiral Farragut heard of these Confederate movements he went down the river to attend to affairs personally, and placed the gun-boats where they would do the most good. Unfortunately, there was only one vessel (the "Princess Royal," Commander M. B. Woolsey) stationed at Donaldsonville, the place the en-

emy was marching to attack, but this officer was equal to the emergency.

About noon on the 27th of June, hearing the long roll beaten in the fort where the Federal troops were assembled, he sent to inquire the cause, and was informed that General Green had written a letter to the commander of the post to notify the women and children of the town to remove three miles outside of it, as it was his intention to attack the place. A reply was sent back by the flag's truce notifying the Confederate general that the inhabitants would be duly warned. Commander Woolsey got under way early in the evening—his vessel cleared for action—ready to take any position that might be required of him. At midnight a red light was burned in the fort (the pre-arranged signal denoting that the enemy was in motion), and at a little past 1 A. M. the Confederates attacked the Federal post with musketry, which the latter returned with great guns. At the same moment the "Princess Royal" opened on the enemy, in a wood to the right of the fort, with shells, and also fired shells over the fort up the bayou for the purpose of disturbing troops that were in the rear.

Finding that the enemy was pressing upon the water-side of the fort for the purpose of assaulting it, the "Princess Royal" sheered close in to the levee and kept up a rapid fire of shrapnel and canister from all her guns until 2 A. M. when the smoke became so dense that it was impossible to see the fort from the steamer. Commander Woolsey then stood up the river two hundred yards and continued his fire upon the enemy, who were in a wood north of and at a distance of four hundred yards from the Federal fort. Their position was indicated by their yelling, as the flashes of their guns could not be seen for the smoke.

The "Princess Royal" then stood up river for an opening in the levee which her commander remembered, and when abreast of it, he poured in upon the enemy grape and canister at point-blank range and enfiladed them.

The enemy then attacked the steamer with rifles and she turned down river and presented her other broadside. The enemy opened on her from the town, when Commander Woolsey fired one broadside up the main street and another one up the north side of the bayou. He then stood up stream again and took position to enfilade the north side of the fort. In fact this flying battery of heavy guns seemed to be everywhere at the same time, disconcerting all the plans of the Confederate general, who had evidently placed his men expecting to have an easy victory.

This fire was kept up until 3.30 A. M., while the Confederate riflemen returned it

so steadily that the men of the "Princess Royal" had several times to lie flat on the deck until the line of fire was passed.

At about 4 A. M., the yelling of the Confederates ceased and their fire slackened, and shortly afterwards cheers went up from the Federal ramparts.

At this moment the gun-boat "Winona," Lieutenant-Commander A. W. Weaver, joined in the engagement, and continued in it until the end.

At daylight the American flag floated gaily over the fort—none of its stars dimmed. General Green and his army retreated and left Donaldsonville in peace. One hundred and twenty of the Confederates got inside of the fort, and were captured and distributed among the different vessels for safe-keeping.

Take it altogether, this was a handsome affair. There is no knowing what might have happened had it not been for the skill with which the naval steamer was handled and the bravery of her commander, officers and crew, who at times fought their guns lying on the deck, which they were obliged to do to escape the riflemen's unerring aim.

What vessels remained of the mortar flotilla had been for three months in front of Port Hudson bombarding that place, and the vessels, with their commanders, officers and crews were spoken of by those who witnessed their work in the most enthusiastic manner. Not only naval officers, but officers of the Army who witnessed the practice, acknowledged the efficiency of the mortar-shells when managed by intelligent officers and men. And yet a high official, whose duty it was to perform a fair and impartial part towards every officer and man in the Navy, attempted to depreciate the services of this gallant little flotilla that had more than once helped Army and Navy on to victory.

Admiral Farragut on June 3d, 1863, recommended for promotion a young Ensign (Adams) who had commanded one of the mortar vessels (the "Orvietto") at Port Hudson, at the same time calling the attention of the department to his heroism, endurance and obstinate determination to hold his ground until compelled by his commander to fall back, when his vessel was being cut to pieces.

The last affair of any importance that took place in the river before July 10th, 1863, was the attack of some Confederate field batteries upon the U. S. steamer "New London," Lieutenant-Commander G. H. Perkins.

The "New London" was on her way from Port Hudson, having on board a bearer of dispatches from General Banks, announcing the unconditional surrender of that place.

On his arrival at Donaldsonville, Lieutenant-Commander Perkins was directed to proceed to New Orleans, the "Winona" to accompany him past some batteries at Whitehall Point.

At 1 o'clock, A. M., as the "New London" was passing this point, the enemy opened on her with artillery and musketry. The third shell entered one of the boilers, and exploding, made seven holes in a line with the upward flues, scalding six persons severely. Another perforated the steam-drum, and the vessel was disabled and enveloped in steam. The Captain put the vessel's head toward the eastern shore, but the steam escaped so rapidly that the men could not stay at the wheel and the "New London" grounded under the battery. A rocket was sent up to call the attention of the "Winona" that she might come to the assistance of her consort, but she was not in sight. The port battery was manned and commenced playing on the opposite shore where the Confederates were posted. The fire of the enemy's batteries was very severe, and though it was night their range was improving all the time.

Lieutenant-Commander Perkins lowered all his boats and got kedges out astern to haul his vessel off the bottom, which he succeeded in doing, and drifted down the river until out of range of the upper batteries. The principal battery being below, Lieutenant-Commander Perkins towed the "New London" with his boats to the east bank and made her fast. During this operation, a continuous fire was kept up by the enemy's infantry upon the boats and also on the vessel. It was nearly daylight and the Union commander, expecting a renewed attack by the enemy, sent his men on shore under cover of the levee to guard against it. Pickets were stationed up and down the river and messengers sent to Donaldsonville to state the condition of affairs, and also down the river to obtain the assistance of the iron-clad "Essex" and steam-sloop "Monongahela."

The messengers returned from Donaldsonville, stating that no assistance could be rendered, and the two couriers from below returned with the unsatisfactory news that the "Essex" and "Monongahela" could not be found.

This was not the kind of an answer the Army would have received from the Navy if the general in command had made a requisition for gun-boats when attacked by the Confederates. It was not the kind of message Commander Woolsey sent from the "Princess Royal" when the post at Donaldsonville was attacked by General Green, who with his large force would have carried the works but for the tremendous enfilading fire of the Federal gun-boat.

But General Weitzel was in command at Donaldsonville and he did not seem to think a gun-boat of much importance, or perhaps did not think it prudent to weaken his garrison while there were Confederate field-pieces in the neighborhood.

But Lieutenant-Commander Perkins, knowing that the Confederates would attack him at night with a force he could not resist, determined to go and convince General Weitzel of the necessity there was for sending troops to the assistance of his vessel, and succeeded in doing so; but on returning to the place where he had left the "New London," he found her gone. During his absence, which was only of two hours' duration, the "Essex" and "Monongahela" had come up the river and towed the "New London" down!

The Confederates did not easily relinquish what no doubt they considered a certain prize. They contested the passage of the "Essex" and "Monongahela" with much determination, and the infantry even stood up for some time against the fire of the heavy guns of three vessels; but they were scattered by grape, canister and shrapnel, which proved too much for them.

This affair was well managed by Lieutenant-Commander Perkins, who did all that lay in his power to prevent his vessel falling into the enemy's hands; displaying cool judgment and bravery through all. Some officers under the circumstances might have abandoned the gun-boat in the night, and escaped in the boats after setting fire to her; but Perkins preferred to use his boats to tow her out of range of the enemy's guns until he could obtain assistance, which by his perseverance he succeeded in doing. Farragut blamed him for leaving his ship to go after assistance himself. No doubt the principle that every commanding officer should be the last man to leave his vessel, is the right one, but here there was no danger of capture in his absence, as the enemy was on the opposite shore and could not reach his vessel in the short time that he was away from her.

The last of the reports from Admiral Farragut to the Navy Department, published in the year 1863, conveyed the melancholy news of the death of Commander Abner Reed of the "Monongahela." He was mortally wounded by a rifle-shell while passing the batteries, twelve miles below Donaldsonville, and Farragut says of him: "Commander Reed was one of the most enterprising and gallant officers in my squadron, and the very mention of his name was a source of terror to the Confederates—the country could well have spared a better man." No higher eulogium was ever passed upon any officer, and it should be recorded in history.

Captain T. A. Jenkins, who was on board, was severely wounded.

This brings the narrative of events up to July 28th, 1863.

The news of the surrender of Vicksburg had been received in New Orleans, and that of Port Hudson immediately followed.

The Father of Waters flowed peacefully to the sea, free and untrammelled. The great chain of slavery was broken, never to be again united. The work of setting free the great artery of the North and South, so essential to our nationality, had been accomplished, and the foul blot of human slavery had disappeared forever from our escutcheon. The squadrons of the Upper and Lower Mississippi had shaken

since the events took place which are here narrated. Many of the men who figured in those scenes have been overtaken by age, and Time, the great destroyer, has somewhat impaired their faculties, but they are the same in spirit as in 1861, and still entitled to the gratitude of their country.

The men in civil life who read the stirring incidents of the war by their cosy firesides should not forget that they have reaped the benefits arising from the incessant toil of the Navy, and should therefore forbear to speak unkindly of a profession whose officers and men would tomorrow—if war should again arise—exhibit the same zeal, energy and courage as was shown by those who so well performed their parts in the late conflict.

On the receipt of the news of the fall of Vicksburg and Fort Hudson at New Orleans, on the 10th of July, there was great rejoicing on the part of our Army and Navy. The commanding officers of both branches of the service ordered salutes of one hundred guns to be fired—the sound of which carried joy to the hearts of those who sympathized with the Union cause, and dismay to the hearts of the Confederates. The latter element predominated very largely, yet on the whole the people of New Orleans were pleased with the hope of seeing the commerce of the North and West return to their once flourishing city and again crowd its levees with the splendid steamers that formerly kept their storehouses supplied with the products of the Upper Mississippi. But war had made sad ravages in this class of vessels; hundreds of them had been sunk or burned in the Red, Yazoo, Arkansas and White Rivers, and the few that now came creeping out of the bayous and small streams where they had been laid away, were in so dilapidated a condition that on their appearance at the levee, the very sight of these vessels called to mind the decayed condition of this once flourishing city and brought tears of sorrow to many an eye. These people were only repaid for their faithlessness to a form of government under which they had reaped so much prosperity and from which, even in their wildest enthusiasm for the Confederacy, they received protection.

Few of the seceders would believe that Vicksburg and Port Hudson had surrendered, for they were so infatuated with the Confederacy that they could not but believe that it was the strongest government on the face of the earth, and that its resources were illimitable; forgetting that it only derived its present strength from coming into possession of the forts, navy-yards and arsenals which had been taken from the true government by the very persons for whose protection they had been built.

COMMANDER ABNER REED

hands in New Orleans, and the great highway between Cincinnati and the Queen City of the South was once more open to commerce with the North and with foreign countries. The power of the United States Government had been restored and its authority vindicated in more than half the territory claimed by the insurgents.

It is to be hoped that the future millions who will dwell along the banks of these mighty waters, which were emancipated by the valor of the Army and Navy, will not withhold a due share of credit to the officers and men of the Navy, who performed their important part in those eventful times with such an unflinching devotion to the Union.

A quarter of a century has passed away

New Orleans, after it had been conquered by Farragut's fleet, became a model city as regards its police and sanitary departments, for the first time in its history. No city in the world ever possessed a more turbulent mob—and in no city were the municipal laws less respected (before its capture)—at the end of 1862 its streets were as well kept as those of the cleanest village at the North and the citizens had never enjoyed such safety as they did under the Butler regime, when General Shipley was the military governor of the city.

With the fall of Vicksburg and Port Hudson the flying detachments of Confederates that lingered along the Mississippi and in the bayous and inland rivers drew back into the western part of Louisiana, or into Texas, where most of them came from. They were a fearless set of men (unlike the home-guards of Tennessee), who seem to have been drawn to the banks of the Mississippi for the purpose of aiding their besieged friends in Vicksburg and Port Hudson; and although they were sufficiently active in annoying gun-boats and transports going up or down the river, they did not resort to the vile measures of the Tennessee home-guards or commit depredations upon inoffensive citizens. They were soldiers in every sense of the word, and risked their lives fearlessly in making attacks on the Union fortifications; fighting in what they considered the defence of their own soil, until the last Confederate stronghold on the Mississippi had fallen.

The surrender of the two great fortifications relieved a large force of the Army and Navy from close confinement around the enemy, and allowed them to be used all along the river and coast. This, too, in a measure helped to get rid of the artillery and mounted rangers, who, though not numerous enough to make a stand against the Federal troops, had been very annoying. The Federals had frequently to acknowledge that the Texas and Louisiana troops were more than a match for them; and if they had not been so strongly backed by the naval force, it is doubtful whether Butler or

Banks could have held their positions for a month.

After the fall of Vicksburg, Rear-Admiral Porter descended the Mississippi as far as New Orleans, where the command of the entire river and all its tributaries was turned over to him by Farragut, who could now give his whole attention to the coast and its inlets, which were still in the hands of the enemy.

Farragut had calculated on capturing some of the enemy's strongholds on the coast as early as 1862, but the latter held out defiantly—very much strengthened, doubly armed and trebly manned—their commanders arrogantly flying the Confederate flag and bidding our wooden vessels to come to the sacrifice that awaited them.

After Farragut had turned over his part of the command in the Mississippi, it belonged to his successor to see that the enemy built no more forts along the banks of the great river; to guarantee a safe passage to army transports and commercial steamers, and to see that no provisions or troops reached the Confederates from Arkansas, Louisiana or Texas.

These duties were faithfully performed. The tin-clads and gun-boats, now amounting to about 112, were spread along the whole length of the river (below Vicksburg) and at or near the mouth of all tributaries. The vessels were divided into squadrons under young and competent officers, who vied with each other in carrying out the orders that were issued from time to time "to keep open the free navigation of the rivers."

It cannot be said that peace was actually established, but the transit from Cairo to New Orleans was not at all hazardous for the travelling community; the little towns began to exhibit a desire to trade, and the people on the plantations soon found that they received more protection from the gun-boats than they did from the half-starved Confederates, who had been accustomed to make frequent raids upon the coast (as they called the river-banks) in search of food and plunder.

## CHAPTER XXXII.

CONDITION OF THE NAVY DEPARTMENT AT THE BREAKING OUT OF THE REBELLION.—SECRETARY WELLES, HIS CHARACTER AND ABILITY.—COMMODORES STRINGHAM AND PAULDING CONNECTED WITH THE NAVY DEPARTMENT TO ASSIST SECRETARY WELLES.—PAULDING DRIVES THE SECESSIONISTS OUT OF THE DEPARTMENT.—PRESIDENT LINCOLN SELECTS MR. **W**HEN the civil war broke out, the Navy Department, like every other branch of the government, was totally unprepared for the event.

The right of secession had been openly declared in the Senate and House of Representatives, and Southern members were daily leaving their seats; yet the Administration held back, and, deluded by Confederate sympathizers, sat still and looked on with dismay at the dismemberment of the country without seeming to take any steps to prevent it.

No department of the government seemed to rise to the occasion, and the Navy Department was no exception to the rule. The Secretary of the Navy, Mr. Gideon Welles, was not a naval man in any sense of the word. His life had been passed amid civil pursuits, and the only connection he had ever had with the Navy was for a short time when he was Chief of the Bureau of Provisions and Clothing—a purely political

appointment. He had spent many years of his life as editor of a newspaper, and during his administration of affairs in the Navy Department gave evidence of ability in the use of his pen. The numerous dispatches and reports which he wrote during the war showed that as a literary man he had few superiors.

But Mr. Welles was far advanced in years when he took charge of the Navy, and had reached a period when men generally desire to retire to the shades of private life, and follow pursuits more congenial to their tastes. He was not a rapid thinker—was cautious by nature and extremely methodical in all he did. Having been at the head of a bureau where he constantly came in contact with contractors, he naturally surrounded himself with guards of all kinds, and introduced so much red tape into the Department, that it must have been a bold man who would have attempted to break through it all with the hope of overreaching the chief or his assistants.

Some of the bureau officers were inoculated with secession sentiments, and their rooms were daily filled with officers who exchanged opinions hostile to the government, meanwhile leaving the Secretary to assume that they were loyal. The Secretary, as a matter of course, received no aid from these men; on the contrary, they held him back and delayed his doing what good he attempted.

Mr. Welles began to find out gradually that he was not surrounded by the kind of men it was desirable to have about him under the circumstances, and he called to his aid in the department Commodore Stringham, the best dock-yard officer in the Navy and a thorough seaman, loyal to the last degree and of a most honorable character. But he possessed no administrative abilities, disliked an office life, and soon sought relief from it by applying for active duty afloat. He was therefore appointed to the command of a small squadron, to attempt the capture of the forts at Hatteras Inlet, which he succeeded in doing.

To show how slowly secretaries or officers had risen to the occasion, and how little all concerned could form any estimate of what was actually necessary to be done at the breaking out of the civil war (though the coming events cast their shadows plainly before them), the Hatteras expedition was looked upon as a great event, and it was thought that the success of it was likely to carry such terror into the hearts of the Confederates that it would break up any further attempt to fortify the Southern coast!

Commodore Paulding relieved Commodore Stringham in the Navy Department. He was a faithful officer, who looked upon the flag of his country as the emblem of all that was great and glorious. He regarded secession as the worm at the root of the flower, sure to destroy it unless speedily removed, and he was in favor of exterminating every man in the Navy of whose loyalty there was even a doubt. He had served many years of his life in active duty at sea, but he now began to show the advance of age, and did not at once realize the gravity of the situation. Running in a groove, as he had done for so many years, he was not able to change his nature suddenly and adopt new methods.

He soon found that he did not suit the place, nor the place him, and as his ideas of naval discipline were so dissimilar to the system which governed a civil department that he had at times to defer to the opinions of the chief clerk, and the associations were not pleasant, he soon tired of the position, especially when he found that he would have to bear responsibilities which he did not care to shoulder.

In fact, Commodore Paulding disliked

the atmosphere of the Navy Department as much as Commodore Stringham had done, and soon obtained duty at the New York Navy Yard, where he thought he could be of more service to his country. But before he left the Department he not only rooted out the disloyal officers who were attached to the different bureaus, but forbade any man who uttered disloyal sentiments, or who hesitated to espouse the Union cause, from entering the building.

It never struck these loyal old officers, when they heard that the Confederates were building iron-clads, that something might be done in that direction by the North. They had fought their battles on the open decks of ships and they thought that was a good-enough way for any one to fight. They did not believe in men who would resort to a shelter of iron for protection against shot or shell, and rather had a contempt for any one who would suggest such a mode of fighting. Consequently, their thoughts did not run in the direction of iron-clads.

It was absolutely necessary that Mr. Welles should have an adviser in his department who could take charge of the practical part of naval affairs, and who by his knowledge of the wants of the Navy could assist him to meet the difficulties which were daily accumulating, and almost overpowering him. It would not have been looked upon favorably had he selected a naval officer below the highest grades, no matter what his abilities were, for such a thing had never occurred in the Navy! That was argument enough, without mentioning that it would have been a reflection upon the older officers. It was for this reason that Mr. G. V. Fox, late a lieutenant in the Navy, was selected by President Lincoln as naval adviser, and finally appointed Assistant Secretary of the Navy. It was not until Mr. Fox was appointed that due attention was paid to the building of iron-clads and other vessels appropriate for coast and river service, and it was to Mr. Fox that we were indebted during the war for the life and energy that pervaded the naval administration, and his ready compliance with the requisitions of officers, which enabled them to carry on naval operations with vigor.

Secretary Welles was not an eminent statesman, yet he had qualities of a high order. He was loyal to his government, held no intercourse with men of disloyal sentiments, and drove out of the service all those officers who wavered in their allegiance. He was a man of good judgment in many matters relating to the business that came before him, and he never showed more wisdom than when he acquiesced in the President's appointment of Mr. Fox as his naval adviser.

The civil war had now assumed such large proportions, and so rapidly, that even the wisest men were at fault as to what should be done to meet the style of warfare which the Confederates were inaugurating all over the South. With the assumed resources of the North, every step the Confederates made in military or naval warfare should have been more than met by a corresponding move on the Federal side: but this was not done. It was known early in the war that the Confederates were building iron-clads of a peculiar character, but no one seemed to know *exactly* what their character was.

There is no doubt of *one* thing, viz., that long before the prominent secession leaders had signified their intention of leaving their seats in Congress, every move had been determined. It was known exactly how many small arms were wanted, and how many great guns and pieces of artillery; and it was known that for a beginning there were enough of these arms stowed away in the Government arsenals scattered through the Southern States, to say nothing of the great armament that had been supplied from time to time to the States for the use of their militia. It is thus seen that in respect to arms the Confederates had no right to complain of deficiencies. At the battle of Bull Run they were as well supplied with all the appliances of war as were the government troops, who were forced to retreat on that day before the fire of this first army of the insurgents.

For some time all these matters had been considered by the southern leaders; and when the time came to act, eleven States rose as one man, and the government had not only to put down the State of South Carolina, with a small number of insurrectionists, but millions of people from Kentucky to Maryland, all armed and equipped and formed into battalions, as if they had been the great reserve of the nation, ready to jump to their arms at the call of the general government. This system of preparation extended to the Navy as well as to the Army. The Confederate leaders knew, two years before the war, what officers of the Navy would unite with them in humiliating the old flag, and though these officers made no pledges, and doubtless hoped that the event would never take place that would disturb their position under the United States Government, yet they had made up their minds what to do in case the struggle ensued.

It is not likely that the Southern leaders would lose any opportunity of gaining information from Southern officers that would enable them to carry out their plans, and it is free to presume, from what we now know, that a full discussion of all matters was

carried on between the promoters of secession and officers of the Army and Navy up to the last moment; many of the latter may have entered into these discussions and given all the desired information without realizing that they were unfaithful to the trusts confided to them by their lawful government.

We believe that all the iron-clads that finally got afloat or were burned on the stocks were calculated for before the war, the places of building them decided upon, the difficulties the Federal Government would have to contend with to get at them, the material required for their construction, the time required to build them, and the officers and artisans who were to be employed in the work selected. This may seem doubtful, but the Confederates could never, with all their energy and determination to win, have achieved such work as they performed in the building of an iron-clad navy without having had preconceived plans.

It is a compliment to their energy and ingenuity to say that they could build anything at all at the South beyond their light river-steamers. They had so long depended upon the Northern machine-shops for all heavy work needed in the South, that they had no great factories of their own. Even the Tredegar Works at Richmond, which supplied a large number of the Brooke rifles for the Confederacy, owed its existence to the fact that it was sustained by the United States Government in the first instance, and by large contracts given it for naval ordnance up to 1861, some of which was on the lathe when Sumter fired the first gun.

If the Southerners did not make their plans before the war actually broke out, they deserve unbounded credit for the energy displayed in getting into existence such formidable vessels as they did before the North had done anything but build the little "Monitor," which was ready nearly on the same day that the "Merrimac" created such consternation at Hampton Roads.

It is true, that through the enterprise and energy of a western man, Mr. James B. Eads, we got some iron-clads afloat on the Mississippi, but it was not until the 17th of June, 1861, that the Quartermaster-general of the Army issued proposals for building the vessels. Great progress was made upon these *quasi* iron-clads when the work was once under full headway; but with all the remarkable services they performed, what were they when compared with the "Virginia," the "Louisiana," the "Albatross," the "Atlanta," "Mobile," and three large vessels built or building at Yazoo City—the "Mississippi," burnt at New Orleans—the "Tennessee," that fought a whole squadron (including three iron-clads) in Mo-

bile Bay—and the “Arkansas,” that passed through a fleet of vessels (carrying 150 guns), without receiving more serious injury than the wounding of some fifteen men and the slight derangement of part of her armor and machinery?

Previous to the civil war it had been the aim of the United States Government to excel all other nations in the quality and size of its vessels-of-war. If a steam-frigate was built in Europe of large size and heavily armed, the U. S. Government at once laid down the lines of a larger vessel carrying many more guns, and these guns of a calibre hitherto unknown in naval warfare. We had, in fact, reached the point of excellence in our ships some years previous to the breaking out of the Rebellion, and the great steam-frigates which figured during the war in attacks on heavy earth-works were sample vessels of our Navy. They had all steamed to different parts of the world, and their appearance and power called forth the applause of all foreign officers who visited them. There were no vessels in Europe of this class that could compare with them; yet, with all these triumphs over foreigners, we had only one vessel at the time of the “Merrimac’s” appearance that was able to compete with her. The only vessels we had building were the “New Ironsides” (a splendid ship of her class) and the “Galena,” a perfect failure as an iron-clad, as proved by her weakness on the James River, where she attacked the Confederate batteries.

It required some time for the Department to take in the true situation of affairs, and it was not until after the battle between the “Monitor” and “Merrimac” that they saw how nearly the nation escaped a great calamity, which had been averted by the invention of John Ericsson, and the gallant officer who fought the Union iron-clad with so much skill and bravery. Then the Navy Department rose to the occasion, and putting forth all its energy, more than redeemed itself for the *apparent* supineness of the past.

At first neither the constructors nor the Navy Department had a fair conception of what was needed in the Navy to meet the new order of vessels that were being built in the South. The Department was overwhelmed with a multiplicity of plans that were presented by outside parties, who were backed by strong political friends in Congress whom it was advisable the Secretary should conciliate. Some of these plans were so wild and impracticable that they could not be considered for a moment. The attention required by these claimants and their political backers hampered the Department greatly; and they were not so much indebted to John Ericsson for driving

the “Merrimac” into port, as for getting rid of the pack of inventors and advisers who had been hanging about the doors of the Secretary of the Navy, until none but a person of Mr. Welles’ placid temper or Mr. Fox’s inflexible will could have been able to stand the strain. The little “Monitor” settled all these inventors at the same time that she settled the “Merrimac,” and Ericsson not only rose at once in the estimation of the public, but his standing with the Government became assured.

From that time forth the Navy Department may be said to have assumed new life and vigor, and the most hypercritical historian can scarcely find fault with it for want of energy displayed in building vessels of the new type, which, when finished, could bid defiance to the heaviest ships of any foreign navy.

There was at one time in England a large number of British naval officers who would not listen to the idea of having an iron-clad navy. The French were trying to introduce iron-clads into their service, but on a small scale; and their want of success did not encourage Englishmen to copy their traditional enemies. They still clung to their idols, the staunch old wooden three-deckers, seventy-fours and frigates, and scouted the idea of laying aside these noble structures for a class of vessel that had never been tested at sea, and which, in the opinion of many, would go to the bottom in the first gale of wind they encountered. They had in some cases partially protected the wood-work abreast of the guns, but not to any extent.

There was no master-mind to take hold of the subject, and to evoke a system that would at once show up the weakness of the British navy, and convince the authorities that the days of the wooden monarchs of the sea were numbered.

The Federal Navy Department long before had its eyes on the great English navy that made no move in the direction of changing the character of its vessels—a navy full of clever and scientific men, who should have been ever alive to any theory that makes one navy superior to another, but who now refused to listen to the talk about iron-clad ships and scouted the idea of adopting them.

It would have been a bold man, indeed, who, as Secretary of the Navy, would have taken the responsibility of building any number of untried “Monitors” without something to justify him in doing so. The Secretary of the Navy himself and those about him had no positive belief at first in the success of Ericsson’s “Monitor.” The plan was so contrary to all preconceived ideas of a fighting-ship that they could not believe it would do what Ericsson predicted for it.

The chief constructor of the navy, Mr. John Lenthall, at first condemned the "Monitor" *in toto*, and he was at that time the ablest naval architect in any country, having built some of the most effective ships afloat.

All these things were enough to have deterred Secretary Welles from embarking in the iron-clad business; but he did take hold of the Ericsson plan, and in view of the fact that it was necessary to have something with which to meet the "Merrimac," he made a contract with this inventor which in the end led to much larger vessels. As soon as the invulnerability of the "Monitor" was established by her encounter with the most powerful iron-clad afloat, Secretary Welles was no longer backward in advocating this class of vessel.

To show how little was known about iron-clads in the U. S. Navy and how little support the Department received from that direction: A Board, established by Act of Congress, "to consist of three skillful line officers of the Navy," was appointed to look into the subject of iron-clads; and, if their report was favorable, the Secretary of the Navy was to be authorized to build one or more armored or iron-clad, or steel-clad, steamships or floating batteries, etc., etc. This law was passed in September, 1861. The Board of Officers appointed to decide upon this matter approached the subject very carefully, saying: "Distrustful of our own ability to discharge this duty, which the law requires should be performed by three skillful naval officers, we approach the subject with diffidence, having no experience and but scanty knowledge in this branch of naval architecture."

This Board was governed very much in their reports by the information and opinions which they could obtain from English authorities. They recommended three out of seventeen plans that had been submitted (one of them John Ericsson's), but with reservations and a proviso (which was enough to frighten off any constructor) that the vessels must be a success in all respects, or else be thrown back on the hands of the contractors!"

The Board on their own account recommended that armor and heavy guns be

placed on one of our *river craft*; "or, if none will bear it, to construct a scow that will answer, to plate and shield the guns for river service on the Potomac; to be constructed or prepared at the Washington Navy Yard for immediate use!" The Board did not say how this iron-clad warrior was to be propelled.

When three of the most skillful officers of the Navy could give the Secretary no better information than this, it is no wonder that he was doubtful of his own ability to decide in such a case; but he did decide, and in favor of Ericsson, who proposed not only the most reasonable price for

JOHN LENTHALL, CHIEF OF BUREAU OF CONSTRUCTION.

his vessels, but the unity of the design seemed to strike the Board as something likely to succeed. The "New Ironsides" was also contracted for with Cramp & Sons in Philadelphia, and the "Galena," to be armored with three-inch iron, to be built by Bushnell & Co., New Haven, Connecticut. These three vessels, it is said, were to represent the three types of the American idea of iron-clads—though, with the exception of the "New Ironsides," very few persons had any faith in them.

This was the first attempt at building an iron-clad navy for operations on the coast,

and the "Monitor" was the only one of them that was ready to meet the enemy's greatest fighting-machine, "just in the nick of time."

There was one thing which the Navy Department lost sight of altogether, and that was that the "Merrimac" was simply a large frigate being metamorphosed into an iron-clad. We had five vessels similar to the "Merrimac," and any two of them could have been cut down and armored much more effectively than the "Merrimac" was. The work could have been done at our northern navy yards in half of the time it could be done by the Confederates, and we would have had two heavy iron-clads ready to meet the Confederate monster if ever she should get out of Norfolk.

What matters it? some will say. The "Monitor" drove the "Merrimac" back, and demonstrated the superiority of the American type of iron-clad over the most powerful war-ship ever until that time built in any navy, placed us on an equality with England and France, and gave our government a sure plan they could follow with safety.

Yes, but we would have been saved the disgrace and disaster of seeing two of our finest frigates sunk or destroyed at Newport News, 250 gallant officers and men slain almost in cold blood, three frigates run on shore and at the mercy of the "Merrimac," and every ship at Hampton Roads thrown into a state of panic, which unfortunately was witnessed by a foreign man-of-war lying at anchor off Fortress Monroe. It would have saved the government a shock which it did not recover from for some time, and the Northern people from the mortification of knowing that our entire fleet at Hampton Roads had been beaten by one Confederate vessel in the first naval encounter of the war.

With all this, the lesson learned was a useful one. It opened the eyes of Congress to the necessity of making more liberal appropriations for the Navy, and made them listen at last to the appeals of the Secretary of the Navy to strengthen this branch of the service.

The Board above referred to recommended that the Department should ask Congress, at the next session, to appropriate \$10,000 for experiments on iron plates of different kinds! As if the Department could wait while the enemy was thundering at its doors! But it is due to the Navy Department to state that it was not at all influenced by such a procrastinating policy. Mr. Welles while Secretary of the Navy received his share of abuse, and on no point was he more severely criticised than on his selection of the "Monitor" as the type of American iron-clads, for the princi-

ple did not meet with favor among that class of officers who were expected to serve in them. Mr. Welles could not expect to be exempt from criticism, or be excused from the responsibility of any failure that might attend his experiments with the Navy. He was in the position of the commander of a fleet, being alone responsible for success or failure. Though his subordinates may do a great deal of the work, and make a great many suggestions, yet the Commander-in-chief is entitled to all the honors in case of success, and must also bear the blame of failure. Such has been the history of war since wars began. This rule also applies to heads of departments. They may have the ablest subordinates and be relieved of many of the cares of office, yet they must shoulder all responsibility and take the odium of every case of failure.

In writing history, one must be careful not to let his predilections in favor of one man lead him to do injustice to another, especially if this other is the head of a department and the responsible party.

No matter what the abilities of the subordinates are, or how much their services have conduced to the desired end, one must look only to the head of his department for reward, as a lieutenant does to his captain.

It is not always that men receive in their life-time the amount of credit due for their work; it oftener happens that they receive more honor after death. In the course of years history will do them justice. The patient, plodding historian will come along, and taking no account of time, will delve into the mass of records which lie at his disposal, when every word is carefully scanned, and the truth is sure to be evolved. Then men are weighed according to their merits, and assigned to their rightful positions.

All the sensational histories written during the war, or directly after it, have long since been consigned to that bourne from which sensational history never returns. He who now undertakes to write of the war must prepare himself for severe criticism if he tries to deprive any one of credit.

Time is a great promoter of good feeling and softener-down of asperities, enabling a writer of the present day to view things in a different light from what he did twenty years ago. It would be better, nevertheless, that a century should pass before the history of a war is written, when all the participants in it are dead; for history can be better told from the written or printed records of the day than from the recollections of any one who lived among the scenes he attempts to describe; but, if men will write, they must lay aside all personal feeling, and keeping the records before their

eyes, do their duty "tho' the heavens should fall."

Thus, in this history, in speaking of the work done by the Navy Department to bring to an end the terrible rebellion that was devastating the country, the writer can only recognize Mr. Welles, the Secretary of the Navy, as the one who controlled the great machine that was turning out ships, gun-boats, iron-clads, etc., with a rapidity that astonished the powers of Europe, who were looking on with amazement at the Federal Government while the latter was building a Navy capable of setting at defiance even France or England.

While Mr. Fox, the Assistant Secretary, was bending all *his* energies to devise the class of vessels best suited for the purposes of our war, and to meet the necessities of the occasion, and Mr. Faxon, the chief clerk, was giving his undivided attention to the civil branch of the Department, Mr. Welles was presiding over all and giving to each his moral support.

Mr. Welles was the responsible head; it was his judgment that decided almost all matters; it was his coolness and placidity of temper that controlled those around him and smoothed over the little asperities and jealousies which would spring up among his subordinates—with a smooth word he brought back to his proper position anyone who attempted to assume more than his rightful authority—in this way making a unit of the department. Mr. Fox was the able assistant, in charge of the general naval duties that had in years gone by pertained to the Board of Naval Commissioners, while Mr. Faxon was the chief clerk in charge of the Civil Department and the records.

Secretary Welles was the judicial, financial, and political head, under whose direction everything was done; all plans were submitted to him, and no movement was made without his consent, and he weighed every matter before coming to a conclusion. He knew everything that was going on in the Navy; and as a proof that he understood and appreciated all that was taking place, and that he was observing the proper steps to provide for the future, it is only necessary for one to read the numerous able reports he wrote from time to time on the condition of the Navy and its requirements, or his descriptions of the operations of the different squadrons. These documents will convince any one that Secretary Welles had abilities of no ordinary kind, and that, with few omissions, he did everything that could be done to put the Navy in a creditable condition.

That he could have accomplished all he did without Mr. Fox's assistance no one pretends to claim; but he showed

his judgment in listening to this gentleman's recommendations, and by placing confidence in one who had the best interests of the service at heart. Hereafter, then, when speaking of the Navy Department, we shall regard Secretary Welles as the responsible head to whom all under him owed proper obedience and their best efforts to aid in the difficult task he had before him.

In all that regarded the general increase of the Navy, the Department had made good use of the means at its disposal. The Navy Yards and private establishments were full of work to overflowing. Mr. John Lenthall, a constructor of the highest order, was always ready, with his practical skill and science, for any emergency. He had planned the great frigates, "Colorado," "Wabash," "Minnesota," "Merrimac," and "Franklin," which had elicited the applause of the world. He planned the "90-day gun-boats" immediately after the breaking out of the war (a small class of vessel carrying one 11-inch gun forward and two light 32-pounders aft, drawing only eight or ten feet of water, and therefore able to enter any of the Southern ports). These vessels were of the greatest use during the war, and their value could not be overestimated.

On a requisition from Mr. Fox, Mr. Lenthall designed the double-enders, with their heavy batteries of 9 and 11-inch guns and ten feet draft of water, that could follow the "90-day gun-boats" through the most narrow and tortuous streams, where, not having room to turn, they could go out again stern foremost, like a New York ferry-boat going from slip to slip.

And when Mr. Lenthall was notified that the Confederates were having built in England fast clippers armed with English guns, manned by English seamen, and commanded by Confederate officers, he at once designed a score of swift and beautiful corvettes, that were able to overtake any of the Confederate cruisers and capture them when they got them under their guns. One of these did actually destroy the "Alabama."

Mr. Lenthall also designed those large ships-of-war of over 3,000 tons (on Mr. Fox's suggestion), the first of which made seventeen and one-half knots per hour for twenty-four consecutive hours, the greatest speed that had been attained at that time by any naval power. In this case the ability of Mr. Isherwood, chief of Bureau of Steam Engineering, was brought into play. He designed the engines and boilers of these ships, as he did the machinery of all others planned by Mr. Lenthall.

Mr. Lenthall could not at first be made to admit that a vessel of the "Monitor's" build could be made efficacious for war pur-

poses, or live in a sea-way, and he did not hesitate to say, while she was building, that she would go down as soon as she was launched. It was not until after the battle of the "Monitor" and "Merrimac" that he had any confidence in the former. Then Mr. Lenthall's ideas underwent a radical change, and while he sighed over what he knew would be the end of all his beautiful wooden vessels, with whose fine models he had spent so many hours of his life, his practical mind at once grasped the subject, with new ideas engrafted on the first project, and in the end he produced vessels of the Monitor type that had not their equals at that time in any European navy.

Whatever alterations may have been made in the Monitor system, the original idea was that of John Ericsson; any change

B. F. ISHERWOOD, U. S. NAVY, CHIEF OF BUREAU OF  
STEAM-ENGINEERING.

or improvement that left the hull submerged, or nearly so, and retained the revolving turret, was his by right. The criticisms on his first invention led him to consider the importance of somewhat changing his plans, and out of this came the "Miantonomah," "Monadnock," etc., double-turreted monitors, which, with their four 15-inch guns, were more than a match for any three-decker.

Though there were some objections to the first Monitor, there was nothing to call for the bitter criticisms with which the vessel was assailed. Theoretically, the original plan had advantages over the later ideas: for instance, the armor projected over the sides, stern and bow on what was called the overhang which carried out the idea

Ericsson first conceived of building a raft that could not sink; which could not be struck by shot below the water line; which could not be rammed; where the rudder and propeller were entirely secure from shot or ramming; and where raising the anchor and all other operations could be performed without a single person appearing on deck.

If the "Monitor" was not as efficient a vessel as some of those that came after her, it is no reason why any of her arrangements should be condemned. She performed a more important part in the history of the war than any of her successors, and her name will go down in history when the names of other vessels of her class will have been forgotten. Had the original design been received by the government as it ought to have been, and money spent without stint to produce at the first such vessels as the "Miantonomah" and "Monadnock," either of them would have destroyed the "Merrimac" in twenty minutes.

We prided ourselves in those days on the character of our ordnance, which was the best of its kind in the world—we refer to the 11-inch and 9-inch smooth-bore—rifled cannon had not at that time made such an advance as to satisfy us that it would be the gun of the future. Admiral Dahlgren, who had brought our naval ordnance to a state of perfection, considered the 11-inch the most powerful gun in the world; and having accomplished what he considered the grandest feat of gun-making in modern times, he was contented to rest upon his laurels.

There was a diversity of opinion at that time between the ordnance authorities of the Army and Navy in regard to the kind of guns that were required, which engendered some ill-feeling between the heads of the two branches of the service, the result of which was that there was no interchange of ideas. The Naval Chief of Bureau was satisfied that he had found in the 11-inch gun all that was desirable for naval purposes, never considering the great change that might occur at any moment in the shape and character of war ships that would involve the necessity of using larger guns. The result was that the new era came and found us with only the 11-inch gun on hand in the Navy.

It is not certain that the original Monitor would have carried two guns of larger size, but her dimensions and steam power might easily have been increased at small additional expense, and she could have been provided with 15-inch guns.

The ordnance department of the Army had gone to work very quietly and cast some guns of that size, somewhat on the Dahlgren pattern. Whether the Naval Ordnance Department knew of the casting of

this 15-inch gun we are not prepared to say, but it is certain neither Secretary Welles nor Mr. Fox knew anything about it until after the battle of the "Monitor" and "Merrimac."

The account of the destruction of the "Cumberland" and "Congress" had been flashed over the wires to the Secretary of the Navy, and Mr. Fox started at once for Hampton Roads to see if he could be of any service, and to report on the condition of affairs.

Mr. Fox was on the dock at Fortress Monroe, where he could witness the fight between the iron-clads. He noticed that the shot from the "Monitor's" guns glanced off from the sloping sides of the "Merrimac," while the rifled shot of the "Merrimac" seemed to have no effect on the turret of the "Monitor." "I wonder," he said, mentally, "why no one has ever thought of casting larger guns with heavier shot, that would knock in that fellow's sides at the first broadside." As this idea struck him, he cast his eyes on a monster gun that was lying on the dock under the lifting-crane, and on examining it he found it to be a 15-inch gun, army pattern, intended to be mounted at Fortress Monroe. This was a revelation to the Assistant Secretary, and he returned to Washington with his ideas much enlarged, and said to the Secretary, "We must have Monitors that will carry turrets large enough for 15-inch guns;" and Mr. Welles, on hearing his story, agreed with him in his conclusions.

When an invention which has been doubted and decried shows its superiority over all its competitors, and its detractors are set at naught, it immediately rises to the extreme of popularity; and so it was with the Monitor system, though some officers, who thought more of their personal comfort than they did of results to be achieved, greatly preferred the "New Ironsides," with her sixteen 11-inch guns, to a Monitor with two, or even four, 15-inch guns.

The "New Ironsides" was without doubt a splendid vessel, and we ought to have built more of the same kind; but although she was better suited for attacking fortifications under certain conditions than the Monitors were (owing to the number of her guns and the consequent rapidity of her fire), she would have stood no chance in a contest with one of the single-turreted class—much less with the "Monadnock" or "Miantonomah."

The "New Ironsides" did not represent an idea that could be carried out in all future naval ships; no vessels built on her plans have maintained their positions, while the Monitor system has been combined in all the grand fighting-ships of the line in England. The Monitor turret has even been used for land fortifications, and it will no

doubt in the future be extensively applied to the defence of bays and harbors.

That Ericsson deserves the credit for the original idea of the Monitor system, no one will deny; but, next to Mr. Ericsson, the Assistant Secretary of the Navy did more than any one else to improve on this idea, and apply it to naval warfare. It was a matter which the Navy Department had to handle cautiously; for though the "Monitor" had demonstrated her superiority over the "Merrimac," yet the plan was not altogether acceptable to the majority of naval officers; their objections were taken up by members of Congress, particularly those belonging to the "opposition," who were averse to giving liberal appropriations to "oppress the Southern people;" and it was only when anxiety was felt lest we might be involved in a war with France or England that patriotic feelings got the upper hand of sectional tendencies, and Congress came forward and voted the necessary money to build as many vessels of the Monitor type as the Navy Department asked for.

To go further into an explanation of all the merits of the Monitor class of vessels would take the writer beyond the limits assigned to this history. The reader must judge of their merits from what has been done with them by intelligent officers.

To the uninitiated the history of the difficulties attending the introduction of this new type of vessel into the Navy will be very much less interesting than the battles in which they engaged and the hard service they performed on the Atlantic coast, in shelling forts and riding out heavy gales, while anchored out at sea—defying the elements in their most disastrous forms.

It is not only in regard to the men who fought the battles of the war that the public should be interested, but they should also be glad to understand the work done by those in official positions at headquarters in overcoming tiresome details, in fighting against ignorance and prejudice, or in providing for the thousand wants of fleets and ships, which, without proper forethought on their part, might have been paralyzed, perhaps in a time of great danger to the nation.

When the United States was drawn into the dreadful contest, which brought sorrow and desolation to so many homes, the country was in no condition to go into a war of any kind. Had we become involved at that time with a fifth-rate naval power, we should have been humiliated beyond anything one can conceive; our cities would have been bombarded and laid waste, our commerce would have been driven from the ocean to seek shelter under some neutral flag, and our Navy, instead of being in

condition to take the sea against our enemies, would have been laid up to prevent its being captured.

That is not exactly the kind of Navy a great country like this should possess, fit only to cruise in peaceful times and over summer seas. But such has been the policy of our statesmen from decade to decade, and the Navy has never received proper attention. Even the great civil war did not seem to stir up Congress to remedy the evils that had fallen upon it during the long peace.

The cry was in the halls of Congress, "We want no Navy," and the Secretaries of the Navy, up to 1861, echoed the oft-told tale that we only wanted a "small but efficient Navy!" As if a small Navy could be at all efficient, when it would have been obliged to retire under the guns of our forts in case of a foreign war, or else be towed up some inaccessible river and stowed away until peace was restored.

We at times almost think that the rebellion was a blessing in disguise, if only to show how unprepared we were for hostilities with a foreign foe, by whom we would to a certainty have been humiliated and no doubt have been mulcted in damages to an amount that would have crippled the country for years to come. Though we might incur great losses by a civil war, yet there would be no humiliation in it. What chagrin may have been felt on both sides, we could share it alike; and having set fire to our estates and burned up each other's houses, it would be *our* free fight and not the business of any one else. We could put our shoulders to the wheel after the fight was over, and with the energy possessed by no other people we could gather the fragments of our greatness together again, and become stronger than ever. There would be no humiliation to the nation in such a strife, and we would show the world at large how impossible it would be for any foreign army to land on our shores without being exterminated. The naval officers who gained success in the war of the rebellion ought not to forget, amidst the honors and rewards they won, how much they were indebted to the herculean efforts of those in the Navy Department for the support they received under the most trying circumstances—how, after the first surprise of being forced into a great war, and the slow process of realizing the situation had been passed, ships and guns were furnished as if by magic; when at the beginning of the war, few officers counted on obtaining commands, and there was little prospect of our acquiring a class of vessels that would be impregnable against the heavy shot and shell which the enemy seemed to possess in abundance, even a year after the war

began. Yet all this was provided for in less than a year.

Though the Navy Department has been at times severely criticised by those in opposition to it, yet the naval officers, as a whole, can but acknowledge that, with the exception of not keeping pace in the early part of the war with the Confederates in the building of heavy iron-clads, there was a remarkable degree of efficiency in all the civil branches of the Navy as well as in the Navy afloat.

It would occupy a large space to enumerate all that was done by the Department: the difficulties overcome, the resources created almost out of nothing, the opposition of partisans, the strife that had to be conciliated and the enemies that had to be op-

CAPTAIN H. A. WISE, U. S. NAVY, CHIEF OF BUREAU OF ORDNANCE.

posed, out of all which grew up a Navy that at one time bade defiance to France and England, who, in consequence, let us alone to work out our own destiny.

Among others who were in favor of building up an iron-clad navy were citizens whose names should ever be remembered. At the time when the greatest opposition was being manifested against Ericsson's invention, and the government would only authorize the construction of the first "Monitor" on a guarantee that she should prove a success *in battle*, John A. Griswold, Bushnell and Winslow, and Erastus Corning, came forward to the inventor's assistance, and it was mainly due to the capital furnished by these gentlemen that the

"Monitor" was ready in time to meet the "Merrimac." It is thus seen that, although there was a want of liberality in Congress, our private citizens were more generous, and would not let an invention which common-sense told them was invaluable, be lost for want of money, even though they ran the risk of losing all that they ventured.

Men frequently occupy subordinate positions where their lives are expended in carrying on important work which without their services would result in failure. To such men great credit is due, although they generally receive but little.

Captain Henry A. Wise, Chief of the Bureau of Ordnance in the Navy Department, was one of those steady workers who labored from the beginning to the end of the

HORATIO BRIDGE, PAY DIRECTOR, U. S. NAVY, (CHIEF OF BUREAU OF PROVISIONS AND CLOTHING.)

war. Of him it may be truly said that the right man was in the right place while he occupied his important post.

Everything in Captain Wise's bureau moved like clockwork, and ships and squadrons lost no valuable time in waiting for guns and ammunition. The occasions were many in which commanding officers paid the highest eulogiums to Captain Wise's energy and ability, and he was thoroughly appreciated by the head of the Department and by Assistant Secretary Fox.

The Board of Admirals convened at the close of the civil war paid Captain Wise the high compliment of recommending his promotion to the grade of commodore, but owing to the wording of the law Mr. Secre-

tary Welles did not feel himself authorized to recommend to the President to send Captain Wise's name to the Senate.

Paymaster Horatio Bridge, Chief of the Bureau of Provisions and Clothing, also made his mark in the Navy Department under the administration of Mr. Welles. He was Paymaster-General and Commissary-General of the Navy, and had over six hundred vessels-of-war of all classes to keep supplied. This important duty he performed in a most satisfactory manner, and his exertions contributed much to the success of naval operations.

Surgeon P. J. Horintz, Chief of the Bureau of Medicine and Surgery, displayed marked ability in the Management of the Bureau over which he presided. Of the importance of the duties of Surgeon-General, particularly in time of war, it is not necessary to speak, and we can only say that Dr. Horintz did his duty in a most satisfactory manner.

To Rear-Admiral Joseph Smith, Chief of the Bureau of Yards and Docks, the country was largely indebted for the practical advice which he gave the Department, the fruit of his long and varied experience.

Rear-Admiral Smith, with the other officers whom Mr. Secretary Welles had to assist him, formed a fine combination, and although the former was advanced in years at the breaking out of the war, and not very robust, yet he was ever punctual in the performance of his duties.

Such men as we have mentioned assisted greatly in lightening the labors of the venerable Secretary of the Navy, and enabled him to carry the Navy successfully through a great crisis.

It was sometime in April, 1862, that the Department determined to build up an iron-clad navy on the Ericsson idea, and by December of that year twenty single-turreted Monitors were contracted for, or under construction, all their plans having been made ready for the assembling of Congress. These vessels were to be of about 614 tons displacement, excepting a few of 844 tons. They were very much larger than the original "Monitor" and were designed to carry two 15-inch guns in a revolving turret. The idea of the first "Monitor" was carried out in these vessels to a great extent, but with such modifications as experience warranted. The side-armor was five inches thick, fastened to a three-foot oak backing, and the turrets of eleven 1-inch plates, bolted together with all the skill and ingenuity American mechanics were capable of.

There were also contracted for, or under construction, four double-turreted Monitors, to be armed with four 15-inch guns, the object of the government in building these vessels being to provide a turreted ocean-cruiser. They were large vessels of 1,564

tons displacement, 257 feet in length, and 56 feet in breadth, and drawing about 18 feet of water. The side-armor was equal to 11 inches of solid iron, not counting the wood backing; the turrets were 12 inches thick, of laminated plates. Weight of broadside 1,800 pounds, more than equalling the broadsides of the heaviest French or English frigate.

This was a wonderful step for the Navy Department to take after hesitating so long over the contract for the first "Monitor," but that little vessel had so effectually demonstrated her capability of coping with the great leviathan of the Confederacy that there was no longer, as regarded the Monitor system, a pin to hang a doubt on. It was evident that the principle could be carried out to any extent, and that vessels-of-war of this construction could be built to cross the ocean and withstand the heaviest weather.

Nine of the single-turreted Monitors were pushed to completion for the purpose of taking Charleston, and for such other work as could not be accomplished by wooden ships.

From the time Rear-Admiral Dupont took command of the squadron, Charleston had been closely watched from outside the bar, and the whole southern coast blockaded to the satisfaction of the Department.

This was good work to accomplish from November, 1861, to October, 1862, for it included, in addition to keeping up a vigorous blockade, a great many expeditions against the enemy in the numerous sounds and inlets; and these expeditions had often to be undertaken at the risk of neglecting the blockade for a day or two.

The Navy Department had not yet been supplied with a sufficient number of vessels to comply with all the demands made upon it. There was a large amount of coast under blockade from the capes of Virginia to the Rio Grande in Texas, and every commander of a squadron was applying for more vessels to enable him to carry out his instructions.

The great desire of Secretary Welles had been for the Navy to capture Charleston, the original seat of insurrection and disunion. Preparations were made for the occupation of the harbor and the reduction of the defences of this city. The completion of the iron-clad vessels was pushed with all the power of the Department, though it was found a difficult matter to urge the contractors to move faster than their limited means would permit. It was a new work on which they were engaged, and it was necessary to feel the way for fear of making mistakes; besides, in almost all cases, it was necessary to get up a new plant.

In order to enable Rear-Admiral Dupont

to carry out the wishes of the Department, his squadron was now re-inforced by the following iron-clads: "New Ironsides," "Weehawken," "Montauk," "Keokuk," "Patapsco," "Nahant," "Nantucket" and "Catskill." This was a powerful fleet, and the Secretary of the Navy depended upon it to close the port of Charleston so effectively that nothing in the shape of an enemy could get in or out; and finally, if opportunity offered, to make an attack on the batteries, remove the obstructions, and go on up to the city.

The "New Ironsides" carried sixteen 11-inch guns and one heavy rifle; the Monitors each carried one 15-inch and one 11-inch gun (except one that carried a heavy rifle instead of the 11-inch).

This was the force that would be called into play in case Dupont determined to attack the batteries, and with which he was expected to be victorious. For after the fight of the "Monitor" with the "Merrimac," and her success, the turreted vessels had grown in favor with all classes of people, and many ran to the other extreme of supposing that the Monitors were invulnerable, that all they had to do was to haul up alongside the Confederate fortifications and drive the gunners away.

Some of these vessels arrived at Charleston bar as early as January, 1863, and Dupont, who was a sagacious and prudent officer, considered it his duty, before commencing any important operations, to have them tested to see what their turrets and hull would bear, and to ascertain whether anything could be done to improve their defensive power.

The turret principle had only been tried once in battle, and then only against guns the largest of which were the 7-inch rifles in the bow and stern of the "Merrimac," neither of which, it is clear, ever struck the "Monitor" in hull or turret. To determine this point, Commander John L. Worden was sent down to Ossabaw Sound to operate up the Great Ogeechee River and capture, if he could, a fort at Genesee Point, under cover of which the steamer "Nashville" was lying, fitted out as a privateer, and only waiting an opportunity to get to sea and prey upon Federal commerce. He was also instructed to destroy the railroad at that point, if successful in taking the fort and destroying the "Nashville."

Commander Worden arrived off the bar at Ossabaw Sound on January 24th, 1863, but a thick fog prevailed at the time, and the "Montauk" did not get under-way and stand up the river until the next morning. When just outside of the range of Fort McAllister's guns Worden again anchored, and was there joined by the gun-boats "Seneca," "Wissahickon," and "Dawn."

The enemy had range-stakes or buoys planted in the river, and a boat expedition under the command of Lieutenant-Commander Davis was sent up to destroy them, and any obstructions or torpedoes that he might find in the way.

At 7 A. M., on the 27th, Commander Worden got underway with the "Montauk" (the gun-boats following), moved up to 150 yards below the obstructions—anchored—and opened fire on the fort. The enemy returned the "Montauk's" fire very briskly at first, no doubt wondering what kind of a nondescript they were firing at. After about an hour's practice the "Montauk" had the enemy's range so well that his fire began to slacken. At 11.15, A. M., all the shells of the "Montauk" had been expended and solid shot had to be used in their stead—but as they did not seem to have the same effect upon the enemy as the shells, Commander Worden, considering that he was throwing away ammunition, got underway and stood down the river, accompanied by his consorts.

The practice of the Confederates during this battle was very fine, striking the "Montauk" a number of times but doing no dam-

age, and towards the end only firing at intervals. The report does not say what weight of shot or shell the enemy fired, whether smooth-bore or rifle, or how many times, or in what part of the vessel, the "Montauk" was struck; but we presume that Commander Worden was satisfied with the result of his experiment, and so reported to Rear-Admiral Dupont.

Worden, whose experience in the lighter "Monitor" at Hampton Roads ought to have made him a good judge of the strength of the "Montauk" on this occasion, seemed to treat the matter lightly, and it is probable that he thought his vessel would give a good account of herself when she was brought into action against the Charleston defenses.

As no battle of the war has been so closely criticised as the one between our iron-clads and the forts at Charleston, we will give a separate chapter to the operations of Rear-Admiral Dupont while he commanded at that point.

In the next chapter we will also give an account of such events as occurred prior to this attack, which cannot help but be interesting to the reader.

## CHAPTER XXXIII.

CAPTURE OF THE "PRINCESS ROYAL."—REMARKS ON BLOCKADING THE SOUTHERN PORTS, AND THE DIFFICULTY IN PREVENTING BLOCKADE-RUNNERS GETTING IN AND OUT.—ATTACK ON BLOCKADING VESSELS BEFORE CHARLESTON BY CONFEDERATE RAMS.—SURRENDER OF THE U. S. S. "MERCEDITA."—"KEYSTONE STATE" DISABLED BY THE RAMS, WHICH AFTERWARDS ATTACK THE "AUGUSTA," "QUAKER CITY" AND "MEMPHIS."—RAMS ESCAPE CHASED BY THE "JUNIATA."—CONFEDERATES CLAIM THE BLOCKADE IS RAISED.—THE CLAIM NOT ADMITTED AND THE BLOCKADE STRENGTHENED.—CAPTURE OF THE GUN-BOAT "ISAAC SMITH."—THE IRON-CLAD "MONTAUK," COMMANDER JOHN L. WORDEN, ENGAGES THE FORTS AT OGEECHEE RIVER.—CONFEDERATE STEAMER "NASHVILLE" DESTROYED BY THE "MONTAUK" AND OTHER VESSELS.—IRON-CLADS "PASSAIC," "PATAPSCO" AND "NAHANT" ATTACK FORT McALLISTER.—SINKING VESSELS ON CHARLESTON BAR AS OBSTRUCTIONS.—EXPECTATIONS OF THE NAVY DEPARTMENT FROM THE IRON-CLAD VESSELS.—ADMIRAL DUPONT ATTACKS THE BATTERIES IN CHARLESTON HARBOR, APRIL 7, 1863. DESCRIPTION OF THE HARBOR OF CHARLESTON.—ORDER OF ADMIRAL DUPONT PREVIOUS TO ATTACKING THE FORTS.—LIST OF IRON-CLADS ENGAGED IN THE ATTACK.—IRON-CLADS RETIRE BEFORE THE HEAVY FIRE OF THE BATTERIES.—THE "KEOKUK" DISABLED AND AFTERWARDS SUNK.—LIST OF DAMAGES TO THE IRON-CLADS.—COMPARISON BETWEEN THE GUNS ON SHORE AND THOSE AFLOAT.—VIEW OF THE CASE.—REFLECTIONS ON CHIEF ENGINEER STIMER'S LETTER TO THE NAVY DEPARTMENT.—DIFFICULTIES ENCOUNTERED BY THE MONITORS.—MISREPRESENTATIONS OF THE ATTACK ON CHARLESTON.—GENERAL RIPLEY'S INSTRUCTIONS FOR REPELLING THE FEDERAL ATTACK ON CHARLESTON.—CORRESPONDENCE BETWEEN PRESIDENT LINCOLN AND ADMIRAL DUPONT, AND BETWEEN MR. SECRETARY WELLES AND ADMIRAL DUPONT.—ADMIRAL DUPONT RETIRES TO PORT ROYAL.—COMBINED ATTACK OF ARMY AND NAVY ON BUFFINGTON.—CAPTURE OF CONFEDERATE IRON-CLAD "ATLANTA" BY THE U. S. S. "WEEHAWKEN."—ADMIRAL DUPONT RETIRES FROM COMMAND OF THE SOUTH ATLANTIC SQUADRON AND IS SUCCEEDED BY REAR-ADMIRAL DAHLGREN.—SECRETARY WELLES' LETTER TO REAR-ADMIRAL DUPONT ON HIS GIVING UP HIS COMMAND.—LIST OF OFFICERS WHO SERVED UNDER ADMIRAL DUPONT.

**O**PERATIONS commenced in January, 1863, by some of the vessels of Rear-Admiral Dupont's squadron capturing a large blockade-running steamer, which proved to be one of the most valuable prizes of the war.

To show the nature of the blockading service, it may not be uninteresting to give an account of the capture of the above-mentioned vessel.

On the morning of the 29th of January a blue light was observed from the U. S. S. "Unadilla," Lieutenant-Commander S. P. Quackenbush, in an easterly direction, supposed to be from the U. S. S. "Blunt." The "Unadilla" slipped her cable and stood in

shore in a north-west direction, guided by a rocket thrown up apparently by the "Blunt," and indicating the course of a vessel attempting to run the blockade. After proceeding inshore a mile and a half, a steamer was observed from the "Unadilla" standing along close to the shore, and heading for Charleston. Two shots were fired at her by the "Unadilla," when the strange steamer changed her course and ran upon the beach, where she was immediately taken possession of. The prize proved to be the iron steam-propeller "Princess Royal," four days out from Bermuda—one of the principal depots of the blockade-runners—loaded with rifle-guns, small-arms, am-

munition, steam-engines for iron-clads, etc., etc.

Thus was the Confederacy kept afloat by our cousins across the water, not so much from sympathy with the Southern people as from a desire to obtain cotton, which was so necessary for them to have to keep their mills going and prevent a revolt of the factory operatives. The English Government did nothing to prevent blockade-running, and doubtless considered it a fair business enterprise. If a vessel got safely in past the blockaders, her cargo sold at a large profit, and she loaded with cotton, worth three times as much as the ingoing cargo. There was great excitement as well

blockade-running continued, the task of putting down the Rebellion was greatly increased, and it could only be prevented by the untiring energy and watchfulness of the Navy, incited somewhat by the hope of prize-money, which is a great incentive to extra exertions in time of war both to officers and men. Blockade-runners were captured in large numbers, and the vessels and cargoes condemned by our Admiralty Courts, without protest from the British Government.

There was plenty of timber in the South, and the Southerners could build vessels as fast as Perry did on Lake Erie, but they could not build engines of the kind they required.

SURRENDER OF THE U. S. STEAMER "MERCEDITA" TO THE CONFEDERATE RAM, "PALMETTO STATE," OFF CHARLESTON HARBOR, JAN. 31, 1863.

as profit to the hardy Britons who engaged in this trade.

In some respects the Confederates had advantages superior to our own. The markets of Europe were glutted with rifled guns and engines, and almost all the blockade-runners carried rifled field-guns for the Confederates, while the conservative Army and Navy Departments of the North felt it due to the people that all the implements of war should be made at home. The result was that the Confederates at an early stage of the war had their forts partly armed with heavy rifled guns, while in our vessels-of-war a rifled gun was an exception.

It was plainly to be seen that, as long as

The British merchants who went into blockade-running with such alacrity probably never dreamed of the facility with which the United States Government could equip a large number of vessels exactly calculated to run down and capture their own. There was another factor that these traders had not taken into account—the watchfulness and energy of the American naval officers, who were ever on the alert, and would either run the blockade-runners off the coast or upon the beach, where they would fall into Federal hands, often with their cargoes in perfect order. This was the case with the "Princess Royal," which was floated off without sustaining the least injury, and

was fitted up by the Navy Department as a gun-boat, and performed good service, under Commander M. B. Woolsey, at the capture of the forts at Donaldsonville, La.

During January, 1863, the harbor of Charleston was not occupied by the Federal squadron, but the vessels lay outside the bar, keeping a bright look-out. Towards the end of the month two of the heaviest ships, the "Powhatan" and "Canandaigua," had to proceed to Port Royal for coal, leaving some lighter vessels to continue the blockade. The Confederates had two iron-clad rams, the "Chicora" and "Palmetto State," under Commodore D. N. Ingraham, in Charleston Harbor, and on the 31st of January, about 4 A. M., they succeeded in crossing the bar unperceived in the darkness and attacked the "Mercedita," Captain H. S. Stellwagen, which had just returned from the chase of a strange vessel.

The captain was below, and Lieutenant-Commander Abbott in charge of the deck, when the faint appearance of a vessel showing black smoke was seen through the gloom. All the Federal vessels burned anthracite, while the Confederates and blockade-runners burned bituminous coal, the smoke from which can be seen even in the darkness of night.

All hands were called to quarters, the captain appeared on deck, and saw what, for all he knew, might be a tug belonging to the squadron. The guns were trained on the approaching stranger, who was then hailed and ordered to heave-to. The answer to the first hail from the "Mercedita" was "Hello!" The other replies were purposely indistinct, and the stranger crashed into the Federal vessels, with the reply, "This is the Confederate States' steam-ram, 'Palmetto State.'"

The order was given to fire, but no gun could be brought to bear on the enemy as she approached. At the moment of striking, the "Palmetto State" fired a rifle-shell diagonally through the Federal steamer, which penetrated the condenser, the steam-drum of the port-boiler, and exploded against the port-side of the vessel, making a hole four or five feet square in its exit. The "Mercedita" was instantly enveloped in vapor, while cries came from below: "Shot through the boiler! Fires put out—gunner and one man killed and a number fatally scalded—water over fire-room floor—vessel sinking fast! The ram has cut us through at and below water line, and the shell has burst at the water line on the other side!"

This was appalling information, and it must be a well-trained crew that would not feel nervous at such intelligence. Captain Stellwagen could do nothing, for the enemy's ram was under his counter. He had made a mistake in not firing on the stranger

as soon as she appeared, for none but an enemy would have approached so stealthily.

He should have had steam up and chain ready to slip at a moment's notice. No one expected that the enemy's rams would dare cross the bar, but the same love of adventure existed in the Confederate navy as in the Federal, and this affair was another illustration of the importance of never underrating a foe.

After the "Palmetto State" struck the "Mercedita" she swung round under the latter's counter, and the Confederate commander called out, "Surrender, or I will sink you!" Captain Stellwagen replied, "I can make no resistance, my boiler is destroyed." "Then, do you surrender?" inquired the other. "I do," replied Stellwagen.

The Confederate commander hailed several times for a boat to be sent him, threatening to fire in case of further delay. Lieutenant-Commander Abbott then proceeded on board the ram, where the parole of the officers and crew of the "Mercedita" was demanded; after receiving which, the ram started in the direction of the "Keystone State," which vessel and three other blockaders Captain Stellwagen had tried to alarm by burning signal-lights.

Soon after the ram left the "Mercedita" the people on board that vessel saw a shell from the "Keystone State" explode against her armor, and several shells from the ram hit the "Keystone State," followed by smoke and vapor, which poured from the latter. The firing then receded to the north and east and finally died away, and it was supposed the ram had engaged all the blockading vessels in turn.

The commanding officer of the "Mercedita" now set to work to save his vessel, about which nothing had been said on board the ram. The enemy supposed the vessel was sinking, and probably thought those on board could take care of themselves. In two hours repairs were made, and with the assistance of the "Stettin" and "Flag" the "Mercedita" reached Port Royal.

When the "Keystone State" was attacked, Commander Le Roy gallantly returned the enemy's fire, but the ram lodged a shell in the fore-hold of his vessel, which set the "Keystone State" on fire and obliged her to shear off till it could be extinguished. By this time the ram "Chicora," Commander John R. Tucker, had attacked the "Keystone State" and Le Roy turned upon the enemy, and putting on full steam ran right for one of the rams at the rate of twelve knots an hour, when a shell from the enemy penetrating both steam-chests rendered the "Keystone State" powerless. Two rifle-shells burst on the quarter-deck, but most of them struck the hull, and there were two feet of water in the hold; but some of the

other vessels of the blockading squadron now came to the assistance of the "Keystone State" and took her in tow. These vessels were the "Augusta," Commander E. G. Parrott, the "Quaker City," Commander J. M. Frailey, and the "Memphis," Acting-Lieutenant P. G. Watmough.

All these steamers kept up a brisk fire on the enemy's rams while the "Keystone State" was towed out of their reach. The "Augusta" and "Quaker City" were both struck in their hulls, but the "Memphis" only in her rigging.

As daylight approached, the rams hauled off to the north-west, chased by the U. S. S. "Juniata," and anchored inside the shoals of the swash-channel, their commanders doubtless thinking they had done enough for one night and that they must reserve their strength for a future occasion.

On board the "Mercedita" there were twenty killed and as many wounded, a number being scalded to death, among whom was Assistant Surgeon Jacob H. Gotwold and his steward. It was a heavy list of killed and wounded for so short an engagement, but the Confederates wasted very few shots, and the striking of the boilers of two of the Federal vessels was no doubt a matter of calculation and not mere accident.

The attack of the Confederate rams on the Union squadron was a gallant affair, and the one that encountered the "Mercedita" might have sunk that vessel while the commanding officer was hesitating to answer the hails. After disabling the "Mercedita" and encountering four other vessels, finding doubtless that the Federal ships were too numerous to be agreeable, the rams moved off uninjured and sought the safety of well-known channels. Admiral Dupont was much chagrined when he received the news of this engagement; but a nation cannot expect to carry on a war with a skillful and energetic enemy without mishaps, especially under circumstances like the above, where the Confederates could slip out in the darkness, make a dash at the blockading vessels and retire when necessary to do so.

The Confederate authorities endeavored to make great capital out of this affair, and General Beauregard, who commanded the defences, proclaimed officially that the blockade had been raised, as the United States Navy was powerless to maintain it. However, next morning, the blockading vessels were at their posts as usual, ready to prevent the ingress or egress of any vessel.

The claim of the Confederates that the blockade had been raised by the raid of their two rams was, of course, absurd. To raise a blockade, it would be necessary to drive away the blockading vessels alto-

gether and hold the positions they occupied, yet, strange to say, the foreign consuls at Charleston, and an officer commanding one of Her Britannic Majesty's ships-of-war, united in a statement that the blockade of Charleston had been raised!

The "New Ironsides," "Powhatan," and "Canandaigua" were immediately added to the force off Charleston, which, without further argument, settled the question. The port of Charleston remained blockaded more closely than ever, and it was generally accepted by the world that the gentlemen who had put their names to a paper stating the blockade had been raised had prostituted their offices, by giving currency to a statement which could not have been forced upon their conviction as truth.

CAPTAIN PERCIVAL DRAYTON, U. S. N.

On the 1st of February Admiral Dupont received notice of the capture of a gun-boat. It seems that the "Isaac Smith," Acting-Lieutenant-Commanding F. S. Conover, was sent up Stone River to make a reconnaissance. No enemy was seen; but when the vessel was on her way back three concealed batteries opened a concentrated fire on her from heavy rifle-guns. The gun-boat "McDonough," Lieutenant-Commander Bacon, was at anchor down the river, and on hearing the firing got underway, and went to the assistance of the "Isaac Smith;" but owing to the number, position and weight of the enemy's guns could render no aid without the certainty of losing his own vessel. The "Isaac Smith" was aground and enveloped in a cloud of vapor, and the "McDonough" was soon

driven off by the superior range of the enemy's fire.

The commanding officer of the "Isaac Smith" endeavored to get out of the trap in which he found himself by dropping below the batteries; but for upwards of a mile, on account of a bend in the river, the vessel was subjected to a raking fire of 30 guns, and was only able now and then to answer with her pivot-gun. To add to the difficulty, a large number of concealed riflemen were firing upon the vessel. Eight of the gun-boat's crew were killed and 17 wounded. But for the latter, the commanding officer would have set fire to his vessel and escaped with his officers and men; but to escape with the vessel was impossible, and she was therefore surrendered.

It may have been observed by the reader that many cases occurred during the civil war where vessels were entrapped as the "Isaac Smith" was; but, as a rule, the defence of these vessels was characterized by great courage. In such cases it was not possible to ascertain the loss of the enemy, and we abstain from unreliable conjectures.

It was impossible to circumvent the enemy without running such risks as were encountered by the "Isaac Smith." "Nothing venture, nothing have," is a maxim which all should profit by who go to war. Though now and then the Federals met with losses of vessels, yet the experience gained was beneficial and stimulated the younger officers to deeds of daring, while teaching them at the same time the necessity of prudence.

On the 1st of February the "Montauk," Commander John L. Worden, was ordered to engage the forts at Ogeechee River, a duty which was well performed; but the Confederates shifted their guns from point to point, as the range of the "Montauk" improved, and finally the vessel withdrew from action after expending a large amount of ammunition and being struck thirty-nine times without apparent injury.

The Confederate steamer "Nashville" had been closely watched for eight months by the blockading steamers "Wissahickon," Lieutenant-Commander John L. Davis, the "Dawn," Lieutenant John S. Barnes, and the "Seneca," Lieutenant-Commander William Gibson. The "Nashville" lay under Fort McAllister loaded with cotton, and although a swift and well-appointed steamer, never ventured to run out. After several months she withdrew up the Ogeechee River and returned in the guise of a privateer, presenting a formidable appearance.

Fort McAllister was strengthened and the river lined with torpedoes to prevent the ascent of vessels to attack the "Nashville."

The vessel frequently came near the forts, watching an opportunity to run out and perform the part of the "Alabama" or "Florida." The "Nashville" was armed with a heavy pivot-gun, and, being fast, would no doubt have rivalled the other Confederate cruisers that had done so much injury to our commerce. For this reason she was closely watched, and it was as great a triumph to dispose of such a craft as it would have been to win a considerable victory.

On the 27th of February, Commander Worden, on making a reconnaissance, observed that the "Nashville" had grounded in that portion of the river known as "Seven Mile Reach," and on the 28th at daylight the

COMMANDER (NOW REAR-ADMIRAL) DANIEL AMMEN.

"Montauk" "Seneca" and "Dawn" moved up the river. Worden was able to approach within twelve hundred yards of the "Nashville," though under a heavy fire from the fort. The "Montauk" opened on the privateer, while the gun-boats enfiladed the fort at long range.

In a short time Commander Worden had the satisfaction of seeing the "Nashville" in flames from the shells exploding in different parts of her. The "Nashville's" pivot-gun was soon exploded by the heat, and in a short time the vessel blew up with a terrific crash. The fort continued a brisk fire on the "Montauk," but only struck her five times, and inflicted on her no damage whatever, which indicated that she was impervious to shot and shell. A torpedo exploded

near the vessel as she dropped down the river out of range of the enemy's guns, but did no harm, and that night Commander Worden had the satisfaction of reporting to Rear-Admiral Dupont the destruction of a vessel that might have proved as troublesome as the "Alabama."

It was deemed advisable to try the iron-clads of the squadron in action with some fort, so as to be certain of their impenetrability, and fully test the working of the turrets. Captain Percival Drayton, commanding the "Passaic," was directed to proceed with the "Patapsco," Commander Daniel Ammen, and the "Nahant," Commander John Downes, up the Ogeechee River, and make an attack on Fort McAllister.

The fort had been subjected to three previous attacks from the "Montauk," but damages to earth-works are easily repaired, and the work made stronger than ever, unless the guns have been dismounted, as during a bombardment the weak points are discovered and strengthened.

Fort McAllister was 20 feet above the river, solidly built, with high traverses between the guns, protecting them from anything but a direct fire. It contained one 10-inch columbiad, a 100-pounder rifle, four 32-pounders, and one Whitworth rifle, throwing bolts.

The three vessels anchored 1,200 yards below the fort, at 8 A. M., March 3, 1863, opened fire, and, as Captain Drayton reported, the parapets were much cut up and large holes made by the bursting shell, but no damage was done that could not be repaired in a few hours.

Captain Drayton did not consider the fort nearly as great an obstacle to his advance as the piles which were driven in the channel of the river, and which rendered it impassable till they could be removed.

The iron-clads were subjected to the fire of Fort McAllister for eight hours without receiving any serious injury, but the same thing was true of the fort.

Captain Drayton expressed some mortification at what he called his want of success in this attack; but experience has proved that iron-clads, although so valuable against ships, or fortifications built of masonry, are not so serviceable against earth-works as vessels carrying a greater number of lighter guns.

The power of the 15-inch gun as a breaching force against masonry is considerable, but against a work constructed of sand-bags it has not the value of a 11-inch gun, and nothing like the power of a 100-pounder rifle for boring through the sand. The 15-inch gun in a turret is slow firing, not being able to discharge oftener than once in five minutes, while the breech-loading rifle can

be pointed and fired once a minute, which in an hour would give 60 shots from the rifled-gun to 12 from the 15-inch.

While the iron-clads were turning their turrets, the enemy would wait until the port-holes appeared, would fire, knowing the exact range, hide in their bomb-proofs until the iron-clads had fired, then stand to their guns again, until the port-holes once more came round.

In attacking forts, in conjunction with other vessels carrying many guns, iron-clads are valuable for distances not exceeding 600 yards; but the initial velocity of the 15-inch shot is only about 1,500 feet per second, which is much reduced even at the distance of 1,200 yards. At 800 yards a 15-inch shot would not, with the charges assigned to the gun, penetrate a 4-inch iron plate.

More was expected from our iron-clads during the war than they had power to accomplish. Any one of them armed with 15-inch guns could have destroyed a vessel like the "Merrimac" in half an hour, but against earth works, sand especially, none of the monitor class were equal to the "New Ironsides," with her quick-firing batteries of 11-inch guns.

All these matters were fully discussed during the siege of Charleston. Admiral Dupont had a great responsibility on his shoulders, as he was the first officer to whom these iron-clads had been assigned. He was determined to leave nothing undone to give these vessels a full trial to determine their capabilities. It cannot be doubted that the experience to which the iron-clads had been subjected in the attack on Fort McAllister afforded valuable information in relation to their qualities, and several imperfections were detected which could be remedied in other vessels of their class.

The capture of Fort McAllister, in itself, was of no special importance, except, perhaps, to prevent its protecting some other privateer or blockade-runner.

Captain Drayton's opinion was that the fire of the iron-clads was not effective, and that the fort fired more rapidly towards the end than it did at the beginning of the action.

In the demonstration against Fort McAllister it was discovered that the fuses for the shells were not good, and the shells exploded at irregular intervals—a very important matter to ascertain before the grand engagement with the forts at Charleston took place. The "Patapsco" carried one 15-inch gun, and one 150-pounder rifle. She fired fourteen 15-inch shells and 46 shells from the one 150-pounder rifle—over three to one in favor of the rifle.

The "Nahant" was not struck by the shells from Fort McAllister, the enemy seeming to concentrate his fire on the "Passaic."

Up to the 10th of March was a busy and successful time with the blockaders of Admiral Dupont's squadron. Two large steamers, the "Queen-of-the-Wave" and the "Georgian," loaded with munitions of war for the Confederates, were destroyed, which served to indicate that the blockade was still effective.

As Charleston had taken the lead in the movement for a division of the Union, the government naturally desired that the laws should be vindicated there at as early a date as practicable, and the Navy Department wished to have the honor of bringing about so desirable an end. Therefore, Assistant Secretary Fox, with the approbation of the Secretary of the Navy, directed all his energies towards getting as large a number of iron-clads as possible to Charleston to

COMMANDER (NOW REAR-ADMIRAL) WILLIAM E. LE ROY.

enable Admiral Dupont to force his way up to the city.

The harbor of Charleston had been closely guarded and many blockade-runners captured, but the Confederates calculated to strengthen their fortifications and add new ones, so as to hold the hot-bed of secession against all the forces that could be brought to bear.

Besides establishing a close blockade, an attempt had been made by the Federals to obstruct the passage across the bar with sunken vessels, which proved unsuccessful, as the vessels soon disappeared in the quick-sands, or the currents washed out new channels. So the blockade-runners, though closely watched, continued to run into Charleston and supply the Confederacy with munitions of war.

Several plans for the reduction of the

Confederate stronghold were proposed, but none were thought advisable, and in the absence of a large land force it seemed that the duty must devolve entirely upon the Navy.

This was a most serious task for the Navy to undertake without any support from the Army; but even at that stage of the war the Government had not learned the importance of using large land and naval forces in conjunction when attacking heavily fortified places—attacks which, when conducted with good judgment, seldom or ever failed. The Navy Department was, doubtless, very willing to have the co-operation of the Army, but they were frequently unable to obtain it, and the War Department did not attach the same importance to the capture of Charleston as did the Navy.

Much was expected of the iron vessels by the Navy Department, and their hopes were confirmed by the attacks on Fort McAllister, where none of the vessels were seriously injured, and none of their crew killed. The Department had been abused for expending so much money on these vessels, which their detractors affirmed would perform no effective service, and would founder, as the "Monitor" had done; not taking into consideration the fact that they were superior to the original "Monitor," and that the defects of the latter had been eliminated in these later structures. The Department naturally wanted to show that it had made no mistakes in this instance, and they pushed on the work of preparation regardless of the criticism of those who were in favor of a different class of vessel carrying more guns. Some of these detractors were persons whose plans had been rejected, and who thought there was no other mode but their own of bringing the contumacious city under subjection.

On the other hand, the Department had rather too much faith in these vessels, and was inclined to expect from them more than they could perform, and was, therefore, disinclined to listen to the advice of officers who, by their standing and length of service, were entitled to consideration. Almost everybody admitted the value of the turret-vessels as harbor defences, but many doubted their efficiency against the earth-works of Charleston.

Admiral Dupont was pressed by the Navy Department to attack the batteries, and on the 7th of April, 1863, he determined to attempt what he was far from certain would be a success, in order to carry out the wishes of the government, and meet, if possible, the public expectations.

To understand the harbor of Charleston, with its intricate shoals and channels, requires the study of a chart. In some respects

it resembles the harbor of New York, although it is on a much smaller scale. The city of Charleston stands on a neck of land, bounded by two rivers, and projecting into a narrow bay. The bay was protected by Fort Pinkney, Fort Ripley, Fort Moultrie, Fort Beauregard, Fort Sumter, Battery Bee, Battery Gregg, Battery Wagner, etc. These defences were so placed that a vessel attempting to pass Sumter would be under a cross-fire from them all, every fort being armed with the heaviest and most destructive ordnance then known.

After crossing the bar, there were several channels leading into Charleston harbor—the "Main-Ship Channel," "North Channel" and "Swash Channel." In taking either of these, a vessel would be under a raking and cross fire. Should she get by Sumter, she would still be subjected to a raking fire from that work and the works on the upper part of Sullivan's Island—from Battery Gregg, Fort Johnson, Fort Ripley and Castle Pinkney, and some smaller batteries. To run past these defences, if there were no obstructions in the channel, would be much easier with a small squadron than to stop and give the forts battle with iron-clads. This fact was established during the civil war, and the subject has been ably treated in a work published in 1868 by Lieutenant-Colonel Von Sheliha.

Before proceeding to attack the defences of Charleston, Rear-Admiral Dupont issued the following order:

The bar will be buoyed by the "Keokuk," Commander Rhind, assisted by C. O. Boutelle, Assistant United States Coast Survey, commanding the "Bibb," by Acting-Ensign Platt, and by the pilots of the fleet.

The commanding officers will, previous to crossing, make themselves acquainted with the value of the buoys.

The vessels, on signal being made, will form in the prescribed order ahead at intervals of one cable's length.

The squadron will pass up the Main Ship Channel without returning the fire of the batteries on Morris Island, unless signal should be made to commence action.

The ships will open fire on Fort Sumter when within easy range, and will take up a position to the northward and westward of that fortification, engaging its left or north-west face at a distance of from 600 to 800 yards, firing low, and aiming at the centre embrasure.

The commanding officers will instruct their officers and men to carefully avoid wasting a shot, and will enjoy upon them the necessity of precision rather than rapidity of fire.

Each ship will be ready to render assistance to any vessel that may require it.

The special code of signals prepared for the iron-clads will be used in action.

After the reduction of Fort Sumter, it is probable that the next point of attack will be the batteries on Morris Island.

The line of battle will be in line ahead, as follows :

1. "Weehawken," Captain John Rodgers.
2. "Passaic," Captain Percival Drayton.
3. "Montauk," Captain John L. Worden.

4. "Patapsco," Commander Daniel Ammen.
5. "New Ironsides," Captain T. Turner.
6. "Catskill," Commander G. W. Rodgers.
7. "Nantucket," Commander D. M. Fairfax.
8. "Nahant," Commander John Downes.
9. "Keokuk," Commander A. C. Rhind.

A squadron of vessels, of which Captain J. F. Green will be the senior officer, will be formed outside the bar, near to the entrance buoy, consisting of the following vessels: "Canandaigua," "Housatonic," "Huron," "Unadilla," "Wissahickon," and will be held in readiness to support the iron-clads when they attack the batteries on Morris Island.

S. F. DUPONT,

*Rear-Admiral commanding South-Atlantic Blockading Squadron.*

When Admiral Dupont hoisted his flag on board the "New Ironsides," he took with him his personal staff, who remained with him during the operations at Charleston. To the officers of the staff he pays the highest encomiums for the assistance they rendered him in the battle and otherwise. They were as follows:

Commander C. R. P. Rodgers, Fleet Captain; Lieutenant S. W. Preston, Flag Lieutenant; Lieutenant A. S. Mackenzie, Ordnance Officer; Ensign M. L. Johnson, Aide and Signal Officer. All these gentlemen are mentioned with that warmth of feeling which distinguished Dupont in cases where officers under him performed their duty faithfully.

On the 7th of April the vessels moved to the attack, the "Weehawken" leading with a torpedo raft in front. On the way up the Main Ship Channel, the leading vessel passed a number of buoys indicating torpedoes, one of which exploded near the "Weehawken," without, however, doing any harm.

At 2 P. M., the squadron approached the obstructions extending across the harbor from Fort Moultrie to Fort Sumter. These were indicated by several lines of casks, beyond which piles were seen extending from James Island to the Middle Ground.

At 2.50 P. M., the guns of Fort Moultrie opened upon the "Weehawken," followed shortly after by Fort Sumter, and all the batteries on Sullivan's Island.

Being unable to pass the obstructions, the iron-clads were obliged to turn, which threw the line into confusion. The flagship became entangled with the Monitors, and could not bring her batteries to bear on the enemy without danger of firing into them. The "New Ironsides" was compelled to anchor twice to prevent going ashore,—on one of these occasions the Monitors and the "Keokuk" were able to get within easy range of Fort Sumter—at distances varying from 550 to 800 yards—in which position they were subjected to a fire from the batteries on Sullivan's Island, Morris Island and Sumter.

The effect of the concentrated fire of the

forts on the Monitors would have been bewildering to officers and men whose nerves were not of the strongest kind. The enemy had been anxiously looking forward to the time when they could get the Federal iron-clads in just such a position, and their only apprehension was that the opportunity would not be offered them. The Confederate engineers felt that it would be impossible for any force of vessels such as the Federals possessed to pass the forts and obstructions to Charleston. Owing to repeated practice at targets, the Confederate officers felt certain of planting two out of three of their heaviest shots on the Monitors' turrets at the rate of sixty shots a minute.

The trial of the Monitors before Fort McAllister afforded no real test of their endurance, for there could be no comparison between such a work as McAllister and the defences of Charleston. The fire on the iron-clads was such as an equal number of the heaviest European ships-of-war could not have withstood many minutes.

The severity of the fire was shown by the effect on the Monitors and the sinking of one of their number, and yet the vessels retired from the conflict without confusion.

That attack will always stand the severest criticism from those disposed to be hypercritical; and those capable of judging will admit that it was conducted with skill and judgment. It was very well in those who could sit in their cosy arm-chairs and direct great naval and military movements, who seldom reflect that while undertaking to direct battles from a distance they are meddling with that which properly should be managed by the professional leader, and uselessly sacrificing the lives of officers and men.

Admiral Dupont found it impossible, owing to currents and an unmanageable ship, to place the "New Ironsides" where he desired, although he was within one thousand yards of Fort Sumter; night was coming on, and the squadron in some disarray. He therefore signalled the vessels to withdraw from action, intending to renew the engagement.

That evening the commanding officers of the iron-clads visited the flag-ship to report the condition of affairs on board their respective vessels, which caused Admiral Dupont to change his mind about renewing the attack next morning, for he was now satisfied that it was impossible to take Charleston with the force under his command.

And here arises the question—Was it wise to undertake so great a task as the capture of Charleston at one blow? It would have been a good beginning to have taken Fort Wagner. To have attacked that place eight hundred yards to the southward would have placed the squadron two and a half miles

from the forts on Sullivan's Island and a mile and three-quarters from Sumter. Of course, if the iron-clads could not reduce Wagner, it would be useless to attempt to go up to the city. There was a great desire, on the part of the Northern people, that Charleston should be taken, and the officer who could at that moment have captured the place would have won unbounded popularity. It was certainly the hardest task undertaken by the Navy during the war. In fact, without the co-operation of an army, the taking of Charleston was an impossibility.

Charleston was approached by tortuous channels filled with obstructions, that even without the fortifications would have been formidable to the squadron that went to at-

COMMANDER (NOW REAR-ADMIRAL) A. C. RHIND.

tack it. It is difficult to manœuvre a squadron in a narrow space with strong currents running; how much more difficult must it be, then, when crooked channels are filled with obstructions?

In such a case a Commander-in-chief is entitled to use his own discretion, and not undertake a movement against a place unless he is confident the obstructions are not of a character to impede the progress of his fleet. Had Dupont persevered and entangled his vessels in the contrivances placed in the channels for that purpose, those who urged him on would have put the blame of the necessary failure upon his shoulders. He discontinued the attack in good time, and let us see the result:

No ships had been exposed to the severest

fire of the enemy more than forty minutes, yet in that brief period five iron-clads were wholly or partially disabled.

Commander Rhind, in the "Keokuk," had been able to fire only three times during the period he was exposed to the guns of the enemy, when he was obliged to withdraw from action to prevent his vessel from sinking, which event did happen on the following morning. The "Nahant," Commander Downes, was seriously damaged, her turret so jammed as to prevent its turning, many of the bolts of both turret and pilot house broken, and the latter rendered nearly untenable by flying bolts and nuts. Captain Drayton, in the "Passaic," after the fourth fire from her 11-inch gun, found himself unable to use it again during the action. His turret, also, became jammed, although he

COMMANDER (NOW REAR-ADMIRAL) D. Mc. N. FAIRFAX.

was finally enabled to get it in motion again. Commander Ammen, of the "Patapsco," lost the use of his rifled-gun after the fifth fire, owing to the carrying away of the bolts of the forward cap-square. Commander Fairfax, of the "Nantucket," reports that after the third shot from the 15-inch gun, the port-stopper became jammed, several shot striking near the port, driving in the plates and preventing the further use of the gun during the action.

The other iron-clads, although struck many times, were still able to use their guns, but it seems probable that in a short time they would have been placed *hors-de-combat*.

The position of the squadron was simply that of being in a trap, and having to bear the cross-fire of all the forts within a circle

of two miles. Only one hundred and thirty shot and shell were fired by the iron-clads during the action, while many hundred were fired by the enemy, the character of which is well described by a contemporary writer, who remarks :

In order to more fully understand the terrible severity of the fire to which these vessels were to be exposed, it is necessary to consider some statements in the circular of the Confederate General Ripley. He mentions three circles of fire which had been prepared for the reception of the fleet. He meant that there were three points beyond each other in passing up the harbor upon which circles the batteries on shore would concentrate their fire as upon a focus, and to these points the range of the guns had been actually adjusted by experimental firing, and the points were marked by guides, buoys and obstructions, so that no shot could miss its mark.

The first focus of fire into which the fleet would come was formed between Sumter and Moultrie. Three obstructions of various kinds were placed in and across the channel, through which it was thought the fleet could not pass, and where the leading vessels being stopped the line would be thrown into confusion, and the Monitors would be huddled together and could be crushed by the concentrating fire of the circle of forts and batteries.

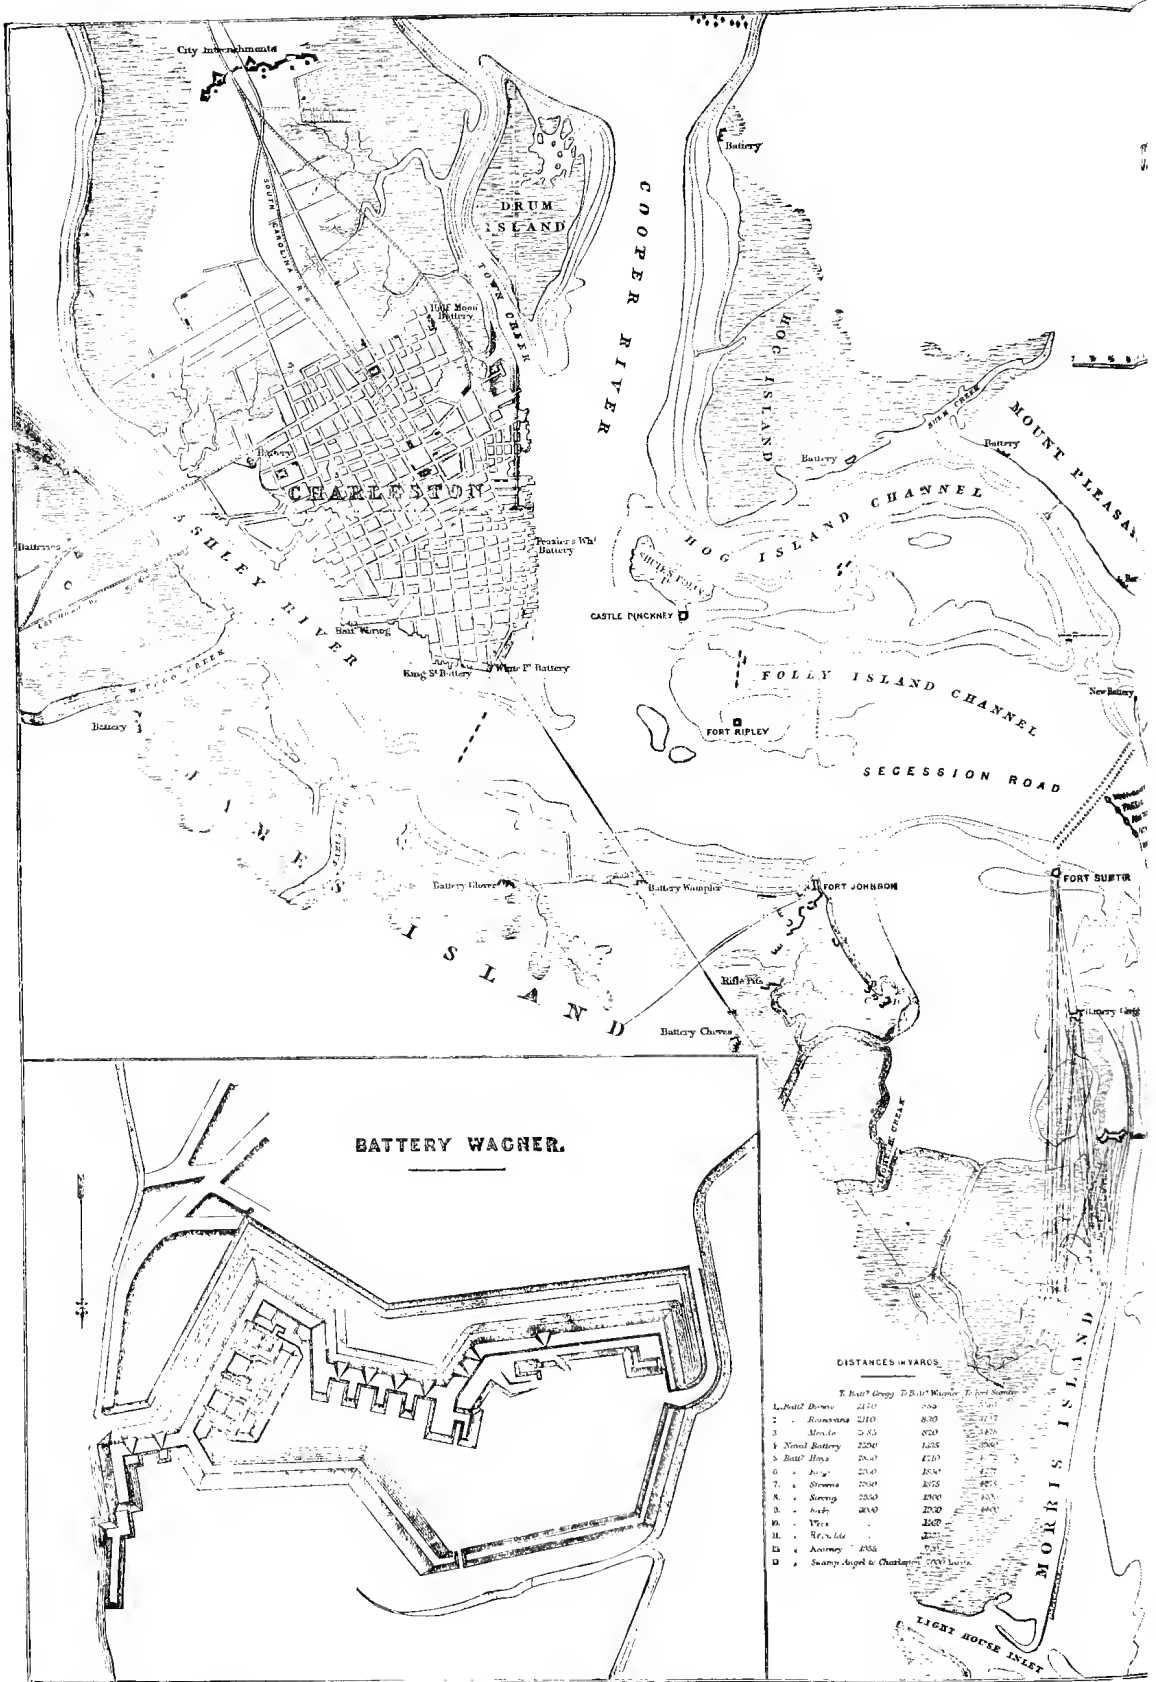

According to the Confederate accounts seventy-six guns bore on this single point, while our own officers placed the number at a hundred. If now it is considered that bearing on this spot were 7-inch, 8-inch, Brooke and Blakely rifles, 10-inch columbiads, for which had been prepared square-head bolts, with chilled ends, much heavier than the ordinary shot, and guns for hot shot and shells containing molten iron, an idea may be formed of what these iron-clads were to meet. The enemy's guns, moreover, had been so tried that there could be no random shooting. The Confederate plan of defence lacked nothing which skill, experience and science could suggest.

So far the writer whom we quote pictures in glowing terms the difficulties with which the Monitors would have to contend in an attack on Charleston; but after stating the damages received by the Federal vessels, and quoting the opinions of all the principal officers that a continuation of the attack would have resulted in the destruction of the squadron, the chronicler suddenly changes his course, as if impressed by a new idea, and attempts to show that a prolongation of the struggle would have led to a Union victory, and that the opinions of ten brave and experienced officers were of no account whatever!

There was no officer in the Navy whose reputation stood higher than that of Dupont. He had gallantly won the first naval battle of any importance in the war, and had shown so much ability at Port Royal as to entitle him to the full confidence of the Government, and his opinions should have been preferred in all matters relating to his command to those of any other person. The belief was general at the time that Dupont was not well treated by the Navy Department—a belief which prevails in the Navy to this day.

When the Department commenced build

# GENERAL MAP OF CHARLESTON HARBOUR, SOUTH CAROLINA.

SHOWING CONFEDERATE BRENCES AND OBSTRUCTIONS.

ing small Monitor-shaped vessels with great rapidity, the Secretary and Assistant Secretary of the Navy were unjustly assailed from various quarters for adopting the Monitor system in preference to all others.

In this matter, Mr. Secretary Welles and Mr. Fox showed good judgment, for the "Keokuk," which was not a Monitor-built vessel, was shattered so by the enemy's fire at Charleston that in a few minutes she withdrew from action to avoid sinking, and did sink some hours afterwards from the effects of the enemy's shot.

Having prepared these Monitors, the Navy Department were naturally anxious to prove to their detractors that this was the right form of vessel to carry out the ideas of the government; but the Department did not take into consideration that seven Monitors, each with two slow-firing guns, were no match for seventy-six pieces of ordnance of the heaviest calibre then in use. If we further consider that half of the guns in the Monitors were 11-inch, there remained but seven 15-inch guns with which to breach the masonry of Fort Sumter and the thick earth-works of the numerous other fortifications.

The Confederate accounts disagree in the number of their guns, but it is probable that in the aggregate they fell not much short of a hundred.

In their anxiety to triumph over those who had attacked them so unjustly, the Navy Department required of Dupont more than could be accomplished with his small force, and did not pay that deference to his opinion to which his reputation and position entitled him. On Dupont alone would have rested the responsibility of defeat had he entangled his vessels in the meshes prepared to receive them, and rendered them targets for the enemy to destroy at their leisure. In that event there would have been such an outcry at the North against the Monitor system that the Navy Department could not have withstood it. All the blame would have been thrown upon Dupont in the same way that the blame of failing to continue his attack was ascribed to him.

But the Navy did not look upon the action of the 7th of April as a defeat, by any means. It was a prudent withdrawal from engagement with a force more than six times its superior. It must not be forgotten that the Monitors had to take position and get their range under a most terrific fire; and although none were so disabled that they could not have resumed the action next day, they were enough so to be obliged to retire temporarily.

The difficulty lay in having too few vessels to accomplish so great a work—an

opinion which was generally acquiesced in by those cognizant of the facts of the case.

It is now an axiom that, no matter how strong you may build an iron-clad, guns can be made that will knock her to pieces in a given space of time. In the case of the Monitors, the enemy had in forty minutes weakened some of them, and an hour longer would perhaps have made it necessary for them to go to the machine-shop.

We do not consider the official report of Chief Engineer A. C. Stimers to the Navy Department as carrying any weight with it, particularly in view of the terrible mistakes made by that officer in the building of a number of light-draft Monitors which were consigned to the scrap-heap as worthless. In his communication to the Navy Department Mr. Stimers says: "In consideration of the vast importance to our country that this stronghold of the rebellion should be reduced, I take the liberty to express to the Department my firm opinion that the obstructions could be readily passed with the means already provided, and our entire fleet of iron-clads pass up successfully to the wharves at Charleston, and that the Monitors will retain sufficient enduring power to enable them to pass all the forts and batteries which may reasonably be expected."

Mr. Stimers also expressed great confidence in the efficiency of the torpedo rafts designed by Mr. Ericsson, for the purpose of removing torpedoes and blowing up obstructions, which the historian of the Navy says "naval officers were unwilling to use."

Mr. Stimers—or any other person in like circumstances—could express what opinion he pleased, as he had no responsibility in the matter and was not likely to have any. The intelligent reader will doubtless attach more importance to the opinion of the Commander-in-chief and his well-tried officers, who always did their duty faithfully in whatever situation they were placed.

To show that the commanding officers of the Monitors did not lose their coolness, and that they were not deficient in courage during the time they were under the fire of so many guns, it is only necessary to state the accuracy of the fire of those vessels. One hundred and twenty-four shots were fired at Sumter, and during the engagement the Monitors had to be kept in position to preserve their range under the storm of shot that was showered upon them.

The Confederate accounts state that fifty-five of the Monitors' shot struck the walls of Sumter, and others struck inside the works, which was excellent practice considering the situation. The firing also showed that the 15-inch shot had a breaking force against masonry that it did not possess against earth-works.

The distance at which the vessels were from the fort is differently stated by the Federal and Confederate officers, the former placing it at 600, the latter at 1,000, yards. As both were liable to error, we will take the mean of the two, or 800 yards, as correct, at which distance both the 15-inch and the 11-inch guns must have great breaching power. Only two of the 15-inch shot passed through the walls of Fort Sumter and exploded—one in a casemate, the other in the parade-ground. Other 15-inch shells exploded against the walls, making deep craters, but not essentially injuring the fort; “embrasures were destroyed, and one shot cracked the masonry for twenty-four feet in length;” “one large shell went over the parapet, demolished the officers’ quarters, and damaged several walls.” “Other 15-inch shells and shot and fragments of shells were picked up in and about the fort.” These facts we glean from the Confederate official account.

We quote the historian of the Navy, who is anxious to show that Admiral Dupont and his officers had no idea of the damage they were doing to the fort, otherwise they would have continued the attack. The fact is, if the Monitors had been filled with shot and shell and every one had struck Fort Sumter, they would not materially have injured its powers of resistance unless they could have disabled the guns.

The naval historian says: “That nothing was more certain, in view of what was actually done, than that Sumter could not long have resisted even such a fire as the Monitors delivered that day. The result would have been not such a gradual crumbling of the walls as took place under the long-range firing of the heavy rifles afterwards from the land batteries, but they would have come down with a crash, and the whole interior of the fort would have been torn in pieces by the enormous shells.” In giving such opinions, it is very plain the Naval historian, whom we quote, had never seen a fort after a bombardment, where the ground was strewn with shells and *débris*, yet remaining in fair fighting condition. He seems not to consider that while the fort is getting battered the iron-clads are at the same time receiving a severe hammering, and that, when the bombardment is continued for a length of time, the iron turrets will be likely to yield to repeated blows, on the same principle that the trunnions of a heavy gun can be broken off by repeated strokes from an ordinary hammer.

There was another argument urged in favor of the Monitors maintaining the fight with Sumter, viz.: “That, in judging of the actual power of these large guns, one very important point must be considered. These guns were novel weapons, and there

was an apprehension that they would burst in firing, and consequently were used with a caution which in the light of subsequent experience appears like timidity. The charge of powder was limited to thirty-five pounds. They have since been fired repeatedly and safely with double that amount—with seventy pounds of powder, or one hundred of mammoth powder, which is equal to seventy or seventy-five of common powder. From the results that were actually reached with only thirty-five pounds of powder, it is rendered certain that, if the charges had been suitably increased, every shot and shell striking fairly would have gone through the walls and the fort would have been destroyed, or, at the very least, it would have been so shattered that none would have doubted the propriety of a second attack, for it could be seen that it could easily be destroyed by a second attack.”

CAPTAIN (AFTERWARDS REAR-ADMIRAL) THOMAS TURNER.

This kind of “argument” will not stand against the statement of the facts. Its purpose was to throw on Dupont the odium of failure in the attack on Charleston.

All the talk of increasing the charges of the guns to obtain more breaching power was sheer folly, for the charges for the guns were established by the Bureau of Ordnance in the Navy Department, and no officer could take the responsibility of doubling the charges of the guns during an action, for should they burst and kill his own men he would be held blamable.

The Naval historian labors in all this to show that there was wanting the energy in the attack on Sumter which characterized subsequent proceedings; but it must be remembered that Rear-Admiral Dahlgren, who relieved Dupont, with the light of the latter’s experience to guide him,

accomplished no more than his predecessor. In fact, the historian admits as much, and acknowledges that nothing was effected until Fort Wagner, the key to the situation, was attacked by the Army and Navy at the same time, when, to use his words: "The Monitors and 'New Ironsides' played a most conspicuous part." In fact, he says, "it does not appear how Wagner could have been taken without their assistance." The north end of the island was in possession of the Confederates, and, of course, in communication with Charleston and the other forts, and Wagner could at any time be reinforced, and it would have been just as easy for the Confederates to have advanced by sap towards Gilmore's batteries as for him to approach them, had it not been for the presence of the iron-clads; but the latter

LIEUTENANT-COMMANDER (NOW REAR-ADMIRAL) S. B. LUCE.

effectually prevented any operations outside the walls of the fort, nor were the enemy even able to make a sortie to check the working-parties of Gilmore, nor use their batteries with effect upon the position, for the men could not stand to their guns under the fire of the Monitors or "New Ironsides."

Day by day, and even by night, it was the business of the Monitors to go up and attack the forts, gradually weakening their defence till, on the day when Gilmore expected to make the final assault, Rear-Admiral Dahlgren, the successor of Dupont, reported that he had knocked the fort into sand-heaps under the fire of the land and naval batteries; it was no longer tenable, and that night Morris Island was evacuated.

No one will pretend that Fort Wagner

compared in strength to Fort Sumter, which it was expected six Monitors would knock down; the Commander-in-chief of the squadron, indeed, being blamed for not settling it in the first attack; and when we consider all the events at Charleston, from Dupont's first attack until the evacuation of the place on the advance of General Sherman's army, we are confirmed in our idea that Rear-Admiral Dupont was right in saying that "the place can only be taken by a combined attack of the Army and Navy; and attacking the forts with the Monitors and iron-clads alone would never end in any favorable results."

It was not until after the fall of Morris Island, when General Gilmore could erect batteries armed with heavy rifled-guns, that Fort Sumter began to crumble, day by day, until it became a mere heap of rubbish to outward seeming, although still powerful, even in its crippled condition, and protecting the obstructions from the Monitors and "New Ironsides," so that no one could tell any more of their character than was known to Dupont when he relinquished his command.

To show the Confederate determination to hold Charleston at all hazards, we here insert the circular of General Ripley. It shows that the Confederates were alive to everything necessary to circumvent an enemy.

[CIRCULAR.]

HEADQUARTERS FIRST MILITARY DISTRICT,  
SOUTH CAROLINA, GEORGIA AND FLORIDA. }  
CHARLESTON, December 26, 1862. }

In case the proposed attack on this harbor is known beforehand, special directions will be given for the service of the different batteries. As, however, it may happen that a surprise may be attempted, or that the intervening time between the knowledge of the intention and the event may be too short, the instructions hereinafter contained will be carefully attended to.

Each commanding officer of a fort or battery will give his attention immediately to the strengthening of his carriages and the complete preparation of his material. Besides making the proper requisitions on the staff departments, let him endeavor to do as much as possible from his own resources. While staff departments are to a great extent crippled for want of material and workmen, much can be accomplished by ready expedients without their aid. Every carriage must be kept carefully screwed up, and, if any defects, made at least temporarily efficient. All the elevating screws, eccentric wheels, and traversing gear must be put in order and kept so, and especial care must be taken to see that a full supply of small implements is constantly on hand.

Ammunition should be examined, and immediately apportioned to the several guns, reference being had to the orders heretofore given on that subject; but where the quantity is not sufficient, the greater portion should be given to the heavier guns, as on them principally the success of the defence must depend.

Officers and men of each command must be kept on the alert, and instructions given to go to each battery at once, upon an alarm; and especial care must be taken that each battery is in readiness for instant action as the men arrive at their guns.

It is hoped and believed that these instructions will be

are habitually attended to; but, as constant vigilance is our only security, they cannot be too forcibly insisted upon.

Upon observing a disposition to attack on the part of the enemy, the nearest fort or battery will give the alarm. By day a shotted gun and dipping the flag will communicate the danger to the other fortifications and head-quarters. All commands will go at once to battery, and the circumstances of the alarm communicated to the head-quarters by telegraph or signal.

By night a shotted gun and a rocket will give the intelligence.

In whatever way the attack is made by the enemy, he is to be engaged as soon as possible, to do so effectually, with a few long-range guns from every fort that will bear. The number of guns must be left to the discretion of the commanding officer, who must see that the fire is as accurate as possible. They must not engage too great a number, and be careful not unduly to excite their men, or strain their guns and carriages. While the long-range fire is valuable, if accurate, to annoy the enemy and force him to develop his attack, it is not to be depended on for more. Other things being equal, it will be well that the guns to leeward are first engaged. The remaining guns of the batteries will be trained by battery on different points where the enemy must pass, care being taken to have the fire of each battery concentrated.

As the enemy approaches, let the distance he will be in passing be accurately estimated by the distance-buoys, and the elevation made to correspond, making it too little rather than too great for direct fire. If the vessels are passing rapidly the guns should be discharged by battery, just as the prows of the vessels come across the line of sight.

In the case of wooden vessels, the object will be to hit them near the water line, just abaft the smoke-stack. In the case of iron-clad vessels, to hit the deck or turrets at the intersection with the deck, and especially to let all the shots strike at once.

The first fire will be concentrated upon the leading vessels, and will be continued upon them as long as the guns by battery will bear well, and especially if they become entangled in obstructions, even if certain vessels engage to draw off the attention of the outermost batteries and remain behind.

Should some of the vessels succeed in passing, the action must then pass into the hands of commanding officers of batteries. They will pour in their fire as far as practicable by battery, and as fast as it can be done with accuracy, on whatever vessels of the enemy may be nearest them.

The guns of Beauregard Battery, Fort Moultrie, Battery Bee, and the eastern, north-eastern, and north-western faces of Fort Sumter, will be used to form the first circle of fire to which the enemy must be subjected, the centre being a little to the eastward of a line between the forts and midway. Every effort must be made to crush his vessels and repel his attack within this circle, and especially while he is entangled in the obstructions.

All the mortars of Fort Sumter and Fort Moultrie will be trained on the centre above indicated. The fuses will be of the full length, and the shells have large bursting charges, it being better to have the fuses fail than the shells to burst in the air, and the full effect of the explosions being desirable if successful. The mortar batteries will be fired by battery when the enemy's vessels are about two ships' length from the point on which they are trained.

If the fleet is large, the mortars will be kept trained on the same point and fired by battery as rapidly as possible while the fleet is passing. If small, and a portion has passed the first circle of fire, the mortars of Fort Sumter will be trained to operate on the second circle, the centre of which will be at a point

about midway between Forts Sumter and Ripley, and to the southward of the middle-ground shoal. It will be formed by the heavy guns of Fort Johnston, Fort Ripley, Castle Pinckney, Battery Bee, the north-western and western faces of Fort Sumter.

The guns of Forts Johnston and Ripley and Castle Pinckney will open on the leading vessels as they come within easy range, care being taken that every shot finds its mark. Those of Fort Sumter and Battery Bee will continue upon the leading vessels as long as they are close; but, if they elongate their distance, the fire will concentrate on the vessels nearest them.

Should any vessel succeed in passing the second circle of fire, the third will be formed and put into action by the guns of White Point Battery and Battery Glover, with such guns of Forts Johnston and Ripley and Castle Pinckney as will bear. Concentration on the leading vessels will be the object, as before.

During the action care will be taken, as far as possible, to prevent the chances of shot from the batteries taking the direction of our own works. The best way of doing this will be to let none miss the enemy, and when he is between the works most especial accuracy will be striven for.

The vessels of the Confederate navy will engage during the action, and they may often pass our batteries. In this case officers and gunners cannot be too careful to avoid hitting them. The fire by battery, as a general thing, will be discontinued at those vessels of the enemy which our ships engage closely; but, if occasion offers, endeavors will be made to hit the ports of the revolving turrets on the enemy's vessels when turned from our ships, to disarrange and throw out of gear the machinery for closing the ports.

Accurate fire by single guns will be concentrated on the enemy's vessels, if two or more attack one of ours; and should the distance admit, then it will be advisable to pour upon one of them a heavy fire by battery.

The plunging fire from Fort Sumter is expected to be particularly effective, and when single-rifled guns are fired from the barbettes of that fort, it will be well to hit the grated roofs of the turrets with square-headed bolts, followed by shells filled with molten iron.

The square-headed bolts for the 10-inch columbiads and the heavier guns will be fired by battery when the enemy is within close range. Solid shot and bolts will be used generally against iron-clads during the action.

The furnaces for melting iron and heating shot will be kept in heat, and heated projectiles will be used whenever occasion offers advantage.

Should it happen that any of the enemy's vessels become disabled and endeavor to get out of fire, the outermost batteries must pay particular attention to prevent them; and in case other of the enemy's ships come to the assistance of the disabled, let every gun and mortar which will bear be turned upon them by battery.

The great object of the enemy will probably be to run by, and every effort must be made to crush him in each successive circle of fire which he encounters.

Hog Island Channel will be obstructed, and the obstructions must be guarded by the long-range guns of Fort Sumter and the columbiads of Battery Bee nearest it.

It is doubtful whether the enemy will attempt to pass by Folly Channel. If he does, a circle of fire will be formed by the guns of Fort Ripley, Castle Pinckney and White Point Battery.

The position of torpedoes will be communicated to commanding officers, and the effort made to drive the enemy's vessels upon them if he is taking other courses.

The obstructions will also be designated, and

under no circumstances will the enemy be permitted to reconnoitre them.

The headquarters of the undersigned will be at Fort Sumter, and directions will be sent by telegraph and signal to different posts, should anything require special directions.

Batteries Marshall and Wagner will be worked to the extent of their capacity for injuring the enemy, by their commanding officers, without unduly exposing their commands.

The directions given above relate, generally, to the defeat of an attack by the enemy's fleet alone. Should a combined attack be made by land and water, other orders can be issued, as nothing of that kind can be done by surprise.

The present circular will be studied and reflected upon by all officers who will be engaged in this honorable duty of the coming defence. With careful attention, coolness and skillful gunnery, success is far more than possible.

R. S. RIPLEY,  
*Brigadier-General Commanding.*

Official :

WM. F. NANEE, *Acting-Assistant Adjutant-General.*

COMMANDER (NOW REAR-ADMIRAL) JOHN H. UPSHUR.

We think we have established that Admiral Dupont was right in the conclusions which he submitted to the Navy Department immediately after the engagement of the 7th of April. The public, knowing that he retired from his command directly after this affair, might suppose that some blame was attached to him.

Dupont was too popular an officer to be treated with injustice, and in the course of a month it was seen by the Secretary of the Navy that his views were correct, and that the siege of Charleston by the Navy still continued with no better results than before.

Overtures were then made to the Admiral

and he could have had any command he desired, but Dupont was a proud man and would not listen to terms from those whom he thought had censured him for doing his duty and forced him from his command at Charleston. To accept another command, Dupont thought, would imply that he concurred in the views of the Department.

The following letters will explain in a measure the reasons for the misunderstanding between the Secretary of the Navy and Rear-Admiral Dupont. The Secretary's letter is an implied order for Dupont to succeed at all hazards, while the Admiral's undertakes to show the Department how little prospect there was of meeting its expectations:

SECRETARY WELLES TO REAR-ADMIRAL DUPONT.  
NAVY DEPARTMENT, }  
April 11, 1863. }

SIR—It has been suggested to the Department by the President, in view of operations elsewhere, and especially by the Army of the Potomac, that you should retain a strong force off Charleston, even should you find it impossible to carry the place. You will continue to menace the rebels, keeping them in apprehension of a renewed attack, in order that they may be occupied; and not come North or go West to the aid of the rebels, with whom our forces will soon be in conflict. Should you be successful, as we trust and believe you will be, it is expected that General Hunter will continue to keep the rebels employed and in constant apprehension, so that they shall not leave the vicinity of Charleston. This detention of the iron-clads, should it be necessary, in consequence of a repulse, can be but for a few days.

I trust your success will be such that the iron-clads can be, or will have been, dispatched to the Gulf when this reaches you. There is intense anxiety in regard to your operations.

This day is the anniversary of the assault on Sumter, and God grant that its recurrence may witness the destruction of that fortress by our naval forces under your command.

I am very respectfully,  
Your obedient servant,  
GIDEON WELLES,  
*Secretary of the Navy.*

Rear-Admiral S. F. DUPONT,  
*Commanding S. A. B. Squadron, Port Royal, S. C.*

President Lincoln was greatly disturbed at the want of success at Charleston, and sent the following communications to Admiral Dupont:

EXECUTIVE MANSION, }  
(TELEGRAM.) WASHINGTON, April 13, 1863. }

Hold your position inside the bar near Charleston; or, if you shall have left it, return to it and hold it till further orders.

Do not allow the enemy to erect new batteries or defences on Morris Island. If he has begun it, drive him out. I do not herein order you to renew the general attack. That is to depend upon your own discretion or a further order.

A. LINCOLN.

Admiral DUPONT.

EXECUTIVE MANSION, }  
WASHINGTON, April 14, 1863. }

This is intended to clear up an apparent inconsistency between the recent order to continue operations before Charleston, and the former one to remove to another point in a certain contingency. No

censure upon you or either of you is intended; we still hope that by cordial and judicious co-operation you can take the batteries on Morris Island and Sullivan's Island and Fort Sumter. But whether you can or not, we wish the demonstration kept up for a time for a collateral and very important object; we wish the attempt to be a real one (though not a desperate one, if it affords any considerable chance of success. But if prosecuted as a *demonstration* only, this must not become public, or the whole effect will be lost. Once again before Charleston, do not leave till further orders from here; of course, this is not intended to force you to leave unduly exposed Hilton Head, or other near points in your charge. Yours truly,

A. LINCOLN.

General HUNTER and Admiral DUPONT.

P. S.—Whoever receives this first, please send a copy to the other immediately. A. L.

COMMANDER (NOW REAR-ADMIRAL) CHARLES STEEDMAN,  
COMMANDING FLANKING DIVISION, BATTLE OF PORT ROYAL.

REAR-ADMIRAL DUPONT TO SECRETARY WELLES.  
FLAG-SHIP "WABASH," }  
PORT ROYAL HARBOR, S. C., April 16, 1863. }

SIR—I have the honor to acknowledge the receipt this morning, by the "Freeborn," of your communication of the 11th instant, directing the maintaining of a large force off Charleston to menace the rebels and keep them in apprehension of a renewed attack in the event of our repulse.

I have also to acknowledge the receipt of a copy of a telegraphic despatch of the 13th instant, from the President of the United States, sent from Fortress Monroe.

The Department will probably have known, on the 12th instant, the result of the attack. In my dispatch of the 11th instant, dated off Charleston, the department was made aware of my withdrawal, with the iron-clads, from the very insecure anchorage inside the bar, and just in time to save the Monitors from an easterly gale, in which, in my

opinion and that of their commanders, they would have been in great peril of being lost on Morris Island Beach. Their ground-tackling has been found to be insufficient, and from time to time they have dragged even in close harbors.

I have since been doing all in my power to push forward their repairs in order to send them to the Gulf as directed; but I presume that your dispatch of the 11th instant, and the telegraphic message from the President, revoke your previous order.

I shall spare no exertions in repairing, as soon as possible, the serious injuries sustained by the Monitors in the late attack, and shall get them inside Charleston bar with all dispatch, in accordance with the order of the President. I think it my duty, however, to state to the Department that this will be attended with great risk to these vessels from the gales which prevail at this season, and from the continuous fire of the enemy's batteries, which they can neither silence nor prevent the erection of new ones.

The "New Ironsides" can only cross the bar with certainty at spring-tides, which are twice a month. She is more vulnerable than the Monitors, and at the distance she must necessarily anchor could not elevate her guns sufficiently to reach any batteries of the enemy, while at the same time she would be liable to injury, particularly in her wooden ends, from a fire which she could not return. If this vessel is withdrawn from the blockade and placed inside, the blockade may be raised by the rebel rams coming out of Charleston harbor at night by Maffit's Channel, in which case she could give no assistance to the fleet outside. But for the "New Ironsides," the raid of the 31st of January would have been repeated with more serious effect.

The lower and greater part of Morris Island exhibits a ridge or row of sand-hills, affording to the enemy a natural parapet against the fire of shipping and facilities for erecting batteries in very strong position. The upper part of the island is crossed by Fort Wagner, a work of great strength, and covered by the guns of Fort Sumter. The island is in full communication with Charleston, and can, in spite of us, draw fresh re-inforcements as rapidly as they may be required. Shoals extend from the island, which prevent the near approach of the Monitors, and our experience at Fort McAllister does not encourage me to expect that they will reduce well-defended sand batteries, where the damage inflicted by day is readily repaired by the unstinted labor of the night. The ships, therefore, can neither cover the landing nor afterwards protect the advance of the small force of the army available for operations in this quarter, which will meet fresh troops at every sand-hill, and may look also for a reverse fire from the batteries on James Island.

As it is considered necessary to menace Charleston by a demonstration of land and naval forces, North Edisto will afford a better point from which to threaten an advance, and a concentration of troops and ships in that quarter would accomplish the purpose of the Government mentioned in your dispatch of the 11th instant, as it is a military point from which Charleston could be attacked now, James Island being fully occupied by the enemy's batteries.

I have deemed it proper and due to myself to make these statements, but I trust I need not add that I will obey all orders with the utmost fidelity, even when my judgment is entirely at variance with them, such as the order to re-occupy the unsafe anchorage for the iron-clads off Morris Island, and an intimation that the renewal of the attack on Charleston may be ordered, which, in my judgment, would be attended with disastrous results, involving the loss of this coast.

For eighteen months in these waters I have given whatever of professional knowledge, energy and zeal I possess to the discharge of my duties, and to the

close study of our military and naval position in the tenure of the sea-coasts within the limits of my command, and I claim to know what best pertains to the disposition of my fleet in carrying out the instructions of the Department.

I know not yet whether the confidence of the Department so often expressed to me has been shaken by the want of success in a single measure which I never advised, though intensely desirous to carry out the Department's orders and justify expectations in which I could not share.

I am, however, painfully struck by the tenor and tone of the President's order, which seems to imply a censure, and I have to request that the Department will not hesitate to relieve me by an officer, who, in its opinion, is more able to execute that service in which I have had the misfortune to fail—the capture of Charleston. No consideration for an individual officer, whatever his loyalty and length of service, should weigh an instant if the cause of his country can be advanced by his removal.

Very respectfully, your obedient servant,

S. F. DUPONT,

*Rear-Admiral, Commanding S. A. B. Squadron.*  
HON. GIDEON WELLES,  
*Secretary of the Navy, Washington.*

CAPTAIN (NOW REAR-ADMIRAL) WM. ROGERS TAYLOR.

After the attack on Charleston, Rear-Admiral Dupont returned to Fort Royal and the blockade continued as before with the wooden gun-boats.

In the latter part of April, Major-General Hunter applied for a gun-boat to assist a land force in an expedition against Buffington, on May River, which town had been the head-quarters of Confederate marauders for some time.

The army force numbering one thousand men, under Colonel Barton, embarked on board the gun-boat "Mayflower" and a transport, and were landed near Buffington under cover of the guns of the "Commodore McDonough," and took possession of the town from which the Confederates had retreated. By order of Colonel Barton the

town was destroyed by fire, the church alone being spared. The enemy returned and made several charges on the Federal troops, but were driven back by the shells of the "McDonough," which burst in their ranks.

The burning of the town seems to have been an unnecessary act of severity, but such is the tendency of civil war. The inhabitants of a town are held responsible for the acts of lawless guerillas, and punished for aiding and abetting the enemy, when perhaps they may not have been to blame.

While the blockade of Charleston still continued, the Confederates, with the persistent energy by which they were distinguished, were constructing iron-clads at Savannah. They had been for some time past engaged in altering the blockade-runner "Fingal" into a casemated vessel of the same type as the "Merrimac" and others so popular in the South.

The fancy for this description of iron-clad arose doubtless more from necessity than from anything else. The Confederates had few machine-shops, and it was hardly practicable to roll out a sufficiency of wide plates, but they had a plenty of railroad iron, and of this they made liberal use. The Southern iron-clads were very formidable vessels when brought into conflict with wooden ships-of-war of the old type. It is only necessary to recall to the reader's memory the two small iron-clads which slipped out of Charleston and did such damage to the Federal gun-boats, not to mention other instances, to show the value of the Confederate war machines.

The slanting roof was the Southern idea pitted against the Monitor plan, which was that of the North. These represented the two most powerful types of fighting-ships in existence, and, if the "Merrimac" had destroyed the "Monitor," the former would no doubt have been the type of vessel used for coast and harbor defence the world over.

The Confederates never conceded the Northern claim that the "Monitor" drove the "Merrimac" back to Norfolk. The Confederate naval authorities knew how the Federal Navy Department was abused and criticised throughout the North for adopting the Ericsson principle instead of some of the numerous other devices that were offered, and the South took the view of the question which coincided with their own preconceived ideas. They believed in their plan of vessel with rifled guns, and rather derided the Monitors with their slow-moving turrets and short-range guns.

The want of success of the Monitors at Charleston also lowered their prestige, though this was unjust to the vessels, for

they certainly showed their endurance at that place sufficiently to prove that they could stand the attack of the "Atlanta."

The "Atlanta," then called the "Fingal," had succeeded in running the blockade and getting into Savannah soon after the capture of Port Royal. She had since been closely watched, and finding it would be almost impossible to get out of port again as a blockade-runner, she was sold to the Confederate Government and converted into an iron-clad, supposed to be one of the best that had been built in the South.

The "Weehawken," Captain John Rodgers, and the "Nahant," Commander John Downes, were employed blockading the "Atlanta" at the mouth of Wilmington River.

Early in the morning of June 17th, 1863,

the "Nahant." At this time the "Atlanta" lay across the channel waiting the attack of the Monitors. Commander William A. Webb, her commanding officer, showed more courage than judgment, as he was not called upon to await the attack of two vessels which together were superior in force.

The "Weehawken" approached within three hundred yards of the enemy and at 5.15 A. M. opened fire. In fifteen minutes the "Atlanta's" colors were hauled down and a white flag was hoisted. The "Weehawken" fired but five shots altogether, but that number was quite sufficient.

As soon as the Confederate steamer struck her colors, Captain Rodgers steamed close to her and ordered a boat to be sent on board the "Weehawken." Lieutenant

IRON-CLAD "ATLANTA," CAPTURED IN WARSAW SOUND, JUNE 17, 1863.

CONFEDERATE IRON-CLAD "ATLANTA," CAPTURED IN WARSAW SOUND.

it was reported to Captain Rodgers that a Confederate iron-clad was coming down the river. The "Weehawken" was immediately cleared for action, the cable slipped, and the Monitor steamed slowly towards the northeast end of Warsaw Island, then turned and stood up the Sound, heading for the enemy, who came on with confidence, as if sure of victory. Two steamers followed the Confederate iron-clad, filled with people who had come down to see the Union vessels captured or driven away. The "Nahant," having no pilot, followed in the wake of the "Weehawken."

When the "Atlanta" was about a mile and a half from the "Weehawken" she fired a rifled shot which passed across the stern of the later vessel and struck near

Alexander, of the Confederate Navy, went on board to surrender the "Atlanta," which he informed Captain Rodgers was aground on a sand-spit. Soon after, Commander Webb of the "Atlanta" repaired on board the "Weehawken" to deliver up his sword, and a prize-crew, under Lieutenant-Commander D. B. Harmony, was sent to take charge of the prize.

The "Weehawken" received no damage from the "Atlanta's" shot, the only injury she received was from her consort running foul of her. The "Nahant" took no part in the battle, which was ended before she could obtain a position to use her guns.

The "Atlanta" was struck four times by the "Weehawken's" shot, first on the inclined side by a 15-inch cored shot, which

broke through the armor and wood-backing, strewing the deck with splinters, prostrating about forty men by the force of the concussion, and wounding several by splinters and fragments of armor. The second shot—11-inch solid—struck the “knuckle” or edge of the overhang, and did no damage except breaking a couple of plates. The third shot—15-inch—struck the top of the “Atlanta’s” pilot-house, knocking it off, wounding the pilots and stunning the man at the wheel. The fourth shot—11-inch—struck a port-stopper in the centre, breaking it in two and driving the fragments through the port.

The “Atlanta” had sixteen wounded, one of whom died from the effects of his

we have before stated, viz., that the 15-inch shot could not penetrate four inches of iron with the ordinary backing at a distance of 800 yards.

The “Atlanta” was considered by the Confederates the best iron-clad they had built, and in the capture was verified the statement we have made, that either of the Monitor-built vessels, armed with 15-inch guns, could have destroyed the “Merrimac” in half an hour. The “Weehawken” defeated a better ship than the “Merrimac” in half the time mentioned.

It was probably the intention of the commanding officer of the “Atlanta” to get out where he could have plenty of sea-room and choose his distance—which the

CAPTURE OF THE CONFEDERATE RAM "ATLANTA" BY THE MONITOR "WEEHAWKEN."

wounds, but there is no mention of any one being killed outright.

The armament of the Confederate vessel was two 6-inch rifles in broadside, and two 7-inch rifles working on pivots, either as broadside or bow and stern guns. The “Atlanta” had a complement of 145 officers and men, including marines.

The fact that the vessel was aground when she struck her colors does not account for the feeble defence she made after running down so defiantly and engaging two Monitors, whose strength must have been well known to the Confederates. Only two of the shots which struck the “Atlanta” did any great damage, and the armor and backing, though much shattered, were not penetrated. This confirms what

great speed of the “Atlanta” would have enabled him to do—and attack the Monitors at long range, which would only have ended in the expenditure of a large amount of ammunition without any result, except that the “Atlanta” might have escaped to do harm elsewhere.

It seemed to be the fate of all the Confederate iron-clads to be either captured, or destroyed by their officers to prevent them from falling into the hands of the Federals, and the “Merrimac” was about the only one of them which effected much previous to her destruction.

The “Atlanta” had a speed of ten knots, and her officers had confidently counted on capturing both the Monitors. From the nautical instruments on board the Confed-

erate vessel, her commanding officer evidently intended to go to sea or cruise along the coast, and her excellent engines and equipments and good model would have justified such an attempt. The 15-inch shot which struck the "Atlanta" dispelled all these illusions and demoralized the crew, and, although the vessel fired some shots, they all went wide of the mark.

When it was determined to fit the "Atlanta" as an iron-clad, she was cut down so as to have the deck two feet above the water. Upon this deck was built a casemate with inclined sides similar to the "Merrimac," with ports in which to mount four heavy rifle-guns of the Brooke pattern. Her armor was four inches thick, composed of two layers of plates seven inches wide placed horizontally and vertically to each other.

The vessel was two hundred and four feet

CAPTAIN (NOW REAR-ADMIRAL) J. F. GREEN.

long, forty-one feet breadth of beam, and about sixteen feet draft of water. The bow terminated in an iron beak for ramming, and the vessel carried a torpedo apparatus on the bow, to be used when opportunity offered. The "Atlanta" was, in fact, an improved "Merrimac."

This is a general description of a vessel from which so much was expected and so little realized, and which instead of capturing two Monitors, was captured by one of them in fifteen minutes.

There was a good deal of ingenuity displayed in the construction of the "Atlanta," but the question of the superiority of the Monitor type over the flat or angular type of vessel may be considered set at rest by her capture.

Notwithstanding the battle of the original "Monitor" with the "Merrimac," many people declined to believe in the superiority

of the turret system. The English, even after the news reached them, commenced building armed ships with plated sides like the "Warrior" class, judging from the effect of the "Monitor's" shot on the "Merrimac," that they could build vessels with teak or oak backing and four inches of iron that would resist the most powerful American gun. But here was a new and more powerful gun, of which they had taken no account, and which, exceeding in size anything in the ordnance line heretofore manufactured, might smash in the sides of the "Warrior" class, even if the shot did not pass clear through them.

This fight with the "Atlanta," therefore, set Europe to thinking, and convinced the Navy Department it had taken a step in the right direction. If their little floating batteries could not demolish the heaviest fortifications, they could break up and send to the bottom the heaviest ships.

The battle between the "Weehawken" and the "Atlanta" satisfied the United States Government that it could safely intimate to the governments of Europe that we would submit to no interference in our domestic concerns so long as we complied with the law of nations. There was established a more hopeful feeling for the speedy suppression of the rebellion, now that we had demonstrated that we could build vessels that were more than a match for the war-ships of Europe.

The news of this engagement was received in Europe with great interest. It was a contest between English and American ideas. The American idea was the Monitor-built vessel with the 15-inch gun; the English idea was the "Atlanta" with her plated sides and rifled guns. No persons were more interested in the result of the conflict than the Lords of the British Admiralty, ever alive to what might exercise an influence upon their navy. They had commenced the plating system and seemed to cling to the idea, but the success of the "Weehawken" shattered their faith. The Monitor system remained master of the field and has so continued to this day.

On this occasion the Secretary of the Navy was eloquent in his praise of Captain Rodgers, recognizing in the handsomest manner his services not only on the present occasion, but also on the Mississippi at the commencement of the war and at Drury's Bluff on the James, where Rodgers attacked the enemy's fortifications in the so-called iron-clad "Galena." The Secretary also dwelt on the moral courage exhibited by Captain Rodgers in putting to sea in the face of a violent storm to test the sea-going qualities of the "Weehawken"—one of a class of vessels so unjustly decried by many persons.

For his important services, the Secretary informed Captain Rodgers that he had presented his name to Congress for a vote of thanks, and certainly the distinction was well deserved, for John Rodgers was one of the most gallant officers in the Navy. He had that cool courage which would flinch from no danger, and his capacious mind was ever ready to meet emergencies which might have unnerved many clever officers. All of Rodgers' friends and associates in the Navy felt that his honors were fairly earned, and they were worn with the modesty which distinguished him.

The capture of the "Atlanta" was the last important event that occurred while the South Atlantic squadron was under the command of Dupont, and he was well pleased to terminate his official communications to the Navy Department with such gratifying intelligence; and on the 4th of July, 1863, at his own request, he was relieved from the command of the squadron by Rear-Admiral John A. Dahlgren.

In the later communications which passed between Rear-Admiral Dupont and the Secretary of the Navy, some asperity may be observed on both sides; but the capture of the "Atlanta" seemed to have smoothed all this away, and Admiral Dupont's friends hoped on his arrival in Washington he would be appointed to some important command where he could give the country the benefit of his talents and experience. On his retirement from the command of the squadron, Mr. Secretary Welles

wrote the Admiral the following letter, which would seem to indicate that if he had ever had any feeling against Dupont he had outgrown it:

NAVY DEPARTMENT, }  
June 26, 1863. }

SIR—The Department has received your several dispatches announcing the capture of the rebel iron-clad steamer "Fingal," *alias* "Atlanta," and enclosing the detailed reports of Captain John Rodgers and Commander John Downes of the affair.

I take occasion to express the Department's appreciation of your prompt measures to prepare for the expected appearance of the rebel iron-clad by sending off Savannah two of our own ably commanded ships, and congratulate you on the acquisition of so powerful a vessel, which promises to be of important service on the station.

To your ceaseless vigilance and that of the officers under your command were we indebted some months since for the destruction of the steamer "Nashville," which the enemy had armed and fruitlessly endeavored to send out to destroy our commerce, and now to your timely measures and to the efficient means provided do we owe the capture of one of the most powerful iron-clads afloat, a vessel prepared after several months of toil and great expenditure of money, and sent forth with confidence to disperse our blockading fleet and overcome our Monitors.

You may well regard this, and we may with pleasure look upon it, as a brilliant termination of a command gallantly commenced and conducted for nearly two years with industry, energy and ability.

The Department desires you to recommend to it an officer of the South Atlantic Blockading Squadron to command the "Atlanta."

Very respectfully,  
GIDEON WELLES,  
*Secretary of the Navy.*

Rear-Admiral S. F. DUPONT,  
*Commanding S. A. B. Squadron, Port Royal, S. C.*

## SOUTH ATLANTIC SQUADRON, JANUARY, 1863.

### LIST OF VESSELS AND OFFICERS UNDER REAR-ADMIRAL SAMUEL F. DUPONT.

#### CAPTAIN C. R. P. RODGERS, CAPTAIN OF THE FLEET.

##### STEAM-FRIGATE "WABASH," FLAG-SHIP.

Commander, Thomas G. Corbin; Lieutenant-Commander, John Irwin; Lieutenant Alexander S. Mackenzie, Ordnance-Officer; Lieutenant Samuel W. Preston, Flag-Lieutenant; Lieutenants, Lloyd Phenix, John H. Rowland and James P. Robertson; Fleet Surgeon, George Clymer; Assistant Surgeons, Henry F. McSherry and Theodor Woolverton; Paymaster, John S. Cunningham; Chaplain, George W. Dorrance; Acting-Master, Townsend Stiles; Marine Officers: Captain, James Lewis; First-Lieutenant, H. B. Lowry; Ensigns, James Wallace, M. L. Johnson, Philip W. Lowry, La Rue P. Adams and Frederick Pearson; Acting-Master's Mates, Wm. A. Duer, W. F. Horton and Joel R. Hinman; Engineers: Chief, Robert W. McCleery, Acting-Second-Assistant, J. B. Hathaway; Third-Assistants, J. S. Green, Thomas Crumney; Acting-Third-Assistants, J. L. Marshall, J. B. Place and J. T. Dennett; Boat-swain, Zachariah Whitmarsh; Gunner, Thomas Stewart; Carpenter, Charles Bordman; Sailmaker, G. T. Lozier

##### IRON CLAD STEAMER "NEW IRONSIDES."

Captain, Thomas Turner; Lieutenant-Command-

Surgeon, Marius Duvall; Assistant Surgeons, W. T. Plant and Edward Kershner; Paymaster, Alex. W. Russell; Marine Officers: First-Lieutenant, H. A. Bartlett; Second-Lieutenant, J. B. Young; Acting-Masters, G. W. Domett, J. M. Skillings and J. M. Butler; Acting-Master's Mates, C. W. Howard, G. H. Bradley, S. S. Hand, T. E. Harvey, B. F. Morris and Robert Shepherd; Engineers: Chief, Harmon Newell; First-Assistant, N. B. Littig; Second-Assistants, O. H. Lackey, R. L. Harris; Third-Assistants, Edward Battelle, H. C. Beckwith and W. S. Wells; Boat-swain, Thomas Bennett; Gunners, Charles Stuart and R. J. Hill; Carpenter, Theodore Bishop; Sailmaker, J. B. Birdsall.

##### IRON-CLAD STEAMER "NANTUCKET." [JAN. 1864.]

Lieutenant-Commander, S. B. Luce; Lieutenant, H. L. Howison; Assistant Surgeon, A. B. Judson; Acting-Assistant Paymaster, L. L. Brigham; Acting-Master, W. H. Males; Acting-Ensigns, J. T. Otis, C. C. Starr and John Meyers; Engineers: Second-Assistants, Geo. H. White, Isaac McNary; Third-Assistants, W. W. Buckhout, J. K. Smedley and Acting-Third-Assistant A. L. Grow. [Commander Donald McN. Fairfax commanded the

## IRON-CLAD STEAMER "CATSKILL." [JAN. 1864.]

Lieutenant-Commander, F. M. Bunce; Assistant-Surgeon, Robert Willard; Acting-Assistant Paymaster, G. F. Barker; Acting-Master, G. W. Parker; Acting-Ensigns, C. P. Walters and George M. Prindle; Engineers: Second-Assistant, G. D. Emmons; Third-Assistant, J. F. Booth; Acting-Third-Assistants, Frank Marsh and James Plunkett; Acting-Master's Mate, Peter Trescott. [Commander George W. Rodgers commanded the "Catskill" at Charleston.]

## STEAM-SLOOP "POWHATAN."

Captain, S. W. Godon; Lieutenant-Commander, E. P. Williams; Lieutenants, A. R. McNair and F. J. Higginson; Surgeon, Henry O. Mayo; Assistant Surgeon, Edw. D. Payne; Paymaster, L. J. Brown; First-Lieutenant of Marines, P. C. Pope; Acting-Masters, Jas. Ogilvie, Lothrop Baker, C. R. Wilkins and E. L. Haines; Acting-Ensign, C. P. Walters; Acting-Masters' Mates, W. S. Curtis, Wm. Frost and C. H. Howland; Engineers: Chief, John A. Grier; First Assistant, H. B. Nones; Second-Assistant, Henry Brown; Third-Assistants, W. H. Gladding, R. A. Wright, G. W. Carriek, John Franklin and M. Cuthbert; Boatswain, Wm. Long; Gunner, G. W. Omensetter; Carpenter, Amos Chick; Sailmaker, W. S. L. Brayton.

## IRON-CLAD STEAMER "PASSAIC."

Captain, Percival Drayton; Lieutenant-Commander, Joseph N. Miller; Assistant Surgeon, Edgar Holden; Assistant Paymaster, J. P. Woodbury; Acting-Ensigns, H. B. Baker and L. G. Emerson; Engineers: First-Assistant, G. S. Bright; Second-Assistant, H. W. Robie; Third-Assistants, W. A. Dripps and Joseph Hoops.

## STEAM SLOOP "CANANDAIGUA."

Captain, Joseph F. Green; Lieutenant-Commander, J. J. Cornwell; Lieutenant, H. De H. Manley; Surgeon, James Suddards; Paymaster, C. H. Eldredge; Acting-Master, Samuel Hall; Ensign, Benjamin H. Porter; Acting-Ensign, John L. Gifford; Acting-Master's Mates, A. S. Eldridge, J. N. Pease, W. T. Vincent and C. S. McCarty; Engineers: Chief, Wm. S. Stamm; First-Assistant, H. C. Victor; Second-Assistant, G. W. Rogers; Third-Assistants, Albert Jackson, Alfred Hedrick, Philip Miller and E. S. Phillippi; Boatswain, Thomas Smith; Gunner, John Gaskins; Carpenter, S. N. Whitehouse; Sailmaker, David Bruce.

## IRON-CLAD STEAMER "WEEHAWKEN."

Captain, John Rodgers; Lieutenant-Commander, L. H. Newman; Assistant Surgeon, E. M. Stein; Acting-Assistant Paymaster, J. H. Pyncheon; Acting-Master, B. W. Loring; Acting-Ensigns, J. C. Cox and Stephen Balles; Engineers: Second-Assistants, J. H. Bailey and David Hardie; Third-Assistants, H. W. Merian and Augustus Mitchell.

## STEAM-SLOOP "HOUSATONIC."

Captain, Wm. Rogers Taylor; Lieutenants, M. S. Stuyvesant and E. T. Brower; Surgeon, S. F. Coues; Assistant Paymaster, J. S. Woolson; Acting-Masters, J. W. Congdon and J. K. Crosby; Acting-Ensign, Weston Gregory; Acting-Master's Mates, C. D. Bordman, E. A. Butler, G. A. Harriman and B. F. Jacobs; Engineers: Chief, John S. Albert; Second-Assistant, P. A. Rearick; Third-Assistants, I. R. McNary, F. L. Cooper, G. W. Geddes and J. H. Harmany; Boatswain, H. P. Grace; Gunner, Benjamin Roberts.

## STEAMER "MERCEDITA."

Captain, Henry S. Stellwagen; Lieutenant-Commander, Trevot Abbott; Acting-Assistant Surgeon, C. H. Mason; Acting-Assistant Paymaster, T. C. Stellwagen; Acting-Masters, C. B. Wilder, F. J. Gover and T. J. Dwyer; Master's Mates, Edward Rogers and G. A. Steins; Engineers: Acting-First-Assistant, Alexander Doig; Acting-Third-Assistants,

Simon Rockefeller, E. F. Martin and J. A. Munger; Gunner, Jacob Ameer.

## STEAM GUN-BOAT "PAUL JONES."

Commander, Charles Steedman, Lieutenant, Edward A. Walker; Acting-Masters, Wm. Buckholdt; C. H. Boutelle and J. O. Ormond; Assistant Surgeon, J. H. Hazleton; Acting-Assistant Paymaster, J. A. Berry; Acting-Master's Mates, C. V. Kelly, Jeremiah Potts and Charles Weidenbine; Engineers: First-Assistant, Alexander Greer; Second-Assistant, James Sheriden; Third-Assistants, J. H. Chassar, W. H. G. West and E. D. Weems; Acting-Gunner, O. B. Holden.

## STEAMER "SOUTH CAROLINA."

Commander, John J. Almy; Acting-Assistant Surgeon, G. A. Bright; Assistant Paymaster, A. S. Kenny; Acting Masters, J. W. Magune, G. A. Crabb, W. H. Garfield and F. W. Baur; Acting-Ensign, C. T. Taylor; Acting-Master's Mates, Eliphalet Holbrook, Wm. C. Nye, A. S. Hitch and S. S. Withington; Engineers: Acting-Second-Assistants, B. B. Carney, B. D. Mulligan and J. H. Rowe; Acting-Third-Assistants, Henry Gornley and James Jamison.

## STEAMER "FLAG."

Commander, James H. Strong; Acting-Assistant Surgeon, C. W. Sartori; Acting-Assistant Paymaster, Lynford Lardner; Acting-Master, Wm. H. Latham; Acting-Master's Mates, E. G. Welles, G. W. Veacock and C. S. Lawrence; Engineers: Acting-First-Assistant, L. H. Flowry; Acting-Second-Assistants, John Harris, W. W. Tunis and M. Dandreaux; Acting-Third-Assistants, J. S. Johnson and Edw. Alin; Acting-Gunner, B. F. Ritter.

## STEAMER "QUAKER CITY."

Commander, James M. Frailey; Lieutenant-Commander, S. Livingston Breese; Acting-Assistant Surgeon, J. J. Brownlee; Acting-Assistant Paymaster, H. J. Bullay; Acting Master, H. S. Blanchard; Acting-Ensigns, T. F. DeLuce, A. Delano, Jr., and J. H. Bennett; Acting-Master's Mates, E. H. Dewey and E. W. Hale; Engineers: Acting-First-Assistant, G. W. Farrer; Acting-Third-Assistants, James Barnes, E. F. McGinniss, Henry Wauklin, J. F. King and John Proshero; Gunner, Daniel Dunsmore.

## STORE-SHIP "VERMONT."

Commander, William Reynolds; Surgeon, Charles Eversfield; Assistant-Surgeon, I. H. Hazleton; Acting-Assistant Paymaster, J. S. Isaacs; Second-Lieutenant Marines, Alfred Devereaux; Acting-Masters, Howard Tibbatts and C. C. Kingsbury; Acting-Ensigns, C. A. Pettit and R. T. Westcott; Acting-Master's Mates, W. Van Wyck, O. F. Wixen, J. G. Rose, Sidney Gray, Arthur Taffe and J. S. Griscom; Boatswain, William Winchester; Acting-Gunners, G. W. Allen and J. G. Bills; Carpenter, C. W. Babbit; Sailmaker, John Joins.

## STEAMER "KEYSTONE STATE."

Commander, Wm. E. Le Roy; Lieutenant-Commander, T. H. Eastman; Assistant Surgeon, J. H. Gotwold; Acting-Assistant Paymaster, J. S. Stinson; Acting-Masters, C. H. Corser, Curtis Redman and L. E. Degr; Acting-Ensign, C. M. Bird; Acting-Master's Mates, J. C. Murphy, J. E. Jones and J. T. Ridgeway; Engineers: Acting-First-Assistant, A. K. Eddowes; Acting-Second-Assistant, James Doran; Acting-Third-Assistants, Wm. F. Warburton, John Smith and Pearson L. Fry; Acting-Gunner, David L. Briggs.

## STEAMER "CIMMERONE."

Commander, Maxwell Woodhull; Lieutenant-Commander, B. B. Taylor; Acting-Masters, G. E. Thurston, Edward D. March and Samuel A. Waterbury; Assistant Surgeon, Eugene S. Olcott; Acting-Assistant Paymaster, D. W. Hale; Acting-Master's Mates, John F. Miller, Peter J. Marcoe, Wm. H.

Herring and Augustus Lippitt; Engineers: First-Assistant, E. A. C. Du Plaine; Second-Assistant, Reynold Driver; Third-Assistants, G. J. Burnap, George W. Beard and David Jones; Gunner, John Caulk.

## STEAMER "BIENVILLE."

NOTE.—List of officers not given in the Navy Register.

## IRON-CLAD STEAMER "MONTAUK."

Commander, John L. Worden; Lieutenant-Commander, C. H. Cushman; Assistant Surgeon, S. N. Brayton; Acting-Assistant Paymaster, S. T. Browne; Acting-Master, Pierre Giraud; Acting-Ensigns, I. J. McKinley and Geo. A. Almy; Engineers: Second-Assistants, Robert Potts and T. A. Stephens; Third-Assistants, D. P. McCartney and Geo. M. Greene.

## STEAM GUN-BOAT "CONEMAUGH."

Commander, Reed Werden, Lieutenant, B. J. Cromwell; Assistant Surgeon, J. J. Allingham; Paymaster, George Lawrence; Acting-Masters, J. W. Stapleford and J. L. Lee; Acting-Ensigns, W. F. Reading and G. F. Morse; Acting-Master's Mates, J. H. Wainwright, A. R. Bashford, John Brown and G. H. French; Engineers: Second-Assistant, L. J. Allen; Third-Assistants, C. P. Gardner, P. H. Hendrickson, John Lloyd and J. W. Boynton.

## STEAMER "JAMES ADGER."

Commander, Thomas H. Patterson; Acting-Assistant Surgeon, R. N. Atwood; Acting-Assistant Paymaster, W. W. T. Greenway; Acting-Master, R. O. Patterson; Acting-Ensigns, C. F. Keith and J. T. Chadwell; Acting-Master's Mates, W. W. Reed, George Couch and Wm. B. Dyer, Jr.; Engineers: Acting-First-Assistant, E. A. Whipple; Acting-Second-Assistant, John Carren; Acting-Third-Assistants, Andrew McTurk, Wm. Moran and W. R. Nutz; Acting-Gunner, J. H. Pennington.

## IRON-CLAD STEAMER "PATAPSCO."

Commander, Daniel Ammen; Lieutenant, Henry Erben, Jr.; Assistant Surgeon, W. L. Wheeler; Acting-Assistant Paymaster, Daniel Leach, Jr.; Acting-Master, William Hamilton; Acting-Ensigns, J. T. Ross and Henry Kloeppel; Engineers: First-Assistant, B. B. H. Wharton; Second-Assistant, John B. Carpenter; Third-Assistants, J. W. Huxley and G. C. Cook.

## STEAM-SLOOP "PAWNEE."

Commander, G. B. Balch; Lieutenant, F. M. Bunce; Surgeon, W. T. Hord; Assistant-Paymaster, F. R. Curtis; Acting-Masters, J. C. Champion and J. P. Lindsay; Acting-Ensign, Thomas Moore; Acting-Master's Mates, C. J. Rogers, J. G. Bache and A. A. Franzen; Engineers: Second-Assistant, Alfred Adamson; Third-Assistants, H. D. Sellman, Benjamin Bunce, W. J. Clark, Jr., John G. Brosnahan and Arthur Price; Boatswain, James Brown.

## IRON-CLAD STEAMER "NAHANT."

Commander, John Downes; Lieutenant-Commander, D. B. Harmony; Assistant Surgeon, C. E. Stedman; Assistant Paymaster, Edwin Putnam; Acting-Master, Wm. W. Carter; Acting-Ensigns, C. C. Ricker and C. E. Clark; Engineers: First-Assistant, F. J. Lovering; Second-Assistant, T. H. Bordley; Third-Assistants, Abram Michener and W. S. Neal.

## STEAMER "NORWICH."

Commander, James M. Duncan; Ensign, A. H. McCormick; Acting-Assistant Surgeon, G. E. McPherson; Acting-Assistant Paymaster, G. C. Boardman; Acting-Masters, C. F. Mitchell and R. B. Arants; Acting-Master's Mates, Peter Mookler, A. J. L. Baker and G. M. Smith; Engineers: Acting-Second-Assistant, Nicholas Coyle; Acting-Third-Assistants, A. A. Odell, Benjamin Cobb, Jr., and W.

## STEAM GUN-BOAT "SEBAGO."

Commander, John C. Beaumont; Lieutenant, H. M. Blue; Assistant Surgeon, John P. Quinn; Acting-Assistant Paymaster, S. G. Thorn; Acting-Masters, Thomas M. Gardner, Wm. C. Mallard and J. F. Anderson; Acting-Ensign, C. B. Dorrance; Acting-Master's Mate, E. D. Martin; Engineers: First-Assistant, S. F. Savage; Third-Assistants, G. E. Tower, W. H. De Hart, O. W. Allison and J. A. Bullard.

## STEAMER "MOHAWK."

Lieutenant-Commander, Aaron K. Hughes; Assistant Surgeon, Geo. W. Woods; Acting-Assistant Paymaster, G. H. Andrews; Acting-Masters, G. R. Durand, Anthony Smally and Alex. Tillinghast; Acting-Master's Mates, T. Holland and T. J. Speights; Engineers: Acting-First-Assistant, Alfred Lapoint; Acting-Third-Assistants, William King, Geo. E. Whitney and R. K. Morrison.

## STEAM GUN-BOAT "HURON."

Lieutenant-Commander, Geo. A. Stevens; Assistant Surgeon, C. H. White; Acting-Assistant Paymaster, Charles Stewart; Acting-Masters, J. W. Gill, W. H. Baldwin and Wm. A. Mills; Acting-Master's Mates, Peter O'Conner, Sam'l Delano, J. M. Blake and Wm. Henderson; Engineers: Acting-First-Assistant, Wm. Craig; Third-Assistants, Sylvanus McIntyre, J. P. Kelley, John Lowe and F. C. Russell.

## STEAM GUN-BOAT "UNADILLA."

Lieutenant-Commander, S. P. Quackenbush; Assistant Surgeon, C. T. Hubbard; Acting-Assistant Paymaster, Geo. B. Tripp; Acting-Masters, Edw. Van Sice, W. L. Tuttle and P. N. Cruse; Acting-Ensign, R. M. Cornell; Acting-Master's Mates, Geo. E. Thomas, C. N. Hall and Wm. Field; Engineers: Second-Assistant, R. S. Talbot; Third-Assistants, R. H. Thurston, Fred'k Bull, Jr., and M. N. Knowlton.

## STEAMER "FLAMBEAU."

Lieutenant-Commander, John H. Upshur; Lieutenant, Fred'k R. Smith; Acting-Assistant Surgeon, J. R. Layton; Acting-Assistant Paymaster, F. V. D. Horton; Acting-Masters, W. B. Sheldon, A. C. Megathlin and Wm. L. Kempton; Acting-Ensign, Gardner Cottrell; Acting-Master's Mate, J. F. Burrows; Engineers: Acting-First-Assistant, A. G. Pemble; Acting-Second-Assistant; Alex. Gillanders; Acting-Third-Assistant, William Richardson.

## STEAM GUN-BOAT "OTTAWA."

Lieutenant-Commander, Wm. D. Whiting; Lieutenant, Geo. B. White; Assistant Surgeon, C. O. Carpenter; Acting-Assistant Paymaster, C. H. Noyes; Acting-Master, Samuel Hanes; Acting-Ensigns, J. L. Gamble and B. Mitchell; Acting-Master's Mates, E. M. Dimon, A. W. Tripp and David McKewan; Engineers: Second-Assistant, J. P. Sprague; Third-Assistants, E. W. Koehl, F. C. Prindle and R. B. Hine.

## STEAM GUN-BOAT "SENECA."

Lieutenant-Commander, William Gibson; Lieutenant, Thomas C. Bowen; Assistant Surgeon, J. H. Macomber; Assistant Paymaster, G. W. Beaman; Acting-Masters, J. H. Rodgers, Henry Vaughan and G. W. Ewen; Acting-Master's Mates, E. W. Fiske, J. W. Paine and C. E. Culver; Engineers: Second-Assistant, J. W. De Krafft; Third-Assistants, H. H. Burritt, Thomas Lynch and R. T. Bennett.

## STEAM GUN-BOAT "WISSAHICKON."

Lieutenant-Commander, John L. Davis; Lieutenant, Silas Casey; Assistant Surgeon, Henry Ackley; Acting-Assistant Paymaster, A. W. Kelsey; Acting-Masters, Geo. W. Parker and T. S. Steel; Acting-Ensign, J. W. Hathorn; Acting-Master's Mates, R. B. Crapo, G. E. Senter and A. L. Pendleton; Engi-

Third-Assistants, J. J. Newton, C. A. Stuart and H. J. Tarr.

STEAMER "MARBLEHEAD."

Lieutenant-Commander, R. W. Scott; Lieutenant, Geo. C. Remy; Assistant Surgeon, R. H. Kidder; Acting-Assistant Paymaster, J. H. Mulford; Acting-Masters, Geo. Martin and B. Allen; Acting-Master's Mates, D. S. Gross, B. O. Low, G. F. Winslow and Harry West; Engineers: Second-Assistant, Clark Fisher; Third-Assistants, W. L. Nicoll, James Long and H. W. Bulkley.

STEAMER "WATER WITCH."

Lieutenant-Commander, Austin Pendergrast; Acting-Assistant Surgeon, W. H. Pierson; Acting-Assistant Paymaster, L. G. Billings; Acting-Masters, C. W. Buck and H. S. Kimball; Acting-Ensign, J. M. Forsyth; Acting-Masters' Mates, J. J. Bigley and E. D. Parsons; Engineers: Acting-First-Assistant Samuel Genter; Acting-Third-Assistants, J. P. Cooper, John Hawkins and John Overn.

STEAMER "COMMODORE M'DONOUGH."

Lieutenant-Commander, George Bacon; Acting-Assistant Surgeon, J. W. Gibson; Acting-Assistant Paymaster, J. F. Quintard; Acting-Ensigns, Wm. Knapp and J. A. Buxton; Acting-Master's Mates, J. K. Winn, J. W. Goodwin and D. B. Hallett; Engineers: Acting-Third-Assistants, T. O. Reynolds, J. T. Booth and S. S. Hetrick.

STEAMER "ISAAC SMITH."

Acting-Lieutenant, F. S. Conover; Acting-Assistant Surgeon, G. H. Marvin; Acting-Assistant Paymaster, F. C. Hills; Acting-Masters, J. W. Dicks and Robert Tarr; Acting-Ensigns, Whitman Chase, F. J. Brenton and H. S. Borden; Engineers: Acting-First-Assistant, Jacob Tucker; Acting-Second-Assistant, J. S. Turner; Acting-Third-Assistants, Wm. Ross and Erastus Barry.

STEAMER "DAWN."

Acting-Lieutenant, John S. Barnes; Acting-Assistant Surgeon, A. R. Holmes; Acting-Assistant Paymaster, R. C. Pierce; Acting-Masters, James Brown and J. W. Saunders; Acting-Master's Mates, A. Hartshorn, P. W. Morgan and Charles Myers; Engineers: Acting-First-Assistant, N. D. Bates; Acting-Third-Assistants, Sam'l Tomlinson, M. V. B. Darling and W. P. Ayres.

STEAMER "WHITELEAD."

Acting-Volunteer-Lieutenant, Chas. A. French; Acting-Ensigns, J. M. Holmes and J. R. Dickinson; Acting-Master's Mates, T. E. Quayle and T. M. Nelson; Engineers: Acting-Second-Assistant, Moses Petersen; Acting-Third-Assistants, R. H. Ryan and G. B. McDermott.

BARK "GEM-OF-THE-SEA."

Acting-Volunteer-Lieutenant, J. B. Baxter; Acting-Assistant Surgeon, B. G. Walton; Acting-Assistant Paymaster, H. A. Strong; Acting-Masters, P. F. Coffin and H. B. Carter; Acting-Ensign, Samuel Bliss.

STEAMER "POTOMSKA."

Acting-Volunteer-Lieutenant, William Budd; Acting-Assistant Surgeon, S. C. Smith; Acting-Assistant Paymaster, F. H. Swan; Acting-Masters, R. P. Walter, B. W. Leary and Abner West; Acting-Master's Mates, J. D. Wells and Woodward Carter; Engineers: Acting-Second-Assistant, G. H. Guyer; Acting-Third-Assistants, C. A. Martine, Edwin Vaughan and W. L. McKay.

STEAMER "MEMPHIS."

Acting-Lieutenant, P. G. Watnough; Acting-Assistant Surgeon, S. H. Brown; Acting-Assistant Paymaster, W. E. Foster; Acting-Master, C. A. Curtis; Acting-Ensigns, E. A. Magone and J. B. Childs; Acting-Master's Mates, N. P. Dickinson, Silas Owens and J. M. Moore; Engineers: Acting-First-Assistant, J. L. Peake; Acting-Second-Assistant,

C. H. McCarty; Acting-Third-Assistants, H. L. Churchill, Chas. Hardwick and J. H. Vaile.

STEAMER "STETTIN."

Acting-Master, C. J. Van Alstine; Acting-Assistant Surgeon, J. S. Cohen; Acting-Assistant Paymaster, E. P. Heberton; Acting-Master, G. P. Lee; Acting-Ensigns, G. R. Bailey and Joseph Frost; Acting-Master's Mates, G. E. Short, Marcus Baird and G. N. Ryder; Engineers: Acting-Second-Assistant, J. B. Edwards; Acting-Third-Assistants, P. B. Robinson, Thomas Slater and S. B. Cornell.

BARK "RESTLESS."

Acting-Master, Wm. R. Brown; Acting-Assistant Surgeon, J. B. Calkins; Acting-Assistant Paymaster, W. S. Cushman; Acting-Masters, Maurice Digard and J. B. Rogers; Acting-Ensigns, Henry Eason, J. J. Russell and C. N. Hicks; Acting-Master's Mates, J. W. Mackie and Henry Oakley.

STEAMER "MADGIE."

Acting-Master, F. B. Meriam; Acting-Assistant Surgeon, Louis Michel; Acting-Assistant Paymaster, B. Huseull; Acting-Ensign, W. C. Underhill; Acting-Master's Mates, E. H. Vail, E. P. Blague and Jason Ryan; Engineers: Acting-Second-Assistant, G. L. Palmer; Acting-Third-Assistants, A. F. Rockfeller, Maurice McCarty and C. M. Goodwin.

BARK "MIDNIGHT."

Acting-Master, Nicholas Kirby; Acting-Assistant Surgeon, J. G. Bacon; Acting-Assistant Paymaster, F. Miller; Acting-Masters, S. D. Joy and Edwin Coffin; Acting-Ensign, Zera L. Tanner; Acting-Master's Mates, A. K. Noyes, Nicholas Pratt and Thos. Hollius.

SHIP "VALPARAISO."

Acting-Master, A. S. Gardner; Acting-Assistant Surgeon, A. B. C. Sawyer; Acting-Assistant Paymaster, Tracy Coit; Acting-Masters, J. W. Godfrey and Wm. Haffords; Acting-Master's Mates, John Blitz and Charles Cooke.

STEAMER "UNCAS."

Acting-Master, William Watson; Acting-Assistant Surgeon, G. H. Van Deusen; Acting-Assistant Paymaster, C. E. Taylor; Acting-Ensigns, Wm. L. Pavy; Acting-Master's Mate, Geo. Newlin; Engineers: Acting-Second-Assistant, C. Dandreaux; Acting-Third-Assistant, Paul Dandreaux.

STEAMER "WAMSUTTA."

Acting-Master, S. C. Gray; Acting-Assistant Surgeon, S. F. Quimby; Acting-Assistant Paymaster, Sam. Jordan; Acting-Master's Mates, G. F. Goodrich, Chas. Crayton and Thomas Kennedy; Engineers: Acting-Third-Assistants, Wm. A. Address, John Seaman and W. J. Carman.

SHIP "COURIER."

Acting-Master, W. K. Cressy; Acting-Assistant Surgeon, W. R. Bonsall; Acting-Assistant Paymaster, M. W. Blake; Acting-Master, W. B. Stoddard; Acting-Ensigns, W. P. O'Brien and Wm. McDermott; Acting-Master's Mates, C. J. Hill and E. H. Shee.

BARK "FERNANDINA."

Acting-Master, Edward Moses; Acting-Assistant Surgeon, S. P. Boyer; Acting-Assistant Paymaster, T. N. Murray; Acting-Masters, R. B. Hines and C. C. Childs; Acting-Ensigns, Wm. H. Thomas; Acting-Master's Mates, J. B. Henderson, W. C. Gibson and Alonzo Townsend.

BARK "KINGFISHER."

Acting-Master, J. C. Dutch; Acting-Assistant Surgeon, W. H. Westcott; Acting-Assistant Paymaster, A. N. Blakeman; Acting-Ensigns, S. W. Rhodes and T. E. Chapin; Acting-Master's Mates, Tom. Nelson, H. G. Seaman and Frank Jordan.

BARK "BRAZILIERA."

Acting-Master, W. T. Gillespie; Acting-Assistant

Surgeon, S. N. Fisk; Acting-Assistant Paymaster, C. H. Longstreet; Acting-Masters, J. J. N. Webber and Jeremiah Chadwick; Acting-Master's Mates, W. N. Smith, J. B. F. Smith and W. H. Roberts.

## STEAMER "COLUMBINE."

Acting-Master, J. S. Dennis; Acting-Ensign, C. S. Flood; Acting-Master's Mates, Edwin Daly and F. W. Sanborn; Engineers: Acting-Second-Assistant, W. H. Ogden; Acting-Third-Assistants, E. H. Lawrence and S. C. Clark.

## TUG "DAFFODIL."

Acting-Master, E. M. Baldwin; Acting-Master's Mates, Francis Such and S. C. Bishop; Acting-Second-Assistant Engineer, J. P. Rossman; Acting-Third-Assistant Engineer, Geo. Cunningham.

## TUG "DANDELION"

Acting-Master, A. S. Gardner; Acting-Master's Mate, John Brittingham; Engineers: Acting-Second-Assistant, J. M. Case; Acting-Third-Assistant, E. F. Hedden.

## SCHOONER "C. P. WILLIAMS."

Acting-Master, S. N. Freeman; Acting-Master's Mates, F. W. Towne, John Gunn and F. E. Daggett.

## SCHOONER "NORFOLK PACKET."

Acting-Ensign, G. W. Wood; Assistant-Surgeon, A. B. Judson; Acting-Assistant Paymaster, T. Merritt; Acting-Master's Mates, Leaken Barnes, Jackson Kingsley and Tim. Ryan.

## SCHOONER "HOPE."

Acting-Master, J. E. Rockwell; Acting-Master's

Mates, J. B. Williamson, J. C. Sanborn and Jacob Cochrane.

## SCHOONER "PARA."

Acting-Master, E. C. Furber; Acting-Master's Mates, Edward Ryan, John McDonough and W. H. Morse.

## YACHT "AMERICA."

Acting-Master, Jonathan Baker; Acting-Master's Mates, G. H. Wood, August Adler and W. H. Thompson.

## SCHOONER "G. W. BLUNT"

Acting-Master, J. R. Beers; Acting-Master's Mates, B. D. Reed, A. H. Comstock and G. W. Cleaves.

## STEAMER "RESCUE."

Acting-Ensign, C. A. Blanchard; Acting-Master's Mate, E. D. Smith; Engineers: Acting-Third-Assistants, M. C. Heath and G. W. Howe.

## TUG "O. M. PETTIT."

Acting-Ensign, T. E. Baldwin; Engineers: Acting-Second-Assistant, Reuben McClenahan; Acting-Third-Assistant, Augustus Wandell.

## IRON-CLAD "KEOKUK."

Lieutenant-Commander, A. C. Rhind; Lieutenant, Moreau Forrest; Acting-Master, James Taylor; Acting-Ensigns, W. H. Bullis, Ira T. Halstead and Alex McIntosh; Acting-Assistant Surgeon, Geo. D. Slocum; Acting-Assistant Paymaster, John Read; First-Assistant Engineer, Wm. H. King; Second-Assistant Engineer, J. H. Hunt; Third-Assistant Engineers, J. M. Emanuel and H. A. Smith.

## LETTERS RELATING TO THE BATTLE OF PORT ROYAL AND OCCUPATION OF THE CONFEDERATE FORTS.

FROM FLAG - OFFICER DUPONT, COMMANDER STEEDMAN, AND LIEUTENANTS - COMMANDING C. R. P. RODGERS, AMMEN, STEVENS AND WATMOUGH—MAJOR JOHN G. REYNOLDS, U. S. M. C.

—COMMENDATORY LETTERS OF SECRETARY WELLES—GENERAL ORDERS, ETC

## REPORT OF FLAG-OFFICER DUPONT:

FLAG-SHIP "WABASH," OFF HILTON HEAD, }  
PORT ROYAL HARBOR, Nov. 8, 1861. }

SIR—I have the honor to inform you that yesterday I attacked the enemy's batteries on Bay Point and Hilton Head (Forts Beauregard and Walker), and succeeded in silencing them after an engagement of four hours' duration, and driving away the squadron of rebel steamers under Commodore Tatnall. The reconnoissance of yesterday made us acquainted with the superiority of Fort Walker, and to that I directed my especial efforts, engaging it at a distance of, first, eight, and afterwards six, hundred yards. But the plan of attack brought the squadron sufficiently near Fort Beauregard to receive its fire, and the ships were frequently fighting the batteries on both sides at the same time.

The action was begun on my part at twenty-six minutes after 9, and at half-past 2 the American ensign was hoisted on the flag-staff of Fort Walker, and this morning at sunrise on that of Fort Beauregard.

The defeat of the enemy terminated in utter rout and confusion. Their quarters and encampments were abandoned without an attempt to carry away either public or private property. The ground over which they fled was strewn with the arms of private soldiers, and officers retired in too much haste to submit to the encumbrance of their swords.

Landing my marines and a company of seamen, I took possession of the deserted ground, and held the forts on Hilton Head till the arrival of General Sherman, to whom I had the honor to transfer its

We have captured forty-three pieces of cannon, most of them of the heaviest calibre and of the most improved description.

The bearer of these dispatches will have the honor to carry with him the captured flags and two small brass field-pieces, lately belonging to the State of South Carolina, which are sent home as suitable trophies of the day. I enclose herewith a copy of the general order, which is to be read in the fleet to-morrow morning at muster. A detailed account of this battle will be submitted hereafter.

I have the honor to be, very respectfully,

Your most obedient servant,

S. F. DUPONT,

*Flag-Officer, Commanding*

*South Atlantic Blockading Squadron.*

Hon. GIDEON WELLES,

*Secretary of the Navy,*

*Washington, D. C.*

P. S.—Bearer of dispatches will also carry with him the first American ensign raised upon the soil of South Carolina since the rebellion broke out.

S. F. D.

## GENERAL ORDER NO. 2.

FLAG-SHIP "WABASH," HILTON HEAD, }  
PORT ROYAL BAY, Nov. 8, 1861. }

It is the grateful duty of the Commander-in-chief to make a public acknowledgment of his entire commendation of the coolness, discipline, skill and gallantry displayed by the officers and men under his command in the capture of the batteries on Hilton Head and Bay Point, after an action of four

The flag-officer fully sympathizes with the officers and men of the squadron in the satisfaction they must feel at seeing the ensign of the Union flying once more in the State of South Carolina, which has been the chief promoter of the wicked and unprovoked rebellion they have been called upon to suppress.

S. F. DUPONT,

*Flag-Officer, Commanding  
South Atlantic Blockading Squadron.*

REPORT OF FLAG-OFFICER DUPONT.

UNITED STATES FLAG-SHIP "WABASH," }

PORT ROYAL HARBOR, S. C., Nov. 11, 1861. }

SIR—I have the honor to submit the following detailed account of the action of the 7th of November:

From the reconnoissance of the 5th we were led to believe that the forts on Bay Point and Hilton Head were armed with more than twenty guns each, of the heaviest calibre and longest range, and were well constructed and well manned, but that the one on Hilton Head was the strongest. The distance between them is two and two-tenths nautical miles—too great to admit of their being advantageously engaged at the same time, except at long shot. I resolved, therefore, to undertake the reduction of Hilton Head (or, as I shall hereafter call it, Fort Walker) first, and afterwards to turn my attention to Fort Beauregard—the fort on Bay Point. The greater part of the guns of Fort Walker were presented upon two water-fronts, and the flanks were but slightly guarded, especially on the north, on which side the approach of an enemy had not been looked for.

A fleet of the enemy—consisting of seven steamers, armed, but to what extent I was not informed further than that they carried rifle-guns—occupied the northern portion of the harbor, and stretched along from the mouth of Beaufort River to Scull Creek.

It was high water on the 7th instant at 11h. 35m. A. M. by the tables of the Coast Survey.

These circumstances—the superiority of Fort Walker and its weakness on the northern flank, the presence of the rebel fleet, and the flood-tide of the morning—decided the plan of attack and the order of battle.

The order of battle comprised a main squadron ranged in line ahead, and a flanking squadron, which was to be thrown off on the northern section of the harbor, to engage the enemy's flotilla and prevent them taking the rear ships of the main line when it turned to the southward, or cutting off a disabled vessel.

The main squadron consisted of the frigate "Wabash," Commander C. R. P. Rodgers, the leading ship; the frigate "Susquehanna," Captain J. L. Lardner; the sloop "Mohican," Commander S. W. Godon; the sloop "Seminole," Commander J. P. Gillis; the sloop "Pawnee," Lieutenant-Commanding R. H. Wyman; the gun-boat "Unadilla," Lieutenant-Commanding N. Collins; the gun-boat "Ottawa," Lieutenant-Commanding T. H. Stevens; the gun-boat "Pembina," Lieutenant-Commanding J. P. Bankhead; and the sailing sloop "Vandalia," Commander F. S. Haggerty, towed by the "Isaac Smith," Lieutenant-Commanding J. W. A. Nicholson.

The flanking squadron consisted of the gun-boat "Bienville," Commander Charles Steedman, the leading ship; the gun-boat "Seneca," Lieutenant-Commanding Daniel Ammen; the gun-boat "Cerulea," Lieutenant-Commanding P. G. Watmough; the gun-boat "Penguin," Lieutenant-Commanding T. A. Budd; and the gun-boat "Angusta," Commander E. G. Parrott, the closing ship of that line.

The plan of attack was to pass up mid-way between Forts Walker and Beauregard (receiving and returning the fire of both) to a certain distance, about two and a half miles north of the latter. At

that point the line was to turn to the south around by the west, and close in with Fort Walker, encountering it on its weakest flank, and at the same time enfilading, in nearly a direct line, its two water-faces. While standing to the southward the vessels were head to tide, which kept them under command, whilst the rate of going was diminished.

When abreast of the fort, the engine was to be slowed and the movement reduced to only as much as would be just sufficient to overcome the tide, to preserve the order of battle by passing the batteries in slow succession, and to avoid becoming a fixed mark for the enemy's fire. On reaching the extremity of Hilton Head and the shoal ground making off from it, the line was to turn to the north by the east, and, passing to the northward, to engage Fort Walker with the port battery nearer than when first on the same course. These evolutions were to be repeated. The accompanying plan will explain the preceding description.

The captains of the ships had been called on board and instructed as to the general formation of the lines and their own respective places.

At 8 o'clock the signal was made to get under way. At 8h. 10m. the ship, riding to the flood, tripped her anchor; and at 8h. 30m. the ship turned, and was headed in for the forts. At 9 the signal was made for close order. At 9h. 26m. the action was commenced by a gun from Fort Walker, immediately followed by another from Fort Beauregard. This was answered at once from this ship, and immediately after from the "Susquehanna." At 10 o'clock the leading ship of the line turned to the southward, and made signal to the "Vandalia" (which ship, in tow of the "Isaac Smith," was dropping astern, and was exposed, without support, to the fire of Fort Beauregard) to join company. At 10h. 15m. the signal was made for closer action, the "Wabash" slowly passing Fort Walker at a distance, when abreast, of eight hundred yards. At 11 the signal was made to get into and preserve stations, and at 11h. 15m. to follow the motions of the Commander-in-chief.

Standing to the northward, nearly in the line shown in the diagram, the ship's head was again turned to the southward, and she passed the guns of Fort Walker at a distance less than six hundred yards (the sights were adjusted to five hundred and fifty yards). At 11h. 30m. the enemy's flag was shot away.

The second fire with the starboard guns of the "Wabash," and Captain Lardner, in the "Susquehanna," my second in command, who always kept so near as to give me the entire support of his formidable battery, seems at this short distance to have discomfited the enemy. Its effect was increased by the shells thrown from the smaller vessels at the enfilading point. It was evident that the enemy's fire was becoming much less frequent, and finally it was kept up at such long intervals and with so few guns as to be of little consequence.

After the "Wabash" and "Susquehanna" had passed to the northward, and given the fort the fire of their port battery the third time, the enemy had entirely ceased to reply and the battle was ended.

At 1h. 15m. the "Ottawa" signalled that the works at Hilton Head were abandoned. This information was, a few minutes later, repeated by the "Pembina." As soon as the starboard guns of this ship and the "Susquehanna" had been brought to bear a third time on Fort Walker, I sent Commander John Rodgers on shore with a flag of truce. The hasty flight of the enemy was visible, and was reported from the tops. At twenty minutes after two Captain Rodgers hoisted the flag of the Union over the deserted post. At forty-five minutes after two I anchored and sent Commander C. R. P. Rodgers on shore with the marines and a party of

seamen to take possession and prevent, if necessary, the destruction of public property.

The transports now got underway, and came rapidly up, and by nightfall Brigadier-General Wright's brigade had landed and entered upon the occupation of the ground.

I have said, in the beginning of this report, that the plan of attack designed making the reduction of Fort Walker the business of the day. In passing to the northward, however, we had improved every opportunity of firing at long range on Fort Beauregard. As soon as the fate of Fort Walker was decided, I dispatched a small squadron to Fort Beauregard to reconnoitre and ascertain its condition, and to prevent the rebel steamers returning to carry away either persons or property.

Near sunset it was discovered that the flag upon this fort was hauled down, and that the fort was apparently abandoned.

At sunrise the next day the American ensign was hoisted on the flag-staff at Fort Beauregard by Lieutenant-Commanding Ammen.

The "Pocahontas," Commander Percival Drayton, had suffered from the gale of Friday night so badly as not to be able to enter Port Royal until the morning of the 7th. He reached the scene of action about 12 o'clock, and rendered gallant service by engaging the batteries on both sides in succession.

Lieutenant-Commanding H. L. Newcomb, of the "R. B. Forbes," which vessel had been employed in towing in the "Great Republic," arrived in time to take good part in the action.

And, finally, the tug "Mercury," Acting-Master Martin commanding, employed his single Parrott gun with skill and effect.

After congratulating you upon the success thus far of our expedition, which had its origin in the counsels of the Department, and which the Department has fostered and labored to render efficient, the gratifying duty remains to be performed of according to each and all their due share of praise for good conduct in their encounter with the enemy. This duty, though most welcome, is still delicate.

I am well aware that each one did his part in his place, and when I discriminate it is in cases that necessarily fell under my own immediate observation. I have no doubt that all would have embraced and improved the same opportunities of distinction; and in noticing those who were made prominent by their stations, or who were near me during the action, I am showing no invidious preference.

The General Order No. 2, already forwarded to the Department, expressed in general terms my commendation of the gallantry and skill of the officers and men.

The reports of the commanding officers of the several ships, herewith enclosed, do justice to those under them; while the results speak for the commanding officers themselves. The names of the latter are mentioned in the beginning of this dispatch. I refer with pleasure to them again. They did their duty to my satisfaction, and I am most happy to bear testimony to their zeal and ability.

The officers of this ship, to whom I am deeply indebted, will be mentioned by her commander, C. R. P. Rodgers, in his special report.

It affords me the highest gratification to speak of the manner in which this ship was handled during the engagement, owing, in a great measure, to the professional skill, the calm and rapid judgment and the excellent management of Commander C. R. P. Rodgers. His attention was divided between this duty and the effective service of the guns, which involved the estimation of distances, the regulation of fuses and the general supervision of the divisions. His conduct and judicious control of everything

was to be expected from his established reputation, impressed me with a higher estimation than ever of his attainments and character.

I had also an opportunity to remark the admirable coolness and discrimination of the first-lieutenant, T. G. Corbin. The good order, discipline and efficiency, in every respect, of this ship are, to a great extent, the results of his labors as executive officer, and they were conspicuous on this occasion. Acting-Master Stiles, acting as pilot, was devoted and intelligent in the performance of his duties; and the third-assistant engineer, Missiveer, who attended the bell, was prompt and always correct.

Acting-Master S. W. Preston, acting as my flag-lieutenant, displayed throughout the day an undisturbed intelligence and a quick and general observation, which proved very useful. His duties as signal-officer were performed without mistake. This gentleman and the young officers—Mr. R. H. Lamson, Mr. J. P. Robertson and Mr. J. H. Rowland, who were also under my eye, in immediate command of the pivot-guns and spar-deck divisions—sustained the reputation and exhibited the benefits of the Naval Academy, the training of which only could make such valuable officers of such young men.

Commander John Rodgers, a passenger in this ship, going to take command of the steamer "Flag," volunteered to act upon my staff. It would be difficult for me to enumerate the duties he performed, they were so numerous and varied, and he brought to them all an invincible energy and the highest order of professional knowledge and merit. I was glad to show my appreciation of his great services by allowing him the honor to hoist the first American flag on the rebellious soil of South Carolina.

My secretary, Mr. Alexander McKinley, was by my side throughout the engagement, making memoranda under my direction. He evinced the same cool bravery which he once before had an opportunity of showing under fire in a foreign land. It gives me pleasure to mention him here as a gentleman of intelligence, of great worth, and of heartfelt devotion to his country.

I have yet to speak of the chief of my staff and fleet-captain, Commander Charles H. Davis. In the organization of our large fleet before sailing, and in the preparation and systematic arrangement of the duties of our contemplated work—in short, in all the duties pertaining to the flag-officer—I have received his most valuable assistance. He possesses the rare quality of being a man of science and a practical officer, keeping the love of science subordinate to the regular duties of his profession. During the action he watched over the movements of the fleet, kept the official minutes, and evinced that calmness in danger, which, to my knowledge, for thirty years has been a conspicuous trait in his character.

I have the honor to be, sir, respectfully,  
Your most obedient servant,

S. F. DUPONT,  
*Flag-Officer, Commanding  
South Atlantic Blockading Squadron.*

HON. GIDEON WELLES,  
*Secretary of the Navy,  
Washington.*

REPORT OF LIEUTENANT-COMMANDING C. R. P. RODGERS.

UNITED STATES STEAMER "WABASH," }  
PORT ROYAL, NOV. 10, 1861. }

SIR—Although I know that the conduct of the officers and crew of the "Wabash" are warmly commended by you in the action of the 7th instant, yet, in obedience to your demand for a special report, I respectfully submit the following:

They were all there, and did their duty as became American

seamen, with calmness, precision and resolute earnestness. They fought their guns with energy, and pointed them with admirable coolness.

The three gun-deck divisions of 9 inch guns, under Lieutenants Luce, Upshur and Barnes, were commanded by those officers in a manner which illustrated the highest power of both men and guns, and exhibited the greatest effect of manhood and training. I beg leave to commend these officers in terms of the warmest praise, both for skill and conduct; and also Lieutenant Irwin, who, in command of the powder division, did everything that a brave and earnest man could do to make his ship efficient.

Acting-Masters Lamson, Rowland and Robertson, in command of the spar-deck guns, followed the example of their seniors on the gun-deck, and did honor to the Naval School, which had, at their early age, trained them to do such efficient service in battle.

Acting-Masters W. H. West, Rockwell, Gregory and Palmer, stationed at the various divisions, evinced patriotic zeal and courage.

Mr. Coghlan, the boatswain, not only did his duty in the sixth division, but also skillfully served the rifled boat-guns, with which he did good service.

The gunner, Mr. Stewart, in the magazine, and the carpenter, Mr. Boardman, with his shot-plugs, did their duty manfully.

The engine and steam, during the whole action, were managed with consummate skill, which did great credit to Chief Engineer King and his assistants. Third-Assistant Engineer Missiveer, who stood upon the bridge by my side during the action, impressed me very favorably by his cool intelligence and promptness.

All the other officers, in their various departments, did their whole duty faithfully.

Acting-Master Stiles rendered most valuable service by his careful attention to the steerage and soundings of the vessel, and by his skill and vigilance in keeping the ship clear of the shoals. I desire to commend him especially to your notice.

My clerk, Mr. Blydenburgh, acted as my aide, and did prompt and good service.

The two oldest seamen in the ship, John Dennis and Henry L. Coons, both quartermasters—the one at the wheel and the other at the signals—well represented the gallantry of their class and generation.

The marines were used as a reserve, and, whenever called upon, rendered prompt assistance at the guns, with the good conduct that has always characterized their corps.

It only remains for me to speak of the executive officer, Lieutenant Corbin, who has filled that post since the "Wabash" was commissioned. The admirable training of the crew may, in a high degree, be attributed to his professional merit; and his gallant bearing and conspicuous conduct throughout the whole action were good illustrations of the best type of a sea-officer.

At the close of the action the "Wabash" was engaged with Fort Walker at a distance of six hundred yards or less, and her officers and men may well feel satisfied with the precision of their aim and the overwhelming power of their rapid fire. Eight hundred and eighty shells were fired from her guns, chiefly with 5-second fuses. Some grape was fired with good effect from the 10-inch gun, in the latter part of the action.

I have to thank that most brave and distinguished officer, Captain C. H. Davis, the captain of the fleet, for the aid he gave me when not engrossed by the important duties of his special station; and I desire to pay the same tribute to Commander John Rodgers, who, being a passenger on board, had volunteered to serve on your staff, and never failed to give me most valuable assistance. Nor must I fail to bear witness to the gallant bearing and striking coolness of your young flag-lieutenant, Mr.

Preston. I thank you, sir, in the name of the officers and men of your flag-ship, for the example you gave us.

I have the honor to be, very respectfully,  
Your obedient servant,

C. R. P. RODGERS,

*Lieutenant-Commanding U. S. Steamer "Wabash."*  
Flag-Officer S. F. DUPONT,  
*Commanding South Atlantic Blockading Squadron.*

REPORT OF COMMANDER CHARLES STEEDMAN.

UNITED STATES STEAMER "BIENVILLE,"  
PORT ROYAL HARBOR, Nov. 8, 1861. }

SIR—I have the honor to report that in the action of yesterday with the forts this vessel was struck several times, one shot passing through and through her, another striking bulwarks, forward, unfortunately mortally wounding two men, Patrick McGuigan and Alexander Chambers (since dead), and slightly wounding three others, Peter Murphy, Alexander Finey and William Gilchrist, while gallantly fighting at their guns.

The other shots did but little damage. It affords me the utmost gratification to bring to your notice the excellent conduct of the officers and men. It would be impossible to particularize the bearing of any one officer or man, such was their gallant conduct.

During the engagement, we fired from this vessel eighty-four 32 solid shots, thirty-nine 32 pound shell, and sixty-two rifle-shell.

I am, sir, very respectfully, your obedient servant,  
CHARLES STEEDMAN,  
*Commander.*

Flag-Officer S. F. DUPONT,  
*Commander-in-Chief of Naval Forces, etc., etc.*

REPORT OF LIEUTENANT-COMMANDING DANIEL AMMEN.

UNITED STATES GUN-BOAT "SENECA,"  
PORT ROYAL, S. C., Nov. 15, 1861. }

SIR—In obedience to your order of this date, I have the honor to make the following report:

On Monday, the 4th, this vessel entered Port Royal, and sounded the channel until within three miles of Bay Point, when we were signalled from the "Ottawa" to return and anchor, which we did at 4 P. M., near her, about a mile further out and a cable's length nearer the batteries. The fleet generally, at this time, was standing in and anchoring. An hour later, three rebel steamers approached us and opened fire with rifled guns, but at a distance which proved ineffective. The "Ottawa," "Pembina" and this vessel got underway, and, standing in at an angle, allowing our heavy guns to bear, drove them before us. At sunset we returned, and anchored as before.

At daylight on Tuesday several rebel steamers again attacked us. We got underway, and, obeying signals from the "Ottawa," accompanied her, with the "Pembina," "Curlew," "Isaac Smith," and afterwards the "Pawnee," drove them until we were within a cross-fire of the batteries of Hilton Head and Bay Point, both opening upon us. No material damage was sustained. A heavy shell—or shot, probably—struck the vessel on the port-side, but I have been unable to find it, and probably will not until we get in a sea-way. Our rigging was struck three times. The object being effected—that of ascertaining the strength of the rebel batteries—we returned and anchored, as before, about half-past 8.

Two or three hours after, the rebel steamers again approached us, and, finding that they were within range, I had the satisfaction of firing an 11-inch shell at the flag-ship, which was seen from aloft, as well as by several persons on deck, to strike just abaft the starboard wheel-house. The vessel put into Bay Point, and on returning, or rather show-

ing herself, in the afternoon, had a large white plank forward of the port wheel house, probably where the shell went out. On the morning of the 7th, obeying signal, we took position assigned us in the line, and, passing up, delivered our fire at Bay Point, and on arriving out of fire of the batteries, made chase—as directed by instructions—to the rebel steamers. They, being river boats, soon left us, and I had the chagrin of having wasted several shells at them at ineffective distance.

Returning to the attack on Hilton Head, we passed so near to the shore as to be fired upon by riflemen, who kept quiet on being fired on by our Parrott 20-pounder. From an enfilading position we began with 10-second fuses, and, closing up, found ourselves within effective 5-second range. As to the latter part of the action, we were within howitzer range, and were using both howitzers effectively, as well as 11-inch gun and Parrott 20-pounder.

During the engagement we fired sixty-three 11-inch shells, 9 with 15-second fuses, 28 with 10-second fuses and 26 with 5-second fuses. Thirty-three projectiles from the Parrott-gun were also fired, and twelve 24-pounder shrapnel.

I am sorry to say that the Parrott shell appears defective; its flight was wild and range short. As I fired once myself, I know they were not to be depended on, and the captain of the gun was much disappointed at his results.

During the engagement an officer was kept at the mast-head, whose duty it was to report our firing, by which we were governed. I have, therefore, reason to believe that our fire was effective.

Few of our crew have served before in a vessel-of-war, and as we went into commission only three weeks before the engagement, Mr. Sproston, the first-lieutenant of the vessel, fired nearly all the 11-inch shells with his own hands. Of him, as well as of the officers and crew generally, I have to express my warmest commendations, and my surprise that amidst such a shower of shot and shells we received no damage.

I am, very respectfully,

Your obedient servant,  
DANIEL AMMEN,  
*Lieutenant-Commanding "Seneca."*

Flag-Officer SAMUEL F. DUPONT,  
*Commanding South Atlantic Blockading Squadron.*

REPORT OF LIEUTENANT-COMMANDING T. H. STEVENS.

UNITED STATES GUN-BOAT "OTTAWA," }  
OFF HILTON HEAD, NOV. 8, 1861. }

SIR—I have the honor to report that, as soon as the "Ottawa," under my command, could take up her position in the order of battle, I weighed anchor, following in the wake of our leading vessel. When abreast of Bay Point battery, finding that our 11-inch gun was doing good execution, I stopped the engine to engage it, and threw about a dozen shells in and about the fortifications. Discovering, however, that we were under a cross-fire, I steamed up to take distance, in the order assigned. About this time a 32-pound shot struck the "Ottawa" in the port-waist, just abaft the pivot-gun (11-inch), wounding severely Mr. Kerne, one of the acting-masters who subsequently lost his leg by amputation, one other man seriously, and four others slightly, and doing considerable damage to the deck of the vessel, the coamings of the forward coal-bunker hatch, and splitting two of the upper-deck beams.

Discovering, as we ranged up with the fort on Hilton Head, that we occupied an enfilading position, I continued to occupy it until the enemy deserted their batteries, when, being nearest to

stopped firing, about 500 yards from the fort. While engaging at a distance of about 1,000 yards, and when within 300 yards of the beach of Hilton Head, some of the riflemen of the enemy commenced firing upon us, when we opened with the howitzers charged with shrapnels, and quickly dispersed them.

It only remains for me to notice the good conduct, coolness and gallantry of both officers and men upon the occasion, who behaved with the steadiness of veterans, and to commend them to your favorable notice, and the notice of the Department, as worthy supporters of the cause we have espoused.

Very respectfully,

T. H. STEVENS,  
*Lieutenant-Commanding, U. S. N.*  
Flag-Officer S. F. DUPONT,  
*Commanding South Atlantic Blockading Squadron.*

ORDER FOR "UNADILLA" AND OTHER SHIPS TO TAKE POSSESSION OF BEAUFORT, S. C.

FLAG-SHIP, "WABASH," }  
PORT ROYAL HARBOR, NOV. 10, 1861. }

SIR—It has been reported to me by Lieutenant-Commanding Ammen that, on taking possession of the town of Beaufort, under my orders of the 8th instant, he found that most of the white inhabitants had abandoned the town, and that the negroes were committing excesses and destroying private property.

You will proceed with the most convenient dispatch in the gun-boat "Unadilla," under your command, to Beaufort, where you will find the gun-boat "Pembina" (Lieutenant-Commanding Bankhead), and the gun-boat "Curlew" (Lieutenant-Commanding Watmough), and assume command of the station.

You will employ your forces in suppressing any excesses on the part of the negroes; and you will take pains to assure the white inhabitants that there is no intention to disturb them in the exercise of their private rights, or in the enjoyment of their private property.

Acting on this principle of conduct, you will pursue any other measures that may tend to create confidence, to bring back the people to their houses and to re-establish order.

You will please send Lieutenant-Commanding Watmough to report to me to-morrow morning in person upon the actual state of things, and upon the steps you may have found it expedient to take.

Any information you may have it in your power to collect, concerning the state of the surrounding country, will be valuable.

S. F. DUPONT,  
*Flag-Officer, Commanding South Atlantic Blockading Squadron.*  
Lieutenant NAPOLEON COLLINS, U. S. N.,  
*United States Gun-boat "Unadilla," Port Royal Harbor.*

LETTER COMMENDING THE OFFICERS OF THE "CURLEW" BY ACTING-LIEUTENANT-COMMANDING WATMOUGH.

UNITED STATES GUNBOAT "CURLEW," }  
PORT ROYAL, S. C., NOV. 17, 1861. }

SIR—It affords me great pleasure to speak with praise of the general gallantry, coolness, and cheerfulness of the officers and men under my command during the several actions with the rebel squadron and batteries on the 4th, 5th, and 7th instants. Master H. E. Mullan, acting executive officer, rendered efficient service by his readiness and zeal. Acting-Master C. A. Curtis, in charge of the battery of 32s, is deserving of all praise for the spirit

curacy of the divisional firing. Acting-Master Spavin's steadiness at the wheel merits commendation. Acting-Master H. N. Parish, who had charge of the Parrott pivot-gun, disabled early in the action of the 7th by the enemy's shot, afterwards assisted with his crew at the broadside battery.

The paymaster, Wm. A. A. Kerr, acting as signal-officer, by his coolness and watchfulness was of material assistance; he also kept a careful record of the incidents of the several actions. Messrs. Emory, Swasey, McConnell and Lloyds, engineers of the vessel, with great difficulties to contend against, in the general unfitness of the engine, boilers and condensing apparatus for such rough service, managed to carry us through the action, for which I was thankful.

Fortunately, the readiness of our medical officer, Mr. Perucer, was not called upon. Master's Mate Duncan, acting as gunner, provided a bountiful supply of ammunition for the battery.

I have the honor to be, sir, your obedient servant,

PEN. G. WATMOUGH,

*Acting-Lieutenant-Commanding.*

Flag-Officer S. F. DUPONT,

*Commanding South Atlantic Squadron.*

Respectfully forwarded, S. F. DUPONT,  
*Flag-Officer.*

COMMENDATORY LETTER TO FLAG-OFFICER  
DUPONT.

NAVY DEPARTMENT, }  
November 16, 1861. }

SIR—It is with no ordinary emotion that I tender to you and your command the heartfelt congratulations and thanks of the Government and the country for the brilliant success achieved at Port Royal. In the war now raging against the Government in this most causeless and unnatural rebellion that ever afflicted a country, high hopes have been indulged in the Navy, and great confidence reposed in its efforts.

The results of the skill and bravery of yourself and others have equalled and surpassed our highest expectations. To you and your associates, under the providence of God, we are indebted for this great achievement by the largest squadron ever fitted out under that flag, which you have so gallantly vindicated, and which you will bear onward to continued success. On the receipt of your dispatches announcing the victory at Port Royal, the Department issued the enclosed general order, which, with this letter, you will cause to be read to your command.

I am, respectfully, etc.,

GIDEON WELLES.

Flag-Officer SAMUEL F. DUPONT,

*Commanding South Atlantic Blockading Squadron.*

GENERAL ORDER.

NAVY DEPARTMENT, }  
November 13, 1861. }

The Department announces to the Navy and to the country its high gratification at the brilliant success of the combined Navy and Army forces, respectively commanded by Flag-officer S. F. Dupont and Brigadier-General W. T. Sherman, in the capture of Forts Walker and Beauregard, commanding the entrance of Port Royal harbor, South Carolina.

To commemorate this signal victory, it is ordered that a national salute be fired from each Navy Yard at meridian on the day after the receipt of this order.

GIDEON WELLES,  
*Secretary of the Navy.*

FLAG-OFFICER DUPONT'S REPORT CONCERNING  
THE MARINE BATTALION, NOV. 15.

FLAG-SHIP "WABASH," }

PORT ROYAL HARBOR, S. C., Nov. 15, 1861. }

SIR—I avail myself of the first moment of leisure to transmit to you the report of Major John George Reynolds, commanding the battalion of marines attached to my squadron, in which he relates all the circumstances attending the loss of the chartered steamer "Governor," and the rescue of himself and his command by the frigate "Sabine," Captain Riuggold.

The Department will find this report exceedingly interesting, and will be gratified to learn that the conduct of the officers and of nearly all the men of the battalion was such as to command Major Reynolds' approval, as it will, I doubt not, receive the favorable notice of the Department. The established reputation and high standing of Major Reynolds might almost dispense with any observations of my own upon the bravery and high sense of honor which he displayed in disputing with Mr. Weidman (though not a seaman) the privilege of being the last to leave the wreck.

I have the honor to be, sir, respectfully, your obedient servant,

S. F. DUPONT,

*Flag-Officer, Commanding South Atlantic Blockading Squadron.*

Hon. GIDEON WELLES,

*Secretary of the Navy, Washington.*

REPORT OF MAJOR JOHN GEO. REYNOLDS, U. S. M. C.

UNITED STATES SHIP "SABINE," }  
AT SEA, November 8, 1861. }

SIR—I have the honor to report that the marine battalion under my command left Hampton Roads on transport steamboat "Governor," on the morning of Tuesday, the 29th of October, with the other vessels of the fleet, and continued with them, near the flag-ship "Wabash," until Friday, the 1st of November.

On Friday morning, about 10 o'clock, the wind began to freshen, and by 12 or 1 blew so violently that we were obliged to keep her head directly to the wind, and thereby leave the squadron, which apparently stood its course. Throughout the afternoon the gale continued to increase, though the "Governor" stood it well till about 4 o'clock. About this time we were struck by two or three heavy seas, which broke the port hog-brace in two places, the brace tending inward. This was immediately followed by the breaking of the hog-brace on the starboard side. By great exertions on the part of the officers and men of the battalion, these braces were so well stayed and supported that no immediate danger was apprehended from them. Up to this time the engine worked well. Soon after, the brace-chains, which supported the smoke-stack, parted, and it went overboard. Some three feet of it above the hurricane-deck remained, which enabled us to keep up the fires. Soon after the loss of the smoke-stack, the steam-pipe burst. After this occurrence we were unable to make more than fourteen pounds of steam, which was reduced, as soon as the engine commenced working, from three to five pounds. The consequence was, we had to stop the engine frequently in order to increase the head of steam. At this period the steamer was making water freely, but was easily kept clear by the pump of the engine, whenever it could be worked. About 5 o'clock we discovered a steamer with a ship in tow, which we supposed to be the "Ocean Queen." To attract attention, we sent up rockets, which signals she answered. When our rockets, six in all, were gone, we kept up a fire of musketry for a long time, but the sea running high and the wind being violent, she could render us no assistance. She continued on her course in sight the

greater part of the night. About 3 o'clock Saturday morning the packing around the cylinder-head blew out, rendering the engine totally useless for some time. The engine was finally put in running order, although it went very slowly. The rudder-chain was carried away during the night, the water gaining constantly on us, and the boat laboring violently. At every lurch we apprehended the hog-braces would be carried away, the effect of which would have been to tear out the whole starboard-side of the boat, collapse the boiler, and carry away the wheel-house. Early in the morning the rudder-head broke, the engine was of very little use—the water still gaining on us rapidly—and we entirely at the mercy of the wind. It was only by the untiring exertions of our men that we were kept afloat. Nearly one hundred of them were kept constantly pumping and bailing, and the rest were holding fast to the ropes which supported the hog-braces. Towards morning, the weather, which during the night had been dark and rainy, seemed to brighten and the wind to lull. At daybreak two vessels were seen on our starboard-bow, one of which proved to be the United States steamer "Isaac P. Smith," commanded by Lieutenant J. W. A. Nicholson, of the Navy. She descried our signal of distress—which was ensign half-mast, union down—and stood for us. About 10 o'clock we were hailed by the "Smith," and given to understand that, if possible, we would all be taken on board. A boat was lowered from her, and we were enabled to take a hawser. This, through the carelessness of Captain Litchfield, of the "Governor," was soon cut off or unavoidably let go. The water was still gaining on us. The engine could be worked but little, and it appeared our only hope of safety was gone. The "Smith" now stood off, but soon returned, and by 1 o'clock we had another hawser from her, and were again in tow. A sail (the propeller-bark "Young Rover", which had been discovered on our starboard-bow during the morning, was soon within hailing-distance. The captain proffered all the assistance he could give, though at the time he could do nothing, owing to the severity of the weather. The hawser from the "Smith" again parted, and we were once more adrift. The "Young Rover" now stood for us again, and the captain said he would stand by us to the last, for which he received a heartfelt cheer from the men. He also informed us a large frigate was ahead, standing for us. He then stood for the frigate, made signals of distress, and returned. The frigate soon came into view, and hope once more cheered the hearts of all on board the transport. Between 2 and 3 o'clock the United States frigate "Sabine" (Captain Ringgold) was within hail, and the assurance given that all hands would be taken on board. After a little delay, the "Sabine" came to anchor. We followed her example, and a hawser was passed to us. It was now late in the day, and there were no signs of an abatement of the gale. It was evident that whatever was to be done for our safety must be done without delay. About 8 or 9 o'clock the "Sabine" had payed out enough chain to bring her stern close to our bow. Spars were rigged out over the stern of the frigate, and every arrangement made for whipping our men on board, and some thirty men were rescued by this means. Three or four hawsers and an iron stream-cable were parted by the plunging of the vessels. The "Governor," at this time, had three feet of water, which was rapidly increasing. It was evidently intended by the commanding officer of the "Sabine" to get the "Governor" alongside, and let our men jump from the boat to the frigate. In our condition this appeared extremely hazardous. It seemed impossible for us to strike the frigate without instantly going to pieces. We were, however, brought alongside, and some forty men succeeded in getting on board the frigate; one was crushed to death between the

frigate and the steamer in attempting to gain a foot-hold on the frigate.

Shortly after being brought alongside the frigate, the starboard quarter of the "Sabine" struck the port-bow of the "Governor," and carried away about twenty feet of the hurricane-deck from the stem to the wheel-house. The sea was running so high, and we were being tossed so violently, it was deemed prudent to slack up the hawser and let the "Governor" fall astern of the frigate with the faint hope of weathering the gale till morning. All our provisions and other stores—indeed, every movable article—were thrown overboard, and the water-casks started, to lighten the vessel. From half-past 3 till daylight the "Governor" floated in comparative safety, notwithstanding the water was gaining rapidly on her. At daybreak, preparations were made for sending boats to our relief, although the sea was running high, and it being exceedingly dangerous for a boat to approach the guards of the steamer; in consequence, the boats laid off, and the men obliged to jump into the sea and then hauled into the boats. All hands were thus providentially rescued from the wreck, with the exception, I am pained to say, of one corporal and six privates, who were drowned or killed by the crush or contact of the vessels.

Those drowned were lost through their disobedience of orders in leaving the ranks or abandoning their posts. After the troops were safely re-embarked, every exertion was directed to securing the arms, accoutrements, ammunition and other property which might have been saved after lightening the wreck. I am gratified in being able to say nearly all the arms were saved and about half the accoutrements. The knapsacks, haversacks and canteens were nearly all lost. About ten thousand rounds of cartridges were, fortunately, saved, and nine thousand lost. Since being on board this ship every attention has been bestowed by Captain Ringgold and his officers towards recruiting the strength of our men, and restoring them to such condition as will enable us to take the field at the earliest possible moment. Too much praise cannot be bestowed upon the officers and men under my command—all did nobly. The firmness with which they performed their duty is beyond all praise. For forty-eight hours they stood at ropes and passed water to keep the ship afloat. Refreshments in both eating and drinking were passed to them at their posts by non-commissioned officers. It is impossible for troops to have conducted themselves better under such trying circumstances. The transport continued to float some hours after she was abandoned, carrying with her when she sunk, I am grieved to say, company books and staff returns. In order to complete the *personnel* of the battalion, I have requested Captain Ringgold to meet a requisition for seven privates, to which he readily assented. I considered this requisition in order, as I have been informed by Captain Ringgold it is his intention, or orders were given, for his ship to repair to a Northern post, in which event he can be easily supplied, and my command, by the accommodation, rendered complete, in order to meet any demand you may make for our services.

Under God, we owe our preservation to Captain Ringgold and the officers of the "Sabine," to whom we tender our heartfelt thanks for their untiring labors while we were in danger, and their unceasing kindness since we have been on board the frigate.

This report is respectfully submitted.

I am, Commodore, very respectfully, your obedient servant,

JOHN GEO. REYNOLDS,  
Commanding Battalion Marines, Southern  
Division.

Flag-Officer SAMUEL F. DUPONT.

Commanding United States Naval Expedition,  
Southern Coast, U. S. N. America.

## THE CAPTURE OF TYBEE ISLAND, GEORGIA.

FLAG-SHIP "WABASH," }  
 PORT ROYAL HARBOR, Nov. 25, 1861. }

SIR—I have the honor to inform the Department that the flag of the United States is flying over the territory of the State of Georgia.

As soon as the serious injury to the boilers of the "Flag" had been repaired, I dispatched Commander John Rodgers to Tybee entrance, the mouth of Savannah River, to report to Commander Miss-ron, the senior officer, for a preliminary examination of the bars, and for the determination of the most suitable place for sinking the proposed obstructions to the navigation of the river.

Captain Rodgers was instructed to push his reconnaissance so far as to "form an approximate estimate of the force on Tybee Island, and of the possibility of gaining access to the inner bar;" and further, "if the information acquired by this reconnaissance should be important, to return and communicate it to me immediately."

I was not surprised when he came back and reported that the defences on Tybee Island had probably been abandoned. Deeming it proper, however, to add the "Seneca," Lieutenant-Commanding Ammen, and "Pocahontas," Lieutenant-Commanding Balch, to his force, I directed him to renew his approaches with caution, and, if no opposition was met with, to occupy the channel.

I am happy now to have it in my power to inform the Department that the "Flag," the "Augusta," and the "Pocahontas," are at anchor in the harbor abreast of Tybee beacon and light, and that the "Savannah" has been ordered to take the same position.

The abandonment of Tybee Island, on which there is a strong Martello tower, with a battery at its base, is due to the terror inspired by the bombardment of Forts Beauregard and Walker, and is a direct fruit of the victory of the 7th inst.

By the fall of Tybee Island, the reduction of Fort Pulaski, which is within easy mortar distance, becomes only a question of time.

The rebels have themselves placed sufficient obstructions in the river at Fort Pulaski, and thus by the co-operation of their own fears with our efforts, the harbor of Savannah is effectually closed.

I have the honor to be, sir, very respectfully, your most obedient servant,

S. F. DUPONT, *Flag-Officer,*  
*Commanding South Atlantic Blockading Squadron.*  
 Hon. GIDEON WELLES,  
*Secretary of the Navy.*

NOTE.—The reports of the other commanding officers do not contain any statements of historical interest, being general in their character, and are therefore omitted.

## CHAPTER XXXIV.

FURTHER OPERATIONS OF FLAG-OFFICER GOLDSBOROUGH IN THE SOUNDS OF NORTH CAROLINA.—IMPORTANCE OF GUN-BOATS IN CO-OPERATING EXPEDITIONS OF THE ARMY AND NAVY.—COMMANDER S. C. ROWAN'S GENERAL ORDER TO THE OFFICERS AND MEN UNDER HIS COMMAND.—OPERATIONS IN THE BLACKWATER RIVER UNDER LIEUTENANT FLUSSER.—THE GUN-BOATS EXTRICATE THEMSELVES FROM A DILEMMA.—NOTICE OF LIEUTENANT CUSHING, HIS ATTACK ON THE TOWN OF JACKSONVILLE AND HIS GALLANT DEFENCE OF THE "ELLIS."—CAPTURE OF FORT MACON BY THE ARMY AND NAVY.—SURRENDER OF YORKTOWN, MAY 5, 1862.—CO-OPERATION OF THE NAVY.—ATTACK ON SEWELL'S POINT BY FLAG-OFFICER GOLDSBOROUGH.—EVACUATION OF SEWELL'S POINT AND CRANEY ISLAND.—"MERRIMAC" BLOWN UP BY THE CONFEDERATES, JUNE 11.—"SUSQUEHANNA," "SEMINOLE" AND "DAKOTA" ANCHOR BEFORE NORFOLK.—THE RETREATING ENEMY SET FIRE TO THE NAVY YARD.—ATTACK ON DRURY'S BLUFF BY COMMANDER JOHN RODGERS WITH THE "GALENA," THE "MONITOR," AND OTHER VESSELS.—REMARKS ON THE SERVICES OF THE NORTH ATLANTIC SQUADRON.—FLAG-OFFICER GOLDSBOROUGH AND COMMANDER ROWAN RECEIVE THE THANKS OF CONGRESS.—ATTACK ON HAMILTON BY LIEUTENANT FLUSSER.—ATTACK ON CONFEDERATE TROOPS AT WASHINGTON, N. C., BY LIEUTENANT R. T. RENSHAW.—BLOWING UP OF THE ARMY GUN-BOAT "PICKET."—EXHIBIT OF THE WORK DONE BY THE NORTH ATLANTIC SQUADRON UNDER FLAG-OFFICER GOLDSBOROUGH.

AS soon as Flag-officer Goldsborough received the news of the battle of the "Monitor" and "Merrimac," he returned to Hampton Roads to superintend matters in that quarter, leaving Commander S. C. Rowan in charge of the sounds of North Carolina.

The gallant service performed by Commander Rowan, in the capture of Newburn and Elizabeth City, has already been related, though complete justice has not been done to the officers and men who embarked in frail vessels never intended to go under the fire of a battery, and who exhibited as much courage as if they were fighting behind the bulwarks of stout frigates. The manner in which the little flotilla in the sounds of North Carolina operated is worthy of all praise, and confers the highest honors on the able commander and his officers, who, scorning all the dangers of an intricate navigation, concealed riflemen, and masked batteries, pushed on up the sounds and rivers wherever a Confederate flag could be heard of or a Confederate gun was mounted, and who never failed to achieve

victory when there was an enemy to engage.

There was a large army force in the sounds, commanded by brave and energetic officers, but it is no disparagement to them to say that, without the hearty co-operation of the gun-boats, they would not have achieved half the success they did. It became evident, at a very early period of the war, that no army operations along rivers or sounds could be successful unless aided by gun-boats. Most of these vessels carried guns of heavy calibre which could not have been dragged along by an army, and these guns always proved to be more than a match for the lines of defence thrown up by the Confederates all along the rivers and sounds. The Federal Army could not have held these works unless the gun-boats were at hand to drive off or capture the improvised vessels-of-war, which it has been seen were equally as well armed as the Union vessels, and for a time made a sturdy opposition to the advance of the Navy.

It must not be supposed that the Federal officers and men conquered the enemy with-

out a struggle, or that their victories were easy ones; if they were, it was because the enemy were not prepared for the bold dashes that were made upon them, and did not suppose that any officer would lead a weakly built flotilla right up to the mouths of heavy batteries, around which the enemy's gun-boats had assembled for safety and protection.

The good account his officers and men gave of themselves in their various encounters with the enemy drew from Commander Rowan the following General Order, which is as remarkable for the handsome compliments it pays to all who served under him, as for its brevity and truthfulness; he could have said no more had he used a folio of words:

[ORDER.]  
 UNITED STATES STEAMER "DELAWARE," }  
 OFF ELIZABETH CITY. }  
 FEBRUARY 11th, 1862. }

The commander of the flotilla in Albemarle Sound avails himself of the earliest moment to make a public acknowledgment of the coolness, gallantry and skill displayed by the officers and men under his command in the capture and destruction of the enemy's batteries and squadron at Cobb's Point.

The strict observance of the plan of attack and the steady but onward course of the ships, without returning a shot until within three-fourths of a mile of the fort, excited the admiration of our enemies.

The undersigned is particularly gratified at the evidence of the high discipline of the crews in refraining from trespassing in the slightest degree upon the private property of defenceless people in a defenceless town; the generous offer to go on shore to extinguish the flames applied by the hands of a vandal soldiery to the houses of their own defenceless women and children, is a striking evidence of the justice of our cause, and must have its effect in teaching our deluded countrymen a lesson in humanity and civilization.

S. C. ROWAN,  
*Commanding Flotilla, Albemarle Sound,*

For the present we must discontinue the narrative of operations in the sounds of North Carolina.

As has been seen, there was scarcely a large gun left in the hands of the enemy, of the many that were mounted when the little naval flotilla entered the sounds through Hatteras Inlet, January 19, 1862, and the preparations which were made by the Navy Department for carrying on the war in this important section of the Confederate strongholds had been carried out with a judgment and success which entitled all concerned to the highest praise.

In the latter part of September, 1862, a joint expedition of the Army and Navy was prepared to operate against Franklin, a small town on the Blackwater River. It was agreed between the military commander, General Dix, and the commander of the gun-boats, that the attack should be made on the 3d of October.

The expedition was under the command of Lieutenant C. W. Flusser, on board the steamer "Commodore Perry." Acting-Lieutenant Edmund R. Colhoun commanded the "Hunchback," and Acting-Master Charles A. French the "Whitehead."

On the morning of October 3d, 1862, the three above-mentioned steamers got underway and proceeded up the river, which was so crooked and narrow in some places that these vessels, small as they were, could not turn the bends without the aid of hawsers. At 7 o'clock the "Perry," being ahead, came to one of three short turns, and, while engaged in running out a line, a heavy fire was opened upon her from a steep bluff, almost overhead, by a body of the enemy's concealed riflemen.

The guns of the steamer could not be brought to bear, and the only way to escape the fire of the riflemen was to work by the point and obtain a position where the great guns could be brought into play. This was attempted, but the vessel ran ashore. At this moment, a daring color-bearer of the enemy started towards the gun-boat, trying to get his companions to follow him and board her. But he was instantly shot down and the enemy were driven back to their cover.

In a few moments the gun-boat was off the bottom, and pushed ahead until she could bring her guns to bear, and from this position cover the passage of the other two steamers. Having passed the turn in safety, these vessels joined the "Commodore Perry" above, where they were still fired upon from the bluff, without being able to make any effective return.

To make their position more critical, they now came upon a barricade which they found it impossible to pass. The enemy soon noticed the dilemma of the gun-boats, and began to flatter themselves that they were about to have an easy victory. A large body of men collected below the Federal vessels and commenced felling trees across the narrow stream to cut off their retreat, after which they calculated to capture them all by driving the men from the decks with their rifles.

In his anxiety to get ahead, Lieutenant Flusser had not waited for the troops, and he now found himself caught in a trap. He had got into the difficulty through an error of judgment, and the only way to get out of it seemed to be to fight until the troops came up.

It was most difficult to work the guns under such a terrific fire from concealed riflemen without a great loss of life, but there was no alternative. Flusser threw 11-inch shells towards the town of Franklin, while with the forward 32-pounder he poured grape and canister into the woods on his

left. With the after 32-pounder and a field-gun he fought the enemy on the right and with his 9-inch gun aft he shelled the bluff, from whence the weight of the enemy's fire proceeded. Thus he fought on like a lion at bay, scattering shell, grape and canister on all sides, while his men were exposed to a deadly fire from marksmen no one could see.

The other steamers were not idle, but followed the tactics of their leader, and their rapid fire disconcerted the aim of the riflemen.

When a lull occurred, the steamers made a dash down the river, and although their decks were still swept by the enemy's fire, they succeeded in passing the bluffs. During this movement the Union commanders kept their men under cover, and thus saved many lives. When they came to the fallen timber they put on a full head of steam and pierced their way through and over it. It was "neck or nothing" with them, and it was only through great exertions that they succeeded in getting beyond the range of the enemy's fire by nightfall.

The "Commodore Perry" lost two killed and eleven wounded (a severe loss for so small a vessel). The "Hunchback" had two killed and one wounded.

This was not a great battle, but it was more trying than some great battles have been, and was accompanied by much more danger. It shows that the gun-boat commanders were of good metal, determined to sell their lives as dearly as possible. There is nothing in the world so harassing as to be caught in a narrow river under such circumstances, and there is scarcely anything to justify it, unless the vessels are supported by a land force. In the above case the land force unfortunately did not come up.

Flusser was a cool and daring officer, and his name has already been mentioned several times in the course of this narrative. He was always to be found where fighting was going on.

There was another young officer in the North Atlantic squadron at this time, Lieutenant William B. Cushing, who made a name for himself by his total disregard of danger.

He would undertake the most desperate adventures, where it seemed impossible for him to escape death or capture, yet he almost always managed to get off with credit to himself and with loss to the enemy. He commanded the small gun-boat "Ellis," and in November, 1862, it struck him that he would enter New River Inlet, push up the river, sweep it clear of vessels, capture the town of Jacksonville or Onslow Court-house, take the Wilmington mail and de-

stroy any salt-works he could find on the banks. He expected to surprise the enemy on going up, and then fight his way out.

Five miles from the mouth of the inlet he came in sight of a vessel bound out with a load of cotton and turpentine. The enemy set fire to her in order to prevent her falling into Cushing's hands; but this officer did not waste time over her. After assuring himself that she was thoroughly ignited, and that the owner could not return and extinguish the flames, he proceeded on his way up the river. He reached the town of Jacksonville, landed, threw out pickets and placed guards over the public buildings.

Jacksonville was the county-seat of Onslow County, and quite an important place. Here he captured 25 stand of arms in the Court-house, and a large mail in the post-office. He also took two schooners and confiscated the negroes of the Confederate post-master.

Jacksonville being situated on the main road to Wilmington, it was not long before the news of Cushing's performances reached the latter place, and the Confederates at once took measures to prevent his escape.

As soon as he had finished with the town, Cushing dropped down with his two prizes until he came in sight of a camp on the river-bank, which he shelled very thoroughly. The enemy opened fire on the "Ellis" with rifles, but they were soon dispersed. Night coming on, the pilots declined to take the vessels out of the river until daylight next morning. In consequence, Lieutenant Cushing anchored five miles from the outer bar, took his prizes alongside and prepared for an attack. All night the signal fires of the enemy could be seen on the banks, and the Union commander had very little doubt that he would be attacked at daylight.

As soon as possible next morning Cushing got underway, and had nearly reached the most dangerous place in the river when the enemy opened upon him with two field-pieces. He placed his vessels in position, hoisted the battle-flag at the fore, his crew gave three cheers and he went into action. In one hour he had driven the enemy from his guns and from the bluff, and he passed on within a hundred yards of their position without being fired at.

Up to this time the fortune of the Federal party had been in the ascendant, but they were destined to meet with an accident which changed the fortunes of the day, and resulted in the destruction of the "Ellis." About 500 yards from the bluff, the pilots, making a mistake in the channel, ran the steamer hard and fast aground. All hands set to work at once to lighten her and every effort was made to get her afloat, but without avail. When the tide fell, Cushing sent

a party on shore to take possession of the artillery which had been abandoned by the enemy, but found it gone. There was nothing now left but for Cushing to save his crew from the overwhelming force which he knew would soon be brought to bear upon the gun-boat. So, "all hands" were "called to muster" and told that they could go on board the schooners and get off down the river and over the bar. He called for six volunteers to stay with him and defend the steamer until the last. The volunteers came forward at once; also two Master's Mates, Valentine and Barton.

The schooners were ordered to drop down the channel out of range of any guns the enemy might mount on the bluff, and there to wait the termination of the action, and if the "Ellis" was destroyed to proceed to sea.

Early in the morning the enemy opened fire upon the steamer with three heavy guns and one Whitworth. It was a cross-fire and very destructive. Cushing replied as well as he could, but in a short time the engine was disabled and the vessel so much cut up that the only alternative was surrender or a pull of a mile and a half in an open boat under the enemy's fire.

The last expedient was adopted. The "Ellis" was set on fire in five places, and leaving the battle-flag flying, Cushing trained his guns upon the enemy so that the vessel could fight to the last, started down the river, reached the schooners and put to sea. A party of Confederates attempted to cut off his retreat, but they were unsuccessful, and the sailors gave three cheers and hoisted the Union flag as they sailed out over the bar.

Cushing brought away all his men, his rifled howitzer and ammunition, the ship's stores and clothing, the men's bags and hammocks, and most of the small-arms. As he crossed the bar the "Ellis" blew up and the enemy were disappointed in getting her.

Cushing was famous for this kind of adventure, and he will be heard of frequently here-

ATTACK ON FORT MACON BY THE NAVAL FLOTILLA.

after. He was what might be called a "Free-lance," who was always ready to perform any act of daring; and although he was not always successful, the honor of the flag never suffered at his hands.

There were plenty of young officers in the Navy who were equally brave, and with more judgment, but Cushing was of a peculiar temperament, always doing something to astonish his commanders, and whether fortunate or not in his undertakings, he was sure to create a sensation.

The account of the loss of the "Ellis" is given as an illustration of this young officer's character and his fancy for seeking adventures. There was nothing particularly to be gained by his trip up New Inlet River, and there was a chance of losing his vessel. He lost her, but, in doing so, showed his spirit of adventure, risking his life and the lives of his men, and then escaping with his crew, arms, provisions and clothing, setting fire to his vessel and training her guns upon the enemy so that she might give them a broadside as she went out of existence.

Among the captures made by co-operating vessels of the North Atlantic squadron was that of Fort Macon, Beaufort Harbor, N. C. A combined expedition of the Army and Navy attacked this place on April 25, 1862, and after a bombardment of some hours, by land and sea, the American flag was hoisted over the fort.

The naval part of the expedition consisted of the following vessels under the command of Commander Samuel Lockwood:

Steamer "Daylight" (flag-ship).

Steamer "State of Georgia." — Commander J. F. Armstrong.

Steamer "Chippewa." — Lieutenant-Commanding A. Bryson.

Bark "Gemsbok." — Acting-Volunteer-Lieutenant Edward Cavendy.

Steamer "Ellis." — Lieutenant-Commanding C. L. Franklin.

The gun-boats attacked the fort by passing it in an ellipse and firing when abreast of it.

Major-General Burnside commanded the land forces, and to him the fort surrendered.

The losses were small on both sides, which was rather remarkable, as Commander Lockwood states that the interior of the fort was literally covered with fragments of bombs and shells, and many of the guns disabled.

Beaufort was a valuable acquisition to the North Atlantic squadron, and a fine rendezvous for the smaller vessels engaged in blockading the coast.

With regard to the bombardment, the reports of both Army and Navy are somewhat obscure, but it appears that a good deal of

damage was inflicted upon the fort in spite of a heavy sea, which rendered the firing from the vessels somewhat uncertain. The gun-boats themselves suffered little damage.

On May 5, 1862, Yorktown was evacuated by the Confederates, and General McClellan telegraphed to Captain Wm. Smith of the "Wachusett" to assist in communicating with Gloucester and to send some of the gun-boats up York River to reconnoitre.

The flotilla was immediately underway, and proceeded to Gloucester Point, where the American flag was hoisted. The "Corwin," Lieutenant T. S. Phelps, and the "Currituck," Acting-Master W. F. Shankland, pushed on some twelve miles further up. Commander T. H. Patterson, in the "Chocura," proceeded up the river as far as

LIEUTENANT-COMMANDER (NOW REAR-ADMIRAL) T. S. PHELPS.

West Point, which had been deserted by the enemy. White flags were flying all along the river. A few small vessels were captured, but the enemy had fled from that quarter.

About the 7th of June, Flag-officer Goldsborough was ordered by the President to make an attack on Sewell's Point and to ascertain the possibility of landing a body of troops thereabouts. The wooden vessels were to enfilade the works, while the "Monitor," accompanied by the "Stevens," went up as far as the wrecks to engage the "Merrimac" in case she made her appearance.

The "Monitor" had orders to fall back into fair channel-way and only to engage the "Merrimac" seriously in such a position that the "Minnesota" together with

the merchant-ships prepared for the occasion, could run her down if an opportunity presented itself. The ramming-vessels were directed to run at the "Merrimac" at all hazards, and the "Baltimore," an unarmed steamer with a curved bow of light draft and high speed, was kept in the direction of the "Monitor," to throw herself at the "Merrimac" forward or aft, as circumstances might require.

The demonstration was made, and the ships shelled Sewell's Point, and ascertained the fact that the number of the enemy's guns had been materially reduced and did not amount to over seventeen.

Whether it was this demonstration, or the fact that the Confederates found that they could not hold their works at Sewell's Point in the face of even a small number of troops, or that they did not care to stand a shelling from the Federal ships, is not

COMMANDER (NOW REAR-ADMIRAL) A. L. CASE, U. S. N.  
REAR-ADMIRAL GOLDSBOROUGH'S FLEET CAPTAIN.

known, but on the 10th of May, 1862, Norfolk surrendered to a Federal force under General Wool, who had landed at Willoughby's Point. All the works on Sewell's Point were evacuated, and also those at Craney Island, and early in the morning of the 11th the "Merrimac" was blown up.

Thus ended the farce of the Confederate occupation of Norfolk. It should never have fallen into their hands, and could have been retaken at any time by a force of ten thousand men and the vessels at Hampton Roads.

Flag-officer Goldsborough, supposing that Sewell's Point and Craney Island might not have surrendered, ordered all the fleet to get underway and proceed to the attack of those places, but remembering that when the army had got into their rear that the enemy would no longer stay there, he sent

Lieutenant Selfridge in a tug to Sewell's Point, and Commander Case in another to Craney Island, to ascertain the position of affairs.

Selfridge landed at Sewell's Point and found that the enemy had departed, on which he hoisted the American flag on the ramparts. When Commander Case arrived at Craney Island he also found the forts deserted. Two Confederate flags were still flying over the works, which he hauled down and replaced with the American colors.

The "Susquehanna," "Seminole," "Dakota" and "San Jacinto" proceeded up to Norfolk without difficulty, and cast their anchors before the town. The deserting Confederates played the same part that had been played by the Federal forces when they gave up the Navy Yard. They set fire to all the useful buildings, and most of them were destroyed; the commandant's and the officers' quarters being left intact, in hopes that the Confederate officers might have a chance some day to live in them again.

Thus Norfolk became the head quarters of the Navy, as it ought to have been from the beginning of the war to the end. There had been no good reason for deserting the place, for there were as many ships in front of the town at the time when the Navy Yard was burned, as on May 9, 1862, while the Confederates were much weaker. The retreat from Norfolk was caused by a panic which sometimes seizes upon people, and leads them to do things at the moment for which they rebuke themselves when they come to their senses.

The re-occupation of Norfolk Navy Yard was a great convenience to the North Atlantic squadron, which had been obliged to send most of its vessels to Philadelphia and New York for repairs, and now the operations up the James River could be carried on more effectively.

On May 18, 1862, Flag-officer Goldsborough reports to the Department an engagement which took place on the James River between some gun-boats under Commander John Rodgers and a heavy battery on Drury's Bluff (a high point commanding a long reach of the river).

The vessels which attacked this stronghold were the iron-clad (so-called) "Galena," Commander John Rodgers, the "Anchorage," Lieutenant W. N. Jeffers, and the unarmed steamers "Aroostook," "Port Royal" and "Naukatuck."

These vessels moved up the James River on the 15th of May and encountered no artificial impediments until they reached Drury's Bluff, eight miles below Richmond, where the Confederates had erected batteries and placed two separate obstructions in the river. These barriers were made by driving piles, and sinking vessels loaded

with stone. It was said that the enemy's gun-boats, "Jamestown" and "Yorktown," were among the vessels sunk.

It cannot be doubted that these obstacles were too formidable for the gun-boats to pass, unless they could succeed in dismounting the guns on Drury's Bluff, which was not easily done. Any attempt to remove these obstructions (even if the fort was silenced) without the aid of a large land force would have been unavailing, for the banks of the river all along, up to and past the bluff, were lined with rifle-pits filled with marksmen, who made it almost impossible for the Federals to stand at their guns.

The "Galena," leading, ran within 600 yards of the batteries, and as near to the obstructions as it was deemed prudent to go. She let go her anchor, and swinging with a spring across the channel, not more than twice the length of the ship, opened fire on the enemy at Drury's Bluff. The wooden vessels anchored about 1,300 yards below, and the "Monitor" anchored just above the "Galena," but finding that her guns could not be elevated sufficiently to reach the forts, she dropped to a position to enable her to do so.

After an action of three hours and fifteen minutes, the "Galena" had expended nearly all her ammunition, having but six charges left for the rifled Parrott gun and not a 9-inch shell filled. Thirteen men had been killed and eleven wounded on board. Signal was made to discontinue the action, and the vessels dropped out of fire.

The "Monitor" was unhurt, though struck once squarely on the turret by an 8-inch shot, and twice on her side armor. The rifled 100-pounder burst on board the "Nau-gatuck," and disabled her.

Commander Rodgers reported that the "Galena" was not shot-proof, exactly what was predicted of her when she was on the stocks. The vessel was so much cut up that it was reported she would have to be thoroughly repaired before she could go to sea.

It was intended to ascertain by this action whether the "Monitor" or "Galena" was the best vessel for fighting forts. It was settled in favor of the "Monitor," which was not damaged seriously.

It was a one-sided battle altogether, for the forts on Drury's Bluff could not be taken by a naval force alone. They could only be taken by a combined attack of the Army and Navy.

If it was intended to show the enemy that the courage of naval officers would undertake anything, this was amply demonstrated by the cool manner in which the vessels anchored and went at what they must have known was hopeless work. There was not an officer there who did not know

that, no matter how often they might drive the enemy away from their guns by an overwhelming fire, that they would just step inside their bomb-proofs until a good opportunity offered to return to their guns.

The Confederates knew that no naval force would attempt to land and scale the bluff, 200 feet high. In fact, it was simply good practice for the enemy; and whatever defects their works showed were remedied in twenty-four hours.

That Commander Rodgers and his officers showed the greatest courage, in attacking works so far superior to them in every way, every one will admit. The "Galena" was simply a slaughter-house, and the other vessels, except the "Monitor," would have fared worse than the "Galena" had not the enemy been intent upon destroying the vessel which carried the divisional flag at her main.

Commander Rodgers still thought that the "Galena" and "Monitor" could reduce the works if they had plenty of ammunition; but experience had by this time taught most of our commanders that very few expeditions of this kind were successful unless the Army and Navy acted together, and it was only the desire of a brave man to try and get even with the enemy.

This expedition convinced Commander Rodgers "that an army could be landed on the James River within ten miles of Richmond, on either bank, and that this land force with naval co-operation could march into Petersburg; that such a move would cause the evacuation of Drury's Bluff in its then condition, and other forts along the James River; that obstructions could then be removed, and perhaps the gun-boats might work their way on to Richmond."

This was the hardest fight that had occurred on the James. The duties on that river were, as a rule, monotonous in the extreme, and the officers of the Navy were delighted with this opportunity to show that the same spirit existed at this point as elsewhere to perform the most hazardous undertakings.

The work of the North Atlantic squadron in the James and York rivers was deficient in those dashing strokes which had been made in other squadrons, and which so attracted the attention of the Northern people. With the single exception of the affair of the "Merrimac," nothing had been done by the northern portion of this squadron to attract much notice, yet it was in some respects the most important squadron afloat. The security of Washington greatly depended on its efficiency, for, in the event of a move of the Confederates upon the Capital, a large force of gun-boats could be sent up the Potomac and prevent the enemy from marching directly upon the city and give

time to assemble troops enough to meet him in the field. Washington City would have been cut off entirely in its river communications with the North, in the earlier part of the war, but for the presence of this squadron at Hampton Roads, where it was within easy reach. Without it, the Grand Army of the Potomac could not have been moved so successfully to the Peninsular; and it is scarcely yet forgotten how, in the most trying times, when that army

its great discipline, the energy of the officers and the skill of its commanders, it not only often arrested defeat, but sometimes changed defeat into victory.

It might appear to some people that there was a larger number of vessels lying idle in Hampton Roads than was necessary, and that these might in the earlier part of the war have pushed on up the James and kept that river free of batteries until the Federals could mount guns enough afloat to

COMMANDER (AFTERWARDS REAR-ADMIRAL) JOHN RODGERS.

seemed to be in danger of annihilation, the Navy was at hand to give shelter under its guns to our retiring and weary troops, and drive back the excited and victorious foe, who would have driven our soldiers into the river, or made them lay down their arms.

These things are mentioned not for the purpose of claiming undue credit for the Navy, but to show that it was always on hand to perform its part of the duty in putting down the rebellion, and that, through

push on up to Richmond. But war cannot be carried on without mistakes, and these occurred in the Navy as well as in the Army; but we will venture to say that there were not near so many in the Navy. The sins of the Navy were more those of omission than commission. The situation was a new one to *all* concerned, and the stern reality could only be learned by wading through battle-fields, or in the slaughter-pens of gun-boats when under the fire of heavy artillery.

Owing to the change of the head-quarters of the North Atlantic squadron, reports of naval occurrences were not always received at the Navy Department in regular order, and being quickly recorded as they were received, it happens that many of the events of the war are narrated out of their proper order, and the earlier performances are behind the later ones. This cannot well be helped, and it would probably make confusion if the writer attempted to remedy the evil.

When General McClellan had captured Yorktown he almost immediately moved part of his army up the river in transports in the direction of West Point.

On the 7th of May, 1862, Lieutenant T. H. Stevens reported that, hearing the firing of heavy cannon, he proceeded on board the

LIEUTENANT LEONARD PAULLING.

“Wachusett,” for the purpose of joining his command, which he had passed on the way up; when General Franklin telegraphed him that he was attacked by a superior force and desired the assistance of the gun-boats — “that he wanted immediate support,” etc.

At this moment the gun-boat “Maratanza” was engaged, two miles below, in endeavoring to haul the gun-boat “Marblehead” off a shoal. Receiving Captain William Smith’s orders to go on board the “Maratanza” and bring her into action, Stevens took a boat from the “Wachusett” and joined his vessel.

The “Wachusett” and “Sebago” went into action with some batteries that had been posted on hills to prevent the advance of the Union Army. The gun-boats shelled the Confederate artillery for nearly an hour

with their heavy rifled guns, when the enemy retired. It was the opinion of General Franklin’s officers that the rapid and accurate fire of the gun-boats “was greatly instrumental in saving the Army from severe disaster, if not defeat.”

The gun-boats followed along on the flanks of the Army, ready to aid it in every way, until the river became so narrow and crooked that they could go no farther, and in returning had to drop stern foremost.

General Franklin’s object in advancing on West Point was to cut off the retreat of the Confederates from Yorktown. But he encountered a much larger force than he had expected, and but for the gun-boats would have been roughly handled.

Acting-Rear-Admiral S. P. Lee assumed command of the North Atlantic squadron on July 16, 1862, taking the place of Flag-officer Goldsborough, who was promoted to the rank of Rear-Admiral, and relieved at his own request. Though the services of the latter officer had not been brilliant, yet his duties had been well performed and his record is that of a faithful, zealous officer, who, if he had been employed in a wider field of operations, would no doubt have made his name more conspicuous. The President considered that his services in the sounds of North Carolina entitled him to a vote of thanks from Congress and sent in his name, and afterwards that of Commander Rowan.

Goldsborough was a Southerner by birth, and although no officer deserves particular credit for standing by the Government that had taken care of him for fifty years, yet he showed an example of live patriotism which entitled him to respect and to any honors his country had to bestow.

From July 11th up to November 30th, 1862, there was little done by the North Atlantic squadron except in the sounds of North Carolina, which for a time were under the control of Commander Rowan.

The operations in the sounds, after the time mentioned, were not of a very important nature, but as they form part of the history of the war we will give a brief sketch of them. There was great danger in some of the expeditions, and good judgment and gallantry shown in all.

Lieutenant C. W. Flusser, who has already figured as a brave and energetic officer, was a leading spirit in every enterprise set on foot. He seemed to delight in making explorations where little was to be gained except hard knocks, and it is remarkable that in the severe river-fighting to which he was exposed he did not sooner lose his life.

On the 9th of July, 1862, he left Plymouth for Hamilton in the steamer “Commodore Perry,” having taken on board Captain W.

W. Hammell, Company F., 9th New York Volunteers, and twenty of his men, with the steamers "Shawsheen" and "Ceres" in company; the latter vessel having on board Second-Lieutenant Joseph A. Green and ten men.

While ascending the river, at 1 o'clock p. m., the flotilla was fired upon from the south bank by riflemen. Flusser returned the fire and pushed on, expecting to meet the enemy at Hamilton in force. The vessels were under fire from the banks and rifle-pits for two hours, during which time they had to run very slowly, looking out for batteries. When they reached Hamilton, the enemy, who had been firing from concealed places, retreated, being afraid to meet Flusser's little force of 100 sailors and soldiers in the open field.

The only reward which they received for all their exposure was the capture of an unimportant town and a small schooner.

The loss on board the vessels, fortunately, was small (two killed and ten wounded), but these casualties often repeated ran up in time to a large number. In this warfare not much was to be gained except gunshot wounds. There was no prize-money, but the officers and men of this expedition were spoken of in the highest terms of praise, which cheered them on in the absence of other rewards.

Acting-Volunteer-Lieutenant John Macdearmid and Acting-Master Thomas J. Woodward, who commanded the steamers "Ceres" and "Shawsheen" on this expedition, were highly spoken of.

Acting-Lieutenant R. T. Renshaw, commanding U. S. steamer "Louisiana," reports that while at Washington, N. C., on the 6th of September, 1862, the enemy attacked that place in force and opened on his vessel "with volleys of musketry." "That he returned the fire with grape and shell, killing a number and finally driving them back."

He also followed them up with shell and killed a number in their retreat.

During this action the Army gun-boat "Picket" blew up, killing the captain and 18 men, and wounding others, who were taken on board the "Louisiana" and properly cared for.

Acting-Master Edward Hooker is well spoken of for the manner in which he managed the guns of the "Louisiana." The action must have lasted some time, as 137 shot, shell, stands of grape, and howitzer shell were fired from the "Louisiana;" and, if less justice is done the occasion than it deserves, it is because the accounts of the commanding officer are so obscure.

This closes the account of the operations of the Navy in the sounds of North Carolina up to November 10th, 1862, at which time these waters were in charge of Commander H. K. Davenport. The sounds at this time were virtually in possession of the Federal Army and Navy, though the enemy would make useless raids along the banks of the rivers for the purpose of firing on the gun-boats.

During the command of Flag-officer Goldsborough all the sounds had been taken possession of under the admirable management of Commander Rowan, Lieutenant Flusser and others. Newbern, Plymouth, Elizabeth City, and every important place, was in charge of a gun-boat or was garrisoned by soldiers, and most of the Confederate troops that had been sent to resist the Union forces had returned to Richmond, where at that time an attack was expected.

The harbor of Beaufort was in the hands of the Federals and part of the coast of North Carolina was under blockade.

All of which, when closely examined, exhibits as much gallantry, energy and hard work, in proportion to the means at hand and the objects in view, as appears elsewhere.

## LIST OF VESSELS AND OFFICERS IN THE NORTH ATLANTIC BLOCKADING SQUADRON, UNDER REAR-ADMIRAL L. M. GOLDSBOROUGH.

COMMANDER A. LUDLOW CASE, CAPTAIN OF THE FLEET.

OBTAINED FROM THE SECRETARY'S REPORT OF 1862, AND NAVY REGISTER OF SEPT. 1862.

### STEAM-FRIGATE "MINNESOTA"—FLAG-SHIP.

Commander, A. L. Case; Lieutenant-Commanders, E. C. Grafton and John Watters; Lieutenant, Adolphus Dexter; Midshipman, R. S. Chew; Fleet Surgeon, W. M. Wood; Surgeon, J. S. Kitchen; Assistant Surgeons, S. J. Jones, Edgar Holden and E. R. Dodge; Paymaster, Robert Pettit; Chaplain, T. G. Salter; Captain of Marines, W. L. Shuttleworth; First-Lieutenant of Marines, W. H. Cartter; Chief Engineer, C. H. Loring; Assistant Engineers, J. H. Bailey, E. J. Whittaker, Alfred Colin, L. A. Haverly, T. W. Rae and G. W. Thorn; Acting-Masters, D. A. Campbell, W. G. Saltonstall and Wm. Wright; Boat-

swain, Paul Atkinson; Gunner, C. W. Homer; Carpenter, Ebenezer Thompson; Sailmaker, A. A. Warren.

### STEAMER "MARATANZA."

Commander, G. H. Scott; Lieutenant-Commander, Wm. P. McCann; Assistant Surgeon, Job Corbin; Acting-Assistant Paymaster, C. S. Perley; Acting-Masters, Charles Cortney, Jacob Kimball and J. B. Wood, Jr.; Acting-Engineers, Edward Scattergood, Wm. H. Kilpatrick, L. H. Harvey and R. L. Webb; Acting-Master's Mates, J. Creighton and E. W. Flowers.

### STEAMER "MORSE."

Acting-Masters, Peter Hayes and G. W. Caswell.

Acting-Assistant Paymaster, Henry Russell, Acting-Assistant Engineers, Thomas Divine, Tim. Flanders and George West; Acting-Master's Mates, William Dunne and C. E. Rich.

IRON-CLAD "MONITOR."

Commanders, John L. Worden, Wm. N. Jeffers and T. H. Stevens [commanding at different times]; Lieutenant, S. Dana Greene; Acting-Volunteer-Lieutenant, Wm. Flye; Acting-Assistant Surgeon, D. C. Logue; Acting-Assistant Paymaster, W. F. Keeler; Acting-Master, L. M. Stodder; Assistant Engineers, A. B. Campbell, Geo. H. White, R. W. Hands and M. T. Sunstrom; Acting-Master's Mates, Geo. Fredrickson and Peter Williams.

STEAMER "JACOB BELL."

Lieutenant-Commander, E. P. McCrea; Acting-Assistant Surgeon, O. J. Bissell; Acting-Assistant Paymaster, Samuel Anderson; Acting-Assistant Engineers, Arthur Clements, Nelson Ross and R. H. Buel; Acting-Master's Mate, E. McConnell.

STEAMER "PORT ROYAL."

Lieutenant-Commander, George U. Morris, Acting-Volunteer-Lieutenant, Wm. P. Randall [commanding at different times]; Lieutenant, H. D. Todd; Assistant Surgeon, W. S. Fort; Assistant Paymaster, J. A. Bates, Jr.; Assistant Engineers, W. C. Selden, G. W. Sensner, O. C. Lewis, F. B. Allen and E. M. Breese; Acting-Master's Mates, W. F. Reynolds, Jr., E. V. Tyson and Benj. Woods.

STEAMER "SUSQUEHANNA."

Captain, R. B. Hitchcock; Lieutenant-Commander, J. H. Gillis; Surgeon, Joseph Beale; Paymaster, W. H. Thompson; Assistant Surgeon, H. C. Nelson; Captain of Marines, P. R. Fendall; Chief Engineer, George Sewell; Assistant Engineers, J. M. Hobby, James Renshaw, James Butterworth and E. R. Arnold; Acting-Masters, W. L. Churchill and G. B. Livingston; Boatswain, Chas. Miller; Gunner, Wm. Summers; Carpenter, G. M. Doughty; Sailmaker, J. C. Herbert.

STEAMER "AROOSTOOK."

Lieutenant-Commander, S. R. Franklin; Lieutenant, T. S. Spencer; Acting-Masters, Eben Hoyt and W. A. Maine; Acting-Assistant Paymaster, W. L. Pynchon; Assistant Engineers, W. G. Buehler, Geo. R. Holt, James Entwistle and Samuel Gragg; Acting-Master's Mates, C. F. Palmer, Louis Hammersley and Edw. Culbert.

STEAMER "DACOTAH."

Captain, J. P. McKinstry; Lieutenant, G. C. Wiltse; Surgeon, Delavan Bloodgood; Acting Masters, Wm. Earle and W. Moslander; Assistant Paymaster, Richard Washington; Chief Engineer, P. G. Peltz; Assistant Engineers, Elijah Laws, G. P. Hunt, Geo. W. Melville and Jas. H. Perry; Acting-Master's Mates, Charles Trathen, Paul Borner, C. H. Chase and C. H. Davidson; Boatswain, G. C. Abbott; Gunner, Geo. Edmond.

STEAM-FRIGATE "SAN JACINTO."

Commander, Wm. Rockendorff; Lieutenant-Commander, Ralph Chandler; Lieutenant, B. P. Smith; Assistant Surgeon, I. W. Bragg; Assistant Paymaster, T. C. Masten; Acting-Masters, John Baker, H. J. Coop and D. G. McRitchie; Captain of Marines, L. L. Dawson; First-Lieutenant of Marines, Robert Kidd; Chief Engineer, M. Kellogg; Assistant Engineers, G. W. Hall, H. S. Davids, H. C. McIlvaine, Edwin Wells, H. W. Scott, Edm. Lincoln and N. P. Towne; Boatswain, John Marley; Carpenters, J. W. North and R. A. Williams; Gunner, C. A. Stephenson; Acting-Master's Mates, J. D. Weed, H. T. Keen and A. H. Fuller.

TUG "DRAGON."

Acting-Assistant Engineer, John Jordan.

IRON-CLAD "GALENA."

Captain, John Rodgers; Lieutenant-Commander, L. H. Newman; Assistant Surgeon, R. E. Van Giesen; Acting-Assistant Paymaster, J. H. Sellman; Acting-Masters, S. B. Washburn and B. W. Loring; Assistant Engineers, J. W. Thompson, T. T. Millholland, F. A. Breman, James Dodd and A. S. Chipman; Acting-Master's Mates, J. H. Jenks, Andrew McCleary, Alex. Meldrum and E. A. Galindo; Gunner, J. D. Boorum; Boatswain, Rob't Dixon.

STEAMER "STEVENS."

Lieutenant, D. C. Constable.

STEAMER "DAYLIGHT."

Commander, Samuel Lockwood; Acting-Master, J. D. Warren, [commanding at different times]; Acting-Masters, J. R. Dickinson and J. H. Gleason; Acting-Assistant Surgeon, F. M. Dearborne; Acting-Assistant Paymaster, A. J. Clark; Acting-Assistant Engineers, C. D. Kiersted, Wm. Emmons and T. McIntosh; Acting-Master's Mates, Chas. Attmore and James Corlace.

STEAMER "GENESEE."

Commander, Wm. H. Macomb; Lieutenant-Commander, Wm. H. Dana; Assistant Surgeon, G. B. Slough; Acting-Masters, Wm. Hanson, C. M. Merchant and R. T. Wyatt; Acting-Engineers, W. H. Green, C. H. Harrab, G. H. Griggs, M. McLoughlin and C. Moulton; Acting-Master's Mates, W. J. Crosby, John Connor, G. M. Fludder and E. W. Halero.

STEAMER "ELLIS."

Lieutenant, C. L. Franklin; Acting-Master's Mate, Omar Smith; Midshipman, B. H. Porter; Acting-Assistant Engineer, F. A. Whitfield.

STEAMER "HUNCHBACK."

Acting-Lieutenant, E. R. Colhoun; Acting-Master, Ric'd Pasquell; Acting-Assistant Paymaster, Henry Cushing; Acting-Assistant Engineers, Henry Armstrong and John Wall; Acting-Master's Mates, Wm. Weaver and Chas. Weaver.

STEAMER "HENRY BRINKER."

Acting-Master, John E. Giddings; Acting-Master's Mate, W. B. Miles; Acting-Engineers, J. W. Kelsey, Robt. Ross and W. H. Yates.

SLOOP "GRANITE."

Acting-Master, E. Boomer.

STEAMER "HETZEL."

Commander, H. K. Davenport; Lieutenant, C. L. Franklin; Acting-Assistant Surgeon, N. L. Campbell; Acting-Assistant Paymaster, G. W. Morton; Acting-Assistant Engineers, Joshua Eddowes, J. B. Dick, T. B. Cole, J. H. Paget and W. H. Tower; Acting-Master's Mates, John Rudrow and Benj. Walker.

STEAMER "I. N. SEYMOUR."

Acting-Master, F. S. Wells; Acting-Assistant Engineers, N. Eggleston, Stephen Mealeus, Philip Hublitz and J. A. Whittaker.

STEAMER "MONTICELLO."

Lieutenant-Commander, Daniel L. Braine; Acting-Masters, L. A. Brown and Richard Hustace; Acting-Ensign, A. G. Stebbins; Acting-Assistant Engineers, W. S. Montgomery, John Pick, C. O. Morgan, Thomas McGough, J. Thomas and H. Webster; Acting-Master's Mate, E. A. Nassau.

STEAMER "MYSTIC."

Lieutenant-Commander, H. N. T. Arnold; Acting-Masters, R. S. Coffin, B. W. Loring and S. B. Meaders; Acting-Assistant Surgeon, W. F. Browne; Acting-Assistant Paymaster, T. E. Smith; Acting-Assistant Engineers, J. B. Lovell, J. B. Allen, H. F. Lovejoy, S. Rockefeller and G. W. Shook; Act

ing-Master's Mates, G. R. Durand, J. M. C. Reville and J. B. Swett.

STEAMER "LOUISIANA."

Lieutenant-Commander, Alex. Murray, and Acting-Lieutenant, R. T. Renshaw [commanding at different times]; Lieutenant-Commander, Alfred Hopkins; Acting-Master Edward Hooker; Assistant Surgeon, Michael Bradley; Assistant Paymaster, W. W. Williams; Assistant Engineers, J. M. Lay, D. P. McCartney, J. H. Huxley and T. J. McK. Daniels.

STEAMER "MT. VERNON."

Commanders, O. S. Glisson and A. G. Clary [commanding at different times]; Acting-Masters, J. W. Simmons and E. W. White; Acting-Assistant Surgeons, S. B. Hoppin and Joseph McKnight; Acting-Ensign, O. L. S. Roberts; Acting Assistant Engineers, J. H. Hosford and John Lardner; Acting-Master's Mates, G. C. Kellogg and Lloyd Rogers.

STEAMER "MAHASKA."

Lieutenant, N. H. Farquhar; Acting-Master, C. L. Moses; Assistant Surgeon, J. C. Spear; Acting-Assistant Paymaster, Chas. Fairchild; Midshipman, E. C. V. Blake; Engineers, B. B. H. Wharton, Elisha Harsen, Thos. Le Blanche, J. C. Stevens and E. L. Hewitt; Acting Master's Mates, N. W. Black, G. E. French, Thomas Smith and B. F. Trask.

STEAMER "SABAGO."

Commander, Daniel Ammen; Lieutenant-Commander, E. W. Henry; Acting-Masters, Benj. Dyer, J. F. Anderson, T. M. Gardner and W. H. Mallard; Assistant Surgeon, J. P. Quinn; Assistant Engineers, G. F. Savage, G. E. Tower, W. H. DeHart, O. W. Allison and J. A. Bullard; Acting-Master's Mates, Wm. Manning and E. D. Martin.

STEAMER "OCTORARA."

Lieutenant-Commander, George Brown; Acting-Master, L. G. Cook; Surgeon, James Laws; Assistant Paymaster W. S. Higbee; Midshipman, Chas. W. Tracy; Acting-Ensign, G. F. Hollis; Assistant Engineers, Jackson McElwell, E. J. Brooks, C. R. Morgan, J. G. Cooper and E. W. Clark.

STEAMER "WHITEHEAD."

Acting-Master, Charles A. French; Acting-Assistant Engineers, Morris Petersen and W. W. Baker.

STORE-SHIP "WILLIAM BADGER."

Acting-Master's Mate, Reuben Rich; Acting-Assistant Paymaster, W. M. Whittemore.

MORTAR SCHOONERS, "ARLETTA" AND "PARA."

FRIGATE "ST. LAWRENCE."

Captain, H. Y. Purviance, and Commander J. E. Schenck [at different times in command]; Lieutenant, H. F. Picking; Acting-Masters, G. L. Allyn, G. J. Murray and Wm. H. Smith; Second-Lieutenant of Marines, R. S. Collum; Acting-Master's Mates, John Fisher, V. W. Jones and T. W. Jones; Boatswain, J. A. Briscoe; Gunner, C. De Bevoise; Carpenter, J. A. Krim; Sailmaker, L. Rogers.

STEAMER "DELAWARE."

Lieutenant-Commander, S. P. Quackenbush; Assistant Surgeon, Lorenzo Traver; Assistant Paymaster, F. R. Curtis; Acting-Ensign, J. H. Kerens; Acting-Engineers, J. D. Williamson, T. J. Brown, A. Dunbar and James Mellen; Acting-Master's Mate, J. H. Springman.

SLOOP-OF-WAR "CUMBERLAND."

Commander, William Radford; Lieutenants, George U. Morris, T. O. Selfridge, and M. S. Stuyvesant; Chaplain, J. H. Lenhart; Acting-Masters, W. P. Randall and W. W. Kennison; Surgeon, Charles Martin; Assistant Surgeon, Edward Kershner; Lieutenant of Marines, Charles Haywood; Acting-Master's Mates, Henry Wyman, E. V. Tyson, Chas. O'Neil and J. M. Harrington; Boatswain, E. B. Bell; Gunner, Eugene Mack; Carpenter, W. M. Leighton; Sailmaker, David Bruce.

STEAMER "JOHN L. LOCKWOOD."

Acting-Masters, G. W. Graves and W. F. North; Acting-Assistant Engineers, J. T. Newton, W. W. Whiting and J. T. Miller; Acting-Master's Mate, Samuel Horton.

STEAMER "WACHUSETT."

Commander, Wm. Smith and Capt. T. A. Jenkins [commanding at different times]; Lieutenant-Commanders, C. A. Babcock and C. E. Fleming; Surgeon, J. H. Otis; Assistant Paymaster, F. K. Moore; Lieutenant Wm. Whitehead; Acting-Masters, Edm. Kimble, S. P. Lathrop and P. Leach; Midshipman, H. C. Tallman; Chief Engineer, W. C. Wheeler; Assistant Engineers, W. D. Pendleton, W. H. Messinger, C. J. Coney, H. Holmes and M. H. Knapp; Acting-Master's Mates, A. Ellwell, Wm. McCreary and C. A. Stewart; Boatswain, John Burrows; Gunner, Samuel Cross.

FRIGATE "CONGRESS."

Lieutenants, Joseph B. Smith and Austin Pendergrast; Acting-Master, Thomas Moore; Master's Mate, Peter J. Hargous; Pilot, Wm. Rhodes.

BARK "GEMSBOK."

Acting-Volunteer-Lieutenant, Edward Cavendy; Acting-Masters, J. E. Giddings, O. Thatcher, T. Werthoff and Samuel Very; Acting-Assistant Surgeon, Thomas Welch; Acting-Assistant Paymaster, E. H. Roberts.

SHIP "SUPPLY."

Commander, Geo. Colvocoresses; Assistant Surgeon, W. L. Wheeler; Paymaster, Edw. Foster; Acting-Masters, Zac. Kempton and J. D. Wood; Acting-Ensign, A. B. Axtell; Acting-Master's Mate, Peter Faunce.

STEAMER "STARS AND STRIPES."

Lieutenant-Commander, Reed Werden and Lieutenant, R. S. McCook [commanding at different times].

STEAMER "STATE OF GEORGIA."

Commander, J. F. Armstrong; Acting-Masters, A. D. Littlefield and J. J. Rogers; Acting-Assistant Surgeon, J. W. Hamilton; Acting-Assistant Paymaster, T. H. Haskell; Acting-Engineers, James Wilkinson, David Pyke, Wm. H. Miller, Thomas Nesbitt and J. D. Rogers; Acting-Master's Mates, J. T. Hughes and Isaac Halleck.

STEAMER "SOUTHFIELD."

Acting-Volunteer-Lieutenant, C. F. W. Behm; Acting-Master, W. F. Pratt; Acting-Assistant Engineers, George Ashby and James Kennedy.

STEAMER "SHAWSHEEN."

Acting-Volunteer Lieutenant, T. C. Woodward; Acting-Master's Mates, G. W. Barrett and G. C. Williams; Acting-Assistant Engineers, Richard Anderson and M. Smith.

STEAMER "PENOBSCOT."

Commander, J. M. B. Clitz; Lieutenant, F. M. Bunce; Assistant Surgeon, E. C. Ver Meulen; Assistant Engineers, T. J. Jones, Thos. Petherick, G. P. Wilkinson, G. W. Hall; Acting-Master's Mates, G. H. Smith, J. P. Semple, S. H. Daman, H. P. Edwards and S. K. Luce; Acting-Assistant Paymaster, Addison Pool.

STEAMER "PHILADELPHIA."

Commander, S. C. Rowan, Flag-officer; Acting-Master, Silas Reynolds, Commanding; Assistant Surgeon, Sam'l J. Jones; Carpenter, H. M. Griffith.

STEAMER "RESCUE."

Acting-Assistant Engineers, W. H. Capen and B. D. Mulligan.

STEAMER "UNDERWRITER."

Lieutenant, Alfred Hopkins and Lieutenant-Commander, Wm. N. Jeffers [commanding at different times]; Acting-Assistant Paymaster, Dan'l Harman;

Acting-Assistant Engineers, John Cohill, John Morse and John Whittaker; Acting-Master's Mates, Wm. K. Engell and Daniel Ward.

STEAMER "VALLEY CITY."

Lieutenant-Commander, J. C. Chaplin and Acting-Volunteer-Lieutenant, H. K. Furniss [commanding at different times]; Acting-Assistant Surgeon, F. E. Martindale; Acting-Assistant Paymaster, G. W. Moore; Acting-Assistant Engineers, Perry Short, James Hitchcock and B. Hildebrand; Acting-Master's Mates, C. W. Campbell, John Cullaton, H. Dickenson and T. Langton; Gunner, John Davis.

STEAMER "VICTORIA."

Lieutenant Commander, G. A. Stevens; Acting-Masters, Alfred Everson and H. A. Phelan; Acting-Ensign, W. H. Mayer; Acting-Assistant Surgeon, J. G. Parke; Acting-Assistant Paymaster, H. S. Bradford; Acting-Assistant Engineers, J. M. Barron, E. A. Hurd and T. D. Webster; Acting-Master's Mate, G. B. Howard.

STEAMER "CAMBRIDGE."

Commander, Wm. A. Parker; Acting-Masters, J. A. J. Brooks; W. H. Maies, F. W. Strong; Acting-Assistant Surgeon, Ezra Pray; Acting-Assistant Paymaster, J. C. Canning; Midshipman, C. L. Huntington; Acting-Engineers, G. B. Orswell, C. C. Pennington, S. B. Ellis, H. F. Hayden and James Powers; Acting-Master's Mate, W. F. Durgin; Gunner, W. Ferguson; Carpenter, T. D. Wilson.

STEAMER "CHOCURA."

Commander, T. H. Patterson; Lieutenant-Commander, R. F. Bradford; Assistant Surgeon, Charles Carter; Acting-Masters, P. S. Borden and T. B. Sears; Acting-Assistant Paymaster, E. L. Turner; Assistant Engineers, Z. Talbot, W. H. Harrison, Theo. Cooper and Andrew Blythe; Acting-Master's Mate, A. P. Atwood.

STEAMER "CURRITUCK."

Acting-Master, W. F. Shankland; Acting-Assistant Surgeon, Henry Johnson; Acting-Assistant Paymaster, L. S. Yorke; Acting-Assistant Engineers, Alfred Clum, W. H. Boreuin and Wm. Godard; Acting-Master's Mate, T. H. Strong.

STEAMER "COMMODORE PERRY."

Lieutenant-Commander, Charles W. Flusser; Acting-Masters, F. J. Thomas and W. B. Cushing; Acting-Assistant Paymaster, Henry Anderson; Acting-Assistant Engineers, J. W. Cross, J. L. Bowers and G. W. Richards; Acting-Master's Mates, R. Dolly, John Lynch and H. C. Webster.

STEAMER "CORWIN."

Lieutenant Commander, T. S. Phelps.

STEAMER "COMMODORE BARNEY."

Acting-Lieutenant, R. T. Renshaw; Acting-Master, J. R. Grace; Acting-Assistant Surgeon, G. R. Mann; Acting-Assistant Paymaster, Benj. Page; Acting-Assistant Engineers, Strong Conklin and Lemuel Albert; Acting-Master's Mates, J. Aspinwall, Jr., Wm. Betts, John Hill and C. Washburn.

STEAMER "COHASSET."

[Commander not found]; Acting-Master's Mates, Wm. P. Burke and Jacob Daggett; Acting-Assistant Engineers, Sidney Smith and Chas. Robinson.

STEAMER "CERES."

Acting-Volunteer Lieutenant, John Macdearmid; Acting-Master, G. B. Thompson.

STEAMER "A. C. POWELL."

Acting-Master's Mate, A. P. Matthews; Acting-Engineer Wm. Mahan.

STEAMER "W. G. PUTNAM."

Acting-Master, W. J. Hotchkiss; Acting-Assistant Engineers, James Osborne and John Henry.

STEAMER "YOUNG AMERICA."

Acting-Master, G. W. Graves; Acting-Assistant Engineers, James Hamilton, C. E. Rainer and W. B. Whitmore.

STEAMER "ZOUAVE."

Acting-Assistant Engineers, John Badgely and Isaac Buck.

NOTE.—The above list of officers is necessarily incomplete and not strictly correct, from the fact that the Navy Register for September, 1862, does not furnish the information usually given.

## CHAPTER XXXV.

### OPERATIONS OF THE NORTH ATLANTIC SQUADRON, 1863.

SUCCESSFUL EXPEDITION OFF YORKTOWN AND UP NEUSE RIVER. — LOSS OF "MONITOR." — GALLANT RESCUE OF GREATER PORTION OF "MONITOR'S" CREW BY THE "RHODE ISLAND." — SERIOUS LOSS TO THE GOVERNMENT. — OPERATIONS OF LIEUTENANT FLUSSER ON THE CHOWAN RIVER. — ATTACK ON PLYMOUTH, N. C. — THE "SOUTHFIELD" DISABLED. — ACHIEVEMENTS OF GENERAL J. G. FOSTER. — ARMY AND NAVY CO-OPERATE IN EXPEDITION AGAINST GOLDSBOROUGH, N. C. — LIEUTENANT CUSHING'S EXPEDITION AGAINST WILMINGTON PILOTS. — CUSHING CAPTURES A FORT AND PUTS ENEMY TO FLIGHT. — OTHER ADVENTURES. — LIEUTENANT FLUSSER'S EXPEDITION TO HERTFORD, N. C. — CONFEDERATES ATTACK FORT ANDERSON. — ASSISTANCE RENDERED BY GUN-BOATS. — ENEMY WITHDRAWS. — LETTER OF COL. BELKNAP. — GREAT HAVOC COMMITTED BY STEAMER "HETZEL." — VESSELS DISPATCHED TO OCCUPY NANSEMOND RIVER. — GUN-BOATS IN DEMAND. — LIEUTENANT LAMSON DISTINGUISHES HIMSELF AT HILL'S POINT. — CUSHING PREVENTS LONGSTREET AND FORCES FROM CROSSING RIVER. — REPULSE OF CONFEDERATES AT SUFFOLK. — GENERAL GETTY ACKNOWLEDGES MERIT. — THE "MOUNT WASHINGTON" FIGHTS HER WAY OUT OF MUD. — THE "BARNEY" ENGAGES ENEMY. — BRAVERY OF OFFICERS AND MEN. — NOBLE ACTS. — LIEUTENANT LAMSON RUNS HIS VESSELS UNDER ENEMY'S GUNS. — CAPTURE OF CONFEDERATE ARTILLERY. — COMMENDATION OF LAMSON AND CUSHING BY SECRETARY WELLES. — CAPTURE AND DESTRUCTION OF BLOCKADE-RUNNERS. — OPERATIONS IN SOUNDS OF NORTH CAROLINA. — CONFEDERATES INVEST WASHINGTON, N. C. BUT COMPELLED TO RETIRE. — GUN-BOATS ENGAGE AND SILENCE MANY BATTERIES ON PAMLICO RIVER. — NAMES OF OFFICERS AND MEN WHO RECEIVED COMMENDATIONS. — GENERAL SPINOLA'S TESTIMONY IN REGARD TO GALLANT CONDUCT OF NAVY. — LIEUTENANT FRENCH'S EXPEDITION. — IMPORTANT CAPTURES. — GENERAL DIX EVACUATES WEST POINT, COVERED BY GUN-BOATS. — EXPEDITIONS UP NORTH, YORK, AND MATTAPONY RIVERS. — CUTTING OUT OF CONFEDERATE STEAMER "KATE" FROM UNDER GUNS OF FORT FISHER. — ACTS OF BRAVERY DISPLAYED. — ATTEMPT TO DESTROY STEAMER "HEBE." — LIEUTENANT CUSHING "CUTS" OUT AND DESTROYS BLOCKADE-RUNNER "ALEXANDER COOPER." — DESTRUCTION OF THE "VENUS." — MISCELLANEOUS.

WHEN Acting-Rear-Admiral S. P. Lee succeeded Rear-Admiral Goldsborough in the command of the North Atlantic squadron there was not much left to be done except keeping up a strict blockade of the coast and keeping the Albemarle and Pamlico Sounds under subjection.

All the naval force of the enemy between Norfolk and Howlet batteries had either been destroyed or made its escape to Richmond, enabling the Navy Department to decrease the large force kept in and about Hampton Roads.

From September 1st up to January there was but little of moment to report in the North Atlantic squadron, beyond the operations in the sounds of North Carolina and the naval expedition under Commander Foxhall A. Parker, off Yorktown, which proved successful, the Navy being of much service to the Army contingent under General Negley; also a successful military expedition up the Neuse River under General Foster, in which the Navy participated, with much credit to its commander, Commander Alexander Murray.

On December 31st, 1862, the Government

met with a serious loss by the sinking at sea of the famous little "Monitor," which had set the huge "Merrimac" at defiance and driven her back to Norfolk. This was not only the great actual loss of a fighting vessel, but in addition there were associations connected with this little craft which made her name dear to every Union-loving man, and it was hoped by all those who had faith in her that she might be long permitted to float the flag of the Union at her staff and become a terror to its enemies. But it seems that she was only permitted to perform the great service for which she was built, an event that made her name as famous as that of the old "Constitution," and then she sank from sight in the depth of ocean, leaving behind her not as much of her hull as would serve to make a small memento of the past.

The "Monitor" left Hampton Roads in tow of the U. S. steamer "Rhode Island," on the 29th of December, 1862, at 2.30 P. M., with a light southwest wind, and clear, pleasant weather, with a prospect of its continuance. At 5 A. M., the next morning, a swell set in from the southward with an increase of wind from the southwest, the sea breaking over the pilot-house forward and striking the base of the turret, but not with sufficient force to break over it. But it was found that the packing of oakum under and around the base of the turret had worked out, as the "Monitor" pitched and rolled, and water made its way into the vessel, though for some time the bilge pumps kept her free.

The wind hauled to the south, increasing all the time, the vessel towing badly and yawing about very much. By 8 P. M., the wind began to blow heavily, causing the "Monitor" to plunge deeply, the sea washing over and *into* the turret, and at times into the hawse-pipes. Commander J. P. Bankhead, of the "Monitor," signalled several times to the "Rhode Island" to stop towing, in order to see whether that would prevent the influx of water into his vessel, but she only fell off into the trough of the sea and made matters worse, the water coming on board so rapidly that it became necessary to start the centrifugal pumps.

It was quite evident to many on board that the last days of the "Monitor" had come unless the wind should abate and the sea go down, which did not seem at all likely; but the enthusiasm of the commander, officers and men kept them at their posts until it became necessary to signal to the "Rhode Island" for assistance, which was promptly given. The officers and men of the "Rhode Island" (Commander Stephen D. Trenchard) did not hesitate to jump into their boats in that tempestuous weather and go to the relief of their comrades. The Commander

of the "Monitor," in order to keep his vessel afloat as long as possible, cut the large cable by which she was towed and ran down to the "Rhode Island," which enabled him to use all the pumps.

Two boats reached the "Monitor" from the "Rhode Island," and the Commander ordered Lieutenant S. Dana Green (who had been first-lieutenant during the fight with the "Merrimac") to put as many of the crew in them as they would safely carry. This was a very dangerous operation, and it brought into play that cool courage which is more admirable than that shown in battle. A heavy sea was breaking entirely over the deck and there was great danger of the boats being crushed by the overhang, if not pierced by the sharp prow which was first high above the waves, then completely submerged by the crushing billows. The "Rhode Island" herself was in great danger, as she was lying close by and liable at any moment to be struck by the "Monitor's" bow.

THE "MONITOR" LOST IN A GALE.

The first two boat-loads safely reached the "Rhode Island" amid the storm and darkness, and again returned on their mission of mercy to rescue the remaining persons, the vessel being most difficult to find in the gale. In the meantime the captain and the remnant of his crew retired to the turret and there held on, though several of the men were washed overboard and lost. Fortunately the vessel was on soundings, and the captain gave the order to let go an anchor in hopes it would bring the "Monitor's" head to wind, and that the chain would hold her there long enough to get the crew out. At this moment the water was over the ash-pans and increasing rapidly, and the engine-room had to be abandoned.

Fortunately the "Monitor" came head to wind, when the cable brought her up. By this time the vessel was filling rapidly, the deck was on a line with the water, and all the men left on the turret were ordered by

the captain to gain the deck and endeavor to reach the two boats that were again approaching. At that time there were twenty-five or thirty men left on board.

The boats had to approach the "Monitor" very carefully. She was as dangerous as a reef of rocks just above the water over which the sea was breaking furiously. Several men were washed overboard in their attempt to reach the boats, and only one of them was picked up. With great difficulty one of the boats succeeded in getting into a position where a number of the crew could get into her, but there were several persons still on the turret who would not come down, either being unmanned, or not supposing the vessel would sink so soon. These went down in her.

The captain had done all a good officer could do to save his vessel and his crew. He had stood at his post like a hero, helping the men into the boats, and now finding that he could be of no more use he jumped into the already deeply laden boat and shoved off, the heavy, sluggish motion of the "Monitor" giving evidence that she would soon go down.

The boats had scarcely reached the "Rhode Island" when the gallant little craft that had done so much to save the honor of the nation, and had by her one battle destroyed the prestige of the best fighting ships in Europe, sank to the bottom, the wild winds howling a requiem over her resting-place!

While regrets remain that not all her crew were saved (many of whom had served in the fight with the "Merrimac"), it is wonderful, considering the dangerous condition of the "Monitor," that so many were rescued.

In mustering the crew of the "Monitor," on the deck of the "Rhode Island," two officers and twelve men were found to be missing. All honor to their memories! Two great battles had they fought in a short time, one with the Confederate monster, the other with the wrath of the ocean, and in both cases had they shown that indomitable courage and skill which are among the highest attributes of the American sailor.

There was no instance during the war where greater courage, skill and coolness were exhibited than on this ever-to-be-remembered occasion, and it is due to the officers and men of the ill-fated "Monitor" that this small tribute should be paid them for standing so manfully by the historic vessel which had added some of the greenest laurels to the fame of the American Navy.

The position of the vessel on that dark and tempestuous night was enough to appall the stoutest heart, but neither officers nor men quailed before the danger which seemed to cut off all hope of rescue. Lieutenant S.

Dana Greene and Acting-Master L. N. Stodder stood by Commander Bankhead to the last, and Acting-Master's Mate Peter Williams, and Richard Anjier, Quartermaster, showed conduct entitling them to all praise. The quartermaster remained at his post until the vessel was sinking, and when ordered by the captain to get into the boat, said, "No, sir, not until you do so."

This may seem to be a long and tedious description of an event the like of which happens so often in peace or war, and frequently without grave comment; but the "Monitor" was an historic vessel whose name and fame should be handed down to posterity, and as the memorable event of her great battle is known to almost every school-boy, it is but fitting that the story of her tragical end should be told also.

One of the boats of the "Rhode Island," which had been successful in taking off a load from the "Monitor," was driven off by the storm and supposed to be lost. Search was made for her all the following day, but without success, and she was given up. But, fortunately, after many perils, she was picked up by the schooner "Colby," of Buckport, Maine, and restored to the steamer "Rhode Island." The poor fellows in this boat suffered great hardships, and their adventures would form by themselves an interesting chapter of incidents.

Lieutenant-Commander Flusser, so prominent under the command of Rear-Admiral Goldsborough, continued to hold his reputation under Rear-Admiral Lee. He was a terror to the marauding troops of the enemy, who made a note of all his movements.

On December 9th, 1862, he left Plymouth to operate on the Chowan River, leaving the "Southfield," Acting-Volunteer-Lieutenant C. F. W. Behm, to protect the place. He had not much more than started when the enemy appeared and commenced a heavy musketry fire from the shore. Lieutenant Behm immediately beat to quarters and trained his guns so as to command the Plymouth shore. The river-bank was lined with people flying before the Confederates, who were firing alike on friend and foe, and it was difficult for the "Southfield" to open fire, for fear of harming those citizens who had proved themselves friendly and favorable to the Union cause. The steamer immediately got underway and stood up the river where her guns could be brought to bear upon the enemy, who now opened upon her with their artillery, and succeeded in putting a shell through her steam-chest and filling the gangways and hold so full of hot steam that the powder-passers could not get to the magazines. Of course, the "Southfield" could no longer use her guns, and the boats had to be lowered to tow

her down the river. In the meantime the enemy committed all the mischief possible and then decamped.

Lieutenant-Commander Flusser hove in sight a short time after, and taking the "Southfield" in tow returned to Plymouth, where his presence restored confidence and quiet.

Thus the Confederate marauding parties continued, on every favorable opportunity, to molest the citizens in the sounds of North Carolina, determined that no loyal feeling should exist among them, or, if it did, that the citizens should pay the penalty for their allegiance to the North. The mistake of the Navy Department at that moment was that it did not keep a larger force of vessels in the sounds to gain the confidence of the inhabitants and secure them against the raids of the Confederate troops.

COMMANDER (AFTERWARDS CAPTAIN) J. P. BANKHEAD.

One of the most energetic of the military commanders in this neighborhood was General J. G. Foster, who was always on the alert to circumvent the enemy in his movements.

The war in North Carolina was not prosecuted on a scale that could accomplish any decisive results. The military force in that region was only sufficient to keep down the Confederate raids, which were made with forces consisting of five or six hundred men. These seldom accomplished anything beyond oppressing the inhabitants of towns along the rivers where Federal troops were stationed, covered by the gun-boats. Notwithstanding the apparent insignificance of these small bands, if they could have united they would have driven the Federal troops out of the country. The difficulty of the Confederates was that the naval vessels

were always at hand, and they had received so many proofs of the effectiveness of their "batteries" that they seldom attacked the military posts except in the absence of the gun-boats.

General Foster was fully alive to the value of the naval branch of the forces, and availed himself on all occasions of its services. In December, 1862, he planned an attack upon the Confederate fortifications of Kinston and the railroad at or near Goldsborough, and asked the co-operation of the naval flotilla, at that time commanded by Commander A. Murray.

The following gun-boats were assigned to this expedition: "Delaware," Acting-Volunteer-Lieutenant A. P. Foster; "Shawshen," Acting-Volunteer-Lieutenant T. C. Woodward; "Lockwood," Acting-Master G. W. Graves; "Seymour," Acting-Master F. S. Wells, and the Army transports, "Ocean Wave," Major Uliam; "Allison," Gunner, E. A. McDonald, U. S. N.; "Port Royal," Acting-Master G. B. Thompson, U. S. N.; "Wilson," Captain Rodgers, and "North State," Captain Berry.

This flotilla left Newbern on the evening of the 12th of December. The "Allison," "Port Royal," "Ocean Wave" and "Wilson" were in the advance, under Colonel Manchester of the "Marine Artillery," with orders to push ahead and reconnoitre, and in case of an attack, or the discovery of the enemy's batteries, to fall back on the heavier vessels.

Colonel Manchester, in charge of the military expedition, anchored his steamers for the night and made preparations to ascend the Neuse River. At daylight next morning he got underway and with great difficulty forced his way up to within two miles of Kinston, meeting with but slight opposition from the guerilla bands which infested that neighborhood, and only losing one man.

About two miles from Kinston the officers of the vessels, on turning a bend, suddenly found themselves faced by a 10-gun battery, while they were penned within the river with a space of only a hundred feet in which to move their boats. The "Port Royal," "Ocean Wave" and "Wilson" were ordered to back out, and the "Allison" was interposed between them and the battery, which now opened a rapid fire. It took some minutes to back the vessels down the river, it was so narrow. The "Allison" replied to the enemy's fire with her Parrott gun, the first fire being within canister range. Three shells were exploded within the enemy's batteries with good effect and the Confederates were silenced.

It was sunset when the firing commenced, and darkness came on so rapidly that the vessels could hardly see their way, the enemy's shell exploding around them all the

time. The "Allison" received three shells in her upper works. The vessels dropped behind the bend of the river and there anchored in double line, hay, beef, bread, etc., being packed along the sides; the guns put in battery ready for service, and bags of oats spread over the decks. In this manner the commander of the expedition waited until daylight, in expectation of an attack from the enemy, who could move about unseen and ascertain where the flotilla was stationed. Several attempts were made at early morn to reconnoitre the position, but the enemy were driven off by the fire of the Federal outposts.

The active force had to return down the river, owing to the falling water, and half the night was spent in hauling over the steamers that had grounded in the mud. After proceeding about five miles, Colonel Manchester heard of a force concentrating about a mile below, with the intention of disputing his passage. The "North State" was sent ahead to ascertain the enemy's position, while the other vessels followed prepared to shell them out. A mile further on, the flotilla was attacked by sharpshooters, who kept up a galling fire during the next five miles.

At a place called Old Dam the enemy had assembled in force, with the intention of obstructing the river, and both banks seemed to be well manned with sharpshooters. The position of the Confederates was well chosen, as they were enabled to rake the vessels with artillery as they turned the river-bend. The steamers now underwent a running fire from unseen foes, to which they answered as best they could with grape and canister, and with such good effect that the last gun-boat could find nothing to fire at. The distance of the gun-boats was from one to two hundred feet from the Confederates and their guns did serious injury to them.

The vessels were much shattered by shot and falling trees, but by good luck and good management they worked their way out of the net in which they had injudiciously become entangled. Yet these were the services in which both Army and Navy were called upon frequently to embark, where, in nine out of ten times, the loss and capture of the expedition might have been counted upon. Fortunately, in this expedition, only two men were killed and six wounded.

Commander Murray says, in his report: "This expedition was partially strategic and was very successful. The attack on the batteries and the falling-back of the light boats, the shelling of the woods, and the feint to land a force on the north bank, had the desired effect." [!]

What the desired effect was, history does not say, and it seems to the writer that this

was simply an expedition where men's lives were sacrificed without any apparent good. The Army was frittering away its forces in these small attempts to score a point, while the true course to pursue would have been to concentrate all the troops, drive the enemy out of the State of North Carolina, tear up the railroads leading to Richmond, and destroy all the means of subsisting an army in the State.

Though it may have been said that the Federals held North Carolina, yet it was by a most precarious tenure; and this section, which should in the beginning have been completely conquered, remained simply a skirmishing-ground for the contending forces throughout the war.

On January 5th the indefatigable Lieutenant Cushing started on an expedition to capture some Wilmington pilots, and having heard that there was a pilot station at "Little River," thirty miles below Fort Caswell, he made sail for that point, and reached it on the morning of January 5th, 1863. He crossed the bar at 8 o'clock at night with twenty-five men, in three cutters, and proceeded up the river. He was in hopes of finding pilots above and also some schooners.

About a mile from the mouth of the river the expedition received a volley of musketry from a bluff on the left. Cushing beached his boats the moment he was fired upon, without returning the fire, and formed his men about 200 yards from the point of attack, and gave the order: "*Forward—double-quick—charge!*"

The fearless fellow never stopped to consider whether he was charging fifty men or a thousand. It seemed immaterial to him, when his blood was up, how many of the enemy faced him; and his men, inspired by his intrepid example, followed him without hesitation.

There was a wood in front of the charging party, through which they passed, and on getting into the clearing Cushing found himself before a fort plainly to be seen by the light of the camp-fires, which were burning freely. Knowing that the enemy were ignorant of his numbers, he charged with the bayonet, giving three cheers, and as he went over one side of the works the enemy went out of the other.

The fort was an earthwork surrounded by a ditch ten feet wide and five deep, with a block-house inside pierced for musketry. No guns were mounted on the work. If there had been, the daring and impetuosity of the attack would have captured them. The enemy left in such haste that all their clothes, ammunition, stores, and the larger portion of their arms were left in the hands of the sailors, and all that could not be brought away was destroyed.

Notwithstanding that there was a possibility of the enemy returning with increased numbers, Cushing pushed on up the river, where he met another party of Confederates, and a skirmish took place in which the sailors used up all their ammunition and had to return to their boats, with only the loss of one man.

This was not an important affair, but it is selected as showing the indomitable courage of a young officer who received a share of honor during the war that seldom falls to the lot of one holding so subordinate a position; his performances in the face of the enemy had already attracted the notice of his commander; and, finally, the Government, having confidence in his valor and judgment, intrusted him with duties of a hazardous character, which he always performed with credit to himself.

Not to be outdone by Cushing, that gallant and efficient officer, Lieutenant-Commander Flusser, started on the 29th of January for Jamesville, hearing that a regiment of Confederates were fortifying that place, it being one of the best points on the river for annoying the gun-boats; and was too important a position and too near Plymouth to allow the enemy to hold it.

On the 30th, Flusser took on board his vessel (the "Commodore Perry") fifty soldiers of the 27th Massachusetts, under Captain Sanford, landed them at Hertford with about ninety sailors, marched into the country eight or ten miles, destroyed two bridges over the Purquimenous River, and returned that same night to Plymouth. Thus was cut off one of the means by which the enemy had supplied themselves with goods from Norfolk and Richmond, by the south side of the Chowan River, enabling the Navy to guard that ford with a gun-boat; for a large amount of contraband traffic had been carried on from the Albemarle Sound and its rivers by means of small boats which kept along the shore and could slip into the small creeks if a gun-boat hove in sight.

These little expeditions, though not very damaging to the enemy, showed the spirit of the naval officers and their determination to give the enemy no rest.

On the 14th of March, 1863, the Confederates made an attack on Fort Anderson, a work built by the Union troops opposite Newbern, and occupied by a regiment of volunteers. The enemy bombarded the works with field-pieces, and kept up the fire all night. In the morning they made a spirited attack in force, with masked batteries on the right. The gun-boat "Hunchback" and an armed schooner were brought up to strengthen the Federal position; when Lieutenant-Commander McCann, bringing his batteries to bear, and keeping up a well-

directed fire, with the aid of the schooner, silenced the enemy's guns.

There was an intermission of an hour on the enemy's part, who made a demand for the surrender of the fort; but this was evidently to give them time to bring up more guns. (The fort had no guns mounted.) Perceiving that their demand received no attention, they brought up fourteen more guns and renewed the attack, the "Hunchback" and armed schooner throwing in their shells until the enemy drew off. Before doing so, they were attacked by the gun-boats "Hetzel" and "Shawsheen," which vessels, being in a disabled condition, had to be towed into action by tugs.

The firing of the Federal vessels was excellent, and so well aimed were their guns that the enemy was unable to use his artillery with much effect. The "Hunchback" was only struck twice, but the schooner was placed in a sinking condition.

Had it not been for the prompt assistance rendered to Fort Anderson by the gun-boats, it would certainly have fallen into the enemy's hands. From the fact that the Army undertook to hold several places with skeleton regiments and few or no guns, it required the utmost watchfulness on the part of the Navy to prevent disastrous results.

This affair was a surprise on the part of the Confederates, for which the Union troops were not at all prepared, and they thanked their stars that so watchful a friend as the Navy was at hand to succor them in their hour of need. The Army were not unmindful of the service rendered by the Navy on this occasion, and their feeling of gratitude is well expressed by Colonel J. C. Belknap, as follows:

HEADQUARTERS FIRST BRIGADE, }  
WESSEL'S DIVISION, }  
NEWBERN, N. C., March 15, 1863. }

COMMODORE—When, on the 14th of March, 1863, General Pettigrew, with eighteen pieces of artillery and over three thousand men, made his furious assault on Fort Anderson, an unfinished earth-work garrisoned by three hundred men of my command (the 92d New York Volunteers), the capture or destruction of the brave little band seemed inevitable, but the gun-boats under your command, the pride of loyal men and the terror of traitors, came promptly to the rescue.

Your well-directed fire drove the enemy from the field, covered the landing of the 85th New York, sent to the relief of the garrison, and the repulse of the rebel army was complete.

Allow me, Commodore, in the name of the officers and members of my command, to express to you my admiration for the promptitude and skill displayed by your command on that occasion.

The Army is proud of the Navy.  
I remain your most obedient,

J. C. BELKNAP,  
Colonel 85th Regiment, New York Volunteers,  
Commanding 1st Brigade.

COMMANDER DAVENPORT,  
Newbern, N. C.

The steamer "Hetzel" committed great

havoc among the enemy on this occasion by the accuracy of her fire. One of her shells struck a Parrott gun and destroyed it; bursting, it killed a number of the enemy, scattering their bones and fragments of their clothing over the ground.

The army on the Newbern side of the river had to be lookers-on during this fight, and could give no assistance to their comrades, consequently it was altogether a naval affair; but no one doubted what the result would be when they saw the rapidity and accuracy of the naval fire. In this action the revenue-cutter "Agassiz" also took part at close quarters, embarrassing the enemy in his retreat.

As the enemy retreated, the gun-boats "Lockwood" and "Allison" hung upon his rear for ten miles up the river, inflicting severe punishment; all these gun-boats, be it understood, being flimsy vessels, that could not encounter a moderate gale of wind at sea without danger of foundering.

This was one of the most gallant affairs that had occurred in the North Atlantic squadron since Rear-Admiral Lee took command, and was an instance of how necessary was the aid which the Navy stood always ready to afford the other branch of the service. Moreover, it was not an assistance that was sought by the Army, but one which the Navy anticipated by being on hand at the right moment.

In April the Confederates seemed to be making more zealous efforts to obtain a firm footing in North Carolina, and the naval officer in command of the Sounds urged the commander of the North Atlantic squadron to increase his flotilla, suggesting that, if the Army also was not re-enforced, that the Union forces would be driven out of the State.

The policy of keeping small detachments of troops at the different towns on the rivers, with the gun-boats to look after them, had no permanent effect towards bringing the State under subjection, for the roving bands of Confederates were ever on the alert to gain some advantage over the Union forces, which may be said to have been kept penned up under the protection of the gun boats.

About the same time the enemy seemed to be making a move upon Williamsburg, Va., and on the morning of April 11th they attacked that place, and commenced concentrating a heavy force on Fort Magruder, which was not far from Williamsburg.

Gun-boats were immediately required by the Army to move up and down between Yorktown and Queen's Creek, and also to lie near Jamestown Island. Every effort was made to comply with the demands made upon the Navy, and on an announcement being made to Rear-Admiral Lee by

General Peck that the enemy were advancing in an attempt to surround the Federal forces at Suffolk, the Admiral dispatched the following vessels under the command of Lieutenant R. H. Lamson, with instructions to occupy the Nansemond River between Suffolk and the bar, at the mouth of the western branch, and to render all possible assistance to the Army:

"Mount Washington" (river steamer), with a 30-pounder Parrott, 3 howitzers, and a detachment from the "Minnesota."

"Cohasset" (tug), 20-pounder Parrott and a 24-pound howitzer.

"Alert" (tug), one 12 and one 24-pound howitzer.

"Stepping Stones" (light ferry-boat), with a battery of howitzers.

The "Commodore Barney," Lieutenant W. B. Cushing, was also detached from other duty and sent to Jamestown Island.

COMMANDER (AFTERWARDS REAR-ADMIRAL) STEPHEN D. TRENCHARD.

The above list of vessels will show to what shifts the Navy was put to meet the calls made upon it by the Army. Gun-boats were called for everywhere, and these demands were more than the naval commander could comply with.

On the 11th, Major-General Keyes telegraphed that the Federal troops in the neighborhood of Williamsburg were being driven by a large force of Confederates down towards the mouth of Queen's Creek, and that, if a large force of gun-boats was not sent to Yorktown, even Yorktown itself might fall. The "Commodore Morris" (the only available vessel) was sent immediately to the York River to co-operate with the "Crusader," then there.

Any one can imagine the embarrassment the commander-in-chief labored under to satisfy all these demands, first in the Sounds,

then on the Nansemond, James, or York rivers. After all, most of these gun-boats were merely improvised for the occasion, and the Army transports, armed with field-artillery, would have answered the same purpose. But the soldiers were not used to managing steamers up the narrow streams or handling guns behind the frail bulwarks of wooden gun-boats. Only sailors could do that kind of work, and the Army were only too glad to have them do it.

During the demonstrations made by the enemy on this occasion there was much hard service performed, frequent attacks from and repulses of the enemy. Some clever young officers were employed in this service, among them Lieutenant Lamson and the indomitable Cushing—both brave, energetic men—Lamson with the capacity of one older and more experienced, and Cushing with dash and vigor never exceeded. Lamson especially distinguished himself by planning, and with the co-operation of troops under Brigadier-General Getty, effecting the capture of five guns and 130 men on Hill's Point. This position commanded the communication between the Upper and Lower Nansemond, and the Confederates had, from it, greatly harassed the flotilla. Here Lamson captured a 24-pound howitzer and the sword of the Confederate commander.

Lieutenant Cushing again, on this occasion, exhibited those high qualities which he was known to possess in so remarkable a degree, being in a fight of some kind from the time the expedition came in sight of the enemy until the latter retreated.

The enemy's forces were under the command of General Longstreet, a brave and able officer, who with 10,000 men on the left bank of the river and a large force on the right bank, including strong field and siege batteries, was attempting to combine his forces and surround General Peck at Suffolk.

It was Cushing who prevented the Confederates from crossing the river, and kept up the communication with the Union troops. The enemy were given no rest by the flotilla. They were frequently driven from their rifle-pits, but continually returned to them with indomitable courage whenever the fire of the gun-boats slackened for a moment.

While Cushing was operating with his vessel, he also kept pickets on shore to prevent a surprise, and a party of these men captured the engineer-in-chief on the staff of the Confederate General French, who had come down near the gun-boats with the intention of locating batteries.

General Peck and General Getty both relied very much on the aid of the Navy in repulsing the Confederate attack on Suffolk, and they were largely indebted to the officers

and men of the vessels for the hearty co-operation which they afforded, either by scattering the enemy with their guns or carrying the batteries on shore by assault. This latter work was done on several occasions in the most handsome manner, the assaulting party being always led by Lieutenant Lamson. General Getty, that brave old soldier, who never failed to acknowledge merit when it came under his notice, was profuse in his acknowledgments of Lieutenant Lamson's conduct in the management of the flotilla.

It would require too long an account to tell the whole story of this expedition, where fighting was carried on from the 12th of April to the 23d, where the sailors took their share of the fighting on shore, and where the gun-boats, under the incessant fire of the enemy, were nearly knocked to pieces.

But General Getty shall speak for himself. On April 20th he writes as follows:

HEADQUARTERS, 3D DIVISION, 9TH CORPS, }  
U. S. S. "STEPPING STONES," }  
NANSEMOND RIVER, April 20th, 1863. }

ADMIRAL :

I beg to express my most sincere thanks to Captain Lamson, U. S. N., his officers and crews, for the gallantry, energy and ability displayed by them in the operations of yesterday, resulting in the capture of one of the enemy's batteries of five guns, on the west side of the Nansemond, and a number of prisoners.

All did their duty most handsomely.

Very respectfully, etc.,

GEORGE W. GETTY,  
Brigadier-General, U. S. Volunteers.

REAR-ADMIRAL LEE.

Also the following letters:

U. S. GUN-BOAT "STEPPING STONES," }  
SLEEPY HOLE LANDING, }  
NANSEMOND RIVER, April 21st, 1863. }

ADMIRAL :

I have again to express my obligation to Lieutenant R. H. Lamson, commanding gun-boats in upper Nansemond, for the admirable disposition of gun-boats during the withdrawal of the troops, etc., last night, from Hill's Point, and for the efficient aid rendered by him, his officers and crews in effecting the withdrawal, which was successfully accomplished, the last man having recrossed the river at 12 o'clock.

All was accomplished without confusion or accident.

The artillery, trophies, material, etc., have been landed from the "Stepping Stones" at this point, and are now on the way to Suffolk.

The prisoners were landed on the right bank of the Nansemond immediately after the battery was carried, and sent to Suffolk.

I remain, Admiral, etc., etc.,

GEORGE W. GETTY,  
Brigadier-General, etc.

To REAR-ADMIRAL LEE, etc., etc.

HEADQUARTERS 3D DIVISION, 9TH CORPS, }  
IN THE FIELD, }  
NANSEMOND RIVER, April 29th, 1863. }

ADMIRAL :

I deem it proper to state that all the arrangements made by Captain Lamson, U. S. N., commanding gun-boats in the upper Nansemond during the operations of the 19th and 20th instants, were fully known to and approved by me.

The conduct of Captain Lamson, his officers and men, was bold and gallant in the extreme.

I remain, Admiral, etc.,

GEORGE W. GETTY,

*Brigadier-General, Commanding.*

REAR-ADMIRAL S. P. LEE, etc., etc.

The operations to which these brief letters alluded were those which took place between April 12th and April 23d, in which Lieutenant Lamson, commander of a small flotilla, co-operated with Generals Peck and Getty for the protection of Suffolk, Virginia.

During this time the fighting was hard and incessant, and but for the aid of the naval force Suffolk would, without doubt, have fallen into the hands of General Longstreet, who, with a large army, attempted unsuccessfully to cross the river and surround the Union works.

That little fleet of gun-boats was under a constant fire for days without once flinching from the post of duty. Often grounding while under a heavy pelting from the enemy's field-pieces (which seemed to know no fatigue), they were almost cut to pieces. The commander expressed it, in his modest way, when he on one occasion said: "The enemy soon obtained our range, and his artillery told with fearful effect on the timbers and machinery of these lightly-built vessels." But his reports all end with a cheering account of having silenced the enemy's batteries, and scattered the sharpshooters.

One who knows anything about such matters can imagine what targets these *quasi* gun-boats must have been to Longstreet's well-trained gunners, and how hardly pummelled these veterans must have been, when they were obliged to retreat again and again before the well-directed fire of these "paper-clad" vessels.

The Confederate artillery was no sooner silenced in one position than it opened from another upon the vessels, which had not the option of choosing their position in these narrow rivers. At times they would lie in the mud, bow on to the enemy, who was too intelligent not to take advantage of their apparently helpless condition. But, with a brave energy that never flagged, Lamson would hoist his guns to the upper or hurricane deck, without considering whether the deck would bear their weight, and open fire upon the enemy until they were driven off.

The guns so mounted were often struck by the expert artillerymen of the enemy, and the decks were plowed up by their shot and shell; but the gun-boats never gave in, and only changed their positions for the purpose of bringing more guns to bear.

The Confederates would yell with delight when they could get one of the larger ves-

sels, like the "Mount Vernon," fast in the mud, where they could bring all their artillery and sharpshooters to bear on her; but the "Stepping Stones," or some other spirited little craft, would get alongside, and tow her into deeper water, and receive without flinching the shot and shell intended for her helpless companion.

General Getty might well say that the officers and men did their duty. From such a liberal old soldier, as he was, this was but faint praise. It may be that the Army commanders considered brevity to be a virtue when dealing with such matters, for, as a rule, the Army was not eulogistic of the Navy at any time during the war. We should not attach much importance to the mere brevity of these dispatches, for sometimes much may be expressed in a very few words; but the "Records of the War" show to-day that, on almost all occasions where the Army and Navy co-operated, the reports of army operations were very voluminous, and even concerning points which could not have been held except by the guns of the Navy, the Army came in for the largest share of praise.

An affair which occurred on the 14th of April in the Nansemond River, where Lieutenant Lamson in the "Mount Washington," and Acting-Master T. A. Harris in the "Stepping Stones," fought the enemy's batteries for six hours under the most adverse circumstances, was one of the most gallant affairs of the war.

The reports of these actions are long and voluminous, and only a condensation of them can be given in this history. But they can all be found in the Report of the Secretary of the Navy for 1863, where may be seen the most faithful and interesting account of these events that has yet been written; in fact, a better story of the doings of the Navy throughout the war is given in these official reports than any historian can ever compile. They were written by the men who did the work; and who can so well describe, not only the acts that were done, but the motives that inspired them?

Now and then a paragraph forcibly strikes our attention, and, though it lengthens this work beyond bounds, we cannot leave it out. On the 14th, when the "Mount Washington" was fighting her way out of the mud, and was getting out hawsers to bring her broadside to bear, Lamson says:

\* \* \* The hawser slipped, and the channel being so narrow, she was obliged to run down some distance before she could turn, when the enemy's artillery was again turned on the "Mount Washington." Captain Harris soon ran up to me again, and I was towed out of the enemy's range. The "Barney" still remained engaging the enemy, and continued to fire till their artillery ceased and withdrew.

Towards the close of the action the "Mount Washington's" flag-staff was shot away even with

the upper deck, when Mr. Birtwistle and seaman Thielberg assisted me to haul it up out of the water by the ensign halliards, raise it, and lash it alongside the stump.

And further—

I cannot find words to express my admiration of the courageous conduct of my officers and men, who fought the guns for six hours, aground in a disabled vessel, under such a fire of artillery and musketry, and who did not flinch even from working a gun on the open hurricane deck, or from going out in boats to carry hawsers. I wish through you to express my thanks to Captain Haynes, of the "Mount Washington," and his executive officer, Mr. Griffith, who nobly refused to leave the vessel when his crew were sent away, and who rendered the most valuable assistance during the action.

Master's - Mate Birtwistle, of the "Minnesota," behaved in the most gallant manner, and I respectfully recommend him to you as a most brave and efficient officer.

There was much heroic conduct displayed on this occasion:

A seaman, Joachim Sylvia, was instantly killed and knocked overboard by a shell from the enemy, when Sammel Woods, captain of the gun, jumped overboard to rescue the body, but, before he reached it, it sank to rise no more. This gallant seaman then swam back to the vessel, went again to his gun, and fought it to the close of the action, in a manner that attracted the attention of every one.

How many noble acts of this kind occur in war without any notice being taken of them! The smaller glories are swallowed up by the greater and apparently more brilliant events, while, if the aggregate minor affairs were summed up, they would show an amount of gallantry far outweighing that of some of the grandest sea-fights.

We would gladly chronicle all these little events, but our space will not permit it. It is seldom that the sailors, who are so much exposed, have their names handed down in history, and it is a mistake commanders of vessels commit in failing to notice the gallant tars who, in all the wars which the United States has had with foreign nations, have performed acts of heroism that could not be excelled by the bravest officers.

Lieutenant Lamson shows a praiseworthy example by commending the deeds of his gallant sailors as well as those of his officers. Henry Thielberg, Robert Jourdan and John Sullivan, seamen; Robert Woods, boatswain's-mate; Quartermaster De Lunn; Third - Assistant Engineer, John Healey; William Jackson and James Lody (both colored), are all handsomely spoken of. They, no doubt, received medals (the highest reward a sailor can aspire to), but let their names go down in history as part of the gallant band who so nobly sustained the reputation of the Navy on April 14th, 1863, the anniversary of the day when Sumter, battered and torn, had to lower her flag to those who gave the first stab to our free institutions.

Another one of the events of this expedition, which General Getty alludes to, oc-

curred on April 19th, when Lieutenant Lamson received on board the "Stepping Stones" a portion of the 89th New York Volunteers, under Lieutenant-Colonel England, and the 8th Connecticut, under Colonel Ward, the whole consisting of 300 men. Lieutenant Lamson had four 12-pound howitzers ready for landing, manned by sailors.

Near 6 o'clock A. M., at a preconcerted signal from the steam-whistle, a heavy fire was opened from all the gun-boats on the Confederate batteries, and from General Getty's two batteries on Colham's Point, opposite, under Captains Morris and Valler, U. S. A.

When all was in position, Lamson steamed slowly down the river, as if about to run the batteries (which he had done several times before), until he got nearly abreast of the enemy's works, when he signalled to the gun-boats and Federal batteries to cease firing, and putting his helm hard-a-starboard, ran into the bank immediately under the upper end of the enemy's works, and so close to them that the Confederates could not bring a gun to bear. The screens that had been used to hide the troops were triced up, gang-planks were launched, and with a cheer from all the boats and Union batteries the 89th New York rushed ashore, followed by the naval howitzer-battery and the 8th Connecticut.

The Confederate works consisted of two lines, with an impassable ravine between them. The Federal troops carried the first line at once, but while the 89th New York were running around the head of the ravine, the enemy swung round some of their guns, and poured a charge of grape into the assaulting party, which was immediately answered by a discharge of canister from the naval battery, that had been judiciously planted on the crest of the ravine, overlooking the inner line of defences. The brave 89th were into the works by this time, and the Confederates did not fire another shot.

The victory was a complete one. The Federals captured 161 prisoners and 5 pieces of artillery (12 and 24 pound field-guns, captured by the Confederates at Harper's Ferry or from Western Virginia), with a large amount of ammunition. Not a Confederate escaped.

Owing to the decisive charge made upon the enemy and the fortunate position occupied by the naval battery, the loss to the Federal side was small; but never was there a better commanded affair, and Lamson gives due credit to those of his officers and men who were engaged in it.

Though the work of the Navy in this affair is lightly spoken of by the Army authorities, the Secretary of the Navy saw in it something worth noticing, and he

issued the following communication, which in part repaid Lieutenant Lamson for the hard work he had performed throughout the campaign:

NAVY DEPARTMENT, April 4, 1863.

SIR—Your recent important and meritorious services on the upper Nansemond deserve the special commendation of the Department. The ability displayed in the discharge of the important and responsible duties which devolved on the naval force during the late demonstration of the enemy reflected the greatest credit upon yourself and the officers and men under your command. Their zeal and courage in the hazardous positions in which they were placed have not failed to receive the approbation of both the naval and military authorities.

General Getty, with whom you have been co-operating, has expressed his obligations to you and your command for gallantry and energy displayed, especially in the capture of a rebel battery on the Nansemond, and for valuable assistance rendered to him during his operations in repelling the enemy; and your immediate commanding officer, Acting Rear-Admiral Lee, has reported in terms of admiration of your discretion and valor.

The Department congratulates you on your success, and is proud to see in the younger members of the corps such evidence of energy and gallantry and execution and ability, scarcely surpassed by those of more age and experience.

GIDEON WELLES,

*Secretary of the Navy.*

Cushing also came in for a share of commendation for his success on the Nansemond, and Secretary Welles was no less enthusiastic in his praise than in the case of Lieutenant Lamson:

NAVY DEPARTMENT, May 4, 1863.

SIR—Your gallantry and meritorious services during the recent demonstrations of the enemy on the Nansemond, and in co-operating with the Army, are entitled to the especial notice and commendation of the Department. Your conduct on this occasion adds additional lustre to the character you had already established for valor in the face of the enemy.

The energy and ability displayed by yourself and the officers and men under your command in defence of the lower Nansemond are most creditable, and are appreciated by the Department.

The Department desires to express to you more especially its admiration of your gallantry and enterprise, in conducting an important armed reconnaissance with a party from the gun-boats, some miles into the enemy's country to the village of Chuckatuck, and putting to flight a party of the enemy's cavalry, and safely returning to your vessel.

Accept my congratulations for yourself and the officers and men who were under your command.

GIDEON WELLES,

*Secretary of the Navy.*

Lieutenant W. B. CUSHING,

*Commanding Steamer "Commodore Barney."*

These were very complimentary words, and should have made these officers proud of the distinction that had been shown them—distinctions superior even to those received by officers who had commanded fleets and performed services that had a most decisive bearing on the war. Without doubt, these young officers deserved all that was said of them, and their performances in after service show that the commendations were not misplaced.

The result of this expedition was the repulse of the enemy and the security of the Federal forces in the entrenched works at Suffolk. But this was not war on a grand scale, such as should have been inaugurated by the Federal Government at that time, when its troops were almost numberless, and great armies were posted from Washington to Missouri. These little skirmishes and reconnaissances had no material effect upon the war. It was a great waste of men on shore and a great destruction of gun-boats afloat.

It was quite evident to those who could judge, that, under such a system as the Government was pursuing, the war must languish for want of one efficient leader, who could arrange and direct the great armies which were scattered from one end of the States to the other, without apparently working for one common object. These comparatively small demonstrations had no actual value beyond making the troops familiar with the duties of soldiers in the field, and the establishment of positions at places like Suffolk (which they could not hold without a force of improvised gun-boats carrying the heaviest guns) gave evidence that the art of war had not progressed much, in 1863, when such small operations were held in such high estimation. There was a great waste of military force, and in most cases waste of time, frequently without any effect (one way or the other), beyond demonstrating the zeal, energy and courage of the two arms of the service.

If one good-sized army had been stationed upon the Peninsula, its lines gradually closing in the direction of Richmond, with its centre resting upon the principal river, as it advanced, and covered by a large flotilla of well-constructed gun-boats, all the rivers in that part of Virginia would have been so completely under the Federal control that the Confederates would have had no opportunity to keep up their incessant raids, which seemed to keep the Army and Navy in a continual state of excitement.

In some cases the Army had hardly got possession of some point and made themselves warm in it, when the strategy of war turned it over to the hands of the Confederates, who would erect batteries after their mode of defence, and then abandon it in as summary a manner as the Federals had done before them. The same course seems to have been taken in Virginia as was tried in North Carolina—small bodies of men detailed to hold prominent positions, with a few ill-built and worse-equipped gun-boats to protect them.

There was no want of activity, courage and zeal on the part of the officers of the North Atlantic squadron, but there was so small a field of operations, with the excep-

tion of such as has been mentioned, that the officers and men had not the same opportunity for distinction as was enjoyed on other stations; though in war the true secret is to *make* the opportunity. It is what seldom comes to any one. It must be sought for, and though it is a shy spirit, not easily wooed and won, yet it puts itself in the way of those who are determined to pursue and overtake it in spite of all obstacles. The proof of this was demonstrated in the case of Lieutenants Lamson and Cushing, two daring young fellows, who lost no opportunity of bringing their names before the Navy Department, and who were as well known in the Navy as the most successful commanders of fleets.

A great many of the vessels of the North Atlantic squadron were employed in the blockade of the coast from the mouth of the Chesapeake to below Cape Fear shoals. The Cape Fear River had (since the complete blockade of Charleston) become the principal ground for blockade-runners, that river having two entrances, by either of which blockade-runners could enter, protected by Fort Caswell on the south side of Cape Fear, and by strong earth-works (which finally grew to be Fort Fisher) on the north side.

Many reports are made of the capture or destruction of blockade-runners, and in chasing up these vessels great activity was displayed. On the 6th of May, Lieutenant-Commander Braine reports a boat expedition from the steamer "Monticello" and the mortar schooner "Matthew Vassar" (Acting-Master L. A. Brown), mentioning the destruction of one of the vessels in Morrell's Inlet, an English schooner called the "Golden Liner," of Halifax, with a large cargo, and also the burning of two large store-houses. Destruction of this kind of property always caused serious loss to the enemy, and it could not be replaced.

On May 26th, Rear-Admiral Lee reports the operations in the sounds of North Carolina. It appears that the Confederates had invested Washington, on the Pamlico River, which investment lasted eighteen days, and after a fruitless effort to take the place (which would have been of no use to them if they had succeeded), the enemy retired on the 15th of April.

Washington, N. C., had been pretty extensively fortified by the Confederates while they held it, but they had been driven away from it by the Federal forces.

On the morning of March 31st the enemy appeared in force, and took possession of their old works (seven miles below the town), which had been built to cut off the water communication. The "Commodore Hull" and "Louisiana" (two light-built and vulnerable gun-boats) were at the time sta-

tioned at Washington, and, on the appearance of the Confederates, opened fire upon them with their great guns.

At 5:45, the enemy took position at Rodman's Point, and opened fire with artillery upon the "Commodore Hull," which vessel had been stationed at that point to prevent their occupying it. The fire was returned with vigor, and, after a smart action of one hour and a half, the "Commodore Hull," in changing her position, got aground, where she remained until eight P. M. exposed to a continuous and accurate fire. Her commander (Acting-Master Saltonstall) defended her most gallantly until all his ammunition was expended. The vessel was much cut up, but received no vital injury.

Meantime the "Ceres," Acting-Volunteer-Lieutenant J. Macdearmid; "Lockwood," Acting-Volunteer-Lieutenant G. W. Graves; the sloop "Granite," Acting-Master E. Boomer, and, finally, the "Hunchback," Lieutenant-Commander McCann, were dispatched by Commander Davenport to the relief of the besieged forces at Washington, but they were stopped below Hill's Point by the re-establishment of the enemy's batteries there, and by the removal of the buoys at the old obstructions. This prevented the steamers from going ahead, for fear of being grounded on the old wrecks, in which case they would easily have been destroyed. It was not possible to send out boats and place other buoys on account of the enemy's sharpshooters and flying artillery, which would have destroyed the boats. Under the circumstances there was no remedy, and the above-mentioned steamers had to remain outside; but during the siege communications were opened at great risks between the vessels above and below the batteries, thus conveying ammunition and dispatches.

On the 3d of April, the flotilla below Hill's Point was reinforced by the "Southfield," "Whitehead" and "Seymour," from Plymouth. In the meantime the "Commodore Hull" and "Louisiana," and an armed transport called the "Eagle," under charge of Second-Assistant Engineer J. L. Lay and Assistant Paymaster W. W. Williams, of the "Louisiana," as volunteers, were almost continually engaged with the enemy's batteries opposite Washington, until the morning of the 4th, when the "Ceres" made a gallant dash past the forts, with a full supply of ammunition, and joined the besieged force above.

On the 6th, a small naval battery of two light guns was established on shore, commanding the channel from above, to repel any attempt on the part of the enemy to attack the gun-boats from that quarter by water.

On the 7th inst. 112, on the 8th 107, and on the 9th 55 shot and shell were fired by the enemy at the gun-boats without inflicting any serious damage.

On the 10th, Acting - Ensign J. B. De Camarra succeeded in getting a schooner through from the lower fleet, loaded with naval ammunition.

On the 12th, the gun-boats silenced and destroyed by their fire a battery which the enemy had erected with sand-bags and cotton-bales, abreast of the town, and which for seven days previously had maintained an active and dangerous fire on them.

On the 13th, the Confederate boats filled with infantry, as pickets on the river below the forts, were driven ashore by Acting-Volunteer-Lieutenant Macdearmid, with a howitzer on a small schooner. On the same night the army transport "Escort" gallantly ran the blockade, with reinforcements for the Federal troops at Washington, having safely passed Hill's Point under cover of the gun-boats below.

On the 14th and 15th, the enemy kept up a vigorous fire with their artillery, which was returned by the gun-boats.

An opportunity occurred about the time mentioned for the Army and Navy to score a strong point on the Confederates. There were a number of troops in transports below Hill's Point waiting the opportunity to reinforce the troops above, either by running the batteries or turning them by land marches. Under cover of the gun-boats the troops could easily have carried the enemy's works at Hill's Point, but it was not attempted. The Confederate batteries were behind strong natural banks of earth-works, perforated at points with embrasures. The gun-boats had attacked them several times without any apparent effect. The position was deemed too strong to carry by assault with a limited number of troops, so the gun-boats and transports had to lie at anchor before it and make no sign, until troops could be marched overland from Newbern.

On the morning of the 15th, the steamer "Escort" arrived with General Foster on board, who seemed to think the situation so serious that his presence was demanded. The day after his arrival the enemy suddenly disappeared, and the siege was raised.

The commander of the North Atlantic squadron seemed to be well satisfied with the conduct of those under his command, and reported that the credit of the Navy had been well maintained throughout.

Commander Renshaw, at Washington, and Lieutenant-Commander McCann, below on the river, conducted affairs with prudence and zeal. The former held a position of great responsibility and severe trial, and he met the various emergencies

with promptness and decision. He had the direction of naval matters, and would have been held responsible if the town had fallen into the enemy's hands.

On the 3d inst., the enemy had established their batteries abreast of the town, one of them a rifled 12-pounder, distant 600 yards. The batteries succeeded in firing only five shots before they were silenced by the Federal shell, which fairly demolished the works.

During the siege (if it may be so called) there was an incessant peal of artillery, and the enemy seemed determined to carry the place, no matter what the cost might be to them; but, whether aground on the river-bed or lying in the stream, the fire of the gun-boats was incessant and well directed—so well directed, indeed, that the enemy frequently seemed to be firing at random.

Acting-Volunteer-Lieutenant Macdearmid is spoken of in the highest terms for his coolness and valor. This is not the first time that his name has appeared in this narrative, and it will not likely be the last.

Acting-Master Saltonstall was promoted by the Department for the steady gallantry with which he fought his disabled vessel for nearly a day against great odds, and for his good conduct during the siege.

Acting-Volunteer-Lieutenant Graves and Acting-Master Welles were commended for faithful and efficient service, and were promoted in consequence.

Acting-Ensign De Camarra, Acting-Master's Mates E. MacKeever, A. H. Hicks and Edward S. Austin were commended for their good conduct and bravery in battle.

Acting-Master F. Josselyn, Acting-Ensigns J. O. Johnson and J. B. De Camarra, Acting-Master's Mates A. F. Haraden and Henry W. Wells, Acting-Second-Assistant Engineers H. Rafferty and John E. Harper, and Paymaster's Steward John C. Cross, were recommended to especial notice for their bravery in battle.

These commendations were probably only known to the parties who secured them; and, as their names have not been handed down in history, it may be some compensation to them at this late day to know that they are remembered. De Camarra, Johnson, Wells and Hicks were recommended for promotion.

That the Navy performed excellent service in defending the garrison at Washington, N. C., there can be little doubt. The naval force appeared promptly on the scene of action, and was so well handled that it saved the garrison from capture; yet all this zeal, gallantry and efficiency is merely mentioned by General Spinola as follows:

I cannot close this report without bearing testimony to the gallant conduct of the Navy while

acting in conjunction with my command, particularly Captain Macdearmid, of the gun-boat "Ceres."

The conduct of the lieutenant-commanders of the gun-boats engaged was all that could have been expected of them; they manifested great bravery, coupled with a willingness to do all in their power to relieve the garrison.

These are not the hearty expressions that should come from the pen of a gallant soldier, who should have felt and expressed a warmer gratitude for the services rendered to his army; but this seems to have been the style of noticing the work of the Navy throughout the war. Very few cases occurred where the Army could help the Navy; but, when such was the case, the latter acknowledged the obligation in a most eulogistic manner.

This affair on the Pamlico River was very much like that on the upper Nansemond—there were too few troops for the occasion. These scattered garrisons, in badly-built and poorly-armed earth-works, offered great temptations to the Confederate roving bands, who, through their spies, watched the Federal movements closely, and when the military commanders grew less watchful, or the gun-boats were out of the way, pounced upon them, expecting an easy victory. The enemy would often fight with a pertinacity bordering on desperation, and, after firing away all their ammunition, would retire as suddenly as they appeared.

What the Federals needed in order to break up these raids was a large force of cavalry, moving from one part of the State to the other with such rapidity and energetic action that the Confederates could make no headway against them. This course would have placed the Army in a more independent position, and they would not have become impressed with the idea that "every soldier ought to carry a gun-boat in his pocket."

On May 27th, Lieutenant Flusser reports an expedition under Acting-Volunteer-Lieutenant Charles A. French, who went in the steamer "Whitehead" to cruise in the eastern end of Albemarle Sound, and break up the contraband trade, a great deal of which was carried on in that vicinity. Lieutenant French reports the capture of a large two-masted boat, containing 500 barrels of tobacco. In Alligator River he captured or destroyed several boats engaged in illicit trade, and also along the shore a large quantity of pork, bacon, leather, tobacco bags, lard and tallow ready for shipment to the enemy. Many grist mills, grinding corn for the enemy, were burned by the officers of the "Valley City."

At this time the Confederate commissaries were out in great force gathering stores for the Army near Suffolk, and it was desirable to destroy as much provisions as possible—even though the non-combatants

suffered considerably. Such is the law of war—no distinction can be drawn in such cases, and on this occasion the duty was performed very thoroughly.

On May 31st, 1863, General Dix concluded to evacuate West Point, at the head of York River, and on that day the Federal Army marched out, covered by the gun-boats "Commodore Morris," "Commodore Jones," "Morse" and "Mystic," under the command of Lieutenant-Commander Gillis. The operation was effected without the slightest accident, and without any demonstration on the part of the enemy. Everything belonging to the United States Government was safely removed, the gun-boats taking on board the forage, provisions and ammunition, and landing them safely at Yorktown.

In the latter part of May, Lieutenant-Commander James H. Gillis participated in an expedition with Brigadier-General Kilpatrick in Matthews County. The object of the expedition was to mount all the dismounted men in Kilpatrick's command.

Lieutenant-Commander Gillis took on board the "Commodore Morris" 100 men from the 4th Delaware Volunteers, under Major La Mott, and with the "Winnissimmet" in company proceeded to North River, where he arrived at half-past five P.M. Here were captured 300 horses, 150 head of cattle and a large number of sheep. At the same time the troops destroyed all the property that could be of any use to the Confederates.

A large amount of property was destroyed in these raids. It was impossible to discriminate, and, in consequence, a great many innocent people suffered.

One of the mail-boats (the "Swan") was fired upon by a party of Confederate raiders, on York River, below West Point, the result of which was the burning by the gun-boat "Morse" of twelve houses, in front or behind which the enemy had placed their batteries. The object evidently was to have these houses burned, in order to embitter the inhabitants against the Union troops. The justification given for firing the buildings was that an unarmed mail-boat, which was in the habit of carrying women and children as passengers, had been fired upon by the Confederates.

It was rather a severe punishment to inflict on an unoffending people, because the Confederates would not stay to be captured, and it certainly was not the best method of gaining the confidence of the citizens, whom the Army and Navy claimed to protect. The amenities of war were entirely forgotten on this occasion, and such wantonness could only insure retaliation on the first favorable opportunity.

On the morning of June 4th, an expedition of 400 soldiers embarked at Yorktown on board the United States steamers "Com-

modore Morris" (Lieutenant-Commander Gillis), "Commodore Jones" (Lieutenant-Commander Mitchell), the army gun-boat "Smith Briggs" and the transport "Win-nissimmet."

These vessels proceeded to Walkertown, about twenty miles above West Point, on the Mattapony River. Here the troops were landed and marched to Aylett's, where the object of the expedition was successfully accomplished: a large foundry, with all its machinery, grist mills, and a quantity of grain were destroyed, and a number of horses captured.

The affair was carried through without any accident, the gun-boats keeping the river open, though several attempts were made by the enemy to annoy them at different points. This expedition was fitted out (as appears from a general order of General Keyes) with the purpose of "striking an effective blow at the enemy," but the results were only as above stated.

These events do not appear very striking on paper, but in a campaign which did not offer a very large scope for military and naval operations, they hold a place worthy of being mentioned, as exhibiting the zeal, bravery and enterprise of the Federal officers, who showed a determination to annoy and cripple the enemy in every possible way.

But still this was not war, in the true sense of the word—it was simply raiding—when we had quite a respectable force that should have been gaining victories over the enemy, who did not seem unwilling to meet the encounters of the Federal troops, and who held their own positions and checked the advance beyond the upper Nansemond whenever it was attempted.

The records of the times, in speaking of the military movements on the Peninsula, have constant accounts of the Federal's getting possession of West Point and then evacuating it, to fall back on Yorktown, which latter place seems to have been kept for a harbor of safety, or a resort from whence the Army could, by aid of the gun-boats, make a dash, carry off some heads of beef and horses, and return with little or no loss. But at that moment it was the only field of adventure which offered itself to the North Atlantic squadron, and the Navy was glad of the opportunity to share with the Army the dangers (if there were any) of these expeditions.

We are aware that the doings of the North Atlantic squadron afford dry reading, in comparison with the more brilliant achievements enacting elsewhere; but it is a part of the history of the war, in which the Navy bore its part, if not with any important success, yet with patience, zeal and gallantry, under circumstances which were oftentimes more trying than was the case in

other squadrons, where a wider field of action was offered.

It may seem to the reader that we have dwelt longer than necessary on what might be considered unimportant events, but the small matters are the links in the chain of history, which, if omitted, would leave the story incomplete. Officers themselves have attached so much importance to some of these events, and have made such minute reports of them, that they possess more intrinsic value than appears upon their face.

A good many of the later reports are taken up with accounts of small expeditions in the sounds of North Carolina, the gun-boats being evidently constantly employed attacking small bodies of the enemy in narrow and crooked streams, destroying granaries, and detecting Confederate sympathizers. But with all our desire to do justice to the praiseworthy efforts of the officers and men of the North Atlantic squadron, and to mention all those who in any way distinguished themselves or scored a good point on the enemy, we feel obliged to omit many accounts of expeditions which would take up the place of more important matters having a greater bearing on the war. Therefore, we will confine ourselves to such expeditions as accomplished important results. Our pages are limited, and we desire to make them as bright as possible.

On the 31st of July, 1863, the steamer "Kate," belonging to the Confederates, while going into Wilmington, was driven on Smith's Island Beach by the gun-boat "Penobscot," but was eventually floated off by the enemy, and towed under the batteries at New Inlet.

Early in the morning of the 1st of August, the blockading vessels, "James Adger," "Mount Vernon" and "Iroquois," approached, and the "Mount Vernon," discovering the condition of the Confederate steamer, reported it to Captain Case, of the "Iroquois." This officer immediately organized an expedition to cut the vessel out from under the guns of Fort Fisher (which had not at that time assumed such formidable proportions as it did later on).

The Confederates were at this time towing the "Kate" in towards New Inlet, and Commander Patterson, in the "James Adger," was ordered to assist the "Mount Vernon" in cutting her out, and prevent her reaching the protection of the batteries.

At seven o'clock, the "Mount Vernon" opened fire upon the steamer, when her commander (Acting-Volunteer-Lieutenant James Trathen) received orders from Captain Case to "drag the 'Kate' out." Two boats were called away from the "Mount Vernon" and sent to board the "Kate," while the vessel herself went alongside, and

sent another party on board at the same time. A hawser was made fast to the prize, and she was towed out.

The Confederate batteries at New Inlet opened with great vigor, and a masked battery of Whitworth guns on Smith's Island kept up a furious fire. The enemy did not seem to be particular in his aim, as an 80-pounder Armstrong rifle-shot passed through the port-side of the "Kate," and out through the starboard bulwarks, just as the "Mount Vernon" and her boats boarded her. Several shots from heavy Armstrong guns and Whitworth 12-pounders struck the "Mount Vernon." One Whitworth projectile passed through the engine-room, instantly killing Edwin H. Peck, first-class fireman. This shot lodged in the engineer's tool-chest, demolishing the contents. An Armstrong rifle-shot cut away all the shrouds of the port fore-rigging. A Whitworth shot cut away the fore-topmast rigging, and another the fore-gaff. A shot from the mound battery carried away the stock of the port-anchor. Many shot passed over the vessel and all around her, and the firing from the enemy's work was lively enough to make the affair very exciting. But the commander of the "Mount Vernon" did not abandon his prize; he towed her out, and delivered her to the "Iroquois," which vessel took her to Beaufort.

This cutting-out was gallantly done, and the parties concerned deserve great credit. Captain Case speaks handsomely of the manner in which Lieutenant Trathen boarded the "Kate" and towed her off shore. It was not only the coolness and bravery with which this affair was conducted, but also the professional skill with which the "Mount Vernon" was managed by her commander that gives it special merit.

There were lively times when a blockade-runner was sighted. Starting a hare with a pack of hounds would not create a greater excitement than when a long, lean, English-built steamer, with a speed of sixteen knots an hour, suddenly found herself almost in the grip of the blockaders, which, being usually on the alert, would give her a hard chase, if they did not capture her outright.

To look at the beautiful lines of one of these small steamers (which often carried cargoes worth half a million) as she skimmed over the water, it would seem impossible that our improvised cruisers could overtake her. These vessels, built in England with all the science known to English ship-builders, were sent fearlessly upon our coast, with a certainty that nothing we had could overtake them. Yet how mistaken the British builders were with regard to Yankee watchfulness and naval pluck!

Every mail would carry the news to England of their fastest vessels having been picked up by Federal cruisers — though they may have made several successful runs ere they came to grief. It is said that if one blockade-runner out of three could make a successful passage, it would more than cover the cost of all.

On August 18th, one of these clippers, the "Hebe," attempted to run into Wilmington by the New Inlet channel. There were several blockaders on the alert, and among them the "Nippon"—which vessel, being in-shore of the "Hebe," attempted to head her off. But, instead of surrendering when he saw that his vessel was cut off, the commander of the "Hebe" beached her, and escaped in his boats, with his crew and passengers.

It was then blowing a gale from the northeast, with a heavy sea on, and the waves broke over the doomed vessel.

Lieutenant W. B. Cushing commanded one of the vessels present on this occasion (the "Shokokon"), and from the two vessels a boarding-party was formed which started through the breakers to destroy the "Hebe."

There were always companies of Confederate artillery moving up and down the coast to prevent vessels driven on shore from being destroyed by blockaders. The boarding-party had no sooner landed and boarded the steamer, with the intent to fire her, than they were opened upon by Confederate artillery, well posted behind the sand-hills, and these kept up a warm fire, not only on the boarders, but on the two gun-boats, which the latter were unable to return with any certainty, owing to the heavy sea running. The result was that the "Nippon" lost two boats, which were swamped in the breakers, and fifteen persons by capture, four of whom were officers. One ensign (E. H. Dewey) and three men were saved by the boats of the two gun-boats.

On this occasion, though there was a good deal of gallantry displayed, there was bad luck for the blockaders, and the enemy succeeded in getting a large part of the damaged cargo on shore.

Later in the month the Federal vessels came in for a share of the cargo, and destroyed the steamer, but not until the enemy had shown a strong determination to hold on to all of the "Hebe" that they could.

On the 23d of August, Commander T. H. Patterson, in the "James Adger," was directed to proceed to the "Hebe," and try to destroy her. When within 500 yards of her, he opened fire upon the vessel's hull and upon the enemy's artillery, which was located behind the sand-hills on the beach, about 100 yards from the "Hebe." This

fire was kept up until the steamer was pretty well cut to pieces. (A boat had been sent in before the firing commenced to see if it were practicable to get the vessel afloat, but it was opened upon by the enemy with musketry and a Whitworth gun, and all hopes of saving her were abandoned.) The enemy also concentrated the fire of their field-pieces on the "James Adger," striking her three times in the hull, one shot passing through the air-jacket of the donkey-engine, and another cutting the rim of the starboard-wheel.

Notwithstanding the fire of the enemy, the boats of the blockading vessels brought off some Whitworth guns that had been abandoned; and the "Hebe," being now practically of no use, was left upon the beach to be broken up by the winds and waves. A great deal of ammunition was expended upon this vessel—163 shot and shells from the "James Adger," and 145 from the flag-ship "Minnesota."

On the 22d of August, 1863, quite a gallant affair took place, when Lieutenant Cushing cut out and destroyed the blockade-running schooner "Alexander Cooper."

On the 12th, Cushing made a reconnaissance, in the boats of the "Shokokon," of "New Topsail Inlet," and was driven off by the fire of four Confederate field-pieces stationed near the entrance of the inlet. But before he was driven back he discovered a schooner at anchor at a wharf about six miles up the sound. This schooner he determined to destroy.

On the evening of the 22d the "Shokokon" anchored close to the sea-beach, about five miles from the inlet, and sent on shore two boats' crews—who shouldered the dinghy, and carried it across the neck of land that divided the sea from the sound (this was half a mile in width, covered with a dense thicket). This crossing placed the landing party some miles in the rear of the artillery force guarding the entrance. The dinghy being launched on the inside waters, six men, under the executive officer, Acting Ensign J. S. Cony, started, with orders to capture or destroy anything that might be of use to the enemy.

A 12-pound howitzer was stationed at the point towards which the expedition was bound, and the smoke-stack of the "Shokokon" having been seen over the trees, Captain Adams (the Confederate officer in charge of the post) went over to see that a bright look-out was kept. While the Confederates at the schooner's mast-heads were straining their eyes in looking to the southward, the boat was approaching them from another direction, and the Federals succeeded in landing fifty yards from the wharf without being discovered.

The master-at-arms (Robert Clifford)

creeping into the Confederate camp, counted their men; when, having returned to his shipmates, a charge was ordered, and the seven men bore down upon the enemy with three cheers. In a moment the Confederates (who out-numbered our sailors three to one) were routed, leaving in Ensign Cony's hands ten prisoners (including Captain Adams and Lieutenant Latham), one 12-pound howitzer, eighteen horses, one schooner and some extensive salt-works. Mr. Cony then threw out two pickets, detailed two men to guard the prisoners, and, with the remaining two, fired the schooner and salt-works, which were entirely consumed.

The object of the expedition having been accomplished, the men returned to their vessel, taking with them three prisoners, all that the boat would hold. The Confederate officers and men were all dressed alike, and Mr. Cony could not tell them apart, so he was at a loss to know which to retain. He settled the matter by picking out the three best-looking, who all turned out to be privates!

This performance almost sounds like romance, but Cushing's officers were all animated with his spirit, and were always ready to undertake anything, no matter how hazardous. As many risks were run, and as many dangers faced, as fell to Decatur's lot when he cut out the "Philadelphia" in Tripoli harbor.

The later operations of the North Atlantic squadron, in 1863, were merely attempts to co-operate with the Army up the shoal rivers within the limits of the command, keeping down the Confederate raiders, and intercepting dispatches between Virginia and Maryland, in which every light-draft vessel was continually employed. It was not a very brilliant service, but it was a useful one. Without it the Confederates would have seriously harassed the important Army posts, and driven in the smaller ones. They dreaded those frail vessels, with their heavy guns and fearless seamen, and a gun-boat was often worth more to the Army than two or three stout regiments.

The last act chronicled in the records of the North Atlantic squadron for this year is the destruction of the blockade-runner "Venus," on October 21st.

The "Venus" was from Nassau, bound to Wilmington, and, while attempting to run the blockade, was chased by the steamer "Nansemond," Lieutenant Lamson, and overtaken. As the chase did not comply with his orders to heave-to, Lieutenant Lamson opened fire upon her. One shot struck her foremast, another exploded in her ward-room, a third passed through the funnel and killed one man, and a fourth,

striking an iron plate near the water line, caused her to leak so badly that it was necessary to run her on shore, where (as it was found impossible to save her) she was set fire to and burned, her boilers blown up, and her machinery destroyed.

The "Venus" was a splendid vessel of 1,000 tons burden, and, had she not been destroyed, would have made a useful addition to the gun-boat fleet.

During all this time, be it remembered, many vessels of this squadron were engaged in that dreary blockade duty, which, though

somewhat wanting in incidents of a desperate character, was continually adding history to the Navy by successful captures of arms and munitions of war, and creating great astonishment abroad at the ability of the Federals to keep up such an effective blockade, contrary to the predictions of able statesmen and experienced admirals.

This duty was relieved somewhat of its monotony, as it paid well in prize-money, which amply compensated officers and sailors for any hardships they had to undergo in winter storms or summer heats.

## NORTH ATLANTIC SQUADRON, JANUARY 1, 1863.

ACTING-REAR-ADMIRAL SAMUEL P. LEE.

COMMANDER PIERCE CROSBY, FLEET CAPTAIN, JULY, 1863.—LIEUTENANT R. H. LAMSON, FLAG LIEUTENANT, APRIL, 1863.

### STEAM-FRIGATE "MINNESOTA"—FLAG-SHIP.

Commander, N. B. Harrison; Lieutenant-Commander, E. C. Grafton; Lieutenant, Adolphus Dexter; Fleet Surgeon, W. Maxwell Wood; Surgeon, John S. Kitchen; Assistant Surgeons, S. J. Jones and E. R. Dodge; Paymaster, C. C. Upham; Chaplain, T. G. Salter; Marines: Captain, W. L. Shuttleworth, Second-Lieutenant, C. F. Williams; Acting-Masters, D. A. Campbell and Wm. Wright; Ensigns, J. H. Porter, R. S. Chew, C. S. Cotton and S. W. Terry; Acting-Ensigns, F. R. Webb and Amos Brown; Master's Mates, Wm. Hunter, C. W. Campbell, W. R. Hunter, James Birtwistle and P. B. Doran; Engineers: Chief, Philip G. Peltz; Second-Assistant, G. W. Sensner; Third-Assistants, Alfred Colin, T. W. Ray, G. W. Thorn, Webster Lane and Guy Samson; Boatswain, Wm. Bunker; Gunner, C. W. Homer; Carpenter, E. Thompson; Sailmaker, T. O. Fassett.

### STEAMER "OSSISPEE."

Captain, John P. Gillis; Lieutenant-Commander, Robert Boyd, Jr.; Lieutenant, John A. Howell; Surgeon, Thomas T. Turner, Paymaster, Edward Foster; Acting-Master, C. E. Bunker; Acting-Ensigns, H. S. Lambert and C. W. Adams; Acting-Master's Mates, Wm. Knapp, Jr., Charles Putnam, Wm. Wingood, W. W. Gregg and W. W. Black; Engineers: Acting-First-Assistant, J. M. Adams; Second-Assistants, Jas. Renshaw and John Wilson; Third-Assistants, C. S. Maurice, W. W. Vanderbilt and Monroe Murphy; Acting-Third-Assistants, J. R. Webb and G. W. Kidder; Boatswain, Andrew Milne; Acting-Gunner, John Q. Adams.

### STEAMER "DACOTAH."

Captain, Benj. F. Sands; Lieutenants, G. C. Wiltse and S. D. Ames; Surgeon, Delavan Bloodgood; Paymaster, Richard Washington; Acting-Masters, Wm. Earle and Wm. Moslander; Acting-Ensign, Isaac Francis; Acting-Master's Mates, Paul Borner, Charles Trathen, John McMillen and C. H. Chase; Engineers: Chief, Wm. W. Dungan; Acting-First-Assistant, Wm. H. Dohbs; Acting-Second-Assistants, G. R. Bennett, Wm. Best and Charles Cranston; Acting-Third-Assistants, J. H. Perry and G. W. Wilkinson; Acting-Gunner, Geo. Edmond.

### STORE-SHIP "BRANDYWINE."

Commander, Benj. J. Totten; Acting-Lieutenant, S. J. Shipley; Paymasters, C. J. Emery and Thos. H. Looker; Acting-Assistant Surgeon, J. J. Sow-

W. B. Newman, J. F. D. Robinson and Wm. H. Hubbs; Acting-Master's Mates, W. H. Bryant, J. J. Everhardt, J. L. Robins and J. B. Cawood.

### STEAMER "IROQUOIS."

Commander, A. Ludlow Case; Lieutenant-Commander, Wm. E. Fitzhugh; Lieutenants, H. E. Mullan; Surgeon, Wm. E. Taylor; Assistant Paymaster, John A. Bates; Acting-Ensigns, Joseph Avant, Thos. Stothard and J. D. Dexter; Acting-Master's Mates, John Roberts, Horace Dexter, W. F. Halsall and Matthew Crimmin; Engineers: Acting-First-Assistant, J. W. Storms; Acting-Second-Assistants, Warren Ewen and W. J. Howard; Acting-Third-Assistants, J. H. Mathews, W. J. Barrington and H. S. Short; Boatswain, J. H. Downs; Acting-Gunner, J. C. Clapham.

### STEAMER "MARATANZA."

Commander, Gustavus H. Scott; Lieutenant-Commander, Chas. S. Norton; Assistant Surgeon, Job Corbin; Assistant Paymaster, C. S. Perley; Acting-Masters, Chas. Courtney, Jacob Kimball and J. B. Wood, Jr.; Acting-Ensigns, J. C. Gibney and Geo. Smith; Acting-Master's Mate, Henry Wheeler; Engineers: Acting-First-Assistant, C. L. Carty; Second-Assistant, Edward Scattergood; Third-Assistants, W. H. Kilpatrick, L. R. Harvey and R. L. Webb.

### STEAMER "STATE OF GEORGIA."

Commander, James F. Armstrong; Acting-Assistant Surgeon, W. W. Myers; Acting-Assistant Paymaster, T. H. Haskell; Acting-Masters, J. S. Rogers and A. D. Littlefield; Acting-Ensigns, David Mason and N. Broughton; Acting-Master's Mates, Isaac Halleck, J. W. Buck and Wm. B. Mix, Engineers: Acting-First-Assistant, James Wilkinson; Acting-Second-Assistant, David Pyke; Acting-Third-Assistants, J. D. Rodgers, Thomas Nesbit and E. F. Maxfield; Acting-Gunner, Andrew Hannen.

### STEAMER "CAMBRIDGE."

Commander, Wm. A. Parker; Acting-Master, F. W. Strong; Acting-Assistant Surgeon, Ezra Pray; Acting-Assistant Paymaster, J. C. Canning; Acting-Ensigns, E. A. Small, S. H. Meade, Jr., and D. W. Glenn; Acting-Master's Mates, W. T. Dungan, H. B. Nickerson and G. K. Knowlton; Engineers: Acting-First-Assistant, Geo. B. Orswell; Acting-Second-Assistant, J. F. Powers; Acting-Third-Assistants, H. F. Hayden and John Whitaker; Acting-Gunner, Wm. Fisk; Carpenter, Theo. D. Wilson.

### STEAMER "MAHASKA."

Commander, Foxhall A. Parker; Lieutenant

N. H. Farquhar and E. C. V. Blake; Assistant Surgeon, John C. Spear; Acting-Assistant Surgeon, Chas. Fairchild; Acting-Master, Benj. Dyer; Acting-Ensigns, N. W. Black and Frederick Elliott; Acting-Master's Mates, G. E. French and F. M. Drake; Engineers: Acting-First-Assistant, Geo. E. Ashby; Third-Assistants, Elisha Harsen, Thomas La Blanc, J. C. Stevens and E. L. Hewitt.

STEAMER "HETZEL."

Commander, H. K. Davenport; Acting-Assistant Surgeon, N. L. Campbell; Acting-Assistant Paymaster, G. W. Morton; Acting-Masters, G. B. Thompson and G. W. Caswell; Acting-Master's Mates, Benj. Walker and John Rudrow; Engineers: Acting-Second-Assistant, J. B. Dick; Third-Assistants, J. H. Padgett, T. B. Cole and Eli Tempeny.

SLOOP-OF-WAR "VANDALIA."

Lieutenant, M. B. Woolsey; Surgeon, A. C. Gorgas; Paymaster, Rufus Parks; First-Lieutenant of Marines, C. H. Nye; Acting-Masters, E. M. King, C. Folsom and A. Washburn; Acting-Ensign, F. H. Bacon; Acting-Master's Mate, Richard Burk; Boatswain, P. J. Miller; Gunner, Wm. Cheney; Sailmaker, Wm. Rogers.

STEAMER "MYSTIC."

Lieutenant-Commander, H. N. T. Arnold; Acting-Assistant Surgeon, Wm. F. Brown; Acting-Assistant Paymaster, T. E. Smith; Acting-Masters, S. B. Meader and R. F. Coffin; Acting-Ensign, A. F. Hamblin; Acting-Master's Mate, J. M. C. Reville; Engineers: Acting-Second-Assistants, J. B. Lovell and J. B. A. Allen; Acting-Third-Assistants, H. F. Loveaire, George W. Shank and Isaac Buck.

IRON-CLAD STEAMER "OALENA."

Lieutenant-Commander, Leonard Paulding; Acting-Lieutenant, James Parker; Assistant Surgeon, R. E. Van Gieson; Acting-Assistant Paymaster, J. H. Sellman; Acting-Masters, I. D. Seyburn and Edmund Kemble; Acting-Master's Mates, Andrew McCleary, J. H. Jenks and E. A. Galindo; Engineers: Acting-First-Assistant, J. G. Young; Acting-Second-Assistants, B. F. Beckett and A. S. Chipman; Acting-Third-Assistants, Thomas Millholland, Wm. Deaver and C. W. Kenyon; Boatswain, J. H. Polly; Gunner, William Hardison.

STEAMER "PENOBSCOT."

Lieutenant-Commander, J. E. de Haven; Assistant Surgeon, Edw. A. Pierson; Acting-Assistant Paymaster, Addison Poole; Acting-Master, Charles E. Jack; Acting-Ensigns, S. K. Luce and H. D. Edwards; Acting-Master's Mate, G. H. Smith; Engineers: Acting-Second-Assistant, Geo. W. Cobb; Acting-Third-Assistants, Wm. M. Rodes, Wm. C. Burrett and G. W. Hall.

STEAMER "CHOCURA."

Lieutenant-Commander, Wm. T. Truxton; Lieutenant, John McFarland; Assistant Surgeon, Chas. Carter; Acting-Assistant Paymaster, E. L. Turner; Acting-Masters, P. S. Borden and T. B. Sears; Acting-Master's Mates, D. M. Carver, Wm. Leonard and A. P. Atwood; Engineers: Second-Assistant, Zeph. Talbot; Third-Assistants, Andrew Blythe, Theodore Cooper and Wm. H. Harrison.

STEAMER "MONTICELLO."

Lieutenant-Commander, D. L. Braine; Acting-Assistant Surgeon, Wm. Gale; Acting-Assistant Paymaster, G. de F. Barton; Acting-Masters, J. F. Winchester, L. A. Brown and Richard Hustace; Acting-Ensign, A. G. Stebbins; Acting-Master's Mates, Henry Baker and T. J. Gildersleeve; Engineers: Acting-Second-Assistants, John Pick and W. S. Montgomery; Acting-Third-Assistants, Thomas McGough and A. L. Koonen.

STEAMER "COMMODORE PERRY."

Lieutenant-Commander, Charles W. Flusser; Acting-Assistant Surgeon, Geo. W. Gale; Acting-Assist-

ant Paymaster, W. H. Anderson; Acting-Master, H. A. Phelon; Acting-Ensign, Wm. P. Burke; Acting-Master's Mates, George B. Howard and Daniel Laker; Engineers: Acting-Second-Assistant, G. W. Richards; Acting-Third-Assistants, J. L. Bowers and F. A. Whitfield.

STEAMER "HUNCHBACK."

Lieutenant-Commander, Wm. P. McCann; Acting-Assistant Surgeon, George R. Mann; Acting-Assistant Paymaster, Henry Cushing; Acting-Master, Richard Pasquell; Acting-Master's Mates, W. L. Weaver, C. H. Weaver, R. P. Boss, John Maddock and T. C. Barton; Engineers: Acting-Second-Assistant, Henry Armstrong; Acting-Third-Assistants, John Wall, James Dodd and Bryce Wilson.

STEAMER "COMMODORE MORRIS."

Lieutenant-Commander, James H. Gillis; Acting-Assistant Surgeon, M. H. Henry; Acting-Assistant Paymaster, C. G. Hutchinson; Acting-Master, A. A. Lewis; Acting-Ensigns, P. B. Low and H. M. Pierce; Acting-Master's Mates, R. C. J. Pendleton, W. H. Otis and C. E. Blanchard; Engineers: Acting-Second-Assistant, Volney Cronk; Acting-Third-Assistants, B. F. Harris, Henry Harbinson and H. J. Watkins.

STEAMER "COMMODORE BARNEY."

Lieutenant-Commander, J. C. Chaplin; Acting-Assistant Surgeon, James Kinnier; Acting-Assistant Paymaster, Benj. Page; Acting-Ensigns, Wm. Betts, Cornelius Washburn and B. P. Trask; Acting-Master's Mates, David Fader and John Aspinwall, Jr.; Engineers: Acting-Second-Assistant, Thos. Pemblett; Acting-Third-Assistants, L. M. Kensil and Hiram Warner.

STEAMER "MORSE."

Lieutenant-Commander, Chas. A. Babcock; Acting-Assistant Surgeon, G. F. Winslow; Acting-Assistant Paymaster, Henry Russell; Acting-Ensigns, C. F. Russell and J. F. Merry; Acting-Master's Mates, C. E. Rich, J. W. Thompson and Wm. Dunne; Engineers: Acting-Second-Assistant, Thos. Devine; Acting-Third-Assistants, Geo. West and Tim. Flanders.

STEAMER "VICTORIA."

Acting-Volunteer-Lieutenant, Edward Hooker; Acting-Assistant Surgeon, John G. Parke; Acting-Assistant Paymaster, H. S. Bradford; Acting-Master, Alfred Everson; Acting-Ensign, Wm. H. Meyer; Acting-Master's Mates, B. W. Tucker and Wm. Moody; Engineers: Acting-Second-Assistant, T. D. Webster; Acting-Third-Assistants, J. M. Berron, John Haversfield and J. E. Robinson.

STEAMER "UNDERWRITER."

Acting-Volunteer-Lieutenant, Wm. Flye; Acting-Assistant Surgeon, L. R. Boyce; Acting-Assistant Paymaster, C. H. Brown; Acting-Master's Mates, W. K. Engell, W. B. Griffith and Daniel Ward; Engineers: Acting-Third-Assistants, John Morse, S. B. Ellis and H. R. Steever.

MER "COLUMBIA."

Acting-Volunteer-Lieutenant, Jas. P. Couthouy; Acting-Masters, J. W. Balch and E. A. Howell; Acting-Ensigns, J. S. Williams and E. T. Manter; Acting-Master's Mates, E. Morse, E. L. Bourne and E. M. Clarke; Acting-Assistant Surgeon, Passmore Treadwell; Acting-Assistant Paymaster, T. Q. Hill; Engineers: Acting-First-Assistant, G. M. Bennett; Second-Assistant, W. W. Shipman; Acting-Second-Assistant, Samuel Lemmon; Acting-Third-Assistants, J. H. Pelton and W. H. Crawford.

STEAMER "MIAMI."

Acting-Lieutenant, Robert Townsend; Assistant Surgeon, Wm. B. Mann; Acting-Assistant Paymaster, Frank W. Hackett; Acting-Masters, W. N. Welles, Milford Rogers and John Lear; Acting-Ensign, R. W. Rountree; Acting-Master's Mate, John Quevedo; Engineers: Acting-Second-Assist-

ant, L. W. Simonds; Acting-Third-Assistants, C. C. Davis, H. D. Heiser, W. A. Windsor and J. W. Saville.

STEAMER "DELAWARE."

Acting-Volunteer-Lieutenant, Amos P. Foster; Acting-Assistant Surgeon, Lorenzo Traver; Acting-Assistant Paymaster, G. T. Benedict; Acting-Master, H. H. Foster; Acting-Ensign, J. H. Kerens; Acting-Master's Mates, J. H. Sprigman and Wm. Thompson; Engineers: Acting-Second-Assistant, J. D. Williamson; Acting-Third-Assistants, T. J. Brown, James Mellon and R. O. Dennett.

STEAMER "VALLEY CITY."

Acting-Volunteer-Lieutenant, Hartman K. Furniss; Acting-Assistant Surgeon, F. E. Martinsdale; Acting-Assistant Paymaster, W. T. Whitmore; Acting-Master, J. A. J. Brooks; Acting-Master's Mates, John Cullaton and Thos. Langton; Acting-Third-Assistant-Engineers, B. Hilderbrand and Joseph Peddle.

STEAMER "SOUTHFIELD."

Acting-Volunteer-Lieutenant, C. F. W. Behm; Acting-Assistant Surgeon, W. H. Holmes; Acting-Assistant Paymaster, W. Goldsborough; Acting-Masters, Richard Vevers, W. F. Pratt and W. G. Nutting; Acting-Ensign, Thos. B. Stokes; Acting-Master's Mates, C. A. Stewart, G. W. Pratt and John Woodman; Acting-Third-Assistant Engineers, Walter Bradley, H. M. Tuell and J. B. Ferrand.

STEAMER "MOUNT VERNON."

Acting-Volunteer-Lieutenant, James Tathern; Acting-Assistant Surgeon, S. B. Hoppin; Acting-Assistant Paymaster, H. Y. Glisson; Acting-Masters, E. W. White and W. T. Buck; Acting-Ensign, F. M. Page; Acting-Master's Mates, Lloyd Rogers, Ernest Hodder and G. C. Kellogg; Engineers: Acting-Second-Assistant, Jos. McKnight; Acting-Third-Assistants, J. H. Horsford, Wm. Emmons and Esubius Minne.

STEAMER "CERES."

Acting-Volunteer-Lieutenant, John Macdearnid; Acting-Master's Mates, M. Tallmadge Ryan and H. A. Hudson; Engineers: Acting-Second-Assistant, Hugh Rafferty; Third-Assistant, John S. Harper.

SCHOONER "SAMUEL ROTAN."

Acting-Volunteer-Lieutenant, W. W. Kennison; Acting-Master's Mates, Thos. Moore, C. H. Packer and D. M. Gaskins.

STEAMER "JOHN L. LOCKWOOD."

Acting-Master, G. W. Graves; Acting-Master's Mates, A. H. Hicks and Edw. Austin; Engineers: Acting-Second-Assistants, J. T. Newton and W. W. Whiting; Acting-Third-Assistant, J. T. Miller.

STEAMER "GENERAL PUTNAM."

Acting-Master, Wm. J. Hotchkiss; Acting-Ensign, Wm. Jennings; Acting-Master's Mates, H. C. Hawkins, A. P. Kirkham and C. A. Jones; Engineers: Acting-Second-Assistants, James Osburn and R. A. Copeland; Acting-Third-Assistants, John Henry and W. P. Higgins.

STEAMER "HENRY BRINKER."

Acting-Master, James H. Hardesty; Acting-Ensign, H. S. Livermore; Acting-Master's Mate, Wm. B. Miles; Engineers: Acting-Second-Assistant, J. W. Kelsey; Acting-Third-Assistants, Robert Ross and W. H. Tate.

STEAMER "YOUNG ROVER."

Acting-Masters, Ira B. Studley and T. W. Dodge; Acting-Assistant Surgeon, Rob't Cowie; Acting-Assistant Paymaster, Geo. W. Stone; Acting-Ensigns, D. S. Thompson, J. A. Edgren and E. M. Ryder; Acting-Master's Mates, W. F. Gragg and Joshua Simmons; Engineers: Acting-Second-Assistant, James Patterson; Acting-Third-Assistant, Samuel McAvov.

STEAMER "PHILADELPHIA."

Acting-Master, Silas Reynolds; Engineers: Acting-Second-Assistant, C. A. Norris; Acting-Third-Assistants, W. H. Capin and Robert Mulready.

STEAMER "STEPPING STONES."

Acting-Master, T. A. Harris; Acting-Master's Mate, G. M. Lawrence; Engineers: Acting-Second-Assistant, James A. Brown; Acting-Third-Assistant, Edw. Aspald.

SHIP "ROMAN."

Acting-Master, Francis P. Allen.

STEAMER "DAYLIGHT."

Acting-Masters, Joshua D. Warren and J. H. Gleason; Acting-Assistant Surgeon, F. M. Dearborne; Acting-Assistant Paymaster, H. M. Rogers; Acting-Ensigns, Wm. H. Brice, J. W. Willard and W. H. Penfield; Acting-Master's Mates, A. E. Barrett and Charles Attmore; Engineers: Acting-Second-Assistant, C. D. Kiersted; Acting-Third-Assistants, C. O. Morgan and J. M. Battin.

STEAMER "SEYMOUR."

Acting-Master, Francis S. Wells; Acting-Ensign, Chas. Ringot; Acting-Master's Mate, Edwin Smith; Engineers: Acting-Second-Assistant, Newton Eggleston; Acting-Third-Assistants, J. A. Whittaker and Philip Hublitz.

STEAMER "WYANDOTTE."

Acting-Master, Thomas Wright; Acting-Assistant Surgeon, James Penoyer; Assistant-Paymaster, Alex. McC. Bishop; Acting-Ensigns, S. A. Hodge, Benj. Wood and Wm. Henry; Acting-Master's Mates, M. E. Wandell and Wm. Chandler; Engineers: Acting-Second-Assistant, Cornelius Carr; Acting-Third-Assistants, G. R. Dunkley, Wm. Veitch and John Heaney.

STEAMER "COMMODORE HULL."

Acting-Masters, Wm. G. Saltonstall and Francis Josselyn; Acting-Assistant Surgeon, C. F. P. Hildreth; Acting-Assistant Paymaster, Jonathan Chapman; Acting-Ensigns, J. O. Johnson and J. B. da Camera; Acting-Master's Mates, E. F. Bowen, J. H. Wilkinson and A. F. Haradon; Engineers: Acting-Second-Assistant, B. F. Bell; Acting-Third-Assistants, D. R. Wylee, M. O. Stimson and Wm. Lannan.

STEAMER "CRUSADER"

Acting-Master, Thomas Andrews; Acting-Assistant Surgeon, E. A. Arnold; Acting-Assistant Paymaster, T. McC. Brower; Acting-Ensigns, G. W. Nelson, T. W. Sheer and T. S. Smythe; Acting-Master's Mates, Albert Buhner, Henry Parsons and E. D. Edmunds; Engineers: Acting-Second-Assistant, P. O. Brightman; Acting-Third-Assistants, S. T. Strude and W. T. Waterman.

SLOOP "GRANITE."

Acting-Master, E. Boomer.

SCHOONER "WM. BACON."

Acting-Master, Wm. P. Rogers; Acting-Master's Mates, C. D. Thompson, H. E. Ripley and Daniel McLaughlin.

SHIP "CHARLES PHELPS."

Acting-Master, Wm. F. North.

SHIP "BEN. MORGAN."

Acting-Master, Wm. Shankland.

STEAMER "ZOUAVE"

Pilot, John A. Phillips; Acting-Master's Mate, P. B. Doran; Acting-Third-Assistant Engineer, H. N. Ames.

TUG "COHASSET."

Pilot, Thomas Eveans; Acting-Master's Mate, J. F. Doggett; Engineers: Acting-Second-Assistant, Sydney Smith; Acting-Third-Assistant, Charles Robinson.

## CHAPTER XXXVI.

REAR-ADMIRAL DAHLGREN SUCCEEDS REAR-ADMIRAL DUPONT.—DAHLGREN'S DIFFICULT TASK.—GENERAL GILLMORE REQUESTS NAVAL CO-OPERATION.—CHARLESTON HARBOR.—PLAN OF GENERAL GILLMORE.—ATTACK ON ENEMY'S WORKS BY ARMY AND NAVY.—CAPTURE OF CONFEDERATE WORKS ON SOUTH END OF MORRIS ISLAND.—ASSAULT ON FORT WAGNER.—GILLMORE REPULSED.—SECOND ATTACK ON FORT SUMTER.—CAPTURE OF ENEMY'S DEFENCES.—THE CATSKILL SEVERELY HANDLED.—ANOTHER COMBINED ATTACK ON FORT WAGNER.—THE FORT SILENCED.—ARMY BADLY REPULSED IN AN ASSAULT. RODGERS.—GREAT EFFORTS MADE TO REDUCE WAGNER, SUMTER AND GREGG.—EFFECT OF THE FIRE ON CHARLESTON.—THE MONITORS AGAIN OPEN FIRE ON FORTS SUMTER AND MOULTRIE.—ENGINEERING WORK.—DAHLGREN AND GILLMORE DIFFER.—FORTS WAGNER AND BATTERY GREGG EVACUATED.—THE "WEEHAWKEN" GROUNDED.—DISASTROUS NAVAL ASSAULT ON SUMTER.—GREAT GALLANTRY DISPLAYED BY BOAT-CREWS.—ENSIGN WALLACE'S REPORT.—TORPEDO-BOAT.—ATTEMPTS TO DESTROY "NEW IRONSIDES."—PRAISE OF DAHLGREN AND OFFICERS.—THE MONITORS AND "NEW IRONSIDES" CONTRASTED.—BOYNTON'S CRITICISMS, ETC.

**R**EAR-ADMIRAL DAHLGREN succeeded Rear-Admiral DuPont, at Port Royal, on July 4th, 1863, the latter having been relieved at his own request, owing to a difference of opinion between himself and the Secretary of the Navy in regard to the operations before Charleston and the attempt to take the Confederate works with the Monitors.

Dahlgren had a difficult task before him. In the first place, he had relieved an officer who maintained as high a prestige as any in the Navy, at home and abroad, for skill and bravery. The attack upon and capture of Port Royal had given DuPont a foreign reputation in addition to that he bore at home, and European officers of distinguished merit did not hesitate to say that the battle of Port Royal was one of the best exhibitions of naval tactical skill that had been seen for years. Compare it, even now,

with the late English attack in Egypt, with their heavy iron-clads and monstrous guns, and note the rapidity with which DuPont's squadron captured the works at Hilton Head, etc., in comparison with the long-drawn-out battle at Alexandria against forts only a trifle superior to those at Port Royal, and the palm will be given to the American squadron as an exhibition of skill. That affair did a great deal to impress foreign Governments with the power of our guns, and the indomitable energy of our officers and seamen; and though Great Britain, about that time, or shortly after, did threaten us in a manner that was anything but agreeable to the American people, yet that Government would have entered upon the fulfillment of their threats with misgivings—the growth of former disappointments in the War of 1812. Aside from his recently acquired renown, there was no officer in the United States Navy better

known abroad than Rear-Admiral DuPont. Many years of his life had been passed in the Mediterranean Squadron, where he traveled and made many European friends. He had commanded one of our best squadrons in China and Japan, and his bland manners, high standing as an officer, general knowledge on all subjects, in and out of his profession, made him an authority to whom foreign officers deferred. He was as well posted in all naval matters as any officer at home or abroad, and his opinions, which did not in 1863 run in accord with those of the Navy Department, were adopted by his friends and acquaintances in every quarter. DuPont had said that the forts in Charleston harbor could not be taken

by the force with which he had attacked them, and his opinion was accepted as that of an expert who had tried the matter to satisfy the Navy Department, and had failed, and who considered that to attempt it again, *under the same circumstances*, with the same force, would only entail a loss of men and material, if not a loss of naval prestige. The victory at Port Royal had settled the question of the future usefulness of Charleston and Savannah to the Confederates, for it offered the means, if we had properly used them, of sealing up those two harbors

as effectually as if we had actual possession of them, which we now know fully. The capture of Port Royal included in its direct consequences all that was essential to the occupation of adjacent places—as far as their value to the Confederate cause was concerned, they could be rendered useless if the proper steps were taken, without leading to a loss of vessels and men, a sacrifice not at all called for by the circumstances of the case.

Therefore, when Rear-Admiral Dahlgren entered upon his command, it must have been with the consciousness that he had a difficult task before him, and that he could scarcely hope to succeed with the force that had been so unmercifully tried by DuPont

Dahlgren had no sooner taken command than he received a letter from Brigadier-General Gillmore, informing him that he (Gillmore) was about to commence military operations against Morris Island, and looked for naval co-operation.

This should have been the first step taken at Charleston on the arrival of the Monitors, and the operations carried on should have been by an able and hearty co-operation of the Army and Navy, with well-digested plans drawn up, and an exact knowledge of the difficulties to be encountered and overcome. The capture of Charleston necessitated a somewhat long and patient siege by naval and military forces, as was the case during the war with

places superior in strength to Charleston. In such cases, the Confederates had to succumb, owing to the greater resources of the Federal Government; for the well-known advantage besiegers in force have over a beleaguered place is that the latter must eventually fall under the accumulated power that is concentrated against it.

Rear-Admiral Dahlgren must have congratulated himself when he saw that the Army was at once coming to his aid, and that he would not be obliged to repeat the attack made by DuPont upon the uninjured forts in

Charleston harbor, with the same Monitors that had failed so badly, and left one of their number resting on the bottom.

Dahlgren was not an engineer, but he must have known that the method about to be pursued by General Gillmore was the only feasible way of getting possession of Charleston, and he at once assured the General that he was ready to assist him with all his resources, if required. In making this announcement to the Navy Department, Rear-Admiral Dahlgren remarks: "Of course, the most that is expected from the action of these vessels is to relieve the troops as much as possible, and is to be considered of no other consequence." Thus, early in the operations, Dahlgren prepared

REAR-ADMIRAL JOHN A. DAHLGREN.

the Navy Department not to expect as much from the Monitors as was required of DuPont; as, with others, he had made up his mind that operations against the whole circle of forts should not be undertaken with a force that had proved itself totally inadequate on a former occasion.

Charleston harbor, in its general configuration, may be likened to that of New York, the city being on a neck of land somewhat resembling Manhattan Island; Cooper River, on the east, may be compared to the East River; while the Ashley River, on the west, resembles the Hudson. Morris and Sullivan Islands may pass for the defensive points at the Narrows, though the channel between them is much wider; and the interior fortifications—Sumter, Moultrie, Cumming's Point, Battery Gregg, Fort Johnson, etc.—were all within the lines of Morris and Sullivan Islands. An attack on Fort Wagner could be made by a naval force without bringing the ships composing it within range of the heavy batteries which successfully resisted the attack of the Monitors on the first occasion.

The plan of General Gillmore was to dispossess the enemy of Morris Island by opening batteries placed on the north end of Folly Island, to command those of the enemy on Morris Island, and by occupying the sandy eminences that form the southern portion of that island for a mile south of Light-house Inlet. It would require an accurate map of the harbor and forts to give one a good idea of the enemy's defences. A hostile force approaching from the sea, with the intention of attacking the Charleston batteries, would be obliged to pass between Sullivan's Island on the north and Morris Island on the south, both of which had heavy batteries, including Moultrie and Wagner; while above Moultrie, and forming a triangle with it and Battery Gregg, stands Sumter. These works and the accessories within this line of defence remained pretty much the same after Dahlgren's accession as they were on the day DuPont attacked them.

"The circle of fire," and the plan of meeting an advancing enemy, is minutely described in the circular issued by the Confederate Brigadier-General to all the officers in command of the forts, a copy of which will be found in the chapter entitled, "First Attack on Sumter."

A squadron, making an attack on the Morris Island works (Fort Wagner), would be two and one-quarter miles from Fort Moultrie, two miles from Sumter, one mile from Battery Gregg, and half a mile from Wagner; therefore, a squadron of Monitors would not be subjected, as they were in DuPont's battle, to a cross-fire from five or six heavy batteries, but would be open only to

the fire of Battery Gregg, Moultrie and Wagner at long range, with the Monitors presenting their bows to the enemy (the least vulnerable point, and the most difficult for gunners to strike).

This was the only way Charleston could be taken. Why was not this course pursued in the first instance? The question is easily answered. The Navy Department was so fully impressed with the power of the Monitors (those before Charleston being great improvements in strength over the original) that they had urged upon DuPont the necessity of making a grand stroke at the first trial of these formidable vessels. This was more for the purpose of making a great impression upon the French and English Governments, which were, it is said, at that moment watching for a favorable excuse to recognize the independence of the Southern States. At the same time, the Secretary of the Navy would have considered it a great triumph to have the Navy conquer this nest of secession; and though he did not demand success, he felt so assured of it that his expressed wishes amounted to almost an order.

Seeing the ill-success of the first attack, and having been somewhat surprised at Rear-Admiral DuPont's hint that he was willing the Department should send some one to undertake the capture of Charleston in whom the Secretary had more confidence, it was determined not to hamper Rear-Admiral Dahlgren with specific instructions, but allow him and the military engineers to work out the problem after their own plans.

At the same time, it must be said, in justice to the Navy Department, that Secretary Welles represented to the War Department that "a second attack was preparing against the forts in Charleston harbor, and that its success required the military occupation of Morris Island, and the establishment of land batteries on that island, to assist in the reduction of Sumter," and, as this was a task requiring engineering skill of the highest ability, Brigadier-General Q. A. Gillmore was assigned to the command of the Department.

General Gillmore commenced his advance upon Charleston by the movement of troops to Folly Island on July 3d, 1863, where they remained concealed as much as possible, and erected batteries to command those of the enemy on the south end of Morris Island.

With the foregoing explanations, we will proceed to relate what followed, namely, the attack on the enemy's works by the Army and Navy.

At 4 A. M. of July 10th, 1863, four ironclads—the "Catskill," Commander George

W. Rodgers, "Montauk," Commander Donald McN. Fairfax, "Nahant," Commander John Downes, and the "Weehawken," Commander E. R. Colhoun, passed over the bar, the flag of Rear-Admiral Dahlgren flying on the "Catskill." One hour later, at 5 A. M., General Gillmore made an attack on the Confederate fortified positions on the south end of Morris Island, and after an engagement of three hours and a quarter he had captured all the enemy's works upon that part of the island, and pushed forward his infantry to within six hundred yards of Fort Wagner.

As the fleet of Monitors passed the bar, General Gillmore commenced the attack with his batteries, and as soon as the Monitors could get sufficiently near to fire with effect, they opened with shell upon the Confederate works, which were replying to

beach, the iron-clads steamed parallel to the low, flat ground that extended northward from the sand-hills toward Fort Wagner, and as near to it as the depth of the water would allow, sending shells in every direction over its surface to clear away any bodies of troops that might be gathered there. Gillmore's troops pushed on, and, as they reached Fort Wagner, two or three buildings standing apart from each other were seen to be in flames, supposed to be the work of the enemy to unmask the guns of Fort Wagner bearing down the beach.

The iron-clads at this time were laid abreast of Fort Wagner. This was an open sand-work about two and three-quarter miles from the southern end of Morris Island, and lying about one and three-quarter miles north of the sand-hills, and commanding the intervening level.

FORT WAGNER DURING THE BOMBARDMENT.

General Gillmore's guns, and dispersed the enemy wherever they were seen to assemble.

At 8 o'clock, being nearly abreast the northern end of the ridge of sand-hills, Gillmore's batteries ceased firing, and his troops were seen from the Monitors making their way upon Morris Island. The assaulting column, led by Brigadier-General Strong, had passed the waterway between Folly and Morris Islands in small boats, under cover of his batteries. He then held all the island, except a mile on the north end, including Fort Wagner and the battery on Cumming's Point, which, as near as could be judged, contained fourteen or fifteen heavy guns. Rear-Admiral Dahlgren speaks of an assaulting party of troops that were landed on Morris Island by Lieutenant McKenzie, but General Gillmore leads one to infer that these were landed in small army-boats.

As the troops moved rapidly along the

It was 9 o'clock before the first shot was fired from the Monitors at Wagner, the Rear-Admiral desiring to get close enough to use grape shot, but the state of the tide would not permit his vessels to approach nearer than twelve hundred yards. The fire from the Monitors was promptly met, and was kept up vigorously until noon, when the vessels dropped down out of range to enable their men to get dinner, after which the previous position was re-occupied, and the attack continued until 6 P. M. Then the signal was made to "cease action," for the men had been at work for fourteen hours, and the weather was excessively hot.

The four iron-clads fired during this action five hundred and thirty-four shell and shrapnel, making excellent practice, while the vessels themselves proved their endurance. The flagship "Catskill" was struck sixty times, a large percentage of the hits being very severe. The pilot-house, turret,

side-armor and decks were all more or less damaged. Some of the projectiles were large. One, found on deck, where it fell after striking the turret, proved to be of 10-inch calibre. When these heavy shot struck the turret the concussion was very great. The iron of the pilot-house was broken entirely through, a nut from one of the bolts being driven against the lining so as to break it also. The deck-plates were cut through in so many places as to make the entrance of water troublesome. Though the test was a severe one, the "Catskill," after firing one hundred and twenty-eight rounds, came out of action in good working order, as was proved by her renewal of the fight on the following day. Naturally, the enemy made a mark of the "Catskill," that vessel carrying the Rear-Admiral's flag. The "Nahant" was only struck six times, the "Montauk" twice, while the "Weehawken" escaped altogether.

On the following morning, July 11th, Rear-Admiral Dahlgren received a note from General Gillmore stating that he "had made an assault on Fort Wagner at early daylight, and had been repulsed." At the same time he stated that he learned the enemy were about to throw reinforcements into Wagner, and asked for some action to prevent it. The four Monitors were again moved into position near Fort Wagner, and scoured the ground in the direction from which the expected reinforcements would approach.

So far the acquisitions of the combined forces had not been of a very important nature; still, a foothold was gained on Morris Island, and the officers in command felt satisfied that it would eventually lead to the possession of Sumter.

When General Gillmore made his attempt to carry Wagner, the parapets were gained, but the supports recoiled under the fire to which they were exposed, and could not be got forward. The loss of the army was about one hundred and fifty killed, wounded and prisoners. In the morning they captured in the defences of the enemy eleven pieces of heavy ordnance and a large quantity of camp equipage.

Rear-Admiral Dahlgren issued his first general order, thanking the commanders, officers and crews of the Monitors, and the members of his personal staff: Fleet-Captain William Rogers Taylor, Flag-Lieutenant S. W. Preston, and Ensign La Rue P. Adams, for the zealous and efficient manner in which they had performed their duties during the attacks of the 10th and 11th of July; also the ordnance officer, Lieutenant-Commander O. C. Badger, for the systematic promptness with which he had supplied the iron-clads with all requisite ordnance stores.

This battle was a strong endorsement of Rear-Admiral DuPont's opinion regarding another attack on the enemy's works. Within the "circle of fire" were seventy-five guns, that being about the number the Confederates stated were used in DuPont's attack. On the 10th of July four Monitors were brought up with their guns bearing on only fourteen of this number; yet, after fourteen hours of severe firing, the works not only remained "practically uninjured," but a heavy assaulting party were driven off, and the "Catskill" was struck sixty times by the shot from Fort Wagner. The whole fire of the fort, however, was evidently concentrated on this vessel, the enemy having soon learned that this was the only way to disable the fleet.

The report of Commander G. W. Rodgers goes to show that the "Catskill" was very severely handled, the chief injury being inflicted by the 10-inch smooth-bores of the enemy, their rifle-shot glancing.

It can readily be imagined, if the fourteen guns of Wagner did so much damage, how the seventy-five guns of Sumter and adjacent works would have cut up DuPont's small squadron after fourteen hours of cross-fire! Under the circumstances, they would have been literally knocked to pieces. At this day DuPont's opinion on these matters have been endorsed by a large majority of the officers of the Navy; and, as the siege of Charleston is related, it will be seen that he followed the path of wisdom in declining to risk the loss of his vessels and their crews without adequate compensation.

On the 18th of July another combined attack of the Army and Navy was made on Fort Wagner. After the failure of the assault by the troops, General Gillmore proceeded to bring his heaviest guns into position to play upon the besieged earth-work, as well as to throw his shot and shell into such of the enemy's works as he could reach, and, if possible, to throw shells into Charleston itself. The plan of the contest now consisted in pushing the siege-works up as close as possible to Wagner, and to annoy the enemy as much as possible with sharpshooters and bursting shells, which plan the latter were not slow to follow.

On the 18th of July, General Gillmore had succeeded in getting into position, to bear on the opposing works, twelve heavy guns and eight mortars, within eight hundred yards of Wagner; and when his arrangements were all completed he notified Rear-Admiral Dahlgren that he was ready to open fire.

The naval commander was not averse to an engagement, and at 11:30 A. M. of the above date led up to Fort Wagner with his flag flying on the "Montauk," followed by the "New Ironsides"—which had crossed the

bar—the “Catskill,” “Nantucket,” “Weehawken,” “and “Patapsco.” Upon arrival abreast of the fort, the “Montauk” was anchored and fired the first gun, which was immediately followed by the other vessels—a nearer approach than twelve hundred yards, however, being prevented by an ebb-tide. Meanwhile, the gun-boats “Paul Jones,” Commander A. C. Rhind, “Ottawa,” Lieutenant-Commander W. D. Whiting, “Seneca,” Lieutenant-Commander William Gibson, “Chippewa,” Lieutenant-Commander T. C. Harris, and “Wissahickon,” Lieutenant-Commander John L. Davis (all under charge of Commander Rhind), were detailed to use their great guns at long range, which they did with good effect; at the same time the batteries were delivering a very steady and deliberate fire.

At 4 P. M. the tide changed to flood, and the iron-clads got underway and closed in with the fort to a distance of three hundred yards, when the vessels opened fire again. Wagner was speedily silenced, and did not fire another shot or shell at the vessels during the day; neither was there a man of the enemy's force to be seen on or about the works. No troops in open earth-works could stand the terrible cross-fire on Fort Wagner from the vessels and General Gillmore's batteries, and the Confederates all went to cover, biding their time when the assault should come. This they knew was pretty sure to follow the bombardment.

The iron-clads continued their fire until it became too dark to distinguish friend from foe, when they ceased from necessity.

Very soon after, the rattle of musketry and the flashes of light artillery announced that the Federal troops were mounting the parapets of Fort Wagner. This continued without intermission until 9:30 P. M., then died away gradually, and finally ceased altogether. The Army had been badly repulsed a second time.

One gun in Wagner was known to have been dismounted, and another had burst, and General Gillmore, supposing from the terrible fire which had been poured upon the fort that the Confederates must be very much demoralized, determined upon a second assault without having men enough to overcome so powerful a work and its numerous and hardy defenders.

It may be desirable, perhaps, to know what kind of a work this was that endured such a tremendous cross-fire from thirty-seven heavy guns on shore and afloat. It was seldom that an earth-work so situated could stand the fire of naval vessels, much less a combined attack.

All that part of Morris Island not taken by General Gillmore was well fortified; it may be said that the batteries planted about

were the outposts of Fort Wagner. This work, though not mounting many guns, was built with remarkable care and skill; it was in shape partly a lunette, with one end fortified with guns looking down the beach, the other end commanding the upper beach. The whole work was constructed of immense timbers, forming bomb-proofs, and these were covered with sand-bags to a thickness of over twenty feet. Its air-line distance from Sumter was one and three-quarter miles, and from Battery Gregg less than one mile, and by these two works it might be said to be covered. It was very plain to a mere tyro in engineering that Wagner was the key to the destruction of Sumter and the acquisition of the enemy's works on Sullivan's Island.

A new era had dawned in engineering, and the clever enemy, with sand-bags and timber, had built a work far excelling anything in the shape of mortar, brick and stone, and had armed it with the heaviest guns at that time known in the United States. This was the fort (Wagner) which so far had defied the forces of both the Army and the Navy.

It now became necessary to prosecute the siege of Wagner with patience and perseverance, as it was felt that the number of Union troops was inadequate to carry the work without throwing away the lives of the men and the useless expenditure of materials, therefore active operations were for the moment suspended.

It was very evident that the fire of the naval vessels could silence Wagner's guns at any time, but General Gillmore could only raise one single column for attack, while the Confederates could throw into Wagner at night any number of men that might be required to fill up vacancies by casualties. These points had been made known to the War Department; but, with a degree of negligence that cannot be accounted for, the notice was so slow in being heeded that it gave the enemy opportunity to strengthen their weak points, and repair damages to such an extent that the combined operations would have to be repeated. If General Gillmore had been furnished with five thousand more troops, Wagner, without doubt, would have fallen at the first assault. It is not the writer's intention to criticise the action of the Government—he only states facts—but it is, nevertheless, very remarkable, considering the great desire of the American people to see Charleston (the hot-bed of secession and the pioneer in the revolution) fall into Union hands, that prompter measures were not taken to strengthen the Army corps and the Navy when required. Here, again, was demonstrated the necessity for having at the head of the Army one great military mind that

would know how to direct such important operations.

While giving credit to the Navy for the part it took in this affair, we deem it a duty we owe to the gallant army under General Gillmore to give an account of the more desperate adventures that befel the brave corps, which, after keeping up an energetic fire for so long a time, undertook the assault of Wagner. For this purpose two brigades were selected, consisting of the 7th Connecticut regiment, the 3d New Hampshire, the 9th Maine, the 76th Pennsylvania and the 48th New York, under Brigadier-General Strong; and the 7th New Hampshire, the 6th Connecticut, the 62d Ohio, the 100th New York, and the 54th Massachusetts (colored), under Colonel Putnam.

The brigades were formed in line on the beach, with the regiments disposed in columns, the colored regiment being in the advance. This movement was observed from Sumter, and fire opened on the troops from that work, but without effect.

At dark the order was given for both brigades to advance, General Strong leading and Colonel Putnam within supporting distance. The troops went forward in quick time, preserving the greatest silence, until the 54th Massachusetts, led by Colonel Shaw, was within two hundred yards of Wagner, when the men gave a cheer and rushed up the glacis, closely followed by the other regiments of the brigade.

The enemy—hitherto silent, but aware of all transpiring—opened upon the advancing columns a most furious fire of grape and canister, as well as a rapid fire of musketry. The negro troops plunged on, and some of them crossed the ditch, though it contained four feet of water, and reached the parapets. They were dislodged, however, in a few minutes, with hand-grenades, and retreated, leaving more than half their number on the field. The 6th Connecticut, under Lieutenant-Colonel Rodman, was next in support of the 54th Massachusetts, and they also suffered a terrible repulse. The next in line—the 9th Maine—was broken up by the retiring colored troops (who rushed through their lines), and retired in confusion, with the exception of three companies, which stood their ground.

It now devolved upon the 3d New Hampshire regiment to push forward, and, led by General Strong and Colonel Jackson in person, they dashed up against the fort. Three companies gained the ditch, and, wading through the water, found shelter against the embankment. Here was the critical point of the assault, but the second brigade, which should have been up and ready to support the leading troops, were, for some unknown reason, delayed. General Strong, finding that he was not sup-

ported, gave the order to fall back and lie down on the glacis, which was obeyed without confusion. While waiting, in this position, under a heavy fire, General Strong was wounded. Finding that the supports still failed to come up, he gave the order to his brigade to retire, and the movement was effected in good order.

Soon after this the other brigade came up, much impeded by the retreating troops; but they made up for their tardiness by their valor, rushing in impetuously, undeterred by the fury of the enemy, whose fire had continued without intermission. Several of the regiments succeeded in crossing the ditch, scaling the parapet, and getting *inside* the fort. Here a terrible hand-to-hand conflict ensued; the Union troops fought with desperation, and were able to drive the enemy from one side of the work to seek shelter between the traverses, while the former held possession for something more than an hour. This piece of gallantry was, unfortunately, of no avail. The enemy rallied, and, having received reinforcements, made a charge, and, by the force of numbers, drove the Union troops from their position.

One of the regiments engaged in this brilliant dash was the 48th New York, Colonel Barton, and it came out of the conflict almost decimated. The 48th was among the first to enter the fort, and was fired upon by a Union regiment that had gained the parapet, under the impression that it was the enemy. About midnight, seeing that it was impossible to hold what had been gained of the fort, an order was given to the Union troops to retire, and they fell back to the rifle-pits outside their own works, with a loss, in killed, wounded and missing, of 1,530 men.

After this most gallant but unsuccessful attack, General Gillmore came to the conclusion that Wagner could not be taken in that way by his depleted forces, and he decided to bombard that fort, Fort Sumter, and even Charleston, to either cause a surrender or to lay them in ruins.

Had the enemy been in great force at that moment, they could have massed all their troops, landed them on Morris Island, and captured Gillmore's army and everything belonging to it. But they were quite satisfied with the position as it was; they held the great chain of works which blocked the way to Charleston, and were very glad to see the Federals apparently wasting their strength in futile efforts to obtain possession of their strongholds.

In this last dreadful assault on Wagner, the ground in and around the fort was covered with the Union killed and wounded, and the naval force could not continue the fire the following day, nor until they were

removed. Rear-Admiral Dahlgren sent a communication to the commander of Fort Wagner, offering to bury the dead and to remove and care for the wounded. This proposition was politely declined, the Confederate commander sending word that he would bury the dead and see the wounded cared for. Judging from the manner in which he had defended his fort, his chivalric character no doubt caused him to keep his word.

The first thing General Gillmore did toward securing possession of Morris Island, which he determined to hold, was to construct parallels. These extended from the beach on the right to the marsh on the left. The first was distant from Wagner 1,200 yards. The second, and principal one, was so constructed that its left was 600 yards from the fort, and its right 750 yards. The third parallel was 425 yards from Wagner. The parallels were built in a direction diagonal to the length of Morris Island, having the highest points resting on the marsh. The rifle-pits, forming the foundation of the first parallel, were thrown up shortly after the troops gained possession of the lower part of the island. These pits were thrown up in a single night, and were first used on the 17th of July in the attack on Wagner. The interstices were subsequently filled, and the first parallel constructed. The moment this parallel was finished, the enemy were preparing to make a sortie on the work; but Rear-Admiral Dahlgren got underway with the iron-clads, assisted by the gun-boats at long range, and opened fire on Wagner, soon silencing that work and driving the men to cover.

At that time General Gillmore reported his advance position had been secured. The length of this parallel was 220 yards. The length of the second parallel was 325 yards. The siege-guns used for the offensive were mounted in the rear of this parallel. Its distance from Sumter was 3,350 yards. The third parallel was 100 yards in length. On the left, earth-works were constructed containing some of the heaviest siege-guns. Their mean distance from Sumter was 4,100 yards. Still further to the left, on the marsh, was another earth-work, facing Fort Sumter. On this work was mounted that celebrated gun, called the "Swamp Angel," which sent its shells into the city of Charleston—a distance of five miles.

This work was built on a spot inaccessible to the enemy's troops. At low water it was a deep bog; at high water the tide covered the ground to a depth of four feet, enabling scows to approach the spot and supply all the material necessary for the erection of earth-works. Sand-bags, and

everything else used in the construction of the work, sank out of sight in the soft ooze, at first, until a good foundation was secured. At each succeeding tide the scows brought their loads of material, which produced, in the end, a great mound above the marsh. This was an engineering feat worthy of the clever officer, General Gillmore, who executed it. Strong traverses were erected on this bank, and, after due time given everything to settle, the "Swamp Angel" was floated to the point on one of the scows, and mounted. The work was all done at night, as it was in full view of Fort Johnson and the James Island batteries.

In reference to the last two engagements with Wagner, Rear-Admiral Dahlgren does not speak of any casualties or damage to the Monitors or other vessels of the fleet, and it is presumed that the cross-fire from shore and afloat drove the Confederate gunners to cover before damage could be inflicted. Rear-Admiral Dahlgren had a great adjunct in these affairs in the staunch "New Ironsides," Captain Rowan, whose 11-inch guns, rapidly fired, did more to silence Wagner than any three Monitors in the fleet.

While General Gillmore was perfecting his plans, the vessels of the fleet were not idle. A smart affair came off in the Stono River, in which the "Pawnee" (Commander Balch), "Marblehead" (Lieutenant-Commander Scott), and the "Huron" were engaged. The "Pawnee" and "Marblehead" were at anchor near Fort Grimball, when they were hotly attacked by batteries of the enemy posted six hundred yards away, the first shot striking the "Pawnee," and the others admirably directed by the enemy. The position of the "Pawnee" was such that she could bring no guns to bear, and she was obliged to drop down stream until a point was reached whence the guns could be trained on the enemy. The "Marblehead" was requested to do likewise, and, meeting the "Huron" in this position, they all opened fire on the hostile batteries, which had been cutting them up severely while shifting their berths, resulting in the retreat of the enemy. The "Pawnee" was struck thirty-three times in the hull, three times in the smoke-stack, had three boats damaged, and six shot in the rigging. Fortunately, the "Pawnee" had chain-cables triced up and down her sides, or the boilers would have been perforated. Those South Carolina artillerymen were just as spunky and annoying as were those on the Mississippi, and never lost an opportunity to attack the wooden gun-boats, frequently with effect. There were but four persons wounded in this affair, and it is remarkable that a number were not killed, considering the precision of the enemy's fire.

Commander Balch, the senior officer on the Stono River, speaks in the handsomest terms of the conduct of Lieutenant-Commander Bacon for his unremitting attention to duties in that locality, where, for a period of five months, he had been co-operating with the Army. On the 16th of July the Confederates commenced an artillery fire on General Gillmore's pickets at Secessionville, but were speedily silenced by Lieutenant-Commander Bacon moving up the river with the "Commodore McDonough," and firing into their camp with his rifled gun.

In a report by Lieutenant A. S. McKenzie, referring to the landing of the brigade, which was transported, under his charge, on the boats of the "Weehawken" for the assault on Fort Wagner, he mentions the fact that Lieutenant H. B. Robeson, of the "New Ironsides," was the first to plant the American flag on Morris Island, Brigadier-General Strong landing with him.

During the operations for the possession of Morris Island, Commander Balch, with the "Commodore McDonough," Lieutenant-Commander Bacon and Lieutenant F. M. Bunce, in charge of boats with howitzers mounted, were employed in landing troops on Folly Island, which had to be done at night. By the most active exertions of these officers the duty was fully accomplished, every effort being made to effect a successful landing; and the Army was in a great measure indebted to them for the perfect manner in which all the troops were debarked.

While part of General Gillmore's forces were being landed on Folly Island, General Terry, commanding a division, was directed to proceed up the Stono in transports, preceded by the "Pawnee," "Nantucket" and the "Commodore McDonough," and make a landing on James Island, which was done. This manœuvre—a part of the programme of attack on Morris Island—was successfully accomplished under cover of the vessels mentioned.

While General Gillmore was making his advances the Confederates were increasing and improving their defences, and among other things were laying torpedoes and planting obstructions to prevent the advance of the fleet, and the greatest watchfulness was required to avoid them; but these measures did not affect the movements of General Gillmore, who, on August 17th, opened fire on Sumter with all his guns, over Wagner and the intervening space.

About the same time Rear-Admiral Dahlgren, with the "Weehawken," carrying his flag, moved forward with the entire naval force. The "Catskill," "Nahant" and "Montauk" following the flag-ship, the

"Passaic" and "Patapsco" being held in reserve for an attack on Sumter. The "New Ironsides," Captain Rowan, moved up abreast of Wagner, and the following sloops and gun-boats fired at long range: "Canandaigua," Captain J. F. Green, "Mahaska," Commander J. B. Creighton, "Cimmarone," Commander A. K. Hughes, "Ottawa," Commander W. D. Whiting, "Wisahickon," Lieutenant-Commander John L. Davis, "Dai Ching," Lieutenant-Commander J. C. Chaplin, "Lodona," Acting-Lieutenant E. Broadhead.

As the tide rose, the "Weehawken" closed to four hundred and fifty yards from Wagner; the other three Monitors followed, and the "New Ironsides" lay as near as her great draft of water would permit. The fort was silenced after a steady and well-directed fire.

General Gillmore had opened with his batteries soon after daylight, in answer to a fire from Wagner, Battery Gregg and Sumter, which was continued with great vigor for several hours. A 200-pounder rifled gun was brought to bear on Sumter for the purpose of testing the powder intended for use in these guns. Seven shots were fired, the distance being two and five-eighths miles. The first three fell short, but, of the remaining four, two went directly through the gorge wall a short distance above the sallyport, and two struck the parapet, sending a large amount of brick and mortar into the ditch and into the fort. The solid shot that passed through made holes from four to five feet in diameter.

General Gillmore had sixty guns of different calibres mounted, and with these he kept up an incessant fire on Sumter, while the fleet kept its guns playing rapidly on Wagner until there was no answer from that work. Then the flag was shifted to the "Passaic," that vessel and the "Patapsco" having rifled guns, and these two steamed up the channel to within two thousand yards of Sumter, when fire was opened on the gorge angle and southeast front of the work. The guns of the "Patapsco" were well aimed, and their projectiles struck the southeast front nine times in succession. To all this fire Sumter only replied now and then; Wagner was silenced, and Battery Gregg alone kept up an obstinate fire on the "Passaic" and "Patapsco."

At noon the iron-clads drew off to let the men go to dinner. This was, no doubt, a deliberate movement; but a better one would have been to have divisions of the fleet relieve each other, and never to cease fire on Wagner, even at night, until it lay a heap of ruins. The fertility of the Confederates, and their pertinacity in repairing damages, were too well known to suppose

that they would lose an opportunity to act when the guns stopped firing on them.

All the afternoon of the 17th the shore batteries continued to fire upon Sumter, with little or no reply. The "Passaic" and "Patapsco" were sent up again in the afternoon to open on Wagner, and prevent the repairing of damages. The fort answered actively for awhile, but in a short time ceased its fire.

On the whole, the day's work was satisfactory to the combined forces. The Army had demonstrated the feasibility of reaching Sumter and inflicting serious damage on the work; the Navy had shown that it could silence Wagner whenever it pleased to do so. It was not possible yet to ascertain what damage had been done to Sumter by the combined fire, but enough was known to assure the respective commanders that they had not yet demonstrated their full power, and that the enemy's works would be so seriously damaged in a short time that they would not be able to repair them.

The bombardment of Fort Sumter may be said to have commenced in earnest from this date, August 17th, with what result can be better judged from the bulletins that were issued day after day in Charleston, as the following:

CHARLESTON, Thursday, August 20th, 1863.

The firing of the Parrott guns on Sumter to-day was exceedingly heavy, but not so accurate as heretofore. About noon the flag was shot away, but soon replaced; no casualties are reported. Col. Alfred Rhett is commanding, and the garrison is stout-hearted.

The battery of Parrott guns is distant from Sumter  $2\frac{3}{4}$  miles. The missiles used are 200-pdr. bolts, eight inches in diameter and two feet long, with flat heads of chilled iron. Shells of the same dimensions are also used.

Up to Wednesday night, the third day of the attack, 1,972 of these missiles struck Sumter, and, including to-day, 2,500 have struck. The damage is, of course, considerable, and for the last two days all the guns on the south face of the fort have been disabled.

Yesterday the iron-clads formed in line of battle to renew the attack, but the fort opened at long range from the east face, and they retired without attacking.

To-day the "Ironsides" and two Monitors kept up a fire on Wagner at intervals, and the Yankee sappers have begun to make approaches on that battery from the nearest work. A shot from Wagner disabled one of the Parrott guns; and the James Island batteries, under Lieutenant-Colonel Yates, exploded two of the enemy's ammunition chests.

Thus, at last, Charleston was reaping some of the whirlwind it had sown, and retribution came for the dishonor it had done the flag that had once waved on Sumter. Through Sumter, the Union was being avenged for the first blows the Confederates had struck. This once sturdy old fort, in a few days after Gillmore opened his batteries, began to show signs of great weakness. Its great distance from the Federal batteries could not save it; science had surmounted

all the difficulties, and, if the American flag did not float over it, it would remain but a heap of ruins—a mere memento of the past.

CHARLESTON, Friday, August 21st, 1863.

The fire of the enemy's land batteries has been heavier to-day than ever. A new battery of Parrott guns opened on Sumter this morning, and the fire has been concentrated upon the east battery and its guns.

The south side of the fort is now a pile of rubbish. On the south the wall is also crumbling into a heap of ruins. The flag has been shot away twice to-day, and six times during the attack. The flag-staff is shot off, and the flag flies from the ruins of the south wall.

Just before sunset Sumter fired several shot at the iron-clads which were engaging Wagner.

A Monitor this morning fired at Sumter while making a reconnaissance, but was not replied to.

There is no report of casualties. The sappers are making a regular approach on Battery Wagner.

CHARLESTON, Saturday, August 22d, 1863.

From 5 o'clock A. M. until 7 o'clock P. M. the enemy's fire on Fort Sumter was very heavy; 923 shots were fired, and 704 struck the fort, either outside or inside. The eastern face of the fort was badly battered; some guns on the east face and on the north end were disabled. The flag was shot down four times. Five privates and two negroes were wounded.

The enemy's fire on Wagner caused five casualties, including Captain Robert Pringle, killed.

Last night a communication from the enemy (unsigned) was sent to General Beauregard, demanding the surrender of Sumter and the Morris Island batteries, with a notification that the city would be shelled in four hours if the demand was not complied with. General Beauregard was on a reconnaissance, and General Jordan returned it for the signature of the writer.

About 2 o'clock this afternoon the enemy began throwing shells into the city from a battery on the marsh between James and Johnson's Islands, and distant five miles from the city. Twelve 8-inch Parrott shells fell into the city, but caused no casualties. The transaction is regarded as an outrage on civilized warfare. The shelling had a good effect in hastening the exodus of the non-combatants.

At daylight this morning the enemy opened again vigorously on Sumter. The "Ironsides" has since opened on Wagner. Sumter is replying. Wagner is firing briskly on the enemy's advance works, four hundred and fifty yards from the battery.

CHARLESTON, August 22d.

The fire of the enemy's land batteries has been kept up on Sumter, and more guns disabled. There was only one casualty.

There was also a heavy fire opened on Battery Wagner from the fleet; also on Battery Gregg. The casualties at Wagner were one officer and five privates. General Gillmore's demand for the surrender of Sumter and Morris Island was a threat to shell Charleston in four hours from the delivery of the paper at Wagner. It was signed and returned at 7 o'clock this morning.

General Beauregard, in his reply, charges inhumanity and a violation of the laws of war, and affirms that, if the offence be repeated, he will apply stringent measures of retaliation.

Up to this time the threat to shell the city has not been executed.

There seems to be a discrepancy between these two bulletins about General Gillmore shelling the city.

CHARLESTON, Friday, August 23d.

To-day the land batteries opened from south to north, and the Monitors from east to west, coming close up; the fire was very damaging. The east wall was crushed and breached, and the shot swept through the fort. A shell burst, wounding Lieutenant Boylston, Colonel Rhett and three other officers.

The fort (Sumter) is now in ruins. Colonel Rhett is ordered to hold this outpost, even as a forlorn hope, until relieved or taken.

Colonel Gaillard was killed.

General Gillmore sent a communication at 11 o'clock, giving notice that at 11 o'clock to-morrow he would open fire again on Charleston.

CHARLESTON, August 24th.

The enemy's fire on Sumter slackened to-day. The fleet has not participated.

At 12 o'clock last night the enemy's guns opened on the city, firing fifteen 8-inch Parrott shells. No casualties resulted. Non-combatants are leaving the city in continuous streams.

I deem it unnecessary at present to continue the fire upon the ruins of Fort Sumter.

I have also (under a heavy fire from James Island) established batteries on my left, within effective range of the heart of Charleston city, and have opened with them, after giving General Beauregard due notice of my intention to do so.

My notification to General Beauregard, his reply thereto, with the threat of retaliation and my rejoinder, have been transmitted to Army headquarters.

The projectiles from my batteries entered the city, and General Beauregard himself designates them as the most destructive missiles ever used in war. \* \* \* \*

Very respectfully, your obedient servant,

Q. A. GILLMORE.

Colonel John W. Turner, Chief of Artillery, reports to General Gillmore as follows:

The gorge wall of the fort is almost a complete mass of ruins for the distance of several casemates about midway of this face, the ramparts are re-

APPEARANCE OF FORT SUMTER AT THE CLOSE OF THE ATTACK.

On the 24th of August General Gillmore wrote the following dispatches to Washington:

HEADQUARTERS, DEPARTMENT OF THE SOUTH, }  
MORRIS ISLAND, S. C., August 24th, 1863. }

To Major-General H. W. Halleck, General-in-chief:

SIR—I have the honor to report the practical demolition of Fort Sumter as the result of the seven days' bombardment of the work, during two days of which a powerful northeasterly storm most severely affected the accuracy of our fire.

Fort Sumter is to-day a shapeless and harmless mass of ruins. My chief of artillery, Colonel J. W. Turner, reports its destruction so far complete that it is no longer of any avail in the defence of Charleston. He also says that by a longer fire it could be made more completely a ruin and a mass of broken masonry, but could scarcely be made more powerless for the defence of the harbor.

My breaching batteries were located at distances varying from between 3,320 yards and 4,240 yards from the works, and now remain as efficient as ever.

moved nearly, and in places quite to the arches, and but for the sand-bags with which the casemates are filled, and which has served to sustain the broken arches and masses of masonry, it would have long since been entirely cut away, and with it the arches to the floor of the second tier of casemates.

The debris in this point now forms a ramp as high as the floor of the casemates. The parapet wall of the two northeasterly faces is completely carried away, a small portion being left at the angle made with the gorge wall, and the ramparts of these faces are also a total ruin. . . . The ruin extends around, taking in the northeasterly face as far as can be seen. . . . The ramparts in this angle, as well as in the southeasterly face, must be ploughed up and greatly shattered, the parapet in this latter face being torn off, as could be seen, and it was thought that the platforms of these remaining faces could not have escaped the universal destruction.

With the assistance of powerful glasses

all the damages could be accurately ascertained, even to the injury done to the gun-carriages. Colonel Turner ends his report by recommending that no more shot be wasted on Sumter, as it was practically of no further use in the defence of the harbor.

When all these facts were fully ascertained to the satisfaction of General Gillmore, that officer wrote to General Beauregard demanding the immediate evacuation of Morris Island and the surrender of Sumter, otherwise he would proceed "to open fire on Charleston from batteries already established within easy range of the city." To this, General Beauregard replied, using the following language, which may be interesting from the fact that he tries to place the Federal soldiers in the light of barbarians, while, at that very time, the harshest treatment was imposed upon the Union prisoners of war, and the Confederates themselves did not in all cases observe war's amenities. What General Gillmore proposed to do was according to the rules of war, he having given notice that he was about to bombard the city, six hours in advance—quite time enough for the non-combatants, women and children, to leave the place.

We cut down General Beauregard's letter owing to its length, but the following gives the substance of it :

Among nations, not barbarous, the usages of war prescribe that, when a city is about to be attacked, timely notice shall be given by the attacking commander in order that non-combatants shall have an opportunity for withdrawing beyond the limits. Generally, the time allowed is from one to three days. That is time for the withdrawal in good faith of the women and children. You, sir, give only four hours, knowing that your notice, under existing circumstances, could not reach me in less than two hours, and then, not less than the same time would be required for an answer to be conveyed from this city to Battery Wagner.

With this knowledge, you threaten to open fire on the city—not to oblige its surrender, but to force me to evacuate those works which you, assisted by a great naval force, have been attacking in vain for more than forty days.

Battery Wagner, Gregg and Fort Sumter are nearly due north from your batteries on Morris Island, and in distance therefrom varying from half a mile to two and a quarter miles; the city, on the other hand, is to the northwest, and distant quite five miles from the battery opened on us this morning.

It would appear, sir, that, despairing of reducing those works, you now resort to the novel measure of turning your guns against the old men, the women and children and hospitals of a sleeping city—an act of inexcusable barbarity from your own confessed point of sight, inasmuch as you allege that the complete demolition of Fort Sumter within a few hours, by your guns, seems to you "a matter of certainty."

I am only surprised, sir, at the limits you have set to your demands. If, in order to attain the abandonment of Morris Island and Fort Sumter, you feel authorized to fire on this city, why did you not also include the works on Sullivan and James Islands—nay, even the city of Charleston—in the same dispatch?

Since you have felt warranted in inaugurating this matter of reducing batteries in your immediate front, which were found otherwise impregnable, and a mode of warfare which I confidently pronounce to be atrocious and unworthy of any soldier, I now solemnly warn you that if you fire again from your batteries upon this city without giving a somewhat more reasonable time to remove non-combatants, I shall feel compelled to employ such stringent means of retaliation that may be available during the continuance of this attack. Finally, I reply that neither the works on Morris Island nor Fort Sumter will be evacuated on the demand you have been pleased to make. However, I am making preparations to remove all non-combatants, who are now fully alive to what they may expect at your hands.

Respectfully, your obedient servant,

G. T. BEAUREGARD.

General Gillmore answered the different points of this letter, and concluded with the following pertinent remarks:

If, under the circumstances, the life of a single non-combatant is exposed to peril by the bombardment of the city, the responsibility rests with those who have first failed to apprise the non-combatants, or secure the safety of the city, after having held control of all the approaches for a period of two years and a half in the presence of a threatening force, and who afterwards refuse to accept the terms on which the bombardment might have been postponed.

From various sources (official and otherwise) I am led to believe that all the women and children of Charleston have long since been removed from the city; but, upon your assurance that the city is still full of them, I shall suspend the bombardment until 11 o'clock P. M. to-morrow, thus giving you two days from the time you first acknowledged to have received my communication of the 21st inst.

Very respectfully, etc., etc.,

Q. A. GILLMORE,  
Brigadier-General, etc., etc.

In the naval bombardment of the 17th, the Navy lost the services of a brilliant young officer through the death of Commander George W. Rodgers, commanding the Monitor "Catskill." Commander Rodgers had more than once asked the rear-admiral if he should go with him as usual or take command of the "Catskill." In each instance the commander-in-chief answered, "Do as you choose." Rodgers finally concluded to go in the "Catskill." He got his vessel underway, and, while endeavoring to get a berth closer to the enemy, and *inside* the "Weehawken's" position, the "Catskill" was struck by a shot from Wagner, and Rodgers was instantly killed. This shot first struck the top of the pilot-house, fracturing the outer plate and tearing off an irregular piece of the inside plate about one foot in area, and forcing out several of the bolts by which the pieces were held together, fragments of which struck Commander Rodgers and Acting-Assistant Paymaster J. G. Woodbury, killing both instantly, besides wounding the pilot, Mr. Penton, and Acting-Master's Mate Trescott. When the commander fell, Lieutenant-Commander Charles C. Carpenter hove up the

anchor, steamed down to the tug "Dandelion," and, depositing the bodies in her, returned to his station and continued the action.

Rear-Admiral Dahlgren pays the highest tribute to Commander Rodgers, whose death was regretted by all who knew him. The latter's relations to the commander-in-chief (as fleet-captain) were so close that the rear-admiral felt his loss very sorely, and could ill supply the place of so efficient an officer. He was one of those to whose gallantry there were no bounds.

In the action of August 17th, the iron-clads, though frequently hit, suffered no material injury. The "Catskill" was struck thirteen times, with the casualties already mentioned. The "Ironsides," Captain S. C. Rowan, was hit thirty-

COMMANDER GEORGE W. RODGERS.

one times, exclusive of some shots supposed to have struck her under water. Most of the hits were from 10-inch solid shot, which seemed to have been fired with extra heavy charges; and, when the shot struck, they cut and broke everything to pieces. There are no reports of damage to other vessels, hence it is probable that the enemy concentrated their fire on the "Ironsides" and "Catskill."

No mention is made in Rear-Admiral Dahlgren's report of the establishment of a naval battery against Sumter, but there was one under command of Commander Foxhall A. Parker, and it performed good service. That battery fired, on the 17th of August, 170 shells and 125 solid shot against the exposed face of Sumter, doing much damage. Commander Parker was assisted in this service by Lieutenant E. T. Brower,

Ensign James Wallace and Acting-Ensign Owens, who deserve great credit for the work they performed for fifteen hours under a burning sun.

Though great efforts were made to reduce Wagner, Sumter and Gregg, these strong works stood apparently as defiant as ever, notwithstanding the great shot seams that could be seen in Sumter's side. It was pretty well ascertained from Gillmore's batteries, by the aid of good glasses, that it had been rudely dealt with; yet, though sixty more heavy guns were brought against it than were used in DuPont's attack, the Federal naval forces did not seem any nearer to the attainment of their wishes than DuPont was.

The effect of the fire on Charleston had not, up to the 24th of August, proved of a serious nature. Twelve 8-inch shells had fallen into the city, thirteen having been fired altogether. These shells flew in the direction of St. Michael's steeple, and fell either in the vacant lots in the burnt district on King Street, or in Queen and Rutledge Streets. Some loose straw was set on fire by them, and the firemen turned out to extinguish the flames. The pieces of shell picked up in the city caused great curiosity and wonder, that such large missiles should have been thrown to such a distance from the point where the Federal battery was located in the swamp.

On August 23d, Rear-Admiral Dahlgren got underway and moved the Monitors to within eight hundred yards of Sumter, and opened fire. During a portion of the time a clear sight of the fort was prevented by fog. When the Monitors opened, Sumter only replied with six guns; but Moultrie, with its extended lines, opened heavily, according to reports, and struck the Monitors frequently with heavy shot. The "Weehawken" received two heavy and damaging blows on the pilot-house. There was a good deal of difficulty in working the Monitors in the narrow channels, and they drew off under the fire of Moultrie, which being as yet intact was more than a match for them. No casualties in the fleet were reported in this action.

In this reconnaissance—which it will be well to call it—the injuries to Fort Sumter were clearly observed, but it did not yet come under the head of "useless ruin." Fort Wagner is spoken of in the reports as being "quite as strong as ever, perhaps more so;" so that in this state of affairs the naval forces were about as far from the central prize as ever.

Sumter was now considered "useless to the Confederate system of defence," only it yet remained to be turned fully to account as a Union acquisition, and this advantage could not be realized because the Federal

forces could not occupy the work. Such occupation, if possible, would have made a great difference in the plans of the besieging forces, but could not be likely to occur until the works on Sullivan's Island were invested simultaneously with those on Morris Island, and here was the great defect in the plan of this campaign. There was, no doubt, good engineering skill displayed, as far as it went, but what use could Sumter have been to the Federals while Moultrie—one of the heaviest works in Charleston harbor—and others stood ready to drive out of Sumter any Federal force that might undertake to enter it, which could only be by assault? It was, we may say, a heap of rubbish that had all fallen inside, but which could still afford a tremendous defence against any assaulting party brought against it. The true plan would have been for our forces to land on Sullivan's Island and Morris Island at the same time, and pursue the same methods that had been carried out at the latter. Of course, this would have required a greater number of troops and guns, but it was the only way to take Charleston.

While the Federals were making the most assiduous efforts to get into Sumter by the way of Wagner and Gregg, they overlooked entirely the obstacles still remaining on Sullivan's Island to prevent their holding it after capture; while Fort Johnson, Fort Ripley, Castle Pinckney and the iron batteries stood ready to pour in their cross-fire, as they had done when their attack on Sumter opened the Rebellion. The capture of James Island and the occupation of the works upon it, which was feasible, would have been a greater military feat than the capture of Wagner. In such event, Charleston would have been obliged to surrender or be destroyed, and, in consequence, its forts would have been obliged to follow her example.

The engineering work accomplished was of a splendid order, and the greatest bravery was displayed in its performance; yet engineers often become so absorbed in some favorite plan, which seems to promise all they desire, that they overlook other points which are the real keys to the situation. So it was at Sebastopol: all the best Russian, French and English engineers had overlooked the hill on which the Malakoff Tower stood, until the great Todelben appeared, and with his practiced eye discovered that to be the key. If either the French or the English had seized it, Sebastopol would not have stood a day before the fire of the allied batteries.

Four months had now passed since the first attack on Charleston, and many hundreds of heavy shells had been fired, without any great advance of the Federal forces

toward their objective point; and this not from any want of skill in the naval or military commanders, but from the fact that the authorities at Washington did not have a comprehensive idea of what was required to carry out so great a work, and from their absurd supposition, in the first instance, that the whole net-work of forts could be taken by a small fleet of Monitors, armed principally with guns of small penetrative power, when, moreover, the endurance of these vessels had scarcely been tested.

It is very easy, though, to see all that was required when what was considered to be the best means had failed; but herein lies the ability of the engineer and the naval officer co-operating: they should be able to see the best points ere the operations have advanced too far to allow of retraction.

General Gillmore was of the opinion that Sumter could not be taken possession of until Wagner was subdued, and all his siege-guns were advanced as close as possible to the north end of Morris Island, while Rear-Admiral Dahlgren thought he could pass the batteries with his fleet, and go on to Charleston.

Here the naval officer and the military commander began to differ. Gillmore desired that the Monitors and the "Ironsides" should move *pari passu* with him. Dahlgren thought he could go alone, regardless of the obstructions which had to be forced, and which were defended by at least seventy guns, under the full range of which the fleet would be exposed, even as far as Sumter, which fort might or might not still have guns mounted upon it that would do serious injury to the vessels. Under the circumstances, General Gillmore deemed that the assistance of the Navy, in all its strength, was indispensable to success.

At midnight of September 1st, and just before slack high water, the "Ironsides" and the Monitors were moved up the channel. The primary purpose of this movement was to make certain that Sumter had no guns remaining in service. It was believed that the Confederates had remounted a few guns on the northeast and northwest faces. On the same evening, General Gillmore's batteries had opened fire on Sumter, and the general had informed Rear-Admiral Dahlgren that he had knocked down some four or five pieces that were observed on the more remote fronts, and this encouraged Dahlgren to attack. The nearest approach of the Monitors to Sumter was five hundred yards, the flag being carried on the "Weehawken;" but the ebb-tide was now so strong that it was nearly 12 o'clock before the first shot was fired from the flag-ship.

Two shots were fired from the fort, when the "Weehawken" was laid off the angle

of the northeast and southeast fronts. The "Iron-sides" was brought up to an easy range, and joined in the action which followed, the vessels all firing steadily and accurately. Meanwhile, Moultrie opened a rapid and well-sustained fire from its extended lines, which told on the vessels, though the obscurity of the night interfered with the accuracy of the enemy's aim at such small targets as the turrets of the Monitors.

The fire of the Monitors was also directed against the floating obstructions which had been reported from day to day. At daylight the fleet withdrew without being able to ascertain the effect of their fire. This engagement lasted five hours, during which time the fleet fired 245 shots, and received in all 71 hits, of which numbers the "Iron-sides" fired 50 shots and received 7 hits.

From all accounts there was no serious damage done to the vessels, notwithstanding all the pounding, and the "Iron-sides" stood the brunt of the battle as well as the Monitors. Fleet-Captain Badger was struck by a fragment of the turret knocked off by one of the enemy's shot, and his leg broken by it. This was the third fleet-captain Dahlgren had had injured or killed in the short space of two months. He speaks of Captain Badger in the warmest terms of praise, and as an officer whose place it would be very difficult to fill.

The commanders of the iron-clads, Captain S. C. Rowan, Commander T. H. Stevens, Commander Andrew Bryson, Commander E. R. Colhoun, Lieutenant-Commander Edward Simpson, Lieutenant-Commander John L. Davis and Lieutenant-Commander J. J. Cornwell, are spoken of in terms of high commendation for their gallantry and the ability they displayed in handling their vessels in the narrow channel on an obscure night.

On September 7th, arrangements were made to open fire upon Wagner from the trenches, and from all the iron-clads, which fire was to be followed at 9 o'clock at night by an assault. A steady cannonade had been maintained against the work on the 6th from the trenches and from the "Iron-sides;" but in the meantime a deserter had gone over to General Gillmore with the information that the Confederates were evacuating the works; they had stood the siege as long as they could, had gone through fire enough to drive out any but American troops, and now evacuated to escape the assault which they knew would come at night. We cannot help but admire the courage of these brave fellows, though they were fighting against us in a bad cause. We cannot help thinking how those men would fight against a foreign foe!

On the 7th of September, General Gill-

more made the following report to General Halleck:

GENERAL—I have the honor to report that Fort Wagner and Battery Gregg are ours. Last night our sappers mined the counterscarp of Fort Wagner in its sea-point, unmasking all its guns, and the order was given to carry the place by assault at 9 o'clock this morning, that being the hour of low tide.

About 10 o'clock last night the enemy commenced to evacuate the island, and all but seventy-five of them made their escape from Cumming's Point in small boats.

Captured dispatches show that Fort Wagner was commanded by Col. Keitt, of South Carolina, and garrisoned by 1,400 effective men, and Battery Gregg by from 100 to 200 men.

Fort Wagner is a work of the most formidable kind. The bomb-proof shelter, capable of containing 1,800 men, remains intact after the most terrible bombardment to which any work was ever subjected.

We have captured nineteen pieces of artillery and a large supply of excellent ammunition.

The city and harbor of Charleston are now completely covered by my guns.

I have the honor to be, etc., etc.,

Q. A. GILLMORE,  
Brigadier-General, Commanding.

After the evacuation of Wagner and Gregg, Rear-Admiral Dahlgren, having ineffectually demanded the surrender of Fort Sumter, on the ground of its indefensibility, determined to try a plan by which that work might be captured; and, as a preliminary, ordered the "Weehawken" to pass in by a narrow channel winding about Cumming's Point, so as to cut off all communication in that direction. In so doing, the "Weehawken" grounded, and, though at low water, did not succeed in floating on the next high tide. Later in the day, the rear-admiral moved up in the "Iron-sides," with the Monitors, to feel and, if possible, pass the obstructions north of Sumter. Moultrie, Battery Bee and Fort Beauregard quickly opened on the iron-clads, which returned the fire very warmly, and continued to do so until it became necessary to pay attention to the "Weehawken." Steam-tugs and hawsers were provided for getting her off, but without success, even at high water, as already stated. At 7 A. M. the enemy perceived her condition, and began to fire upon her from Moultrie, about 3,000 yards distant. The iron-clads were ordered up to cover the grounded Monitor, which meanwhile replied to the enemy's fire, and, in less than half an hour, blew up one of the Confederate magazines. At the next high water the "Weehawken" was fortunately floated, after the most strenuous efforts of Commander Colhoun, officers and crew. The only casualties on board the "Weehawken" on this occasion were three men wounded by a shot from Battery Bee.

Up to this time the operations of the Navy had been well conducted. There was

a perfect co-operation between the commanders of the respective forces; and, as the Army advanced its parallels and breaching batteries toward Wagner, the "Iron-sides" and the Monitors advanced on the water, keeping up a well-directed fire, the effect of all which is shown by its evacuation on the 7th of September.

General Gillmore and his chief of artillery had given the most satisfactory account of the damage done to Sumter by the breaching of the gorge wall and the dismounting of most of the guns, and had also asserted "that it was no longer of any practical use to Charleston harbor as an offensive work." This was pretty well demonstrated when the "Weehawken" got hard and fast aground in the channel, between Sumter and Cumming's Point, and Sumter could not fire upon her for lack of guns. Sumter was now, in fact, nothing but an outpost to be held by the enemy as a matter of pride—nothing more—and without power to inflict a particle of injury on any one, unless it might be a party that attempted to gain admission over the debris that blocked the entrances, and afforded no footing for a party of boarders. A small party within, however, could easily bar the way or inflict serious injury upon an attacking-party that might attempt to take the work by assault.

All these matters had been very fully discussed, but it does not appear that General Gillmore was consulted as to the feasibility of an attempt to take Sumter by assault, or applied to for the assistance of his steady and practiced assaulters, who had had considerable experience in attacking forts. Brave and dashing as sailors may be, for this kind of business they lack that steady movement and discipline which makes an attacking force a unit, and carries everything before it; while sailors, drilled to board a ship with a cheer and a rush, have a less methodical way, which may succeed; if checked for one moment by regulars and steady troops in an operation of the kind on shore, the chances are that they will be driven back and cut to pieces or captured in the retreat.

Whether Rear-Admiral Dahlgren considered these matters or not is not known, but he nevertheless determined to make a naval assault on Sumter on the night of September 8th. The supposition is that he did not consider military assistance requisite. Viewed as a military move, the attempt to assault Sumter was a grave mistake; there was no necessity for it, and General Gillmore was already moving forward his heavy breaching-guns to cover Charleston and all the forts in the upper harbor; and would, in a few days, have made Sumter a still more useless heap of rubbish than it was already. Again, it is questionable

whether the military etiquette properly observable on such an occasion was not violated in attempting to take possession of a work destroyed principally by army guns, without extending an invitation to the general commanding to participate in the projected assault.

Dahlgren claimed that, if successful, the assault would enable him to pass the obstructions in the main channel with his fleet. He therefore directed that a storming party should be formed, and called for volunteers. No matter what may be the danger for officers and sailors to face, there is never any difficulty in getting volunteers in the American Navy, and such was the case on this occasion. The following officers came forward and offered their services at once: Commander T. H. Stevens, Lieutenant Moreau Forrest, Lieutenant-Commander E. P. Williams, Lieutenant George C. Remy, Lieutenant S. W. Preston, Lieutenant F. J. Higginson, Ensign Charles H. Craven, Lieutenant-Commander F. M. Bunce, Lieutenant E. T. Brower, Ensign James Wallace and Ensign B. H. Porter; also the following officers of the Marine Corps: Captain C. G. McCawley, First-Lieutenant Charles H. Bradford, First-Lieutenant John C. Harris, Second-Lieutenant R. L. Meade, Second-Lieutenant Lyman P. Wallace and Second-Lieutenant L. E. Fagan.

Of these officers, Commander T. H. Stevens was selected to command the expedition, while the following were appointed to command divisions of the assaulting force: First division, Lieutenant-Commander E. P. Williams; 2d division, Lieutenant George C. Remy; 3d division, Lieutenant S. W. Preston; 4th division, Lieutenant F. J. Higginson; and 5th division, Ensign Charles H. Craven.

Upon applying to General Gillmore for more boats to carry the sailors and marines, Rear-Admiral Dahlgren learned *for the first time* that Gillmore was about to make an assault on Sumter the same night. It is stated that when this information was received by Dahlgren it was late in the evening, and, owing to the want of inter-service signals, there was no concert with the Army contingent in the further movements. It was 10 o'clock at night when the boats started off for Sumter in tow of a tug. On the way, the party communicated with the "Passaic" and "Montank," giving orders to their respective commanders to move up to their support. When within eight hundred yards of the fort, the tug cast off the boats, and the orders regarding the operations of the night, as well as the watchword, were given out.

Lieutenant Higginson was ordered to move up to the northwest front of the fort,

with his division, for the purpose of making a diversion, while the remainder of the divisions were ordered to close up and wait for the order to advance upon the southeast point. The intention of Commander Stevens was to wait until he had the full benefit of Lieutenant Higginson's diversion; but mistaking his movement, no doubt, as a general one, and with a true spirit of emulation and gallantry, many of the other boats dashed on to the fort. Finding it impossible to stop them, the order was given along the line for *all* to advance.
