ENQUIRY

CONCERNING

POLITICAL JUSTICE,

AND

ITS INFLUENCE

ON

GENERAL VIRTUE AND HAPPINESS.

BY

WILLIAM GODWIN.

IN TWO VOLUMES.

VOL. I.

LONDON:

PRINTED FOR G. G. J. AND J. ROBINSON, PATERNOSTER-ROW.
M.DCC.XCIII.

PREFACE.

F E W works of literature are held in greater estimation, than those which treat in a methodical and elementary way of the principles of fcience. But the human mind in every enlightened age is progressive; and the best elementary treatifes after a certain time are reduced in their value by the operation of subsequent discoveries. Hence it has always been defired by candid enquirers, that preceding works of this kind should from time to time be superfeded, and that other productions including the larger views that have fince offered themselves, should be substituted in their place.

It would be strange if something of this kind were not defirable in politics, after the great change that has been produced in men's minds upon this fubject, and the light that has been thrown

1

thrown upon it by the recent discussions of America and France. A sense of the value of such a work, if properly executed, was the motive which gave birth to these volumes. Of their execution the reader must judge.

Authors who have formed the defign of superfeding the works of their predecessors, will be found, if they were in any degree equal to the defign, not merely to have collected the scattered information that had been produced upon the subject, but to have increased the science with the fruit of their own meditations. In the following work principles will occasionally be found, which it will not be just to reject without examination, merely because they are new. It was impossible perseveringly to reslect upon so prolific a science, and a science which may be said to be yet in its infancy, without being led into ways of thinking that were in some degree uncommon.

Another argument in favour of the utility of fuch a work was frequently in the author's mind, and therefore ought to be mentioned. He conceived politics to be the proper vehicle of a liberal morality. That description of ethics deserves to be held in flight estimation, which seeks only to regulate our conduct in articles of particular and personal concern, instead of exciting our attention to the general good of the species. It appeared fufficiently practicable to make of fuch a treatife, exclusively of its direct political use, an advantageous vehicle of moral improvement. He was accordingly defirous of producing a work, from the perusal of which no man should rife without being frengthened in habits of fincerity, fortitude and justice.

Having stated the considerations in which the work originated, it is proper to mention a few circumstances of the outline of its history. The sentiments it contains are by no means the suggestions of a sudden effervescence of sancy. Political en-

quiry had long held a foremost place in the writer's attention. It is now twelve years fince he became fatisfied, that monarchy was a species of government unavoidably corrupt. He owed this conviction to the political writings of Swift and to a perusal of the Latin historians. Nearly at the fame time he derived great additional instruction. from reading the most considerable French writers upon the nature of man in the following order, Système de la Nature, Rousseau and Helvetius. Long before he thought of the present work, he had familiarifed to his mind the arguments it contains on justice, gratitude, rights of man, promises, oaths and the omnipotence of truth. Political complexity is one of the errors that take ftrongest hold on the understanding; and it was only by ideas fuggested by the French revolution, that he was reconciled to the defirableness of a government of the simplest construction. To the same event he owes the determination of mind which gave existence to this work.

Such was the preparation which encouraged him to undertake the prefent treatife. The direct execution may be difmiffed in a few words. It was projected in the month of May 1791: the composition was begun in the following September, and has therefore occupied a space of sixteen months. This period was devoted to the purpose with unremitted ardour. It were to be wished it had been longer; but it seemed as if no contemptible part of the utility of the work depended upon its early appearance.

The printing of the following treatife, as well as the composition, was influenced by the same principle, a desire to reconcile a certain degree of dispatch with the necessary deliberation. The printing was for that reason commenced, long before the composition was finished. Some disadvantages have arisen from this circumstance. The ideas of the author became more perspicuous and digested, as his enquiries advanced. The longer he considered the subject, the more accu-

rately he feemed to understand it. This circumstance has led him into a few contradictions. The principal of these confists in an occasional inaccuracy of language, particularly in the first book, refpecting the word government. He did not enter upon the work, without being aware that government by its very nature counteracts the improvement of individual mind; but he understood the full meaning of this proposition more completely as he proceeded, and faw more distinctly into the nature of the remedy. This, and a few other defects, under a different mode of preparation would have been avoided. The candid reader will make a fuitable allowance. The author judges upon a review, that these defects are such as not materially to injure the object of the work, and that more has been gained than lost by the conduct he has purfued.

The period in which the work makes its appearance is fingular. The people of England have affiduously been excited to declare their loy-

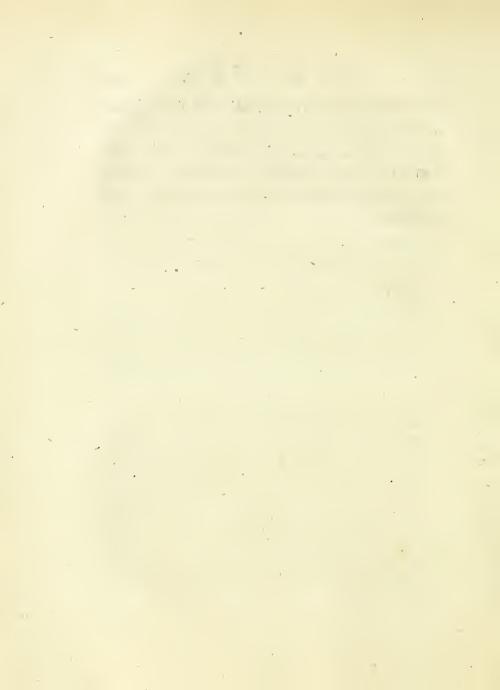

5

alty, and to mark every man as obnoxious who is not ready to fign the Shibboleth of the constitution. Money is raifed by voluntary fubscription to defray the expence of profecuting men who shall dare to promulgate heretical opinions, and thus to oppress them at once with the enmity of government and of individuals. This was an accident wholly unforeseen when the work was undertaken; and it will fearcely be supposed that such an accident could produce any alteration in the writer's defigns. Every man, if we may believe the voice of rumour, is to be profecuted who shall appeal to the people by the publication of any unconstitutional paper or pamphlet; and it is added, that men are to be profecuted for any unguarded words that may be dropped in the warmth of conversation and debate. It is now to be tried whether, in addition to these alarming encroachments upon our liberty, a book is to fall under the arm of the civil power, which, beside the advantage of having for one of its express objects the diffuading from all tumult and violence, is by its very nature an appeal to men of study and reflexion. It is to be tried whether a project is formed for suppressing the activity of mind, and putting an end to the disquisitions of science. Respecting the event in a personal view the author has formed his resolution. Whatever conduct his countrymen may pursue, they will not be able to shake his tranquillity. The duty he is most bound to discharge is the assisting the progress of truth; and if he suffer in any respect for such a proceeding, there is certainly no vicissitude that can befal him, that can ever bring along with it a more satisfactory consolation.

But, exclusively of this precarious and unimportant consideration, it is the fortune of the prefent work to appear before a public that is panic struck, and impressed with the most dreadful apprehensions of such doctrines as are here delivered. All the prejudices of the human mind are in arms against it. This circumstance may appear to be of greater importance than the other.

But it is the property of truth to be fearless, and to prove victorious over every adversary. It requires no great degree of fortitude, to look with indifference upon the false fire of the moment, and to foresee the calm period of reason which will succeed.

JANUARY 7, 1793;

OF THE

FIRST VOLUME.

BOOK I.

OF THE IMPORTANCE OF POLITICAL INSTITUTIONS.

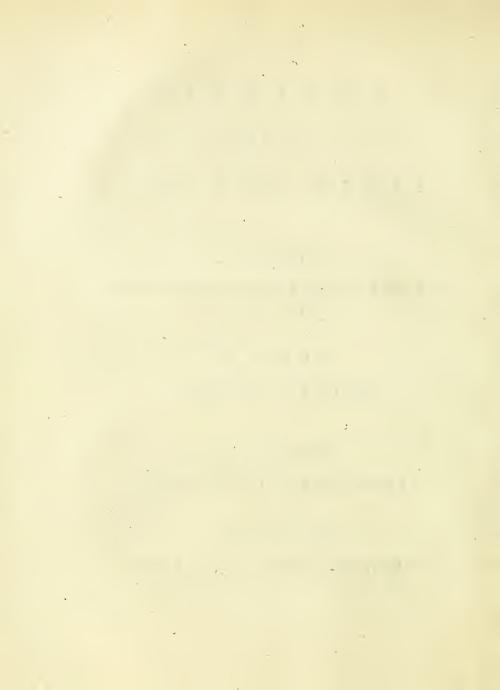

BOOK II.

PRINCIPLES OF SOCIETY.

BOOK III. PRINCIPLES OF GOVERNMENT.

BOOK IV.

MISCELLANEOUS PRINCIPLES.

OF THE

FIRST BOOK.

OF THE IMPORTANCE OF POLITICAL INSTITUTIONS.

CHAP. I.

INTRODUCTION.

THE subject proposed.—System of indifference—of passive obedience—of liberty.—System of liberty extended.

Page 1

CHAP. II.

HISTORY OF POLITICAL SOCIETY.

Frequency of war—among the ancients—among the moderns—the
French—the English.—Causes of war.—Penal laws.—Defpotism.—Deduction.—Enumeration of arguments.

5

CHAP. III.

THE MORAL CHARACTERS OF MEN ORIGINATE IN THEIR PERCEPTIONS.

No innate principles.—Objections to this affertion—from the early actions of infants—from the define of self-preservation—from self-love—from pity—from the vices of children—tyranny—sullenness.—Conclusion.

Page 12

CHAP. IV.

THREE PRINCIPAL CAUSES OF MORAL IMPROVE-MENT CONSIDERED.

I. LITERATURE.

Benefits of literature.—Examples.—Essential properties of literature.

—Its defects.

II. EDUCATION.

Benefits of education.—Causes of its imbecility.

III. POLITICAL JUSTICE.

Benefits of political institution.—Universality of its influence—proved by the mistakes of society.—Origin of evil.

CHAP. V.

INFLUENCE OF POLITICAL INSTITUTIONS EXEMPLIFIED.

Robbery and fraud, two great vices in society—originate, 1. in extreme poverty—2. in the oftentation of the rich—3. in their tyranny

tyranny—rendered permanent—1. by legislation—2. by the administration of law—3. by the inequality of conditions. Page 33

CHAP. VI.

HUMAN INVENTIONS CAPABLE OF PERPETUAL IM-PROVEMENT.

Perfettibility of man—instanced, sirst, in language. — Its beginnings.

—Abstraction.—Complexity of language.—Second instance: alphabetical writing.—Hieroglyphics at sirst universal.—Progressive deviations.—Application.

CHAP. VII.

OF THE OBJECTION TO THESE PRINCIPLES FROM THE INFLUENCE OF CLIMATE.

PART I.

OF MORAL AND PHYSICAL CAUSES.

The question stated.—Provinces of sensation and restection.—Moral causes frequently mistaken for physical.—Superiority of the former evident from the varieties of human character.—Operation of physical causes rare.—Fertility of restection.—Physical causes in the sirst instance superior, afterwards moral.—Objection from the effect of breed in animals.—Conclusion.

PART II.

OF NATIONAL CHARACTERS.

Character of the prieshhood.—All nations capable of liberty.—The assertion illustrated.—Experience favours these reasonings.—Means of introducing liberty.

Page 60

CHAP. VIII.

OF THE OBJECTION TO THESE PRINCIPLES FROM THE INFLUENCE OF LUXURY.

The objection stated.—Source of this objection.—Refuted from mutability—from mortality—from the nature of truth.—The probability of perseverance considered.

BOOK II.

PRINCIPLES OF SOCIETY.

CHAP. I.

INTRODUCTION.

Nature of the enquiry.—Mode of pursuing it.—Distinction between fociety and government 77

CHAP. II.

OF JUSTICE.

Connection of politics and morals.—Extent and meaning of justice.—
Subject of justice: mankind.—Its distribution measured by the capacity of its subject—by his usefulness.—Family affection considered.—Gratitude considered.—Objections: from ignorance—from utility.—An exception stated.—Degrees of justice.—Application.—Idea of political justice.

Page 80

APPENDIX, No. I.

OF SUICIDE,

Motives of fuicide: 1. escape from pain - 2. benevolence. - 92

APPENDIX, No. II.

OF DUELLING.

Motives of duelling: 1. revenge—2. reputation for courage.— Fallacy of this motive.—Objection answered.—Illustration. 94

CHAP. III.

OF DUTY.

A difficulty stated.—Of absolute and practical virtue.—Impropriety of this distinction.—Universality of what is called practical virtue

8 —instanced

—instanced in robbery—in religious fanaticism.—The quality of an action distinct from the disposition with which it is performed.—Farther difficulty.—Meaning of the term, duty.—Application.—Inferences.

Page 97

CHAP. IV.

OF THE EQUALITY OF MANKIND.

Physical equality.—Objection.—Answers.—Moral equality.—How limited.—Province of political justice.

CHAP. V.

, RIGHTS OF MAN.

The question stated.—Foundation of society.—Opposite rights impossible.—Conclusion from these premises.—Discretion considered.—Rights of kings.—Immoral consequences of the doctrine of rights.—Rights of communities.—Objections: 1. the right of mutual aid.—Explanation.—Origin of the term, right.—2. rights of private judgment and of the press.—Explanation.—Reasons of this limitation upon the functions of the community: 1. the inutility of attempting restraint—2. its pernicious tendency.—Conclusion.

109

CHAP. VI.

OF THE EXERCISE OF PRIVATE JUDGMENT. .

Foundation of virtue.—Human actions regulated: 1. by the nature of things—2. by positive institution.—Tendency of the latter: 1.

10

to excite virtue.—Its equivocal character in this respect.—2. to inform the judgment.—Its inaptitude for that purpose.—Province of conscience considered.—Tendency of an interference with that province.—Recapitulation.—Arguments in favour of positive institution: 1. the necessity of repelling private injustice.—Objections: the uncertainty of evidence—the diversity of motives—the unsuitableness of the means of correction—either to impress new sentiments—or to strengthen old ones.—Punishment for the sake of example considered.—Urgency of the case.—2. rebellion—3. war.—Objections.—Reply.

Page 120

BOOK III.

PRINCIPLES OF GOVERNMENT.

CHAP. I.

SYSTEMS OF POLITICAL WRITERS.

The question stated.—First hypothesis: government founded in superior strength.—Second hypothesis: government jure divino.—
Third hypothesis: the social contract.—The first hypothesis examined.—The second.—Criterion of divine right: 1. patriarchal descent—2. justice.

CHAP. II.

OF THE SOCIAL CONTRACT.

Queries proposed.—Who are the contracting parties?—What is the form of engagement?—Over how long a period does the contract extend?—To how great a variety of propositions?—Can it extend to laws hereafter to be made?—Addresses of adhesion considered.—Power of a majority.

Page 143

CHAP. III.

OF PROMISES.

The validity of promises examined.—Shown to be inconsistent with justice—to be foreign to the general good.—Of the expectation excited.—The fulfilling expectation does not imply the validity of a promise.—Conclusion.

CHAP. IV.

OF POLITICAL AUTHORITY.

Common deliberation the true foundation of government—proved from the equal claims of mankind—from the nature of our faculties—from the object of government—from the effects of common deliberation.—Delegation vindicated.—Difference between the doctrine here maintained and that of a focial contract apparent—from the merely prospective nature of the former—from the nullity of promises—from the fallibility of deliberation.—Conclusion.

CHAP.

CHAP. V.

OF LEGISLATION.

Society can declare and interpret, but cannot enact.—Its authority only executive. Page 166

CHAP. VI.

OF OBEDIENCE.

Obedience not the correlative of authority.—No man bound to yield obedience to another.—Case of submission considered.—Foundation of obedience.—Usefulness of social communication.—Case of considence considered.—Its limitations.—Mischief of unlimited considence.—Subjection explained.

APPENDIX.

Moral principles frequently elucidated by incidental reflection—by incidental passages in various authors.—Example. 176

CHAP. VII.

OF FORMS OF GOVERNMENT.

Argument in favour of a variety of forms—compared with the argument in favour of a variety of religious creeds.—That there is one best form of government proved—from the unity of truth—from the nature of man.—Objection from human weakness and prejudice.—Danger in establishing an imperfect code.—Manners

of nations produced by their forms of government.—Gradual improvement necessary.—Simplicity chiefly to be desired.—Publication of truth the grand instrument—by individuals, not by government—the truth entire, and not by parcels.—Sort of progress to be desired.

Page 179

BOOK IV.

MISCELLANEOUS PRINCIPLES.

CHAP. I.

OF RESISTANCE.

Every individual the judge of his own refishance.—Objection.—
Answered from the nature of government—from the modes of refishance.—1. Force rarely to be employed—either where there is

small prospect of success—or where the prospect is great.—History
of Charles the first estimated.—2. Reasoning the legitimate
mode.

CHAP. II.

OF REVOLUTIONS.

SECTION I.

DUTIES OF A CITIZEN.

Obligation to support the constitution of our country considered must arise either from the reason of the case, or from a personal and local consideration.—The sirst examined.—The second.

Page 198

SECTION II.

MODE OF EFFECTING REVOLUTIONS.

Persuasion the proper instrument—not violence—nor resentment.— Lateness of event desirable. 202

SECTION III.

OF POLITICAL ASSOCIATIONS.

Meaning of the term.—Associations objected to—1. from the fort of persons with whom a just revolution should originate—2. from the danger of tumult.—Objects of association.—In what cases admissible.—Argued for from the necessity to give weight to opinion—from their tendency to ascertain opinion.—Unnecessary for these purposes.—General inutility.—Concessions.—Importance of social communication.—Propriety of teaching resistance considered. 225

SECTION IV.

OF THE SPECIES OF REFORM TO BE DESIRED.

Ought it to be partial or entire?—Truth may not be partially taught.—Partial reformation confidered.—Objection.—Answer.

—Partial reform indispensible.—Nature of a just revolution—how distant?

Page 219

CHAP. III.

OF TYRANNICIDE.

Diversity of opinions on this subject.—Argument in its vindication.—
The destruction of a tyrant not a case of exception.—Consequences of tyrannicide.—Assassination described.—Importance of sincerity.

CHAP. IV.

OF THE CULTIVATION OF TRUTH.

SECTION I.

OF ABSTRACT OR GENERAL TRUTH.

Its importance as conducing—to our intellectual improvement—to our moral improvement.—Virtue the best source of happiness.—Proved by comparison—by its manner of adapting itself to all situations—by its undecaying excellence—cannot be effectually propagated but by a cultivated mind.—Importance of general truth to our political improvement.

SECTION II.

OF SINCERITY.

Nature of this virtue.—Its effects—upon our own actions—upon our neighbours.—Its tendency to produce fortitude.—Effects of infincerity.—Character which fincerity would acquire to him who practifed it.—Objections.—The fear of giving unneceffary pain.—Answer.—The desire of preserving my life.—This objection proves too much.—Answer.—Secrecy considered.—The secrets of others.—State secrets.—Secrets of philanthropy.

Page 238

APPENDIX, No. I.

OF THE CONNEXION BETWEEN UNDERSTANDING AND VIRTUE.

Can eminent virtue exist unconnected with talents?— Nature of virtue.—It is the offspring of understanding.—It generates understanding.—Illustration from other pursuits—love—ambition—applied.

Can eminent talents exist unconnected with virtue?—Argument in the affirmative from analogy—in the negative from the univer-sality of moral speculation—from the nature of vice as founded in mistake.—The argument balanced.—Importance of a sense of justice.—Its connexion with talents.—Illiberality with which men of talents are usually treated.

APPENDIX,

APPENDIX, No. II.

OF THE MODE OF EXCLUDING VISITORS.

Its impropriety argued—from the fituation in which it places, 1. the vifitor—2. the fervant.—Objections:—Pretended necessity of this practice, 1. to preserve us from intrusion—2. to free us from disagreeable acquaintance.—Characters of the honest and dishonest man in this respect compared.

Page 265

APPENDIX, No. III.

SUBJECT OF SINCERITY RESUMED.

A case proposed.—Arguments in favour of concealment.—Previous question: Is truth in general to be partially communicated?—Customary effects of sincerity—of insincerity—upon him who practises it—1. the suspension of improvement—2. misanthropy—3. disingenuity—upon the spectators.—Sincerity delineated.—Its general importance.—Application.—Duty respecting the choice of a residence.

CHAP. V.

OF FREE WILL AND NECESSITY.

Imfortance of the question.—Definition of necessity.—Why supposed to exist in the operations of the material universe.—The case of the operations of mind is parallel.—Indications of necessity—in history—in our judgments of character—in our schemes of policy—in our ideas

ideas of moral discipline.—Objection from the fallibility of our expectations in human conduct.—Answer.—Origin and universality of the sentiment of free will.—The sentiment of necessity also universal.—The truth of this sentiment argued from the nature of volition.—Hypothesis of free will examined.—Self-determination.—Indifference.—The will not a distinct faculty.—Free will disadvantageous to its possessor of no service to morality. Page 283

CHAP. VI.

INFERENCES FROM THE DOCTRINE OF NECESSITY.

Idea it suggests to us of the universe.—Influence on our moral ideas
—action—virtue—exertion—persuasion—exhortation—ardour—
complacence and aversion—punishment—repentance—praise and
blame — intellectual tranquillity. — Language of necessity recommended.

305

CHAP. VII.

OF THE MECHANISM OF THE HUMAN MIND.

Nature of mechanism.—Its classes, material and intellectual.—
Material system, or of vibrations.—The intellectual system most probable—from the consideration that thought would otherwise be a superfluity—from the established principles of reasoning from effects to causes.—Objections refuted.—Thoughts which produce animal motion may be—1. Involuntary.—All animal motions were first involuntary.—2. Unattended with consciousness.—The

mind cannot have more than one thought at any one time.—Objection to this affertion from the case of complex ideas—from various mental operations—as comparison—apprehension—rapidity of the succession of ideas.—Application.—Duration measured by consciousness.—3. A distinct thought to each motion may be unnecessary—apparent from the complexity of sensible impressions.—The mind always thinks.—Conclusion.—The theory applied to the phenomenon of walking—to the circulation of the blood.—Of motion in general.—Of dreams.

Page 318

CHAP. VIII.

OF THE PRINCIPLE OF VIRTUE.

Hypotheses of benevolence and self love—superiority of the former.—
Action is either voluntary or involuntary.—Nature of the first of these classes.—Argument that results from it.—Voluntary action has a real existence.—Consequence of that existence.—Experimental view of the subject.—Suppositions suggested by the advocates of self love—that we calculate upon all occasions the advantage to accrue to us.—Falseness of this supposition.—Supposition of a contrary fort.—We do not calculate what would be the uneasiness to result from our refraining to act—either in relieving distress—or in adding to the stock of general good.—Uneasiness an accidental member of the process.—The suppositions inconsistently blended.—Scheme of self love recommended from the propensity of mind to abbreviate

CONTENTS.

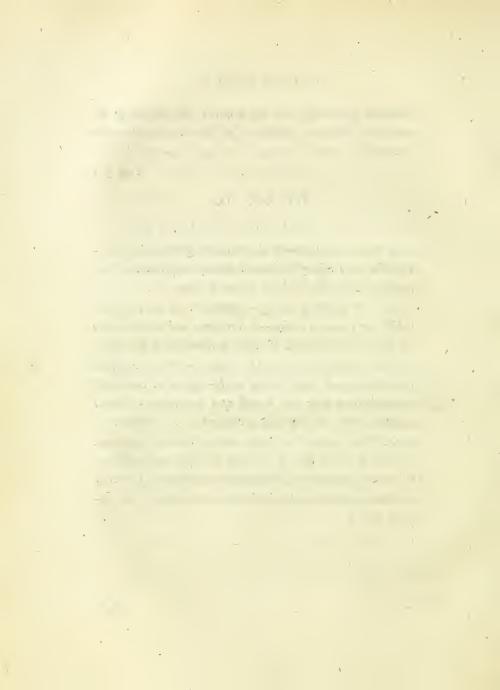

abbreviate its process—from the simplicity that obtains in the natures of things.—Hypothesis of self love incompatible with virtue.—Conclusion.—Importance of the question.—Application.

Page 341

CHAP. IX.

OF THE TENDENCY OF VIRTUE.

It is the road to happiness—to the esteem and affection of others.— Objection from misconstruction and calumny.—Answer.—Virtue compared with other modes of procuring esteem .- Vice and not virtue is the subject of obloquy—instanced in the base alloy with which our virtues are mixed-in arrogance and offentation-in the vices in which persons of moral excellence allow themselves. - The virtuous man only has friends. - Virtue the road to prosperity and success in the world-applied to commercial transactions—to cases that depend upon patronage.—Apparent exceptions where the dependent is employed as the inftrument of vice .- Virtue compared with other modes of becoming prosperous. -Source of the difrepute of virtue in this respect. - Concession. -Case where convenient vice bids fair for concealment.—Chance of detection.-Indolence-apprehensiveness-and depravity the offspring of vice. 362

E O U IRY N

CONCERNING

POLITICAL JUSTICE.

BOOK I.

OF THE IMPORTANCE OF POLITICAL INSTITUTIONS.

CHAP. I.

INTRODUCTION.

THE SUBJECT PROPOSED .- SYSTEM OF INDIFFERENCE-OF PASSIVE OBEDIENCE-OF LIBERTY. - SYSTEM OF LIBERTY EXTENDED.

HE question which first presents itself in an enquiry concerning political institution, relates to the importance of the topic which is made the fubject of enquiry. All men will proposed. grant that the happiness of the human species is the most desirable object for human science to promote; and that intellectual and moral happiness or pleasure is extremely to be preferred

BOOK I. CHAP. I.

to those which are precarious and transitory. The methods which may be proposed for the attainment of this object, are various. If it could be proved that a found political institution was of all others the most powerful engine for promoting individual good, or on the other hand that an erroneous and corrupt government was the most formidable adversary to the improvement of the species, it would follow that politics was the first and most important subject of human investigation.

System of indifference :: The opinions of mankind in this refpect have been divided. By one fet of men it is affirmed, that the different degrees of excellence ascribed to different forms of government are rather imaginary than real; that in the great objects of superintendance no government will eminently fail; and that it is neither the duty nor the wisdom of an honest and industrious individual to busy himself with concerns so foreign to the sphere of his industry. A second class, in adopting the same principles, have given to them a different turn. Believing that all governments are nearly equal in their merit, they have regarded anarchy as the only political mischief that deserved to excite alarm, and have been the zealous and undistinguishing adversaries of all innovation. Neither of these classes has of course been inclined to ascribe to the science and practice of politics a pre-eminence over every other.

of pailive obedience:

of liberty.

But the advocates of what is termed political liberty have al-

BOOK I.

ways been numerous. They have placed this liberty principally in two articles; the fecurity of our persons, and the security of our property. They have perceived that these objects could not be effected but by the impartial administration of general laws, and the investing in the people at large a certain power sufficient to give permanence to this administration. They have pleaded, some for a less and some for a greater degree of equality among the members of the community; and they have confidered this equality as infringed or endangered by enormous taxation, and the prerogatives and privileges of monarchs and ariftocratical bodies.

But, while they have been thus extensive in the object of their demand, they feem to have agreed with the two former classes in regarding politics as an object of subordinate importance, and only in a remote degree connected with moral improvement. They have been prompted in their exertions rather by a quick fense of justice and disdain of oppression, than by a consciousness of the intimate connection of the different parts of the focial fystem, whether as it relates to the intercourse of individuals, or to the maxims and inflitutes of flates and nations *.

It may however be reasonable to consider whether the science System of siof politics be not of somewhat greater value than any of these ed.

berty extend-

* These remarks will apply to the English writers upon politics in general, from Sydney and Locke to the author of the Rights of Man. The more comprehensive view has been perspicuously treated by Rousseau and Helvetius.

BOOK I. CHAP. I. reasoners have been inclined to suspect. It may fairly be questioned, whether government be not still more considerable in its incidental effects, than in those intended to be produced. Vice, for example, depends for its existence upon the existence of temptation. May not a good government strongly tend to extirpate, and a bad one to increase the mass of temptation? Again, vice depends for its existence upon the existence of error. May not a good government by taking away all restraints upon the enquiring mind hasten, and a bad one by its patronage of error procrastinate the discovery and establishment of truth? Let us consider the subject in this point of view. If it can be proved that the science of politics is thus unlimited in its importance, the advocates of liberty will have gained an additional recommendation, and its admirers will be incited with the greater eagerness to the investigation of its principles.

C H A P.

HISTORY OF POLITICAL SOCIETY.

FREQUENCY OF WAR-AMONG THE ANCIENTS-AMONG THE MODERNS-THE FRENCH-THE ENGLISH .- CAUSES OF WAR .- PENAL LAWS .- DESPOTISM .- DEDUCTION .-ENUMERATION OF ARGUMENTS.

7 HILE we enquire whether government is capable of improvement, we shall do well to consider its present effects. It is an old observation, that the history of mankind war: is little else than the history of crimes. War has hitherto been confidered as the infeparable ally of political institution. The among the earliest records of time are the annals of conquerors and heroes, a Bacchus, a Sefostris, a Semiramis and a Cyrus. These princes led millions of men under their standard, and ravaged innumerable provinces. A fmall number only of their forces ever returned to their native homes, the reft having perished of diseases, hardships and misery. The evils they inflicted, and the mortality introduced in the countries against which their expeditions were directed, were certainly not less severe than those which their countrymen fuffered. No fooner does hiftory become more precise, than we are presented with the four great monarchies, that is, with four fuccefsful projects, by means of bloodshed.

Frequency of

BOOK I. CHAP. II.

bloodshed, violence and murder, of enslaving mankind. expeditions of Cambyses against Egypt, of Darius against the Scythians, and of Xerxes against the Greeks, feem almost to set credibility at defiance by the fatal confequences with which they were attended. The conquests of Alexander cost innumerable lives, and the immortality of Cæsar is computed to have been purchased by the death of one million two hundred thousand Indeed the Romans, by the long duration of their wars. and their inflexible adherence to their purpose, are to be ranked among the foremost destroyers of the human species. wars in Italy endured for more than four hundred years, and their contest for supremacy with the Carthaginians two hundred. The Mithridatic war began with a maffacre of one hundred and fifty thousand Romans, and in three single actions of the war five hundred thousand men were lost by the eastern monarch. Sylla, his ferocious conqueror, next turned his arms against his country, and the struggle between him and Marius was attended with profcriptions, butcheries and murders that knew no restraint from mercy and humanity. The Romans, at length, fuffered the penalty of their iniquitous deeds; and the world was vexed for three hundred years by the irruptions of Goths, Vandals, Ostrogoths, Huns, and innumerable hordes of barbarians.

among the

I forbear to detail the victorious progress of Mahomet and the pious expeditions of Charlemagne. I will not enumerate the crusades against the insidels, the exploits of Aurungzebe,

Gen-

Gengiskan and Tamerlane, or the extensive murders of the Spaniards in the new world. Let us examine the civilized and favoured quarter of Europe, or even those countries of Europe which are thought most enlightened.

BOOK I. CHAP. II.

France was wasted by fuccessive battles during a whole century, for the question of the Salic law, and the claim of the Plantagenets. Scarcely was this contest terminated, before the religious wars broke out, some idea of which we may form from the siege of Rochelle, where of sisteen thousand persons shut up eleven thousand perished of hunger and misery; and from the massacre of Saint Bartholomew, in which the numbers assassinated were forty thousand. This quarrel was appealed by Henry the fourth, and succeeded by the thirty years war in Germany for superiority with the house of Austria, and afterwards by the military transactions of Louis the sourceenth.

In England the war of Creffy and Agincourt only gave place the English. to the civil war of York and Lancaster, and again after an interval to the war of Charles the first and his parliament. No fooner was the constitution settled by the revolution, than we were engaged in a wide field of continental warfare by king William, the duke of Marlborough, Maria Theresa and the king of Prussia.

And what are in most cases the pretexts upon which war is Causes of war,

BOOK I. CHAP. II. undertaken? What rational man could possibly have given him-felf the least disturbance for the sake of choosing whether Henry the fixth or Edward the fourth should have the style of king of England? What Englishman could reasonably have drawn his sword for the purpose of rendering his country an inferior dependency of France, as it must necessarily have been if the ambition of the Plantagenets had succeeded? What can be more deplorable than to see us first engage eight years in war rather than suffer the haughty Maria Theresa to live with a diminished sovereignty or in a private station; and then eight years more to support the free-booter who had taken advantage of her helpless condition?

The usual causes of war are excellently described by Swist. "Sometimes the quarrel between two princes is to decide which of them shall disposses a third of his dominions, where neither of them pretends to any right. Sometimes one prince quarrels with another, for fear the other should quarrel with him. Sometimes a war is entered upon because the enemy is too strong; and sometimes because he is too weak. Sometimes our neighbours want the things which we have, or have the things which we want; and we both fight, till they take ours, or give us theirs. It is a very justifiable cause of war to invade a country after the people have been wasted by famine, destroyed by pestilence, or embroiled by factions among themselves. It is justifiable to enter into a war against our nearest ally, when one of his towns lies convenient for us, or a territory of land, that would

would render our dominions round and compact. If a prince fends forces into a nation where the people are poor and ignorant, he may lawfully put the half of them to death, and make flaves of the reft, in order to civilize and reduce them from their barbarous way of living. It is a very kingly, honourable and frequent practice, when one prince defires the affiftance of another to fecure him against an invasion, that the affistant, when he has driven out the invader, should feize on the dominions himself, and kill, imprison or banish the prince he came to relieve *."

BOOK I.

If we turn from the foreign transactions of states with each Penal laws. other, to the principles of their domestic policy, we shall not find much greater reason to be satisfied. A numerous class of mankind are held down in a state of abject penury, and are continually prompted by disappointment and distress to commit violence upon their more fortunate neighbours. The only mode which is employed to repress this violence, and to maintain the order and peace of society, is punishment. Whips, axes and gibbets, dungeons, chains and racks are the most approved and established methods of persuading men to obedience, and impressing upon their minds the lessons of reason. Hundreds of victims are annually facrificed at the shrine of positive law and political institution.

^{*} Gulliver's Travels, Part IV. Ch. v.

BOOK I. CHAP. II. Despotism. Add to this the species of government which prevails over nine tenths of the globe, which is despotism: a government, as Mr. Locke justly observes, altogether "vile and miserable," and "more to be deprecated than anarchy itself *."

Deduction.

This account of the hiftory and state of man is not a declamation, but an appeal to facts. He that considers it cannot possibly regard political disquisition as a trifle, and government as a neutral and unimportant concern. I by no means call upon the reader implicitly to admit that these evils are capable of remedy, and that wars, executions and despotism can be extirpated out of the world. But I call upon him to consider whether they may be remedied. I would have him feel that civil policy is a topic upon which the severest investigation may laudably be employed.

If government be a fubject, which, like mathematics, natural

* Locke on Government, Book I. Ch. i. §. 1; and Book II. Ch. vii. §. 91. The words in the last place are: "Wherever any two men are, who have no standing rule and common judge to appeal to on earth for the determination of controversies of right betwixt them, there they are still in the state of nature, and under all the inconveniences of it, with only this woeful difference to the subject, &c."

Most of the above arguments may be found much more at large in Burke's Vindication of Natural Society; a treatife, in which the evils of the existing political institutions are displayed with incomparable force of reasoning and lustre of eloquence, while the intention of the author was to show that these evils were to be considered as trivial.

philosophy

POLITICAL SOCIETY.

philosophy and morals, admits of argument and demonstration, then may we reasonably hope that men shall some time or other agree respecting it. If it comprehend every thing that is most important and interesting to man, it is probable that, when the theory is greatly advanced, the practice will not be wholly neglected. Men may one day feel that they are partakers of a common nature, and that true freedom and perfect equity, like food and air, are pregnant with benefit to every constitution. If there be the faintest hope that this shall be the final result, then certainly no subject can inspire to a found mind such generous enthusiasm, such enlightened ardour and such invincible perseverance.

The probability of this improvement will be fufficiently established, if we consider, first, that the moral characters of men are the result of their perceptions: and, secondly, that of all the modes of operating upon mind government is the most considerable. In addition to these arguments it will be found, Thirdly, that the good and ill effects of political institution are not less conspicuous in detail than in principle; and, rourthly, that persectibility is one of the most unequivocal characteristics of the human species, so that the political, as well as the intellectual state of man, may be presumed to be in a course of progressive improvement.

THE MORAL CHARACTERS OF MEN

CHAP. III.

THE MORAL CHARACTERS OF MEN ORIGINATE IN THEIR PERCEPTIONS.

NO INNATE PRINCIPLES.—OBJECTIONS TO THIS ASSERTION
—FROM THE EARLY ACTIONS OF INFANTS—FROM THE

DESIRE OF SELF-PRESERVATION—FROM SELF-LOVE—

FROM PITY—FROM THE VICES OF CHILDREN—TYRANNY
—SULLENNESS.—CONCLUSION.

E bring into the world with us no innate principles: consequently we are neither virtuous nor vicious as we first come into existence. No truth can be more evident than this, to any man who will yield the subject an impartial consideration. Every principle is a proposition. Every proposition consists in the connection of at least two distinct ideas, which are affirmed to agree or disagree with each other. If therefore the principles be innate, the ideas must be so too. But nothing can be more incontrovertible, than that we do not bring pre-established ideas into the world with us.

Let the innate principle be, that virtue is a rule to which we are obliged to conform. Here are three great and leading ideas, not to mention subordinate ones, which it is necessary to form, before we can so much as understand the proposition.

The

BOOK I.
CHAP. III.
No innate
ryinciples.

BOOK I.

What is virtue? Previously to our forming an idea corresponding to this general term, it seems necessary that we should have observed the several features by which virtue is distinguished, and the several subordinate articles of right conduct, that taken together, constitute that mass of practical judgments to which we give the denomination of virtue. Virtue may perhaps be defined, that species of operations of an intelligent being, which conduces to the benefit of intelligent beings in general, and is produced by a desire of that benefit. But taking for granted the universal admission of this definition, and this is no very defensible assumption, how widely have people of different ages and countries disagreed in the application of this general conception to particulars? a disagreement by no means compatible with the supposition that the sentiment is itself innate.

The next innate idea included in the above proposition, is that of a rule or standard, a generical measure with which individuals are to be compared, and their conformity or disagreement with which is to determine their value.

Lastly, there is the idea of obligation, its nature and source, the obliger and the fanction, the penalty and the reward.

Who is there in the prefent state of scientifical improvement, that will believe that this vast chain of perceptions and notions is fomething

BOOK I. CHAP. III. fomething that we bring into the world with us, a myftical magazine, shut up in the human embryo, whose treasures are to be gradually unfolded as circumstances shall require? Who does not perceive that they are regularly generated in the mind by a series of impressions, and digested and arranged by affociation and reslexion?

Objections to this affertion: from the early actions of infants:

Experience has by many been supposed adverse to these reafonings: but it will upon examination be found to be perfectly in harmony with them. The child at the moment of his birth is totally unprovided with ideas, except such as his mode of existence in the womb may have supplied. His first impressions are those of pleasure and pain. But he has no foresight of the tendency of any action to obtain either the one or the other, previously to experience.

A certain irritation of the palm of the hand will produce that contraction of the fingers, which accompanies the action of grasping. This contraction will at first be unaccompanied with defign, the object will be grasped without any intention to retain it, and let go again without thought or observation. After a certain number of repetitions, the nature of the action will be perceived; it will be performed with a consciousness of its tendency; and even the hand stretched out upon the approach of any object that is defired. Present to the child, thus far instructed, a lighted candle. The sight of it will produce a pleasurable state of the organs of

The fight of it will produce a pleasurable hate of the organs of the product of the house of perception.

I again the tring or heart, the hear's in cloud of the framework of the country that the framework of the case have from the state of th

Acres of the your

to her che

perception. He will stretch out his hand to the slame, and will CHAP. III. have no apprehension of the pain of burning till he has felt the fenfation.

At the age of maturity, the eyelids instantaneously close, when any substance, from which danger is apprehended, is advanced towards them; and this action is fo fpontaneous, as to be with great difficulty prevented by a grown person, though he should explicitly defire it. In infants there is no fuch propenfity; and an object may be approached to their organs, however near and however fuddenly, without producing this effect. Frowns will be totally indifferent to a child, who has never found them affo ciated with the effects of anger. Fear itself is a species of forefight; and in no case exists till introduced by experience.

It has been faid, that the defire of felf-preservation is innate. demand what is meant by this defire? Must we not understand preservation: by it, a preference of existence to non-existence? Do we prefer any thing but because it is apprehended to be good? It follows, that we cannot prefer existence, previously to our experience of the motives for preference it possesses. Indeed the ideas of life -and death are exceedingly complicated, and very tardy in their formation. A child defires pleafure and loathes pain, long before he can have any imagination respecting the ceasing to exist.

I from the de-

Again, it has been faid, that felf-love is innate. But there fromfelf-love: cannot be an error more easy of detection. By the love of

BOOK I. CHAP. III. felf we understand the approbation of pleasure, and dislike of pain: but this is only the faculty of perception under another name. Who ever denied that man was a percipient being? Who ever dreamed that there was a particular instinct necessary to render him percipient?

Gillians for a sure

from pity:

Pity has fometimes been supposed an instance of innate principle; particularly as it seems to arise more instantaneously in young persons, and persons of little refinement, than in others. But it was reasonable to expect, that threats and anger, circumstances that have been affociated with our own sufferings, should excite painful feelings in us in the case of others, independently of any laboured analysis. The cries of distress, the appearance of agony or corporal infliction, irresistibly revive the memory of the pains accompanied by those symptoms in ourselves. Longer experience and observation enable us to separate the calamities of others and our own safety, the existence of pain in one subject and of pleasure or benefit in others, or in the same at a future period, more accurately than we could be expected to do previously to that experience.

from the vices of children:

Such then is universally the subject of human institution and education. We bring neither virtue nor vice with us at our entrance into the world. But the seeds of error are ordinarily fown so early as to pass with superficial observers for innate.

Our constitution prompts us to utter a cry at the unexpected fensation of pain. Infants early perceive the affistance they obtain from the volition of others; and they have at first no means of inviting that affiftance but by an inarticulate cry. In this neutral and innocent circumstance, combined with the folly and imbecility of parents and nurses, we are presented with the first occasion of vice. Assistance is necessary, conducive to the existence, the health and the mental fanity of the infant. Empire in the infant over those who protect him is unnecessary. If we do not withhold our affiftance precifely at the moment when it ceases to be requisite, if our compliance or our refusal be not in every case irrevocable, if we grant any thing to impatience, importunity or obstinacy, from that moment we become parties in the intellectual murder of our offspring.

In this case we instill into them the vices of a tyrant; but we sullennessare in equal danger of teaching them the vices of a flave. It is not till very late that mankind acquire the ideas of justice, retribution and morality, and these notions are far from existing in the minds of infants. Of consequence, when we strike, or when we rebuke them, we risk at least the exciting in them a sense of injury, and a feeling of refentment. Above all, fentiments of this fort cannot fail to be awakened, if our action be accompanied with fymptoms of anger, cruelty, harshness or caprice. The fame imbecility, that led us to inspire them with a spirit of tyranny by yielding to their importunities, afterwards dictates to

BOOK 1. CHAP. III. us an inconfishent and capricious conduct, at one time denying them as abfurdly, as at another we gratified them unreasonably. Who, that has observed the consequences of this treatment, how generally these mistakes are committed, how inseparable they are in some degree from the wisest and the best, will be surprised at the early indications of depravity in children *?

Conclusion.

From these reasonings it sufficiently appears, that the moral qualities of men are the produce of the impressions made upon them, and that there is no instance of an original propensity to evil. Our virtues and vices may be traced to the incidents which make the history of our lives; and if these incidents could be divested of every improper tendency, vice would be extirpated from the world. The task may be difficult, may be of slow progress, and of hope undefined and uncertain. But hope will never desert it; and the man who is anxious for the benefit of his species, will willingly devote a portion of his activity to an enquiry into the mode of effecting this extirpation in whole or in part, an enquiry which promises much, if it do not in reality promise every thing.

^{*} The arguments of this chapter are for the most part an abstract, the direct ones from Locke on the Human Understanding, those which relate to experience from Hartley's Observations on Man, and those respecting education from the Emile of J. J. Rousseau.

CHAP. IV.

THREE PRINCIPAL CAUSES OF MORAL IMPROVE-MENT CONSIDERED.

I. LITERATURE.

BENEFITS OF LITERATURE.—EXAMPLES.—ESSENTIAL PRO-PERTIES OF LITERATURE.—ITS DEFECTS.

II. EDUCATION.

BENEFITS OF EDUCATION .- CAUSES OF ITS IMBECILITY.

III. POLITICAL JUSTICE.

BENEFITS OF POLITICAL INSTITUTION.—UNIVERSALITY OF

ITS INFLUENCE—PROVED BY THE MISTAKES OF SOCIETY.

—ORIGIN OF EVIL.

HERE are three principal causes by which the human mind is advanced towards a state of perfection; literature, or the disfusion of knowledge through the medium of discussion, whether written or oral; education, or a scheme for the early impression of right principles upon the hitherto unprejudiced mind; and political justice, or the adoption of any principle of morality and truth into the practice of a community. Let us take a momentary review of each of these.

BOOK I. CHAP IV.

I. LITERATURE.

BOOK I. CHAP. IV Benefits of literature. Few engines can be more powerful, and at the fame time more falutary in their tendency, than literature. Without enquiring for the present into the cause of this phenomenon, it is sufficiently evident in fact, that the human mind is strongly infected with prejudice and mistake. The various opinions prevailing in different countries and among different classes of men upon the same subject, are almost innumerable; and yet of all these opinions only one can be true. Now the effectual way for extirpating these prejudices and mistakes seems to be literature.

Examples.

Literature has reconciled the whole thinking world respecting the great principles of the system of the universe, and extirpated upon this subject the dreams of romance and the dogmas of superstition. Literature has unfolded the nature of the human mind, and Locke and others have established certain maxims respecting man, as Newton has done respecting matter, that are generally admitted for unquestionable. Discussion has ascertained with tolerable perspicuity the preference of liberty over slavery; and the Mainwarings, the Sibthorpes, and the Filmers, the race of speculative reasoners in savour of despotism, are almost extinct. Local prejudice had introduced innumerable privileges and prohibitions upon the subject of trade; speculation has nearly ascertained that persect freedom is most favour-

able to her prosperity. If in many instances the collation of BOOK I. evidence have failed to produce universal conviction, it must however be confidered, that it has not failed to produce irrefragable argument, and that falshood would have been much shorter in duration, if it had not been protected and inforced by the authority of political government.

Indeed, if there be fuch a thing as truth, it must infallibly Essential probe struck out by the collision of mind with mind. The restless terature. activity of intellect will for a time be fertile in paradox and error; but these will be only diurnals, while the truths that occafionally fpring up, like sturdy plants, will defy the rigour of feafon and climate. In proportion as one reafoner compares his deductions with those of another, the weak places of his argument will be detected, the principles he too hastily adopted will be overthrown, and the judgments, in which his mind was exposed to no finister influence, will be confirmed. All that is requifite in these discussions is unlimited speculation, and a fufficient variety of fystems and opinions. While we only difpute about the best way of doing a thing in itself wrong, we shall indeed make but a trifling progress; but, when we are once perfuaded that nothing is too facred to be brought to the touchstone of examination, science will advance with rapid strides. Men, who turn their attention to the boundless field of enquiry, and still more who recollect the innumerable errors and caprices of mind, are apt to imagine that the labour is without benefit

BOOK I. CHAP. IV.

and endless. But this cannot be the case, if truth at last have any real existence. Errors will, during the whole period of their reign, combat each other; prejudices that have passed unsuspected for ages, will have their era of detection; but, if in any science we discover one solitary truth, it cannot be overthrown.

Its desects:

Such are the arguments that may be adduced in favour of literature. But, even should we admit them in their full force, and at the same time suppose that truth is the omnipotent artificer by which mind can infallibly be regulated, it would yet by no means fufficiently follow that literature is alone adequate to all the purposes of human improvement. Literature, and particularly that literature by which prejudice is fuperfeded, and the mind is strung to a firmer tone, exists only as the portion of a few. The multitude, at least in the present state of human fociety, cannot partake of its illuminations. For that purpose it would be necessary, that the general system of policy should become favourable, that every individual should have leifure for reasoning and reflection, and that there should be no species of public inflitution, which, having falshood for its basis, should counteract their progress. This state of society, if it did not precede the general diffemination of truth, would at least be the immediate refult of it.

But in representing this state of society as the ultimate result,

BOOK I. CHAP, IV.

we should incur an obvious fallacy. The discovery of truth is a purfuit of fuch vaft extent, that it is scarcely possible to prefcribe bounds to it. Those great lines, which feem at present to mark the limits of human understanding, will, like the mists that rife from a lake, retire farther and farther the more closely we approach them. A certain quantity of truth will be fufficient for the fubversion of tyranny and usurpation; and this fubversion, by a reflected force, will affift our understandings in the discovery of truth. In the mean time, it is not easy to define the exact portion of discovery that must necessarily precede political melioration. The period of partiality and injuffice will be shortened, in proportion as political rectitude occupiesa principal share in our disquisition. When the most considerable part of a nation, either for numbers or influence, becomes convinced of the flagrant abfurdity of its inflitutions, the whole will foon be prepared tranquilly and by a fort of common confent to superfede them.

> EDUCATION. II.

But, if it appear that literature, unaided by the regularity Benefis of of inftitution and discipline, is inadequate to the reformation of the species, it may perhaps be imagined, that education, commonly fo called, is the best of all subsidiaries for making up its defects. Education may have the advantage of taking mind in its original state, a foil prepared for culture, and as yet unin-

fested

BOOK I. CHAP. IV. fested with weeds; and it is a common and a reasonable opinion, that the task is much easier to plant right and virtuous dispositions in an unprejudiced understanding, than to root up the errors that have already become as it were a part of ourselves. If an erroneous and vicious education be, as it has been shewn to be, the source of all our depravity, an education, deprived of these errors, seems to present itself as the most natural exchange, and must necessarily render its subject virtuous and pure.

I will imagine the pupil never to have been made the victim of tyranny or the flave of caprice. He has never been permitted to triumph in the fuccess of importunity, and cannot therefore well have become restless, inconstant, fantastical or unjust. He has been inured to ideas of equality and independence, and therefore is not passionate, haughty and overbearing. The perpetual witness of a temperate conduct and reasonable sentiments, he is not blinded with prejudice, is not liable to make a false estimate of things, and of consequence has no immoderate desires after wealth, and splendour, and the gratifications of luxury. Virtue has always been presented to him under the most attractive form, as the surest medium of success in every honourable pursuit, the never-failing consolation of disappointment, and infinitely superior in value to every other acquisition.

It cannot be doubted that fuch an education is calculated to produce very confiderable effects. In the world indeed the pupil will become the spectator of scenes very different from what his preconceived ideas of virtue might have taught him to expect. Let us however admit it to be possible so to temper the mind, as to render it proof against the influence of example and the allurements of luxury. Still it may be reafonable to doubt of the fufficiency of education. How many inflances may we expect to find, in which a plan has been carried into execution, fo enlightened, unremitted and ardent, as to produce these extraordinary effects? Where must the preceptor himself have been educated, who shall thus elevate his pupil above all the errors of mankind? If the world teach an implicit deference to birth and riches and accidental distinctions, he will scarcely be exempt from this deference. If the world be full of intrigue and rivalship and selfishness, he will not be wholly disinterested. If falfhood be with mankind at large reduced to a fystem, recommended by the prudent, commanded by the magistrate, inforced by the moralist *, and practifed under a thousand forms, the

^{*} The following passage is extracted from Lord Kaimes, late one of the judges of the kingdom of Scotland.

[&]quot;Custom-house oaths now a-days go for nothing. Not that the world grows more wicked, but because nobody lays any stress upon them. The duty on French wine is the same in Scotland and in England. But as we cannot afford to pay this high duty, the permission underhand to pay Spanish duty for

BOOK I. CHAP. IV.

the individual will not always have the fimplicity to be fincere, or the courage to be true. If prejudice have usurped the feat of knowledge, if law and religion and metaphysics and government be furrounded with mystery and artifice, he will not know the truth, and therefore cannot teach it; he will not possess the criterion, and therefore cannot furnish it to another. Again; if a man thus mighty, thus accomplished, thus superior to rivalship and comparison, can be found, who will consent to the profanation of employing him in cultivating the mind of a boy, when he should be instructing the world?

Education, in the fense in which it has commonly been understood, though in one view an engine of unlimited power, is

French wine, is found more beneficial to the revenue than the rigour of the law. The oath however must be taken that the wine we import is Spanish, to entitle us to the ease of the Spanish duty. Such oaths at first were highly criminal, because directly a fraud against the public; but now that the oath is only exacted for form's sake, without any faith intended to be given or received, it becomes very little different from saying in the way of civility, 'I am, sir, your friend, or your obedient servant."—Loose Hints upon Education, Appendix, p. 362. Edinburgh, 1781.

Archdeacon Paley in a work, the seventh edition of which lies before me, and which is used as a text book in the university of Cambridge, speaks thus:

"There are falshoods which are not lies; that is, which are not criminal; as—a fervant's denying his master, a prisoner's pleading not guilty, an advocate afferting the justice, or his belief of the justice of his client's cause. In such instances no considence is destroyed, because none was reposed." Principles of Moral and Political Philosophy, Book III. Part I. Chap. xv. London, 1790.

exceed-

BOOK I. CHAP, IV.

exceedingly incompetent to the great business of reforming mankind. It performs its task weakly and in detail. The grand principles that the inventor feeks in his machines, and the philosopher in investigating the fystem of the universe, are such, as from a few simple data are sufficient to the production of a thousand events. But the education I have been describing is the reverse of this. It employs an immense combination of powers, and an endless chain of causes for the production of a fingle specimen. No task, which is not in its own nature impracticable, can eafily be supposed more difficult, than that of counteracting universal error, and arming the youthful mind against the contagion of general example. The strongest mind that proposed this as its object, would scarcely undertake the forming more than one, or at most a very small number, of pupils. Where can a remedy be found for this fundamental disadvantage? where but in political justice, that all comprehenfive scheme, that immediately applies to the removal of counteraction and contagion, that embraces millions in its grafp, and that educates in one school the preceptor and the pupil?

III. POLITICAL FUSTICE.

THE benefits of political justice will best be understood, if Benefits of we confider fociety in the most comprehensive view, taking into our estimate the erroneous institutions by which the human mind has been too often checked in its career, as well as those

political jul-tice.

well

BOOK I. CHAP. IV. well founded opinions of public and individual interest, which perhaps need only to be clearly explained, in order to their being generally received.

Universality of its influence:

Now in whatever light it be confidered, we cannot avoid perceiving, first, that political institution is peculiarly strong in that very point in which the efficacy of education was deficient, the extent of its operation. That it in some way influences our conduct will hardly be disputed. It is sufficiently obvious that a despotic government is calculated to render men pliant, and a free one resolute and independent. All the effects that any principle adopted into the practice of a community may produce, it produces upon a comprehensive scale. It creates a fimilar bias in the whole, or a confiderable part of the fociety. The motive it exhibits, the stimulus it begets, are operative, because they are fitted to produce effect upon mind. will therefore inevitably influence all to whom they are equally addressed. Virtue, where virtue is the result, will cease to be a task of perpetual watchfulness and contention. It will neither be, nor appear to be, a facrifice of our personal advantage to difinterested considerations. It will render those the confederates, support and security of our rectitude, who were before its most formidable enemies.

proved by the mistakes of society. Again, an additional argument in favour of the efficacy of political institutions, arises from the extensive influence which

3

29

certain false principles, engendered by an imperfect system of BOOK I. fociety, have been found to exert. Superflition, an immoderate fear of shame, a false calculation of interest, are errors that have been always attended with the most extensive consequences. How incredible at the present day do the effects of superstition exhibited in the middle ages, the horrors of excommunication and interdict, and the humiliation of the greatest monarchs at the feet of the pope, appear? What can be more contrary to European modes than that dread of difgrace, which induces the Bramin widows of Indostan to destroy themselves upon the funeral pile of their husbands? What more horribly immoral than the mistaken idea which leads multitudes in commercial countries to regard fraud, falshood and circumvention as the truest policy? But, however powerful these errors may be, the empire of truth, if once established, would be incomparably greater. The man, who is enflaved by shame, superstition or deceit, will be perpetually exposed to an internal war of opinions, disapproving by an involuntary censure the conduct he has been most perfuaded to adopt. No mind can be so far alienated from truth, as not in the midft of its degeneracy to have incessant returns of a better principle. No system of society can be fo thoroughly pervaded with mistake, as not frequently to fuggest to us sentiments of virtue, liberty and justice. truth is in all its branches harmonious and confiftent.

BOOK I. CHAP. IV.

The recollection of this circumstance induces me to add as a concluding observation, that it may reasonably be doubted whether error could ever be formidable or long-lived, if government did not lend it support. The nature of mind is adapted to the perception of ideas, their correspondence and difference. In the right discernment of these is its true element and most congenial pursuit. Error would indeed for a time have been the refult of our partial perceptions; but, as our perceptions are continually changing, and continually becoming more definite and correct, our errors would have been momentary, and our judgments have hourly approached nearer to the truth. The doctrine of transubstantiation, the belief that men were really eating flesh when they seemed to be eating bread, and drinking human blood when they feemed to be drinking wine, could never have maintained its empire fo long, if it had not been reinforced by civil authority. Men would not have fo long perfuaded themselves that an old man elected by the intrigues of a conclave of cardinals, from the moment of that election became immaculate and infallible, if the perfuaiion had not been maintained by revenues, endowments and palaces. A fystem of government, that should lend no fanction to ideas of fanaticism and hypocrify, would presently accustom its subjects to think justly upon topics of moral worth and importance. A flate, that should abstain from imposing contradictory and impracticable oaths, and thus perpetually flimulating its members

to concealment and perjury, would foon become diffinguished for plain dealing and veracity. A country, in which places of dignity and confidence should cease to be at the disposal of faction, favour and interest, would not long be the residence of fervility and deceit.

These remarks suggest to us the true answer to an obvious Origin of objection, that might otherwise present itself, to the conclusion to which these principles appear to lead. It might be faid, that an erroneous government can never afford an adequate folution for the existence of moral evil, since government was itself the production of human intelligence, and therefore, if ill, must have been indebted for its ill qualities to fome wrong which had previous existence.

The proposition afferted in this objection is undoubtedly true. All vice is nothing more than error and mistake reduced into practice, and adopted as the principle of our conduct. But error is perpetually hastening to its own detection. Vicious conduct is foon discovered to involve injurious consequences. Injustice therefore by its own nature is little fitted for a durable existence. But government "lays its hand upon the fpring there is in fociety, and puts a stop to its motion *." It gives substance and permanence to our errors. It reverfes the genuine propenfities

BOOK I. CHAP. IV. of mind, and, instead of suffering us to look forward, teaches us to look backward for perfection. It prompts us to seek the public welfare, not in innovation and improvement, but in a timid reverence for the decisions of our ancestors, as if it were the nature of mind always to degenerate, and never to advance.

CHAP.

INFLUENCE OF POLITICAL INSTITUTIONS EXEMPLIFIED.

ROBBERY AND FRAUD, TWO GREAT VICES IN SOCIETY-ORIGINATE, I. IN EXTREME POVERTY-2. IN THE OS-TENTATION OF THE RICH-3, IN THEIR TYRANNY-RENDERED PERMANENT-I. BY LEGISLATION-2. BY THE ADMINISTRATION OF LAW-3. BY THE INEQUA-LITY OF CONDITION.

HE efficacy of political institutions will be rendered still more evident, if we enquire into the history of the most confiderable vices at prefent existing in society; and if it can be shewn that they derive their inveteracy from political institution.

Two of the greatest abuses relative to the interior policy of Robbery and nations, which at this time prevail in the world, will be allowed to confift in the irregular transfer of property, either first by violence, or fecondly by fraud. If among the inhabitants of any country there existed no defire in one individual to possess himself of the substance of another, or no desire so vehement and restless, as to prompt him to acquire it by means inconsistent with order and juffice; undoubtedly in that country guilt could

fociety :

BOOK I. CHAP. V. hardly be known but by report. If every man could with perfect facility obtain the necessaries of life, and, obtaining them, feel no uneasy craving after its superfluities, temptation would lose its power. Private interest would visibly accord with public good; and civil society become all that poetry has seigned of the golden age. Let us enquire into the principles to which these evils owe their existence, and the treatment by which they may be alleviated or remedied.

originate, 1. in extreme poverty. First then it is to be observed, that, in the most refined states of Europe, the inequality of property has arisen to an alarming height. Vast numbers of their inhabitants are deprived of almost every accommodation that can render life tolerable or secure. Their utmost industry scarcely suffices for their support. The women and children lean with an insupportable weight upon the efforts of the man, so that a large samily has in the lower order of life become a proverbial expression for an uncommon degree of poverty and wretchedness. If sickness or some of those casualties which are perpetually incident to an active and laborious life, be superadded to these burthens, the distress is yet greater.

It feems to be agreed that in England there is lefs wretchednefs and diftrefs than in most of the kingdoms of the continent. In England the poors' rates amount to the sum of two millions sterling per annum. It has been calculated that one person in

feven

feven of the inhabitants of this country derives at some period of his life affistance from this fund. If to this we add the perfons, who, from pride, a spirit of independence, or the want of a legal fettlement, though in equal diffrefs, receive no fuch affiftance, the proportion will be confiderably increased.

BOOK L.

I lay no stress upon the accuracy of this calculation; the general fact is fufficient to give us an idea of the greatness of the The confequences that refult are placed beyond the reach of contradiction. A perpetual struggle with the evils of poverty, if frequently ineffectual, must necessarily render many of the fufferers desperate. A painful feeling of their oppressed fituation will itself deprive them of the power of furmounting it. The fuperiority of the rich, being thus unmercifully exercifed, must inevitably expose them to reprifals; and the poor man will be induced to regard the flate of fociety as a flate of war, an unjust combination, not for protecting every man in his rights and fecuring to him the means of existence, but for engroffing all its advantages to a few favoured individuals, and referving for the portion of the rest want, dependence and mifery.

A fecond fource of those destructive passions by which the 2. in the ofpeace of fociety is interrupted, is to be found in the luxury, the the rich: pageantry and magnificence with which enormous wealth is usually accompanied. Human beings are capable of encoun-

BOOK I. CHAP. V.

tering with chearfulness considerable hardships, when those hardships are impartially shared with the rest of the society, and they are not infulted with the spectacle of indolence and ease in others, no way deferving of greater advantages than themselves. But it is a bitter aggravation of their own calamity, to have the privileges of others forced on their observation, and, while they are perpetually and vainly endeavouring to fecure for themselves and their families the poorest conveniences, to find others revelling in the fruits of their labours. This aggravation is affiduously administered to them under most of the political establishments at present in existence. There is a numerous class of individuals, who, though rich, have neither brilliant talents nor fublime virtues; and, however highly they may prize their education, their affability, their fuperior polish and the elegance of their manners, have a fecret confciousness that they possess. nothing by which they can fo fecurely affert their pre-eminence and keep their inferiors at a distance, as the splendour of their equipage, the magnificence of their retinue and the fumptuousness of their entertainments. The poor man is struck with this exhibition; he feels his own miferies; he knows how unwearied are his efforts to obtain a slender pittance of this prodigal waste; and he mistakes opulence for felicity. He cannot perfuade himself that an embroidered garment may frequently cover an aching heart.

A third disadvantage that is apt to connect poverty with

3. in their tyranny:

BOOK I.

discontent confists in the infolence and usurpation of the rich. If the poor man would in other respects compose himself in philosophic indifference, and, conscious that he possesses every thing that is truly honourable to man as fully as his rich neighbour, would look upon the rest as beneath his envy, his neighbour will not permit him to do fo. He feems as if he could never be fatisfied with his possessions unless he can make the fpectacle of them grating to others; and that honest felf-esteem, by which his inferior might otherwise arrive at apathy, is rendered the instrument of galling him with oppression and injustice. In many countries justice is avowedly made a subject of folicitation, and the man of the highest rank and most splendid connections almost infallibly carries his cause against the unprotected and friendless. In countries where this shameless practice is not established, justice is frequently a matter of expenfive purchase, and the man with the longest purse is proverbially victorious. A confciousness of these facts must be expected to render the rich little cautious of offence in his dealings with the poor, and to inspire him with a temper overbearing, dictatorial and tyrannical. Nor does this indirect oppression fatisfy his despotism. The rich are in all such countries directly or indirectly the legislators of the state; and of confequence are perpetually reducing oppression into a system, and depriving the poor of that little commonage of nature as it were, which might otherwise still have remained to them.

BOOK 1. CHAP. V.

The opinions of individuals, and of confequence their defires, for defire is nothing but opinion maturing for action, will always be in a great degree regulated by the opinions of the com-But the manners prevailing in many countries munity. are accurately calculated to impress a conviction, that integrity, virtue, understanding and industry are nothing, and that opulence is every thing. Does a man, whose exterior denotes indigence, expect to be well received in fociety, and especially by those who would be understood to dictate to the rest? Does he find or imagine himself in want of their affistance and fayour? He is prefently taught that no merits can atone for a mean appearance. The lesson that is read to him is, Go home, enrich yourfelf by whatever means, obtain those superfluities which are alone regarded as estimable, and you may then be fecure of an amicable reception. Accordingly poverty in fuch countries is viewed as the greatest of demerits. It is escaped from with an eagerness that has no leisure for the scruples of honesty. It is concealed as the most indelible difgrace. While one man chooses the path of undiffinguishing accumulation, another plunges into expences which are to impose him upon the world as more opulent than he is. He haftens to the reality of that penury, the appearance of which he dreads; and, together with his property, facrifices the integrity, veracity and character which might have confoled him in his adverfity.

Such are the causes, that, in different degrees under the dif-

rendered permanent:

BOOK I.

ferent governments of the world, prompt mankind openly or fecretly to encroach upon the property of each other. Let us confider how far they admit either of remedy or aggravation from political inftitution. Whatever tends to decrease the injuries attendant upon poverty, decreases at the same time the inordinate defire and the enormous accumulation of wealth. Wealth is not purfued for its own fake, and feldom for the fenfual gratifications it can purchase, but for the same reasons that ordinarily prompt men to the acquisition of learning, eloquence and skill, for the love of diffinction and fear of contempt. How few would prize the possession of riches, if they were condemned to enjoy their equipage, their palaces and their entertainments in folitude. with no eye to wonder at their magnificence, and no fordid observer ready to convert that wonder into an adulation of the owner? If admiration were not generally deemed the exclusive property of the rich, and contempt the conftant lacquey of poverty, the love of gain would cease to be an universal passion. Let us confider in what respects political institution is rendered fubfervient to this paffion.

First then, legislation is in almost every country grossly the 1. by legisfavourer of the rich against the poor. Such is the character of the game laws, by which the industrious rustic is forbidden to destroy the animal that preys upon the hopes of his future subfiftence, or to supply himself with the food that unsought thrusts itself in his path. Such was the spirit of the late revenue laws

BOOK I. CHAP. V.

of France, which in feveral of their provisions fell exclusively upon the humble and industrious, and exempted from their operation those who were best able to support it. Thus in England the land tax at this moment produces half a million less than it did a century ago, while the taxes on confumption have experienced an addition of thirteen millions per annum during the fame period. This is an attempt, whether effectual or no, to throw the burthen from the rich upon the poor, and as fuch is an exhibition of the fpirit of legislation. Upon the same principle robbery and other offences, which the wealthier part of the community have no temptation to commit, are treated as capital crimes, and attended with the most rigorous, often the most inhuman punishments. The rich are encouraged to affociate for the execution of the most partial and oppressive positive laws. Monopolies and patents are lavishly dispensed to such as are able to purchase them. While the most vigilant policy is employed to prevent combinations of the poor to fix the price of labour, and they are deprived of the benefit of that prudence and judgment which would felect the scene of their industry.

2. by the administration of law:

Secondly, the administration of law is not less iniquitous than the spirit in which it is framed. Under the late government of France the office of judge was a matter of purchase, partly by an open price advanced to the crown, and partly by a secret douceur paid to the minister. He, who knew best how to manage his market in the retail trade of justice, could afford to purchase the

41

good will of its functions at the highest price. To the client juffice was avowedly made an object of personal solicitation, and a powerful friend, a handsome woman, or a proper present, were articles of much greater value than a good cause. In England the criminal law is administered with tolerable impartiality so far as regards the trial itself; but the number of capital offences, and of confequence the frequency of pardons, open even here a wide door to favour and abuse. In causes relating to property the practice of law is arrived at fuch a pitch as to render all justice ineffectual. The length of our chancery fuits, the multiplied appeals from court to court, the enormous fees of counfel, attornies, fecretaries, clerks, the drawing of briefs, bills, replications and rejoinders, and what has fometimes been called the glorious uncertainty of the law, render it often more advisable to refign a property than to contest it, and particularly exclude the impoverished claimant from the faintest hope of redress. Nothing certainly is more practicable than to fecure to all questions of controverfy a cheap and speedy decision, which, combined with the independence of the judges and a few obvious improvements in the conftruction of juries, would infure the equitable application of general rules to all characters and flations.

Thirdly, the inequality of conditions usually maintained by 3. by the inpolitical institution, is calculated greatly to enhance the imagined conditions. excellence of wealth. In the ancient monarchies of the east, and in Turkey at the prefent day, an eminent station could

BOOK I. CHAP. V. fcarcely fail to excite implicit deference. The timid inhabitant trembled before his fuperior; and would have thought it little less than blasphemy, to touch the veil drawn by the proud satrap over his inglorious origin. The same principles were extensively prevalent under the feudal system. The vassal, who was regarded as a fort of live flock upon the estate, and knew of no appeal from the arbitrary fiat of his lord, would scarcely venture to fuspect that he was of the same species. This however constituted an unnatural and violent situation. There is a propenfity in man to look farther than the outfide; and to come with a writ of enquiry into the title of the upstart and the successful. In England at the present day there are few poor men who do not confole themselves, by the freedom of their animadversions upon The new-fangled gentleman is by no means their fuperiors. fecure against having his tranquillity disturbed by their furly and pointed farcasms. This propensity might easily be encouraged. and made conducive to the most falutary purposes. Every man might, as was the case in certain countries upon record, be infpired with the consciousness of citizenship, and be made to feel himself an active and efficient member of the great whole. The poor man would then perceive, that, if eclipfed, he could not be trampled upon; and he would no longer be flung with the furies of envy, refentment and despair.

VI. CHAP.

HUMAN INVENTIONS CAPABLE OF PERPETUAL IMPROVEMENT.

PERFECTIBILITY OF MAN-INSTANCED, FIRST, IN LAN-GUAGE, -- ITS BEGINNINGS, -- ABSTRACTION, -- COMPLEXI-TY OF LANGUAGE. - SECOND INSTANCE: ALPHABETICAL WRITING .- HIEROGLYPHICS AT FIRST UNIVERSAL .-PROGRESSIVE DEVIATIONS .- APPLICATION.

F we would form to ourselves a solid estimate of political, or indeed of any other science, we ought not to confine our furvey to that narrow portion of things which passes under our of man: own immediate inspection, and rashly pronounce every thing that we have not ourselves seen, to be impossible. There is no characteristic of man, which seems at present at least so eminently to distinguish him, or to be of so much importance in every branch of moral science, as his perfectibility. Let us carry back our minds to man in his original state, a being capable of impressions and knowledge to an unbounded extent, but not having as yet received the one or cultivated the other; and let us contrast this being with all that science and genius have effected: and from hence we may form some idea what it is of which hu-

BOOK I.

BOOK I. CHAP. VI.

man nature is capable. It is to be remembered, that this being did not as now derive affiftance from the communications of his. fellows, nor had his feeble and crude conceptions affifted by the experience of successive centuries; but that in the state we are figuring all men were equally ignorant. The field of improvement was before them, but for every ftep in advance they were to be indebted to their untutored efforts. Nor is it of any confequence whether fuch was actually the progress of mind, or whether, as others teach, the progress was abridged, and manwas immediately advanced half way to the end of his career by the interpolition of the author of his nature. In any case it is an allowable and no unimproving speculation, to consider mind as it is in itself, and to enquire what would have been its history, if, immediately upon its production, it had been left to be acted upon by those ordinary laws of the universe with whose operation we are acquainted.

instanced, 1. in language. One of the acquisitions most evidently requisite as a preliminary to our present improvements is that of language. But it is impossible to conceive of an acquisition, that must have been in its origin more different from what at present it is found, or that less promised that copiousness and refinement it has since exhibited.

Its beginning. Its beginning was probably from those involuntary cries, which infants for example are found to utter in the earliest ftages

stages of their existence, and which, previously to the idea of BOOK I. exciting pity or procuring affiftance, spontaneously arise from the operation of pain upon our animal frame. These cries, when actually uttered, become a fubject of perception to him by whom they are uttered; and, being observed to be constantly affociated with certain preliminary impressions and to excite the idea of those impressions in the hearer, may afterwards be repeated from reflection and the defire of relief. Eager defire to communicate any information to another, will also prompt us to utter some fimple found for the purpose of exciting attention: this found will probably frequently recur to organs unpractifed to variety. and will at length stand as it were by convention for the information intended to be conveyed. But the distance is extreme from these simple modes of communication, which we possess in common with some of the inferior animals, to all the analysis and abstraction which languages require.

Abstraction indeed, though as it is commonly understood it Abstraction, be one of the fublimest operations of mind, is in some fort coeval with and inseparable from the existence of mind. The next ftep to fimple perception is that of comparison, or the coupling together of two ideas and the perception of their refemblances and differences. Without comparison there can be no preference, and without preference no action: though it must be acknowledged, that this comparison is an operation that may be performed by the mind without adverting to its nature, and that neither

BOOK I. CHAP. VI. neither the brute nor the favage has any confciousness of the feveral steps of the intellectual progress. Comparison immediately leads to imperfect abstraction. The sensation of to-day is classed, if similar, with the sensation of yesterday, and an inference is made respecting the conduct to be adopted. Without this degree of abstraction the faint dawnings of language already described could never have existed. Abstraction, which was necessary to the first existence of language, is again affished in its operations by language. That generalisation, which is implied in the very notion of thought, being thus embodied and rendered palpable, makes the mind acquainted with its own powers and creates a restless desire after farther progress.

Complexity of language.

But, though it be by no means impossible, to trace the causes that concurred to the production of language, and to prove them adequate to their effect, it does not the less appear that this is an acquisition of slow growth and inestimable value. The very steps, were we to pursue them, would appear like an endless labyrinth. The distance is immeasurable between the three or four vague and inarticulate sounds uttered by animals, and the copiousness of lexicography or the regularity of grammar. The general and special names by which things are at first complicated and afterwards divided, the names by which properties are separated from their substances and powers from both, the comprehensive distribution of parts of speech, verbs, adjectives and particles, the inflexions of words by which the change

of their terminations changes their meaning through a variety of shadings, their concords and their governments, all of them present us with such a boundless catalogue of science, that he, who on the one hand did not know that the boundless task had been actually performed, or who on the other was not intimately acquainted with the progressive nature of mind, would pronounce the accomplishment of them impossible.

BOOK I. CHAP. VI.

A fecond invention, well calculated to impress us with a fense of the progressive nature of man, is that of alphabetical writing. Hieroglyphical or picture writing appears at some time to have Hieroglybeen universal, and the difficulty of conceiving the gradation from this to alphabetical is fo great, as to have induced Hartley, one of the most acute of all philosophical writers, to have recourfe to miraculous interpolition as the only adequate folution. In reality no problem can be imagined more operofe, than that of decomposing the founds of words into four and twenty simple elements or letters, and again finding these elements in all other words. When we have examined the fubject a little more closely, and perceived the steps by which this labour was accomplished, perhaps the immensity of the labour will rather gain upon us, as he that shall have counted a million of units, will have a vafter idea upon the fubject, than he that only confiders them in the gross.

Second inftance : alphabetical writing. phics at first univerfal.

In China hieroglyphical writing has never been superfeded by Progressive

deviations.

BOOK I. CHAP. VI. alphabetical, and this from the very nature of their language, which is confiderably monofyllabic, the fame found being made to fignify a great variety of objects, by means of certain shadings of tone too delicate for any alphabet to be able to represent. They have however two kinds of writing, one for the learned, and another for the vulgar. The learned adhere closely to their hieroglyphical writing, representing every word by its corresponding picture; but the vulgar are frequent in their deviations from it.

Hieroglyphical writing and speech may indeed be considered in the first instance as two languages, running parallel to each other, but with no necessary connection. The picture and the word each of them represent the idea, one as immediately as the other. But, though independent, they will become accidentally affociated: the picture at first imperfectly, and afterwards more constantly fuggesting the idea of its correspondent found. It is in this manner that the mercantile classes of China began to corrupt, as it is fivled, their hieroglyphical writing. They had a word suppose of two fyllables to write. The character appropriate to that word they were not acquainted with, or it failed to fuggest itself to their memory. Each of the fyllables however was a diffinct word in the language, and the characters belonging to them perfectly familiar. The expedient that fuggefted itself was to write these two characters with a mark fignifying their union, though in reality the characters had hitherto been appropriated to ideas

of a different fort, wholly unconnected with that now intended to be conveyed. Thus a fort of rebus or chararde was produced. In other cases the word, though monofyllabic, was capable of being divided into two founds, and the same process was employed. This is a first step towards alphabetical analysis. Some word, fuch as the interjection O! or the particle A is already a found perfectly simple, and thus furnishes a first stone to the edifice. But, though these ideas may perhaps present us with a faint view of the manner in which an alphabet was produced, yet the actual production of a complete alphabet is perhaps of all human difcoveries, that which required the most persevering reflection, the luckiest concurrence of circumstances, and the most patient and gradual progrefs.

BOOK I.

Let us however suppose man to have gained the two first Application, elements of knowledge, speaking and writing; let us trace him through all his fubfequent improvements, through whatever constitutes the inequality between Newton and the ploughman, and indeed much more than this, fince the most ignorant ploughman in civilifed fociety is infinitely different from what he would have been, when stripped of all the benefits he has derived from literature and the arts. Let us furvey the earth covered with the labours of man, houses, inclosures, harvests, manufactures, instruments, machines, together with all the wonders of painting, poetry, eloquence and philosophy.

BOOK I. CHAP. VI.

Such was man in his original state, and such is man as we at present behold him. Is it pessible for us to contemplate what he has already done, without being impressed with a strong prefentiment of the improvements he has yet to accomplish? There is no science that is not capable of additions; there is no art that may not be carried to a still higher perfection. If this betrue of all other sciences, why not of morals? If this be true of all other arts, why not of focial institution? The very conception of this as possible, is in the highest degree encouraging. If we can still farther demonstrate it to be a part of the natural and regular progress of mind, our confidence and our hopes will then be complete. This is the temper with which we ought to. engage in the study of political truth. Let us look back, that we may profit by the experience of mankind; but let us not look back, as if the wifdom of our ancestors was such as to. leave no room for future improvement.

CHAP. VII.

OF THE OBJECTION TO THESE PRINCIPLES FROM THE INFLUENCE OF CLIMATE.

PARTL

OF MORAL AND PHYSICAL CAUSES.

THE QUESTION STATED .- PROVINCES OF SENSATION AND REFLECTION .- MORAL CAUSES FREQUENTLY MISTAKEN FOR PHYSICAL .- SUPERIORITY OF THE FORMER EVIDENT FROM THE VARIETIES OF HUMAN CHARACTER. -- OPE-RATION OF PHYSICAL CAUSES RARE. - FERTILITY OF REFLECTION .- PHYSICAL CAUSES IN THE FIRST IN-STANCE SUPERIOR, AFTERWARDS MORAL. - OBJECTION FROM THE EFFECT OF BREED IN ANIMALS .- CONCLU-SION.

HERE are certain propositions which may be considered indifferently, either as corollaries flowing from the prin-CHAP.V ciples already established, or as a source of new arguments against the validity of those principles. In the first view they are entitled to a clear and perspicuous statement, and in the second to a mature examination. For example:

H 2

The

BOOK I. CHAP. VII. The question stated. The causes which appear to operate upon the human mind may be divided into two classes; perceptions, which are rendered directly a subject of reasoning, and regarded by the intellect as inducements to action; and perceptions, which act indirectly upon the mind, by rendering the animal frame gay, vigorous and elastic, or on the contrary sluggish, morbid and inactive. According to the system already established, the former of these are to be regarded as the whole, the latter being so comparatively inefficient and subordinate as to stand in the estimate as almost nothing. To many reasoners however they have by no means appeared of so trivial importance, and it may not be useless to examine for a moment the ideas they have formed, and the reasons which have induced them to ascribe so much to the meanest branch of the human constitution.

Impressions upon our senses may act either as physical or moral causes. Indisposition of the body operates upon the mind principally in the first of these ways, seeming without any formal deliberation of the understanding to incline us to distatisfaction and indolence. Corporal punishment affects us principally in the latter mode, since, though it directly introduces a painful state of the mind, it influences our conduct, only as it is reflected upon by the understanding, and converted into a motive of action.

Provinces of fensation and reflection. It may be a curious speculation to examine how far these

classes are distinct from each other. It cannot be denied but that fensation is of some moment in the affair. It possesses the initiative. It is that from which all the intellects with which we are acquainted date their operations. Its first effect upon mind does in the majority of cases precede reflection and choice. In some cases the impressions upon our senses are foreseen by us, and may confequently be refifted in the outfet. But it would be a contradiction to affirm that they can always be forefeen. Forefight is itself the offspring of experience.

BOOK I. CHAP.VII.

Meanwhile, though they can only in particular inflances be Moral causes foreseen, and of consequence completely forestalled, yet much mistaken for of their effect is in all cases to be ascribed to deliberation and choice. "I feel a painful fensation, and I persuade myself that it is wifer to fubmit, and thus cherish and second its influence, than to relift. I conceive myfelf unfortunate, oppressed by a combination of unfavourable accidents, and am rendered by this conception gloomy, discontented and wretched. I satisfy myfelf that my fituation is fuch as to render exertion unreasonable, and believe that the attempt would produce nothing but abortive and fruitless torture. I remain liftless, sluggish and inactive."

frequently phyfical.

How different would be the fum of my fituation, if I were animated by fentiments of chearfulness, industry and courage? It has been faid "that a rainy day has been known to convert a

man of valour into a coward." How eafily would this external difadvantage have been furmounted, if his mind had been more full of the benefits to arife from his valour, if the rainy day had been put in the balance with his wife and children, the most illustrious rewards to be bestowed upon himself, and freedom and selicity to be secured to his country? "Indigestion," we are told, "perhaps a fit of the tooth-ach, renders a man incapable of strong thinking and spirited exertion." How long would these be able to hold out against a sudden and unexpected piece of intelligence of the most delightful nature?

When operations of an injurious nature are inflicted on the body, and are encountered by the mind with unalterable firmness, what is the degree of pain which in such instances is suffered? Was the language of Anaxarchus merely a philosophical rant, "Beat on, tyrant! Thou mayest destroy the shell of Anaxarchus, but thou canst not touch Anaxarchus himsels?" How much pain was really endured by Mutius Scævola and archbishop Cranmer, when each steadily held his hand to be devoured by the slames? How much is endured by the savage Indians, who sing in the midst of tortures, and sarcastically provoke their tormentors to more ingenious barbarity?

The truth that feems to refult from these considerations is, that indisposition only becomes formidable in proportion as it is seconded by the consent of the mind; that our communication

cation with the material universe is at the mercy of our choice: and that the inability of the understanding for intellectual exertion is principally an affair of moral confideration, existing only in the degree in which it is deliberately preferred.

BOOK I. CHAP. VII.

"The hero of to-day," we are told, "fhall by an indigeftion or Superiority of a rainy atmosphere be converted into a coward to-morrow." Waving the consideration of how far this fact where it exists is in of human reality of a moral and intellectual nature, let us examine to what degree a principle of this fort is the true index of human actions. We have already established it as a fundamental, that there are no innate ideas. Of consequence, if men were principally governed by external circumstances such as that of atmosphere, their characters and actions would be much alike. The fame weather, that made you a coward, would make me fo too, and an army would be defeated by a fog. Perhaps indeed this catastrophe would be prevented by the impartiality of the moisture, in proportion as the enemy advanced, which he necessarily must do, into the same atmosphere.

the former evident from the varieties character.

Every thing that checks the uniformity of this effect, and permanently diffinguishes the character of one man from that of another, is to be traced to the affociation of ideas. But affociation is of the nature of reasoning. The principal, the most numerous and lafting of our affociations, are intellectual, not accidental, built upon the refemblances and differences of things, BOOK I. CHAP.VII. not upon the contingency of their occurring in any given time or place. It is thus that one man appears courageous and another cowardly, one man vigorous and another dull, under the fame or nearly the fame external circumstances.

Operation of physical causes rare.

In reality the atmosphere, instead of considerably affecting the mass of mankind, affects in an eminent degree only a small part of that mass. The majority are either above or below it; are either too gross to feel strongly these minute variations, or too busy to be at leisure to attend to them. It is only a few, whose treatment has been tender enough to imbue them with extreme delicacy, and whose faculties are not roused by strong and unintermitted incitements, who can be thus blindly directed. If it should be said "that the weather indeed is too great a trisle to produce these consequences, but that there are pains and interruptions which scarcely any man can withstand;" it may be answered, that these occur too seldom to be mistaken for the efficient principles of human character, that the system which determines our proceedings rises from a different source, and ordinarily returns when the pain or interruption has subsided.

There can be no question more interesting than that which we are now considering. Upon our decision in this case it depends, whether those persons act wisely who prescribe to themselves a certain discipline and are anxious to enrich their minds with science, or whether on the contrary it be better to trust

trust every thing to the mercy of events. Is it possible that we should not perceive from the very nature of the thing the advantages which the wife man possesses over the foolish one, and that the points in which they refemble will be as nothing compared to those in which they differ? In those particulars in which our conduct is directed merely by external impressions we resemble the inferior animals; we differ from them in the greater facility with which we arrange our fensations, and compare, prefer and judge.

BOOK I.

Out of a fingle fensation a great variety of reflections may Fertility of be generated. Let the thing perceived be a material substance of certain regular dimensions. I perceive that it has an upper and a lower furface, I can therefore conceive of it as divided. I can conceive of the parts into which it is formed as moving towards and from each other, and hence I acquire the ideas of distance and space. I can conceive of them as striking against each other, and hence I derive the notion of impenetrability, gravity and momentum, the flowness, rapidity and direction of motion. Let the sensation be a pain in the head. I am led to reslect upon its causes, its seat, the structure of the parts in which it resides, the inconvenience it imposes, the consequences with which it may be attended, the remedies that may be applied and their effects. whether external or internal, material or intellectual.

It is true that the infant and inexperienced mind cannot thus Physical analyse and conjure up differtations of philosophy out of its most first instance

BOOK I. CHAP.VII. fuperior, afterwards moral.

trivial fensations. Such a capacity infers a long series of preceding impressions. Mind is in its infancy nearly what these philosophers describe, the creature of contingencies. But the farther it advances, the more it individualises. Each man has habits and prejudices that are properly his own. He lives in a little universe of his own creating, or he communicates with the omnipresent and eternal volume of truth. With these he compares. the fucceffive perceptions of his mind, and upon these depend the conclusions he draws and the conduct he observes. Hence it inevitably follows, that physical causes, though of some confequence in the history of man, fink into nothing, when compared with the great and inexpressible operations of reflection. They are the prejudices we conceive or the judgments we form, our apprehensions of truth and fallhood, that constitute the true basis. of distinction between man and man. The difference between favage and favage indeed, in the first generation of the human fpecies and in perfect folitude, can only be ascribed to the different impressions made upon their senses. But this difference would be almost imperceptible. The ideas of wisdom and folly would never have entered the human mind, if men, like beafts, derived neither good nor evil from the reflections and discoveries of their companions and ancestors.

Objection from the effect of breed in animals. Hence we are furnished with an answer to the analogical argument from the considerable effects that physical causes appear to produce upon brutes. "Breed for example appears to be of unquestionable importance to the character and qualifications of

horses and dogs; why should we not suppose this or certain BOOK I. other brute and occult causes to be equally efficacious in the case of men? How comes it that the races of animals perhaps never degenerate, if carefully cultivated; at the fame time that we have no fecurity against the wifest philosopher's begetting a dunce?"

I answer, that the existence of physical causes cannot be controverted. In the case of man their efficacy is swallowed up in the superior importance of reflection and science. In animals on the contrary they are left almost alone. If a race of negroes were taken, and maintained each man from his infancy, except fo far as was necessary for the propagation of the species, in solitude; or even if they were excluded from an acquaintance with the improvements and imaginations of their ancestors, though permitted the fociety of each other, the operation of breed might perhaps be rendered as conspicuous among them, as in the different classes of horses and dogs. But the ideas they would otherwife receive from their parents and civilifed or half-civilifed neighbours would be innumerable: and, if the precautions above mentioned were unobserved, all parallel between the two cases would cease.

Such is the character of man confidered as an individual. He Conclusion. is operated upon by exterior causes immediately, producing certain effects upon him independently of the exercise of reason; and he is operated upon by exterior causes mediately, their impressions furnishing him with materials for reflection, and as-

BOOK I. CHAP.VII.

fuming the form of motives to act or to refrain from acting. But the latter of these, at least so far as relates to man in a civilised state, may stand for the whole. He that would change the character of the individual, would miserably misapply his efforts, if he principally sought to effect this purpose by the operations of heat and cold, dryness and moisture upon the animal frame. The true instruments of moral influence, are desire and aversion, punishment and reward, the exhibition of general truth, and the development of those punishments and rewards, which wisdom and error by the very nature of the thing constantly bring along with them.

PART'II.

of the transfer of the

OF NATIONAL CHARACTERS.

CHARACTER OF THE PRIESTHOOD.—ALL NATIONS CAPABLE
OF LIBERTY.—THE ASSERTION ILLUSTRATED.—EXPERIENCE FAVOURS THESE REASONINGS.—MEANS OF INTRODUCING LIBERTY.

S is the character of the individual, so may we expect to find it with nations and great bodies of men. The operations of law and political inftitution will be important and interesting, the operations of climate trisling and unworthy of notice. Thus there are particular professions, such as that of the priesthood, which must always operate to the production of a particular character.

Priefts

Character of the prieft-

Priests are upon all occasions accustomed to have their opinions listened to with implicit deference; they will therefore be imperious, dogmatical and impatient of opposition. Their success with mankind depends upon the opinion of their fuperior innocence: they will therefore be particularly anxious about appearances, their deportment will be grave and their manners formal. The frank and ingenuous fallies of mind they will be obliged to fuppress; the errors and irregularities into which they may be drawn they will be studious to conceal. They are obliged at set intervals to assume the exterior of an ardent devotion; but it is impossible that this should at all times be free from occasional coldness and distraction. Their importance is connected with their real or supposed mental superiority over the rest of mankind; they must therefore be patrons of prejudice and implicit faith. Their prosperity depends upon the reception of particular opinions in the world; they must therefore be enemies to freedom of enquiry; they must have a bias upon their minds impressed by fomething different from the force of evidence. Particular moral causes may in some instances limit, perhaps superfede the influence of general ones, and render some men superior to the character of their profession; but, exclusively of such exceptions, priefts of all religions, of all climates and of all ages will have a friking fimilarity of manners and disposition. In the same manner we may rest affured that free men in whatever country will be firm, vigorous and spirited in proportion to their freedom, and that vaffals and flaves will be ignorant, fervile and unprincipled .. .

The

BOOK I. CHAP.VII All nations capable of liberty. The truth of this axiom has indeed been pretty universally admitted; but it has been affirmed to be "impossible to establish a free government in certain warm and esseminate climates." To enable us to judge of the reasonableness of this affirmation, let us consider what process would be necessary in order to introduce a free government into any country.

The answer to this question is to be found in the answer to that other, whether freedom have any real and solid advantages over slavery? If it have, then our mode of proceeding respecting it ought to be exactly parallel to that we should employ in recommending any other benefit. If I would persuade a man to accept a great estate, supposing that possession to be a real advantage; if I would induce him to select for his companion a beautiful and accomplished woman, or for his friend a wise, a brave and disinterested man; if I would persuade him to prefer ease to pain, and gratistication to torture, what more is necessary, than that I should inform his understanding, and make him see these things in their true and genuine colours? Should I find it necessary to enquire first of what climate he was a native, and whether that were favourable to the possession of a great estate, a fine woman, or a generous friend?

The advantages of liberty over flavery are not less real, though unfortunately they are less palpable, than in the cases just enumerated. Every man has a confused sense of these advantages, but he has been taught to believe that men would tear each other to pieces, if they had not priests to direct their confesences,

sciences, and lords to consult for their sublistence, and kings to fleer them in fafety through the inexplicable dangers of the political ocean. But whether they be missed by these or other prejudices, whatever be the fancied terror that induces them quietly to fubmit to have their hands bound behind them, and the scourge vibrated over their heads, all these are questions of rea-Truth may be presented to them in such irresistible evidence, perhaps by fuch just degrees familiarised to their anprehension, as ultimately to conquer the most obstinate prepossessions. Let the press find its way into Persia or Indostan, let the political truths discovered by the best of the European lages be transfused into their language, and it is impossible that a few folitary converts should not be made. It is the property of truth to spread; and, exclusively of great national convulfions, its advocates in each fucceeding age will be fomewhat more numerous than in that which went before. The causes, which suspend its progress, arise, not from climate, but from the watchful and intolerant jealoufy of despotic sovereigns.

Let us suppose then that the majority of a nation by how- The affertion ever flow a progress are convinced of the defirableness, or, which amounts to the fame, the practicability of freedom. The fupposition would be parallel, if we were to imagine ten thousand men of found intellect, that up in a madhouse, and superintended by a fet of three or four keepers. Hitherto they have been perfuaded, for what abfurdity has been too great for human intellect

illustrated.

BOOK I. CHAP.VII. to entertain? that they were destitute of reason, and that the superintendence under which they were placed was necessary for their preservation. They have therefore submitted to whips and straw and bread and water, and perhaps imagined this tyranny to be a blessing. But a suspicion is at length by some means propagated among them, that all they have hitherto endured has been an imposition. The suspicion spreads, they restlect, they reason, the idea is communicated from one to another through the chinks of their cells, and at certain times when the vigilance of their keepers has not precluded them from the pleasures of mutual society. It becomes the clear perception, the settled persuasion of the majority of the persons confined.

What will be the confequence of this opinion? Will the influence of climate prevent them from embracing the obvious means of their happiness? Is there any human understanding that will not perceive a truth like this, when forcibly and repeatedly presented? Is there a mind that will conceive no indignation at so horrible a tyranny? In reality the chains fall off of themselves, when the magic of opinion is dissolved. When a great majority of any society are persuaded to secure any benefit to themselves, there is no need of tumult or violence to effect it. The effort would be to resist reason, not to obey it. The prisoners are collected in their common hall, and the keepers inform them that it is time to return to their cells. They have no longer the power to obey. They look at the impotence of

their

their late mafters, and fmile at their prefumption. They quietly leave the mansion where they were hitherto immured, and partake of the bleffings of light and air like other men.

Let us compare this theory with the history of mankind. the theory be true, we may expect to find the inhabitants of reasonings. neighbouring provinces in different states, widely differiminated by the influence of government, and little affimilated by refemblance of climate. Thus the Gascons are the gayest people in all France; but the moment we pass the Pyrenees, we find the ferious and faturnine character of the Spaniard. Thus the Athenians were lively, penetrating and ingenious, but the Thebans unpolified, phlegmatic and dull.—It would be reafonable to expect that different races of men, intermixed with each other, but differently governed, would afford a strong and visible contrast. Thus the Turks are brave, open and sincere, but the modern Greeks mean, cowardly and deceitful. - Wandering tribes closely connected among themselves, and having little sympathy with the people with whom they refide, may be expected to have great fimilarity of manners. Their fituation renders them conspicuous, the faults of individuals reflect dishonour upon the whole and their manners will be particularly fober and reputable, unless they should happen to labour under so peculiar an odium as to render all endeavour after reputation fruitless. Thus the Armenians in the East are as univerfally distinguished among the nations with whom they refide, as the Jews in Europe; but the Arme-

If Experience

BOOK I. CHAP.VII. nians are as much noted for probity, as the Jews for extortion.—What refemblance is there between the ancient and the modern Greeks, between the old Romans and the prefent inhabitants of Italy, between the Gauls and the French? Diodorus Siculus defcribes the Gauls as particularly given to taciturnity, and Aristotle affirms that they are the only warlike nation who are negligent of women.

If on the contrary climate were principally concerned in forming the characters of nations, we might expect to find heat and cold producing an extraordinary effect upon men, as they do upon plants and inferior animals. But the reverse of this appears to be the fact. Is it supposed that the neighbourhood of the fun renders men gay, fantastic and ingenious? While the French, the Greeks and the Persians have been remarkable for their gaiety, the Spaniards, the Turks and the Chinese are not less distinguished by the seriousness of their deportment. It was the opinion of the ancients that the northern nations were incapable of civilifation and improvement; but the moderns have found that the English are not inferior in literary eminence to any nation in the world. Is it afferted, that the northern nations are more hardy and courageous, and that conquest has usually travelled from that to the opposite quarter? It would have been truer to fay that conquest is usually made by poverty upon plenty. The Turks, who from the deferts of Tartary invaded the fertile provinces of the Roman empire, met the Saracens half way, who were advancing with fimilar views from the no less dreary deserts of Arabia. In their extreme perhaps heat and cold may determine the characters of nations, of the negroes for example on one side and the Laplanders on the other. Not but that in this very instance much may be ascribed to the wretchedness of a sterile climate on the one hand, and to the indolence consequent upon a spontaneous fertility on the other. As to what is more than this, the remedy has not yet been discovered. Physical causes have already appeared to be powerful, till moral ones can be brought into operation.

BOOK I. CHAP.VII.

Has it been alledged that carnivorous nations are endowed with the greatest courage? The Swedes, whose nutriment is meagre and sparing, have ranked with the most distinguished modern nations in the operations of war.

It is usually said, that northern nations are most addicted to wine, and southern to women. Admitting this observation in its sull force, it would only prove that climate may operate upon the grosser particles of our frame, not that it influences those since organs upon which the operations of intellect depend. But the truth of the first of these remarks may well be doubted. The Greeks appear to have been sufficiently addicted to the pleasures of the bottle. Among the Persians no character was more coveted than that of a hard drinker. It is easy to obtain any thing

BOOK I.

of the negroes, even their wives and children, in exchange for liquor.

As to women the circumstance may be accounted for from moral causes. The heat of the climate obliges both sexes to go half naked. The animal arrives sooner at maturity in hot countries. And both these circumstances produce vigilance and jealously, causes which inevitably tend to instant the passions *.

Means of introducing liberty.

ř ...

The refult of these reasonings is of the utmost importance to him who speculates upon principles of government. It is of little consequence what discoveries may be made in moral and political science, if, when we have ascertained most accurately what are the intellectual requisites that lead to wisdom and virtue, a blind and capricious principle is to intrude itself, and taint all our conclusions. Accordingly there have been writers on the subject of government, who, admitting, and even occasionally declaiming with enthusiasm upon the advantages of liberty and the equal claims of mankind to every social benefit, have yet concluded that the corruptions of despotism and the usurpations of aristocracy were congenial to certain ages and divisions of the world, and under proper limitations entitled to our approbation.

^{*} The majority of inflances in the three preceding pages are taken from Hume's Essay on National Characters, where this subject is treated with much ability. Essays, Vol. I, Part I, Essay xxi.

But this hypothesis will be found incapable of holding out against a moment's serious reslection. Can there be any state of mankind that renders them incapable of the exercise of reason? Can there be a period in which it is necessary to hold the human fpecies in a condition of pupillage? If there be, it feems but reasonable that their superintendents and guardians, as in the case of infants of another fort, should provide for the means of their fubfiftence without calling upon them for the exertions of manual industry. Wherever men are competent to look the first duties of humanity in the face, and to provide for their defence against the invalions of hunger and the inclemencies of the fky, there they will out of all doubt be found equally capable of every other exertion that may be necessary to their security and welfare. Present to them a constitution which shall put them into a simple and intelligible method of directing their own affairs, adjudging their contests among themselves, and cherishing in their bosoms a manly fense of dignity, equality and independence, and you need not doubt that prosperity and virtue will be the refult.

The real enemies of liberty in any country are not the people, but those higher orders who profit by a contrary system. Infuse just views of society into a certain number of the liberally educated and reflecting members; give to the people guides and instructors; and the business is done. This however is not to be accomplished but in a gradual manner, as will more fully

appear in the fequel. The error lies, not in tolerating the worst forms of government for a time, but in supposing a change impracticable, and not incessantly looking forward to its accomplishment.

CHAP. VIII.

OF THE OBJECTION TO THESE PRINCIPLES FROM THE INFLUENCE OF LUXURY.

THE OBJECTION STATED .- SOURCE OF THIS OBJECTION .-REFUTED FROM MUTABILITY-FROM MORTALITY-FROM SYMPATHY-FROM THE NATURE OF TRUTH.-THE PRO-BABILITY OF PERSEVERANCE CONSIDERED.

HERE is another proposition relative to the subject, BOOK I. which is less to be considered as an affertion distinct in itself, than as a particular branch of that which has just been tion flated. discussed; I mean the proposition which affirms, "that nations like individuals are subject to the phenomena of youth and old age, and that, when a people by luxury and depravation of manners have funk into decrepitude, it is not in the power of legislation to restore them to vigour and innocence."

This idea has partly been founded upon the romantic notions Source of this of pastoral life and the golden age. Innocence is not virtue. Virtue demands the active employment of an ardent mind in the promotion of the general good. No man can be eminently virtuous, who is not accustomed to an extensive range of reflection. He must fee all the benefits to arise from a disinterested proceed-

objection.

BOOK I.

proceeding, and must understand the proper method of producing those benefits. Ignorance, the slothful habits and limited views of uncultivated life have not in them more of true virtue, though they may be more harmless, than luxury, vanity and extravagance. Individuals of exquisite feeling, whose disgust has been excited by the hardened selfishness or the unblushing corruption which have prevailed in their own times, have recurred in imagination to the forests of Norway or the bleak and uncomfortable Highlands of Scotland in search of a purer race of mankind. This imagination has been the offspring of disappointment, not the dictate of reason and philosophy.

It may be true, that ignorance is nearer than prejudice to the reception of wifdom, and that the absence of virtue is a condition more hopeful than the presence of its opposite. In this case it would have been juster to compare a nation sunk in luxury, to an individual with confirmed habits of wrong, than to an individual whom a debilitated constitution was bringing fast to the grave. But neither would that comparison have been fair and equitable.

Refuted from mutability:

The condition of nations is more fluctuating, and will be found less obstinate in its resistance to a consistent endeavour for their improvement, than that of individuals. In nations some of their members will be less confirmed in error than others. A certain number will be only in a very small degree indisposed

to liften to the voice of truth. This number will perpetually increase. Every new convert will be the means of converting others. In proportion as the body of disciples is augmented, the modes of attack upon the prejudices of others will be varied, and fuited to the variety of men's tempers and prepoffessions.

Add to this that generations of men are perpetually going off from mortathe flage, while other generations fucceed. The next generation will not have fo many prejudices to fubdue. Suppose a despotic nation by some revolution in its affairs to become posfessed of a free constitution. The children of the present race will be bred in more firm and independent habits of thinking; the suppleness, the timidity and the vicious dexterity of their fathers will give place to an erect mien, and a clear and decifive judgment. The partial and imperfect change of character which was introduced at first, will in the succeeding age become more unalloyed and complete.

Laftly, the power of focial inftitutions changing the character from fympaof nations is very different from and infinitely greater than any power which can ordinarily be brought to bear upon a folitary individual. Large bodies of men, when once they have been enlightened and perfuaded, act with more vigour than folitary in-They animate the mutual exertions of each other. dividuals. and the united forces of example and shame urge them to perfeverance. The case is not of that customary fort where the

BOOK I. CHAP. VIII. power of reason only is tried in curing any person of his errors; but is as if he should be placed in an entirely new situation. His habits are broken through, and his motives of action changed. Instead of being perpetually recalled to vicious practices by the recurrence of his former connections, the whole society receives an impulse from the same cause that acts upon any individual. New ideas are suggested, and the surprise of novelty conspires with the approbation of truth to prevent men from falling back into imbecility and languor.

from the na-

The question may in reality be reduced to an enquiry, whether the human understanding can be made the recipient of truth, whether it be possible for an effort so strenuous to exist as to make men aware of their true interests. For let this be granted, and the consequence is inevitable. It has already fufficiently appeared, that whatever is politically right or politically wrong, must be in all cases of no trivial consequence to the welfare of mankind. Monarchy for example will by all men be acknowledged to be attended with many difadvantages. It acts upon infufficient and partial information, it generates intrigue, corruption, adulation and fervility. If it could be proved, that it produced no advantages in equal proportion, and that its abolition would not lead to mischief, anarchy and disorder, is there a nation upon the face of the earth to whom these propositions were rendered palpable, that would endure to fubmit to it? Is there a nation upon the face of the earth, that would fubmit

to the impositions of its administration, the wars it occasions, and the lavish revenues by which it is maintained, if they knew it to be merely an excrescence and a disease in the order of fociety?

But it has been farther alledged, that, even should a luxurious The probanation be prompted by intolerable grievances and notorious feverance usurpation to affert the just principles of human fociety, they would be unable to perpetuate them, and would foon be led back by their evil habits to their former vices and corruption: that is, they would be capable of the heroic energy that should expel the usurper, but not of the moderate resolution that should prevent his return. They would rouse themselves so far from their lethargy as to assume a new character and enter into different views; but, after having for some time acted upon their convictions, they would fuddenly become incapable of underflanding the truth of their principles and feeling their influence.

bility of perconfidered.

Men always act upon their apprehensions of preferableness. There are few errors of which they are guilty, which may not be refolved into a narrow and inadequate view of the alternative presented for their choice. Present pleasure may appear more certain and eligible than diffant good. But they never choose evil as apprehended to be evil. Wherever a clear and unanswerable notion of any subject is presented to their view, a correspondent action or course of actions inevitably follows. Having thus gained

BOOK I.

one step in the acquisition of truth, it cannot easily be conceived of as lost. A body of men, having detected the injurious confequences of an evil under which they have long laboured, and having shaken it off, will scarcely voluntarily restore the mischief they have annihilated. Nothing can reconcile them to the revival of falshood, which does not obliterate their present conviction of truth.

E N O U I R

CONCERNING

POLITICAL JUSTICE.

BOOK II.

PRINCIPLES OF SOCIETY.

CHAP. I.

INTRODUCTION.

NATURE OF THE ENQUIRY-MODE OF PURSUING IT .- DIS-TINCTION BETWEEN SOCIETY AND GOVERNMENT.

TR. Locke begins his celebrated Treatife of Government BOOK II. with a refutation of the patriarchal scheme of sir Robert Filmer; and, having thus cleared his ground, proceeds to observe, enquiry, that " he, that will not give just occasion to think that all government in the world is the product only of force and violence, and that men live together by no other rules but that of beafts,

must

BOOK II. CHAP. I. must of necessity find out another rise of government, and another original of political power *." Accordingly he proceeds through the greater part of his treatise to reason abstractedly upon the probable history of the early ages of mankind, and concludes that no legitimate government could be built upon any other foundation than that of an original contract.

It is to be suspected that this great man, friend as he was to the liberty and the interests of mankind, intrepid and sagacious in his search after truth, has been guilty of an oversight in the first step of the investigation.

Mode of purfuing it. There are two modes, according to which we may enquire into the origin of fociety and government. We may either examine them historically, that is, consider in what manner they have or ought to have begun, as Mr. Locke has done; or we may examine them philosophically, that is, consider the moral principles upon which they depend. The first of these subjects is not without its use; but the second is of a higher order and more essential importance. The first is a question of form; the second of substance. It would be of trivial consequence practically considered, from what source any form of society flowed, and by what mode its principles were fanctioned, could we be always secure of their conformity to the dictates of truth and justice.

CHAP. I.

It is farther neceffary before we enter upon the subject carefully to distinguish between society and government. Men associated at first for the sake of mutual assistance. They did not foresee that any restraint would be necessary, to regulate the conduct of individual members of the society, towards each other, or towards the whole. The necessity of restraint grew out of the errors and perverseness of a sew. An acute writer has expressed this idea with peculiar felicity. "Society and government," says he, " are different in themselves, and have different origins. Society is produced by our wants, and government by our wickedness. Society is in every state a blessing; government even in its best state but a necessary evil*."

* Common Sense, p. 1.

CHAP. II.

OF JUSTICE.

CONNECTION OF POLITICS AND MORALS.—EXTENT AND MEANING OF JUSTICE.—SUBJECT OF JUSTICE: MAN-KIND.—ITS DISTRIBUTION MEASURED BY THE CAPACITY OF ITS SUBJECT—BY HIS USEFULNESS.—FAMILY AFFECTION CONSIDERED.—GRATITUDE CONSIDERED.—OBJECTIONS: FROM IGNORANCE—FROM UTILITY.—AN EXCEPTION STATED.—DEGREES OF JUSTICE.—APPLICATION.—IDEA OF POLITICAL JUSTICE.

BOOK II. CHAP. II. Connection of politics and morals. ROM what has been faid it appears, that the fubject of the prefent enquiry is ftrictly speaking a department of the science of morals. Morality is the source from which its fundamental axioms must be drawn, and they will be made somewhat clearer in the present instance, if we assume the term justice as a general appellation for all moral duty.

Extent and meaning of justice.

That this appellation is fufficiently expressive of the subject will appear, if we consider for a moment mercy, gratitude, temperance, or any of those duties which in looser speaking are contradistinguished from justice. Why should I pardon this criminal,

remunerate this favour, abstain from this indulgence? If it partake of the nature of morality, it must be either right or wrong, just or unjust. It must tend to the benefit of the individual, either without intrenching upon, or with actual advantage to the mass of individuals. Either way it benefits the whole, because individuals are parts of the whole. Therefore to do it is just, and to forbear it is unjust. If justice have any meaning, it is just that I should contribute every thing in my power to the benefit of the whole.

BOOK II. CHAP. II.

Confiderable light will probably be thrown upon our invefti. Subject of gation, if, quitting for the present the political view, we examine kind. juffice merely as it exists among individuals. Justice is a rule of conduct originating in the connection of one percipient being with another. A comprehensive maxim which has been laid down upon the fubject is, "that we should love our neighbour as ourselves." But this maxim, though possessing considerable merit as a popular principle, is not modelled with the strictness of philosophical accuracy.

iuftice: man-

In a loofe and general view I and my neighbour are both of Its diffribuus men; and of consequence entitled to equal attention. reality it is probable that one of us is a being of more worth its subject: and importance than the other. A man is of more worth than a beaft; because, being possessed of higher faculties, he is capable of a more refined and genuine happiness. In the same manner

But in fured by the capacity of

BOOK II. CHAP. II. the illustrious archbishop of Cambray was of more worth thanhis chambermaid, and there are few of us that would hesitate to pronounce, if his palace were in slames, and the life of only one of them could be preserved, which of the two ought to be preferred.

by his ufefulnefs.

But there is another ground of preference, beside the private consideration of one of them being farther removed from the state of a mere animal. We are not connected with one or two-percipient beings, but with a society, a nation, and in some sense with the whole family of mankind. Of consequence that life ought to be preferred which will be most conducive to the general good. In saving the life of Fenelon, suppose at the moment when he was conceiving the project of his immortal Telemachus, I should be promoting the benefit of thousands, who have been cured by the perusal of it of some error, vice and consequent unhappiness. Nay, my benefit would extend farther than this, for every individual thus cured has become a better member of society, and has contributed in his turn to the happiness, the information and improvement of others.

Supposing I had been myself the chambermaid, I ought to have chosen to die, rather than that Fenelon should have died. The life of Fenelon was really preferable to that of the chambermaid. But understanding is the faculty that perceives the truth of this and similar propositions; and justice is the principle that

regulates my conduct accordingly. It would have been just in the chambermaid to have preferred the archbishop to herself. To have done otherwise would have been a breach of justice. BOOK II. CHAP. II.

Supposing the chambermaid had been my wife, my mother or my benefactor. This would not alter the truth of the proposition. The life of Fenelon would still be more valuable than that of the chambermaid; and justice, pure, unadulterated justice, would still have preferred that which was most valuable. Justice would have taught me to save the life of Fenelon at the expence of the other. What magic is there in the pronoun "my," to overturn the decisions of everlasting truth? My wife or my mother may be a fool or a prostitute, malicious, lying or dishonest. If they be, of what consequence is it that they are mine?

Family affection confidered.

"But my mother endured for me the pains of child bearing, and nourished me in the helplessies of infancy." When she first subjected herself to the necessity of these cares, she was probably influenced by no particular motives of benevolence to her future offspring. Every voluntary benefit however entitles the bestower to some kindness and retribution. But why so? Because a voluntary benefit is an evidence of benevolent intention, that is, of virtue. It is the disposition of the mind, not the external action, that entitles to respect. But the merit of this disposition is equal, whether the benefit was conferred upon me or upon another. I and another man cannot both be right in preferring

Gratitude confidered. BOOK II. CHAP. II.

our own individual benefactor, for no man can be at the same time both better and worfe than his neighbour. My benefactor ought to be esteemed, not because he bestowed a benefit upon me, but because he bestowed it upon a human being. His defert will be in exact proportion to the degree, in which that human being was worthy of the distinction conferred. Thus every view of the subject brings us back to the consideration of my neighbour's moral worth and his importance to the general weal, as the only standard to determine the treatment to which he is entitled. Gratitude therefore, a principle which has fo often been the theme of the moralist and the poet, is no part either of justice. or virtue. By gratitude I understand a sentiment, which would lead me to prefer one man to another, from some other confideration than that of his fuperior usefulness or worth: that is, which would make fomething true to me (for example this preferableness), which cannot be true to another man, and is not: true in itself *..

Objections:

from igno-

It may be objected, "that my relation, my companion, or my benefactor will of course in many instances obtain an uncommon portion of my regard: for, not being universally capable of discriminating the comparative worth of different men, I shall inevitably judge most favourably of him, of whose virtues I have received the most unquestionable proofs; and thus shall be com-

^{*}This argument respecting gratitude is stated with great clearness in an Essays on the Nature of True Virtue, by the Rev. Jonathan Edwards. 12mo. Dilly.

pelled to prefer the man of moral worth whom I know, to another who may possess, unknown to me, an essential superiority."

BOOK II. CHAP. II.

This compulsion however is founded only in the present imperfection of human nature. It may serve as an apology for my error, but can never turn error into truth. It will always remain contrary to the strict and inflexible decisions of justice. The difficulty of conceiving this is owing merely to our confounding the disposition from which an action is chosen, with the action itself. The disposition, that would prefer virtue to vice and a greater degree of virtue to a less, is undoubtedly a subject of approbation; the erroneous exercise of this disposition by which a wrong object is selected, if unavoidable, is to be deplored, but can by no colouring and under no denomination be converted into right *.

It may in the second place be objected, "that a mutual from utility, commerce of benefits tends to increase the mass of benevolent action, and that to increase the mass of benevolent action is to contribute to the general good." Indeed! Is the general good promoted by falshood, by treating a man of one degree of worth, as if he had ten times that worth? or as if he were in any degree different from what he really is? Would not the most beneficial consequences result from a different plan; from my

constantly;

^{*} See this subject more copiously treated in the following chapter.

BOOK II. CHAP. II. constantly and carefully enquiring into the deferts of all those with whom I am connected, and from their being sure, after a certain allowance for the fallibility of human judgment, of being treated by me exactly as they deserved? Who can tell what would be the effects of such a plan of conduct universally adopted?

An exception stated.

There feems to be more truth in the argument, derived chiefly from the unequal distribution of property, in favour of my providing in ordinary cases for my wife and children, my brothers and relations, before I provide for strangers. As long as providing for individuals belongs to individuals, it seems as if there must be a certain distribution of the class needing superintendence and supply among the class affording it, that each man may have his claim and resource. But this argument, if admitted at all, is to be admitted with great caution. It belongs only to ordinary cases; and cases of a higher order or a more urgent necessity will perpetually occur, in competition with which these will be altogether impotent. We must be severely scrupulous in measuring out the quantity of supply; and, with respect to money in particular, must remember how little is yet understood of the true mode of employing it for the public benefit.

Degrees of

Having confidered the perfons with whom justice is converfant, let us next enquire into the degree in which we are obliged to consult the good of others. And here I say, that it is just that

that I should do all the good in my power. Does any person in diffress apply to me for relief? It is my duty to grant it, and I commit a breach of duty in refusing. If this principle be not of universal application, it is because, in conferring a benefit upon an individual, I may in fome inftances inflict an injury of fuperior magnitude upon myself or fociety. Now the fame justice, that binds me to any individual of my fellow men, binds me to the whole. If, while I confer a benefit upon one man, it appear, in striking an equitable balance, that I am injuring the whole, my action ceases to be right and becomes absolutely wrong. But how much am I bound to do for the general weal, that is, for the benefit of the individuals of whom the whole is composed? Every thing in my power. What to the neglect of the means of my own existence? No; for I am myself a part of the whole. Befide, it will rarely happen but that the project of doing for others every thing in my power, will demand for its execution the prefervation of my own existence; or in other words, it will rarely happen but that I can do more good in twenty years than in one. If the extraordinary case should occur in which I can promote the general good by my death, more than by my life, justice requires that I should be content to die. In all other cases, it is just that I should be careful to maintain my body and my mind in the utmost vigour, and in the best condition for service *.

^{*} Vide Appendix to this chapter, No. I.

BOOK II. CHAP. II.

I will suppose for example that it is right for one man to possess a greater portion of property than another, either as the fruit of his industry, or the inheritance of his ancestors. Justice obliges him to regard this property as a truft, and calls upon him maturely to confider in what manner it may best be employed for the increase of liberty, knowledge and virtue. He has no right to dispose of a shilling of it at the will of his caprice. So far from being entitled to well earned applause for having employed fome scanty pittance in the service of philanthropy, he is in the eye of justice a delinquent if he withhold any portion from that fervice. Nothing can be more incontrovertible. Could that portion have been better or more worthily employed? That it could is implied in the very terms of the proposition. Then it was just it should have been so employed.—In the same manner as my property, I hold my person as a trust in behalf of mankind. I am bound to employ my talents, my understanding, my ftrength and my time for the production of the greatest quantity of general good. Such are the declarations of justice, fo great is the extent of my duty.

But justice is reciprocal. If it be just that I should confer a benefit, it is just that another man should receive it, and, if I withhold from him that to which he is entitled, he may justly complain. My neighbour is in want of ten pounds that I can spare. There is no law of political institution that has been made to reach this case, and to transfer this property from me to him.

But in the eye of fimple justice, unless it can be shewn that the BOOK II. money can be more beneficently employed, his claim is as complete, as if he had my bond in his possession, or had supplied me with goods to the amount *.

To this it has fometimes been answered, "that there is more than one person, that stands in need of the money I have to spare, and of consequence I must be at liberty to bestow it as I pleafe." I answer, if only one person offer himself to my knowledge or fearch, to me there is but one. Those others that I cannot find belong to other rich men to affift (rich men, I fay, for every man is rich, who has more money than his just occasions demand), and not to me. If more than one person offer, I am obliged to balance their fitness, and conduct myself accordingly. It is feareely possible to happen that two men shall be of exactly equal fitness, or that I shall be equally certain of the fitness of the one as of the other.

It is therefore impossible for me to confer upon any man a favour, I can only do him a right. Whatever deviates from the law of justice, even I will suppose in the too much done in favour of fome individual or fome part of the general whole, is fo much fubtracted from the general flock, is fo much of absolute injustice.

^{*} A spirited outline of these principles is sketched in Swift's Sermon on Mutual Subjection.

BOOK II. CHAP. II. Application.

The inference most clearly afforded by the preceding reasonings, is the competence of justice as a principle of deduction in all cases of moral enquiry. The reasonings themselves are rather of the nature of illustration and example, and any error that may be imputed to them in particulars, will not invalidate the general conclusion, the propriety of applying moral justice as a criterion in the investigation of political truth.

Idea of political justice. Society is nothing more than an aggregation of individuals. Its claims and its duties must be the aggregate of their claims and duties, the one no more precarious and arbitrary than the other. What has the society a right to require from me? The question is already answered: every thing that it is my duty to do. Any thing more? Certainly not. Can they change eternal truth, or subvert the nature of men and their actions? Can they make it my duty to commit intemperance, to maltreat or affassinate my neighbour?—Again. What is it that the society is bound to do for its members? Every thing that can contribute to their welfare. But the nature of their welfare is defined by the nature of mind. That will most contribute to it, which enlarges the understanding, supplies incitements to virtue, fills us with a generous consciousness of our independence, and carefully removes whatever can impede our exertions.

Should it be affirmed, "that it is not in the power of any political fystem to secure to us these advantages," the conclusion I

am drawing will still be incontrovertible. It is bound to contribute every thing it is able to these purposes, and no man was ever yet found hardy enough to affirm that it could do nothing. Suppose its influence in the utmost degree limited, there must be one method approaching nearer than any other to the desired object, and that method ought to be universally adopted. There is one thing that political institutions can affuredly do, they can avoid positively counteracting the true interests of their subjects. But all capricious rules and arbitrary distinctions do positively counteract them. There is scarcely any modification of society but has in it some degree of moral tendency. So far as it produces neither mischief nor benefit, it is good for nothing. So far as it tends to the improvement of the community, it ought to be universally adopted.

APPENDIX, No. I. p. 87.

SUICIDE. OF

MOTIVES OF SUICIDE: I. ESCAPE FROM PAIN .-- 2. BENEVO-LENCE .- MARTYRDOM CONSIDERED.

BOOK II. CHAP. II.

Motives of fuicide. 1. Escape

from pain.

HIS reasoning will explain to us the long disputed case of fuicide. " Have I a right under any circumstances to destroy myself in order to escape from pain or disgrace?" Probably not. It is perhaps impossible to imagine a fituation, that shall exclude the possibility of future life, vigour and usefulnefs. The motive affigned for escape is eminently trivial, to avoid pain, which is a fmall inconvenience; or difgrace, which is an imaginary evil. The example of fortitude in enduring them, if there were no other confideration, would probably afford a better motive for continuing to live.

2. Benevolence.

" Is there then no case in which suicide is a virtue?" What shall we think of the reasoning of Lycurgus, who, when he determined upon a voluntary death, remarked, "that all the faculties a rational being possessed were capable of a moral use, and that, after having spent his life in the service of his country, a man ought, if possible, to render his death a source of additional benefit?" This was the motive of the fuicide of Codrus, Leonidas and Decius. If the fame motive prevailed in the much admired

fuicide of Cato, if he were inftigated by reasons purely benevolent, it is impossible not to applaud his intention, even if he were mistaken in the application.

BOOK II. CHAP. II.

The difficulty is to decide in any inflance whether the recourse to a voluntary death can overbalance the usefulness I may exert in twenty or thirty years of additional life. But furely it would be precipitate to decide that there is no fuch inflance. There is a proverb which affirms, "that the blood of the martyrs is the feed of the church." It is commonly supposed that Junius Brutus did right in putting his fons to death in the first year of the Roman republic, and that this action contributed more than any other cause, to generate that energy and virtue for which his country was afterwards fo eminently diftinguished. The death of Cato produced an effect fomewhat fimilar to this. It was dwelt on with admiration by all the lovers of virtue under the fubsequent tyrants of Rome. It seemed to be the lamp from which they caught the facred flame. Who can tell how much it has contributed to revive that flame in after ages, when it feemed to have been fo long extinct?

Let it be observed that all martyrs [maplops] are fuicides by the Martyrdom very fignification of the term. They die for a testimony [μαρίυριο]; that is, they have a motive for dying. But motives respect only our own voluntary acts, not the violence put upon us by another.

contidered.

APPENDIX,

APPENDIX, No. II.

OF DUELLING.

MOTIVES OF DUELLING: I. REVENGE.—2. REPUTATION FOR COURAGE.—FALLACY OF THIS MOTIVE.—OBJECTION ANSWERED.—ILLUSTRATION.

BOOK II. CHAP. II. Appendix. Motives of duelling. IT may be proper in this place to bestow a moment's consideration upon the trite, but very important case of duelling. A very short reslection will suffice to set it in its true light.

1. Revenge.

This detestable practice was originally invented by barbarians for the gratification of revenge. It was probably at that time thought a very happy project for reconciling the odiousness of malignity with the gallantry of courage.

2.Reputation for courage.

But in this light it is now generally given up. Men of the best understanding who lend it their fanction, are unwillingly induced to do so, and engage in single combat merely that their reputation may sustain no slander.

Fallacy of this motive.

Which of these two actions is the truest test of courage: the engaging in a practice which our judgment disapproves, because we cannot submit to the consequences of following that judgment; or the doing what we believe to be right, and chearfully

encoun-

encountering all the confequences that may be annexed to the practice of virtue? With what patience can a man of virtue think of cutting off the life of a fellow mortal, or of putting an abrupt close to all the generous projects he may himself conceive for the benefit of others, merely because he has not firmness enough to awe impertinence and falshood into silence?

BOOK II.

"But the refusing a duel is an ambiguous action. Cowards Objection. may pretend principle to shelter themselves from a danger they dare not meet."

This is partly true and partly false. There are few actions Answered. indeed that are not ambiguous, or that with the same general outline may not proceed from different motives. But the manner of doing them will fufficiently shew the principle from which they fpring.

He, that would break through an univerfally received custom Illustration. because he believes it to be wrong, must no doubt arm himself with fortitude. The point in which we chiefly fail, is in not accurately understanding our own intentions, and taking care beforehand to free ourselves from any alloy of weakness and error. He, who comes forward with no other idea in his mind but that of rectitude, and who expresses, with the simplicity and firmness which full conviction never fails to inspire, the views with which he is impressed, is in no danger of being mistaken for a

coward.

BOOK II. CHAP. II. coward. If he hefitate, it is because he has not an idea persectly clear of the sentiment he intends to convey. If he be in any degree embarrassed, it is because he has not a feeling sufficiently generous and interpid of the guilt of the action in which he is pressed to engage.

If there be any meaning in courage, its first ingredient must be the daring to fpeak the truth at all times, to all perfons, and in every possible situation. What is it but the want of courage that should prevent me from faying, "Sir, I ought to refuse your challenge. What I ought to do, that I dare do. Have I injured you? I will readily and without compulsion repair my injustice to the uttermost mite. Have you misconstrued me? State to me the particulars, and doubt not that what is true I will make appear to be true. Thus far I will go. But, though I should be branded for a coward by all mankind, I will not repair to a scene of deliberate murder. I will not do an act that I know to be flagitious. I will exercise my judgment upon every proposition that comes before me; the dictates of that judgment I will speak; and upon them I will form my conduct." He that holds this language with a countenance in unifon with his words, will never be fufpected of acting from the impulse of fear.

C H A P. III.

OF DUTY.

A DIFFICULTY STATED .- OF ABSOLUTE AND PRACTICAL VIRTUE .- IMPROPRIETY OF THIS DISTINCTION .- UNI-VERSALITY OF WHAT IS CALLED PRACTICAL VIRTUE-INSTANCED IN ROBBERY-IN RELIGIOUS FANATICISM.-THE QUALITY OF AN ACTION DISTINCT FROM THE DIS-POSITION WITH WHICH IT IS PERFORMED-FARTHER DIFFICULTY .- MEANING OF THE TERM, DUTY .- APPLI-CATION. - INFERENCES.

THERE is a difficulty of considerable magnitude as to the BOOK II. fubject of the preceding chapter, founded upon the difference which may exist between abstract justice and my appre- flated. hensions of justice. When I do an act, wrong in itself, but which as to all the materials of judging extant to my underflanding appears to be right, is my conduct virtuous or vicious?

Certain moralists have introduced a distinction upon this head Of absolute between absolute and practical virtue. "There is one species of virtue, virtue," they fay, " which rifes out of the nature of things and is immutable, and another which rifes out of the views extant to my understanding. Thus for example suppose, I ought to

BOOK II. CHAP. III.

worship Jesus Christ; but, having been bred in the religion of Mahomet, I ought to adhere to that religion, as long as its evidences shall appear to me conclusive. I am impannelled upon a jury to try a man arraigned for murder, and who is really innocent. Abstractedly considered, I ought to acquit him. But I am unacquainted with his innocence, and evidence is adduced such as to form the strongest presumption of his guilt. Demonstration in such cases is not to be attained; I am obliged in every concern of human life to act upon presumption; I ought therefore to convict him."

Impropriety of this diftinction. It may be doubted however whether any good purpose is likely to be answered by employing the terms of abstract science in this versatile and uncertain manner. Morality is, if any thing can be, fixed and immutable; and there must surely be some strange deception that should induce us to give to an action eternally and unchangeably wrong, the epithets of rectitude, duty and virtue.

Universality of what is called practical virtue: Nor have these moralists been thoroughly aware to what extent this admission would carry them. The human mind is incredibly subtle in inventing an apology for that to which its inclination leads. Nothing is so rare as pure and unmingled hypocrify. There is no action of our lives which we were not ready at the time of adopting it to justify, unless so far as we were prevented by mere indolence and unconcern. There is fearcely

fearcely any justification which we endeavour to pass upon others, which we do not with tolerable fuccess pass upon ourselves. The distinction therefore which is here set up would go near to prove that every action of every human being is entitled to the appellation of virtuous.

There is perhaps no man that cannot recollect the time when inflanced in he fecretly called in question the arbitrary division of property established in human society, and felt inclined to appropriate to his use any thing the possession of which appeared to him defirable. It is probably in fome fuch way that men are usually influenced in the perpetration of robbery. They perfuade themfelves of the comparative inutility of the property to its prefent poffesfor, and the inestimable advantage that would attend it in their hands. They believe that the transfer ought to be made. It is of no confequence that they are not confiftent in thefe views, that the impressions of education speedily recur to their minds, and that in a feafon of adverfity they readily confess the wickedness of their proceeding. It is not less true that they did what at the moment they thought to be right.

But there is another confideration that feems still more decifive in religious of the subject before us. The worst actions, the most contrary to abstract justice and utility, have frequently been done from the most conscientious motives. Clement, Ravaillac, Damiens and Gerard had their minds deeply penetrated with anxiety for the

 O_2

eternal

BOOK II. CHAP. III. eternal welfare of mankind. For these objects they sacrificed their ease, and chearfully exposed themselves to tortures and death. It was benevolence probably that contributed to light the fires of Smithsield, and point the daggers of Saint Bartholomew. The inventors of the Gunpowder Treason were in general men remarkable for the fanctity of their lives and the severity of their manners. It is probable indeed, that some ambitious views, and some sentiments of hatred and abhorrence mixed with the benevolence and integrity of these persons. It is probable that no wrong action was ever committed from views entirely pure. But the deception they put upon themselves might nevertheless be complete. At all events their opinions upon the subject could not alter the real nature of the action.

The quality of an action diffinct from the difposition with which it is performed. The true folution of the question lies in observing, that the disposition with which an action is adopted is one thing, and the action itself another. A right action may be done from a wrong disposition; in that case we approve the action, but condemn the actor. A wrong action may be done from a right disposition; in that case we condemn the action, but approve the actor. If the disposition by which a man is governed have a systematical tendency to the benefit of his species, he cannot fail to obtain our esteem, however mistaken he may be in his conduct.

Farther difficulty. But what shall we say to the duty of a man under these circumstances? Calvin, we will suppose, was clearly and conscientiously

tiously perfuaded that he ought to burn Servetus. Ought he to have burned him or not? "If he burned him, he did an action detestable in its own nature; if he refrained, he acted in opposition to the best judgment of his own understanding as to a point of moral obligation." It is abfurd however to fay, that it was in any fense his duty to burn him. The most that can be admitted is, that his disposition was virtuous, and that in the circumstances in which he was placed an action greatly to be deplored flowed from that disposition by invincible necessity.

Shall we fay then that it was the duty of Calvin, who did not understand the principles of toleration, to act upon a truth of which he was ignorant? Suppose that a person is to be tried at York next week for murder, and that my evidence would acquit him. Shall we fay that it was my duty to go to York, though I knew nothing of the matter? Upon the fame principles we might affirm that it is my duty to go from London to York in half an hour, as the trial will come on within that time; the impossibility not being more real in one case than in the other. Upon the same principles we might affirm, that it is my duty to be impeccable, omniscient and almighty.

Duty is a term the use of which feems to be to describe the mode Meaning of in which any being may best be employed for the general good. duty. It is limited in its extent by the extent of the capacity of that being. Now capacity varies in its idea in proportion as we

EOOK II. CHAP. III. vary our view of the fubject to which it belongs. What I am capable of, if you confider me merely as a man, is one thing; what I am capable of as a man of a deformed figure, of weak understanding, of superstitious prejudices, or as the case may happen, is another. So much cannot be expected of me under these disadvantages, as if they were absent. But, if this be the true definition of duty, it is absurd to suppose in any case that an action injurious to the general welfare can be classed in the rank of duties.

Application.

To apply these observations to the cases that have been stated. Ignorance, so far as it goes, completely annihilates capacity. As I was uninformed of the trial at York, I could not be influenced by any consideration respecting it. But it is absurd to say that it was my duty to neglect a motive with which I was unacquainted. If you alledge, "that Calvin was ignorant of the principles of toleration, and had no proper opportunity to learn them," it follows that in burning Servetus he did not violate his duty, but it does not follow that it was his duty to burn him. Upon the supposition here stated duty is silent. Calvin was unacquainted with the principles of justice, and therefore could not practise them. The duty of no man can exceed his capacity; but then neither can in any case an act of injustice be of the nature of duty.

Inferences.

4

There are certain inferences that flow from this view of the fubject, which it may be proper to mention. Nothing is more

common than for individuals and focieties of men to alledge that they have acted to the best of their judgment, that they have done their duty, and therefore that their conduct, even should it prove to be mistaken, is nevertheless virtuous. This appears to be an error. An action, though done with the best intention in the world, may have nothing in it of the nature of virtue. In reality the most effential part of virtue consists in the inceffantly seeking to inform ourselves more accurately upon the subject of utility and right. Whoever is greatly misinformed respecting them, is indebted for his error to a defect in his philanthropy and zeal.

Secondly, fince absolute virtue may be out of the power of a human being, it becomes us in the mean time to lay the greatest stress upon a virtuous disposition, which is not attended with the same ambiguity. A virtuous disposition is of the utmost confequence, since it will in the majority of instances be productive of virtuous actions; since it tends, in exact proportion to the quantity of virtue, to increase our discernment and improve our understanding; and since, if it were universally propagated, it would immediately lead to the great end of virtuous actions, the purest and most exquisite happiness of intelligent beings. But a virtuous disposition is principally generated by the uncontrolled exercise of private judgment, and the rigid conformity of every man to the dictates of his conscience.

CHAP. IV.

OF THE EQUALITY OF MANKIND.

PHYSICAL EQUALITY.—OBJECTION.—ANSWERS.—MORAL EQUALITY.—HOW LIMITED.—PROVINCE OF POLITICAL JUSTICE.

BOOK II. CHAP. IV. Phyfical equality. Their phyfical equality may be confidered either as it relates to the ftrength of the body or the faculties of the mind.

Objection.

This part of the fubject has been exposed to cavil and objection. It has been faid, "that the reverse of this equality is the result of our experience. Among the individuals of our species we actually find that there are not two alike. One man is strong and another weak. One man is wife and another foolish. All that exists in the world of the inequality of conditions is to be traced to this as their source. The strong man possesses power to subdue, and the weak stands in need of an ally to protect. The consequence is inevitable: the equality of conditions is a chimerical assumption, neither possible to be reduced into practice, nor desirable if it could be so reduced."

IOC

Upon this statement two observations are to be made. First, this inequality was in its origin infinitely less than it is at prefent. In the uncultivated state of man diseases, esseminacy and luxury were little known, and of consequence the strength of every one much more nearly approached to the strength of his neighbour. In the uncultivated state of man the understandings of all were limited, their wants, their ideas and their views nearly upon a level. It was to be expected that in their first departure from this state great irregularities would introduce themselves; and it is the object of subsequent wisdom and improvement to mitigate these irregularities.

Secondly, notwithstanding the incroachments that have been made upon the equality of mankind, a great and substantial equality remains. There is no such disparity among the human race as to enable one man to hold several other men in subjection, except so far as they are willing to be subject. All government is founded in opinion. Men at present live under any particular form, because they conceive it their interest to do so. One part indeed of a community or empire may be held in subjection by sorce; but this cannot be the personal force of their despot; it must be the force of another part of the community, who are of opinion that it is their interest to support his authority. Destroy this opinion, and the fabric which is built upon it falls to the ground. It follows therefore that all men are effentially independent.—So much for the physical equality.

BOOK II. CHAP. IV. Moral equality.

The moral equality is still less open to reasonable exception. By moral equality I understand the propriety of applying one unalterable rule of justice to every case that may arise. This cannot be questioned but upon arguments that would subvert the very nature of virtue. " Equality," it has been affirmed, " will always be an unintelligible fiction, fo long as the capacities of men shall be unequal, and their pretended claims have neither guarantee nor fanction by which they can be inforced *." But furely justice is fufficiently intelligible in its own nature, abftracted from the confideration whether it be or be not reduced into practice. Justice has relation to beings endowed with perception, and capable of pleafure and pain. Now it immediately refults from the nature of fuch beings, independently of any arbitrary constitution, that pleasure is agreeable and pain odious, pleafure to be defired and pain to be obviated. It is therefore just and reasonable that such beings should contribute, so far as it lies in their power, to the pleasure and benefit of each other. Among pleasures some are more exquisite, more unalloyed and less precarious than others. It is just that these should be preferred.

From these simple principles we may deduce the moral equality of mankind. We are partakers of a common nature,

^{* &}quot;On a dit—que nous avions tous les mêmes droits. J'ignore ce que c'est que les mêmes droits, où il y a inégalité de talens ou de force, & nulle garantie, nulle fanction." Raynal, Revolution d'Amerique, p. 34.

107

and the same causes that contribute to the benefit of one contribute to the benefit of another. Our fenses and faculties are of the fame denomination. Our pleafures and pains will therefore be the same. We are all of us endowed with reason, able to compare, to judge and to infer. The improvement therefore which is to be defired for the one is to be defired for the other. We shall be provident for ourselves and useful to each other, in proportion as we rife above the atmosphere of prejudice. The same independence, the fame freedom from any fuch restraint, as should prevent us from giving the reins to our own understanding, or from uttering upon all occasions whatever we think to be true, will conduce to the improvement of all. There are certain opportunities and a certain fituation most advantageous to every human being, and it is just that these should be communicated to all, as nearly at least as the general economy will permit.

There is indeed one species of moral inequality parallel to the Howlimited. physical inequality that has been already described. The treatnrent to which men are entitled is to be measured by their merits and their virtues. That country would not be the feat of wildom and reason, where the benefactor of his species was confidered in the fame point of view as their enemy. But in reality this distinction, so far from being adverse to equality in any tenable fense, is friendly to it, and is accordingly known by the appellation of equity, a term derived from the same origin. Though in some sense an exception, it tends to the same

BOOK II. CHAP. IV.

Province of political justice.

purpose to which the principle itself is indebted for its value. It is calculated to insuse into every bosom an emulation of excellence. The thing really to be desired is the removing as much as possible arbitrary distinctions, and leaving to talents and virtue the field of exertion unimpaired. We should endeavour to afford to all the same opportunities and the same encouragement, and to render justice the common interest and choice.

CHAP. V.

RIGHTS OF MAN.

THE QUESTION STATED.—FOUNDATION OF SOCIETY.—OPPOSITE RIGHTS IMPOSSIBLE.—CONCLUSION FROM THESE
PREMISES. — DISCRETION CONSIDERED. — RIGHTS OF
KINGS.—IMMORAL CONSEQUENCES OF THE DOCTRINE
OF RIGHTS.—RIGHTS OF COMMUNITIES.—OBJECTIONS:

1. THE RIGHT OF MUTUAL AID.—EXPLANATION.—ORIGIN OF THE TERM, RIGHT.—2. RIGHTS OF PRIVATE JUDGMENT AND OF THE PRESS.—EXPLANATION.—REASONS
OF THIS LIMITATION UPON THE FUNCTIONS OF THE
COMMUNITY: 1. THE INUTILITY OF ATTEMPTING RESTRAINT.—2. ITS PERNICIOUS TENDENCY.—CONCLUSION.

HERE is no fubject that has been discussed with more eagerness and pertinacity than the rights of man. Has he any rights, or has he none? Much may plausibly be alledged on both sides of this question; and in the conclusion those reasoners appear to express themselves with the greatest accuracy who embrace the negative. There is nothing that has been of greater differvice to the cause of truth, than the hasty and unguarded manner in which its advocates have sometimes defended it: and

BOOK II. CHAP. V. The question stated. BOOK II. CHAP. V. it will be admitted to be peculiarly unfortunate, if the advocates on one fide of this question should be found to have the greatest quantity of truth, while their adversaries have expressed themfelves in a manner more consonant to reason and the nature of things. Where the question has been so extremely darkened by an ambiguous use of terms, it may at any rate be desirable to try, whether, by a patient and severe investigation of the first principles of political society, it may be placed in a light considerably different from the views of both parties.

Foundation of fociety.

Political fociety, as has already been observed, is founded in the principles of morality and justice. It is impossible for intellectual beings to be brought into coalition and intercourse, with out a certain mode of conduct, adapted to their nature and connection, immediately becoming a duty incumbent on the parties concerned. Men would never have affociated, if they had not imagined that in consequence of that affociation they would mutually conduce to the advantage and happiness of each other. This is the real purpose, the genuine basis of their intercourse; and, as far as this purpose is answered, so far does society answer the end of its institution.

Opposite rights impossible. There is only one postulate more, that is necessary to bring us to a conclusive mode of reasoning upon this subject. Whatever is meant by the term right, for it will presently appear that the sense of the term itself has never been clearly understood,

there

there can neither be opposite rights, nor rights and duties hostile to each other. The rights of one man cannot clash with or be destructive of the rights of another; for this, instead of rendering the fubject an important branch of truth and morality, as the advocates of the rights of man certainly understand it to be, would be to reduce it to a heap of unintelligible jargon and inconfistency. If one man have a right to be free, another man cannot have a right to make him a flave; if one man have a right to inflict chastifement upon me, I cannot have a right to withdraw myfelf from chaftifement; if my neighbour have a right to a fum of money in my possession, I cannot have a right to retain it in my pocket.—It cannot be less incontrovertible, that I have no right to omit what my duty prescribes.

BOOK II.

From hence it inevitably follows that men have no rights. By right, as the word is employed in this fubject, has always been understood discretion, that is, a full and complete power of either doing a thing or omitting it, without the person's becoming liable to animadversion or censure from another, that is, in other words, without his incurring any degree of turpitude or guilt. Now in this fense I affirm that man has no rights, no discretionary power whatever.

Conclusion from thefe premifes.

It is commonly faid, "that a man has a right to the disposal Discretion of his fortune, a right to the employment of his time, a right to the uncontrolled choice of his profession or pursuits." But this

confidered.

BOOK II.

can never be confiftently affirmed till it can be shewn that he has no duties, prescribing and limiting his mode of proceeding in all these respects. My neighbour has just as much right to put an end to my existence with dagger or poison, as to deny me that pecuniary affistance without which I must starve, or as to deny me that affistance without which my intellectual attainments or my moral exertions will be materially injured. He has just as much right to amuse himself with burning my house or torturing my children upon the rack, as to shut himself up in a cell careless about his fellow men, and to hide "his talent in a napkin."

If men have any rights, any discretionary powers, they must be in things of total indifference, as whether I sit on the right or on the left side of my sire, or dine on beef to day or tomorrow. Even these rights are much sewer than we are apt to imagine, since before they can be completely established, it must be proved that my choice on one side or the other can in no possible way contribute to the benefit or injury of myself or of any other person in the world. Those must indeed be rights well worth the contending for, the very essence of which consists in their absolute nugatoriness and inutility.

In reality nothing can appear more worklerful to a careful enquirer, than that two ideas so incompatible as man and rights should ever have been affociated together. Certain it is, that one

of them must be utterly exclusive and annihilatory of the other. Before we ascribe rights to man, we must conceive of him as a being endowed with intellect, and capable of difcerning the differences and tendencies of things. But a being endowed with intellect, and capable of discerning the differences and tendencies of things, inftantly becomes a moral being, and has duties incumbent on him to discharge: and duties and rights, as has already been shewn, are absolutely exclusive of each other.

BOOK II. CHAP. V.

It has been affirmed by the zealous advocates of liberty, "that Rights of princes and magistrates have no rights;" and no position can be more incontrovertible. There is no fituation of their lives that has not its correspondent duties. There is no power intrusted to them that they are not bound to exercise exclusively for the public good. It is strange that persons adopting this principle did not go a step farther, and perceive that the same restrictions were applicable to fubjects and citizens.

kings.

Nor is the fallacy of this language more conspicuous than its Immoral immoral tendency. To this inaccurate and unjust use of the term right we owe it, that the mifer, who accumulates to no end that which diffused would have conduced to the welfare of thoufands, that the luxurious man, who wallows in indulgence and fees numerous families around him pining in beggary, never fail to tell us of their rights, and to filence animadversion and quiet the censure of their own mind by reminding us, "that they

confequences of the docBOOK II. CHĄP. V. came fairly into possession of their wealth, that they owe no debts, and that of consequence no man has authority to enquire into their private manner of disposing of that which is their own." A great majority of mankind are conscious that they stand in need of this fort of desence, and are therefore very ready to combine against the insolent intruder, who ventures to enquire into "things that do not concern him." They forget, that the wise man and the honest man, the friend of his country and his kind, is concerned for every thing by which they may be affected, and carries about with him a diploma, constituting him inquisitor general of the moral conduct of his neighbours, with a duty annexed to recal them to virtue, by every lesson that truth can enable him to read, and every punishment that plain speaking is competent to inflict.

Rights of communities. It is fearcely neceffary to add, that, if individuals have no rights, neither has fociety, which possesses nothing but what individuals have brought into a common stock. The absurdity of the common opinion, as applied to this subject, is still more glaring, if possible, than in the view in which we have already considered it. According to the usual sentiment every club assembling for any civil purpose, every congregation of religionists assembling for the worship of God, has a right to establish any provisions or ceremonies, no matter how ridiculous or detestable, provided they do not interfere with the freedom of others. Reason lies prostrate under their feet. They have a right to trample

aoqu

upon and infult her as they please. It is in the same spirit we BOOK II. have been told that every nation has a right to choose its form of government. A most acute, original and inestimable author was probably mifled by the vulgar phraseology on this fubject, when he afferted, that, " at a time when neither the people of France nor the national affembly were troubling themselves about the affairs of England or the English parliament, Mr. Burke's conduct was unpardonable in commencing an unprovoked attack upon them *."

There are various objections that fuggest themselves to the Objections. theory which subverts the rights of men; and if the theory be true, they will probably appear in the refult to be fo far from really hostile to it, as to be found more fairly deducible from and confistent with its principles, than with any of those with which they have inadvertently been connected.

In the first place it has sometimes been alledged, and seems to 1. The rights refult from the reasonings already adduced under the head of justice, that "men have a right to the affiftance and co-operation" of their fellows in every honest pursuit," But, when we affert Explanation. this proposition, we mean something by the word right exceedingly different from what is commonly understood by the term. We do not understand something discretionary, which, if not voluntarily fulfilled, cannot be confidered as a matter of claim.

* Rights of Man, page 1.

BOOK II. CHAP. V. On the contrary every thing adduced upon that occasion was calculated to shew that it was a matter of strict claim; and perhaps something would be gained with respect to perspicuity, if we rather chose to distinguish it by that appellation, than by a name so much abused, and so ambiguous in its application, as the term right.

Origin of the term, right.

The true origin of this latter term is relative to the present. state of political government, in which many of those actions which moral duty most strictly enjoins us are in no degree brought within the fphere of legislative fanction. Men uninfluenced by comprehensive principles of justice, commit every species of intemperance, are felfish, hard-hearted, licentious and cruel, and maintain their right to all these caprices, because the laws of their country are filent with regard to them. Philosophers and political enquirers have too frequently adopted the fame principles with a certain degree of accommodation; though in fact men have no more right to these erroneous propensities in their most qualified fense, than they had to them originally in all their extravagance. It is true, that, under the forms of fociety now existing in the world, intemperance and the caprices of personal intercourse too frequently escape without animadversion. in a more perfect form, though they may not fall under the cognifance of law, the offender will probably be fo unequivocally reminded by the fincerity of his neighbours of the error he has committed, as to be in no danger of running away with the opinion that he had a right to commit it.

BOOK II. CHAP, V.

A fecond and more important objection to the doctrine I am 2. Rights of maintaining is derived from the rights as they are called of private judgment, and the liberty of the press. But it may easily be shewn, that these, no more than the articles already mentioned, are rights of discretion. If they were, they would prove, that a man was firifily juffifiable in publishing what he believed to be pernicious or false, and that it was a matter of perfect moral indifference whether he conformed to the religious rites of Confucius, of Mahomet, or of Christ. The political freedom of Explanation. conscience and of the press, so far from being as it is commonly fupposed an extension, is a new case of the limitation of rights and discretion. Conscience and the press ought to be unrestrained, not because men have a right to deviate from the exact line that duty prescribes, but because society, the aggregate of individuals, has no right to assume the prerogative of an infallible judge, and to undertake authoritatively to prescribe to its members in matters of pure speculation.

private judgment and of the prefs.

One obvious reason against this assumption on the part of the fociety is the impossibility by any compulsatory method of bringing men to uniformity of opinion. The judgment we form upon topics of general truth, is or is imagined to be founded upon evidence: and, however it may be foothed by gentle applications

Reasons of this limitation upon the functions of the community. 1. The inutility of attempting reilraint.

BOOK II. CHAP.V. to the betraying its impartiality, it is apt to repel with no little pertinacity whatever comes under the form of compulsion. Perfecution cannot persuade the understanding, even when it subdues our resolution. It may make us hypocrites; but cannot make us converts. The government therefore, which is anxious above all things to imbue its subjects with integrity and virtue, will be the farthest in the world from discouraging them in the explicit avowal of their sentiments.

2. Its pernicious tendency.

But there is another reason of a higher order. Man is not, as has been already shewn, a perfect being, but perfectible. No government, that has yet existed, or is likely presently to exist upon the face of the earth, is faultless. No government ought therefore pertinaciously to relist the change of its own institutions; and still less ought it to set up a standard upon the various topics of human speculation, to restrain the excursions of an inventive mind. It is only by giving a free scope to these excursions, that science, philosophy and morals have arrived at their present degree of perfection, or are capable of going on to that still greater perfection, in comparison of which all that has been already done will perhaps appear childish. But a proceeding, abfolutely necessary for the purpose of exciting the mind to these falutary excursions, and still more necessary in order to give them their proper operation, confifts in the unrestrained communication of men's thoughts and discoveries to each other. If every man have to begin again at the point from which his neigh-

neighbour fet out, the labour will be endless, and the progress in an unvarying circle. There is nothing that more eminently contributes to intellectual energy, than for every man to be habituated to follow without alarm the train of his speculations, and to utter without fear the conclusions that have suggested them- Conclusion. felves to him.—But does all this imply that men have a right to act any thing but virtue, and to utter any thing but truth? Certainly not. It implies indeed that there are points with which fociety has no right to interfere, not that discretion and caprice are more free, or duty less strict upon these points, than upon any others with which human action is conversant.

CHAP. VI

O a rational being there can be but one rule of conduct, justice, and one mode of ascertaining that rule, the exercise of his understanding. If in any instance I be made the mechanical instrument of absolute violence, in that instance I fall under

under no description of moral conduct either good or bad. But, if, not being operated upon by absolute compulsion, I be wholly prompted by fomething that is frequently called by that name, and act from the hope of reward or the fear of punishment, my conduct is positively wrong.

BOOK II. CHAP.VI.

Here however a distinction is to be made. Justice, as it was defined in a preceding chapter, is coincident with utility. I am myfelf a part of the great whole, and my happiness is a part of that complex view of things by which justice is regulated. The hope of reward therefore and the fear of punishment, confined within certain strict limits, are motives that ought to have influence with my mind.

There are two descriptions of tendency that may belong to Human acany action, the tendency which it possesses by the necessary and gulated, universal laws of existence, and the tendency which results from ture of the politive interference of some intelligent being. The nature of happiness and misery, pleasure and pain, is independent of all politive inftitution: that is, it is immutably true that whatever tends to procure a balance of the former is to be defired, and whatever tends to procure a balance of the latter is to be rejected. In like manner the promulgation of virtue, truth and political justice must always be right. There is perhaps no action of a rational being that has not fome tendency to promote these objects, and consequently that has not a moral character founded in the abstract nature of things.

tions are re-1. by the nathings:

BOOK II. CHAP. VI. 2. By positive institution. Tendency of

the latter.

The tendency of positive institution is of two sorts, to surnish me with an additional motive to the practice of virtue or right, and to inform my understanding as to what actions are right and what actions are wrong. Much cannot be said in commendation of either of these tendencies.

1. To excite virtue. Its equivocal character in this refpect.

First, positive institution may furnish me with an additional motive to the practice of virtue. I have an opportunity of contributing very effentially to the advantage of twenty individuals; they will be benefited, and no other persons will sustain a material injury. I ought to embrace this opportunity. Here let us suppose positive institution to interfere, and to annex some great perfonal reward to myfelf to the performance of my duty. This immediately changes the nature of the action. Before I preferred it for its intrinsic excellence. Now, so far as the po-. sitive institution operates, I prefer it, because some person has arbitrarily annexed to it a great weight of felf-interest. But virtue, confidered as the quality of an intelligent being, depends upon the disposition with which the action is accompanied. Under a politive institution then this very action, which is intrinfically virtuous, may, fo far as relates to the agent, become The vicious man would before have neglected the advicious. vantage of these twenty individuals, because he would not bring a certain inconvenience or trouble upon himself. The same man with the same disposition will now promote their advantage, because his own welfare is concerned in it. Twenty, other things

equal,

CHAP, VI.

equal, is twenty times better than one. He that is not governed BOOK II. by the moral arithmetic of the case, or who acts from a dispofition directly at war with that arithmetic, is unjust. In other words, morality requires that we should be attentive only to the tendency which belongs to any action by the necessary and univerfal laws of existence. This is what is meant by the principle, "that we should do good, regardless of the consequences;" and by that other, "that we may not do evil, from the prospect of good to refult from it," The case would have been rendered still more glaring, if, instead of the welfare of twenty, we had supposed the welfare of millions to have been concerned. In reality, whether the disparity be great or small, the inference ought to be the fame.

Secondly, positive institution may inform my understanding 2. To inform as to what actions are right and what actions are wrong. Here ment. it is proper for us to reflect upon the terms understanding and for that purinformation. Understanding, particularly as it is concerned with moral fubjects, is the percipient of truth. This is its proper fphere. Information, fo far as it is genuine, is a portion detached from the great body of truth. You inform me, "that Euclid afferts the three angles of a plane triangle to be equal to two right angles." Still I am unacquainted with the truth of this propofition. "But Euclid has demonstrated it. His demonstration has existed for two thousand years, and during that term has proved fatisfactory to every man by whom it has been understood."

the judg-Its inaptitude pose.

BOOK II. CHAP. VI. I am nevertheless uninformed. The knowledge of truth lies in the perceived agreement or disagreement of the terms of a proposition. So long as I am unacquainted with the middle term by means of which they may be compared, so long as they are incommensurate to my understanding, you may have furnished me with a principle from which I may reason truly to farther consequences, but as to the principle itself I may strictly be said to know nothing about it.

Every proposition has an intrinsic evidence of its own. Every consequence has premises from which it flows; and upon them, and not upon any thing else, its validity depends. If you could work a miracle to prove, "that the three angles of a triangle were equal to two right angles," I should still know, that the proposition was either true or false previously to the exhibition of that miracle; and that there was no necessary connection between any one of its terms and the miracle exhibited. The miracle would take off my attention from the true question to a question altogether different, that of authority. By the authority adduced I might be prevailed on to yield an irregular affent to the proposition; but I could not properly be said to perceive its truth.

But this is not all. If it were, it might perhaps be regarded as a refinement foreign to the concerns of human life. Positive institutions do not content themselves with requiring my affent

to certain propositions, in consideration of the respectable testimony by which they are inforced. This would amount to no more, than advice flowing from a respectable quarter, which after all I might reject, if it did not accord with the mature judgment of my own understanding. But in the very nature of these institutions there is included a fanction, a motive either of punishment or reward to induce me to obedience.

It is commonly faid, "that positive institutions ought to leave Province of me perfectly free in matters of conscience, but may properly interfere with my conduct in civil concerns." But this distinction feems to have been very lightly taken up. What fort of moralist must he be, who makes no conscience of what passes in his intercourse with other men? Such a distinction proceeds upon the fuppolition, "that it is of great consequence whether I bow to the east or the west; whether I call the object of my worship Jehovah or Alla; whether I pay a priest in a surplice or a black coat. These are points in which an honest man ought to berigid and inflexible. But as to those other, whether he shall be a tyrant, a flave or a free citizen; whether he shall bind himself with multiplied oaths impossible to be performed, or be a rigid observer of truth; whether he shall swear allegiance to a king de jure or a king de facto, to the best or the worst of all possible governments; respecting these points he may safely commit his conscience to the keeping of the civil magistrate." In reality there are perhaps no concerns of a rational being, over which

BOOK II. CHAP. VI. morality does not extend its province, and respecting which he is not bound to a conscientious proceeding.

Tendency of an interference with that province.

I am fatisfied at prefent, that a certain conduct, suppose it be a rigid attention to the confidence of private conversation, is incumbent upon me. You tell me, "there are certain cases of fuch peculiar emergency as to fuperfede this rule." Perhaps I think there are not. If I admit your proposition, a wide field of enquiry is opened, respecting what cases do or do not deserve to be confidered as exceptions. It is little likely that we should agree respecting all these cases. How then does the law treat me, for my conscientious discharge of what I conceive to be my duty? Because I will not turn informer (which, it may be, I think an infamous character) against my most valued friend, the law accuses me of misprisson of treason, felony or murder, and perhaps I believe a certain individual to be a confirmed vilhangs me. lain, and a most dangerous member of society, and feel it to be my duty to warn others, perhaps the public, against the effect of his vices. Because I publish what I know to be true, the law convicts me of libel, fcandalum magnatum, and crimes of I know not what complicated denomination.

If the evil stopped here, it would be well. If I only suffered a certain calamity, suppose death, I could endure it. Death has hitherto been the common lot of men, and I expect at some time or other to submit to it. Human society must sooner or later

be deprived of its individual members, whether they be valuable, or whether they be inconfiderable. But the punishment acts not only retrospectively upon me, but prospectively upon my contemporaries and countrymen. My neighbour entertains the same opinion respecting the conduct he ought to hold as I did. But the executioner of public justice interposes with a powerful argument, to convince him that he has mistaken the path of abstract rectitude.

What fort of converts will be produced by this unfeeling logic? "I have deeply reflected," suppose, "upon the nature of virtue, and am convinced that a certain proceeding is incumbent on me. But the hangman, supported by an act of parliament, affures me I am mistaken." If I yield my opinion to his dictum, my action becomes modified, and my character too. An influence like this is inconsistent with all generous magnanimity of spirit, all ardent impartiality in the discovery of truth, and all inflexible perseverance in its affertion. Countries, exposed to the perpetual interference of decrees instead of arguments, exhibit within their boundaries the mere phantoms of men. We can never judge from an observation of their inhabitants what men would be, if they knew of no appeal from the tribunal of conscience, and if, whatever they thought, they dared to speak, and dared to act.

At present there will perhaps occur to the majority of readers but

BOOK II. CHAP. VI.

but few inftances of laws, which may be supposed to interfere with the conscientious discharge of duty. A considerable number will occur in the course of the present enquiry. More would readily offer themselves to a patient research. Men are so successfully reduced to a common standard by the operation of pofitive law, that in most countries they are capable of little more than like parrots repeating each other. This uniformity is capable of being produced in two ways, by energy of mind and indefatigableness of enquiry, enabling a considerable number to penetrate with equal fuccess into the recesses of truth; and by pufillanimity of temper and a frigid indifference to right and wrong, produced by the penalties which are fuspended over fuch as shall difinterestedly enquire, and communicate and act upon the refult of their enquiries. It is easy to perceive which of these is the cause of the uniformity that prevails in the present inflance.

Recapitulation If there be any truth more unquestionable than the rest, it is, that every man is bound to the exertion of his faculties in the discovery of right, and to the carrying into effect all the right with which he is acquainted. It may be granted that an infallible standard, if it could be discovered, would be considerably beneficial. But this infallible standard itself would be of little use in human affairs, unless it had the property of reasoning as well as deciding, of enlightening the mind as well as constraining the body. If a man be in some cases obliged to prefer his own judg-

judgment, he is in all cases obliged to consult that judgment, before he can determine whether the matter in question be of the fort provided for or no. So that from this reasoning it ultimately appears, that no man is obliged to conform to any rule of conduct, farther than the rule is confiftent with juffice.

BOOK II. CHAP, VI.

Such are the genuine principles of human fociety. would be the unconstrained concord of its members, in a state positive inwhere every individual within the fociety, and every neighbour without, was capable of liftening with fobriety to the dictates of reason. We shall not fail to be impressed with considerable regret, if, when we descend to the present mixed characters of mankind, we find ourfelves obliged in any degree to depart from fo fimple and grand a principle. The universal exercise of private judgment is a doctrine fo unspeakably beautiful, that the true politician will certainly refolve to interfere with it as sparingly and in as few inftances as possible. Let us consider what are the emergencies that may be thought to demand an ex-They can only be briefly stated in this place, each of ception. them requiring to be minutely examined in the fubfequent flages of the enquiry.

Such Arguments in favour of

In the first place then it seems necessary for some powerful arbitrator to interfere, where the proceedings of the individual threaten the most injurious consequences to his neighbours, and where the infant nature of the cafe will not accord with the

1. The necesfity of repelling private injustice.

BOOK II. CHAP. VI. uncertain progress of argument and conviction addressed to the mind of the offender. A man, suppose, has committed murder, or, to make the case more aggravated, several murders; and, having thus far over-stepped all those boundaries of innocence and guilt which restrain the generality of men, it is to be prefumed from analogy that he may be led to the commission of other murders. At first it may appear to be no great infringement upon the exercise of private judgment, to put it under some degree of restraint, when it leads to the commission of atrocious crimes. There are however certain difficulties in the case which are worthy to be considered.

Objections:

First, as soon as we admit the propriety of a rule such as that above stated, our next concern will be with the evidence, which shall lead to the acquittal or conviction of the person accused. Now it is well known, that no principles of evidence have yet been laid down that are infallible. Human affairs universally proceed upon presumption and probability. An eye-witness must identify the person of the offender, and in this he may be mistaken. We must necessarily be contented with presumptive proofs of his intention; and often are or imagine ourselves to be obliged to admit presumptive evidence of the fact itself. The consequence is inevitable. And surely it is no trivial evil, to subject an innocent man eventually, to the public award and the established punishment annexed to the most atrocious crimes.

the uncertainty of evidence:

Secondly, the fame external action will admit of every poffible shade of virtue or vice. One man shall commit murder, to remove a troublesome observer of his depraved dispositions, who will otherwise counteract and expose him to the world. A fecond, because he cannot bear the ingenuous fincerity with which he is told of his vices. A third, from his intolerable envy of fuperior merit. A fourth, because he knows his adversary meditates an act pregnant with extensive mischief, and he perceives no other mode by which its perpetration can be prevented. A fifth, in the actual defence of his father's life or his daughter's chaftity. Each of these men, except perhaps the last, may act either from momentary impulse, or from any of the infinite fhades and degrees of deliberation. Would you award one individual punishment to all these varieties of action? Can you pretend in each instance to ascertain the exact quantity of wrong, equivalent to each? Strictly speaking no two men were ever guilty of the same crime; but here comes in positive law with its Procrustes's bed, and levels all characters, and tramples upon all distinctions.

Thirdly, punishment is not the appropriate mode of correct- the unsuiting the errors of mankind. It will probably be admitted, that the means of the only true end of punishment is correction. That question will be discussed in another part of the present enquiry. "I have done fomething, which though wrong in itself, I believe to be right; or I have done fomething which I ufually admit to be

ableness of correction: BOOK H. CHAP. VI.

wrong; but my conviction upon the fubject is not fo clear and forcible, as to prevent my yielding to a powerful temptation." There can be no doubt, that the proper way of conveying to my understanding a truth of which I am ignorant, or of impressing upon me a firmer persuasion of a truth with which I am acquainted, is by an appeal to my reason. Even an angry expostulation with me upon my conduct will but excite similar passions in me, and cloud instead of illuminate my understanding. There is certainly a way of expressing truth, with such benevolence as to command attention, and such evidence as to inforce conviction in all cases whatever.

either to imprefs new fentiments: Punishment inevitably excites in the sufferer, and ought to excite, a sense of injustice. Let its purpose be to convince me of the truth of a proposition, which I at present believe to be salse. It is not abstractedly considered of the nature of an argument, and therefore it cannot begin with producing conviction. Punishment is a specious name, but is in reality nothing more than force put upon one being by another who happens to be stronger. Now strength apparently does not constitute justice, nor ought "might," according to a trite proverb, to "overcome right." The case of punishment, which we are now considering, is the case of you and I differing in opinion, and your telling me that you must be right, since you have a more brawny arm, or have applied your mind more to the acquiring skill in your-weapons than I have.

But let us suppose, "that I am convinced of my error, but that my conviction is superficial and fluctuating, and the object you propose is to render it durable and profound." Ought it to be thus durable and profound? There are no doubt arguments and reasons calculated to render it so. Is it in reality problema_ tical, and do you wish by the weight of your blows to make up for the deficiency of your logic? This can never be defended. An appeal to force must appear to both parties, in proportion to the foundness of their understanding, to be a confession of imbecility. He that has recourse to it, would have no occasion for this expedient, if he were sufficiently acquainted with the powers of that truth it is his office to communicate. If there be any man, who, in fuffering punishment, is not conscious of injuffice, he must have had his mind previously debased by flavery, and his fense of moral right and wrong blunted by a feries of oppression.

The case is not altered for the better, if I suffer punishment, Punishment not for my own correction, but for an example to others. Upon of example this fupposition a new difficulty is introduced, respecting the propriety of one man's being subjected to pain, for the sake of improving the character and eradicating the vices of another, The fuffering is here also involuntary. Now, though will cannot alter the nature of justice, it must be admitted that the voluntary fufferer has at least one advantage over the involuntary, in the conscious liberality of his purpose. He that suffers, not for his

for the fake confidered. BOOK II. CHAP. VI. own correction, but for the advantage of others, stands, so far as relates to that fuffering, in the situation of an innocent person. If the suffering had relation to him personally as a vicious or imperfect character, it must have relation to him in respect either to the past or the suture. It cannot have relation to him as to the past, for that is concluded and beyond the reach of alteration or remedy. By the supposition it has not relation to him but to others as to the future.

It ought to be observed in this place, that by innocence I do not understand virtue. Innocence is a fort of neutral character, and stands in the mid way between good and harm. Undoubtedly it were better, that a person useless to society should be destroyed than a man of eminent worth, and a person likely to prove injurious than either. I say likely to prove injurious; for the fault already committed, being irrevocable, ought not to enter into the account, and we have nothing to do but with the probability of its repetition. It is in this sense that the sufferer stands upon a level with many of those persons, who are usually denominated innocent.

It must also be allowed, that there are cases in which it is proper that innocent men should suffer for the public good. But this is a question of a very delicate nature, and the severe moralist will be very reluctant to condemn that man to die for the benefit of others, who is desirous to live.

BOOK II.

As to every other circumstance in the case of him who is punished for an example to others, it remains precifely the same as when we supposed him to be punished for his own reformation, It is still an argument of the most exceptionable nature employed to correct the opinions of mankind. It is still a menace of violence made use of to persuade them of the truth or falshood of a proposition. It has little chance of making them wife, and can fcarcely fail of making them timid, diffembling and corrupt,

the cafe.

Notwithstanding all these objections, it would be difficult to Urgency of find a country, respecting which we could say, that the inhabitants might with fafety be dismissed from the operation of punish-So mixed is human character, fo wild are its excursions. fo calamitous and deteftable are the errors into which it occafionally falls, that fomething more than argument feems necessary for their fuppression. Human beings are such tyros in the art of reasoning, that the wifest of us often prove impotent in our attempts, where an instant effect was most powerfully wanted. While I stand still to reason with the thief, the assassin or the oppressor, they hasten to new scenes of devastation, and with unfparing violence confound all the principles of human fociety. I should obtain little success by the abolition of punishment, unless I could at the fame time abolish those causes that generate temptation and make punishment necessary. Meanwhile the arguments already adduced may be fufficient to fliew that punish-

ment

136

BOOK II. CHAP. VI. ment is always an evil, and to perfuade us never to recur to it but from the most evident necessity.

The remaining cases in which it may seem requisite to have

z. Rebellion.

3. War.

recourse to the general will of the society, and to superfede the private judgment of individuals, are, when we are called upon to counteract the hostilities of an internal enemy, or to repel the attacks of a foreign invader. Here as in the former instance the evils that arise from an usurpation upon private judgment are many and various. It is wrong that I should contribute in any mode to a proceeding, a war for example, that I believe to be unjust. Ought I to draw my sword, when the adversary appears to me to be employed in repelling a wanton aggression? The case seems not to be at all different, if I contribute my property, the produce it may be of my personal labour; though custom has reconciled us to the one rather than the other.

Objections.

The confequences are a degradation of character and a relaxation of principle, in the perfon who is thus made the inftrument of a transaction, which his judgment disapproves. In this case, as has been already stated generally, the human mind is compressed and unnerved, till it affords us scarcely the semblance of what it might otherwise have been. And, in addition to the general considerations in similar cases, it may be observed, that the frequent and obstinate wars which at present desolate the

human race would be nearly extirpated, if they were supported only by the voluntary contributions of those by whom their principle was approved.

BOOK II. CHAP. VI

The objection, which has hitherto been permitted practically Reply. to superfede these reasonings, is the difficulty of conducting an affair, in the fuccess of which millions may be interested, upon fo precarious a support as that of private judgment. The men. with whom we are usually concerned in human fociety, are of so mixed a character, and a felf-love of the narrowest kind is so deeply rooted in many of them, that it feems nearly unavoidable upon the scheme of voluntary contribution, that the most generous would pay a very ample proportion, while the mean and avaricious, though they contributed nothing, would come in for their full share of the benefit. He that would reconcile a perfect freedom in this respect with the interest of the whole, ought to propose at the same time the means of extirpating selfishness and vice. How far fuch a proposal is feasible will come hereafter to be confidered.

ENQUIRY

CONCERNING

POLITICAL JUSTICE.

воок III.

PRINCIPLES OF GOVERNMENT.

CHAP. I.

SYSTEMS OF POLITICAL WRITERS.

THE QUESTION STATED .- FIRST HYPOTHESIS: GOVERN-MENT FOUNDED IN SUPERIOR STRENGTH .- SECOND HY-POTHESIS: GOVERNMENT JURE DIVINO .- THIRD HYPO-THESIS: THE SOCIAL CONTRACT. THE FIRST HYPOTHE-SIS EXAMINED .- THE SECOND -- CRITERION OF DIVINE RIGHT: I. PATRIARCHAL DESCENT-2. JUSTICE.

T has appeared in the course of our reasonings upon the na-BOOK III. ture of fociety, that there are occasions in which it may be necessary, to superfede private judgment for the sake of public stated.

The question

BOOK III. CHAP. I. good, and to control the acts of the individual by an act to be performed in the name of the whole. It is therefore an interesting enquiry to ascertain in what manner such acts are to be originated, or in other words to ascertain the foundation of political government.

First hypothesis: government founded in fuperior strength. There are three hypotheses that have been principally maintained upon this subject. First, the system of sorce, according to which it is affirmed, "that, inasmuch as it is necessary that the great mass of mankind should be held under the subjection of compulsory restraint, there can be no other criterion of that restraint, than the power of the individuals who lay claim to its exercise, the soundation of which power exists in the unequal degrees, in which corporal strength and intellectual sagacity are distributed among mankind."

Second hypothefis: government jure divino. There is a fecond class of reasoners, who deduce the origin of all government from divine right, and affirm, "that, as men derived their existence from an infinite creator at first, so are they still subject to his providential care, and of consequence owe allegiance to their civil governors, as to a power which he has thought fit to set over them."

Third hypothesis: the focial contract. The third fystem is that which has been most usually maintained by the friends of equality and justice; the system according to which the individuals of any society are supposed to have

entered

entered into a contract with their governors or with each other, and which founds the rights of government in the confent of the governed.

BOOK III.

The two first of these hypotheses may easily be dismissed. That of force appears to proceed upon the total negation of abstract and immutable justice, affirming every government to be right, that is possessed of power sufficient to inforce its decrees. It puts a violent termination upon all political science; and feems intended to perfuade men, to fit down quietly under their prefent disadvantages, whatever they may be, and not exert themfelves to discover a remedy for the evils they suffer. The second The second hypothesis is of an equivocal nature. It either coincides with the first, and affirms all existing power to be alike of divine derivation; or it must remain totally useless till a criterion can be found, to diffinguish those governments which are approved by God, from those which cannot lay claim to that fanction. The Criterion of criterion of patriarchal descent will be of no avail, till the true claimant and rightful heir can be discovered. If we make utility and justice the test of God's approbation, this hypothesis will be liable to little objection; but then on the other hand little will be gained by it, fince those who have not introduced divine right into the argument, will yet readily grant, that a government which can be flewn to be agreeable to utility and justice, is a rightful government.

The first hypothefis examined.

divine right. 1. Patriarchal defcent. 2. Iustice.

BOOK III. CHAP. I.

The third hypothesis demands a more careful examination. If any error have infinuated itself into the support of truth, it becomes of particular consequence to detect it. Nothing can be of more importance, than to separate prejudice and mistake on the one hand, from reason and demonstration on the other. Whereever they have been consounded, the cause of truth must necessarily be a sufferer. That cause, so far from being injured by the dissolution of the unnatural alliance, may be expected to derive from that dissolution an eminent degree of prosperity and lustre.

H A P. II.

THE SOCIAL CONTRACT.

QUERIES PROPOSED .- WHO ARE THE CONTRACTING PAR-TIES ?-WHAT IS THE FORM OF ENGAGEMENT ?-OVER HOW LONG A PERIOD DOES THE CONTRACT EXTEND ?-TO HOW GREAT A VARIETY OF PROPOSITIONS? -- CAN IT EXTEND TO LAWS HEREAFTER TO BE MADE? -- ADDRESSES OF ADHESION CONSIDERED .- POWER OF A MAJORITY.

PON the first statement of the system of a social contract BOOK III. various difficulties present themselves. Who are the parties to this contract? For whom did they confent, for themselves poled. only or for others? For how long a time is this contract to be confidered as binding? If the confent of every individual be necessary, in what manner is that consent to be given? Is it to be tacit, or declared in express terms?

Queries pro-

Little will be gained for the cause of equality and justice, if Who are the our ancestors, at the first institution of government, had a right parties? indeed of choosing the fystem of regulations under which they thought proper to live, but at the fame time could barter away the understandings and independence of all that came after them

BOOK III, CHAP.II.

to the latest posterity. But, if the contract must be renewed in each successive generation, what periods must be fixed on for that purpose? And if I be obliged to submit to the established government till my turn comes to affent to it, upon what principle is that obligation founded? Surely not upon the contract into which my father entered before I was born?

What is the form of engagement?

Secondly, what is the nature of the confent, in confequence of which I am to be reckoned the fubject of any particular government? It is usually faid, "that acquiescence is sufficient; and that this acquiescence is to be inferred from my living quietly under the protection of the laws." But if this be true, an end is as effectually put to all political science, all discrimination of better and worse, as by any system invented by the most flavish sycophant that ever existed. Upon this hypothesis every government that is quietly fubmitted to is a lawful government, whether it be the usurpation of Cromwel or the tyranny of Caligula. Acquiescence is frequently nothing more than a choice on the part of the individual of what he deems the least evil. In many cases it is not so much as this, fince the peasant and the artisan, who form the bulk of a nation, however diffatisfied with the government of their country, feldom have it in their power to transport themselves to another. It is also to be observed upon the fystem of acquiescence, that it is in little agreement with the established opinions and practices of mankind. Thus what has been called the law of nations, lays leaft stress upon the allegiance

BOOK III.

of a foreigner fettling among us, though his acquiescence is certainly most complete; while natives removing into an uninkabited region are claimed by the mother country, and removing into a neighbouring territory are punished by municipal law, if they take arms against the country in which they were born. Now furely acquiescence can scarcely be construed into consent, while the individuals concerned are wholly unapprifed of the authority intended to be refted upon it. *

Mr. Locke, the great champion of the doctrine of an original contract, has been aware of this difficulty, and therefore observes, that "a tacit confent indeed obliges a man to obey the laws of any government, as long as he has any possessions, or enjoyment of any part of the dominions of that government; but nothing can make a man a member of the commonwealth, but his actually entering into it by positive engagement, and express promife and compact. †" A fingular distinction; implying upon the face of it, that an acquiescence, such as has just been defcribed, is fufficient to render a man amenable to the penal regulations of fociety; but that his own confent is necessary to entitle him to its privileges.

A third objection to the focial contract will fuggest itself, as Over how soon as we attempt to ascertain the extent of the obligation, even does the con-

long a period tract extend?

^{*} See Hume's Effays. Part II. Effay xii.

⁺ Treatise of Government. Book II. Ch. viii. §. 119, 122.

BOOK III. CHAP. II. fupposing it to have been entered into in the most folemn manner by every member of the community. Allowing that I am called upon, at the period of my coming of age for example, to declare my assent or differt to any system of opinions or any code of practical institutes; for how long a period does this declaration bind me? Am I precluded from better information for the whole course of my life? And, if not for my whole life, why for a year, a week or even an hour? If my deliberate judgment or my real sentiment be of no avail in the case, in what sense can it be affirmed that all lawful government is founded in my consent?

To how great a variety of propositions?

But the question of time is not the only difficulty. If your demand my affent to any proposition, it is necessary that the proposition should be stated simply and clearly. So numerous are the varieties of human understanding, in all cases where its independence and integrity are sufficiently preserved, that there is little chance of any two men coming to a precise agreement about ten successive propositions that are in their own nature open to debate. What then can be more absurd than to present to me the laws of England in sifty volumes solio, and call upon me to give an honest and uninfluenced vote upon their whole contents at once?

Can it extend to laws hereafter to be made? But the focial contract, confidered as the foundation of civil's government, requires more of me than this. I am not only obliged:

obliged to confent to all the laws that are actually upon record, but to all the laws that shall hereafter be made. It was under this view of the subject, that Rousseau, in tracing the confequences of the focial contract, was led to affert, that "the great body of the people, in whom the fovereign authority refides. can neither delegate nor refign it. The effence of that authority," he adds, "is the general will; and will cannot be reprefented. It must either be the same or another; there is no alternative. The deputies of the people cannot be its representatives; they are merely its attorneys. The laws, that the community does not ratify in person, are no laws, are nullities.*"

BOOK III.

The difficulty here flated has been endeavoured to be provided Addresses of against by some late advocates for liberty, in the way of addresses fidered, of adhesion; addresses, originating in the various districts and departments of a nation, and without which no regulation of constitutional importance is to be deemed valid. But this is a very inadequate and fuperficial remedy. The addressers of course have feldom any other remedy than that above described, of in-

* " La souveraineté ne peut être representée, par la même raison qu'elle ne peut être alienée ; elle confiste effentiellement dans la volonté générale, et la volonté ne se reprefente point : elle est la même, ou elle est autre ; il n'y a point de milieu. Les deputés du peuple ne font done point ses representans, ils ne sont que ses commissaires; ils ne peuvent rien conclure definitivement. Toute loi que le peuple en personne n'a pas ratifiée, est mulle ; ce n'est point une loi." .Du Contract Social. Liv. III. Chap. xv.

> U 2 discriminate

BOOK III. CHAP. II. discriminate admission or rejection. There is an infinite difference between the first deliberation, and the subsequent exercise of a negative. The former is a real power, the latter is seldom more than the shadow of a power. Not to add, that addresses are a most precarious and equivocal mode of collecting the sense of a nation. They are usually voted in a tumultuous and summary manner; they are carried along by the tide of party; and the signatures annexed to them are obtained by indirect and accidental methods, while multitudes of bystanders, unless upon some extraordinary occasion, remain ignorant of or indifferent to the transaction.

Power of a majority.

Lastly, if government be founded in the consent of the people; it can have no power over any individual by whom that consent is refused. If a tacit consent be not sufficient, still less can I be deemed to have consented to a measure upon which I put an express negative. This immediately follows from the observations of Rousseau. If the people, or the individuals of whom the people is constituted, cannot delegate their authority to a representative; neither can any individual delegate his authority to a majority, in an assembly of which he is himself a member. The rules by which my actions shall be directed are matters of a consideration entirely personal; and no man can transfer to another the keeping of his conscience and the judging of his duties. But this brings us back to the point from which we set

out. No consent of ours can divest us of our moral capacity. This is a species of property which we can neither barter nor resign; and of consequence it is impossible for any government to derive its authority from an original contract.

BOOK III.

CHAP. III.

OF PROMISES.

THE VALIDITY OF PROMISES EXAMINED.—SHEWN TO BE INCONSISTENT WITH JUSTICE.—TO BE FOREIGN TO THE GENERAL GOOD.—OF THE EXPECTATION EXCITED.—THE FULFILLING EXPECTATION DOES NOT IMPLY THE VALL-DITY OF A PROMISE.—CONCLUSION.

BOOK III. CHAP. III. The validity of promifes examined.

HE whole principle of an original contract proceeds upon the obligation under which we are placed to observe our promises. The reasoning upon which it is sounded is, "that we have promised obedience to government, and therefore are bound to obey." It may consequently be proper to enquire into the nature of this obligation to observe our promises.

Shewn to be inconfistent with justice:

We have already established justice as the sum of moral and political duty. Is justice then in its own nature precarious or immutable? Surely immutable. As long as men are men, the conduct I am bound to observe respecting them must remain the same. A good man must always be the proper object of my support and cooperation; vice of my censure; and the vicious man of instruction and resorm.

What is it then to which the obligation of a promife applies? BOOK III. What I have promifed is either right, or wrong, or indifferent. There are few articles of human conduct that fall under the latter class; and the greater shall be our improvements in moral science the fewer still will they appear. Omitting these, let us then confider only the two preceding classes. "I have promifed to do fomething just and right." This certainly I ought to perform. Why? Not because I promised, but because justice prescribes it. "I have promifed to bestow a fum of money upon some good and respectable purpose. In the interval between the promise and my fulfilling it, a greater and nobler purpose offers itself, and calls with an imperious voice for my cooperation." Which ought I to prefer? That which best deserves my preference, A promife can make no alteration in the cafe. I ought to be guided by the intrinsic merit of the objects, and not by any external and foreign confideration. No engagements of mine can change their intrinfic claims.

All this must be exceedingly plain to the reader who has followed me in my early reasonings upon the nature of justice. If every shilling of our property, every hour of our time and every faculty of our mind, have already received their destination from the principles of immutable justice, promises have no department left upon which for them to decide. Justice it appears therefore ought to be done, whether we have promised it or not. If we discover any thing to be unjust, we ought to abstain from it, with what-

BOOKTII. CHAP. III.

ever folemnity we have engaged for its perpetration. We were erroneous and vicious when the promife was made; but this affords no fufficient reason for its performance.

to be foreign to general good.

But it will be faid, " if promifes be not made, or when made be not fulfilled, how can the affairs of the world be carried on?" By rational and intelligent beings acting as if they were rational and intelligent. A promife would perhaps be fufficiently innocent, if it were understood merely as declaratory of intention, and not as precluding farther information. Even in this restrained fense however it is far from being generally necessary. Why should it be supposed that the affairs of the world would not go on fufficiently well, though my neighbour could no farther depend upon my affistance than it appeared rational to grant it? This would be a fufficient dependence if I were honest, nor would he if he were honest desire any thing more. If I were dishonest, if I could not be bound by the reason and justice of the case, it would afford him a slender additional dependence to call in the aid of a principle founded in prejudice and mistake: not to fay, that, let it afford ever fo great advantage in any particular case, the evil of the immoral precedent would outweigh the individual advantage.

It may be farther objected, "that this principle might be fufficiently fuited to a better and more perfect state of fociety, but that at present there are dishonest members of the community,

who

who will not perform their duty, if they be not bound to it by fome groffer motive, than the mere moral confideration." it fo. This is a question altogether different from that we have been examining. We are not now enquiring whether the community ought to animadvert upon the errors of its members. This animadversion the upright man is not backward to encounter, and willingly risks the penalty, which the fociety (for the fociety is more competent to afcertain the just amount of the penalty than the preceding caprice of the parties) has awarded in cases apparently fimilar, if he conceive that his duty requires from him that rifk.

But to return to the case of promises. I shall be told, that, Of the expec "in choosing between two purposes about which to employ my ted. money, my time or my talents, my promife may make an effential difference, and therefore having once been given ought to be fulfilled. The party to whom it was made has had expectations excited in him, which I ought not to disappoint; the party to whom I am under no engagement has no fuch disappointment to encounter." What is this tenderness to which I am bound, this expectation I must not dare to disappoint? An expectation that I should do wrong, that I should prefer a less good to a greater, that I should commit absolute evil; for such must be the refult when the balance has been struck. "But his expectation has altered the nature of his fituation, has engaged him in

BOOK III. CHAP. III. undertakings from which he would otherwise have abstained." Be it so. He and all other men will be taught to depend more upon their own exertions, and less upon the affistance of others, which caprice may refuse, or justice oblige me to withhold. He and all others will be taught to acquire such merit, and to engage in such pursuits, as shall oblige every honest man to come to their succour, if they should stand in need of affistance. The resolute execution of justice, without listening to that false pity, which, to do imaginary kindness to one, would lead us to injure the whole, would in a thousand ways increase the independence, the energies and the virtue of mankind.

The fulfilling expectation does not imply the validity of a promife.

Let us however fuppose, "that my conduct ought to be influenced by this previous expectation of the individual." Let us suppose, "that, in selecting an individual for a certain office, my choice ought not to be governed merely by the abstract fitness of the candidates, but that I ought to take into the account the extreme value of the appointment from certain circumstances to one of the candidates, and its comparative inutility to the other." Let us farther suppose, "that the expectation excited in one of them has led him into studies and pursuits to qualify himself for the office, which will be useless if he do not succeed to it; and that this is one of the considerations which ought to govern my determination."—All this does not come up to what we have been taught respecting the obligation of a promise.

CHAP, III.

For, first, it may be observed, that it seems to be of little confequence in this statement, whether the expectation were excited by a direct promise or in some other manner, whether it were excited by a declaration of mine or of a third person, or lastly, whether it arose fingly out of the reason of the case and the pure deductions and reflections of the expecter's mind. Upon every one of these suppositions his conduct, and the injury he may fustain from a disappointment, will remain the same. Here then all that has been commonly understood by the obligation of a promise is excluded. The motive to be attended to, slows from no folemn engagement of mine, but from an incidental confequence of my declaration, and which might just as easily have been the confequence of many other circumstances. The confideration by which it becomes me to be influenced is, not a regard for veracity, or a particular defire to preferve my integrity, both of which are in reality wholly unconcerned in the transaction, but an attention to the injury to be fustained by the losing candidate, whatever might be the original occasion of the conduct out of which the injury has proceeded.

Let us take an example of a still simpler nature. "I live in Westminster; and I engage to meet the captain of a ship from Blackwal at the Royal Exchange. My engagement is of the nature of information to him, that I shall be at the Exchange at a certain hour. He accordingly lays aside his other business, and comes thither to meet me." This is a reason why I should

BOOK III. CHAP. III. not fail him unless for some very material cause. But it would seem as if the reason why I should not fail him would be equally cogent, if I knew from any other source that he would be there, and that a quantity of convenience equal to the quantity upon the former supposition would accrue from my meeting him. It may be faid, "that it is effential to various circumstances of human intercourse, that we should be able to depend on each other for a steady adherence to engagements of this fort." The statement however would be somewhat more accurate if we said, "that it was essential to various circumstances of human intercourse, that we should be known to bestow a steady attention upon the quantities of convenience or inconvenience, of good or evil, that might arise to others from our conduct."

Conclusion.

It is undoubtedly upon this hypothesis a part of our duty to make as few promises or declarations exciting appropriate expectations as possible. He who lightly gives to another the idea that he will govern himself in his future conduct, not by the views that shall be present to his mind when the conduct shall come to be determined on, but by the view he shall be able to take of it at some preceding period, is vicious in so doing. But the obligation he is under respecting his suture conduct is, to act justly, and not, because he has committed one error, for that reason to become guilty of a second.

CHAP. IV.

OF POLITICAL AUTHORITY.

COMMON DELIBERATION THE TRUE FOUNDATION OF GO-VERNMENT-PROVED FROM THE EQUAL CLAIMS OF MANKIND-FROM THE NATURE OF OUR FACULTIES-FROM THE OBJECT OF GOVERNMENT-FROM THE EF-FECTS OF COMMON DELIBERATION -- DELEGATION VIN-DICATED. - DIFFERENCE BETWEEN THE DOCTRINE HERE MAINTAINED AND THAT OF A SOCIAL CONTRACT AP-PARENT-FROM THE MERELY PROSPECTIVE NATURE OF THE FORMER-FROM THE NULLITY OF PROMISES-FROM THE FALLIBILITY OF DELIBERATION .- CONCLUSION.

TAVING rejected the hypotheses that have most generally BOOK III. been adduced to account for the origin of government confistently with the principles of moral justice, let us enquire whether we may not arrive at the same object, by a simple investigation of the obvious reason of the case, without having recourse to any refinement of system or siction of process.

Government then being introduced for the reasons already Common deaffigned, the first and most important principle that can be ima- true foundagined relative to its form and structure, seems to be this; that, as vernment:

liberation the

government

BOOK III. CHAP.IV. government is a transaction in the name and for the benefit of the whole, every member of the community ought to have some share in its administration. The arguments in support of this proposition are various.

proved from the equal claims of mankind: 1. It has already appeared that there is no criterion perfpicuously designating any one man or set of men to preside over the rest.

from the nature of our faculties: 2. All men are partakers of the common faculty reason, and may be supposed to have some communication with the common preceptor truth. It would be wrong in an affair of such momentous concern, that any chance for additional wisdom should be rejected; nor can we tell in many cases till after the experiment how eminent any individual may one day be sound in the business of guiding and deliberating for his fellows.

from the object of gowernment: 3. Government is a contrivance inflituted for the fecurity of individuals; and it feems both reasonable that each man should have a share in providing for his own security, and probable that partiality and cabal should by this means be most effectually excluded.

from the effects of common deliberation. 4. Lastly, to give each man a voice in the public concerns comes nearest to that admirable idea of which we should never lose fight, the uncontrolled exercise of private judgment. Each man would thus be inspired with a consciousness of his own import-

ance.

ance, and the flavish feelings that shrink up the foul in the prefence of an imagined fuperior would be unknown.

BOOK III.

Admitting then the propriety of each man having a share in directing the affairs of the whole in the first instance, it feems necessary that he should concur, in electing a house of representatives, if he be the member of a large state; or, even in a small one, that he should affist in the appointment of officers and administrators; which implies, first, a delegation of authority tothefe officers, and, fecondly, a tacit confent, or rather an admission of the necessity, that the questions to be debated should abide the decision of a majority.

But to this fystem of delegation the same objections may be Delegation urged, that were cited from Rousseau in the chapter of the Social Contract. It may be alleged that, "if it be the business of every man to exercise his own judgment, he can in no instance surrender this function into the hands of another."

To this objection it may be answered, first, that the parallel is by no means complete between an individual's exercise of his judgment in a case that is truly his own, and his exercise of his judgment in an article where the necessity and province of government are already admitted. Wherever there is a government, there must be a will superfeding that of individuals. It is absurd

BOOK III. CHAP. IV. to expect that every member of a fociety should agree with every other member in the various measures it may be found necessary to adopt. The same necessity, that requires the introduction of force to suppress injustice on the part of a few, requires that the sentiments of the majority should direct that force, and that the minority should either secede, or patiently wait for the period when the truth on the subject contested shall be generally understood.

Secondly, delegation is not, as at first fight it might appear to be, the act of one man committing to another a function, which ftrictly speaking it became him to exercise for himself. Delegation, in every inflance in which it can be reconciled with juffice, is an act which has for its object the general good. The individuals to whom the delegation is made, are either more likely from talents or leifure to perform the function in the most eligible manner, or at least there is some public interest requiring that it should be performed by one or a few persons, rather than by every individual for himself. This is the case, whether in that first and simplest of all delegations the prerogative of a majority, or in the election of a house of representatives, or in the appointment of public officers. Now all contest as to the person who shall exercise a certain function, and the propriety of resigning it, is frivolous, the moment it is decided how and by whom it can most advantageously be exercised. It is of no consequence

that I am the parent of a child, when it has once been afcertained that the child will receive greater benefit by living under the fuperintendence of a stranger.

BOOK III. CHAP. IV.

Lastly, it is a mistake to imagine that the propriety of restraining me when my conduct is injurious, rifes out of any delegation of mine. The justice of employing force when every other means was infufficient, is even prior to the existence of fociety. Force ought never to be reforted to but in cases of absolute neceffity; and, when fuch cases occur, it is the duty of every man to defend himself from violation. There is therefore no delegation necessary on the part of the offender; but the community in the cenfure it exercises over him stands in the place of the injured party.

It may perhaps by fome perfons be imagined, that the doctrine Difference here delivered of the justice of proceeding in common concerns by a common deliberation, is nearly coincident with that other doctrine which teaches that all lawful government derives its authority from a focial contract. Let us confider what is the true difference between them.

between the doctrine here maintained and that of a focial contract apparent:

In the first place, the doctrine of common deliberation is of a from the prospective, and not a retrospective nature. Is the question respecting some future measure to be adopted in behalf of the community? Here the obligation to deliberate in common pre-

merely profpective nature of the former:

BOOK III. CHAP. IV fents itself, as eminently to be preferred to every other mode of deciding upon the interests of the whole. Is the question whether I shall yield obedience to any measure already promulgated? Here I have nothing to do with the consideration of how the measure originated; unless perhaps in a country where common deliberation has in some fort been admitted as a standing principle, and where the object may be to resist an innovation upon this principle. In the case of ship money under king Charles the first, it was perhaps fair to resist the tax, even supposing it to be abstractedly a good one, upon account of the authority imposing it; though that reason might be insufficient, in a country unused to representative taxation.

Exclusively of this confideration, no measure is to be refished on account of the irregularity of its derivation. If it be just, it is entitled both to my chearful submission and my zealous support. So far as it is deficient in justice, I am bound to resist. My situation in this respect is in no degree different from what it was previously to all organised government. Justice was at that time entitled to my affent, and injustice to my disapprobation. They can never cease to have the same claims upon me, till they shall cease to be distinguished by the same unalterable properties. The measure of my resistance will however vary with circumstances, and therefore will demand from us a separate examination.

Secondly,

Secondly, the distinction between the doctrine here advanced and that of a focial contract will be better understood, if we recollect what has been faid upon the nature and validity of promifes. If promife be in all cases a fallacious mode of binding a man to a specific mode of action, then must the argument be in all cases impertinent, that I consented to such a decision, and am therefore bound to regulate myfelf accordingly. It is impossible to imagine a principle of more injurious tendency, than that which shall teach me to difarm my future wisdom by my past folly, and to confult for my direction the errors in which my ignorance has involved me, rather than the code of eternal truth. So far as confent has any validity, abstract justice becomes a matter of pure indifference: fo far as justice deserves to be made the guide of my life, it is in vain to endeavour to share its authority with compacts and promifes.

We have found the parallel to be in one respect incomplete from the between the exercise of these two functions, private judgment deliberation. and common deliberation. In another respect the analogy is exceedingly firiking, and confiderable perspicuity will be given to our ideas of the latter by an illustration borrowed from the In the one case as in the other there is an obvious principle of justice in favour of the general exercise. No individual can arrive at any degree of moral or intellectual improvement, unless in the use of an independent judgment. No state

Y 2

can

BOOK III. can be well or happily administered, unless in the perpetual use of common deliberation respecting the measures it may be requifite to adopt. But, though the general exercise of these faculties be founded in immutable justice, justice will by no means uniformly vindicate the particular application of them. Private judgment and public deliberation are not themselves the standard of moral right and wrong; they are only the means of discovering right and wrong, and of comparing particular propositions with the standard of eternal truth.

Conclusion.

Too much stress has undoubtedly been laid upon the idea, as of a grand and magnificent spectacle, of a nation deciding for itself upon fome great public principle, and of the highest magistracy yielding its claims when the general voice has pronounced. The value of the whole must at last depend upon the quality of Truth cannot be made more true by the number their decision. Nor is the spectacle much less interesting, of a of its votaries. folitary individual bearing his undaunted testimony in favour of justice, though opposed by misguided millions. Within certain limits however the beauty of the exhibition must be acknowledged. That a nation should dare to vindicate its function of common deliberation, is a ftep gained, and a ftep that inevitably leads to an improvement of the character of individuals. That men should unite in the affertion of truth, is no unpleasing evidence of their virtue. Laftly, that an individual, however great

may be his imaginary elevation, should be obliged to yield his BOOK III. personal pretensions to the sense of the community, at least bears the appearance of a practical confirmation of the great principle, that all private considerations must yield to the general good.

CHAP.

LEGISLATION.

SOCIETY CAN DECLARE AND INTERPRET, BUT CANNOT ENACT .- ITS AUTHORITY ONLY EXECUTIVE.

CHAP. V.

AVING thus far investigated the nature of political functions, it feems necessary that fome explanation should be given in this place upon the subject of legislation. Who is it that has the authority to make laws? What are the characteristics by which that man or body of men is to be known, in whom the faculty is vested of legislating for the rest?

Society can declare and interpret, but cannot enact.

To these questions the answer is exceedingly simple: Legislation, as it has been usually understood, is not an affair of human competence. Reason is the only legislator, and her decrees are irrevocable and uniform. The functions of fociety extend. not to the making, but the interpreting of law; it cannot decree, it can only declare that, which the nature of things has already decreed, and the propriety of which irrefiftibly flows from the circumstances of the case. Montesquieu says, that "in a free flate

OF LEGISLATION.

state every man will be his own legislator *." This is not true, fetting apart the functions of the community, unless in the limited fense already explained. It is the office of conscience to determine, " not like an Afiatic cadi, according to the ebbs and flows of his own passions, but like a British judge, who makes no new law, but faithfully declares that law which he finds already written†."

BOOK III.

The fame distinction is to be made upon the subject of autho- Its authority rity. All political power is strictly speaking executive. It has tive. appeared to be necessary, with respect to men as we at present find them, that force should fometimes be employed in repressing injuffice; and for the fame reasons it appears that this force should as far as possible be vested in the community. To the public support of justice therefore the authority of the community extends. But no fooner does it wander in the fmallest degree from the great line of justice, than its authority is at an end, it flands upon a level with the obscurest individual, and every man is bound to refift its decisions.

^{* &}quot; Dans un état libre, tout homme qui est cense avoir une ame libre, deit être gouverné par lui-même." Esprit des Loin, Liv. XI. Ch. vi.

[†] Sterne's Sermons.—"On a Good Conscience."

CHAP. VI.

OF OBEDIENCE.

OBEDIENCE NOT THE CORRELATIVE OF AUTHORITY.—NO MAN BOUND TO YIELD OBEDIENCE TO ANOTHER.—CASE OF SUBMISSION CONSIDERED.—FOUNDATION OF OBEDIENCE.—USEFULNESS OF SOCIAL COMMUNICATION.—CASE OF CONFIDENCE CONSIDERED.—ITS LIMITATIONS.—MISCHIEF OF UNLIMITED CONFIDENCE.—SUBJECTION EXPLAINED.

BOOK III. CHAP. VI.

AVING enquired into the just and legitimate fource of authority, we will next turn our attention to what has usually been confidered as its correlative, obedience. This has always been found a subject of peculiar difficulty, as well in relation to the measure and extent of obedience, as to the source of our obligation to obey.

Obedience not the correlative of authority. The true folution will probably be found in the observation that obedience is by no means the proper correlative. The object of government, as has been already demonstrated, is the exertion of force. Now force can never be regarded as an appeal to the understanding; and therefore obedience, which is an

act of the understanding or will, can have no legitimate connec- BOOK III. tion with it. I am bound to fubmit to justice and truth, because they approve themselves to my judgment. I am bound to co-operate with government, as far as it appears to me to coincide with these principles. But I submit to government when I think it erroneous, merely because I have no remedy.

No truth can be more fimple, at the fame time that no truth has been more darkened by the gloffes of interested individuals, yield obedithan that one man can in no case be bound to yield obedience another. to any other man or fet of men upon earth.

No man bound to ence to

There is one rule to which we are univerfally bound to conform ourselves, justice, the treating every man precisely as his usefulness and worth demand, the acting under every circumstance in the manner that shall procure the greatest quantity of general good. When we have done thus, what province is there left to the disposal of obedience?

I am fummoned to appear before the magistrate to answer Case of subfor a libel, an imaginary crime, an act which perhaps I am con-dered. vinced ought in no case to fall under the animadversion of law. I comply with this fummons. My compliance proceeds, perhaps from a conviction that the arguments I shall exhibit in the court form the best resistance I can give to his injustice, or perhaps

BOOK III. CHAP. VI. from perceiving that my non-compliance would frivolously and without real use interrupt the public tranquillity.

A quaker refuses to pay tithes. He therefore suffers a tithe proctor to distrain upon his goods. In this action morally speaking he does wrong. The distinction he makes is the argument of a mind that delights in trifles. That which will be taken from me by force, it is no breach of morality to deliver with my own hand. The money which the robber extorts from me, I do not think it necessary to oblige him to take from my person. If I walk quietly to the gallows, this does not imply my consent to be hanged.

In all these cases there is a clear distinction between my compliance with justice and my compliance with injustice. I conform to the principles of justice, because I perceive them to be intrinsically and unalterably right. I yield to injustice, though I perceive that to which I yield to be abstractedly wrong, and only choose the least among inevitable evils.

Foundation of obedience.

The case of volition, as it is commonly termed, seems parallel to that of intellect. You present a certain proposition to my mind, to which you require my affent. If you accompany the proposition with evidence calculated to shew the agreement between the terms of which it consists, you may obtain my affent.

If you accompany the proposition with authority, telling me that you have examined it and find it to be true, that thousands of wife and difinterested men have admitted it, that angels or Gods have affirmed it, I may affent to your authority; but, with respect to the proposition itself, my understanding of its reasonableness, my perception of that in the proposition which firictly speaking constitutes its truth or its falshood, remain just as they did. I believe fomething elfe, but I do not believe the proposition.

Just so in morals. I may be perfuaded of the propriety of yielding compliance to a requisition the justice of which I cannot difcern, as I may be perfuaded to yield compliance to a requisition which I know to be unjust. But neither of these requifitions is strictly speaking a proper subject of obedience. Obedience feems rather to imply the unforced choice of the mind and affent of the judgment. But the compliance I yield to government, independently of my approbation of its meafures, is of the same species as my compliance with a wild beast, that forces me to run north, when my judgment and inclination prompted me to go fouth.

But, though morality in its purest construction altogether Usefulness of excludes the idea of one man's yielding obedience to another, munication, yet the greatest benefits will result from mutual communication. There is fearcely any man, whose communications will not

BOOK III. CHAP. VI. fometimes enlighten my judgment and rectify my conduct. But the persons to whom it becomes me to pay particular attention in this respect, are not such as may exercise any particular magistracy, but such, whatever may be their station, as are wifer or better informed in any respect than myself.

Case of confidence confidered.

There are two ways in which a man wifer than myfelf may be of use to me; by the communication of those arguments by which he is convinced of the truth of the judgments he has formed; and by the communication of the judgments themfelves independent of argument. This last is of use only in refpect to the narrowness of our own understandings, and the time that might be requisite for the acquisition of a science of which we are at prefent ignorant. On this account I am not to be blamed, if I employ a builder to construct me a house, or a mechanic to fink me a well; nor should I be liable to blame, if I worked in person under their direction. In this case, not having opportunity or ability to acquire the science myself, I trust to the science of another. I choose from the deliberation of my own judgment the end to be purfued; I am convinced that the end is good and commendable; and, having done this, I commit the felection of means to a person whose qualifications are fuperior to my own. The confidence reposed in this instance is precisely of the nature of delegation in general. No term furely can be more unapt than that of obedience, to express our duty towards the overfeer we have appointed in our affairs.

Similar to the confidence I repose in a skilful mechanic is the BOOK III. attention which ought to be paid to the commander of an army. It is my duty in the first place to be satisfied of the goodness of the cause, of the propriety of the war, and of the truth of as many general propositions concerning the conduct of it, as can possibly be brought within the fphere of my understanding. It may well be doubted whether fecrecy be in any degree necessary to the conduct of war. It may be doubted whether treachery and furprife are to be claffed among the legitimate means of defeating our adversary. But after every deduction has been made for confiderations of this fort, there will still remain cases, where fomething must be consided, as to the plan of a campaign or the arrangement of a battle, to the skill, so far as that skill really exists, of the commander. When he has explained both to the utmost of his ability, there may remain parts, the propriety of which I cannot fully comprehend, but which I have fufficient reason to confide to his judgment.

This doctrine however of limited obedience, or, as it may Its limitamore properly be termed, of confidence and delegation, ought to be called into action as feldom as possible. Every man should discharge to the utmost practicable extent the duties which arise from his fituation. If he gain as to the ability with which they may be discharged, when he delegates them to another, he loses with respect to the fidelity; every one being conscious of the fincerity of his own intention, and no one having equal proof

BOOK III. CHAP. VI. of that of another. A virtuous man will not fail to perceive the obligation under which he is placed to exert his own understanding, and to judge for himself as widely as his circumstances will permit.

Mifchief of unlimited confidence.

The abuse of the doctrine of confidence has been the source of more calamities to mankind than all the other errors of the human understanding. Depravity would have gained little ground in the world, if every man had been in the exercise of his independent judgment. The inftrument by which extensive mifchiefs have in all ages been perpetrated has been, the principle of many men being reduced to mere machines in the hands of a few. Man, while he confults his own understanding, is the ornament of the universe. Man, when he furrenders his reason, and becomes the partifan of implicit faith and paffive obedience, is the most mischievous of all animals. Ceasing to examine every proposition that comes before him for the direction of his conduct, he is no longer the capable subject of moral instruction. He is, in the inflant of fubmiffion, the blind inflrument of every nefarious purpose of his principal; and, when left to himself, is open to the feduction of injuffice, cruelty and profligacy.

Subjection explained. These reasonings lead to a proper explanation of the word subject. If by the subject of any government we mean a person whose duty it is to obey, the true inference from the preceding principles is, that no government has any subjects. If on the

contrary

contrary we mean a person, whom the government is bound to protect, or may justly restrain, the word is sufficiently admissible. This remark enables us to solve the long-disputed question, what it is that constitutes a man the subject of any government. Every man is in this sense a subject, whom the government is competent to protect on the one hand, or who on the other, by the violence of his proceedings, renders force requisite to prevent him from disturbing that community, for the preservation of whose peace the government is instituted.

APPENDIX.

MORAL PRINCIPLES FREQUENTLY ELUCIDATED BY INCI-DENTAL REFLECTION—BY INCIDENTAL PASSAGES IN VARIOUS AUTHORS.—EXAMPLE.

BOOK III. CHAP. VI.

APPENDIX.
Moral principles frequently elucidated by incidental reflection:

T will generally be found that, even where the truth upon any fubject has been most industriously obscured, its occafional irradiations have not been wholly excluded. The mind
has no sooner obtained evidence of any new truth, especially in
the science of morals, but it recollects numerous intimations of
that truth which have occasionally suggested themselves, and is
astonished that a discovery which was perpetually upon the eve
of being made, should have been kept at a distance so long.

by incidental paffages in various authors. This is eminently the case in the subject of which we are treating. Those numerous passages in poets, divines * and philosophers, which have placed our unalterable duty in the strongest contrast with the precarious authority of a superior, and have taught us to disclaim all subordination to the latter, have always been received by the ingenuous mind with a tumult of applause. There is indeed no species of composition, in which the seeds of

* "Be not afraid of them that kill the body, and after that have no more that they can do."

Luke, Ch. XII. Ver. 4.

a morality

and interesting principles which shall tend to impart to every reader the glow of enthusiasm, it is at such moments that the enquiring and philosophical reader may expect to be presented with the materials and rude sketches of intellectual improvement*.

BOOK III.

Among the many passages from writers of every denomina- Example. tion-that will readily fuggest themselves under this head to a well informed mind, we may naturally recollect the spirited reasoning of young Norval in the tragedy of Douglas, when he

* This was the opinion of the celebrated Mr. Turgot. "He thought that the moral fentiments of mankind might be confiderably strengthened, and the perception of them rendered more delicate and precife, either by frequent exercise, or the perpetually subjecting them to the anatomy of a pure and enlightened understanding. For this reason he considered romances as holding a place among treatifes of morality, and even as the only books in which he was aware of having feen moral principles treated in an impartial manner." " M. Turgot pensoit qu'on peut parvenir à fortifier dans les hommes leurs fentimens moraux, à les rendre plus délicats et plus justes, soit par l'exercice de ces sentimens, soit en apprenant à les soumettre à l'analyse d'une raison saine et éclairée. C'est par ce motif qu'il regardoit les romans comme des livres de morale, et même, disoit-il, comme les seuls où il eut vu de la morale."

Vie de M. Turgot, tar M. de Condorcet.

BOOK III. CHAP. VI. Appendix. is called upon by lord Randolph to state the particulars of a contest in which he is engaged, that lord Randolph may be able to decide between the disputants.

"Nay, my good lord, though I revere you much,
My cause I plead not, nor demand your judgment.
To the liege lord of my dear native land
I owe a subject's homage; but even him
And his high arbitration I reject.
Within my bosom reigns another lord—
Honour; sole judge and umpire of itself."

Act IV.

Nothing can be more accurate than a confiderable part of the philosophy of this passage. The term "honour" indeed has been too much abused, and presents to the mind too fantastical an image, to be fairly descriptive of that principle by which the actions of every intellectual being ought to be regulated. The principle to which it behoves us to attend, is the internal decision of our own understanding; and nothing can be more evident than that the same reasoning, which led Norval to reject the authority of his sovereign in the quarrels and disputes in which he was engaged, ought to have led him to reject it as the regulator of any of his actions, and of consequence to abjure that homage which he sets out with reserving. Virtue cannot possibly be measured by the judgment and good pleasure of any man with whom we are concerned.

CHAP. VII.

FORMS OF GOVERNMENT.

ARGUMENT IN FAVOUR OF A VARIETY OF FORMS-COMPAR-ED WITH THE ARGUMENT IN FAVOUR OF A VARIETY OF RELIGIOUS CREEDS .- THAT THERE IS ONE BEST FORM OF GOVERNMENT PROVED-FROM THE UNITY OF TRUTH-FROM THE NATURE OF MAN. - OBJECTION FROM HUMAN WEAKNESS AND PREJUDICE. - DANGER IN ESTABLISHING AN IMPERFECT CODE. -- MANNERS OF NATIONS PRODU-CED BY THEIR FORMS OF GOVERNMENT. -- GRADUAL IM-PROVEMENT NECESSARY .- SIMPLICITY CHIEFLY TO BE DESIRED .- PUBLICATION OF TRUTH THE GRAND IN-STRUMENT-BY INDIVIDUALS, NOT BY GOVERNMENT-THE TRUTH ENTIRE, AND NOT BY PARCELS .- SORT OF PROGRESS TO BE DESIRED.

PROPOSITION that by many political reasoners has BOOK III. been vehemently maintained, is that of the propriety of instituting different political governments suited to the characters, the habits and prejudices of different nations. "The English forms: constitution," fay these reasoners, " is adapted to the thoughtful, rough and unfubmitting character of this island race; the

variety of

BOOK III. CHAP. VII.

flowness and complication of Dutch formality to the phlegmatic Hollander; and the splendour of the grand monarque to the vivacity of Frenchmen. Among the ancients what could be better afforted than a pure democracy to the intellectual acuteness and impetuous energy of the Athenians; while the hardy and unpolifhed Spartan flourished much more under the rugged and inflexible discipline of Lycurgus? The great art of the legislator is to penetrate into the true character of the nationwith whom he is concerned, and to discover the exact structure of government which is calculated to render that nation flourishing and happy." Accordingly an Englishman who should reason upon these postulata might say, "It is not necessary I should affert the English constitution to be the happiest and fublimest conception of the human mind; I do not enquire intothe abstract excellence of that government under which France made herself illustrious for centuries. I contemplate with enthusiasm the venerable republics of Greece and Rome. But Iam an enemy to the removing ancient land-marks, and diffurbing with our crude devices the wisdom of ages. I regard with horror the Quixote plan, that would reduce the irregular greatness of nations to the frigid and impracticable standard of metaphysical accuracy*."

This

^{*}These arguments bear some resemblance to those of Mr. Burke. It was not necessary that they should do so precisely, or that we should take advantage of the argumentum ad hominem built upon his servent admiration of the English

This question has been anticipated in various parts of the BOOK III. prefent work; but the argument is so popular and plausible to a fuperficial view, as justly to entitle it to a separate examination.

The idea bears fome refemblance to one which was formerly compared infifted upon by certain latitudinarians in religion. impious," faid they, "to endeavour to reduce all men to uni- riety of reliformity of opinion upon this fubject. Men's minds are as various as their faces. God has made them fo; and it is to be prefumed that he is well pleafed to be addressed in different languages, by different names, and with the confenting ardour of difagreeing fects." Thus did these reasoners confound the majesty of truth with the deformity of falshood; and suppose that that being who was all truth, took delight in the errors. the abfurdities, and the vices, for all falshood in some way or other engenders vice, of his creatures. At the same time they were employed in unnerving that activity of mind, which is the fingle fource of human improvement. If truth and falshood be in reality upon a level, I shall be very weakly employed in a strenuous endeavour either to discover truth for myself, or to impress it upon others.

with the ar-"It is gument in favour of a vagious creeds.

Truth is in reality fingle and uniform. There must in the That there is one belt

English constitution. Not to fay that we shall feel ourselves more at our ease in examining the question generally, than in a personal attack upon this illustrious and virtuous hero of former times.

BOOK III. CHAP. VII. form of government proved: nature of things be one best form of government, which all intellects, sufficiently roused from the slumber of savage ignorance, will be irresistibly incited to approve. If an equal participation of the benefits of nature be good in itself, it must be good for you and me and all mankind. Despotism may be of use to keep human beings in ignorance, but can never conduce to render them wise or virtuous or happy. If the general tendency of despotism be injurious, every portion and fragment of it must be a noxious ingredient. Truth cannot be so variable, as to change its nature by crossing an arm of the sea, a petty brook or an ideal line, and become falshood. On the contrary it is at all times and in all places the same.

from the unity of truth:

from the na-

The fubject of legislation is every where the same, man. The points in which human beings resemble are infinitely more considerable than those in which they differ. We have the same senses, the same inlets of pleasure and pain, the same faculty to reason, to judge and to infer. The same causes that make me happy will make you happy. We may differ in our opinions upon this subject at first, but this difference is only in prejudice, and is by no means invincible. An event may often conduce most to the benefit of a human being, which his erroneous judgment perhaps regarded with least complacency. A wise superintendent of affairs would pursue with steady attention the real advantage of those over whom he presided, careless of the temporary disapprobation he incurred, and which would last no

longer than the partial and mifguided apprehension from which it flowed.

BOOK III. CHAP, VII.

Is there a country in which a prudent director of education would propose some other object for his labours than to make his pupil temperate and just and wise? Is there a climate that requires its inhabitants to be hard drinkers or horse-jockies or gamesters or bullies, rather than men? Can there be a corner of the world, where the lover of justice and truth would find himfelf out of his element and useless? If no; then liberty must be every where better than flavery, and the government of rectitude and impartiality better than the government of caprice.

But to this it may be objected that "men may not be every Objection where capable of liberty. A gift however valuable in itself, if weakness and it be intended to be beneficial, must be adapted to the capacity of the receiver. In human affairs every thing must be gradual: and it is contrary to every idea that experience furnishes of the nature of mind to expect to advance men to a state of perfection It was in a fpirit fomewhat fimilar to this, that Solon, the Athenian lawgiver, apologifed for the imperfection of his code, faying, "that he had not fought to promulgate fuch laws as were good in themselves, but such as his countrymen wereable to bear."

prejudice.

The experiment of Solon feems to be of a dangerous nature. Danger in A code, fuch as his, bid fair for permanence, and does not an imperfect

code.

BOOK III. CHAP. VII.

appear to have contained in it a principle of improvement. He did not meditate that gradual progress which was above described, nor contemplate in the Athenians of his own time, the root from which were to spring the possible Athenians of some future period, who might realise all that he was able to conceive of good sense, fortitude and virtue. His institutions were rather calculated to hold them down in perpetuity to one certain degree of excellence and no more.

Manners of nations produced by their forms of government.

This fuggestion furnishes us with the real clue to that striking coincidence between the manners of a nation and the form of its government, which was mentioned in the beginning of the chapter, and which has furnished so capital an argument to the advocates for the local propriety of different forms of government. It was in reality fomewhat illogical in these reasoners to employ this as an argument upon the fubject, without previously afcertaining which of the two things was to be regarded as a cause and which as an effect, whether the government arose out of the manners of the nation, or the manners of the nation out of the government. The last of these statements appears upon the whole to be nearest to the fact. The government may be indebted for its existence to accident or force. Revolutions, as they have most frequently taken place in the world, are epochas, in which the temper and wishes of a nation are least confulted*. When it is otherwise, still the real effect of the government

* See Hume's Essays. Part II. Essay xii.

which

which is inflituted, is to perpetuate propenfities and fentiments. BOOK III. which without its operation would fpeedily have given place to other propenfities. Upon every supposition, the existing correfpondence between national character and national government will be found in a just consideration to arise out of the latter.

The principle of gradual improvement advanced in the last Gradual imcited objection must be admitted for true; but then it is necesfary, while we adopt it, that we should not suffer ourselves to act in direct opposition to it; and that we should choose the best and most powerful means for forwarding that improvement.

provement necessary.

Man is in a state of perpetual progress. He must grow either Simplicity better or worse, either correct his habits or confirm them. government proposed must either increase our passions and prejudices by fanning the flame, or by gradually discouraging tend to extirpate them. In reality, it is fufficiently difficult to imagine a government that shall have the latter tendency. By its very nature political institution has a tendency to suspend the elasticity, and put an end to the advancement of mind. Every scheme for embodying imperfection must be injurious. That which is to-day a confiderable melioration, will at fome future period, if preferved unaltered, appear a defect and difease in the body politic. It were earneftly to be defired that each man was wife enough to govern himfelf without the intervention of any compulsory restraint; and, fince government even in its best state is

The defired.

BOOK III. CHAP. VII.

an evil, the object principally to be aimed at is, that we should have as little of it as the general peace of human society will permit.

Publication
of truth the
grand inftrument:
by individuals, not by

government:

But the grand instrument for forwarding the improvement of mind is the publication of truth. Not the publication on the part of government; for it is infinitely difficult to discover infallibly what the truth is, especially upon controverted points, and government is as liable as individuals to be mistaken in this respect. In reality it is more liable; for the depositaries of government have a very obvious temptation to defire, by means of ignorance and implicit faith, to perpetuate the existing state of things. The only fubftantial method for the propagation of truth is discussion, so that the errors of one man may be detected by the acuteness and severe disquisition of his neighbours. All we have to demand from the officers of government, at least in their public character, is neutrality. The intervention of authority in a field proper to reasoning and demonstration is always injurious. If on the right fide, it can only difcredit truth, and call off the attention of men to a foreign confideration. If on the wrong, though it may not be able to suppress the fpirit of enquiry, it will have a tendency to convert the calm pursuit of knowledge into passion and tumult.

the truth entire, and not by parcels. "But in what manner shall the principles of truth be communicated so as best to lead to the practice? By shewing to man-

kind truth in all its evidence, or concealing one half of it? Shall they be initiated by a partial discovery, and thus led on by regular degrees to conclusions that would at first have wholly alienated their minds?"

BOOK III.

This question will come to be more fully discussed in a following chapter. In the mean time let us only consider for the present the quantity of effect that may be expected from these two opposite plans.

An inhabitant of Turkey or Morocco may perhaps be of opinion, that the vesting power in the arbitrary will or caprice of an individual has in it more advantages than disadvantages. If I be desirous to change his opinion, should I undertake to recommend to him in animated language some modification of this caprice? I should attack it in its principle. If I do otherwise, I shall betray the strength of my cause. The principle opposite to his own, will not posses half the irresistible force which I could have given to it. His objections will assume vigour. The principle I am maintaining being half truth and half falshood, he will in every step of the contest possess an advantage in the offensive, of which, if he be sufficiently acute, I can never deprive him.

Now the principle I should have to explain of equal law and equal justice to the inhabitant of Morocco, would be as new to Bb2 him,

BOOK III. CHAP. VII him, as any principle of the boldest political description that I could propagate in this country. Whatever apparent difference may exist between the two cases, may fairly be suspected to owe its existence to the imagination of the observer. The rule therefore which suggests itself in this case is sitted for universal application.

Sort of progrefs to be defired.

As to the improvements which are to be introduced into the political fystem, their quantity and their period must be determined by the degree of knowledge existing in any country, and the flate of preparation of the public mind for the changes that are to be defired. Political renovation may ftrictly be confidered as one of the stages in intellectual improvement. Literature and disquisition cannot of themselves be rendered sufficiently general; it will be only the cruder and groffer parts that can be expected to descend in their genuine form to the multitude; while those abstract and bold speculations, in which the value of literature principally confifts, must necessarily continue the portion of the favoured few. It is here that focial institution offers itself in aid of the abstruser powers of argumentative communication. As foon as any important truth has become established to a fufficient extent in the minds of the enterprising and the wife, it may tranquilly and with eafe be rendered a part of the general fystem; fince the uninstructed and the poor are never the strenuous supporters of those complicated systems by which oppression is maintained; and fince they have an obvious interest

terest in the practical introduction of simplicity and truth. One BOOK III. valuable principle being thus realifed, prepares the way for the realifing of more. It ferves as a resting-place to the human mind in its great bufiness of exploring the regions of truth, and gives it new alacrity and encouragement for farther exertions.

MISCELLANEOUS PRINCIPLES.

CHAP. I.

OF RESISTANCE.

EVERY INDIVIDUAL THE JUDGE OF HIS OWN RESISTANCE.-ÓBJECTION .-- ANSWERED FROM THE NATURE OF GO-VERNMENT-FROM THE MODES OF RESISTANCE. - I. FORCE RARELY TO BE EMPLOYED -EITHER WHERE THERE IS SMALL PROSPECT OF SUCCESS -OR WHERE THE PROSPECT IS GREAT .- HISTORY OF CHARLES THE FIRST ESTI-MATED .- 2. REASONING THE LEGITIMATE MODE.

T has appeared in the course of our reasonings upon politi- BOOK IV. cal authority, that every man is bound to refift every unjust proceeding on the part of the community. But who is the vidual the

judge

BOOK IV. CHAP. I. judge of his own re-

fistance.

judge of this injuftice? The question answers itself: the private judgment of the individual. Were it not so, the appeal would be nugatory, for we have no infallible judge to whom to refer our controversies. He is obliged to consult his own private judgment in this case, for the same reason that obliges him to consult it in every other article of his conduct.

Objection.

"But is not this polition necessarily subversive of all government? Can there be a power to rule, where no man is bound to obey; or at least where every man is to consult his own understanding first, and then to yield his concurrence no farther than he shall conceive the regulation to be just? The very idea of government is that of an authority superseding private judgment; how then can the exercise of private judgment be left entire? What degree of order is to be expected in a community, where every man is taught to indulge his own speculations, and even to resist the decision of the whole, whenever that decision is opposed to the dictates of his own fancy?"

Answered from the nature of government: The true answer to these questions lies in the observation with which we began our disquisition on government, that this boasted institution is nothing more than a scheme for enforcing by brute violence the sense of one man or set of men upon another, necessary to be employed in certain cases of peculiar emergency. Supposing the question then to lie merely between the force of the community on one part, and the force with

which

which any individual member should think it incumbent upon him to refift their decisions on the other, it is sufficiently evident that a certain kind of authority and fupremacy would be the refult. But this is not the true state of the question.

BOOK IV. CHAP. I.

It is farther evident, that, though the duty of every man to exercife his private judgment be unalterable, yet fo far as relates to practice, wherever government fubfifts, the exercise of private judgment is fubftantially intrenched upon. The force put by the community upon those who exercise rapine and injustice, and the influence of that force as a moral motive upon its members in general, are each of them exhibitions of an argument, not founded in general reason, but in the precarious interference of a fallible individual. Nor is this all. Without anticipating the question of the different kinds of refistance and the election that it may be our duty to make of one kind rather than another, it is certain in fact, that my conduct will be materially altered by the forefight that, if I act in a certain manner, I shall have the combined force of a number of individuals to oppose me. That government therefore is the best, which in no one instance interferes with the exercise of private judgment without absolute necessity.

The modes according to which an individual may oppofe any measure which his judgment disapproves are of two forts, action fiftance. and fpeech. Shall he upon every occasion have recourse to the

from the modes of re-1. Force rareBOOK IV. CHAP. I. former? This it is abfurd fo much as to suppose. The object of every virtuous man is the general good. But how can he be faid to promote the general good, who is ready to waste his active force upon every trivial occasion, and facrifice his life without the chance of any public benefit?

either where there is fmall profpect of fuccess, "But he referves himself," I will suppose, "for some great occasion; and then, careless as to success, which is a large object only to little minds, generously embarks in a cause where he has no hope but to perish. He becomes the martyr of truth. He believes that such an example will tend to impress the minds of his fellow men, and to rouse them from their lethargy."

The question of martyrdom is of a difficult nature. I had rather convince men by my arguments, than seduce them by my example. It is scarcely possible for me to tell what opportunities for usefulness may offer themselves in the future years of my existence. Nor is it improbable in a general consideration that long and persevering services may be more advantageous than brilliant and transitory ones. The case being thus circumstanced, a truly wise man cannot fail to hesitate as to the idea of offering up his life a voluntary oblation.

Whenever martyrdom becomes an indispensible duty, when nothing can preserve him short of the clearest dereliction of principle and the most palpable desertion of truth, he will then meet it with perfect ferenity. He did not avoid it before from any BOOK IV. weakness of personal feeling. When it must be encountered. he knows that it is indebted for that luftre which has been fo generally acknowledged among mankind, to the intrepidity of the fufferer. He knows that nothing is fo effential to true virtue, as an utter difregard to individual advantage.

The objections that offer themselves to an exertion of actual. force, where there are no hopes of fuccess, are numerous. Such an exertion cannot be made without injury to the lives of more than a fingle individual. A certain number both of enemies and friends must be expected to be the victims of so wild an undertaking. It is regarded by contemporaries, and recorded by history as an intemperate ebullition of the passions; and serves rather as a beacon to deter others, than as a motive to animate them.- It is not the frenzy of enthusiasm, but the calm, sagacious and deliberate effort of reason, to which truth must be indebted for its progrefs.

But let us suppose, " that the prospect of success is considera- or where the ble, and that there is reason to believe that resolute violence may great. in no long time accomplish its purpose." Even here we may be allowed to hefitate. Force has already appeared to be an odious weapon; and, if the use of it be to be regretted in the hands of government, it does not change its nature though wielded by a band of patriots. If the cause we plead be the cause of truth,

BOOK IV.

there is no doubt that by our reasonings, if sufficiently zealous and constant, the same purpose may be effected in a milder and more liberal way *.

In a word, it is proper to recollect here what has been effablished as to the doctrine of force in general, that it is in no case to be employed but where every other means is ineffectual. In the question therefore of resistance to government, force ought never to be introduced without the most imminent necessity; never but in circumstances similar to those of defending my life from a ruffian, where time can by no means be gained, and the consequences instantly to ensue are unquestionably fatal.

History of Charles the first estimated. The history of king Charles the first furnishes an instructive example in both kinds. The original design of his opponents was that of confining his power within narrow and palpable limits. This object, after a struggle of many years, was fully accomplished by the parliament of 1640, without bloodshed (except indeed in the single instance of lord Strafford) and without commotion. They next conceived the project of overturning the hierarchy and the monarchy of England, in opposition to great numbers, and in the last point no doubt to a majority of their countrymen. Admitting these objects to have been in the utmost degree excellent, they ought not, for the pur-

^{*} See this case more fully discussed in the following chapter.

pose of obtaining them, to have precipitated the question to the BOOK IV. extremity of a civil war.

the legitimate

"But, fince force is scarcely under any circumstances to be 2. Reasoning employed, of what nature is that refistance which ought constantly to be given to every instance of injustice?" The refistance I am bound to employ is that of uttering the truth, of cenfuring in the most explicit manner every proceeding that I perceive to be adverse to the true interests of mankind. I am bound to diffeminate without referve all the principles with which I am acquainted, and which it may be of importance to mankind to know; and this duty it behoves me to practife upon every occasion and with the most perfevering constancy. I must disclose the whole system of moral and political truth, without suppressing any part under the idea of its being too bold and paradoxical, and thus depriving the whole of that complete and irrefiftible evidence, without which its effects must always be feeble, partial and uncertain.

SECTION

DUTIES OF A CITIZEN.

OBLIGATION TO SUPPORT THE CONSTITUTION OF OUR COUNTRY CONSIDERED - MUST ARISE EITHER FROM THE REASON OF THE CASE, OR FROM A PERSONAL AND LOCAL CONSIDERATION .- THE FIRST EXAMINED .- THE SECOND.

BOOK IV. SECTION I. fupport the constitution ofourcountry confidered:

TO question can be more important than that which respects the best mode of effecting revolutions. Before we enter Obligation to upon it however, it may be proper to remove a difficulty which has fuggested itself to the minds of some men, how far we ought generally speaking to be the friends of revolution; or, in other words, whether it be justifiable in a man to be the enemy of the constitution of his country.

> "We live," it will be faid, "under the protection of this conflitution; and protection, being a benefit conferred, obliges us to a reciprocation of support in return."

To this it may be answered, first, that this protection is a very equivocal thing; and, till it can be shown that the vices, from the effects of which it protects us, are not for the most part the produce of that constitution, we shall never sufficiently understand the quantity of benefit it includes.

BOOK IV. CHAP. II. SECTION I.

Secondly, gratitude, as has already been proved *, is a vice and not a virtue. Every man and every collection of men ought to be treated by us in a manner founded upon their intrinsic qualities and capacities, and not according to a rule which has existence only in relation to ourselves.

Add to this, thirdly, that no motive can be more equivocal than the gratitude here recommended. Gratitude to the conftitution, an abstract idea, an imaginary existence, is altogether unintelligible. Affection to my countrymen will be much better proved, by my exertions to procure them a substantial benefit, than by my supporting a system which I believe to be fraught with injurious consequences.

He who calls upon me to support the constitution must found his requisition upon one of two principles. It has a claim upon the reaton the ratio of the case, of from a property of the case, of the cas

must arise either from the reaton of the case, or from a perfonal and local consideration.

* Book II. chap. ii. p. 83.

Against.

BOOK IV. CHAP. II. Section I. The first examined.

Against the requisition in the first sense there is nothing to object. All that is necessary is to prove the goodness which is ascribed to it. But perhaps it will be said, "that, though not absolutely good, more mischief will result from an attempt to overturn it, than from maintaining it with its mixed character of partly right and partly wrong." If this can be made evident, undoubtedly I ought to fubmit. Of this mischief however I can be no judge but in consequence of enquiry. To some the evils attendant on a revolution will appear greater, and to others Some will imagine that the vices with which the English constitution is pregnant are considerable, and some that it is nearly innocent. Before I can decide between these opposite opinions and balance the existing and the possible evils, I must examine for myfelf. But examination in its nature implies uncertainty of refult. Were I to determine before I fat down on which fide the decision should be, I could not strictly speaking be faid to examine at all. He that defires a revolution for its own fake is to be regarded as a madman. He that defires it from a thorough conviction of its ufefulness and necessity has a claim upon us for candour and respect.

The fecond.

As to the demand upon me for support to the English constitution, because it is English, there is little plausibility in this argument. It is of the same nature as the demand upon me to be a Christian, because I am a Briton, or a Mahometan, because

I am

I am a native of Turkey. Instead of being an expression of refpect, it argues contempt of all government, religion and virtue, and every thing that is facred among men. If there be fuch a thing as truth, it must be better than error. If there be such a faculty as reason, it ought to be exerted. But this demand makes truth a matter of absolute indifference, and forbids us the exercise of our reason. If men reason and reflect, it must necessarily happen that either the Englishman or the Turk will find his government to be odious and his religion falfe. For what purpose employ his reason, if he must for ever conceal the conclufions to which it leads him? How would man have arrived at his prefent attainments, if he had always been contented with the state of fociety in which he happened to be born? In a word, either reason is the curse of our species, and human nature is to be regarded with horror; or it becomes us to employ our understanding and to act upon it, and to follow truth wherever it may lead us. It cannot lead us to mischief, since utility, as it regards percipient beings, is the only basis of moral and political truth.

SECTION II.

MODE OF EFFECTING REVOLUTIONS.

PERSUASION THE PROPER INSTRUMENT—NOT VIOLENCE— NOR RESENTMENT.—LATENESS OF EVENT DESIRABLE.

BOOK IV. CHAP. II. SECTION II. Perfuation the proper inftrument;

10 return to the enquiry respecting the mode of effecting revolutions. If no question can be more important, there is fortunately no question perhaps that admits of a more complete and fatisfactory general answer. The revolutions of states, which a philanthropist would defire to witness, or in which he would willingly co-operate, confift principally in a change of fentiments and dispositions in the members of those states. The true instruments for changing the opinions of men are argument and persuasion. The best security for an advantageous issue is free and unrestricted discussion. In that field truth must always prove the fuccessful champion. If then we would improve the focial inftitutions of mankind, we must write, we must argue, we must converse. To this business there is no close; in this purfuit there should be no pause. Every method should be employed, -not fo much positively to allure the attention of mankind, or persuasively to invite them to the adoption of our opinions, as to remove every restraint upon thought, and to throw.

throw open the temple of science and the field of enquiry to all the world.

BOOK IV. CHAP. II.

Those instruments will always be regarded by the discerning not violence: mind as suspicious, which may be employed with equal prospect of success on both sides of every question. This consideration should make us look with aversion upon all resources of violence. When we descend into the listed field, we of course desert the vantage ground of truth, and commit the decision to uncertainty and caprice. The phalanx of reason is invulnerable; it advances with deliberate and determined pace; and nothing is able to resist it. But when we lay down our arguments, and take up our swords, the case is altered. Amidst the barbarous pomp of war and the clamorous din of civil brawls, who can tell whether the event shall be prosperous or miserable?

We must therefore carefully distinguish between informing the people and inflaming them. Indignation, resentment and fury are to be deprecated; and all we should ask is sober thought, clear discernment and intrepid discussion. Why were the revolutions of America and France a general concert of all orders and descriptions of men, without so much (if we bear in mind the multitudes concerned) as almost a dissentient voice; while the resistance against our Charles the first divided the nation into two equal parts? Because the latter was the affair of the seventeenth century, and the former happened in the close of the

Dd2

eighteenth,

BOOK IV. CHAP. II. SECTION II. eighteenth. Because in the case of America and France philofophy had already developed some of the great principles of political truth, and Sydney and Locke and Montesquieu and Rousseau had convinced a majority of reflecting and powerful minds of the evils of usurpation. If these revolutions had happened still later, not one drop of the blood of one citizen would have been shed by the hands of another, nor would the event have been marked so much perhaps as with one solitary instance of violence and confiscation.

Lateness of event desirable. There are two principles therefore which the man who defires the regeneration of his species ought ever to bear in mind, to regard the improvement of every hour as essential in the discovery and dissemination of truth, and willingly to suffer the lapse of years before he urges the reducing his theory into actual execution. With all his caution it is possible that the impetuous multitude will run before the still and quiet progress of reason; nor will he sternly pass sentence upon every revolution that shall by a few years have anticipated the term that wisdom would have prescribed. But, if his caution be firmly exerted, there is no doubt that he will superfede many abortive attempts, and considerably prolong the general tranquillity.

SECTION III.

OF POLITICAL ASSOCIATIONS.

MEANING OF THE TERM.—ASSOCIATIONS OBJECTED TO—

I. FROM THE SORT OF PERSONS WITH WHOM A JUST REVOLUTION SHOULD ORIGINATE—2. FROM THE DANGER OF TUMULT.—OBJECTS OF ASSOCIATION.—IN WHAT CASES ADMISSIBLE.—ARGUED FOR FROM THE NECESSITY TO GIVE WEIGHT TO OPINION—FROM THEIR TENDENCY TO ASCERTAIN OPINION.—UNNECESSARY FOR THESE PURPOSES.—GENERAL INUTILITY.—CONCE6SIONS.—IMPORTANCE OF SOCIAL COMMUNICATION.—PROPRIETY OF TEACHING RESISTANCE CONSIDERED.

QUESTION naturally fuggefts itself in this place refpecting the propriety of affociations among the people at large, for the purpose of effecting a change in their political institutions. It should be observed, that the affociations here spoken of are voluntary confederacies of certain members of the society with each other, the tendency of which is to give weight to the opinions of the persons so afsociated, of which the opinions of the unconfederated and insulated part of the community are destitutes.

BOOK IV. CHAP. II. SECTION III. Meaning of the term. 206

BOOK IV. CHAP. II. titute. This question therefore has nothing in common with that other, whether in a well organized state every individual would not find his place in a deliberative as well as an elective capacity; the society being distributed into districts and departments, and each man possessing an importance, not measured by the capricious standard of some accidental confederacy, but by a rule impartially applied to every member of the community.

Affociations objected to:

Relative then to political affociations, as thus explained, there are two confiderations, which, if they do not afford reason for undistinguishing condemnation, at least tend to diminish our anxiety to their introduction.

1. from the fortof perfons with whom a just revolution should originate: In the first place revolutions less originate in the energies of the people at large, than in the conceptions of persons of some degree of study and reflection. I say, originate, for it must be admitted, that they ought ultimately to be determined on by the choice of the whole nation. It is the property of truth to diffuse itself. The difficulty is to distinguish it in the first instance, and in the next to present it in that unequivocal form which shall enable it to command universal assent. This must necessarily be the task of a sew. Society, as it at present exists in the world, will long be divided into two classes, those who have leisure for study, and those whose importunate necessities perpetually urge them to temporary industry. It is no doubt to be desired, that the latter class should be made as much as possible

to partake of the privileges of the former. But we should be careful, while we liften to the undiffinguishing demands of benevolence, that we do not occasion a greater mischief than that we undertake to cure. We should be upon our guard against an event the confequences of which are always to be feared, the propagating blind zeal, where we meant to propagate reason.

The studious and reflecting only can be expected to see deeply into future events. To conceive an order of fociety totally different from that which is now before our eyes, and to judge of the advantages that would accrue from its inftitution, are the prerogatives only of a few favoured minds. When these advantages have been unfolded by superior penetration, they cannot yet for some time be expected to be underflood by the multitude. Time, reading and conversation are necessary to render them familiar. They must descend in regular gradation from the most thoughtful to the most unobservant. He, that begins with an appeal to the people, may be fuspected to understand little of the true character of mind. A finister defign may gain by precipitation; but true wifdom is best adapted to a flow, unvarying, inceffant progrefs.

Human affairs, through every link of the great chain of necessity, are admirably harmonifed and adapted to each other. As the people form the last step in the progress of truth, they need least preparation to induce them to affert it. prejudices

BOOK IV. CHAP. II. SECTION III. prejudices are few and upon the furface. They are the higher orders of fociety, that find, or imagine they find, their advantage in injuftice, and are eager to invent arguments for its defence. In fophiftry they first feek an excuse for their conduct, and then become the redoubted champions of those errors which they have been affiduous to cultivate. The vulgar have no such interest, and submit to the reign of injustice from habit only and the want of reflection. They do not want preparation to receive the truth, so much as examples to embody it. A very short catalogue of reasons is sufficient for them, when they see the generous and the wife resolved to affert the cause of justice. A very short period is long enough for them to imbibe the sentiments of patriotism and liberty.

2. from the danger of tumult.

Secondly, affociations must be formed with great caution not to be allied to tumult. The conviviality of a feast may lead to the depredations of a riot. While the sympachy of opinion catches from man to man, especially in numerous meetings, and among persons whose passions have not been used to the curb of judgment, actions may be determined on, which solitary reflection would have rejected. There is nothing more barbarous, cruel and blood-thirsty, than the triumph of a mob. Sober thought should always prepare the way to the public affertion of truth. He, that would be the founder of a republic, should, like the first Brutus, be insensible to the energies of the most imperious passions of our nature.

Upon

Upon this subject of affociations an obvious distinction is to BOOK IV. be made. Those, who are diffatisfied with the government of their country, may aim either at the correction of old errors, or the counteracting of new encroachments. Both these objects are legitimate. The wife and the virtuous man ought to fee things precifely as they are, and judge of the actual conflitution of his country with the fame impartiality, as if he had fimply read of it in the remotest page of history.

CHAP. II. SECTION III. Objects of . affociation.

These two objects may be entitled to a different treatment. The In what cases first ought undoubtedly to proceed with a leifurely step and in all possible tranquillity. The fecond appears to require fomething more of activity. It is the characteristic of truth, to trust much to its own energy, and to refift invalion rather by the force of conviction than the force of arms. The individual oppressed feems however particularly entitled to our affiftance, and this can best be afforded by the concurrence of many. The case may require an early and unequivocal display of opinion, and this perhaps will afford an apology for fome fort of affociation, provided it be conducted with all possible attention to peaceableness and good order.

admiffible.

Few arguments can be of equal importance with that which we Argued for are here discussing. Few mistakes can be more to be deplored cessity to than that which should induce us to employ immoral and in- to opinion: jurious methods for the support of a good cause. It may be Еe

from the negive weight

BOOK IV. CHAP. II. SECTION III.

alledged, "that affociation is the only expedient for arming the fense of the country against the arts of its oppressors." Why arm? Why spread a restless commotion over the face of a nation, which may lead to the most destructive consequences? Why seek to bestow upon truth a weight that is not her own? a weight that must always produce some obliquity, some blind and unenlightened zeal? In attempting prematurely to anticipate the conquest of truth, we shall infallibly give birth to desormity and abortion. If we have patience to wait her natural progress, and to affish her cause by no arguments that are not worthy of her, the event will be both certain and illustrious.

from their tendency to afcertain opinion.

Unnecessary for these purposes. A fimilar answer will suggest itself to the objection, "that affociations are necessary unequivocally to ascertain the opinion of the people." What fort of opinion is that, which thus stands in need of some sudden violence to oblige it to start from its hiding-place? The sentiments of mankind are then only equivocal in external appearance, when they are unformed and uncertain in the conception. When once the individual knows his own meaning, its symptoms will be clear and unequivocal. Be not precipitate. If the embryo sentiment at present existing in my mind be true, there is hope that it will gain strength by time. If you wish to affish its growth, let it be by instruction, not by attempting to pass that sentiment for mine which you only wish to be so. If the opinion of the people be not known to-day, it will not fail to shew itself to-morrow. If the opinion

of the people be not known to-day, it is because that which you would have supposed to be their opinion is not sufficiently their opinion. You might as well think of hiding the inhabitants of England, concealing their towns and their cultivation, and making their country pass for a defert, as of concealing their real and deliberate fentiment.

BOOK IV.

These are the expedients of men who do not know that truth is General inomnipotent. It may appear to die for a time, but it will not fail to revive with fresh vigour. If it have ever failed to produce gradual conviction, it is because it has been told in a meagre, an obscure or a pusillanimous manner. Ten pages that should contain an absolute demonstration of the true interests of mankind in fociety could no otherwise be prevented from changing the face of the globe, than by the literal destruction of the paper on which they were written. It would become us to repeat their contents as widely as we were able; but, if we attempted any thing more than this, it would be a practical proof that we did not know they contained a demonstration.

Such are the reasonings that should decide upon our abstract Concessions. opinion of every case of affociation that comes before us. But, though from hence it should sufficiently appear that affociation is fcarcely in any cafe to be defired, there are confiderations that should lead us fometimes to judge it with moderation and forbearance. There is one mode, according to which the benefit of mankind

E e 2

may

EOOK IV. CHAP. II. SECTION III. may best be promoted, and which ought always to be employed. But mankind are imperfect beings, and there are certain errors of his species which a wise man will be inclined to regard with indulgence. Associations, as a measure intrinsically wrong, he will endeavour at least to postpone as long as he can. But it must not be dissembled that in the crisis of a revolution they will sometimes be unavoidable. While opinion is advancing with silent step, imagination and zeal may be expected somewhat to outrun her progress. Wisdom will be anxious to hold them at bay; and, if her votaries be many, she will be able to do this long enough to prevent tragical consequences. But, when the cast is thrown, when the declaration is made and irrevocable, she will not fail, be the confusion greater or less, to take the side of truth, and forward her reign by the best means that the necessity of the case will admit.

Importance of focial communication.

But, though affociation, in the received fense of that term, must be granted to be an inftrument of a very dangerous nature, it should be remembered that unreserved communication in a smaller circle, and especially among persons who are already awakened to the pursuit of truth, is of unquestionable advantage. There is at present in the world a cold reserve that keeps man at a distance from man. There is an art in the practice of which individuals communicate for ever, without any one telling his neighbour what estimate he should form of his attainments and character, how they ought to be employed, and how to be improved,

213

improved. There is a fort of domestic tactics, the object of BOOK IV. which is to instruct us to elude curiofity, and to keep up the tenour of conversation, without the disclosure either of our feelings or our opinions. The philanthropist has no object more deeply at heart than the annihilation of this duplicity and referve. No man can have much kindness for his species, who does not habituate himself to consider upon each successive occafion of focial intercourse how that occasion may be most beneficently improved. Among the topics to which he will be anxious to awaken attention, politics will occupy a principal share.

Books have by their very nature but a limited operation; though, on account of their permanence, their methodical difquisition, and their easiness of access, they are entitled to the foremost place. But their efficacy ought not to engross our confidence. The number of those by whom reading is neglected is exceedingly great. Books to those by whom they are read have a fort of constitutional coldness. We review the arguments of an "infolent innovator" with fullenness, and are unwilling to ftretch our minds to take in all their force. It is with difficulty that we obtain the courage of striking into untrodden paths, and queftioning tenets that have been generally received. But conversation accustoms us to hear a variety of sentiments, obliges us to exercise patience and attention, and gives freedom and elasticity to our mental disquisitions. Athinking man, if he will recollect his intellectual hiftory, will find that he has derived ineftimable advantage from the stimulus and surprise of colloquial suggestions; and, if he review

BOOK IV. CHAP. II. SECTION III. review the history of literature, will perceive that minds of great acuteness and ability have commonly existed in a cluster.

It follows that the promoting of the best interests of mankind eminently depends upon the freedom of focial communication. Let us imagine to ourselves a number of individuals, who, having first stored their minds with reading and reslection, proceed afterwards in candid and unreferved conversation to compare their ideas, to fuggest their doubts, to remove their difficulties, and to cultivate a collected and striking manner of delivering their fentiments. Let us suppose these men, prepared by mutual intercourfe, to go forth to the world, to explain with fuccinciness and simplicity, and in a manner well calculated to arrest attention, the true principles of fociety. Let us suppose their hearers infligated in their turn to repeat these truths to their companions. We shall then have an idea of knowledge as perpetually gaining ground, unaccompanied with peril in the means of its diffusion. Reason will spread itself, and not a brute and unintelligent fympathy. Discussion perhaps never exists with so much vigour and utility as in the conversation of two persons. It may be carried on with advantage in fmall and friendly focieties. Does the fewness of their numbers imply the rarity of their existence? Far otherwise: the time perhaps will come when fuch inflitutions will be univerfal. Shew to mankind by a few examples the advantages of political discussion undebauched by political enmity and vehemence, and the beauty of the spectacle will foon render the example contagious. Every man will

commune

commune with his neighbour. Every man will be eager to tell BOOK IV. and to hear what the interest of all requires them to know. The bolts and fortifications of the temple of truth will be removed. The craggy steep of science, which it was before difficult to afcend, will be levelled with the plain. Knowledge will be acceffible to all. Wifdom will be the inheritance of man, from which none will be excluded but by their own heedlessness and prodigality. If these ideas cannot completely be realised, till the inequality of conditions and the tyranny of government are rendered fomewhat less oppressive, this affords no reason against the fetting afloat fo generous a fystem. The improvement of individuals and the melioration of political inflitutions are destined mutually to produce and reproduce each other. Truth. and above all political truth, is not hard of acquifition, but from the fuperciliousness of its professors. It has been flow and tedious of improvement, because the study of it has been relegated to doctors and civilians. It has produced little effect upon the practice of mankind, because it has not been allowed a plain and direct appeal to their understandings. Remove these obstacles, render it the common property, bring it into daily use, and you may reasonably promise yourself consequences of the

But these consequences are the property only of independent and impartial discussion. If once the unambitious and candid circles of enquiring men be swallowed up in the insatiate gulf of noisy assemblies, the opportunity of improvement is instantly annihilated.

most inestimable value.

215

BOOR IV. CHAP. II. Section III. annihilated. The happy varieties of fentiment which so eminently contribute to intellectual acuteness are lost. Activity of thought is shackled by the fear that our associates should disclaim us. A fallacious uniformity of opinion is produced, which no man espouses from conviction, but which carries all men along with a resistless tide. Clubs, in the old English sense, that is, the periodical meeting of small and independent circles, may be admitted to fall within the line of these principles. But they cease to be admissible, when united with the tremendous apparatus of articles of confederacy and committees of correspondence. Human beings should meet together, not to enforce, but to enquire. Truth disclaims the alliance of marshalled numbers.

It feems fearcely necessary to add, that the individuals who are engaged in the transactions here censured, have frequently been instigated by the best intentions, and informed with the most liberal views. It would be in the highest degree unjust, if their undertakings should be found of dangerous tendency, to involve the authors in indiscriminate censure for consequences which they did not foresee. But at the same time, in proportion to the purity of their views and the soundness of their principles, it were earnestly to be desired that they would feriously restect on the means they employ. It would be deeply to be lamented, if those who were the truest friends to the welfare of mankind, should come, by the injudiciousness of their conduct, to rank among its enemies.

From

BOOK IV.

Section III. Propriety of teaching refistance con-

From what has been faid it is fufficiently evident, that no alarm can be more groundless, than that of violence and precipitation from the enlightened advocates of political justice. There is however another objection which has been urged against them, built upon the supposed inexpediency of inculcating upon the people at large the propriety of occasional resistance to the authority of government. "Obedience," say these objectors "is the rule; resistance the exception. Now what can be more preposterous, than perpetually to insist with all the pomp of eloquence upon an expedient, to which only an extreme necessity can oblige us to have recourse."

It has already been shewn that obedience, that is, a surrender of the understanding to the voice of authority, is a rule to which it can never be creditable to human beings to conform. Tranquillity indeed, a state in which a man shall least be disturbed in the exercise of his private judgment by the interposition of violence, is an object we should constantly endeavour to promote; but this tranquillity the principles here inculcated have little tendency to disturb.

There is certainly no truth which it can be for the general interest to conceal. It must be confessed indeed, that a single

^{*} This argument, nearly in the words here employed, may be found in Hume's Effay on Paffive Obedience. Effays, Part II, Effay xiii.

BOOK IV. CHAP II. SECTION III. truth may be fo detached from the feries to which it belongs, as, when feparately told, to have the nature of falshood. But this is by no means the case in the present instance. To inform mankind of those general principles upon which all political inflitutions ought to be built, is not to diffuse partial information. To discover to them their true interests, and lead them to conceive of a ftate of fociety more uncorrupt and more equitable than that in which they live, is not to inculcate fome rare exception to a general rule. If there be any government which must beindebted for its perpetuity to ignorance, that government is the curse of mankind. In proportion as men are made to underfland their true interests, they will conduct themselves wisely, both when they act and when they forbear, and their conduct will therefore promife the most advantageous issue. He, whosemind has carefully been inured to the dictates of reason, is of all men least likely to convert into the rash and headstrong invades of the general weal.

SECTION IV.

OF THE SPECIES OF REFORM TO BE DESIRED.

OUGHT IT TO BE PARTIAL OR ENTIRE ?-TRUTH MAY PARTIALLY TAUGHT .- PARTIAL REFORMA-TION CONSIDERED. - OBJECTION. - ANSWER. - PARTIAL REFORM INDISPENSIBLE .- NATURE OF A JUST REVOLU-TION-HOW DISTANT?

THERE is one more question which cannot fail occa- BOOKIV. fionally to fuggest itself to the advocate of focial reformation. "Ought we to defire to fee this reformation introduced Ought it to gradually or at once?" Neither fide of this dilemma prefents entire? us with the proper expedient.

CHAP. II. SECTION IV. be partial or

No project can be more injurious to the cause of truth, than Truth may that of prefenting it imperfectly and by parcels to the attention tially taught. of mankind. Seen in its just light, the effect produced cannot fail to be confiderable; but, flewn in some partial and impersect way, it will afford a thousand advantages to its adversaries. Many objections will feem plaufible, which a full view of the fubject would have diffipated. Whatever limits truth is error; and of consequence such a limited view cannot fail to include a Ff2 confiderable

BOOK IV. CHAP. II. Section IV. confiderable mixture of error. Many ideas may be excellent as parts of a great whole, which, when violently torn from their connection, will not only ceafe to be excellent, but may in fome cases become positively injurious. In this war of posts and skirmishes victory will perpetually appear to be doubtful, and men will either be persuaded, that truth itself is of little value, or that human intellect is so narrow as to render the discovery of truth a hopeless pursuit.

Partial reformation confidered.

Objection.

It may be alledged, that "one of the confiderations of greatest influence in human affairs is that of the gradual decline of ill things to worse, till at length the mischief, having proceeded to its highest climax, can maintain itself no longer. The argument in favour of social improvement would lose much of its relative energy, if the opportunity of a secret comparison of possible good with actual evil were taken away. All partial reforms are of the nature of palliatives. They skin over the diseased part instead of extirpating the disease. By giving a small benefit, perhaps a benefit only in appearance, they cheat us of the superior good we ought to have demanded. By stripping error of a part of its enormities, they give it fresh vigour and a longer duration."

Answer.

We must be cautious however of pushing this argument too far. To suppose that truth stands in absolute need of a foil, or that she cannot produce full conviction by her native light, is

a conception unworthy of her enlightened advocates. The true BOOK IV. folution will probably be found in the accurately diffinguishing the fources of reform. Whatever reform, general or partial, shall be fuggefted to the community at large by an unmutilated view of the subject, ought to be seen with some degree of complacency. But a reform, that shall be offered us by those whose interest is fupposed to lie in the perpetuating of abuse, and the intention of which is rather to give permanence to error by divefting it of its most odious features, is little entitled to our countenance. true principle of focial improvement lies in the correcting public opinion. Whatever reform is stolen upon the community unregarded, and does not spontaneously flow from the energy of the general mind, is unworthy of congratulation. It is in this respect with nations as with individuals. He that guits a vicious habit, not from reason and conviction, but because his appetites no longer folicit him to its indulgence, does not deferve the epithet of virtuous. The object it becomes us to pursue is, to give vigour to public opinion, not to fink it into liftleffness and indifference.

When partial reformation proceeds from its legitimate cause, Gradual rethe progress society has made in the acquisition of truth, pensible. it may frequently be entitled to our applause. Man is the creature of habits. Gradual improvement is a most conspicuous law of his nature. When therefore fome confiderable advantage is fufficiently understood by the community to induce them to

defire

BOOK IV. CHAP. II. Section IV.

defire its establishment, that establishment will afterwards react to the enlightening of intellect and the generating of virtue. It is natural for us to take our stand upon some leading truth, and from thence explore the regions we have still to traverse.

There is indeed a fense in which gradual improvement is the only alternative between reformation and no reformation. All human intellects are at sea upon the great ocean of infinite truth, and their voyage though attended with hourly advantage will never be at an end. If therefore we will stay till we shall have devised a reformation so complete, as shall need no farther reformation to render it more complete, we shall eternally remain in inaction. Whatever is fairly understood upon general principles by a considerable part of the community, and opposed by none or by a very few, may be considered as sufficiently ripe for execution.

Nature of a just revolution.

To recapitulate the principal object of this chapter, I would once again repeat, that violence may fuit the plan of any political partifan, rather than of him that pleads the cause of simple justice. There is even a sense in which the reform aimed at by the true politician may be affirmed to be less a gradual than an entire one, without contradicting the former position. The complete reformation that is wanted, is not instant but suture reformation. It can in reality scarcely be considered as of the nature of action. It consists in an universal illumination. Men feel their situa-

tion, and the restraints, that shackled them before, vanish like a BOOK IV. mere deception. When the true crifis shall come, not a fword will need to be drawn, not a finger to be lifted up. The adverfaries will be too few and too feeble to dare to make a stand against the universal sense of mankind.

Nor do these ideas imply, as at first fight they might feem to How distant? imply, that the revolution is at an immeasurable distance. It is of the nature of human affairs that great changes should appear to be fudden, and great discoveries to be made unexpectedly, and as it were by accident. In forming the mind of a young person, in endeavouring to give a new bent to that of a person of maturer years, I shall for a long time feem to have produced little effect, and the fruits will shew themselves when I least expected them. The kingdom of truth comes not with oftentation... The feeds of virtue may appear to perish before they germinate.

To recur once more to the example of France, the works of her great political writers feemed for a long time to produce little prospect of any practical effect. Helvetius, one of the latest, in a work published after his death in 1771, laments in pathetic strains the hopeless condition of his country. "In the history of every people," fays he, "there are moments, in which, uncertain of the fide they shall choose, and balanced between political good and evil, they feel a desire to be instructed; in which the soil, so to express myself, is in some manner prepared, and may easily be impregnated

BOOK IV. CHAP. II. Section IV.

impregnated with the dew of truth. At such a moment the publication of a valuable book may give birth to the most auspicious reforms: but, when that moment is no more, the nation, become insensible to the best motives, is by the nature of its government plunged deeper and deeper in ignorance and stupidity. The soil of intellect is then hard and impenetrable; the rains may fall, may spread their moisture upon the surface, but the prospect of fertility is gone. Such is the condition of France. Her people are become the contempt of Europe. No falutary criss shall ever restore them to liberty*."

But in spite of these melancholy predictions, the work of renovation was in continual progress. The American revolution gave the finishing stroke, and only six years elapsed between the completion of American liberty and the commencement of the French revolution. Will a term longer than this be necessary,

* "Dans chaque nation il est des momens où les citoyens, incertains du parti qu'ils doivent prendre, et suspendus entre un bon et un mauvais gouvernement, éprouvent la soif de l'instruction, où les esprits, si je l'ose dire, préparés et ameublis peuvent être sa-cilement pénétrés de la rosie de la vérité. Qu'en ce moment un bon ouvrage paroisse, il peut opérer d'heureuses résormes: mais cet instant passe, les citoyens, insensibles à la gloire, sont par la forme de leur gouvernement invinciblement entraînés vers l'ignorance et l'abrutissement. Alors les esprits sont la terre endurcie: l'eau de la vérité y tombe, y coule, mais sans la féconder. Tel est l'état de la France. Cette nation avilie est aujourd'hui le mépris de l'Europe. Nulle crise salutaire ne lui rendra la liberté."

De l'Homme, Préface.

before

before France, the most refined and considerable nation in the BOOK IV. world, will lead other nations to imitate and improve upon her plan? Let the true friend of man be inceffant in the propagation of truth, and vigilant to counteract all the causes that might diffurb the regularity of her progress, and he will have every reason to hope an early and a favourable event.

CHAP. III.

OF TYRANNICIDE.

DIVERSITY OF OPINIONS ON THIS SUBJECT.—ARGUMENT IN ITS VINDICATION.—THE DESTRUCTION OF A TYRANT NOT A CASE OF EXCEPTION.—CONSEQUENCES OF TYRAN-NICIDE.—ASSASSINATION DESCRIBED.—IMPORTANCE OF SINCERITY.

BOOK IV. CHAP. III. Diversity of opinions on this subject. QUESTION, connected with the mode of effecting revolutions, and which has been eagerly discussed among political reasoners, is that of tyrannicide. The moralists of antiquity warmly contended for the lawfulness of this practice; by the moderns it has generally been condemned.

Argument in its vindica-

The arguments in its favour are built upon a very obvious principle. "Justice ought universally to be administered. Upon leffer criminals it is done, or pretended to be done, by the laws of the community. But criminals by whom law is subverted, and who overturn the liberties of mankind, are out of the reach of the ordinary administration of justice. If justice be partially administered in subordinate cases, and the rich man be able to oppress

the poor with impunity, it must be admitted that a few examples of this fort are insufficient to authorise the last appeal of human beings. But no man will deny that the case of the usurper and the despot is of the most atrocious nature. In this instance, all the provisions of civil policy being superfeded, and justice pointened at the source, every man is left to execute for himself the decrees of eternal equity."

BOOK IV. CHAP. III.

It may however be doubted whether the deftruction of a tyrant be in any respect a case of exception from the rules proper to be observed upon ordinary occasions. The tyrant has certainly no particular sanctity annexed to his person, and may be killed with as little scruple as any other man, when the object is that of repelling immediate violence. In all other cases, the extirpation of the offender by a self-appointed authority, does not appear to be the proper mode of counteracting injustice.

The destruction of a tyrant not a case of exception.

For, first, either the nation, whose tyrant you would destroy, is ripe for the affertion and maintenance of its liberty, or it is not. If it be, the tyrant ought to be deposed with every appearance of publicity. Nothing can be more improper, than for an affair, interesting to the general weal, to be conducted as if it were an act of darkness and shame. It is an ill lesson we read to mankind, when a proceeding, built upon the broad basis of general justice, is permitted to shrink from public scrutiny. The pistol and the dagger may as easily be made the auxiliaries of vice as

Consequences of tyranniBOOK IV. CHAP. III.

of virtue. To proscribe all violence, and neglect no means of information and impartiality, is the most effectual security we can have for an issue conformable to the voice of reason and truth.

If the nation be not ripe for a state of freedom, the man, who assumes to himself the right of interposing violence, may indeed shew the servour of his conception, and gain a certain degree of notoriety. Fame he will not gain, for mankind at present regard an act of this fort with merited abhorrence; and he will instict new calamities on his country. The consequences of tyrannicide are well known. If the attempt prove abortive, it renders the tyrant ten times more bloody, ferocious, and cruel than before. If it succeed, and the tyranny be restored, it produces the same effect upon his successors. In the climate of despotism some solitary virtues may spring up. But in the midst of plots and conspiracies there is neither truth, nor considence, nor love, nor humanity.

Affaffination deferibed.

Secondly, the true merits of the question will be still farther understood, if we reslect on the nature of assassination. The mistake, which has been incurred upon this subject, is to be imputed principally to the superficial view that has been taken of it. If its advocates had followed the conspirator through all his windings, and observed his perpetual alarm lest truth should become known, they would probably have been less indiscriminate

in their applause. No action can be imagined more directly at BOOK IV. war with a principle of ingenuousness and candour. Like all that is most odious in the catalogue of vices, it delights in obscurity. It shrinks from the penetrating eye of wisdom. It avoids all question, and hesitates and trembles before the questioner. It struggles for a tranquil gaiety, and is only complete where there is the most perfect hypocrify. It changes the use of speech, and composes every feature the better to deceive. Imagine to yourfelf the conspirators, kneeling at the feet of Cæsar, as they did the moment before they destroyed him. Not all the virtue of Brutus can fave them from your indignation.

There cannot be a better instance than that of which we are Importance treating, to prove the importance of general fincerity. We fee in this example, that an action, which has been undertaken from the best motives, may by a defect in this particular tend to overturn the very foundations of justice and happiness. Wherever there is affaffination, there is an end to all confidence among Protests and affeverations go for nothing. No man prefumes to know his neighbour's intention. The boundaries, that have hitherto ferved to divide virtue and vice, are gone. The true interests of mankind require, not their removal, but their confirmation. All morality proceeds upon the assumption of fomething evident and true, will grow and expand in proportion as these indications are more clear and unequivocal, and could not exist for a moment, if they were destroyed.

of fincerity.

CHAP.

CHAP. IV.

OF THE CULTIVATION OF TRUTH.

BOOK IV.

PERHAPS there cannot be a fubject of greater political importance, or better calculated to lead us in fafety through the mazes of controverfy, than that of the value of truth. Truth may be confidered by us, either abstractedly, as it relates to certain general and unchangeable principles, or practically, as it relates to the daily incidents and ordinary commerce of human life. In whichever of these views we consider it, the more deeply we meditate its nature and tendency, the more shall we be struck with its unrivalled importance.

SECTION I.

OF ABSTRACT OR GENERAL TRUTH.

ITS IMPORTANCE AS CONDUCING-TO OUR INTELLECTUAL IMPROVEMENT - TO OUR MORAL IMPROVEMENT. - VIRTUE THE BEST SOURCE OF HAPPINESS .- PROVED BY COMPARI-SON-BY ITS MANNER OF ADAPTING ITSELF TO ALL SITUATIONS-BY ITS UNDECAYING EXCELLENCE-CAN-NOT BE EFFECTUALLY PROPAGATED BUT BY A CULTI-VATED MIND .- IMPORTANCE OF GENERAL TRUTH TO OUR POLITICAL IMPROVEMENT.

BSTRACTEDLY confidered, it conduces to the perfection BOOK IV. of our understandings, our virtue and our political institutions.

SECTION I. lts importance as conducing

In the discovery and knowledge of truth is comprised all that to our intelwhich an impartial and reflecting mind is accustomed to admire. provement: It is not possible for us feriously to doubt concerning the preference of a capacious and ardent intelligence over the limited perceptions of a brute. All that we can imagine of angels and Gods confifts in fuperior wifdom. Do you fay in power also? It will prefently appear that wildom is power. The truths of general

BOOK IV. CHAP. IV. SECTION I. general nature, those truths which preceded, either substantially or in the nature of things, the particular existences that surround us, and are independent of them all, are inexhaustible. Is it possible that a knowledge of these truths, the truths of mathematics, of metaphysics and morals, the truths which, according to Plato's conception *, taught the creator of the world the nature of his materials, the result of his operations, the consequences of all possible systems in all their detail, should not exalt and elevate the mind? The truths of particular nature, the history of man, the characters and propensities of human beings, the process of our own minds, the capacity of our natures, are scarcely less valuable. The reason they are so will best appear if we consider, secondly, the tendency of truth in conducing to the persection of our virtue.

to our moral

Virtue cannot exist in an eminent degree, unaccompanied by an extensive survey of causes and their consequences, so that, having struck an accurate balance between the mixed benefits and injuries that for the present adhere to all human affairs, we may adopt that conduct which leads to the greatest possible advantage. If there be such a thing as virtue, it must admit of degrees. If it admit of degrees, he must be most virtuous, who chooses with the soundest judgment the greatest possible good of his species. But, in order to choose the greatest possible good,

^{*} See the Parmenides.

233

he must be deeply acquainted with the nature of man, its general features and its varieties. In order to execute it, he must have confidered all the inftruments for impressing mind, and the different modes of applying them, and must know exactly the proper moment for bringing them into action. In whatever light we confider virtue, whether we place it in the action or the disposition, its degree must be intimately connected with the degree of knowledge. No man can love virtue fufficiently, who has not an acute and lively perception of its beauty, and its tendency to produce the only folid and permanent happiness. What comparison can be made between the virtue of Socrates and that of a Hottentot or a Siberian? A humorous example how univerfally this truth has been perceived might be drawn from Tertullian, who, as a father of the church, was obliged to maintain the hollowness and infignificance of pagan virtues, and accordingly affures us, "that the most ignorant peasant under the Christian dispensation possessed more real knowledge than the wifeft of the ancient philosophers *."

We shall be still more fully aware of the connection between Virtue the virtue and knowledge, if we confider that the highest employment of virtue is to propagate itself. Virtue alone is happiness. The happiness of a brute that spends the greater part of his life in liftleffness and sleep, is but one remove from the happiness of a plant that is full of fap, vigour and nutrition. The happiness

of happiness:

proved by comparison:

^{*} Apologia, Cap. xlvi. See this fubject farther purfued in Appendix, No. I. Hh of

BOOK IV. CHAP. IV. SECTION I. of a man who purfues licentious pleafure is momentary, and his intervals of weariness and disgust perpetual. He speedily wears himself out in his specious career; and, every time that he employs the means of delight which his corporeal existence affords him, takes so much from his capacity of enjoyment. If he be wise enough like Epicurus to perceive a part of these disadvantages, and to find in fresh herbs and the water of the spring the truest gratification of his appetite, he will be obliged to seek some addition to his stock of enjoyment, and like Epicurus to become benevolent out of pure sensuality. But the virtuous man has a perpetual source of enjoyment. The only reason on account of which the truth of this affertion was ever controverted, is, that men have not understood what it was that constituted virtue.

by its manner of adapting itself to all fituations: It is impossible that any situation can occur in which virtue cannot find room to expatiate. In society there is continual opportunity for its active employment. I cannot have intercourse with any human being who may not be the better for that intercourse. If he be already just and virtuous, these qualities are improved by communication. It is from a similar principle that it has been observed that great geniuses have usually existed in a cluster, and have been awakened by the fire struck into them by their neighbours. If he be impersect and erroneous, there must be always some prejudice I may contribute to destroy, some motive to delineate, some error to remove.

If I be prejudiced and imperfect myself, it cannot however happen that my prejudices and imperfections shall be exactly coincident with his. I may therefore inform him of the truths that I know. and even by the collision of prejudices truth is elicited. It is impossible that I should strenuously apply myself to his mind with fincere motives of benevolence without some good being the refult. Nor am I more at a loss in solitude. In solitude I may accumulate the materials of focial benefit. No fituation can be fo desperate as to preclude these efforts. Voltaire, when thut up in the Bastille, and for ought he knew for life, deprived of books, of pens and of paper, arranged and in part executed the project of his Henriade *.

Another advantage of virtue in this personal view, is that, by its undewhile fenfual pleasure exhaults the frame, and passions often excited become frigid and callous, virtue has exactly the opposite propensities. Passions, in the usual acceptation of that term. having no absolute foundation in the nature of things, delight only by their novelty. But the more we are acquainted with virtue, the more estimable will it appear; and its field is as endless as the progress of mind. If an enlightened love of it be once excited in the mind, it is impossible that it should not continually increase. By its variety, by its activity it perpetually

^{*} Vie de Voltaire, par M*** (faid to be the marquis de Villette). A Geneve. 1786. Chap. iv. This is probably the best history of this great man which has yet appeared.

BOOK IV. CHAP. IV. SECTION I. renovates itself, and renders the intellect in which it resides ever new and ever young.

cannot be effectually propagated but by a cultivated mind. All these reasonings are calculated to persuade us that the most precious boon we can bestow upon others is virtue, that the highest employment of virtue is to propagate itself. But, as virtue is inseparably connected with knowledge in my own mind, so can it only by knowledge be communicated to others. How can the virtue we have just been contemplating be created, but by insusing comprehensive views and communicating energetic truths? Now that man alone is qualified to give these views, and communicate these truths, who is himself pervaded with them.

Let us suppose for a moment virtuous dispositions as existing without knowledge or outrunning knowledge, the last of which is certainly possible, and we shall presently find how little such virtue is worthy to be propagated. The most generous views will in such cases frequently lead to the most nesarious actions. A Calvin will burn Servetus, and a Digby generate the gunpowder treason. But, to leave these extreme instances, in all cases where mistaken virtue leads to cruel and tyrannical actions, the mind will be soured and made putrescent by the actions it perpetrates. Truth, immortal and ever present truth, is so powerful, that, in spite of all his inveterate prejudices, the upright man will suspect himself, when he resolves upon an action

SECTION I.

As to the third point, the tendency of truth to the improve- Importance ment of our political institutions, this is in reality the subject of truth to our the present volume, and has been particularly argued in some of provement. the earlier divisions of the work. If politics be a science, the investigation of truth must be the means of unfolding it. If men refemble each other in more numerous and essential particulars than those in which they differ, if the best purposes that can be accomplished respecting them be to make them free and virtuous and wife, there must be one best method of advancing these common purposes, one best mode of social existence deducible from the principles of their nature. If truth be one, there must be one code of truths on the subject of our reciprocal duties. Nor is the investigation of truth only the best mode of arriving at the object of all political inflitutions, but it is also the best mode of introducing and establishing it. Discussion is the path that leads to discovery and demonstration. Motives ferment in the minds of great bodies of men till all is ripe for action.

BOOK IV. CHAP. IV SECTION I. action. The more familiar the mind becomes with the ideas of which they confift and the propositions that express them, the more fully is it pervaded with their urgency and importance.

SECTION II.

OF SINCERITY.

NATURE OF THIS VIRTUE.—ITS EFFECTS—UPON OUR OWN ACTIONS—UPON OUR NEIGHBOURS.—ITS TENDENCY TO PRODUCE FORTITUDE.—EFFECTS OF INSINCERITY.—CHARACTER WHICH SINCERITY WOULD ACQUIRE TO HIM WHO PRACTISED IT.—OBJECTIONS.—THE FEAR OF GIVING UNNECESSARY PAIN.—ANSWER.—THE DESIRE OF PRESERVING MY LIFE.—THIS OBJECTION PROVES TOO MUCH.—ANSWER.—SECRECY CONSIDERED.—THE SECRETS OF OTHERS.—STATE SECRETS.—SECRETS OF PHILANTHROPY.

Section II. Nature of this virtue. T is evident in the last place, that a strict adherence to truth will have the best effect upon our minds in the ordinary commerce of life. This is the virtue which has commonly been known by the denomination of sincerity; and, whatever certain

accom-

accommodating moralists may teach us, the value of fincerity BOOK IV. will be in the highest degree obscured, when it is not complete. Real fincerity depofes me from all authority over the statement of facts. Similar to the duty which Tully imposes upon the historian, it compels me not to dare "to utter what is false, or conceal what is true." It annihilates the bastard prudence, which would infruct me to give language to no fentiment that may be prejudicial to my interests. It extirpates the low and felfish principle, which would induce me to utter nothing "to the difadvantage of him from whom I have received no injury." It compels, me to regard the concerns of my species as my own What I know of truth, of morals, of religion, of government, it compels me to communicate. All the praise which a virtuous man and an honest action can merit, I am obliged to pay to the uttermost mite. I am obliged to give language to all the blame to which profligacy, venality, hypocrify and circumvention are so justly entitled. I am not empowered to conceal any thing I know of myself, whether it tend to my honour or to my difgrace. I am obliged to treat every other man with equal frankness, without dreading the imputation of flattery on the one hand, without dreading his refentment and enmity on the other.

Did every man impose this law upon himself, he would be Its effects obliged to consider before he decided upon the commission of an actions: equivocal action, whether he chose to be his own historian, to

BOOK IV. CHAP. IV. SECTION II. be the future narrator of the scene in which he was engaging. It has been justly observed that the popish practice of auricular confession has been attended with some salutary effects. How much better would it be, if, instead of a practice thus ambiguous, and which may be converted into so dangerous an engine of ecclesiastical despotism, every man would make the world his confessional, and the human species the keeper of his confesience?

upon our neighbours. How extensive an effect would be produced, if every man were fure of meeting in his neighbour the ingenuous censor, who would tell to himself, and publish to the world, his virtues, his good deeds, his meannesses and his follies? I have no right to reject any duty, because it is equally incumbent upon my neighbours, and they do not practise it. When I have discharged the whole of my duty, it is weakness and vice to make myself unhappy about the omissions of others. Nor is it possible to say how much good one man sufficiently rigid in his adherence to truth would effect. One such man, with genius, information and energy, might redeem a nation from vice.

Its tendency to produce fortitude. The confequence to myfelf of telling every man the truth, regardless of personal danger or of injury to my interests in the world, would be uncommonly favourable. I should acquire a fortitude that would render me equal to the most trying situations, that would maintain my presence of mind entire in spite

of unexpected occurrences, that would furnish me with extem- BOOK IV. porary arguments and wifdom, and endue my tongue with irrefiftible eloquence. Animated by the love of truth, my understanding would always be vigorous and alert, not as before frequently subject to listlessness, timidity and insipidity. Animated by the love of truth, and by a passion inseparable from its nature, and which is almost the same thing under another name, the love of my species, I should carefully seek for such topics as might most conduce to the benefit of my neighbours, anxiously watch the progress of mind, and incessantly labour for the extirpation of prejudice.

> Effects of infincerity.

What is it that at this day enables a thousand errors to keep their station in the world, priestcraft, tests, bribery, war, cabal, and whatever elfe is the contempt and abhorrence of the enlightened and honest mind? Cowardice. Because, while vice walks erect with an unabashed countenance, men less vicious dare not paint her with that truth of colouring, which should at once confirm the innocent and reform the guilty. Because the majority of those who are not involved in the busy scene, and who, possessing some discernment, see that things are not altogether right, yet fee in fo frigid a way, and with fo imperfect a view. Many, who detect the imposture, are yet absurd enough to imagine that imposture is necessary to keep the world in awe, and that truth being too weak to curb the turbulent paffions of mankind, it is exceedingly proper to call in knavery and artifice as the abettors of her power. If every man to-day

BOOK IV. CHAP. IV. SECTION II. would tell all the truth he knows, three years hence there would be fearcely a falshood of any magnitude remaining in the civilised world.

Character which fincerity would acquire to him who practifed it-

There is no fear that the character here described should degenerate into ruggedness and brutality*. The motive by which it is animated affords a fufficient fecurity against fuch con-"I tell an unpleasant truth to my neighbour from a conviction that it is my duty. I am convinced it is my duty. because I perceive the communication is calculated for his benefit." His benefit therefore is the motive of my proceeding. and with fuch a motive it is impossible I should not feek to communicate it in the most efficacious form, not rousing his refentment, but awakening his moral feelings and his energy, Meanwhile the happiest of all qualifications in order to render truth palatable, is that which rifes fpontaneously in the fituation we have been confidering. Truth according to the terms of the supposition is to be spoken from the love of truth. But the face, the voice, the gesture are so many indexes to the mind. It is fcarcely possible therefore that the person with whom I am converfing should not perceive, that I am influenced by no malignity, acrimony and envy. In proportion as my motive is pure. at least after a few experiments, my manner will become unembarraffed. There will be frankness in my voice, fervour in my gesture, and kindness in my heart. That man's mind must be

^{*} See a particular case of this sincerity discussed in Appendix, No. II.

of a very perverse texture, that can convert a beneficent potion BOOK IV. administered with no ungenerous retrospect, no felfish triumph, into rancour and aversion. There is an energy in the sincerity of a virtuous mind that nothing human can refift.

I ftop not to confider the objections of the man who is im- Objections. merfed in worldly prospects and pursuits. He that does not know that virtue is better than riches or title must be convinced by arguments foreign to this place.

But it will be asked, "What then, are painful truths to be dif- The fear of closed to persons who are already in the most pitiable circumstances? Ought a woman that is dying of a fever to be informed of the fate of her husband whose skull has been fractured by a fall from his horse?"

giving unne-

The most that could possibly be conceded to a case like this, Answeris, that this perhaps is not the moment to begin to treat like a rational being a person who has through the course of a long life been treated like an infant. But in reality there is a mode in which under fuch circumstances truth may fafely be communicated; and, if it be not thus done, there is perpetual danger that it may be done in a blunter way by the heedless loquaciousness of a chambermaid, or the yet undebauched fincerity of an infant. How many arts of hypocrify, ftratagem and falshood must be employed to cover this pitiful fecret? Truth was calculated in

BOOK IV. CHAP. IV. SECTION II. the nature of things to discipline the mind to fortitude, humanity and virtue. Who are we, that we should subvert the nature of things and the system of the universe, that we should breed up a set of summer insects, upon which the breeze of sincerity may never blow, and the tempest of missfortune never beat?

The defire of preferving my life. "But truth may fometimes be fatal to him that speaks it. A man, who fought for the Pretender in the year 1745, when the event happened that dispersed his companions, betook himfelf to solitary slight. He fell in with a party of loyalists who were seeking to apprehend him; but not knowing his person, they enquired of him for intelligence to guide them in their pursuit. He returned an answer calculated to cherish them in their mistake, and saved his life."

This objection proves too much. This like the former is an extreme case; but the true answer will probably be found to be the same. If any one should question this, let him consider how far his approbation of the conduct of the person above cited would lead him. The rebels, as they were called, were treated in the period from which the example is drawn with the most illiberal injustice. This man, guided perhaps by the most magnanimous motives in what he had done, would have been put to an ignominious death. But, if he had a right to extricate himself by falshood, why not the wretch who has been guilty of forgery, who has deserved punishment, but who may now be conscious that he has in him materials

materials and inclination to make a valuable member of fociety? Nor is the inclination an effential part of the fupposition. Where-ever the materials exift, it will perhaps be found to be flagrantly unjust on the part of fociety to destroythem, instead of discovering the means by which they might be rendered innocent and useful. At this rate, a man has nothing to do but to commit one crime, in order to give him a right to commit a second which shall secure impunity to the first.

But why, when fo many hundred individuals have been con- Answer. tented to become martyrs to the unintelligible principles of a pitiful fect, should not the one innocent man I have been describing be contented to offer himself up a victim at the shrine of veracity? Why should he purchase a few poor years of exile and mifery by the commission of falshood? Had he surrendered himself to his pursuers, had he declared in the presence of his judges and his country, "I, whom you think too wicked and degenerate to deferve even to live, have chosen rather to encounter your injustice than be guilty of an untruth: I would have escaped from your iniquity and tyranny if I had been able; but, hedged in on all fides, having no means of deliverance but in falshood, I chearfully submit to all that your malice can inflict rather than violate the majesty of truth:" would be not have done an honour to himself, and afforded an example to the world, that would have fully compensated the calamity of his untimely death? It is in all cases incumbent upon us to dif-

charge

BOOK IV. CHAP. IV. SECTION II. charge our own duty, without being influenced by the enquiry whether other men will discharge or neglect theirs.

It must be remembered however that this is not the true jet of the argument. The stress does not lie upon the good he would have done: that is precarious. This heroic action, as it is to be feared has been the case with many others, might be configned to oblivion. The object of true wifdom under the circumstances we are considering, is to weigh, not so much what is to be done, as what is to be avoided. We must not be guilty of infincerity. We must not seek to obtain a desirable object by vile means. We must prefer a general principle to the meretricious attractions of a particular deviation. We must perceive in the prefervation of that general principle a balance of univerfal good, outweighing the benefit to arife in any inftance from fuperfeding it. It is by general principles that the business of the universe is carried on. If the laws of gravity and impulse did not make us know the confequences of our actions, we should be incapable of judgment and inference. Nor is this less true in morals. He that, having laid down to himself a plan of sincerity, is guilty of a fingle deviation, infects the whole, contaminates the frankness and magnanimity of his temper (for fortitude in the intrepidity of lying is baseness), and is less virtuous than the foe against whom he defends himself; for it is more virtuous in my neighbour to confide in my apparent honefty, than in me to abuse his confidence. In the case of martyrdom

tyrdom there are two things to be confidered. It is an evil not BOOK IV. wantonly to be incurred, for we know not what good yet remains for us to do. It is an evil not to be avoided at the expence of principle, for we should be upon our guard against fetting an inordinate value upon our own efforts, and imagining that truth would die, if we were to be destroyed.

"But what becomes of the great duty of fecrecy, which the Secrecy conincomparable Fenelon has made a capital branch in the education of his Telemachus?" It is annihilated. It becomes a truly virtuous man not to engage in any action of which he would be ashamed though all the world were spectator. Indeed Fenelon with all his ability has fallen into the most palpable inconsistency upon this subject. In Ithaca a considerable part of the merit of Telemachus confifts in keeping his mother's fecrets *. When he arrives in Tyre, he will not be perfuaded to commit or fuffer a deception, though his life was apparently at stake †.

What is it of which an honest man is commonly ashamed? Of virtuous poverty, of doing menial offices for himself, of having raifed himself by merit from a humble situation, and of a thousand particulars which in reality constitute his glory. With respect to actions of beneficence we cannot be too much upon our guard against a spirit of ostentation and the character that imperiously exacts the gratitude of its beneficiaries; but it is certainly an extreme weakness to defire to hide our deferts. So

248

BOOK IV. CHAP. IV. SECTION II. far from defiring to withhold from the world the knowledge of our good deeds, we ought to be forward to exhibit an attractive and illustrious example. We cannot determine to keep any thing fecret without risking at the same time to commit a hundred artifices, quibbles, equivocations and falshoods.

But the fecrets of others, " have I a power over them?" Pro-

The fecrets of others.

bably not: but you have a duty respecting them. The sacts with which you are acquainted are a part of your possessions, and you are as much obliged respecting them as in any other case, to employ them for the public good. Have I no right to indulge in myself the caprice of concealing any of my affairs, and can another man have a right by his caprice to hedge up and restrain the path of my duty?—"But state secrets?" This perhaps is a subject that ought not to be anticipated. We shall have occasion to enquire how ministers of the concerns of a nation came by their right to equivocate, to juggle and over-reach, while private men are obliged to be ingenuous, direct and

Secrets of

fincere.

State fecrets.

There is one case of a singular nature that seems to deserve a separate examination; the case of secrets that are to be kept for the sake of mankind. Full justice is done to the affirmative side of this argument by Mr. Condorcet in his Life of Voltaire, where he is justifying this illustrious friend of mankind, for his gentleness and forbearance in afferting the liberties of the species. He

first enumerates the inceffant attacks of Voltaire upon superstition, BOOK IV. hypocritical aufterities and war; and then proceeds: "It is true, the more men are enlightened, the more they will be free; but let us not put despots on their guard, and incite them to form a league against the progress of reason. Let us conceal from them the strict and eternal union that subsists between knowledge and liberty. Voltaire thought proper to paint superstition as the enemy of monarchy, to put kings and princes upon their guard against the gloomy ferocity and ambition of the priesthood, and to demonstrate that, were it not for the freedom of thought and investigation, there would be no fecurity against the return of papal infolence, of profcriptions, affaffinations and religious war. Had he taken the other fide of the question, had he maintained, which is equally true, that fuperstition and ignorance are the fupport of despotism, he would only have anticipated truths for which the public were not ripe, and have feen a fpeedy end to his career. Truth taught by moderate degrees gradually enlarges the intellectual capacity, and infenfibly prepares the equality and happiness of mankind; but taught without prudential restraint would either be nipped in the bud, or occasion national concussions in the world, that would be found premature and therefore abortive *."

What

* " Plus les bommes seront éclairés, plus ils seront libres. Mais n'avertissons point les oppresseurs de former une ligue contre la raison, cachons leur l'étroite et nécessaire union des lumières et de la liberté. - Quel sera donc le devoir d'un philosophe ? - Il Eslairera les gouvernemens sur tout ce qu'ils ont à craindre des prêtres .- Il fera voir BOOK IV. CHAP. IV. Section II. What a cowardly diffrust do reasonings like these exhibit of the omnipotence of truth! With respect to personal safety, it will be found upon an accurate examination that Voltaire with all his ingenuity and stratagem was for fixty years together the object of perpetual, almost daily persecution from courts and ministers*. He was obliged to retire from country to country, and at last to take advantage of a residence upon the borders of two states with a habitation in each. His attempts to secure the patronage of princes led only to vicissitude and disgrace. If his plan had been more firm and direct, he would not have been less safe. Timidity, and an anxious endeavour to secure to ourselves a protector, invite persecution. With the advantages of Voltaire, with his talents and independence, he might have held the tyrants of the world in awe.

que sans la liberté de penser le même esprit dans le clergé ramènerait les mêmes assassants, les mêmes supplices, les mêmes proscriptions, les mêmes guerres civiles.— Au lieu de montrer que la supersition est l'appui du déspotisme, avant que la raison ait rassemblé assez de force, il prouvera qu'elle est l'ennemie des rois.—Tel est l'esprit de tous les ouvrages de Voltaire—Que des hommes; inserieurs à lui, ne voyent pas que se Voltaire eut fait autrement, ni Montesquieu ni Rousseau n'auraient pu écrire leurs ouvrages, que l'Europe serait encore supersitieuse, et resterait long-tems esclave.—En attaquant les oppresseurs avant d'avoir éclairé les citoyens, on risque de perdre la liberté et d'étousser la raison. L'histoire offre la preuve de cette vérité. Combien de fois, malgré les généreux efforts des amis de la liberté, une seule bataille n'a-t-elle pas réduit des nations à une servitude de pluseurs siècles !—Pourquoi ne pas proster de cette expérience funesse, et savoir attendre des progrès des lumières une liberté plus réelle, plus durable et plus paisible ?"

^{*} Vie de Voltaire, par M***, throughout.

As to the progress of truth, it is not so precarious as its fear- BOOK IV. ful friends may imagine. Mr. Condorcet has justly infinuated in the course of his argument, that "in the invention of printing is contained the embryo, which in its maturity and vigour is destined to annihilate the flavery of the human race*." Books. if proper precautions be employed, cannot be destroyed. Knowledge cannot be extirpated. Its progress is filent, but infallible: and he is the most useful foldier in this war, who accumulates in an unperishable form the greatest mass of truth.

As truth has nothing to fear from her enemies, the needs not have any thing to fear from her friends. The man, who publishes the sublimest discoveries, is not of all others the most likely to inflame the vulgar, and hurry the great question of human happiness to a premature crisis. The object to be pursued undoubtedly is, the gradual improvement of mind. But this end will be better answered by exhibiting as much truth as possible, enlightening a few, and fuffering knowledge to expand in the proportion which the laws of nature and necessity prescribe, than by any artificial plan of piecemeal communication that we can There is in the nature of things a gradation in discovery and a progress in improvement, which do not need to be affisted by the stratagems of their votaries. In a word, there cannot be -a more unworthy idea, than that truth and virtue should be

^{* &}quot; Peut-être avant l'invention de l'imprimerie était-il impossible à se soustraire au joug."

BOOK IV. CHAP. IV. under the neceffity of feeking alliance with concealment. The man, who would artfully draw me into a little, that by so doing he may unawares surprise me into much, I infallibly regard as an impostor. Will truth, contracted into some petty sphere and shorn of its beams, acquire additional evidence? Rather let me trust to its omnipotence, to its congeniality with the nature of intellect, to its direct and irresistible tendency to produce liberty, and happiness, and virtue. Let me fear that I have not enough of it, that my views are too narrow to produce impression, and anxiously endeavour to add to my stock; not apprehend that, exhibited in its noon-day brightness, its lustre and genial nature should not be universally confessed.*

^{*} See this subject farther pursued in Appendix, No. III.

OF THE CONNEXION BETWEEN UNDERSTANDING AND VIRTUE.

- CAN EMINENT VIRTUE EXIST UNCONNECTED WITH TA-LENTS ?- NATURE OF VIRTUE. -- IT IS THE OFFSPRING OF UNDERSTANDING .-- IT GENERATES UNDERSTAND-ING .- ILLUSTRATION FROM OTHER PURSUITS-LOVE-AMBITION-APPLIED.
- CAN EMINENT TALENTS EXIST UNCONNECTED WITH VIR-TUE ?-ARGUMENT IN THE AFFIRMATIVE FROM ANA-LOGY-IN THE NEGATIVE FROM THE UNIVERSALITY OF MORAL SPECULATION-FROM THE NATURE OF VICE AS FOUNDED IN MISTAKE. THE ARGUMENT BALANCED. IMPORTANCE OF A SENSE OF JUSTICE. -- ITS CONNEXION WITH TALENTS .- ILLIBERALITY WITH WHICH MEN OF TALENTS ARE USUALLY TREATED.

PROPOSITION which, however evident in itself, seems BOOK IV. never to have been confidered with the attention it deferves, is that which affirms the connexion between understanding and virtue. Can an honest ploughman be as virtuous as virtue exist

APPENDIX, No. I. Can eminent unconnected Cato? with talents? BOOK IV. CHAP. IV. Appendix, No. I. Cato? Is a man of weak intellects and narrow education as capable of moral excellence as the fublimest genius or the mind most stored with information and science?

Nature of vir-

To determine these questions it is necessary we should recollect the nature of virtue. Considered as a personal quality it consists in the disposition of the mind, and may be defined a desire to promote the benefit of intelligent beings in general, the quantity of virtue being as the quantity of desire. Now desire is another name for preference, or a perception of the excellence real or supposed of any object. I say real or supposed, for an object totally destitute of real and intrinsic excellence, may become an object of desire by means of the imaginary excellence that is ascribed to it. Nor is this the only mistake to which human intelligences are liable. We may desire an object of absolute excellence, not for its real and genuine recommendations, but for some fictitious attractions we may impute to it. This is always in some degree the case, when a beneficial action is performed from an ill motive.

How far is this mistake compatible with real virtue? If I defire the benefit of intelligent beings, not from a clear and distinct perception of what it is in which their benefit consists, but from the unexamined lessons of education, from the physical effect of sympathy, or from any species of zeal unallied to and incommensurate with knowledge, can this desire be admitted for virtue?

tuous?

thous? Nothing seems more inconsistent with our ideas of virtue. A virtuous preserence is the preserence of an object for the sake of certain beneficial qualities which really belong to that object. To attribute virtue to any other species of preserence would be the same as to suppose that an accidental effect of my conduct,

which was altogether out of my view at the time of adopting it,

might entitle me to the appellation of virtuous.

BOOK IV. CHAP. IV. Appendix,-

Hence it appears, first, that virtue consists in a desire of the It is the offbenefit of the species: and, secondly, that that desire only can be deritanding.

denominated virtuous, which flows from a distinct perception of the value, and confequently of the nature, of the thing defired. But how extensive must be the capacity that comprehends the. full value of that benefit which is the object of virtue! must begin with a collective idea of the human species. must discriminate, among all the different causes that produce a pleasurable state of mind, that which produces the most exquifite and durable pleafure. Eminent virtue requires that I should have a grand view of the tendency of knowledge to produce happiness, and of just political institution to favour the progress. of knowledge. It demands that I should perceive in what manner focial intercourse may be made conducive to virtue and felicity, and imagine the unspeakable advantages that may arise from a coincidence and fuccession of generous efforts. things are necessary, not merely for the purpose of enabling me to employ my virtuous disposition in the best manner, but also BOOK IV. CHAP. IV. Appendix, No. I. for the purpose of giving to that disposition a just animation and vigour. God, according to the ideas usually conceived of that being, is more benevolent than man, because he has a constant and clear perception of the nature of that end which his providence pursues.

It generates underftanding. A farther proof that a powerful understanding is inseparable from eminent virtue will suggest itself, if we recollect that earnest desire never fails to generate capacity.

Illustration from other pursuits:

love:

This proposition has been beautifully illustrated by the poets, when they have represented the passion of love as immediately leading in the breast of the lover to the attainment of many arduous accomplishments. It unlocks his tongue, and enables him to plead the cause of his passion with infinuating eloquence. It renders his conversation pleasing and his manners graceful. Does he desire to express his feelings in the language of verse? It dictates to him the most natural and pathetic strains, and supplies him with a just and interesting language which the man of mere restection and science has often sought for in vain.

ambition:

No picture can be more truly founded in a knowledge of human nature than this. The history of all eminent talents is of a fimilar kind. Did Themistocles desire to eclipse the trophies of the battle of Marathon? The uneafiness of this desire would not let him sleep, and all his thoughts were occupied with the invention

invention of means to accomplish the purpose he had chosen. It BOOK IV. is a well known maxim in the forming of juvenile minds, that the instruction, which is communicated by mere constraint, makes a flow and feeble impression; but that, when once you have inspired the mind with a love for its object, the scene and the progress are entirely altered. The uneafiness of mind which earnest desire produces, doubles our intellectual activity; and as furely carries us forward with increased velocity towards our goal, as the expectation of a reward of ten thousand pounds would prompt me to walk from London to York with firmer refolution and in a fhorter time.

Let the object be for a person uninstructed in the rudiments of drawing to make a copy of some celebrated statue. At first, we will fuppose, his attempt shall be mean and unsuccessful. If his defire be feeble, he will be deterred by the mifcarriage of this essay. If his desire be ardent and invincible, he will return to the attack. He will derive instruction from his failure. He will examine where and why he miscarried. He will study his model with a more curious eye. He will perceive that he failed principally from the loofe and undigefted idea he had formed of the object before him. It will no longer fland in his mind as one general mass, but he will analyse it, bestowing upon each part in fuccession a separate consideration.

The case is similar in virtue as in science. If I have con- applied. I.1. ceived .

BOOK IV. CHAP. IV. Appendix, No. I. ceived an earnest desire of being a benefactor of my species, I shall no doubt find out a channel in which for my desire to operate, and shall be quick-fighted in discovering the desects or comparative littleness of the plan I have chosen. But the choice of an excellent plan for the accomplishment of an important purpose, and the exertion of a mind perpetually watchful to remove its desects, imply considerable understanding. The farther I am engaged in the pursuit of this plan the more will my capacity increase. If my mind slag and be discouraged in the pursuit, it will not be merely want of understanding, but want of desire. My desire and my virtue will be less, than those of the man, who goes on with unremitted constancy in the same career.

Can eminent talents exist unconnected with virtue? Thus far we have only been confidering how impossible it is that eminent virtue should exist in a weak understanding, and it is surprising that such a proposition should ever have been contested. It is a curious question to examine, how far the converse of this proposition is true, and in what degree eminent talents are compatible with the absence of virtue.

Argument in the affirmative from analogy: From the arguments already adduced it appears that virtuous defire is another name for a clear and diffinct perception of the nature and value of the object of virtue. Hence it feems most natural to conclude, that, though understanding, or strong percipient power is the indispensible prerequisite of virtue, yet it is

necessary that this power should be fixed upon this object, in order to its producing the defired effect. Thus it is in art. Without genius no man ever was a poet; but it is necessary that general capacity should have been directed to this particular channel, for poetical excellence to be the refult.

BOOK IV. CHAP, IV. APPENDIX No. I.

There is however some difference between the two cases, in the negative states and the negative states are the states and the negative states are the negative states. Poetry is the business of a few, virtue and vice are the affairs of universality of. all men. To every intellect that exists one or other of these lation: qualities must properly belong. It must be granted that, where every other circumstance is equal, that man will be most virtuous. whose understanding has been most actively employed in the fludy of virtue. But morality has been in a certain degree an object of attention to all men. No person ever failed more or less to apply the standard of just and unjust to his own actions and those of others; and this has of course been generally done with most ingenuity by men of the greatest capacity.

moral fpecu-

It must farther be remembered that a vicious conduct is always from the nathe result of narrow views. A man of powerful capacity and founded in extensive observation is least likely to commit the mistake, either of feeing himself as the only object of importance in the universe, or of conceiving that his own advantage may best be promoted by trampling on that of others. Liberalaccomplishments are furely in some degree connected with liberal principles. He, who takes into his view a whole nation as the fubjects of his

LIZ

ture of vice as miftake.

operation.

260

BOOK IV. CHAP. IV. Appendix, No. I. operation or the inftruments of his greatness, may naturally be expected to entertain some kindness for the whole. He, whose mind is habitually elevated to magnificent conceptions, is not likely to fink without strong reluctance into those fordid purfuits, which engross so large a portion of mankind.

The argument balanced. But, though these general maxims must be admitted for true, and would incline us to hope for a constant union between eminent talents and great virtues, there are other considerations which present a strong drawback upon so agreeable an expectation. It is sufficiently evident that morality in some degree enters into the reslections of all mankind. But it is equally evident, that it may enter for more or for less; and that there will be men of the highest talents, who have their attention diverted to other objects, and by whom it will be meditated upon with less earnestness, than it may sometimes be by other men who are in a general view their inferiors. The human mind is in some cases so tenacious of its errors, and so ingenious in the invention of a sophistry by which they may be vindicated, as to frustrate expectations of virtue in other respects the best founded.

Importance of a fense of ustice. From the whole of the subject it seems to appear, that men of talents, even when they are erroneous, are not destitute of virtue, and that there is a degree of guilt of which they are incapable. There is no ingredient that so essentially contributes to a virtuous character as a sense of justice. Philanthropy, as

contradiftinguished to justice, is rather an unreflecting feeling, than a rational principle. It leads to an abfurd indulgence, which is frequently more injurious than beneficial even to the individual it proposes to favour. It leads to a blind partiality, inflicting calamity without remorfe upon many perhaps, in order to promote the imagined interest of a few. But justice measures by one inflexible standard the claims of all, weighs their opposite pretentions, and seeks to diffuse happiness, because happiness is the fit and reasonable adjunct of a conscious being. Wherever therefore a strong sense of justice exists, it is common and reasonable to say, that in that mind exists considerable virtue, though the individual from an unfortunate concurrence of circumstances may with all his great qualities be the inftrument of a very small portion of benefit. Can great intellectual energy exist without a strong sense of justice?

It has no doubt refulted from a train of speculation similar to Its conthis, that poetical readers have commonly remarked Milton's talents, devil to be a being of confiderable virtue. It must be admitted that his energies centered too much in personal regards. why did he rebel against his maker? It was, as he himself informs us, because he saw no sufficient reason for that extreme inequality of rank and power which the creator assumed. It was because prescription and precedent form no adequate ground for implicit faith. After his fall, why did he still cherish the fpirit of opposition? From a persuasion that he was hardly and injurioufly

BOOK IV. CHAP. IV. Appendix, No. I. injuriously treated. He was not discouraged by the apparent inequality of the contest: because a sense of reason and justice-was stronger in his mind, than a sense of brute force: because he had much of the seelings of an Epictetus or a Cato, and little of those of a slave. He bore his torments with sortitude, because he disdained to be subdued by despotic power. He sought revenge, because he could not think with tameness of the unexpostulating authority that assumed to dispose of him. How beneficial and illustrious might the temper from which these qualities slowed have proved with a small diversity of situation!

Let us descend from these imaginary existences to real history. We shall find that even Cæsar and Alexander had their virtues. There is great reason to believe, that, however mistaken was their system of conduct, they imagined it reconcileable and even conducive to the general good. If they had desired the general good more earnestly, they would have understood better how to promote it.

Upon the whole it appears, that great talents are great energies, and that great energies cannot flow but from a powerful fense of fitness and justice. A man of uncommon genius is a man of high passions and lofty design; and our passions will be found in the last analysis to have their surest foundation in a sentiment of justice. If a man be of an aspiring and ambitious temper, it is because at present he finds himself out of his place,

and wishes to be in it. Even the lover imagines that his qualities or his passion give him a title superior to that of other men. If I accumulate wealth, it is because I think that the most rational plan of life cannot be fecured without it; and, if I dedicate my energies to fenfual pleafures, it is that I regard other purfuits as irrational and visionary. All our passions would die in the moment they were conceived, were it not for this reinforcement. A man of quick refentment, of strong feelings, and who pertinaciously resists every thing that he regards as an unjust affumption, may be confidered as having in him the feeds of eminence. Nor is it easily to be conceived that such a man should not proceed from a sense of justice to some degree of benevolence; as Milton's hero felt real compassion and sympathy for his partners in misfortune.

If these reasonings are to be admitted, what judgment shall Illiberality we form of the decision of doctor Johnson, who, speaking of a men of tacertain obscure translator of the odes of Pindar, says, that he was "one of the few poets to whom death needed not to be terrible *?" Let it be remembered that the error is by no means peculiar to doctor Johnson, though there are few instances in which it is carried to a more violent extreme, than in the general tenour of the work from which this quotation is taken. It was natural to expect that there would be a combination among the multitude to pull down intellectual eminence. Ambition is com-

with which lents are ufually treated.

mon to all men; and those, who are unable to rise to distinction, are at least willing to reduce others to their own standard. No man can completely understand the character of him with whom he has no sympathy of views, and we may be allowed to revile what we do not understand. But it is deeply to be regretted that men of talents should so often have entered into this combination. Who does not recollect with pain the vulgar abuse that Swift has thrown upon Dryden, and the mutual jealousies and animosities of Rousseau and Voltaire, men who quest to have co-operated for the salvation of the world?

OF THE MODE OF EXCLUDING VISITORS.

ITS IMPROPRIETY ARGUED - FROM THE SITUATION IN WHICH IT PLACES, I. THE VISITOR-2. THE SERVANT .-OBJECTIONS: -- PRETENDED NECESSITY OF THIS PRAC-TICE, I. TO PRESERVE US FROM INTRUSION-2. TO FREE US FROM DISAGREEABLE ACQUAINTANCE .-- CHARACTERS OF THE HONEST AND DISHONEST MAN IN THIS RESPECT COMPARED.

HIS principle respecting the observation of truth in the BOOK IV. common intercourses of life cannot perhaps be better illustrated, than from the familiar and trivial case, as it is commonly supposed to be, of a master directing his servant to say priety he is not at home, as a means of freeing him from the intrusion of impertinent guests. No question of morality can be foreign to the science of politics; nor will those few pages of the present work be found perhaps the least valuable, which here and in other places * are dedicated to the refutation of errors, that by their extensive influence have perverted the foundation of moral and political justice.

No. II. Its impro-

* Vide Appendices to Book II, Chap. II.

BOOK IV. CHAP, IV. APPENDIX. No. II. from the fituation in which it visitor:

Let us first, according to the well known axiom of morality, put ourselves in the place of the person whom this answer excludes. It feldom happens but that he is able, if he be in poffession of any discernment, to discover with tolerable accuracy places, 1. the whether the answer he receives be true or false. There are a thousand petty circumstances by which falshood continually detects itself. The countenance and the voice of the servant, unless long practifed indeed in this lesson of deceit, his cold and referved manner in the one case, and his free, ingenuous and unembarraffed air in the other, will almost always speak a language less ambiguous than his lips. But let us suppose only that we vehemently suspect the truth. It is not intended to keep us in ignorance of the existence of such a practice. He that adopts it, is willing to avow in general terms that fuch is his fystem, or he makes out a case for himself much less favourable than I was making out for him. The visitor then who receives this answer, feels in spite of himself a contempt for the prevarication of the person he visits. I appeal to the feelings of every man in the fituation described, and I have no doubt that he will find this to be their true state in the first instance, however he may have a fet of fophistical reasonings at hand by which he may in a few minutes reason down the first movements of indignation. He feels that the trouble he has taken and the civility he intended intitled him at least to truth in return.

Having

Having put ourselves in the place of the visitor, let us next BOOK IV. put ourselves in the place of the poor despised servant. Let us suppose that we are ourselves destined as sons or husbands to give this answer that our father or our wife is not at home, when he or she is really in the house. Should we not feel our tongues contaminated with the base plebeian lie? Would it be a fufficient opiate to our confciences to fay that "fuch is the practice, and it is well understood?" It never can be understood: its very intention is, not to be understood. We say that "we have certain arguments that prove the practice to be innocent." Are fervants only competent to understand these arguments? Surely we ought best to be able to understand our own arguments, and yet we shrink with abhorrence from the idea of perfonally acting upon them.

Whatever fophistry we may have to excuse our error, nothing is more certain than that our fervants understand the lesson we teach them to be a lie. It is accompanied by all the retinue of falshood. Before it can be gracefully practifed, the servant must be no mean proficient in the mysteries of hypocrify. By the easy impudence with which it is uttered, he best answers the purpose of his master, or in other words the purpose of deceit. By the eafy impudence with which it is uttered, he best stifles the upbraidings of his own mind, and conceals from others the shame imposed on him by his despotic task-master. Before this can be fufficiently done, he must have discarded the ingenuous M m 2 frankness

APPENDIX, No. II. frankness by means of which the thoughts find easy commerce with the tongue, and the clear and undisguised countenance which ought to be the faithful mirror of the mind. Do you think, when he has learned this degenerate lesson in one instance, that it will produce no unfavourable effects upon his general conduct? Surely, if we will practise vice, we ought at least to have the magnanimity to practise it in person, not cowardlike corrupt the principles of another, and oblige him to do that which we have not the honesty to dare to do for ourselves.

Objections:
Pretended
neceffity of
this practice,
1. to preferve
us from intrufion:

But it is faid, "that this lie is necessary, and that the intercourse of human society cannot be carried on without it." What, is it not as easy to say, "I am engaged," or "indisposed," or as the case may happen, as "I am not at home?" Are these answers more insulting, than the universally suspected answer, the notorious hypocrify of "I am not at home?"

The purpose indeed for which this answer is usually employed is a deceit of another kind. Every man has in the catalogue of his acquaintance some that he particularly loves, and others to whom he is indifferent, or perhaps worse than indifferent. This answer leaves the latter to suppose, if they please, that they are in the class of the former. And what is the benefit to result from this indiscriminate, undistinguishing manner of treating our neighbours? Whatever benefit it be, it no doubt

exifts

exists in considerable vigour in the present state of polished for BOOK IV. ciety, where forms perpetually intrude to cut off all intercourse between the feelings of mankind; and I can fearcely tell a man on the one hand "that I esteem his character and honour his virtues," or on the other "that he is fallen into an error which will be of prejudicial confequence to him," without trampling upon all the barriers of politeness. But is all this right? Is not the esteem or the disapprobation of others among the most powerful incentives to virtue or punishments of vice? Can we even understand virtue and vice half so well as we otherwise should, if we be unacquainted with the feelings of our neighbours respecting them? If there be in the list of our acquaintance any person whom we particularly dislike, it usually happens that it is for some moral fault that we perceive or think we perceive in him. Why should he be kept in ignorance of our opinion respecting him, and prevented from the opportunity either of amendment or vindication? If he be too wife or too foolish, too virtuous or too vicious for us, why should he not be ingenuoully told of his miftake in his intended kindness to us, rather than be fuffered to find it out by fix months enquiry from our fervants?

This leads us to yet one more argument in favour of this dif- 2. to free us ingenuous practice. We are told, "there is no other by which agreeable we can rid ourselves of disagreeable acquaintance." How long shall this be one of the effects of polished society, to persuade us

from difacquaintance. BOOK IV. CHAP. IV. Appendix, No. II. that we are incapable of doing the most trivial offices for ourfelves? You may as well tell me, "that it is a matter of indispensible necessity to have a valet to put on my stockings." In
reality the existence of these troublesome visitors is owing to
the hypocrify of politeness. It is that we wear the same indiscriminate smile, the same appearance of cordiality and complacence to
all our acquaintance. Ought we to do thus? Are virtue and
excellence entitled to no distinctions? For the trouble of these
impertinent visits we may thank ourselves. If we practised no
deceit, if we assumed no atom of cordiality and esteem we did
not seel, we should be little pestered with these buzzing intruders.
But one species of falshood involves us in another; and he, that
pleads for these lying answers to our visitors, in reality pleads
the cause of a cowardice, that dares not deny to vice the distinction and kindness that are exclusively due to virtue.

Characters of the honest and dishonest man in this respect compared. The man who acted upon this fystem would be very far removed from a Cynic. The conduct of men formed upon the fashionable fystem is a perpetual contradiction. At one moment they fawn upon us with a servility that dishonours the dignity of man, and at another treat us with a neglect, a sarcastic insolence, and a supercilious disdain, that are felt as the severest cruelty, by him who has not the sirmness to regard them with neglect. The conduct of the genuine moralist is equable and uniform. He loves all mankind, he desires the benefit of all, and this love and this desire are legible in his conduct. Does

he remind us of our faults? It is with no mixture of asperity. BOOK IV. of felfish difdain and infolent superiority. Of consequence it is scarcely possible he should wound. Few indeed are those effcminate valetudinarians, who recoil from the advice, when they distinguish the motive. But, were it otherwise, the injury is nothing. Those who feel themselves incapable of suffering the most benevolent plain dealing, would derive least benefit from the prescription, and they avoid the physician. Thus is he delivered, without harshness, hypocrify and deceit, from those whose intercourse he had least reason to desire; and the more his character is understood, the more his acquaintance will be felect, his company being chiefly fought by the ingenuous, the well difposed, and those who are desirous of improvement.

THE CHOICE OF A RESIDENCE.

APPENDIX, No. III. A cafe proposed. O enable us more accurately to judge of the extent of the obligation to be fincere, let us fuppose, "that I am resident, as a native or otherwise, in the kingdom of Portugal, and that I am of opinion that the establishment, civil and religious, of that country is in a high degree injurious to the welfare and improvement of the inhabitants." Ought I explicitly to declare the sentiments I entertain? To this question I answer, that "my immediate duty is to seek for myself a different residence."

concealment.

The arguments in favour of concealment in this case are ob- BOOK IV. "That country is subject to a high degree of despotism, and, if I delivered my fentiments in this frank manner, especially if along with this I were ardent and indefatigable in en- in favour of deavouring to profelyte the inhabitants, my fincerity would not be endured. In that country the institution of the holy inquifition still flourishes, and the fathers of this venerable court would find means effectually to filence me, before I had well opened my The inhabitants, wholly unaccustomed to such bold commission. affertions as those I uttered, would feel their pious ears inexpreffibly shocked, and the martyrdom I endured, instead of producing the good effects with which martyrdom is fometimes attended, would foon be forgotten, and, as long as it was remembered, would be remembered only with execrations of my memory. If on the contrary I concealed my fentiments, I might fpend a long life in acts of fubftantial benevolence. If I concealed them in part, I might perhaps by a prudent and gradual disclosure effect that revolution in the opinions of the inhabitants, which by my precipitation in the other case I defeated in the outfet. These arguments in favour of concealment are not built upon cowardice and felfishness, or upon a recollection of the horrible tortures to which I should be subjected. They flow from confiderations of philanthropy, and an endeavour fairly to estimate in what mode my exertions may be rendered most conducive to the general good."

BOOK IV. CHAP. IV. APPENDIX, No. III. Previous question: Is truth in general to be partially communicated?

Before we enter upon their direct examination, it may be proper to premife fome general observations. In the first place, let us calmly enquire whether the inftance here flated be of the nature of an exception or a rule. "Ought I univerfally to tell only a small part of the truth at a time, careful not to shock the prejudices of my hearers, and thus lead them imperceptibly to conclusions which would have revolted them at first; or am I to practife this method only, where the risk is great, and my life may be the forfeit?" It would feem as if truth were a facred deposit, which I had no right to deal out in shreds to my fellow men, just as my temper or my prudence should dictate. It would feem as if it were an unworthy artifice, by an ingenious arrangement of my materials to trick men into a conclusion, to which frankness, ingenuity and fincerity would never have conducted them. It would feem as if the shock I am so careful to avoid were favourable to the health and robust constitution of mind: and that, though I might in this way produce least temporary effect, the ultimate refult would afford a balance greatly in favour of undifguifed fincerity.

Customary effects of sincerity: A fecond preliminary proper to be introduced in this place confifts in a recollection of the general effects of fincerity and infincerity, the reasons for which the one is commonly laudable and the other to be blamed, independently of the subjects about which they may be employed. Sincerity is laudable, on account of the firmness and energy of character it never fails to produce.

"An upright man," it has fometimes been faid, "ought to BOOK IV. carry his heart in his hand." He ought to have an ingenuoufness which shrinks from no examination. The commerce between his tongue and his heart is uniform. Whatever he speaks you can depend upon to be the truth and the whole truth. The defigns he has formed he employs no artifice to conceal. He tells you in the first instance: "This is the proposition I mean to demonstrate. I put you upon your guard. I will not take you by furprise. If what I affirm be the truth, it will bear your scrutiny. If it were error, I could have recourse to no means more equivocal, than that of concealing in every step of the process the object in which my exertions were intended to terminate."

Infincerity is to be blamed, because it has an immediate of infincetendency to vitiate the integrity of character. "I must conceal upon him the opinions I entertain," suppose, "from the holy father inquifitor." What method shall I employ for this purpose? Shall I hide them as an impenetrable fecret from all the world? If this be provement: the fystem I adopt, the consequence is an instant and immediate end to the improvement of my mind. It is by the efforts of a daring temper that improvements and discoveries are made. The feeds of discovery are scattered in every thinking mind. but they are too frequently starved by the ungenial foil upon which they fall. Every man suspects the absurdity of kings and lords, and the injuffice of that glaring and oppreffive inequality which subsists in most civilised countries. But he clares not let his

1. the fuspen-

N n 2

mind

APPENDIX, No. III.

mind loofe in fo adventurous a fubject. If I tell my thoughts, I derive from the act of communication encouragement to proceed. I perceive in what manner they are received by others, and this perception acts by rebound upon my own progress. If they be received cordially, I derive new encouragement from the approbation of others. If they be received with opposition and distrust. I am induced to revise them. I detect their errors, or I strengthen my arguments, and add new truths to those which I had previously accumulated. What can excite me to the pursuit of discovery, if I know that I am never to communicate my discoveries? It is in the nature of things impossible, that the man, who has determined with himself never to utter the truths he knows, should be an intrepid and indefatigable The link which binds together the inward and the outward man is indiffoluble; and he, that is not bold in speech. will never be ardent and unprejudiced in enquiry. Add to this, that conscious disguise has the worst effect upon the temper, and converts virtue, which ought to be frank, focial and ingenuous, into a folitary, morose and misanthropical principle.

2. mifanthropy:

3. difingenuity: But let us conceive that the method I employ to protect myfelf from perfecution is different from that above stated. Let us suppose that I communicate my fentiments, but with caution and reserve. This system involves with it an endless train of falshood, duplicity and tergiversation. When I communicate my sentiments, it is under the inviolable seal of secrecy. If my

zeal

zeal carry me any great lengths, and my love of truth be ardent, I shall wish to communicate it as far as the bounds of prudence will possibly admit, and it will be strange if in a course of years I do not commit one mistake in my calculation. My grand secret is betrayed, and suspicion is excited in the breast of the father inquisitor. What shall I do now? I must, I suppose, stoutly deny the fact. I must compose my features into a consistent expression of the most natural ignorance and surprise, happy if I have made such progress in the arts of hypocrisy and falshood, as to put the change upon the wild beast who is ready to devour me. The most consummate impostor is upon this hypothesis the man of most perfect virtue.

But this is not all. My character for benevolence being well known, I am likely to be furrounded by perfons of good humoured indifcretion rather than by inveterate enemies. Of every man who questions me about my real sentiments I must determine first, whether he simply wish to be informed, or whether his design be to betray me. The character of virtue seems in its own nature to be that of firm and unalterable resolution, consident in its own integrity. But the character that results from this system begins in hesitation, and ends in disgrace. I am questioned whether such be my real sentiments. I deny it. My questioner returns to the charge with an, "Oh, but I heard it from such a one, and he was present when you delivered them." What am I to do now? Am I to asperse the character of

BOOK IV. CHAP. IV. APPENDIX, No. III. the honest reporter of my words? Am I to make an impotent effort to get rid of the charge; and, instead of establishing my character for orthodoxy, astonish my informer with my cool and intrepid effrontery?

upon the fpectators.

Infincerity has the worst effect both upon him who practifes, and upon them who behold it. It deprives virtue of that conscious magnanimity and ease, which ought ever to be ranked among its noblest effects. It requires the perpetual exercise of presence of mind, not for the purpose of telling the most useful truths in the best manner, but in order to invent a consistent catalogue of lies, and to utter them with a countenance at war with every thing that is passing in my heart. It destroys that confidence on the part of my hearers, which ought to be infeparable from virtue. They cannot all of them be expected to understand the deep plan of benevolence and the total neglect of all felfish and timid confiderations by which I am supposing my conduct to be regulated. But they can all fee my duplicity and tergiversation. They all know that I excel the most consummate impostor in the coolness with which I can utter falshood, and the craft with which I can support it.

Sincerity delineated. Sincerity has fometimes been brought into difrepute by the abfurd fystem according to which it has been pursued, and still oftener by the whimsical picture which the adversaries of undistinguishing sincerity have made of it. It is not necessary that I

fhould

should stop every person that I meet in the street to inform him BOOK IV. of my fentiments. It is not necessary that I should perpetually talk to the vulgar and illiterate of the deepest and sublimest truths. All that is necessary is, that I should practife no concealment, that I should preserve my disposition and character untainted. Whoever questions me, it is necessary that I should have no fecrets or referves, but be always ready to return a frank and explicit answer. When I undertake by argument to establish any principle, it is necessary that I should employ no circuitous methods, but clearly state in the first instance the object I have in view. Having satisfied this original duty, I may fairly call upon my hearer for the exercise of his patience. "It is true," I may fay, "that the opinion I deliver will appear shocking to your prejudices, but I will now deliberately and minutely affign the reasons upon which it is founded. If they appear fatisfactory, receive; if they be inconclusive, reject it." This is the ground work of fincerity. The fuperstructure is the propagation of every important truth, because it conduces to the improvement of man whether individually or collectively; and the telling all I know of myself and of my neighbour, because strict justice and unequivocal publicity are the best fecurity for every virtue.

Sincerity then, in ordinary cases at least, seems to be of so Its general much importance, that it is my duty first to consider how to

importance.

preferve.

Appendix, No. III.

preserve my fincerity untainted, and afterwards to select the best means in my power in each particular fituation, of benefiting Sincerity is one of those paramount and general rules, mankind. which is never to give way to the affair of the day. I may imagine perhaps that falshood and deceit may be most beneficial in some particular instances, as I might imagine upon the subject of a preceding chapter, that it would be virtuous to plant my dagger in the heart of a tyrant. But we should be cautious of indulging our imaginations in these instances. The great law of always employing ingenuous and honourable means feems to be of more importance than the exterminating any local and temporary evils. I well know in the prefent case what good will refult from a frank and undifguised principle of action, and what evil from deceit, duplicity and falshood. But I am much less certain of the good that will arise under particular circumstances from a neglect of these principles.

Application.

Having thus unfolded the true ground of reasoning upon this subject, we will return to the question respecting the conduct to be observed by the resormer in Portugal.

Duty refpecting the choice of a refidence. And here the true answer will perhaps be found to be that which has been above delivered, that a person so far enlightened upon these subjects, ought by no consideration to be prevailed upon to settle in Portugal; and, if he were there already, ought

to quit the country with all convenient fpeed. His efforts in Portugal would probably be vain; but there is fome other country in which they will be attended with the happiest confequences.

BOOK IV. CHAP. IV. Appendix, No. III.

It may be objected, "that fome person must begin the work of reformation in Portugal, and why should it not be the individual of whom we are treating?" But the answer is, that, in the sense supposed in this objection, it is not necessary that any body should begin. These great and daring truths ought to be published in England, France and other countries; and the dissemination that will attend them here, will produce a report and afford an example, which after some time may prepare them a favourable reception there.

The great chain of causes from which every event in the universe takes its rise, has sufficiently provided for the gradual instruction of mankind, without its being necessary that individuals should violate their principles and facrifice their integrity to accomplish it. Perhaps there never was a mind that so far outran the rest of the species, but that there was some country in which the man that possessed it might safely tell all he knew. The same causes that ripen the mind of the individual are acting generally, ripening similar minds, and giving a certain degree of similar impression to whole ages and countries. There exist perhaps at this very moment in Portugal, or soon will exist, minds, which, though mere children in science compared with

BOOK IV. CHAP. IV. Appendix, No. III. their gigantic neighbours in a more favoured foil, are yet accurately adapted to the improvement of their countrymen. If by any fport of nature an exotic should spring up, let him be transplanted to a climate that will prove more favourable to his vigour and utility. Add to this, that, when we are inclined to set an inordinate value upon our own importance, it may be reasonable to suspect that we are influenced by some lurking principle of timidity or vanity. It is by no means certain that the individual ever yet existed, whose life was of so much value to the community, as to be worth preserving at so great an expence, as that of his sincerity.

AVING now finished the theoretical part of our enquiry, BOOK IV. fo far as appeared to be necessary to afford a foundation for our reasoning respecting the different provisions of political 002institution.

BOOK IV.

institution, we might directly proceed to the consideration of those provisions. It will not however be useless to pause in this place, in order to consider those general principles of the human mind, which are most intimately connected with the topics of political reasoning *.

None of these principles seems to be of greater importance than that which affirms that all actions are necessary.

Importance of the queftion. Most of the reasonings upon which we have hitherto been employed, though perhaps constantly built upon this doctrine as a postulate, will yet by their intrinsic evidence, however inconsistently with his opinion upon this primary topic, be admitted by the advocate of free will. But it ought not to be the present design of political enquirers to treat the questions that may present themselves superficially. It will be found upon maturer resection that this doctrine of moral necessity includes in it consequences of the highest moment, and leads to a bold and comprehensive view of man in society, which cannot possibly be entertained by him who has embraced the opposite opinion. Severe method would have required that this proposition should have been established in the first instance, as an indispensible

foundation

^{*} The reader, who is indifposed to abstruce speculations, will find the other members of the enquiry sufficiently connected, without an express reference to the remaining part of the present book.

foundation of moral reasoning of every fort. But there are well BOOK IV. disposed persons, who notwithstanding the evidence with which it is attended, have been alarmed at its confequences; and it was perhaps proper, in compliance with their miftake, to flew that the moral reasonings of this work did not stand in need of this fupport, in any other fense than moral reasonings do upon every other fubject.

To the right understanding of any arguments that may be Definition of adduced under this head, it is requifite that we should have a clear idea of the meaning of the term necessity. He who affirms that all actions are necessary, means, that, if we form a just and complete view of all the circumstances in which a living or intelligent being is placed, we shall find that he could not in any moment of his existence have acted otherwise than he has acted. According to this affertion there is in the transactions of mind nothing loofe, precarious and uncertain. Upon this question the advocate of liberty in the philosophical sense must join issue. He must, if he mean any thing, deny this certainty of conjunction between moral antecedents and confequents. Where all is constant and invariable, and the events that arise uniformly flow from the circumstances in which they originate, there can be no liberty.

It is acknowledged that in the events of the material universe Why funevery posed to exist EOOK IV. CHAP. V. in the operations of the material univerfe. thing is subjected to this necessity. The tendency of investigation and enquiry relatively to this topic of human knowledge has been, more effectually to exclude chance, as our improvements extended. Let us consider what is the species of evidence that has fatisfied philosophers upon this point. Their only folid ground of reasoning has been from experience. The argument which has induced mankind to conceive of the universe as governed by certain laws, and to entertain the idea of necessary connexion between fuccessive events, has been an observed similarity in the order of fuccession. If, when we had once remarked two events fucceeding each other, we had never had occasion to fee that individual fuccession repeated; if we saw innumerable events in perpetual progression without any apparent order, fo that all our observation would not enable us, when we beheld one, to pronounce that another of fuch a particular class might be expected to follow; we should never have conceived of the existence of necessary connexion, or have had an idea correfoonding to the term caufe.

Hence it follows that all that strictly speaking we know of the material universe is this succession of events. Uniform succession irresistibly forces upon the mind the idea of abstract connexion. When we see the fun constantly rise in the morning and set at night, and have had occasion to observe this phenomenon invariably taking place through the whole period of our existence,

existence, we cannot avoid believing that there is some cause prc- BOOK IV. ducing this uniformity of event. But the principle or virtue by which one event is conjoined to another we never fee.

CHAP. V.

Let us take some familiar illustrations of this truth. Can it be imagined that any man by the inspection and analysis of gunpowder would have been enabled, previously to experience, to predict its explosion? Would he previously to experience have been enabled to predict, that one piece of marble having a flat and polished surface might with facility be protruded along another in a horizontal, but would with confiderable pertinacity refift feparation in a perpendicular direction? The fimplest phenomena of the most hourly occurrence were originally placed at an equal distance from human sagacity.

There is a certain degree of obscurity incident to this subject arifing from the following circumstance. All human knowledge is the refult of perception. We know nothing of any fubstance but by experience. If it produced no effects, it would be no fubject of human intelligence. We collect a confiderable number of these effects, and, by their perceived uniformity having reduced them into general classes, form a general idea annexed to the subject that produces them. It must be admitted, that a definition of any fubstance, that is, any thing that deferves to be called knowledge respecting it, will enable us to predict some of its future possible effects, and that for this plain reason, that defi-

nition.

BOOK IV. CHAP. V. nition is prediction under another name. But, though, when we have gained the idea of impenetrability as a general phenomenon of matter, we can predict some of its effects, there are others which we cannot predict: or in other words, we know none of its effects but fuch as we have actually remarked, added to an expectation that fimilar events will arife under fimilar circumftances, proportioned to the conftancy with which they have been observed to take place in our past experience. Finding as we do by repeated experiments, that material fubflances have the property of refistance, and that one substance in a state of rest, when impelled by another, passes into a state of motion, we are fill in want of more particular observation to enable us to predict the specific effects that will follow from this impulse in each of the bodies. Enquire of a man who knows nothing more of matter than its general property of impenetrability, what will be the refult of one ball of matter impinging upon another, and you will foon find how little this general property can inform him of the particular laws of motion. We suppose him to know that it will communicate motion to the fecond ball. But what quantity of motion will it communicate? What effects will the impulse produce upon the impelling ball? Will it continue to move in the fame direction? will it recoil in the opposite direction? will it fly off obliquely, or will it fubfide into a flate of rest? All these events will appear equally probable to him whom a feries of observations upon the past has not instructed as to what he is to expect from the future.

CHAP. V.

From these remarks we may sufficiently collect what is the BOOK IV. fpecies of knowledge we possess respecting the laws of the material universe. No experiments we are able to make, no reasonings we are able to deduce, can ever instruct us in the principle of causation, or shew us for what reason it is that one event has, in every instance in which it has been known to occur, been the precurfor of another event of a certain given description. we reasonably believe that these events are bound together by a perfect necessity, and exclude from our ideas of matter and motion the supposition of chance or an uncaused event. Affociation of ideas obliges us, after having feen two events perpetually conjoined, to pass, as soon as one of them occurs, to the recollection of the other: and, in cases where this transition never deceives us, but the ideal fuccession is always found to be an exact copy of the future event, it is impossible that this species of forelight should not convert into a general foundation of reasoning. We cannot take a fingle step upon this subject, which does not partake of the species of operation we denominate abstraction. Till we have been led to consider the rising of the fun to-morrow as an incident of the same species as its rising today, we cannot deduce from it fimilar consequences. It is the business of science to carry this task of generalisation to its farthest extent, and to reduce the diversified events of the universe to a small number of original principles.

Let us proceed to apply these reasonings concerning matter to The cast of the opera Pр the

BOOK IV. CHAP. V. tions of mind is parallel.

the illustration of the theory of mind. Is it possible in this latter theory, as in the former subject, to discover any general principles? Can intellect be made a topic of science? Are we able to reduce the multiplied phenomena of mind to any certain flandard of reasoning? If the affirmative of these questions be conceded, the inevitable confequence appears to be, that mind, as well as matter, exhibits a constant conjunction of events, and affords a reasonable presumption to the necessary connexion of those events. It is of no importance that we cannot see the ground of that connexion, or imagine how propolitions and reasoning, when presented to the mind of a percipient being. are able by necessary consequence to generate volition and animal motion: for, if there be any truth in the above reasonings, weare equally incapable of perceiving the ground of connexion between any two events in the material universe, the common and received opinion that we do perceive fuch ground of connexion being in reality nothing more than a vulgar prejudice.

Indications of necessity:

in history:

That mind is a topic of science may be argued from all those branches of literature and enquiry which have mind for their subject. What species of amusement or instruction would history afford us, if there were no ground of inference from moral causes to effects, if certain temptations and inducements did not in all ages and climates produce a certain series of actions, if we were unable to trace connexion and a principle of unity in men's tempers, propensities and transactions? The amusement would

be inferior to that which we derive from the perufal of a chronological table, where events have no order but that of time: fince, however the chronologist may neglect to mark the internal connexion between fuccessive transactions, the mind of the reader is bufied in fupplying that connexion from memory or imagination: but the very idea of fuch connexion would never have fuggested itself, if we had never found the source of that idea in experience. The instruction arising from the perusal of history would be absolutely none; fince instruction implies in its very nature the claffing and generalifing of objects. But, upon the supposition on which we are arguing, all objects would be unconnected and disjunct, without the possibility of affording any grounds of reasoning or principles of science.

The idea correspondent to the term character inevitably in- in our judgcludes in it the affumption of necessary connexion. The cha- racter: racter of any man is the refult of a long feries of impressions communicated to his mind, and modifying it in a certain manner, fo as to enable us, from a number of these modifications and impressions being given, to predict his conduct. Hence arise his temper and habits, respecting which we reasonably conclude, that they will not be abruptly superseded and reversed; and that, if they ever be reverfed, it will not be accidentally, but in confequence of fome strong reason persuading, or some extraordinary event modifying his mind. If there were not this original and effential connexion between motives and actions, and, which

BOOK IV. CHAP. V. forms one particular branch of this principle, between men's past and suture actions, there could be no such thing as character, or as a ground of inference enabling us to predict what men would be from what they have been.

in our schemes of policy:

From the same idea of necessary connexion arise all the schemes of policy, in consequence of which men propose to themselves by a certain plan of conduct to prevail upon others to become the tools and instruments of their purposes. All the arts of courtship and flattery, of playing upon men's hopes and fears, proceed upon the supposition that mind is subject to certain laws, and that, provided we be skilful and assiduous enough in applying the cause, the effect will inevitably follow.

in our ideas of moral difcipline. Lastly, the idea of moral discipline proceeds entirely upon this principle. If I carefully persuade, exhort, and exhibit motives to another, it is because I believe that motives have a tendency to influence his conduct. If I reward or punish him, either with a view to his own improvement or as an example to others, it is because I have been led to believe that rewards and punishments are calculated in their own nature to affect the sentiments and practices of mankind.

Objection from the fallibility of our expectations in human conduct, There is but one conceivable objection against the inference from these premises to the necessity of human actions. It may be alledged, that "though there is a real connexion between motives

BOOK IV.

motives and actions, yet that this connexion may not amount to a certainty, and that of consequence the mind still retains an inherent activity by which it can at pleasure dissolve this connexion. Thus for example, when I address argument and persuasion to my neighbour to induce him to adopt a certain species of conduct, I do it not with a certain expectation of success, and am not utterly disappointed if all my efforts fail of their effect. I make a reserve for a certain faculty of liberty he is supposed to possess, which may at last counteract the best digested projects."

But in this objection there is nothing peculiar to the case of Answer-It is just so in matter. I see a part only of the premises. and therefore can pronounce only with uncertainty upon the conclusion. A philosophical experiment, which has succeeded a hundred times, may altogether fail upon the next trial. But what does the philosopher conclude from this? Not that there is a liberty of choice in his retort and his materials, by which they baffle the best formed expectations. Not that the connexion between effects and causes is imperfect, and that part of the effect happens from no cause at all. But that there was fome other cause concerned whose operation he did not perceive. but which a fresh investigation will probably lay open to him. When the science of the material universe was in its infancy, men were fufficiently prompt to refer events to accident and chance; but the farther they have extended their enquiries and observation.

BOOK IV.

observation, the more reason they have found to conclude that every thing takes place according to necessary and universal laws.

The case is exactly parallel with respect to mind. The politician and the philosopher, however they may speculatively entertain the opinion of free will, never think of introducing it into their scheme of accounting for events. If an incident turn out otherwise than they expected, they take it for granted, that there was some unobserved bias, some habit of thinking, some prejudice of education, some singular association of ideas, that disappointed their prediction; and, if they be of an active and enterprising temper, they return, like the natural philosopher, to fearch out the secret spring of this unlooked for event.

Origin and univerfality of the fentiment of free will. The reflections into which we have entered upon the doctrine of causes, not only afford us a simple and impressive argument in favour of the doctrine of necessity, but suggest a very obvious reason why the doctrine opposite to this has been in a certain degree the general opinion of mankind. It has appeared that the idea of necessary connexion between events of any fort is the lesson of experience, and the vulgar never arrive at the universal application of this principle even to the phenomena of the material universe. In the easiest and most familiar instances, such as the impinging of one ball of matter upon another and its consequences, they willingly admit the interference of chance,

0

CHAP, V.

or an event uncaused. In this instance however, as both the im- BOOK IV. pulse and its effects are subjects of observation to the senses, they readily imagine that they perceive the absolute principle which causes motion to be communicated from the first ball to the second. Now the very fame prejudice and precipitate conclusion, which induce them to believe that they discover the principle of motion in objects of fense, act in an opposite direction with respect to such objects as cannot be subjected to the examination of fense. The manner in which an idea or proposition fuggested to the mind of a percipient being produces animal motion they never fee; and therefore readily conclude that there is no necessary connexion between these events.

But, if the vulgar will univerfally be found to be the advo- The fentieates of free will, they are not lefs ftrongly, however inconfiftently, impressed with the belief of the doctrine of necessity. It is a well known and a just observation, that, were it not for the existence of general laws to which the events of the material universe always conform, man could never have been either a reasoning or a moral being. The most considerable actions of our lives are directed by forefight. It is because he foresees the regular fuccession of the seasons, that the farmer sows his field, and after the expiration of a certain term expects a crop. There would be no kindness in my administering food to the hungry, and no injuffice in my thrusting a drawn fword against the

ment of neceffity also univerfal,

bofom

BOOK IV. CHAP. V.

bosom of my friend, if it were not the established quality of food to nourish, and of a sword to wound.

But the regularity of events in the material universe will not of itself afford a sufficient foundation of morality and prudence. The voluntary conduct of our neighbours enters for a share into almost all those calculations upon which our own plans and determinations are founded. If voluntary conduct, as well as material impulse, were not subjected to general laws, included in the fystem of cause and effect, and a legitimate topic of prediction and forefight, the certainty of events in the material universe would be productive of little benefit. But in reality the mind passes from one of these topics of speculation to the other, without accurately distributing them into classes, or imagining that there is any difference in the certainty with which they are attended. Hence it appears that the most uninstructed peasant or artifan is practically a necessarian. The farmer calculates as fecurely upon the inclination of mankind to buy his corn when it is brought into the market, as upon the tendency of the feafons The labourer no more fuspects that his employer to ripen it. will alter his mind and not pay him his daily wages, than he fuspects that his tools will refuse to perform those functions today, in which they were yesterday employed with success *.

Another

^{*} The reader will find the fubstance of the above arguments in a more diffufive form in Hume's Enquiry concerning Human Understanding, being the third part of his Essays.

Another argument in favour of the doctrine of necessity, not less clear and irresistible than that from the consideration of cause and effect, will arise from any confistent explication that can be this fentigiven of the nature of voluntary motion. The motions of the animal fystem distribute themselves into two great classes, voluntary and involuntary. Involuntary motion, whether it be conceived to take place independently of the mind, or to be the refult of thought and perception, is fo called, because the confequences of that motion, either in whole or in part, did not enter into the view of the mind when the motion commenced. Thus the cries of a new-born infant are not less involuntary than the circulation of the blood; it being impossible that the founds first resulting from a certain agitation of the animal frame should be foreseen, since foresight is the fruit of experience.

From these observations we may deduce a rational and confiftent account of the nature of volition. Voluntary motion is that which is accompanied with forefight, and flows from intention and defign. Volition is that flate of an intellectual being, in which, the mind being affected in a certain manner by the apprehension of an end to be accomplished, a certain motion of the organs and members of the animal frame is found to be produced.

Here then the advocates of intellectual liberty have a clear Qq dilemma

BOOK IV. CHAP. V. dilemma proposed to their choice. They must ascribe this freedom, this impersect connexion of effects and causes, either to our voluntary or our involuntary motions. They have already made their determination. They are aware that to ascribe freedom to that which is involuntary, even if the assumption could be maintained, would be altogether foreign to the great subjects of moral, theological or political enquiry. Man would not be in any degree more of an agent or an accountable being, though it could be proved that all his involuntary motions sprung up in a fortuitous and capricious manner.

But on the other hand to ascribe freedom to our voluntary actions is an express contradiction in terms. No motion is voluntary any farther than it is accompanied with intention and design, and flows from the apprehension of an end to be accomplished. So far as it flows in any degree from another source, so far it is involuntary. The new-born infant foresees nothing, therefore all his motions are involuntary. A person arrived at maturity takes an extensive survey of the consequences of his actions, therefore he is eminently a voluntary and rational being. If any part of my conduct be destitute of all foresight of the effects to result, who is there that ascribes to it depravity and vice? Xerxes acted just as soberly as such a reasoner, when he caused his attendants to inslict a thousand lashes on the waves of the Hellespont.

BOOK IV.

Self determi-

The truth of the doctrine of necessity will be still more evident, if we consider the absurdity of the opposite hypothesis. One of its principal ingredients is felf determination. Liberty in an imperfect and popular fense is ascribed to the motions of the animal fystem, when they result from the foresight and deliberation of the intellect, and not from external compulsion. It is in this fense that the word is commonly used in moral and political reasoning. Philosophical reasoners therefore, who have defired to vindicate the property of freedom, not only to our external motions, but to the acts of the mind, have been obliged to repeat this process. Our external actions are then said to be free, when they truly result from the determination of the mind. If our volitions, or internal acts be also free, they must in like manner result from the determination of the mind, or in other words, "the mind in adopting them" must be "felf determined." Now nothing can be more evident than that that in which the mind exercises its freedom, must be an act of the mind. Liberty therefore according to this hypothesis consists in this, that every choice we make has been chosen by us, and every act of the mind been preceded and produced by an act of the mind. This is fo true, that in reality the ultimate act is not flyled free from any quality of its own, but because the mind in adopting it was felf determined, that is, because it was preceded by another act. The ultimate act resulted completely from the determination that was its precurfor. It was itself necessary; and, if we would look for freedom, it must be in the preceding act. But in that

Qq2

preceding

BOOK IV. CHAP. V. preceding act also, if the mind were free, it was self determined, that is, this volition was chosen by a preceding volition, and by the same reasoning this also by another antecedent to itself. All the acts except the first were necessary, and sollowed each other as inevitably as the links of a chain do, when the first link is drawn forward. But then neither was this first act free, unless the mind in adopting it were self determined, that is, unless this act were chosen by a preceding act. Trace back the chain as far as you please, every act at which you arrive is necessary. That act, which gives the character of freedom to the whole, can never be discovered; and, if it could, in its own nature includes a contradiction.

Indifference.

Another idea which belongs to the hypothesis of self determination, is, that the mind is not necessarily inclined this way or that by the motives which are presented to it, by the clearness or obscurity with which they are apprehended, or by the temper and character which preceding habits may have generated; but that by its inherent activity it is equally capable of proceeding either way, and passes to its determination from a previous state of absolute indifference. Now what fort of activity is that which is equally inclined to all kinds of actions? Let us suppose a particle of matter endowed with an inherent propensity to motion. This propensity must either be to move in one particular direction, and then it must for ever move in that direction unless counteracted by some external impression; or it must

have

lrave an equal tendency to all directions, and then the refult must BOOK IV. be a state of perpetual rest.

The abfurdity of this confequence is so evident, that the advocates of intellectual liberty have endeavoured to destroy its force by means of a distinction. "Motive," it has been said, " is indeed the occasion, the fine qua non of volition, but it has no inherent power to compel volition. Its influence depends, upon the free and unconstrained surrender of the mind. Between opposite motives and considerations the mind can choose as it pleases, and by its determination can convert the motive which is weak and infufficient in the comparison into the strongest." But this hypothesis will be found exceedingly inadequate to the purpose for which it is produced. Motives must either have a necessary and irrefistible influence, or they can have no influence. at all.

For, first, it must be remembered, that the ground or reason of any event, of whatever nature it be, must be contained among the circumstances which precede that event. The mind is supposed to be in a state of previous indifference, and therefore cannot be, in itself considered, the source of the particular choice that is made. There is a motive on one fide and a motive on the other: and between these lie the true ground and reason of preference. But, wherever there is tendency to preference, there may be degrees of tendency. If the degrees beequal,

BOOK IV. CHAP. V.

equal, preference cannot follow: it is equivalent to the putting equal weights into the opposite scales of a balance. If one of them have a greater tendency to preference than the other, that which has the greatest tendency must ultimately prevail. When two things are balanced against each other, so much amount may be conceived to be struck off from each side as exists in the smaller sum, and the overplus that belongs to the greater is all that truly enters into the consideration.

Add to this, fecondly, that, if motive have not a necessary influence, it is altogether supersluous. The mind cannot first choose to be influenced by a motive, and afterwards submit to its operation: for in that case the preference would belong wholly to this previous volition. The determination would in reality be complete in the first instance; and the motive, which came in afterwards, might be the pretext, but could not be the true source of the proceeding*.

The will not a distinct faculty. Laftly, it may be observed upon the hypothesis of free will, that the whole system is built upon a distinction where there is no difference, to wit, a distinction between the intellectual and active powers of the mind. A mysterious philosophy taught men to suppose, that, when the understanding had perceived any object to be desirable, there was need of some distinct

^{*} The argument from the impossibility of free will is treated with great force of reasoning in Jonathan Edwards's Enquiry into the Freedom of the Will.

power to put the body in motion. But reason finds no ground BOOK IV. for this fupposition; nor is it possible to conceive, that, in the case of an intellectual faculty placed in an aptly organised body. preference can exist, together with a consciousness, gained from experience, of our power to obtain the object preferred, without a certain motion of the animal frame being the necessary result. We need only attend to the obvious meaning of the terms in order to perceive that the will is merely, as it has been happily termed, the last act of the understanding, one of the different cases of the affociation of ideas. What indeed is preference, but a perception of fomething that really inheres or is supposed to inhere in the objects themselves? It is the judgment, true or erroneous, which the mind makes respecting such things as are brought into comparison with each other. If this had been fufficiently attended to, the freedom of the will would never have been gravely maintained by philosophical writers, fince no man ever imagined that we were free to feel or not to feel an impression made upon our organs, and to believe or not to believe a proposition demonstrated to our understanding.

It must be unnecessary to add any thing farther on this head, Free will difunless it be a momentary recollection of the fort of benefit that to its possesfreedom of the will would confer upon us, supposing it to be possible. Man being, as we have now found him to be, a fimple fubstance, governed by the apprehensions of his understanding, nothing farther is requisite but the improvement of his

reasoning

BOOK IV. CHAP. V.

reasoning faculty, to make him virtuous and happy. But, did he poffefs a faculty independent of the understanding, and capable of refifting from mere caprice the most powerful arguments, the best education and the most fedulous instruction might be of no use to him. This freedom we shall easily perceive to be his bane and his curse; and the only hope of lasting benefit to the fpecies would be, by drawing closer the connexion between the external motions and the understanding, wholly to extirpate it. The virtuous man, in proportion to his improvement, will be under the constant influence of fixed and invariable principles; and fuch a being as we conceive God to be, can never in any one inftance have exercifed this liberty, that is, can never have acted in a foolish and tyrannical manner. Freedom of the will is abfurdly represented as necessary to render the mind fufceptible of moral principles; but in reality, fo far as we act with liberty, fo far as we are independent of motives, our conduct is as independent of morality as it is of reason, nor is it possible that we should deferve either praise or blame for a proceeding thus capricious and indifciplinable.

of no fervice to morality.

CHAP. VI.

INFERENCES FROM THE DOCTRINE OF NECESSITY.

EDEA IT SUGGESTS TO US OF THE UNIVERSE. -INFLUENCE ON OUR MORAL IDEAS --- ACTION --- VIRTUE --- EXERTION - PERSUASION - EXHORTATION - ARDOUR - COMPLA-CENCE AND AVERSION -PUNISHMENT - REPENTANCE -PRAISE AND BLAME-INTELLECTUAL TRANQUILLITY. -LANGUAGE OF NECESSITY RECOMMENDED.

NONSIDERING then the doctrine of moral necessity as BOOK IV. fufficiently established, let us proceed to the consequences that are to be deduced from it. This view of things prefents us getts to us of with an idea of the universe as connected and cemented in all its parts, nothing in the boundless progress of things being capable of happening otherwise than it has actually happened. In the life of every human being there is a chain of causes, generated in that eternity which preceded his birth, and going on in regular procession through the whole period of his existence, in confequence of which it was impossible for him to act in any instance otherwise than he has acted.

CHAP, VI.

BOOK IV. CHAP. VI. Influence on our moral ideas: The contrary of this having been the conception of the mass of mankind in all ages, and the ideas of contingency and accident having perpetually obtruded themselves, the established language of morality has been universally tinctured with this error. It will therefore be of no trivial importance to enquire how much of this language is founded in the truth of things, and how much of what is expressed by it is purely imaginary. Accuracy of language is the indispensible prerequisite of sound knowledge, and without attention to that subject we can never ascertain the extent and importance of the consequences of necessity.

action:

First then it appears, that, in the emphatical and refined sense in which the word has sometimes been used, there is no such thing as action. Man is in no case strictly speaking the beginner of any event or series of events that takes place in the universe, but only the vehicle through which certain causes operate, which causes, if he were supposed not to exist, would cease to operate. Action however, in its more simple and obvious sense, is sufficiently real, and exists equally both in mind and in matter. When a ball upon a billiard board is struck by a person playing, and afterwards impinges upon a second ball, the ball which was first in motion is said to act upon the second, though it operate in the strictest conformity to the impression it received, and the motion it communicates be precisely determined by the circumstances of the case. Exactly similar to this, upon the principles

ciples already explained, are the actions of the human mind. BOOK IV. Mind is a real cause, an indispensible link in the great chain of the universe; but not, as has fometimes been supposed, a cause of that paramount description, as to superfede all necessities, and be itself subject to no laws and methods of operation. Upon the hypothesis of a God, it is not the choice, apprehension or judgment of that being, fo properly as the truth which was the foundation of that judgment, that has been the fource of all contingent and particular existences. His existence, if necessary, was necessary only as the sensorium of truth and the medium of its operation.

Is this view of things incompatible with the existence of virtue; virtue?

If by virtue we understand the operation of an intelligent being in the exercise of an optional power, so that under the fame precise circumstances it might or might not have taken place, undoubtedly it will annihilate it.

But the doctrine of necessity does not overturn the nature of things. Happiness and misery, wisdom and error will still be distinct from each other, and there will still be a connexion between them. Wherever there is distinction there is ground for preference and defire, or on the contrary for neglect and aversion. Happiness and wisdom will be objects worthy to be defired, Rr2

BOOK IV.

defired, mifery and error worthy to be disliked. If therefore by virtue we mean that principle which asserts the preference of the former over the latter, its reality will remain undiminished by the doctrine of necessity.

Virtue, if we would speak accurately, ought to be considered by us in the first instance objectively, rather than as modifying any particular beings. It is a fystem of general advantage, in their aptitude or inaptitude to which lies the value or worthlessness of all particular existences. This aptitude is in intelligent beings usually termed capacity or power. Now power in the fenfe of the hypothesis of liberty is altogether chimerical. But power in the fense in which it is sometimes affirmed of inanimate substances, is equally true of those which are animate. A candleftick has the power or capacity of retaining a candle in a perpendicular direction. A knife has a capacity of cutting. In the same manner a human being has a capacity of walking: though it may be no more true of him, than of the inanimate fubstance, that he has the power of exercising or not exercising that capacity. Again, there are different degrees as well as different classes of capacity. One knife is better adapted for the purposes of cutting than another.

Now there are two confiderations relative to any particularbeing, that excite our approbation, and this whether the beingbe possessed of consciousness or no. These considerations are capacity capacity and the application of that capacity. We approve of a flar knife rather than a blunt one, because its capacity is greater. We approve of its being employed in carving food, rather than in maiming men or other animals, because that application of its capacity is preferable. But all approbation or preference is relative to utility or general good. A knife is as capable as a man of being employed in the purposes of virtue, and the one is no more free than the other as to its employment. The mode in which a knife is made subservient to these purposes is by material impulse. The mode in which a man is made subservient is by inducement and persuasion. But both are equally the affair of necessity. The man differs from the knife, just as the iron candlestick differs from the brass one; he has one more way of being acted upon. This additional way in man is motive, in the candlestick is magnetism.

But virtue has another fense, in which it is analogous to duty. The virtue of a human being is the application of his capacity to the general good; his duty is the best possible application of that capacity. The words thus explained are to be considered as rather similar to grammatical distinction, than to real and philosophical difference. Thus in Latin bonus is good as affirmed of a man, bona is good as affirmed of a woman. In the same manner we can as easily conceive of the capacity of an inanimate as of an animate substance being applied to the general good, and as accurately describe the best possible application of the one

BOOK IV.

as of the other. There is no effential difference between the two cases. But we call the latter virtue and duty, and not the former. These words may in a popular sense be considered as either masculine or feminine, but never neuter.

exertion:

But, if the doctrine of necessity do not annihilate virtue, it tends to introduce a great change into our ideas respecting According to this doctrine it will be abfurd for a man to fay, "I will exert myfelf," "I will take care to remember," or even "I will do this." All these expressions imply as if man was or could be fomething elfe than what motives make Man is in reality a passive, and not an active being. In another fense however he is sufficiently capable of exertion. The operations of his mind may be laborious, like those of the wheel of a heavy machine in ascending a hill, may even tend to wear out the substance of the shell in which it acts, without in the smallest degree impeaching its passive character. If we were conftantly aware of this, our minds would not glow lefs ardently with the love of truth, justice, happiness and mankind. We should have a firmness and simplicity in our conducts not wasting itself in fruitless struggles and regrets, not hurried along with infantine impatience, but feeing events with their confequences, and calmly and unrefervedly given up to the influence of those comprehensive views which this doctrine inspires.

perfuasion: As to our conduct towards others in instances where we were

concerned to improve and meliorate their minds, we should ad- BOOK IV. dress our representations and remonstrances to them with double confidence. The believer in free will can expostulate with or correct his pupil with faint and uncertain hopes, confcious that the clearest exhibition of truth is impotent, when brought into contest with the unhearing and indisciplinable faculty of will; or in reality, if he were confiftent, fecure that it could produce no effect at all. The necessarian on the contrary employs real antecedents, and has a right to expect real effects.

But, though he would represent, he would not exhort, for exhortation: this is a term without a meaning. He would fuggest motives to the mind, but he would not call upon it to comply, as if it had a power to comply or not to comply. His office would confift of two parts, the exhibition of motives to the pursuit of a certain end, and the delineation of the easiest and most effectual way of attaining that end.

There is no better scheme for enabling us to perceive how far any idea that has been connected with the hypothesis of liberty has a real foundation, than to translate the usual mode of expressing it into the language of necessity. Suppose the idea of exhortation fo translated to stand thus: "To enable any arguments I may fuggeft to you to make a fuitable impression it is necessary that they should be fairly considered. I proceed therefore to evince to you the importance of attention, knowing,

that.

BOOK IV. CHAP. VI. that, if I can make this importance fufficiently manifest attention will inevitably follow." I should however be far better employed in enforcing directly the truth I am desirous to impress, than in having recourse to this circuitous mode of treating attention as if it were a separate faculty. Attention will in reality always be proportionate to our apprehension of the importance of the subject before us.

ardour :

At first fight it may appear as if, the moment I was satisfied that exertion on my part was no better than a siction, and that I was the passive instrument of causes exterior to myself, I should become indifferent to the objects which had hitherto interested me the most deeply, and lose all that inslexible perseverance, which seems inseparable from great undertakings. But this cannot be the true state of the case. The more I resign myself to the influence of truth, the clearer will be my perception of it. The less I am interrupted by questions of liberty and caprice, of attention and indolence, the more uniform will be my constancy. Nothing could be more unreasonable than that the sentiment of necessity should produce in me a spirit of neutrality and indifference. The more certain is the connexion between effects and causes, the more chearfulness should I feel in yielding to painful and laborious employments.

complacence and avertion: It is common for men impressed with the opinion of free will to entertain resentment, indignation and anger against those

who fall into the commission of vice. How much of these feelings is just, and how much erroneous? The difference between virtue and vice will equally remain upon the opposite hypothesis. Vice therefore must be an object of rejection and virtue of preference; the one must be approved and the other disapproved. But our disapprobation of vice will be of the fame nature as our disapprobation of an infectious distemper.

One of the reasons why we are accustomed to regard the murderer with more acute feelings of displeasure than the knife he employs, is that we find a more dangerous property, and greater cause for apprehension, in the one than in the other. The knife is only accidentally an object of terror, but against the murderer we can never be enough upon our guard. In the fame manner we regard the middle of a bufy street with less complacency as a place for walking than the fide, and the ridge of a house with more aversion than either. Independently therefore of the idea of freedom, mankind in general find in the enormoully vicious a fufficient motive of antipathy and difgust. With the addition of that idea, it is no wonder that they should be prompted to expressions of the most intemperate abhorrence.

These feelings obviously lead to the prevailing conceptions on punishment's the subject of punishment. The doctrine of necessity would teach us to class punishment in the list of the means we possess of re-

BOOK IV. CHAP. VI.

forming error. The more the human mind can be shewn to be under the influence of motive, the more certain it is that punishment will produce a great and unequivocal effect. But the doctrine of necessity will teach us to look upon punishment with no complacence, and at all times to prefer the most direct means of encountering error, which is the development of truth. Whenever punishment is employed under this system, it will be employed, not for any intrinsic recommendation it possesses, but just so far as it shall appear to conduce to general utility.

On the contrary it is usually imagined, that, independently of the utility of punishment, there is proper desert in the criminal, a certain fitness in the nature of things that renders pain the suitable concomitant of vice. It is therefore frequently said, that it is not enough that a murderer should be transported to a desert island, where there should be no danger that his malignant propensities should ever again have opportunity to act; but that it is also right the indignation of mankind against him should express itself in the infliction of some actual ignominy and pain. On the contrary, under the system of necessity the ideas of guilt, crime, desert and accountableness have no place.

repentance:

Correlative to the feelings of refentment, indignation and anger against the offences of others, are those of repentance, contrition and forrow for our own. As long as we admit of an effential

effential difference between virtue and vice, no doubt all erroneous BOOK IV. conduct whether of ourselves or others will be regarded with disapprobation. But it will in both cases be considered, under the fystem of necessity, as a link in the great chain of events which could not have been otherwise than it is. We shall therefore no more be disposed to repent of our own faults than of the faults of others. It will be proper to view them both as actions, injurious to the public good, and the repetition of which is to be deprecated. Amidst our present imperfections it will perhaps be useful to recollect what is the error by which we are most easily seduced. But in proportion as our views extend, we shall find motives enough to the practice of virtue, without any partial retrospect to ourselves, or recollection of our own propensities and habits.

In the ideas annexed to the words refentment and repentance praise and there is fome mixture of true judgment and a found conception of the nature of things. There is perhaps still more justice in the notions conveyed by praife and blame, though these also are for the most part founded in the hypothesis of liberty. When I fpeak of a beautiful landscape or an agreeable sensation, I employ the language of panegyric. I employ it still more emphatically, when I fpeak of a good action; because I am conscious that panegyric has a tendency to procure a repetition of fuch actions. So far as praise implies nothing more than this, it perfeely accords with the feverest philosophy. So far as it imBOOK IV.

plies that the man could have abstained from the virtuous action I applaud, it belongs only to the delusive system of liberty.

intellectual tranquillity.

A farther consequence of the doctrine of necessity is its tendency to make us furvey all events with a tranquil and placid temper, and approve and disapprove without impeachment to our felf possession. It is true, that events may be contingent as to any knowledge we poffess respecting them, however certain they are in themselves. Thus the advocate of liberty knows that his relation was either loft or faved in the great from that happened two months ago; he regards this event as past and certain, and yet he does not fail to be anxious about it. But it is not less true, that all anxiety and perturbation imply an imperfect fense of contingency, and a feeling as if our efforts could make fome alteration in the event. When the person recollects with clearness that the event is over, his mind grows composed; but presently he feels as if it were in the power of God or man to alter it, and his diffrefs is renewed. All that is more than this is the impatience of curiofity; but philosophy and reason have an evident tendency to prevent an useless curiofity from diffurbing our peace. He therefore who regards all things past, prefent and to come as links of an indissoluble chain, will, as often as he recollects this comprehensive view, be superior to the tumult of passion; and will reflect upon the moral concerns of mankind with the fame clearness of perception, the same unalterable firmness of judgment, and the same

tranquillity as we are accustomed to do upon the truths of BOOK IV. geometry.

It would be of infinite importance to the cause of science and Language of virtue to express ourselves upon all occasions in the language commended. of necessity. The contrary language is perpetually intruding, and it is difficult to fpeak two fentences upon any topic connected with human action without it. The expressions of both hypotheses are mixed in inextricable confusion, just as the belief of both hypotheses, however incompatible, will be found to exist in all uninstructed minds. The reformation of which I fpeak would probably be found exceedingly practicable in itfelf: though, fuch is the fubtlety of error, that we should at first find feveral revifals and much laborious study necessary before it. could be perfectly weeded out. This must be the author's. apology for not having attempted in the present work what he recommends to others. Objects of more immediate importance: demanded his attention, and engroffed his faculties.

BOOK IV. CHAP.VII. Nature of mechanism:

å.

HE doctrine of necessity being admitted, it follows that the theory of the human mind is properly, like the theory of every other series of events with which we are acquainted,

quainted, a fystem of mechanism; understanding by mechanism nothing more than a regular connexion of phenomena without any uncertainty of event, fo that every incident requires a specific cause, and could be no otherwise in any respect than as the cause determined it to be.

BOOK IV. CHAP.VII.

But there are two forts of mechanism capable of being applied its classes to the folution of this case, one which has for its medium only intellectual. matter and motion, the other which has for its medium thought. Which of these is to be regarded as most probable?

According to the first we may conceive the human body to be fo constituted as to be susceptible of vibrations, in the same manner as the strings of a musical instrument are susceptible of vibrations. These vibrations, having begun upon the surface of the body, are conveyed to the brain; and, in a manner that is equally the refult of construction, produce a second set of vibrations beginning in the brain, and conveyed to the different organs or members of the body. Thus it may be supposed, that a piece of iron confiderably heated is applied to the body of an infant, and that the report of this uneafiness, or irritation and separation of parts being conveyed to the brain, vents itself again in a shrill and piercing cry. It is in this manner that we are apt to imagine certain convulfive and spasmodic affections to take place in the body. The case, as here described. is fimilar to that of the bag of a pair of bagpipes, which, being

Material fyftem, or of vibrations.

BOOK IV. CHAP.VII.

pressed in a certain manner, utters a groan, without any thing more being necessary to account for this phenomenon, than the known laws of matter and motion. Let us add to these vibrations a fystem of associations to be carried on by traces to be made upon the medullary fubstance of the brain, by means of which past and present impressions are connected according to certain laws, as the traces happen to approach or run into each other; and we have then a complete scheme for accounting in a certain way for all the phenomena of human action. to be observed, that, according to this system, mind or perception is altogether unnecessary to explain the appearances. It might for other reasons be desirable or wife, in the author of the universe for example, to introduce a thinking substance or a power of perception as a spectator of the process. But this percipient power is altogether neutral, having no concern either as a medium or otherwise in producing the events *.

The intellectual fystem most probable: The fecond fystem, which represents thought as the medium

* The above will be found to be a tolerably accurate description of the hypothesis of the celebrated Hartley. It was unnecessary to quote his words, as it would be foreign to the plan of the present work to enter into a resutation of any individual writer. The sagacity of Hartley, in having pointed out the necessary connexion of the phenomena of mind, and shewn the practicability of reducing its different operations to a simple principle, cannot be too highly applauded. The reasonings of the present chapter, if true, may be considered as giving farther stability to his principal doctrine by freeing it from the scheme of material automatism with which it was unnecessarily elegged.

of operation, is not less a system of mechanism, according to the doctrine of necessity, than the other, but it is a mechanism of a totally different kind.

BOOK IV. CHAP.VII.

There are various reasons calculated to persuade us that this last from the conhypothesis is the most probable. No inconsiderable argument thought would may be derived from the fingular and important nature of that superfluity: property of human beings, which we term thought; which it is furely fomewhat violent to strike out of our fystem as a mere fuperfluity.

A fecond reason still more decisive than the former, arises from the from the conftancy with which thought in innumerable inftances accompanies the functions of this mechanism. Now this constancy of conjunction has been shewn to be the only ground we have in any imaginable fubject for inferring necessary connexion, or that species of relation which exists between cause and effect. We cannot therefore reject the principle which supposes thought to have an efficient share in the mechanism of man, but upon grounds that would vitiate all our reasonings from effects to caufes.

effablifhed principles of reafoning from effects to canfes.

It may be objected, " that, though this contiguity of event Objections argues necessary connexion, yet the connexion may be exactly the reverse of what is here stated, motion being in all instances the cause, and thought never any thing more than an effect." But this is contrary to every thing we know of the fystem of

BOOK IV. CHAP.VII. the universe, in which each event appears to be alternately both the one and the other, nothing terminating in itself, but every thing leading on to an endless chain of consequences.

It would be equally vain to object, "that we are unable to conceive how thought can have any tendency to produce motion in the animal fystem;" fince it has just appeared that this ignorance is by no means peculiar to the fubject before us. are univerfally unable to perceive the ground of necessary connexion.

Thoughts which produce animal motion may be.

It being then fufficiently clear that there are cogent reasons to perfuade us that thought is the medium through which the motions of the animal system are generally carried on, let us proceed to confider what is the nature of those thoughts by which the limbs and organs of our body are fet in motion. then probably be found, that the difficulties which have clogged the intellectual hypothesis, are principally founded in erroneous notions derived from the system of liberty; as if there were any effential difference between those thoughts which are the medium of generating motion, and thoughts in general.

1.involuntary.

First, thought may be the source of animal motion, without partaking in any degree of volition, or defign. It is certain that there is a great variety of motions in the animal fystem, which are in every view of the fubject involuntary. Such, for example, are the cries of an infant, when it is first impressed with with the fensation of pain. Such must be all those motions which showed from fensation previously to experience. Volition implies that something which is the subject of volition, is regarded as desirable; but we cannot desire any thing, till we have an idea corresponding to the term suturity. Volition implies intention, or design; but we cannot design any thing, till we have the expectation that the existence of that thing is in some way connected with the means employed to produce it. An infant, when he has observed that a voice exciting compassion is the result of certain previous emotions, may have the idea of that voice predominant in his mind during the train of emotions that produce it. But this could not have been the case the first time it was uttered. In the first motions of the animal system, no-

thing of any fort could possibly be foreseen, and therefore nothing of any fort could be intended. Yet in the very instances here produced the motions have sensation or thought for their constant concomitant; and therefore all the arguments, which have been already alledged, remain in full force to prove that thought is

Nor will this appear very extraordinary, if we confider the nature of volition itself. In volition, if the doctrine of necessity be true, the mind is altogether passive. Two ideas present themselves in some way connected with each other; and a perception of preserableness necessarily follows. An object having certain desirable qualities, is perceived to be within my reach;

the medium of their production.

Tt2

and

BOOK IV. CHAP.VII. and my hand is necessarily stretched out with an intention to obtain it. If a perception of preferableness and a perception of desirableness irresistibly lead to animal motion, why may not the mere perception of pain? All that the adversary of automa, tism is concerned to maintain is, that thought is an essential link in the chain; and that, the moment it is taken away, the links that were before it have no longer any tendency to produce motion in the links that were after it. It is possible, that, as a numerous class of motions have their constant origin in thought, so there may be no thoughts altogether unattended with motion.

All animal motions were first involuntary. Here it may be proper to observe, that, from the principles already delivered, it follows that all the original motions of the animal system are involuntary. In proportion however as we obtain experience, they are successively made the subjects of reflection and foresight; and of consequence become many of them the themes of intention and design, that is, become voluntary. We shall presently have occasion to suspect that motions, which were at first involuntary, and afterwards by experience and association are made voluntary, may in the process of intellectual operation be made involuntary again.—But to proceed.

2. unattended with confcioufness. Secondly, thought may be the fource of animal motion, and yet be unattended with confciousness. This is undoubtedly a distinction of considerable refinement, depending upon the pre-

cife

cife meaning of words; and, if any person should choose to ex- BOOK IV. press himself differently on the subject, it would be useless obstinately to dispute that difference with him. By the consciousness which accompanies any thought there seems to be something implied distinct from the thought itself. Consciousness is a fort of supplementary reflection, by which the mind not only has the thought, but adverts to its own fituation and observes that it has it. Consciousness therefore, however nice the distinction, seems to be a fecond thought.

In order to afcertain whether every thought be attended with The mind consciousness, it may be proper to consider whether the mind more than one can ever have more than one thought at any one time. Now any one time. this feems altogether contrary to the very nature of mind. My present thought is that to which my present attention is vielded; but I cannot attend to feveral things at once. This affertion appears to be of the nature of an intuitive axiom; and experience is perpetually reminding us of its truth. In comparing two objects we frequently endeavour as it were to draw them together in the mind, but we feem to be obliged to pass fucceffively from the one to the other.

cannot have thought at

But this principle, though apparently supported both by rea- Objection to fon and experience, is not unattended with difficulties. The first is that which arises from the case of complex ideas. This will best be apprehended if we examine it as relates to visible objects.

this affertion from the cafe of complex

BOOK IV. CHAP.VII.

" Let us suppose that I am at present employed in the act of reading. I appear to take in whole words and indeed clufters of words by a fingle act of the mind. But let it be granted for a moment that I fee each letter fuccesfively. Yet each letter is made up of parts: the letter D for example of a right line and a curve, and each of these lines of the successive addition or fluxion of points. If I consider the line as a whole, yet its extension is one thing, and its terminations another. I could not fee the letter if the black line that describes it and the white surface that bounds it were not each of them in the view of my organ. There must therefore, as it should seem, upon the hypothesis above stated, be an infinite succession of ideas in the mind, before it could apprehend the simplest objects with which we are conversant. But we have no feeling of any such thing, but rather of the precise contrary. Thousands of human beings go out of the world without ever apprehending that lines are composed of the addition or fluxion of points. An hypothesis therefore, that is in direct opposition to so many apparent facts, must have a very uncommon portion of evidence to suftain it, if indeed it can be fustained at all."

The true answer to this objection seems to be the following. The mind can apprehend only a single idea at once, but that idea needs not be in every sense of the word a simple idea. The mind can apprehend two or more objects at a single effort, but it cannot apprehend them as two. There seems no sufficient reason

reason to deny that all those objects which are painted at once BOOK IV. upon the retina of the eye, produce a joint and fimultaneous impression upon the mind. But they are not immediately conceived by the mind as many, but as one: fo foon as the idea fuggests itself that they are made up of parts, these parts cannot be confidered by us otherwise than successively. The refolution of objects into their fimple elements, is an operation of science and improvement; but it is altogether foreign to our first and original conceptions. In all cases the operation is rather analytical than fynthetical, rather that of resolution than composition. We do not begin with the successive perception of elementary parts till we have obtained an idea of a whole: but, beginning with a whole, are capable of reducing it into its elements.

The fecond difficulty is of a much fubtler nature. It confifts from various in the feeming "impossibility of performing any mental operations: tion, such as comparison for example, which has relation to two as comparior more ideas, if we have not both ideas before us at once, if one of them be completely vanished and gone, before the other begins to exist." The cause of this difficulty seems to lie in the mistake of supposing that there is a real interval between the two ideas. It will perhaps be found upon an accurate examination, that, though we cannot have two ideas at once, yet it is not just to fay, that the first has perished before the second begins to exist. The instant that connects them, is of no real magnitude.

BOOK IV. CHAP.VII. and produces no real division. The mind is always full. It is this inftant therefore that is the true point of comparison.

It may be objected, "that this cannot be a just representation, fince comparison is rather a matter of retrospect deciding between two ideas that have been completely apprehended, than a perception which occurs in the middle, before the second has been yet observed." To this objection experience will perhaps be found to furnish the true answer. We find in fact that we cannot compare two objects till we have passed and repassed them in the mind.

apprehension:

"Supposing this account of the operation of the mind in comparison to be admitted, yet what shall we say to a complex sentence containing twenty ideas, the sense of which I fully apprehend at a single hearing, nay, even in some cases by that time one half of it has been uttered?"

The mere task of understanding what is affirmed to us is of a very different nature from that of comparison, or any other species of judgment that is to be formed concerning this affirmation. When a number of ideas are presented in a train, though in one sense there be variety, yet in another there is unity. First, there is the unity of uninterrupted succession, the perennial slow as of a stream, where the drop indeed that succeeds is numerically distinct from that which went before, but there is no cessation.

Secondly, there is the unity of method. The mind BOOK IV. apprehends, as the discourse proceeds, a strict association, from fimilarity or fome other fource, between each idea as it follows in the process, and that which went before it.

The faculty of understanding the different parts of a discourse in their connexion with each other, fimple as it appears, is in reality of gradual and flow acquisition. We are by various causes excluded from a minute observation of the progress of the infant mind, and therefore do not readily conceive by how imperceptible advances it arrives at a quickness of apprehension relative to the simplest fentences. But we more easily remark its fubsequent improvement, and perceive how long it is before it can apprehend a discourse of any length or a sentence of any abstraction.

Nothing is more certain than the possibility of my perceiving the fort of relation that exists between the different parts of a methodical discourse, for example, Mr. Burke's Speech upon Oeconomical Reform, though it be impossible for me after the feverest attention to consider the several parts otherwise than fuccessively. I have a latent feeling of this relation as the difcourse proceeds, but I cannot give a firm judgment respecting it otherwise than by retrospect. It may however be suspected that, even in the case of simple apprehension, an accurate attention to the operations of mind would show, that we scarcely BOOK IV. CHAP.VII. in any instance hear a single fentence, without returning again and again upon the steps of the speaker, and drawing more closely in our minds the preceding members of his period, before he arrives at its conclusion; though even this exertion of mind, fubtle as it is, be not of itself thought sufficient to authorise us to give a judgment upon the whole. There may perhaps be cases where the apprehension is more instantaneous. A similar exception appears to take place even in some cases of judgment or comparison. A new association, or a connecting of two ideas by means of a middle term, which were never brought into this relation before, is a talk of fuch a nature, that the strongest mind feels fome fense of effort in the operation. But, where the judgment accurately fpeaking is already made, the operation is in a manner instantaneous. If you fay, that a melon is a larger fruit than a cherry, I immediately affent. The judgment. though perhaps never applied to this individual subject, may be faid to have been made by me long before. If again you tell me that Cæfar was a worse man than Alexander, I instantly apprehend your meaning; but, unless I have upon some former occasion considered the question, I can neither affent nor diffent till after some reflection.

Rapidity of the fuccession of ideas. But, if the principle here stated be true, how infinitely rapid must be the succession of ideas? While I am speaking no two ideas are in my mind at the same time, and yet with what facility do I pass from one to another? If my discourse be argumentative,

mentative, how often do I pass the topics of which it consists in BOOK IV. review before I utter them, and even while I am speaking continue the review at intervals without producing any paufe in my discourse? How many other sensations are perceived by me during this period, without fo much as interrupting, that is, without materially diverting the train of my ideas? My eye fucceffively remarks a thousand objects that present themselves. My mind wanders to the different parts of my body, and receives a fensation from the chair upon which I sit, from the table upon which I lean; from the pinching of a shoe, from a singing in my ear, a pain in my head, or an irritation of the breaft. When these most perceptibly occur, my mind passes from one to another, without feeling the minutest obstacle, or being in any degree distracted by their multiplicity. From this curfory view of the subject it appears that we have a multitude of different succeffive perceptions in every moment of our existence *.

Confciousness, as it has been above defined, appears to be one Application, of the departments of memory. Now the nature of memory. fo far as it relates to the subject of which we are treating, is exceedingly obvious. An infinite number of thoughts paffed

* An attempt has been made to calculate these, but there is no reason to believe that the calculation deserves to be considered as a standard of truth. Senfations leave their images behind them, fome for a longer and fome for a shorter time; fo that, in two different inftances, the calculation is in one case eight, and in another three hundred and twenty to a fecond.

U 11 2

through

BOOK IV. CHAP.VII. through my mind in the last five minutes of my existence. How many of them am I now able to recollect? How many of them shall I recollect to-morrow? One impression after another is perpetually essaing from this intellectual register. Some of them may with great attention and effort be revived; others obtrude themselves uncalled for; and a third fort are perhaps out of the reach of any power of thought to reproduce, as having never left their traces behind them for a moment. If the memory be capable of so many variations and degrees of intensity, may there not be some cases with which it never connects itself? If the succession of thoughts be so inexpressibly rapid, may they not pass over some topics with so delicate a touch, as to elude the supplement of consciousness?

Duration meafured by confcioufness. It feems to be consciousness, rather than the succession of ideas, that measures time to the mind. The succession of ideas is in all cases exceedingly rapid, and it is by no means clear that it can be accelerated. We find it impracticable in the experiment to retain any idea in our minds unvaried for any perceptible duration. Continual flux appears to take place in every part of the universe. It is perhaps a law of our nature, that thoughts shall at all times succeed to each other with equal rapidity. Yet time seems to our apprehension to slow now with a precipitated and now with a tardy course. The indolent man reclines for hours in the shade; and, though his mind be perpetually at work, the silent lapse of duration is unobserved.

CHAP. VII.

But, when acute pain or uneafy expectation obliges confciousness BOOK IV. to recur with unufual force, the time then appears insupportably long. Indeed it is a contradiction in terms to suppose that the fuccession of thoughts, where there is nothing that perceptibly links them together, where they totally elude or infantly vanish from the memory, can be a measure of time to the mind. That there is fuch a flate of mind in fome cases assuming a permanent form, has been fo much the general opinion of mankind, that it has obtained a name, and is called reverie. It is probable from what has been faid that thoughts of reverie, understanding by that appellation thoughts untransmitted to the memory, perpetually take their turn with our more express and digested thoughts, even in the most active scenes of our life.

Lastly, thought may be the source of animal motion, and yet 3. a diffine there may be no need of a diffinct thought producing each individual motion. This is a very important point in the fubicat before us. In uttering a cry for example, the number of muscles and articulations of the body concerned in this operation is very great; shall we fay that the infant has a distinct thought for each motion of these articulations?

thought to each motion may be unnecellary :

The answer to this question will be considerably facilitated, if apparent we recollect the manner in which the impressions are blended. which we receive from external objects. The fense of feeling pressions. is diffused over every part of my body, I feel the different sub-

complexity of fenfible im-

ftances

BOOK IV. CHAP. VII.

stances that support me, the pen I guide, various affections and petty irregularities in different parts of my frame, nay, the very air that environs me. But all these impressions are absolutely fimultaneous, and I can have only one perception at once. Out of these various impressions, the most powerful, or that which has the greatest advantage to folicit my attention, overcomes and drives out the rest; or, which not less frequently happens. fome idea of affociation fuggested by the last preceding idea wholly withdraws my attention from every external object. It is probable however that this perception is imperceptibly modified by the miniature impressions that accompany it, just as we actually find that the very same ideas presented to a fick man. take a peculiar tinge, that renders them exceedingly different from what they are in the mind of a man in health. It has been already shown, that, though there is nothing less frequent than the apprehending of a simple idea, yet every idea, however complex, offers itself to the mind under the conception of unity. The blending of numerous impressions into one perception is a law of our nature, and the customary train of our perceptions is entirely of this denomination. Mean while it deferves to be remarked by the way, that, at the very time that the most methodical feries of perceptions is going on in the mind, there is another fet of perceptions, or rather many fets playing an under or intermediate part; and, though these perpetually modify each other, yet the manner in which it is done is in an eminent degree minute and unobserved.

The mind always thinks.

These remarks furnish us with an answer to the long disputed BOOK IV. question, whether the mind always thinks? It appears that innumerable impressions are perpetually made upon our body, and the only way, in which the flightest of these is prevented from conveying a diffinct report to the mind, is in confequence of its being overpowered by fome more confiderable impression. It cannot therefore be alledged, "that, as one impression is found to be overpowered by another while we wake, the ftrongest only of the fimultaneous impressions furnishing an idea to the mind; fo the whole fet of fimultaneous impressions during sleep may be overpowered by some indisposition of the sensorium, and entirely fail of its effect." For, first, the cases are altogether different. From the explication above given it appeared, that not one of the impressions was really lost, but tended, though in a very limited degree, to modify the predominant impression. Secondly, nothing can be more unintelligible than this indifpofition. Were it of the nature which the objection requires. fleep ought to cease of its own accordafter the expiration of a certain term, but to be incapable of interruption from any experiment I might make upon the fleeper. To what purpose call or shake him? Shall we fay, that it requires an impression of a certain magnitude to excite the fenforium? But a clock shall ftrike in the room and not wake him, when a voice of a much lower key produces that effect. What is the precise degree of magnitude necessary? We actually find the ineffectual calls that are addressed to us, as well as various other sounds, occasionally

mixing

BOOK IV.

mixing with our dreams, without our being aware from whence this new perception arose.

To apply these observations. If a number of impressions may come blended to the mind, so as to make up one thought or perception, why may not one thought, in cases where the mind acts as a cause, produce a variety of motions? It has already been shown that there is no effential difference between the two cases. The mind is completely passive in both. Is there any fufficient reason to show, that, though it be possible for one substance considered as the recipient of effects to be the subject of a variety of fimultaneous impressions, yet it is impossible for one fubstance considered as a cause to produce a variety of simultaneous motions? If it be granted that there is not, if the mere modification of a thought defigning a motion in chief, may produce a fecondary motion, then it must perhaps farther be confessed possible for that modification which my first thought produced in my fecond, to carry on the motion, even though the fecond thought be upon a fubject altogether different.

Conclusion.

The confequences, which feem deducible from this theory of mind, are fufficiently memorable. By showing the extreme fubtlety and simplicity of thought, it removes many of the difficulties that might otherwise rest upon its finer and more evanestent operations. If thought, in order to be the cause of animal motion, need not have either the nature of volition, or the concomitant

concomitant of confciousness, and if a single thought may BOOK IV. become a complex cause and produce a variety of motions, it will then become exceedingly difficult to trace its operations, or to discover any circumstances in a particular instance of animal motion, which can fufficiently indicate that thought was not the principle of its production, and by that means superfede the force of the general arguments adduced in the beginning of this chapter. Hence therefore it appears that all those motions which are observed to exist in substances having perception, and which are not to be discovered in substances of any other species, may reasonably be suspected to have thought, the distinguishing peculiarity of fuch fubstances, for their cause.

> applied to the of walking :

There are various classes of motion which will fall under The theory this definition, befide those already enumerated. An example phenomenon of one of these classes suggests itself in the phenomenon of walking. An attentive observer will perceive various symptoms calculated to perfuade him, that every ftep he takes during the longest journey is the production of thought. Walking is in all cases originally a voluntary motion. In a child when he learns to walk, in a rope dancer when he begins to practife that particular exercise, the distinct determination of mind preceding each step is fussiciently perceptible. It may be abfurd to fay, that a long feries of motions can be the refult of fo many express volitions, when these supposed volitions leave no trace in the memory. But it is not unreasonable to believe, that a

BOOK IV. CHAP.VII.

fpecies of motion which began in express design, may, though it ceases to be the subject of conscious attention, owe its continuance to a continued series of thoughts flowing in that direction, and that, if life were taken away, material impulse would not carry on the exercise for a moment. We actually find, that, when our thoughts in a train are more than commonly earnest, our pace slackens, and sometimes our going forward is wholly suspended, particularly in any less common species of walking, such as that of descending a slight of stairs. In ascending the case is still more difficult, and accordingly we are accustomed wholly to suspend the regular progress of restection during that operation.

to the circulation of the blood. Another class of motions of a still subtler nature, are the regular motions of the animal economy, such as the circulation of the blood, and the pulsation of the heart. Are thought and perception the medium of these motions? We have the same argument here as in the former instances, conjunction of event. When thought begins, these motions also begin; and, when it ceases, they are at an end. They are therefore either the cause or effect of percipiency, or mind; but we shall be inclined to embrace the latter side of this dilemma, when we recollect that we are probably acquainted with many instances in which thought is the immediate cause of motions, which scarcely yield in subtlety to these; but that, as to the origin of thought, we are wholly uninformed. Add to this, that there are probably

no motions of the animal economy, which we do not find it in BOOK IV. the power of volition, and still more of our involuntary fenfations, to hasten or retard.

It is far from certain that the phenomenon of motion can any Of motion in where exist where there is not thought. Motion may be diffributed into four classes; the simpler motions which result from what are called the essential properties of matter and the laws of impulfe; the more complex ones which cannot be accounted for by the affumption of these laws, such as gravitation, elasticity, electricity and magnetism; and the motions of the vegetable and animal fystems. Each of these seems farther than that which preceded it from being able to be accounted for by any thing we understand of the nature of matter.

Some light may be derived from what has been here ad- Of dreams. vanced upon the phenomenon of dreams. "In fleep we fometimes imagine" for example "that we read long paffages from books, or hear a long oration from a fpeaker. In all cafes fcenes and incidents pass before us that in various ways excite our passions and interest our feelings. Is it possible that these fhould be the unconfcious production of our own minds?"

It has already appeared, that volition is the accidental, and by no means the necessary concomitant, even of those thoughts which are most active and efficient in the producing of motion.

X x 2

BOOK IV. CHAP.VII. It is therefore no more to be wondered at that the mind should be busied in the composition of books which it appears to read, than that a train of thoughts of any other kind should pass through it without a consciousness of its being the author. In fact we perpetually annex wrong and erroneous ideas to this phrase, that we are the authors. Though mind be a real and efficient cause, it is in no case a first cause. It is the medium through which operations are produced. Ideas succeed each other in our sensorium according to certain necessary laws. The most powerful impression, either from without or from within, constantly gets the better of all its competitors, and forcibly drives out the preceding thought, till it is in the same irresistible manner driven out by its successor.

HE subject of intellectual mechanism suggested itself as BOOK IV. the most suitable introduction to an enquiry into the moral principles of human conduct. Having first ascertained that

BOOK IV. CHAP. VIII. that thought is the real and efficient fource of animal motion, it remains to be confidered what is the nature of those particular thoughts in which the moral conduct of man originates.

Hypotheses of benevolence and felf love. Upon this question there are two opinions. By some it is supposed that the human mind is of a temper considerably ductile, so that, as we in certain instances evidently propose our own advantage for the object of our pursuit, so we are capable no less sincerely and directly in other instances of desiring the benefit of our neighbour. By others it is affirmed, that we are incapable of acting but from the prospect or stimulant of personal advantage, and that, when our conduct appears most retrograde from this object, the principle from which it slows is secretly the same. It shall be the business of this chapter to prove that the former hypothesis is conformable to truth.

Superiority of the former.

Action is either voluntary or involuntary. It is to be prefumed from the arguments of the preceding chapter, that there exist in the theory of the human mind two classes of action, voluntary and involuntary. The last of these we have minutely investigated. It has sufficiently appeared that there are certain motions of the animal system, which have sensation or thought for their medium of production, and at the same time arise, to have recourse to a usual mode of expression, spontaneously, without foresight of or a direct reslecting on the result which is to follow. But, if we admit the existence of this phenomenon, there does not seem less reason to admit the existence of the other class of action above enumerated, which

is accompanied in its operation with a forefight of its refult, BOOK IV. and to which that forefight ferves as the reason and cause of exiftence.

Voluntary action cannot proceed from all perceptions indif- Nature of the criminately, but only from perceptions of a peculiar class, viz. fuch perceptions as are accompanied with the idea of fomething as true respecting them, something which may be affirmed or denied. One of the first inferences therefore from the doctrine of voluntary action, is the existence of the understanding as a faculty distinct from sensation, or, to speak more accurately, the possibility of employing the general capacity of perception, not merely as the vehicle of distinct ideas, but as the medium of connecting two or more ideas together. This particular habit, when it has once been created, gradually extends itself to every province of the mind, till at length it is impossible for any thing to make a clear and diffinct impression upon the sensorium, without its being followed with fome judgment of the mind concerning it.

first of these

It is thus that man becomes a moral being. He is no farther fo than he is capable of connecting and comparing ideas, of making propositions concerning them, and of foreseeing certain confequences as the refult of certain motions of the animal fystem.

But, if the forefight of certain confequences to refult may be the BOOK IV.

the fufficient reason of action, that is, if there be such a thing as volition, then every foresight of that kind has a tendency to action. If the perception of something as true, joined with the consciousness of my capacity to act upon this truth, be of it-self sufficient to produce motion in the animal system, then every perception so accompanied has a tendency to motion. To apply this to the subject before us.

Argument that refults from it. I perceive a certain agreeable food, I perceive in myfelf an appetite which this food is adapted to gratify, and these perceptions are accompanied with a consciousness of my power to appropriate this food. If no other consideration exist in my mind beyond those which have just been stated, a certain motion of the animal system irresistibly follows.

Suppose now that the person about whose appetites these propositions are conversant, is not myself but another. This variation cannot materially alter the case. Still there remain all the circumstances necessary to generate motion. I perceive the food, I am acquainted with the wants of the person in question, and I am conscious of my power of administering to them. Nothing more is necessary in order to produce a certain movement of my body. Therefore, if, as in the former case, no other consideration exist in my mind, a certain motion of the animal system irresistibly follows. Therefore, if ten thousand other considerations exist, yet there was in this, separately con-

fidered,

fidered, a tendency to motion. That which, when alone, must BOOK IV. inevitably produce motion, must, however accompanied, retain its internal character.

Let us however suppose, which seems the only consistent mode of supporting the doctrine of felf love, "that there is no fuch thing practically confidered as volition, that man never acts from a forelight of consequences, but always continues to act, as we have proved him to act at first, from the mere impulse of pain, and precisely in the manner to which that impulse prompts him, without the rational faculty having any tendency to prolong, to check or to regulate his actions." What an incredible picture does this exhibit to us of the human mind? We form to ourselves, for this cannot be disputed, opinions, we measure the tendency of means to the promotion of ends, we compare the value of different objects, and we imagine our conduct to be influenced by the judgments we are induced to make. We perceive the preferableness of one thing to another, we defire, we chuse; all this cannot be denied. But all this is a vain apparatus; and the whole fystem of our conduct proceeds, uninfluenced by our apprehension of the relative value of objects, and our forefight of confequences favourable or adverse.

Voluntary action has a real existence.

There is no other alternative. Once admit the understanding to an efficient share in the business, and there is no reason that ence.

BOOK IV. CHAP. VIII. can possibly be assigned, why every topic, which is the object of human understanding, should not have its portion of efficiency. Once admit that we act upon the apprehension of fomething that may be affirmed or denied respecting an idea, and we shall be compelled to acknowledge that every proposition including in it the notion of preferableness or the contrary, of better or worfe, will, fo far as it falls within the compass of our power real or supposed to effect, afford a motive inducing, though with different degrees of energy, to animal motion. But this is directly contrary to the theory of felf love. They who maintain that felf love is the only spring of action, say in effect, not only that no action is difinterested, but that no difinterested consideration contributes in any degree as an inducement to action. If I relieve the virtuous diffress of the best of men, I am influenced according to them by no particle of love for the individual or compassion for his distress, but exclusively by the defire of procuring gratification to myself.

Let us confider this case a little more closely. If I perceive either that my prosperity or existence must be facrificed to those of twenty men as good as myself, or theirs to mine, surely this affords some small inducement to adopt the former part of the alternative. It may not be successful, but does it excite no wish however sleeting, no regret however inessectual? The decision of the question is in reality an affair of arithmetic; is there no human being that was ever competent to understand

it? The value of a man is his usefulnes; has no man ever believed that another's capacity for usefulness was equal to his own?

I am as 40, consequently the others are as 800; if the 40 were not myself, I should perceive that it was less than 800; is it possible I should not perceive it, when the case becomes my own?

But the advocates for the fystem of self love generally admit, "that it is possible for a man to facrifice his own existence in order to preferve that of twenty others;" but they affirm, "that in fo doing he acts from personal interest. He perceives that it is better for him to die with the confciousness of an heroic action, than live with the remorfe of having declined it." That is, here is an action attended with various recommendations, the advantage to arise to twenty men, their tranquillity and happiness through a long period of remaining existence, the benefits they will not fail to confer on thousands of their contemporaries, and through them on millions of posterity, and lastly his own escape from remorfe and momentary exultation in the performance of an act of virtue. From all these motives he selects the last, the former he wholly difregards, and adopts a conduct of the highest generofity from no view but to his own advantage. Abstractedly and impartially considered, and putting self as such out of the question, this is its least recommendation, and he is absolutely and unlimitedly callous to all the rest,

Confidering then the fystem of disinterestedness as sufficiently Experimental view of the subject.

BOOK IV.

Suppositions fuggested by the advocates of self love:

established in theory, let us compare it with the lessons of experience. There are two different hypotheses by which this theory is opposed; the one affirming "that in every thing we do, we employ, previously to the choice of the mind, a calculation by which we determine how far the thing to be done will conduce to our own advantage;" the other ascribing our actions "to the same blind and unintelligent principle, by which, when a child cries, he frequently utters a found unexpected by himself, but which inevitably results from a certain connexion of an organized body with an irritated mind."

that we calculate upon all occasions the advantage to accrue to us. How far does experience agree with the first of these hypotheses? Surely nothing can be more contrary to any thing we are able to observe of ourselves, than to imagine, that in every act, of pity suppose, we estimate the quantity of benefit to arise to ourselves, before we yield to the emotion. It might be said indeed, that the mind is very subtle in its operations, and that, a certain train of reasoning having been rendered samiliar to us, we pass it over in our reflections with a rapidity that leaves no trace in the memory. But this, though true, will contribute little to relieve the system we are considering, since it unfortunately happens that our first emotions of pity are least capable of being accounted for in this way.

Falseness of this supposition. To understand this let us begin with the case of an infant.

Before he can feel sympathy, he must have been led by a

feries.

feries of observations to perceive that his nurse for example, is a being possessed of consciousness, and susceptible like himself of the impressions of pleasure and pain. Having supplied him with this previous knowledge, let us suppose his nurse to fall from a slight of stairs and break her leg. He will probably feel some concern for the accident; he will understand the meaning of her cries, similar to those he has been accustomed to utter in distress; and he will discover some wish to relieve her. Pity is perhaps first introduced by a mechanical impression upon the organs, in consequence of which the cries uttered by another prompt the child without direct design to utter cries of his own. These are at first unaccompanied with compassion, but they naturally induce the mind of the infant to yield attention to the appearance which thus impressed him.

In the relief he wishes to communicate is he prompted by reflecting on the pleasures of generosity? This is by the supposition the first benevolent emotion he has experienced, and previously to experience it is impossible he should foresee the pleasures of benevolence. Shall we suppose that he is influenced by other selfish considerations? He considers, that, if his nurse die, he will be in danger of perishing; and that, if she be lame, he will be deprived of his airings. Is it possible that any man should believe, that, in the instantaneous impulse of sympathy, the child is guided by these remote considerations? Indeed it was unnecessary to have instanced in an action apparently benevolent, since it is equally clear that our

most

BOOK IV. CHAP. VIII.

most familiar actions are inconsistent with this explanation. We do not fo much as eat and drink, from the recollection that these functions are necessary to our support.

Supposition of a contrary fort.

The fecond of the two hypotheles enumerated, is diametrically the reverse of the first. As the former represented all human actions as proceeding from a very remote deduction of the intellect, the latter confiders the whole as merely physical. its literal fense, as has already been seen, nothing can be more incompatible with experience. Its advocates therefore are obliged to modify their original affumption, and to fay, not that we act merely from fensation, but that fensation affords the basis for reflection; and that, though we be capable of conducting ourfelves by fystem and forefight, yet the only topic to which we can apply that forefight is the removal of pain. In reality all that which is regularly adapted to the accomplishment of a certain purpose, must be admitted to flow from the dictates of reflection. The tear flarts, the cry is uttered at the prompting of fensation only, but we cannot lift a finger to relieve except as we are commanded by the understanding.

We do not calculate what would be the uneafiness to refraining to act:

either in relieving dif--trefs:

Here then we are prefented with the commencement of a new feries. If uneafiness be still the source of the phenomena, at refult from our least it is now under a different form. Before, a certain emotion was produced, respecting which no intention was extant in the mind. Now an action or a feries of actions is adopted with a certain view and leading to a certain end. This end is faid to

be the removal of uneafiness. Whether it be or no is a question BOOK IV. which recollection in many cases is competent to enable us to decide. If we frequently deceive ourselves as to the motive by which we are prompted to act, this is chiefly owing to vanity, a defire of imputing to ourselves, or being understood by the world to act from a principle more elevated than that which truly belongs to us. But this idea is least prevalent with children and favages, and of confequence they ought to be most completely aware that the project they have conceived is that of removing uneafinefs. It feems to be an uncommon refinement in abfurdity to fay, that the end we really purfue is one to which we are in no instance conscious; that our action is wholly derived from an unperceived influence, and the view extant in the understanding altogether impotent and unconcerned.

> of general good.

In the case we have just examined uneasiness is the first step or in adding in the process; in others which might be stated uneasiness is not the first step. "In the pursuit" suppose " of a chemical process I accidentally discover a circumstance, which may be of great benefit to mankind. I instantly quit the object I was originally pursuing, profecute this discovery, and communicate it to the world." In the former proceeding a fensation of pain was the initiative, and put my intellectual powers into action. In the present case the perception of truth is the original mover. Whatever uneafiness may be supposed to exist, rendering me anxious for the publication of this benefit, is the confequence of

BOOK IV. CHAP. VIII. the perception. The uneafiness would never have existed if the perception had not gone before it.

Uneafiness an accidental member of the process.

But it has been faid, "that, though the perception of truth in this case goes first, the pain was not less indispensible in the process, fince, without that, action would never have followed. Action is the child of defire, and a cold and uninteresting decifion of the understanding would for ever have laid dormant in the mind." Granting that pain in a certain modified degree is a constant step in the process, it may nevertheless be denied that it is in the strictest sense of the word indispensible. To perceive that I ought to publish a certain discovery, is to perceive that publishing is preferable to not publishing it. But to perceive a preference is to prefer, and to prefer is to choose. The process is in this cafe complete, and pain, in the fense in which it comes in at all, is merely an accident. Why do I feel pain in the neglect of an act of benevolence, but because benevolence is judged by me to be a conduct which it becomes me to adopt? Does the understanding wait to enquire what advantage will refult from the propositions, that two and two make four, or that fuch and fuch causes will contribute to the happiness of my neighbour, before it is capable of perceiving them to be true?

The fame principle which is applied here, is not less applicable to fame, wealth and power, in a word to all those pursuits which engage the reflecting and speculative part of the civilised world. world. None of these objects would ever have been purfued, BOOK IV. if the decisions of the intellect had not gone first, and informed us that they were worthy to be purfued.

Neither of the two hypotheses we have been examining would perhaps have been reckoned fo much as plaufible in themselves, if they had not been blended together by the inadvertence of their The advocates of felf love have been aware, that the mere fenfitive impulse of pain would account for a very fmall part of the hiftory of man; and they have therefore infenfibly flided from the confideration of uneafiness to be removed, to that of interest to be promoted. They have confounded the two cases of sensation and reflection; and, taking it for granted in the latter that private gratification was the object univerfally purfued, have concluded that they were accounting for all human actions from one principle. In reality no two principles can be more distinct, than the impulse of uneafiness, which has very improperly been denominated the love of ourselves, and that deliberate felf love, by which of fet design we pursue our own advantage. One circumstance only they have in common, that of reprefenting us as incapable of understanding any proposition, till we have in fome way or other connected it with perfonal interest. This is certainly a just representation of their consequences; fince, if I were capable of understanding the naked proposition, that my neighbour stood in need, of a candle for Zzinstance

The fuppofitions inconfiftently blended.

CHAP. VIII.

BOOK IV. instance to be removed from one end of a room to the other, this would be a reason of action, a motive, either strong or weak, either predominant or the contrary. But, if this confideration entered for any thing into the ground of my proceeding, the whole would not be resolvable into self love.

Scheme of felf love recommended from the pro-penfity of mind to abbreviate its process.

An hypothesis, which has been thought to have some tendency to relieve the difficulties of the fystem of felf love, is that "of the mind's reasoning out for itself certain general principles, which are a fort of refting-places in the process, to which it afterwards recurs, and upon which it acts, without being at the trouble in each inftance of application, of repeating the reasons upon which the general principle was founded. Thus in geometry, as we proceed to the higher branches, we perpetually refer to the earlier propositions as established and certain, without having at the time in our minds perhaps the smallest recollection of the way in which those early propositions were demonstrated." But this representation, though true, has very little tendency to decide in the subject before us. It is still true. that, if I be capable of understanding a proposition as it relates to the interest of my neighbour, any reasoning about the proposition by which it is indirectly connected with my own interest, is unnecessary to put me into a state of action. It is still true, that my action has a direct and an indirect tendency; and, till it can be shown that there is something in the nature of mind

mind that unfits it for entertaining the direct purpose, an un-BOOK IV. prejudiced enquirer will be very little disposed universally to have recourfe to that which is indirect.

CHAP. VIII.

The hypothesis of self love seems to have been originally invented from a leve of "that funplicity, which appears to be the ultimate term in all grand discoveries relative to the system of things. the universe." But simplicity, though well deferving our approbation, can fearcely of itself be a sufficient support for any opinion. The fimplicity however in this case is more apparent than real. Not to repeat what has been faid relative to the coalition of two hypotheles very incongruous in their own nature, there is little genuine fimplicity in a scheme, that represents us as perpetually acting from a motive which we least suspected, and feeks by a circuitous and intricate method for a recommendation of little intrinsic value, rejecting in all cases the great and obvious reason which the first view of the subject suggested. True fimplicity is altogether on the fide of the opposite system, which reprefents man as capable of being governed by the nature of the thing, and of acting from the motive which he supposes to influence him; which requires nothing but perception to account for all the phenomena of mind, and, when a reason exciting to action is apprehended, does not feek for an additional principle to open a communication between the judgment and the choice.

from the fimplicity that obtains in the natures of

BOOK IV. CHAP. VIII. Hypothesis of felf love incompatible with virtue.

There is one observation more, which, though it be not so conclusive as some of those which have been mentioned, ought not to be omitted. If felf love be the only principle of action, there can be no fuch thing as virtue. Virtue is a principle in the mind, by which we are enabled to form a true estimate of the pretentions of different reasons inviting us to preference. He, that makes a false estimate, and prefers a trivial and partial good to an important and comprehensive one, is vicious. in the disposition and view of the mind, and not in the good which may accidentally and unintentionally refult, that virtue consists. Judas's act in betraying Christ, according to the Christian fystem, may be regarded as a real and essential cause conducing to the falvation of mankind. Yet Judas's act was not virtuous, but vicious. He thought only of the forty pieces of filver, the price of his treachery, and neglected every confideration of public utility and justice. Just so in the case stated early in the present chapter, the public benefactor, absolutely and firially speaking, prefers forty to eight hundred or eight hundred millions. So far as relates to the real merits of the case, his own advantage or pleasure is a very infignificant confideration, and the benefit to be produced, suppose to a world, is inestimable. Yet he falfely and unjustly prefers the first, and regards the latter, abstractedly considered, as nothing. If there be such a thing as justice, if I have a real and absolute value, upon which truth can decide, and which can be compared with what is greater or lefs, then, according to this fystem, the best action that ever was performed, may, for any thing we know, have been the BOOK IV. action in the whole world of the most exquisite and deliberate injustice. Nay, it could not have been otherwise, since it produced the greatest good, and therefore was the individual inftance in which the greatest good was most directly postponed to personal gratification.

Nor will this objection be much relieved by the fystem already alluded to of refting-places, enabling a man in a certain degree to forget the narrow and felfish principles in which his conduct originated. It can fearcely be questioned, that the motives which induced a man to adopt his fystem of conduct, and without which he never would have adopted it, are of more importance, than the thoughtleffness and inattention by which they are forgotten, in deciding upon the morality of his character.

From this train of reasoning the result is, that men are capa- Conclusion. ble of understanding the beauty of virtue, and the claims of other men upon their benevolence; and, understanding them, that these views, as well as every other perception of the intellect, are of the nature of motives, fometimes overpowered by other confiderations, and fometimes overpowering them, but always in their own nature capable of exciting to action, when not counteracted by pleas of a different fort. Men are capable no doubt of preferring an inferior interest of their own to a fuperior interest of other people; but to this preference it is perhaps

BOOK IV.

perhaps neceffary, that they should imagine the benefit to themselves to be great and the injury to others comparatively finall, or else that they should have embraced the pernicious opinion that the general good is best served by each man's applying himself exclusively to his personal advantage.

Importance of the queltion.

There is no doctrine in which the generous and elevated mind refts with more fatisfaction, than in that of which we are treating. If it be false, it is no doubt incumbent upon us to make the best of the small remnant of good that remains. But it is a heartless prospect for the moralist, who, when he has done all, has no hope to perfuade mankind to one atom of real affection towards any one individual of their species. We may be made indeed the inftruments of good, but in a way lefs honourable, than that in which a frame of wood or a sheet of paper may be made the inftrument of good. The wood or the paper are at least neutral. But we are drawn into the service with affections of a diametrically opposite direction. When we do the most benevolent action, it is with a view only to our own advantage, and with the most sovereign and unreserved neglect of that of others. We are instruments of good, just in the same manner as bad men are faid to be the instruments of providence. even when their inclinations are most refractory to its decrees. In this fense we may admire the fystem of the universe, where public utility refults from each man's contempt of that utility, and where the most beneficial actions of those, whom we have been accustomed

accustomed to term the best men, are only instances in which justice and the real merits of the case are most flagrantly violated. But we can think with little complacence of the individuals of whom this universe is composed. It is no wonder that philosophers, whose system has taught them to look upon their fellow men as thus perverse and unjust, have been frequently cold, phlegmatic and unanimated. It is no wonder that Rousseau, the most benevolent of all these philosophers, and who most escaped the general contagion, has been driven to place the perfection of all virtue in doing no injury. Neither philosophy nor morality nor politics will ever show like themselves, till man shall be acknowledged for what he really is, a being capable of justice, virtue and benevolence, and who needs not always to be led to a philanthropical conduct by foreign and frivolous considerations.

The fystem of disinterested benevolence proves to us, that it is possible to be virtuous, and not merely to talk of virtue; that all which has been said by philosophers and moralists respecting impartial justice is not an unmeaning rant; and that, when we call upon mankind to divest themselves of selfish and personal considerations, we call upon them for something which they are able to practise. An idea like this reconciles us to our species; teaches us to regard with enlightened admiration the men who

3

^{* &}quot;La plus fublime vertu est négative; elle nous instruit de ne jamais faire du mal à personne." EMILE, Liv. II.

BOOK IV.

have appeared to lose the feeling of their personal existence in the pursuit of general advantage; and gives us reason to expect, that, as men collectively advance in science and useful institution, they will proceed more and more to consolidate their private judgment and their individual will with abstract justice and the unmixed approbation of general happiness.

Application.

What are the inferences that ought to be made from this doctrine with respect to political institution? Certainly not that the interest of the individual ought to be made incompatible with the part he is expected to take in the interest of the whole. This is neither defirable, nor even possible. But that focial institution needs not despair of seeing men influenced by other and better motives. The legislator is bound to recollect that the true perfection of mind confifts in difinterestedness. He should regard it as the ultimate object of his exertions, to induce men to estimate themselves at their true value, and neither to grant to themselves nor claim from others a higher confideration than they justly deferve. Above all he should be careful not to add to the vigour of the felfish passions. He should gradually wean men from contemplating their own benefit in all that they do, and induce them to view with complacency the advantage that is to refult to others.

The last perfection of this feeling consists in that state of mind which bids us rejoice as fully in the good that is done by others,

as if it were done by ourselves. The truly wise man will BOOK IV. be actuated neither by interest nor ambition, the love of honour nor the love of fame. He has no emulation. He is not made uneasy by a comparison of his own attainments with those of others, but by a comparison with the standard of right. He has a duty indeed obliging him to feek the good of the whole: but that good is his only object. If that good be effected by another hand, he feels no disappointment. All men are his fellow labourers, but he is the rival of no man. Like Pedaretus in ancient flory, he exclaims: "I also have endeavoured to deferve; but there are three hundred citizens in Sparta better than myfelf, and I rejoice."

BOOK IV.

AVING endeavoured to establish the theory of virtue upon its true principle, and to shew that self interest is neither its basis in justice and truth, nor by any means necessary

to incite us to the practice, it may not be improper to confider BOOK IV. in what degree public interest is coincident with private, and by that means at once to remove one of the enticements and apologies of vice, and afford an additional encouragement and direction to the true politician.

In the first place then, there appears to be sufficient reason It is the road to believe, that the practice of virtue is the true road to individual to happiness: happiness. Many of the reasons which might be adduced in this place have been anticipated in the chapter of the Cultivation of Truth. Virtue is a fource of happiness that does not pall in the enjoyment, and of which no man can deprive us *. The effence of virtue confifts in the feeing every thing in its true light, and estimating every thing at its intrinsic value. No man therefore, fo far as he is virtuous, can be in danger to become a prey to forrow and discontent. He will habituate himself. respecting every species of conduct and temper, to look at its absolute utility, and to tolerate none from which benefit cannot arife either to himself or others. Nor will this be so difficult a task as it is commonly imagined. The man, who is accustomed upon every occasion to consult his reason, will speedily find a habit of this nature growing upon him, till the just and dispasfionate value of every incident that befals him will come at length spontaneously to suggest itself. Those evils which prejudice has

* Ch. IV. p. 233.

3 A 2

taught

BOOK IV. taught so great a part of mankind to regard with horror, will appear to his understanding disarmed of their terrors. Poverty, obloquy and difgrace will be judged by him to be very trivial misfortunes. Few conditions can be fo deflitute as to deprive us of the means of obtaining for ourselves a subsistence. The reasonable mind perceives at once the possibility of this and the best method of executing it; and it needs no great stretch of understanding to decide, that real happiness does not confist in luxurious accommodations. With respect to obloquy and disgrace, the wife man may lament the tendency they possess to narrow the fphere of his usefulness; but he will readily perceive, that, feparately from this confideration, they are no evils. My real value depends upon the qualities that are properly my own, and cannot be diminished by the slander and contempt of the whole world. Even bodily pain loses much of its sting, when it is encountered by a chearful, a composed, and a determined spirit. To all these negative advantages of virtue, we may add the pofitive fatisfaction of a mind confcious of rectitude, rejoicing in the good of the whole, and perpetually exerted for the promotion of that good.

> There are indeed some extreme cases of the election of a virtuous conduct, respecting which it is difficult to pronounce. Was it Regulus's interest to return to Carthage to a tormenting death, rather than fave his life by perfuading the Roman fenate to an exchange of prisoners? Probably it was. Probably, with

the

the exquisite feeling of duty with which Regulus was animated, BOOK IV. a life that was to be perpetually haunted with the recollection of his having omitted the noblest opportunity of public fervice, was not worth his purchase. His reasoning, so far as related to personal interest, might be like that of Cato in the play:

" A day, an hour, of virtuous liberty Is worth a whole eternity in bondage *."

Secondly, virtue not only leads to the happiness of him who to the effects practifes it, but to the efteem and affection of others. Nothing of others. can be more indisputable, than that the direct road to the esteem of mankind, is by doing things worthy of their efteem. most artful scheme for passing things upon others for somewhat different from what they really are, is in momentary danger of detection; and it would be an egregious miftake to suppose, that men esteem any thing but what comes to them under the ap-

* The first of the three heads discussed in this chapter is inserted chiefly for the fake of method, few persons having really doubted that virtue is the most genuine fource of individual tranquillity and happiness. It is therefore dismissed with all practicable brevity. The two remaining heads had a fironger claim to discussion. It unfortunately happens to be the generally received opinion, that rigid virtue is neither the furest road to other men's approbation and esteem, nor the most probable means of securing our external prosperity. If the author had known of any work at prefent existing, that had appeared to him to place this fubject in any degree in its true light, he would have omitted the reasonings of this chapter.

pearance

BOOK IV. CHAP. IX.

pearance of virtue. No man ever existed of a taste so depraved as to feel real approbation of another, for the artfulness of his slattery, or the cunning with which he over-reached his neighbours.

Objection from misconstruction and calumny.

and that afterin

There is indeed one disadvantage that occurs under this head, consisting in this circumstance, "that no man truly admires what he does not understand. Now, in order thoroughly to comprehend the value of any mental effort, whether of a purely intellectual or moral nature, it is perhaps necessary that the genius or virtue of the spectator should be equal to that of him by whom it is made. It is an inevitable law of our nature, that we should in a great measure judge of others by ourselves, and form our standard of human nature by an investigation of our own minds. That, respecting which we feel a clear and distinct conviction that we are ourselves incapable, we are prone to suspect to be mere show and deception in others. We are the more inclined to this, because we feel their virtues to be a reproach to our indolence, and therefore are little disposed to make a liberal estimate of them."

Anfwer.

But, though there be fome truth in these observations, they have frequently been made much too indiscriminate, by the mifanthropy and impatience of those, who have conceived their estimation with their neighbours or the world to fall greatly short of their merit. It must be admitted that mankind are reluctant:

BOOK IV.

reluctant to acknowledge a wifdom or a virtue superior to their own; but this reluctance is by no means invincible. It is abfurd to suppose that no man believes himself the inferior of his neighbour, or that, when he reads the plays of Shakespeare, the philosophy of Rousseau, or the actions of Cato, he says, " I am as skilful, as wife, or as virtuous as this man." It would be still more abfurd to suppose that men may not in a considerable degree perceive the beauty of passages they could never have written, and actions they would never have performed.

It is true that men of high moral excellence are feldom effi- Virtue commated at their true value, especially by their contemporaries, ther modes of But the question does not relate to this point, but to that other, esteem. whether they be not esteemed more than persons of any other description, and of consequence whether virtue be not the best road to esteem? Now, let a specious appearance be maintained with ever fo much uniformity of fuccefs, it is perpetually in danger of detection. It will always want fomething of animation, of confistency and firmness that true virtue would produce. The imitation will never come up to the life. That temporifing and compliance, which are careful not to contradict too much the prejudices of mankind, and in which the principal advantage of a merely exterior virtue confifts, will always bear fomething fuspicious about them. Men do not love him who is perpetually courting their applause. They do not give with a liberal spirit what is fought with too unwearied an affiduity. But their praife

BOOK IV. CHAP. IX. is involuntarily extorted, by him who is not fo anxious to obtain fuccess, as to deferve it.

Vice and not virtue is the fubject of obloquy:

inflanced in the bafe alloy with which our virtues are mixed:

If men of virtue be frequently misinterpreted or misunderflood, this is in a great degree to be ascribed to the imperfection of their virtue and the errors of their conduct. True virtue fhould hold no commerce with art. We ought not to be fo defirous to exhibit our virtue to advantage, as to give it free fcope and fuffer it to exhibit itself. Art is nearly allied to selfishness; and true virtue has already been shown to be perfectly difinterested. The mind should be fixed only on the object purfued, and not upon the gracefulness or gallantry of the pursuit. We should be upon all occasions perfectly ingenuous. expressing with simplicity the sentiments of our heart, and speaking of ourselves, when that may be necessary, neither with oftentation and arrogance on the one hand, nor with the frequently applauded lies of a cowardlike humility on the other. There is a charm in fincerity that nothing can refift. If once a man could be perfectly frank, open and firm in all his words and actions, it would be impossible for that man to be misinterpreted.

in arrogance and oftentation: Another fruitful fource of mifrepresentation has appeared to be envy. But, if we be regarded with envy, it may be suspected to be in a great measure our own fault. He will always be envied most, who is most arrogant, and whose mind

most frequently recurs to his own attainments and the inferiority BOOK IV. of others. Our virtues would feldom be contemplated with an uneafy fense of reproach, if they were perfectly unaffuming. Any degree of oftentation in their less corrupted neighbour, as it humbles the vanity of mankind, must be expected to excite in them a defire of retaliation. But he whose virtues flow from philanthropy alone, whose heart expands with benevolence and good will, and who has no defire to make his superiority felt. will at all times have many friends and few enemies.

Virtue has also frequently been subject to misrepresentation in the vices from a farther circumstance which is most properly chargeable persons of upon the fufferers, and that is, the inequality of their actions. It is no wonder, if we first rouse the angry passions of mankind by our arrogance, and then render our motives suspected by a certain mixture of art in the exhibition of our characters, that the follies and vices we commit, if they be of a glaring kind, should too often furnish a triumphant argument to support against us the accusation of hypocrify and deceit. It unfortunately happens, that, when men of an ardent spirit fall into error, their errors are inevitably conspicuous. It happens, that men, who have dedicated the flower of their strength to laudable purposes, too often think they have a right to indulge in relaxations unworthy of the energy of their characters. They would furely avoid this fatal mistake, if they duly reflected, that it is not their individual character only that is at stake, but that they

moral excel lence allow themfelves.

BOOK IV. CHAP. IX. are injuring the cause of justice and general good. Prudential and timid virtues, unalloyed with imprudent and thoughtless vices, are best understood by the vulgar. Their reign indeed is short; they triumph only for a day: but that they are transitory is of little avail, while those who are most worthy of lasting esteem, wantonly barter it for gratifications, contemptible in themselves, and fatally important in their effects.

The virtuous man only has friends.

But to return to the comparison between the esteem and affection that accrue from virtue, and from any other plan of conduct. The produce in the latter case must always be in a confiderable degree barren, and of very short duration. Whether the good name acquired by virtue be more or lefs, virtue will appear in the end to be the only mode for its acqui-He who merits the efteem of his neighbours and fellow citizens, will at least be understood by a few. Instances might be adduced in which perfons inftigated by the purest motives have been eminently unpopular. But there is perhaps no inflance in which fuch men have not had a few friends of tried and zealous attachment. There is no friendship but this. No man was ever attached to an individual but for the good qualities he ascribed to him; and the degree of attachment will always bear fome proportion to the eminence of the qualities. Who would ever have redeemed the life of a knave at the expence of his own? And how many instances do there occur of fuch heroic friendship where the character was truly illustrious?

In the third place, virtue will probably be found the fecurest BOOK IV. road to outward prosperity and success in the world, according to the old maxim, "that honesty is the best policy," It is road to profindeed natural to suppose that a good name should eminently success in the contribute to our fuccess. This is evident even in the humblest walks of life. That tradefman, other things equal, will always applied to be most prosperous, who is most fair and equitable in his transactions; dealings. Which is most likely to succeed, he who never gives expectations that he cannot fulfil, or who is perpetually difappointing his customers? he who is contented with a reasonable profit, or who is ever upon the watch to outwit those with whom he deals? he who puts one constant price upon his commodities, or who takes whatever he can get, favouring a fufpicious customer unreasonably, and extorting with merciless avarice from an eafy one? in a word, he who wishes to keep the persons with whom he is concerned in present good humour, or who would give them permanent fatisfaction?

CHAP. IX. Virtue the perity and

There is no doubt, that, though the former may obtain by his artifices a momentary fuccess, the latter will in the seguel be generally preferred. Men are not fo blind to their own interest as they have fometimes been represented, and they will foon feel the advantage of dealing with the person upon whom they can depend. We do not love to be perpetually upon our guard against an enemy, and for ever prying into the tricks and fubterfuges of a depraved heart.

BOOK IV. CHAP. IX. to cases that depend upon patronage. Apparent exception where the dependent is employed as the instrument of vice.

But what shall we say to those cases in which advancement depends upon patronage? There are two circumstances under this head which seem to form an exception to the rule above delivered. The first is that of a patron, whose vicious and imperfect character renders the co-operation of vicious men necessary to his pursuits, whom therefore he will be contented to reward, even while he despites. The second is that of an office, and it is to be feared such offices exist, which may require a compliant and corrupt character in the person who is to fill it, and for the obtaining of which vice of a certain sort is a necessary recommendation.

Virtue compared with other modes of becoming prosperous. It must no doubt be admitted as to this subject in general, that, so far as relates to success in the world, vicious men will often prove fortunate. But it may reasonably be questioned, whether vice be in the first instance the most likely road to fortune. The candidates for this equivocal species of preferment may be numerous. An individual cannot distinguish himself in the crowd but by a portion of ability, which it may well be supposed would not have been unsuccessful in the career of virtue. After all, not every candidate, not even every skilful candidate, will be victorious. There is always a struggle in the breast of the patron between contempt and a corrupt motive; and, where there is struggle, the decision will sometimes be on the side which the client least desires. Even when fortune feems to have overtaken him, his situation is still precarious. His success is sounded upon a local and mutable basis; his

patron may defert him, may be deprived of his power or his life; and the client, who, after having facrificed every principle to his hopes of advantage, miffes his aim, or is cut short in his career, is in all cases a subject of derision. A bad eminence is always unstable; and, if we could sum up the numbers of those who have facrificed their virtue to their ambition, we should probably find that a great majority of them had egregiously miscarried in their calculation.

In the mean time, if we turn to the other fide of the estimate, we shall in the first place inevitably suspect that esteem must lead to fome of the fruits of effeem. But, exclusively of this consideration, if there be offices for which vice of a certain fort is a necessary qualification, there are also undoubtedly a multitude of offices which cannot be well discharged but by a man of inte-The patron, though he would perhaps willingly provide for his pander or his parafite at the expence of his country, will not be inclined to trust a man of accommodating principles with the superintendence of his fortune or the education of his child. With the exception of the two cases that have been stated, integrity, as it is the first qualification for discharging a function with propriety, will always occupy a foremost place in the recommendation of the client. The employer, whose object is the real interest of himself, his friends or his country, will have a powerful motive inducing him to prefer the honest candidate. Ability may be almost equally requisite; but ability and virtue,

٠٧

BOOK IV. CHAP. IX.

if we should choose to suppose that there is no necessary alliance between them, will at least by no person be thought exclusive of each other. If a knave may in some cases obtain an employment of trust and real importance, it is vehemently to be suspected that this would not have happened, if an honest man of equal ability had been at hand. Add to this that virtue is perpetually gaining ground upon us. The more it is tried, and the more it is known, the more will it be respected. It is to the man of real virtue, whose character is not brought into suspicion by the equivocal nature of some of his proceedings, whose virtue consists in benevolence, equanimity and justice, that all will have recourse, when they have the success of the affair in which they are concerned deeply at heart.

Source of the difrepute of virtue in this respect. Nothing has tended more to bring honesty as an instrument of success into general disrepute, than the fort of complaint that is frequently heard from such as are unsuccessful. These men will naturally have recourse to the most specious topic of self consolation, and there is none that more obviously suggests itself than the supposition that they failed through their too much virtue. Thus the man of rugged temper who is perpetually insulting the soibles of others, the timid man who is incapable of embracing at once a perilous alternative, the scrupulous man who knows not what to admit or reject and is always undetermined upon his course of action, and a thousand others, are forward to impute their miscarriage to their integrity, though strictly speaking it was in every one of these cases to be ascribed to their vices.

There is another confideration which deserves to be taken into account in this estimate. There is a degree of virtue which would probably render me difinclined to fill many eminent flations, to be a great lawyer, a great senator, or a great minister. The functions of these situations in the present state of mankind are of fo equivocal a nature, that a man, whose moral views are in the highest degree sublime, will perhaps find in himself little forwardness to exercise them. He will perhaps conceive that in a private station, unincumbered with engagements, unwarped by the finister motives that high office will not fail to prefent, he may render more lafting fervices to mankind. But furely it is no very formidable objection to fay, that honesty will prevent a man from acquiring what he has no wish to acquire.

> convenient for conceal-

A case of somewhat a different nature has been suggested, and Case where it has been asked, "Whether honesty be the best road to success, vice bids fair where the violation of it bids fair for perpetual concealment? Fortune has led me to the military profession, I lack advancement, but promotions in the army are customarily made by purchase. Thus circumstanced, I find by accident a sum of money, in fecreting which I am in little danger of detection, and I apply this fum to purchase me a commission. Should I have more effectually promoted my worldly fuccess by a more scrupulous conduct?"

The answer to this question ought probably to be affirmative. Chance of de-

tection.

BOOK IV.

In the first place we are to consider the chance of detection. The direct tendency of the laws of the material universe is such, as to force the more confiderable and interesting actions of human beings into publicity. No man can render himself invisible. The most artful conspirator cannot sufficiently provide against a thousand petty circumstances, that will lead, if not to conviction, at least to presumption against him. Who is there that would wish to have fastened upon him the suspicion of a base and difingenuous procedure? This feature in human affairs is fo remarkable, as to have furnished topics to the literary industry of former centuries, and to have been interpreted God's revenge against the unjust. Suppose that in this case I found the money dropped in a field. Will the owner have no fuspicion where he lost it? Will no human being have observed that I was near the spot at the questionable period? The chances are certainly against me, and a mere balance of chance would probably have been fufficient to prove that honesty is the best policy. The bare circumflance of my fuddenly possessing a fum of money without vifible means of acquiring it, a circumstance to which the attention of my neighbours is always fufficiently alive, would caft an unpleasant stain upon my character. How often has the well contrived train of the politician, triumphing in the infcrutability of his wisdom, been baffled by the most trivial accidents? Since therefore, "the race is not to the fwist, nor the battle to the firong," the truest wisdom is to act so as to fear no detection.

There are other circumstances which tend to establish the fame proposition. The man, who depends upon his courage, his ability, or his amiable character for recommendation, will perpetually cultivate these. His conftancy will be unwearied: and, conscious of the integrity of his means, his spirit will be intrepid and erect. The progress of this man, if his ardour be fufficiently great to inspire him with ability, and to render him quick fighted to the detection of his mistakes, will be inceffant. But the man' who has employed foul means, will depend partly upon them, and cannot be fo fervent in the cultivation of the true. If he always escape detection, he will always fear it, and this will fully the clearness of his spirit. Vice cannot compare with virtue in its tendency to individual happiness. This is not the fubject we are confidering in this place; but this will apply to our subject. Remorfe, uneafiness and confusion of mind are calculated to prevent me from perceiving the true point of proiection in my affairs, and detract much from the probability of my rifing to eminence in any profession.

apprehen fivenefs:

Lastly, the man who has once yielded to a dishonest temptation, will yield to it again. He has lost the consistency of character and disdain of vice, which were his firmest securities. He that says, "I will be dishonest now, and dishonest no more," forgets some of the most obvious and characteristic seatures of the human mind. If he escape suspicion in the first instance, he will

and depravity the offspring of vice. BOOK IV.

only diffrace himself more foully in the second: if the remorse and degradation of spirit arising from one base action could perish, they would be fixed and invigorated by other base actions growing out of the first.

ERRATA.

VOL. I.

- Page 131, line 15,—after "quantity of wrong," read " and to invent a species of corporal punishment or restraint,"
- P. 181, note, l. ult., -for "of former times" read "of the ancient model."
- P. 182, -read the fide note "from the unity of truth" as belonging to the top of the page.
 P. 182, 1. 3 from the bottom, -for "purfue" read "prefs."
- ___, l. 2 from the bottom, -for "over whom he prefided" read "among whom he refided."
- P. 185, 186, 187, 188, 189, running title, for "OF OBEDIENCE" read "OF FORMS OF GOVERNMENT."
- P. 260, fide note, -read "justice."

- P. 324, l. 4,—read "automatifm."
 P. 330, fide note,—for "Rapidity" read "rapidity."
 P. 362, l. 15,—for "exceptions" read "exception."

VOL. II.

- P. 403, fide note, for "Diflike" read "diflike."
- P. 427, fide note, -for "defire" read "defires."
- P. 471, l. 4, for "no reflexion" read "to reflexion."
- P. 503, note, l. ult., -- for "volume" read "work."
- P. 511, l. 5 from the bottom, -for "transaction" read "transactions"
- P. 551, l. 3 from the bottom, -for "understand it;" read "understand it."
 P. 564, note, -for "Book IV, Chap. VII" read "Book IV, Chap. VI."
 P. 645, side note, -for "of libel:" read "of libel."

- P. 673, fide note, -read "Reasons by which they are vindicated."
- P. 680, l. ult.,—for "necessity." read "necessity," P. 706, l. 14,—for "look" read "voice."
- P. 730, 1. 3 from the bottom,—for "domeftic" read "municipal."
 P. 774, fide note,—for "man:" read "man."
 P. 791, fide note,—for "mean" read "means."
 P. 807, fide note,—for "vice" read "generating."
 P. 808, fide note,—for "The" read "the"

- P. 811, fide note, -read "and the misfortunes of war."
- P. 837, fide note,-read "or from vanity."
- P. 852, l. 10,-for "be known" read "will be known."
- P. 878, l. 3 from the bottom, -for "operation" read "operations"
- P. 883, fide note, -for "conduct" read "Conduct"

DIRECTION TO THE BINDER.

The volumes are to be divided at page 379 in fignature 3 °C.

The tables of contents to precede the respective volumes.
